Applying the procedures set forth in the C&C Report we obtained passenger revenues by multiplying the monthly revenue passenger miles for each jet aircraft, determined from the TWA on-board reports in the manner described above, pp. II-34, 35, by TWA's average passenger mile yield for the year in question.[2/] These passenger revenues were then multiplied by 105 percent to obtain the monthly transportation revenues per aircraft. Those direct operating costs which vary with the amount of operations performed were computed by multiplying the number of aircraft miles flown by each jet during a month by a cost-per-mile based on the ratio of the total of such costs experienced to total miles operated by jets of the same type in the year in question.[3/] The direct costs which vary with fleet size were determined in the manner described above, p. II-36.

1/ Appendix B.

2/ TWA 4C-1, pp. 30, 45.

3/ See TWA 4C-4, Exs. F-J.

In computing ground and indirect expenses, we first ascertained what portions of these expenses Mr. Wemple considered variable.[1] We then multiplied the corresponding portions of the pertinent monthly statistics for each jet aircraft by the appropriate ratios, as determined from the cost experience in the year in question.[2]

The table in Appendix B (Mr. Wemple's method) for the B-131s in July 1963, when compared with the corresponding table in Appendix A (the S.H.E. method), illustrates the similarities and differences between the two methods. The transportation revenues are slightly higher in Appendix B. The aircraft operating expenses are higher in Appendix B on longer haul flights and lower on shorter haul trips because Mr. Wemple used a flat rate per aircraft mile whereas the S.H.E. method reflects the higher costs of shorter hauls with slower block speeds. The ground and indirect expenses in Appendix B are less for aircraft with high load factors and greater for aircraft with low load factors, reflecting less sensitivity to the effect of traffic on such costs.

Under both methods the most profitable B-131 in July 1963 shows a profit that is very close: $167,000 in Appendix B compared with $164,000 in Appendix A. The least profitable B-331, however, shows a profit of $21,000 in Appendix B compared with a loss of $42,000 in Appendix A. The loss estimate is

occasioned primarily by the higher costs incurred in short haul operations and attributed to them under the S.H.E. method in contrast to Mr. Wemple's method.

While Mr. Wemple's method, in our opinion, tends to minimize the disparity in operating results attained by different aircraft within the fleet, it does not necessarily result in a showing of fewer loss aircraft. In the case of the B-131s for example, Appendix B, compared with Appendix A, shows fewer 131s returning operating losses in 23 months, the same number in 30 months and a greater number in 4 months. The number of months in which one or more B-131s lost money is 39 in Appendix B compared with 47 in Appendix A.

The results of using Mr. Wemple's procedures to determine the profitability of individual jet aircraft lead to the same conclusions as those obtained by the S.H.E. procedures.

a. The B-131s

Again, the first and only B-131 to show an operating loss in 1959 appears in November. Again, beginning in January 1960, one or more B-131s each month failed to earn an operating profit until the peak month of June. Profitable operations for all B-131s continued through September.

Thereafter, the pattern of loss operations persisted without a break, except for the months of November 1962 and April 1963, until the traffic upswing in mid-1963. In a number of months, the losses extended to as many as five, six or seven aircraft. In February 1961 nine B-131s registered losses under Mr. Wemple's methods.

b. The CV-880s

The CV-880s strikingly demonstrate the similarity of the profit and loss pattern obtained by the two methods. Again, it appears that beginning in February 1961, the first full month of operation, TWA was unable to operate all of its CV-880s at a profit in any month until July 1963. With the addition of six more 880s beginning in August 1963, unprofitable operations were resumed, and by November 1963 as many as seven CV-880s were again losing money.

Under both methods there appears a trough from November 1961 which continues throughout 1962. In this 14-month period there was no month without at least seven loss 880s, and there were six months with as many as eleven or twelve.

Under Appendix B, compared with Appendix A, fewer CV-880s returned operating losses in 14 months, the same number in 13 months and a greater number in 9 months. Both methods show only one month, July 1963, in which no CV-880 operated at a loss.

c. The B-131Bs

Appendix B is not as favorable to B-131B operations as Appendix A. Notably in 1963, many more 131Bs appear in Appendix B as experiencing losses, and there are only four months, as compared with seven months in Appendix A, in which no loss operations were sustained. The reason is that the flat rates per aircraft mile used in Mr. Wemple's costing do not reflect the cost savings produced by the long hauls on which the B-131s were routed. Especially noticeable are the relatively sharp differences in the ground and indirect expenses.

The pattern that emerges is basically the same, however, even though somewhat obscured by inexact costing. The B-131Bs, which appeared late on the scene and displaced the B-131s from the more profitable routes because of their greater speed and economy, turned in the best profit performance of any of TWA's jet fleets in the 1959-1963 period. There were still some months, however, in which some of the aircraft in this fleet failed to find profitable employment.

d. The Minor Domestic Jet Fleets: B-331s, B-720Bs, B-331Bs

The pattern for B-331s is almost identical under both methods, with profitable operations in peak months and some loss aircraft in the off seasons. Again, Mr. Wemple's methods disfavor

the relatively long-haul B-331s. Again, the B-720B fleet experiences no month in which all four aircraft return a profit.

Chart II-F-1 on page II-55 compares the monthly operating profits, as computed in Appendix B, earned by the four most profitable B-131s in each month from July 1959 through December 1963 with the operating profit or loss experienced by the four least profitable B-131s in each month. Charts II-F-2 and II-F-3 on pages II-56, 57 present similar comparisons for the CV-880s and B-131Bs. Charts II-F-4 and II-F-5 on pages II-58, 59 present the individual operating profits and losses of all the B-331s (March 1960-April 1962) and all the B-720Bs (September 1961 - September 1962), as computed in Appendix B.

3. General Conclusions as to the Historical Profitability of TWA's Jet Aircraft

Whichever method of estimating profit and loss is followed, it appears that there were very few months of the 1959-1963 period in which TWA's management was able to employ all of its jet aircraft at an operating profit. Appendix A shows only ten months and Appendix B only 12 months in which no jets experienced a loss. Eight of these months occur in 1959, when the difference between TWA's actual domestic jet fleet and that assumed by Mr. Wemple is only 1.4 aircraft. From January 1960 through December 1963, the period during which the bulk of additional jet capacity is postulated, TWA was unable, except in the peak summer season of 1960, to fly all of the jets it did have at a profit.

Chart II-G on page II-61 presents graphically the total number of jet aircraft which TWA operated at a loss in each month from April 1959 through December 1963, as shown both by Appendix A and Appendix B. Chart II-H-1 on page II-62 presents the range of operating profit and loss per jet aircraft in each month of the same period, as computed in Appendix A, graphed against the actual number and the assumed additional number of jet aircraft available to TWA in each such month. Chart II-H-2 on page II-63 is a similar graph based on Appendix B.

CHART II H-2

AX-2533

The comparison of the growing extent of jet losses with the actual jet fleet buildup is, in our opinion, convincing evidence that TWA did not need and could not profitably have used the assumed additional jet capacity. Additional jets could only have been added on schedules less profitable than those already being flown and would therefore have created additional operating losses for TWA.

(Supplemental S.H.E. Report - Volume A)"

APPENDIX A

This table is a profit and loss tabulation by month for TWA jet aircraft shown upon TWA routing charts for the years 1959-1963. The methods used to determine revenues and expenses are those of the previous S.H.&E. report[1/] and are described in Part II, pp. II-33-37, of the present report.

The manual changes recorded in the profit and loss columns were reallocations of revenues and expenses in those months where TWA changed routings of certain flights from one aircraft day to another or had a single trip divided between two aircraft: e.g., where a routing chart shows that Flight 85 was flown from Boston to Baltimore to Kansas City with one 720-B and continued from Kansas City to Los Angeles with a second 720-B. Lack of time prevented new runs being prepared.

The load factor columns and stage length columns in Appendix A were not used.

The aircraft codes used in Appendix A are as follows:

B-70	-	B707-131
B7F	-	B707-131B
B30	-	B707-331
B2F	-	B720B
880	-	CV-880

APPENDIX B

This table is a profit and loss tabulation by month for TWA jet aircraft shown upon TWA routing charts furnished for the years 1959-1963. The methods used to determine revenues and expenses are those of the C & C report [1/] and are described in Part II, pp. II-49, 50, of the present report.

The manual changes recorded in the profit and loss columns were reallocations of revenues and expenses in those months where TWA changed routings of certain flights from one aircraft day to another or had a single trip divided between two different aircraft; e.g., where a routing chart shows that Flight 85 was flown from Boston to Baltimore to Kansas City with one 720-B and continued from Kansas City to Los Angeles with a second 720-B. The manual changes recorded in the load factor and stage length columns were necessary for the same reason. The load factors and stage lengths shown in Appendix B, as manually corrected, were the ones used in this report.

1/ TWA 4C-1 and 4.

E M M E T T O S B O R N C O C K E, having previously been sworn, resumed the stand and testified further as follows:

EXAMINATION (Cont'd) BY MR. DAVIS:

Q Mr. Cocke, have you reviewed your testimony to date?

A Yes, I have.

Q Is there anything that you would like to add, change, modify, alter, to what you have already testified to?

A No.

Q I believe the last time you were here to testify, we had just marked the minutes of the Board of Directors meeting held on February 24, 1950.

Do you have what has been marked as Defendants' Exhibit 163 before you?

A No, I do not.

Q You will recall that is an exhibit which we prepared relating to aircraft acquisition by TWA?

A Yes.

Q It is not necessarily complete. It is accurate so far as we are concerned, to the extent to which we know the facts, and it is to be used by you only to guide you in orienting you in your recollection. Do you understand that?

A Yes.

Q The minutes of the meeting of the board of February 24, 1950, refer to an agreement with the Glenn L. Martin Company for the purchase of 30 Martin 404 aircraft, with a right at the option of TWA to purchase up to 30 additional airplanes of the same model. It also refers

DX 364 id., page 603
(Excerpts from Deposition of Emmett O. Cocke)

DX364

Q Did you find some entries there which helped you remember what was happening at the time?

A I don't recall any entries that brought back more than what the notes in my diary would indicate.

Q Are you currently reading your testimony as it goes along? Have you been reading your own testimony?

A I have.

Q Are you more or less up to date?

A Yes.

Q Is there anything that you can add to what you have already testified to?

A No.

Q You understand if at any time something occurs to you when you review your testimony, that it will be helpful if you would let me know that there is something which has occurred to you, or some change or modification you would like to make. I am not referring now to possible changes in particular words that do not change the meaning of what you say.

Take your time with respect to those. With respect to anything of substance which occurs to you, or what you think ought to be added in order to complete your testimony, I would appreciate it if you would let us know.

Would you do that?

(Excerpts from Deposition of Emmett O. Cocke)

EXAMINATION (Cont'd) BY MR. DAVIS:

Q Mr. Cocke, have you reviewed your testimony to date now?

A Yes.

Q Do you have anything that you would like to add

or alter or modify, of substance--I am not talking of typographical errors?

A No.

Q Have you discussed the period which we have covered with any fellow officers or employees of TWA?

A No, I have not.

Q As I recall, the last time we had completed going over your 1953 diary. I believe we had also gone over a letter from Mr. Bradley to Mr. Dietrich, had we not, relating to the decisions of TWA with respect to the acquisition of additional Lockheed equipment over Douglas equipment?

A There was a letter, yes, from Mr. Bradley to Mr. Dietrich.

Q Do you recall going over that letter with me?

A Yes, I do.

Q You have no further recollection of the subject matter covered by that letter?

A No, I do not.

MR. DAVIS: May I at this time have marked for identification the diary for the year 1954.

(Mr. Cocke's diary for the year 1954 marked Defendants Exhibit 303 for identification, as of this date.)

BY MR. DAVIS:

rl

DX364

Q I understand that, but I would like to know what discussion took place relative to these suggestions, recommendations, alternatives that were being presented by Mr. Rourke?

A I don't recall the discussions.

Q Do you recall what views Mr. Thomas expressed as to the desirability of cutting back on the 880 program so as to take advantage of what appeared at the time, at least, as a possibility of improved aircraft?

A At some later period I recall that he felt that we should cut back the Convair order from thirty to twenty.

Q Now I am interested in what was being said with respect to the desirability of ordering, or having the Hughes Tool Company order some 990s?

A I don't recall any discussions on that. Mr. Thomas at a later date, I believe, discussed the cutback of the 880s from thirty to twenty. I did not agree with him.

After discussions with him he pointed out that by reducing the order from thirty to twenty, that our financing problems would be eased, that it would leave room for later financing for more aevanced models of the aircraft that were being considered.

I think I finally agreed that in view of those factors maybe we should cut back from thirty to twenty.

Q It is a fact, is it not, that there came a point when the Hughes Tool Company did place an order with Convair for some thirteen 990s?

A Yes, I am aware of that.

Q Do you recall the discussion which took place at these meetings of the Jet Planning Committee with respect to the suggestion made by Mr. Rourke, that in order to maintain TWA in a competitive position with American, it might be desirable to plan for ten to fifteen 990s in lieu of a similar number of 880s?

A I don't recall the discussions. Certainly these alternatives were discussed with the Jet Planning Committee.

I have no recollection of what went on in the discussions beyond what I have testified to and I don't know what these minutes reflect.

Q Mr. Tillinghast testified at some point that he or someone at TWA inquired into the circumstances relating to the order placed by the Hughes Tool Company for 990s, which took place some time in 1961.

Do you recall in that connection the suggestion being made by Mr. McCone as a director? Do you recall that taking place?

DX364

EXAMINATION (Cont'd) BY MR. DAVIS:

Q Mr. Cocke, before we resume with your diary, have you thought of anything which you can add to your prior testimony?

A I have not.

Q Have you been reading your testimony?

A Yes, I have.

Q Up to what point have you read it?

A I scanned several pages this morning.

Q Of yesterday's testimony?

A Yes, on the answer that seemed to be confusing yesterday with regard to my comments on Mr. Class, to be certain that it reflected what I intended it to reflect.

Q Does that mean you are current in going over the transcript?

A Except for yesterday.

Q You just had a chance to scan it briefly?

A Yes.

Q Then let us resume with your diary.

A Yes.

Q I believe that we were up to March 20 of 1961.

A That is my recollection.

Q Will you proceed from that point on, please? Where are you up to now?

DX 371

Summary of Categories of Difference Between Estimates of Mr. Wemple and Mr. Simat (Supplemental Report, Vol. B, Part III)

This memorandum is submitted by defendants, in response to the Special Master's invitation (tr. 10,155), as a summary of the differences between the estimates made by Mr. Wemple, plaintiff's expert, in his report (TWA-4C) and those by Mr. Simat, defendants' expert, in Part III of the Simat, Helliesen and Eichner Supplemental Report (DX 359B). Since the Supplemental Report adopts many of the procedures of the prior Simat, Helliesen and Eichner Report (DX 271A and B), notably in the area of costs, and since it deals only with TWA's Domestic Division, many of the comparisons made in DX 348, the summary of differences based upon the prior report as revised, apply also to the present summary. When this is the case, reference will be made to the appropriate pages in Defendants' Exhibit 348. For completeness, however, this memorandum does show the unchanged International Division estimates.

Mr. Simat's alternative estimate, contained in Chapter E of Part III, is not discussed herein because it does not purport to be a complete estimate of changes in operating profit, but a test of the reasonableness of his conclusions.

1. Overall Comparisons

The overall difference between the estimates of changes in operating profits are (in millions):[1]

	Mr. Wemple[2]	Mr. Simat[3]	Difference (Mr. Wemple's estimate less Mr. Simat's)
Domestic	$29.1	$-87.3	$116.4
International	22.4	- 8.6	31.0
Net	$51.5	$-95.9	$147.4

1/ Mr. Simat did not submit a detailed estimate reflecting the effect of the revised traffic estimating formula shown in TWA 417. He estimated that the gain in domestic transportation revenues from added jet service would change from about $80 million to about $95 million and that the net loss in domestic transportation revenues from added jet and deleted piston services would be within a million dollars of the originally estimated loss of about $100 million (tr. 10,079-80).

2/ Source: TWA 345A.

3/ Source: DX 359B, p. III-27 for Domestic;
DX 331 for International.

These figures are not entirely comparable, for although Mr. Wemple's figures provide for an increase in depreciation costs of jet aircraft of $44.1 million, a figure supplied to him by Price, Waterhouse, and an increase in insurance costs of $5.5 million, both of which figures are adopted by Mr. Simat, they make no provision for reduction in the costs of depreciation and insurance attributable to piston aircraft removed from operations. The latter are estimated by Mr. Simat at $14.6 million. If the savings in piston aircraft depreciation and insurance expense are not considered, the difference between the two estimates would be increased by $14.6 million to $162.0 million. 1/

Each of these estimates represents a combination of estimates, by year and by Division, for increased jet operations and for decreased piston operations. The yearly estimates for the entire period, arranged in these categories, are as follows:

1/ DX 348.

1/ Source: DX 348, p. 3.

2/ Source: DX 359B, pp. III-25 - 27.

3/ Mr. Wemple computes only the net changes in jet and piston operations.

4/ Since the Supplemental Report does not deal with the International Division, there is no change from DX 348.

No comparison can be made in terms of the four Chapters of Mr. Wemple's Report (II-V) which deal individually with the equipment premises, for Mr. Simat's supplemental estimates are in terms of TWA's entire fleet. What follows is a comparison of the assumptions and methods adopted by Mr. Wemple and Mr. Simat to estimate changes in Domestic Division profits. Since those adopted by Mr. Wemple have not since been changed, only brief treatment to facilitate comparison is given them here, and reference is made to the fuller exposition contained in Defendants' Exhibit 348.

2. Equipment and Operating Assumptions

The Supplemental Report is premised upon the same jet equipment assumptions as those used by Mr. Wemple[1/] (Supplemental Report, Vol. B, pp. III-1 - III-3). Mr. Simat assumed the same total number of added jet and deleted piston plane miles and the same distribution thereof among the various plane types as in the prior report (Vol. B, Tables III-A, III-B). The assumptions as to added jet plane miles are also the same as those used by Mr. Wemple. Mr. Simat then estimated the number of departures and average stage length in each month for each type of aircraft in the resulting constructive fleet

---

1/ See DX 348, pp. 4-5, 6-7.

on the basis of TWA's schedule pattern and preferences in the month in which its actual fleet was closest in number to the constructive fleet (Vol. B, pp. III-8 - III-13).

3. Revenue Estimates

The estimates of gain or loss in domestic passenger revenues associated with the addition of jet or deletion of piston plane miles were based upon estimates of changes in traffic (added or deleted revenue passenger miles) to which yields (cents per revenue passenger mile) were applied. As in all previous estimates, both Mr. Wemple's and Mr. Simat's, 5% was added to passenger revenue changes to obtain changes in total transportation revenue.1/

a. Traffic estimates

By relating the year-to-year changes in TWA's historical on-line passenger traffic (traffic carried between a point of origin and a point of final destination) between pairs of points served by TWA non-stop flights during 1959-63 to the year-to-year changes in jet and piston aircraft services historically provided, segment-by-segment, Mr. Simat determined relationships for

---

1/ See DX 348, p. 8.

both jet and piston services between a unit change in seat miles and the accompanying change in revenue passenger miles. He applied these relationships to the assumed added jet and deleted piston seat miles to arrive at his estimates of the number of added and deleted revenue passenger miles (Vol. B, pp. III-14 - III-18).[1/]

b. Yield estimates

Mr. Simat used the availability of TWA data to obtain a new relationship between stage length and passenger trip length (Vol. B, pp. III-19 - III-23). Apart from this change, added and deleted revenues were calculated from added and deleted revenue passenger miles as in the prior report.[2/] The following is a summary of the estimated changes in passenger revenues for the Domestic Division.

	Mr. Wemple[3/] (Millions)	Mr. Simat[4/] (Millions)	Difference (Mr. Wemple's estimate less Mr. Simat's) (Millions)
Jet	$ + 229	$ + 76	$ 153
Piston	- 102	- 171	69
Net Change	$ + 127	$ - 95	$ 222

1/ See DX 348, pp. 8-10.

2/ See DX 348, pp. 11-13.

3/ DX 348, p. 21.

4/ DX 359B, pp. III-25, III-26.

This compares with Mr. Simat's previous estimate of $136.5 million added jet and $174 million deleted piston passenger revenues, or a net of $-37.5 million which differed from Mr. Wemple's net by $164.5 million.[1/]

c. Cost estimates.

Mr. Simat calculated added and deleted direct and indirect costs by the same methods that he used in the prior report,[2/] although, since some of the costing units depend on variables such as stage lengths and block hours, the estimates themselves are different. In addition, because the constructive scheduling of added aircraft involved changes in the scheduled usage of existing aircraft, Mr. Simat applied his costing procedures not, as in the prior report, only to the added operations, but rather to the entire constructive operation in each year. The changes due to added and deleted services were then determined by subtracting historical from constructive costs.

1/ DX 348, p. 12.

2/ DX 348, pp. 16-20.

Estimates of Changes in Direct Operating Expense (Less Depreciation and Insurance) (Millions of Dollars)

	Mr. Wemple[1]	Mr. Simat[2]	Difference (Mr. Wemple's estimate less Mr. Simat's)
Domestic			
Jets	+ 98.8	+ 100.7	- 1.9
Pistons	- 71.5	- 101.0	+ 29.5
Net	+ 27.3	- 0.3	+ 27.6
International			
Jets	+ 35.7	+ 35.3	+ 0.4
Pistons	- 16.4	- 16.4	0.0
Net	+ 19.3	+ 18.9	+ 0.4
System			
Jets	+ 134.5	+ 136.0	- 1.5
Pistons	- 87.9	- 117.4	+ 29.5
Net	+ 46.6	+ 18.6	+ 28.0

There is no difference in the estimates of costs of insurance ($5.5 million) and depreciation, including rentals, ($44.1 million) attributable to added jet availability, but Mr. Simat included, as Mr. Wemple did not, estimated savings of $14.6 million in such costs as a result of piston retirements.[3]

1/ DX 348, p. 18.

2/ DX 359B, pp. III-25 - III-27 for Domestic and DX 331 for International.

3/ See DX 348, pp. 7-8.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1971

No.

HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,
Petitioners,

v.

TRANS WORLD AIRLINES, INC., *Respondent.*

PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

Petitioners Hughes Tool Company and Raymond M. Holliday pray that a writ of certiorari issue to review the opinion and judgment of the United States Court of Appeals for the Second Circuit entered on September 1, 1971, which affirmed a judgment in favor of respondent Trans World Airlines, Inc., of $145,448,141.07 and increased the rate of interest on that judgment from 6% to 7½%.

OPINIONS BELOW

The opinion of the Court of Appeals review of which is sought is reported at 449 F.2d 51 and is set forth at page

108a of the separately-bound Appendix.[1] Earlier opinions in this litigation, also set forth in the separately-bound Appendix, are reported as follows:

(1) The opinion and order of the District Court for the Southern District of New York, dated February 7, 1963, denying petitioners' motion to dismiss the complaint, is reported at 214 F. Supp. 106. (App. 1a)

(2) The opinion and order of the District Court, dated May 3, 1963, ordering the entry of a judgment by default against petitioners and certifying the presence of a controlling question of law, is reported at 32 F.R.D. 604. (App. 13a)

(3) The opinion of the Court of Appeals for the Second Circuit, dated June 2, 1964, affirming the District Court on the question on which interlocutory appeal was allowed, is reported at 332 F.2d 602. (App. 19a)

(4) The orders of this Court granting and then dismissing writs of certiorari as improvidently granted, dated November 16, 1964, and March 8, 1965, are reported at 379 U.S. 912, 380 U.S. 248, and 380 U.S. 249. (App. 44a, 45a, 46a)

(5) The opinion and order of the District Court, dated November 16, 1964, affirming the Special Master's refusal to adopt respondents' proposed interim findings, is reported at 38 F.R.D. 499. (App. 47a)

(6) The opinion and order of the District Court, dated December 23, 1969, confirming the Special Master's damage award in the sum of $137,611,435.95, is reported at 308 F. Supp. 679. (App. 50a)

(7) The opinion, order, and judgment of the District Court, dated April 13 and 14, 1970, including counsel fees of $7,500,000 and costs, is reported at 312 F. Supp. 478. (App. 81a, 93a)

A certified copy of the Joint Appendix printed for the use of the court below has been furnished to the Clerk of this Court, and references to it are in the form, "2d Cir. App. A—." References to portions of the record that were not printed in the Joint Appendix are in the form, "Doc. —."

(8) The opinion and order of the District Court, dated June 10, 1970, granting stay of execution and establishing security pending appeal, is reported at 314 F. Supp. 94. (App. 94a)

JURISDICTION

The judgment of the Court of Appeals for the Second Circuit was entered on September 1, 1971. A timely petition for rehearing was filed on September 15, 1971, and denied on September 28, 1971 (App. 163a). The jurisdiction of this Court is invoked under 28 U.S.C. § 1254(1).

QUESTIONS PRESENTED

1. Does a defendant have a right under the Due Process Clause of the Fifth Amendment and as a part of notice pleading under the Civil Rules to require plaintiff to identify with reasonable specificity the conduct that it claims is illegal before defendant is required to participate in lengthy and expensive deposition proceedings in which plaintiff seeks evidence from the defendant to support the charges of illegality?

2. Is a defendant deprived of property without due process of law in violation of the Fifth Amendment if a court enters a default judgment, as a sanction for refusal to make further discovery, under circumstances that do not permit a presumption that the defendant has no defense to the action, and then treats the default as a conclusive admission of liability and that damage proximately resulted therefrom?

3. After a defendant is in default may a federal court, despite the clear prohibition of Civil Rule 54(c), permit a plaintiff to amend its complaint so that it may be awarded damages substantially greater than those prayed for in the complaint at the time of the default?

4. When the Civil Aeronautics Board has approved an acquisition of control over an air carrier by a person engaged in a phase of aeronautics and has further approved all relevant transactions between them, is the exercise of that control to determine how the air carrier acquires aircraft and the necessary financing therefor immunized

from the operation of the antitrust laws under Section 414 of the Federal Aviation Act?

5. May a subsidiary recover against its parent for violation of the Sherman Act because the parent determines the manner and method by which the subsidiary acquires capital equipment, when the parent is not a competitor of those who manufacture and supply such equipment?

6. Is a corporation that has in no way restrained or monopolized a particular area of commerce subject to damages under the Sherman Act because it has "independent economic significance" and is a "potential competitor" of those engaged in that area of commerce?

7. May a plaintiff recover antitrust damages without introducing any evidence that relates the injuries claimed to the restraint or monopolization of trade alleged and without showing that the plaintiff had the financial ability to do what it claims defendants prevented it from doing?

CONSTITUTIONAL AND STATUTORY PROVISIONS INVOLVED

The constitutional and statutory provisions involved are set forth in the separately-bound Appendix beginning at page 176a. They include the following:

1. United States Constitution, Amendment V.
2. United States Code, Title 15, Sections 1 and 2 (Sherman Act §§ 1, 2) and Sections 14 and 18 (Clayton Act §§ 3, 7).
3. United States Code, Title 49, Sections 1378 and 1384 (Federal Aviation Act §§ 408, 414).
4. United States Code, Title 28, Section 1292.
5. Federal Rules of Civil Procedure, Rules 16, 37, 54, and 55.

STATEMENT OF THE CASE

The Judgment

The judgment below for $145,448,141.07, with interest at 7½%, was entered as a sanction under Civil Rule 37. The District Court ordered that a default judgment be entered against petitioners after Hughes Tool Company ("Toolco") had elected to rest on the merits of its legal positions in order to obtain appellate review of interlocu-

tory orders of the District Court. Following the default order, a hearing was held before a Special Master. It was limited to the amount of damages to be awarded Trans World Airlines, Inc. ("TWA").

The judgment awards $137,611,435.95 as treble damages under the antitrust laws, plus $7,500,000 in attorneys' fees and $336,705.12 as costs.

The Toolco-TWA Control Relationship

Petitioner Toolco was formerly the owner of 78% of the stock of TWA. Petitioner Raymond M. Holliday ("Holliday") is a Toolco executive and was for a time a director of TWA.

The Civil Aeronautics Board ("CAB"), pursuant to Section 408 of the Federal Aviation Act (49 U.S.C. § 1378), twice approved after public hearings the acquisition by Toolco of control over TWA. *Transcontinental & Western Air., Inc., Control by Hughes Tool Co.*, 6 C.A.B. 153 (1944); *Transcontinental & Western Air., Further Control by Hughes Tool Co.*, 12 C.A.B. 192 (1950). The CAB found in 1944 that it had jurisdiction over Toolco's acquisition of control because Toolco had ordered aircraft for TWA, some of which might be sold to airlines other than TWA, and thus was engaged in a phase of aeronautics within the meaning of Section 408. The CAB retained jurisdiction over the Toolco-TWA relationship by approving the acquisition of control only on the condition that individual transactions between Toolco and TWA be limited to less than $200 and total annual transactions between Toolco and TWA to less than $10,000. As a result, every material transaction between Toolco and TWA was submitted to the CAB and approved by it under Section 408 through modification of the original orders approving acquisition of control. The CAB issued nineteen such modification orders, including orders approving the specific transactions that are the subject of this litigation.

In 1960, several large banks and insurance companies demanded, as a condition to their supplying senior financing for TWA's initial jet fleet, that Toolco place its TWA stock in a voting trust controlled by them. Toolco yielded

to this demand on December 31, 1960. The new TWA management, which the lenders installed, filed an antitrust complaint against Toolco, Holliday and Howard R. Hughes ("Hughes"), Toolco's sole stockholder, six months thereafter. Hughes was never served.

The Complaint

The complaint charged in conclusory terms violations of Sections 1 and 2 of the Sherman Act and Sections 3 and 7 of the Clayton Act. Toolco was alleged to be a manufacturer and supplier of aircraft to air carriers and the offenses charged all relate to the alleged exclusion of competitors of Toolco from the TWA market for aircraft. This alleged exclusion of Toolco's competitors was variously denominated an acquisition of stock in violation of Section 7 of the Clayton Act, a boycott, a tie-in, monopolization or an attempt to monopolize, and sales and leases on the condition that TWA not acquire aircraft from any competitor of Toolco.

The complaint alleged a number of acts by Toolco, some during the period of Toolco control and some after the voting trust had taken control, in furtherance of the offenses charged. At the damage hearing, however, TWA limited its claims to the manner in which, under Toolco control, Toolco acquired its initial jet fleet from Boeing and Convair.[2]

The complaint prayed for treble damages of $105 million, divestiture, and other injunctive relief.[3] Since both TWA and Toolco are Delaware corporations, federal jurisdiction was solely dependent on alleged antitrust violations.[4]

---

[2] In the damage hearing, TWA did not seek any damages for conduct of the defendants after the voting trust took control in December, 1960 or because of an alleged conspiracy between the defendants and Atlas Corporation to bring about a merger of Northeast Airlines and TWA or for alleged malicious and wilful interference with TWA's business subsequent to December, 1960.

[3] Toolco sold its interest in TWA in a public offering in 1966.

[4] The answers of Toolco and Holliday denied the alleged violations of law and asserted as an affirmative defense that the District Court had no jurisdiction because of exclusive primary jurisdiction in the CAB.

Toolco Seeks To Discover TWA's Factual Contentions

From the filing of the complaint, TWA sought to take the deposition of Hughes before Toolco obtained a reasonable identification of TWA's factual claims. Toolco urged that the charges of antitrust violations in the complaint were unintelligible because: (1) Toolco had never manufactured airplanes for airlines and was a supplier only to the extent that it had helped its subsidiary acquire aircraft; and (2) such acts as were alleged in the complaint appeared to be immunized from the antitrust laws, under Section 414 of the Federal Aviation Act, by the orders of the CAB approving Toolco's control of TWA and all transactions in which TWA acquired equipment from Toolco. The District Court awarded Toolco priority of discovery.

The deposition of TWA failed to reveal the ultimate facts on which TWA relied to support its claimed antitrust violations.[5] Accordingly, Special Master J. Lee Rankin, who had been appointed to preside over discovery, recommended that a pretrial conference be held under Rule 16, at which TWA would be required to delineate the facts on which it based its complaint and at which the issues could be defined. He announced that he considered the holding of a pretrial

---

[5] The Special Master, J. Lee Rankin, stated:

> I had thought that before we completed the testimony of Mr. Tillinghast [the Chief Executive Officer of TWA], I would be informed about the ultimate facts that the plaintiff was relying upon to support the various allegations of its complaint, which are largely conclusions of law, but do conform to the requirements of the federal rules concerning such complaints.
>
> I did not think that with the chief executive officer of the plaintiff being deposed, we would reach a point at the conclusion where I would not know the ultimate facts upon which the plaintiff was relying to establish those various allegations insofar as they had a bearing upon a violation of the antitrust laws.
>
> But I did find I was in that position. I think that has an important bearing upon what is equitable in asking testimony of principal witnesses of the defendant in this case [*i.e.*, Howard Hughes], and when that should be required. [Doc. 236, Tr. 101.]

conference to be so important to the progress of the litigation that if the parties did not apply to the District Court for a Rule 16 proceeding, which he offered to conduct, he would do so himself.

Toolco promptly applied for a pretrial conference. TWA opposed the application. Toolco also served interrogatories designed to elicit TWA's factual contentions. The Special Master ruled that the interrogatories were proper and that TWA could be of great assistance to the progress of the litigation by answering them promptly. TWA appealed this ruling.

On October 25, 1962, the Special Master set February 11, 1963, as the date for the deposition of Hughes in California pursuant to a witness subpoena. He fixed this date in order to give Toolco an opportunity to bring on a dispositive motion addressed to the complaint after Toolco had obtained a definition of the issues, either through answers to interrogatories and further discovery of TWA, or through a Rule 16 proceeding (Doc. 236, Tr. 59-63, 116-117).

The District Court deprived Toolco of this opportunity. On January 10, 1963, it denied Toolco's application for a Rule 16 proceeding, ordered that TWA need not answer interrogatories until 60 days after completion of the Hughes deposition, and confirmed the February 11th date for that deposition (2d Cir. App. A.-122-126).

The Order for the Entry of a Default Judgment

Shortly after the action was begun Toolco had moved to dismiss the complaint or for summary judgment. This motion was held in abeyance pending a delineation of TWA's factual contentions. Toolco advised the District Court on several occasions that once TWA's factual claims were defined Toolco would be in a position to admit the facts (in contrast to legal conclusions) and obtain a determination whether they gave rise to liability and, if so, to what extent.[6] Deprived of this opportunity by the District

---

[6] For example, as early as October 2, 1961, counsel for Toolco advised the District Court: "We believe this case can be decided, in so far as the complaint is concerned on admitted facts" (Doc.

Court's rulings, and faced with the prospect of a deposition expected to take at least "a good two or three months" (2d Cir. App. A-1908) and to cost Toolco $5 million (2d Cir. App. A-280), Toolco abandoned the motion for summary judgment and brought on for hearing the motion to dismiss.

The District Court denied the motion from the bench (2d Cir. App. A-xix-xx) and refused to certify its denial of Toolco's motion so as to permit an interlocutory appeal under 28 U.S.C. § 1292(b) (App. 12a).[7]

In order to secure appellate review, Toolco on February 8, 1963, filed a Notice of Position, stating that, subject only to whatever judicial relief it might thereafter obtain, it elected to rest on the merits of its position so that it might avoid the burden and the enormous expenses of further pretrial and trial proceedings prior to the time that an appellate court had the opportunity to rule upon the decisions and orders of the trial court (2d Cir. App. A-268).[8] In a hearing the same day, Toolco advised the District Court that by reason of the election it had made, Hughes would not appear for deposition on February 11, 1963 (2d Cir. App. A-281) and that Toolco's position would be the same, and it would not further defend on the merits, even if Hughes should appear (2d Cir. App. A-298-299). Pursuant to its election, Toolco declined to produce documents in addition to some 125,000 documents that it had already

---

48, p. 23). In a memorandum filed on July 12, 1962, counsel for Toolco stated:

> Once the present management of TWA has been compelled to disclose the factual basis for its claims, Toolco will be in a position to admit such facts and seek a determination as to whether they give rise to liability and, if so, as to the extent thereof. It has been the position of Toolco since the commencement of this action that once TWA's management is compelled to disclose what it claims, a determination on the merits as to such claims will be appropriate. [Doc. 100, pp. 24-25.]

[7] The District Court gave no reason at the time for this refusal, although later the court suggested that Toolco could have had review by writ of mandamus (2d Cir. App. A-277).

[8] Toolco, as 78% stockholder of TWA, was bearing 78% of TWA's expenses, in addition to its own.

furnished to TWA (2d Cir. App. A-305). The District Court then indicated it would entertain a motion by TWA for a default judgment (2d Cir. App. A-307).

On February 15, 1963, TWA moved for the entry of a default judgment and also to increase the *ad damnum* from $105 million to $135 million. On May 3, 1963, the District Court granted these motions and referred the matter to the Special Master to determine "the amount of damages to be paid * * *." It also granted the certification under 28 U.S.C. § 1292(b) that it had declined to grant at the time it denied the motion to dismiss the complaint (App. 13a).

The Interlocutory Appeal

Toolco petitioned the Court of Appeals for leave to appeal under 28 U.S.C. § 1292(b). The Court of Appeals limited its review to whether the District Court had jurisdiction of the action and whether the CAB orders were a complete defense to the action. It affirmed the District Court on those issues (App. 19a). This Court granted certiorari but, at this interlocutory stage of the case, dismissed the writ after argument as improvidently granted (380 U.S. 248, 249; App. 45a, 46a).

The Damage Award

At the damage hearing before newly-appointed Special Master Herbert Brownell, TWA for the first time specified the conduct of the defendants that it claimed had injured it and for which it sought damages. On a complaint that alleged a boycott, tie-in, and attempt to monopolize based upon the exclusion of manufacturers and suppliers of aircraft other than Toolco from the TWA market, TWA sought damages because Toolco, not TWA, ordered aircraft from Boeing and Convair for the TWA market.

According to TWA, TWA should have ordered for its initial jet fleet 33 planes from Boeing and 30 planes from Convair——exactly the planes that Toolco ordered for its subsidiary. If TWA, not Toolco, had ordered the planes, TWA contended it would have (1) ordered the planes from Boeing sooner, (2) received all the planes instead of cutting back on the size of the fleet, and (3) purchased all the

planes instead of leasing some of the Boeing jets for a time and purchasing them later.[9]

Special Master Brownell held that the order for the entry of a default judgment established both liability and proximate cause. His Report did not explain how Toolco's ordering planes for TWA instead of TWA's ordering the

---

[9] Petitioners introduced no evidence at the damage hearing other than certain industry statistics and expert testimony as to the amount of damages, if any. The following facts, none of which had ever been in dispute and all of which were well-known to TWA at the time it filed its complaint, were confirmed in the course of the cross-examination of TWA witnesses:

(a) Toolco did not manufacture airplanes for air carriers and did not compete with manufacturers and suppliers of aircraft for air carriers.

(b) Toolco ordered Boeing aircraft promptly after Convair had decided not to manufacture a long-range jet that would have met the unique requirements of TWA.

(c) Toolco ordered jets for TWA only after TWA advised Toolco that it lacked the financial resources to order jets itself.

(d) To the manufacturers whether TWA or Toolco ordered the aircraft made no difference. Toolco's contracts with the manufacturers prohibited the assignment of the right to receive the aircraft to anybody other than TWA without the consent of the manufacturer. A vice president of Boeing testified that Boeing at no time considered Toolco or TWA as separate customers, stating: "We considered that they were and are the same" (2d Cir. App. A-1101).

(e) In March, 1959, after the announcement of improved fanjets, Toolco determined that eight of the Boeing jets and ten of the Convair jets were not needed by TWA for its initial jet fleet and so advised TWA. Pursuant to this decision, in the fall of 1959 Toolco released to Boeing its contractual rights to six long-range Boeing jets then under construction. Boeing sold these planes to Pan American.

(f) Late in 1960 Toolco released its contractual rights to six of the ten Convair planes that had been determined to be surplus to TWA's needs. The six planes were then leased by Convair to Northeast. The remaining four were ultimately delivered to Toolco. Toolco offered these four aircraft to TWA in 1961, but TWA did not accept the offer, and the planes were not used until 1963.

(g) Toolco's financial resources and credit made possible payment for and the delivery of 19 of the Boeing jets. Pend-

planes itself, or the other decisions thereafter made, could conceivably be a violation of the antitrust laws.

The Special Master, on the basis of expert testimony that estimated increased revenues by mechanically applying TWA's load factors to a larger number of aircraft, awarded TWA $27,600,000 for late delivery of jets and delivery of a smaller number of jets than originally ordered. He awarded TWA $5,300,000 because some of the jets were temporarily leased by TWA. He awarded TWA $570,748.65 for disruption of TWA's business because the Convair jets were delivered late. The remaining $12,400,000 of the damage award represents the effect of retroactive application of changes in accounting practices made by TWA two-and-a-half years after this action was instituted. The total award of damages after trebling came to $137,611,435.95.[10]

The District Court confirmed the Report of the Special Master in all respects (App. 50a). Judgment was entered for $145,448,141.07, including attorneys' fees and costs, with interest at the rate of 6%.

The Decision of the Court of Appeals

TWA, Toolco, and Holliday filed cross-appeals from the District Court's judgment. TWA claimed that the amount awarded was inadequate. Toolco and Holliday maintained that the judgment entered was without foundation, in fact or law, and that the order for the entry of the default judgment under the circumstances of this case and the

---

ing the arrangement of permanent financing, Toolco leased the planes to TWA on a day-to-day basis. The leases were approved by the CAB under Section 408 of the Federal Aviation Act.

(h) Of the 20 Convair planes received by TWA, 19 were delivered after permanent financing was arranged in December 1960.

[10] The Special Master rejected the hypothetical testimony of TWA's financial expert as to about how TWA could have raised on its own the large amounts of financing required for the 63-plane fleet. Despite his rejection of the only testimony as to how TWA could have financed the 63-plane fleet, the Special Master assumed, without explanation, that TWA could have obtained financing for the jet fleet hypothesized by TWA.

effect given to that order by the District Court deprived them of their property without due process of law. The Court of Appeals affirmed the judgment in all respects but one. It increased the interest rate from 6% to 7½% (App. 108a). The total amount of the judgment with interest now stands at over $163 million. Interest alone is running at almost $11 million a year.

REASONS FOR GRANTING THE WRIT

The decision of the Court of Appeals does tremendous violence to due process of law, subjecting petitioners to the largest judgment ever awarded as a sanction for steps that, rightly or wrongly, they fully believed they were entitled to take in order to permit an orderly test of their legal position. The decision distorts the proper application of the Federal Rules of Civil Procedure. It introduces startling innovations into the antitrust laws that, if left intact, will plague and clog the federal courts for years to come. The decision provides the lure of treble damages to bring to the exclusive jurisdiction of the federal courts suits that until now have been regarded as simple state law claims. Finally, the decision virtually emasculates an important section of the Federal Aviation Act and in doing so discourages others in the aeronautics industry from coming to the assistance of struggling carriers and invites collision between the CAB and the courts.

A. Due Process—the right to know the charges prior to lengthy, burdensome and costly discovery

The plainest principles of fairness and due process, as well as orderly procedure, require that a defendant be apprised of the charges against him before he may be compelled to subject himself to discovery, at an immense expenditure of time and funds. This is particularly true in a treble damage action under the antitrust laws, where the conduct charged is a crime and two-thirds of the relief requested is punitive. Those principles were ignored in the decision of the Court of Appeals.

This case has been colored in the popular mind by the image of a man of great wealth so insistent on maintaining

his privacy that he flouts the lawful processes of the United States courts. The image bears no resemblance to the reality of what in fact happened. It was Toolco that made a responsible decision to decline to proceed further in order to test its legal rights. Toolco specifically advised the court that its decision not to proceed would be the same even if Hughes, who had been subpoenaed as a witness, were to appear on the day set for his deposition (2d Cir. App. A-299, A-303-304).

Toolco made its decision only after the District Court: (1) refused to require TWA to disclose its factual contentions prior to Toolco's being subjected to a deposition that would have taken months and cost it more than $5 million (2d Cir. App. A-280); (2) determined that the antitrust claims asserted were not within the primary jurisdiction of the CAB and had not been immunized from the operation of the antitrust laws by orders of the CAB approving Toolco's control of and transactions with TWA; and (3) declined to certify its rulings for an appeal under 28 U.S.C. § 1292(b).

Toolco took the position it did because it seemed the only way to obtain appellate review of these interlocutory orders that it believed erroneous without being put to the expense of useless litigation. Its course was suggested by that successfully followed by the United States in *United States* v. *Procter & Gamble Co.*, 356 U.S. 677, 680-681 (1958), where the United States solicited dismissal of its complaint as a means of obtaining appellate review of an order requiring it to produce a grand jury transcript. See also *United States* v. *Ryan*, 402 U.S. 530, 533 (1971), holding that a person who believes that a District Court has erred in refusing to quash a grand jury subpoena "is free to refuse compliance and * * * in such event he may obtain full review of his claims before undertaking any burden of compliance with the subpoena."[11]

In this case the need for a meaningful identification of TWA's factual contentions was peculiarly great because

---

[11] See also *Allied Air Freight, Inc.* v. *Pan American World Airways*, 393 F.2d 441 (2d Cir.), *cert. denied*, 393 U.S. 846 (1968), described in note 22, *infra*, p. 24.

defendants saw no facts alleged in the complaint that would constitute a violation of the antitrust laws. On the surface, the complaint would appear to be detailed. It is long. It has many paragraphs. It seems to state numerous facts. But on closer examination by petitioners, the allegations appeared meaningless for they all seemed to center on acts and judgments normally and naturally engaged in by a parent in relation to its subsidiary. The complaint uses in abundance the special jargon of antitrust—"boycott," "tying arrangement," "attempt to monopolize"—to describe a normal and legal relationship between a parent and a subsidiary. In addition the complaint simply ignored the orders of the CAB approving Toolco's control of TWA and all transactions between Toolco and TWA. In fact, the complaint makes no reference whatever to the CAB. Yet the complaint alleged that the acquisition of Toolco's stock interest in TWA violated Section 7 of the Clayton Act, a conclusory allegation that made no sense in light of the CAB's approval of that acquisition by Toolco.

Petitioners' reaction to the complaint was that this case was a classic one for summary judgment because the key facts apparently relied upon gave rise to no antitrust claim, and petitioners were ready to stipulate them. Moreover, Toolco knew, and the damage hearing confirmed, that these were the only facts upon which TWA could be relying—for both TWA and Toolco, after 21 years, were aware of all of the facts concerning their relationship. There were, in truth, no facts to be discovered, and it was wholly unlikely that there would be any "genuine issue as to any material fact" between them as to what had happened in the past, however much they might differ about the legal consequences of those events.

For these reasons Toolco sought to ascertain on which of the facts, known to both parties, TWA was relying to support the conclusory allegations of antitrust violations. Special Master Rankin felt the same way. He tried to elicit from TWA and its executives the facts upon which they were relying to establish antitrust violations, but he was unsuccessful.[12]

[12] See his statement quoted at note 5, *supra*, p. 7.

Despite this, the District Court and the Court of Appeals held that the defendants were entitled to a specification of TWA's factual contentions and a delineation of the issues only *after* they had been subjected to an enormously burdensome and expensive deposition for the purpose of permitting plaintiff to seek evidence or leads to evidence to support its ill-defined charges. In so holding the courts below overlooked the function of a complaint under modern pleading as well as the nature of discovery under the Federal Rules of Civil Procedure.

At one time the pleadings were expected to inform a defendant of the facts underlying the plaintiff's claim and to define the issues between the parties. They were not a suitable device for this task. Accordingly, under the Federal Rules of Civil Procedure, the complaint is now expected only to give defendant "fair notice of what the plaintiff's claim is and the grounds upon which it rests." *Conley* v. *Gibson*, 355 U.S. 41, 48 (1957). The defendant's right to know with reasonable specificity the factual nature of that claim is to be vindicated through the various discovery devices provided by the Rules together with pretrial conferences under Rule 16. *Hickman* v. *Taylor*, 329 U.S. 495, 501 (1947). The same principles of simplified pleading that govern a routine personal injury case are applicable also to the most complex antitrust case. However, as the draftsman of the Civil Rules was at pains to explain in the leading case so holding, in complicated cases in which fuller disclosure of the basis of the claim is needed, simplified pleading is workable only because such disclosure can be had by these other devices in the rules, including Rule 16 and the discovery rules. *Nagler* v. *Admiral Corp.*, 248 F.2d 319, 322-323 (2d Cir. 1957).

The most recent and authoritative guidelines for the conduct of the large antitrust case, found in *Manual for Complex and Multidistrict Litigation* (1970), take into account the necessity for a defendant in a "big" case to be informed in the first instance of the basic facts underlying the complaint. Thus the *Manual* recommends a "first wave of discovery" designed to obtain information concerning the transactions upon which the claims for relief are based.

Only after this is completed is discovery on the merits to be allowed in a "second wave of discovery." *Manual* § 1.5.[13]

Yet in this case, when Toolco turned to the various procedures provided by the Rules in an effort to require TWA to disclose the factual basis of the wrongdoing being charged and to identify the issues between the parties, the District Court denied Toolco's motion for Rule 16 procedures, despite the specific recommendation of the Special Master, and refused to require answers to defendant Toolco's interrogatories until after the deposition of the witness Hughes, even though both the Special Master and the District Court found these interrogatories to be proper. Thus the court ordered that Hughes first appear for a deposition on the merits that would be both extensive and expensive, and for which he could not properly be prepared. The estimate that the deposition would cost Toolco in excess of $5 million (2d Cir. App. A-280) was never challenged.[14] Only after the expenditure of that astronomical amount was Toolco to be permitted to have any meaningful description of the nature of the claims against it.

Ordinarily the order of discovery is and must be for the discretion of the trial court. The grant of this broad discretion assumes that it will be exercised to illuminate, rather than to conceal, the issues. In this case, however, the discovery orders of the District Court, taken together,

---

[13] This is not a new perception. Before the present action was commenced, a predecessor of the present *Manual*, approved by the Judicial Conference of the United States, had said that in protracted cases discovery must be confined to the genuine issues necessary for decision and that the court must take affirmative steps to define the issues before discovery on the merits begins. *Handbook of Recommended Procedures for the Trial of Protracted Cases*, 25 F.R.D. 351, 386-390 (1960). An even earlier report, also approved by the Judicial Conference, had been to the same effect. *Report on Procedure in Anti-Trust and Other Protracted Cases*, 13 F.R.D. 62, 66-68 (1951).

[14] It is of interest that the District Court, which was not disturbed at the prospect of a deposition that would cost defendants more than $5 million, later felt it proper to observe that prior to this case the highest recoveries on record in cases that had gone to judgment had been $4.4 million and $4.2 million (App. 82a).

denied to petitioners the fundamental right to know the charges against them before being subjected to examination in search of evidence or leads to evidence. The rulings of the District Court deprived Toolco of the opportunity properly to prepare Hughes for the deposition, with intelligent advice of counsel. They deprived it also of the opportunity to obtain a determination, based on the facts claimed by TWA, whether TWA had any bona fide antitrust claims against petitioners. To put a defendant to an expense of $5 million in trial preparation before it is known if there is anything to be tried is so grave an abuse of judicial process as to amount to a denial of due process.

The matter has importance far beyond the confines of this case.[15] The possibilities for harassment of defendants, either for the purpose of inducing a settlement or for other ulterior motives unrelated to the merits of the litigation, are enormous. Particularly in the large antitrust case, where vague allegations of a conspiracy in restraint of trade may result in enormous expenditures on discovery, equal in themselves to a sizable judgment, the rights of a defendant under the discovery rules require protection. The ruling of the Court of Appeals will constitute a particularly enticing temptation to competitors to bring treble damage suits for reasons other than legitimate ones, since the expense of discovery and the knowledge gained therefrom can themselves be competitive weapons of no mean worth.

On the other hand, prompt identification of the issues and the stipulation of undisputed facts will greatly reduce the burden that the "big" case imposes on the federal courts. Here, if the facts relied on by TWA had been specified prior to the default, this case would have been disposed of expeditiously by summary judgment.[16]

---

[15] Certiorari is appropriate "to review undecided questions concerning the validity and construction of" the discovery rules (*Schlagenhauf* v. *Holder*, 379 U.S. 104, 109 (1964)), and to pass on questions of importance in the administration of the Federal Rules of Civil Procedures (*La Buy* v. *Howes Leather Co.*, 352 U.S. 249, 251 (1957)).

[16] The presentation of an intelligent motion for summary judgment requires that a defendant know with some certainty the plain-

Conclusory allegations of a complaint permit the artful pleader to bring his case in the federal courts even though ultimately it turns out that the conduct of the defendant does not support a federal claim or is one for an administrative agency. Only through requiring a prompt identification of the factual claims of a plaintiff and an early determination based on such facts as to whether the claim asserted is one over which the federal court has jurisdiction will the federal courts be relieved of the burden of cases that belong in the state courts or before an administrative agency.

The decision of the Second Circuit approving the actions of the District Court with regard to discovery may be expected to have great influence on courts around the country precisely because appellate decisions on the conduct of discovery are, quite properly, few and far between. Thus, there is an urgent need that this Court clarify for the lower courts the proper management of discovery in complex litigation.

B. Due Process—the use of a default to establish conclusions of law

The need for this Court to speak authoritatively on the effect of a default for noncompliance with the discovery provisions of the Federal Rules of Civil Procedure is highlighted by the fact that both Special Masters, the District Court, and the Court of Appeals all considered that the controlling decision was what the Second Circuit referred to as "the venerable but still definitive case" (App. 126a) of *Thomson* v. *Wooster*, 114 U.S. 104 (1885). This 86-year old case was decided in a procedural system that has long since been put in a museum and it cannot be correctly understood apart from its context.

Thomson involved a default for failure to answer. It did not and could not speak to the use of default as a sanction

---

tiff's factual claims. In this case, for example, though the complaint alleged a boycott (¶ 9(c)), it was not revealed until the damage hearing that the supposed boycott consisted of no more than Toolco's ordering planes for TWA from Boeing and Convair instead of TWA's ordering the same planes from Boeing and Convair.

for enforcement of the discovery rules. Indeed in the same month *Thomson* was decided this Court held that, despite the Conformity Act, a federal court lacked power to order a defendant in an action to appear for the taking of his deposition as authorized by a state statute. *Ex parte Fisk*, 113 U.S. 713 (1885). The even more sweeping discovery now permitted was everywhere unknown in that period.

The courts below read *Thomson* as teaching that a party in default "has admitted the truth of the well-pleaded allegations of the complaint" (App. 48a, 52a-53a, 126a). The view of the first Special Master that even a default judgment "must be just" (2d Cir. App. A-371) and that it was "his duty on behalf of the court to be satisfied of the liability of the defendants * * * " (2d Cir. App. A-372) was rejected (App. 48a). Accordingly the Second Circuit took the position "that the default had the effect of admitting or establishing that the acts pleaded in the complaint violated the antitrust laws and that those acts caused injury to TWA in the respects there alleged" (App. 139a). In accord with this view of the effect of a default, the Second Circuit ruled that "there was no burden on TWA to show that any of Toolco's acts pleaded in the complaint violated the antitrust laws nor to show that those acts caused the well-pleaded injuries" (App. 139a), and that the illegality of Toolco's acts was conclusively established by the default (App. 142a). In these rulings the courts below misread the *Thomson* decision.

What *Thomson* held is that a default admits "facts properly pleaded." 114 U.S. at 110. Evidence will not be heard to dispute those facts. *Ibid.* See also *United States* ex rel. *Harshman* v. *County Court of Knox County*, 122 U.S. 306, 316-317 (1887). Nothing in *Thomson* or in any other case supports the proposition that a default admits legal conclusions. To have included conclusions in a complaint would itself have been improper at a time when there was a rigorous rule that pleadings must be limited to the "dry, naked, actual facts." Pomeroy, *Remedies and Remedial Rights* 576 (2d ed. 1883). Thus it was held that a default did not admit "a mere conclusion of law." *Cragin*

v. *Lovell*, 109 U.S. 194, 199 (1883). Nor did a default admit that the facts alleged constituted a cause of action or authorized a recovery. *McAllister* v. *Kuhn*, 96 U.S. 87 (1877); *Cragin* v. *Lovell*, 109 U.S. 194 (1883); *Ohio Cent. R. Co.* v. *Central Trust Co.*, 133 U.S. 83 (1890); 3 Freeman, *Law of Judgments* 2664-2665 (5th ed., Tuttle 1925).

Today's more relaxed notions of pleading allow the use of conclusions in a complaint, but it is still true that conclusory allegations of an attempt to monopolize do not necessarily constitute a valid antitrust claim. *Central Savings & Loan Assn. of Charlton, Iowa* v. *Federal Home Loan Bank Board*, 422 F. 2d 504, 509 (8th Cir. 1970); *SCM Corp.* v. *Radio Corp. of America*, 407 F. 2d 166, 170 (2d Cir. 1968), *cert. denied*, 395 U.S. 943 (1969). Even after default, it remains for the court to consider whether "the unchallenged facts shown of record establish a legally binding obligation; it adjudicates the plaintiff's right of recovery and the extent of it, both of which are essential elements of the judgment." *Pope* v. *United States*, 323 U.S. 1, 12 (1944).[17]

This view of the effect of a default will not burden the courts. If, for example, a complaint alleges that on a specified date defendant executed and delivered to plaintiff a promissory note in which he promised to pay a specified sum by a certain date and that the money has not been paid (*cf.* Official Form 2), or if it alleges that on a particular day at a particular place defendant negligently drove a motor vehicle against plaintiff as a result of which plaintiff was thrown down and had his leg broken and other injuries (*cf.* Official Form 9), a first-year law student can tell at a glance that the facts admitted by the default give rise to liability. Those usual and routine cases are quite unlike

---

[17] See Civil Rule 55(b)(2), providing that after default the court may hold hearings, if necessary, "• • • to determine the amount of damages or *to establish the truth of any averment by evidence* or to make an investigation of any other matter • • • " (emphasis supplied).

an antitrust case in which there may be hard questions in determining liability even on an admitted state of facts.[18]

The holding of the courts below that a party in default has admitted legal conclusions of the complaint and the illegality of his conduct conflicts with applicable decisions of this Court, is contrary to Rule 37 of the Civil Rules, and is a denial of due process of law. It is settled here that the Constitution bars a court from denying a party all right to defend an action as a punishment for failure to obey a court order (*Hovey* v. *Elliott*, 167 U.S. 409 (1897)), though if a party has failed to produce evidence material to an issue it may be presumed that the party's position on that issue is lacking in merit. *Hammond Packing Co.* v. *Arkansas*, 212 U.S. 322 (1909). The presumption can constitutionally go no farther than the production order. Failure to produce evidence going only to one issue justifies resolving that issue against the defaulting party but does not permit the court to deny him a right to defend on other issues.[19]

As a result of Toolco's refusing to proceed further in order that it might obtain appellate review of the legal issues that it deemed controlling, petitioners were held to have admitted the illegality of their conduct, and ultimately were penalized by the entry against them of a default judgment that the courts below said was 30 times the largest judgment ever awarded in an American court, whether with

---

[18] In this respect a default is similar to a plea of guilty in a criminal case. Defendant admits his conduct by a guilty plea but may continue to challenge the illegality of the conduct. *Haynes* v. *United States*, 390 U.S. 85, 87 n. 2 (1968;) *Kolaski* v. *United States*, 362 F.2d 847 (5th Cir. 1966). Challenges of this kind rarely occur and do not burden the courts.

[19] *Mitchell* v. *Watson*, 58 Wash.2d 206, 361 P.2d 744 (1961); *People* v. *George Henriques & Co.*, 267 N.Y. 398, 196 N.E. 304 (1935); *Feingold* v. *Walworth Bros., Inc.*, 238 N.Y. 446, 144 N.E. 675 (1924); 4 Moore, *Federal Practice* ¶ 37.03[2.-1] at pp. 37-56 (2d ed. 1970); 8 Wright & Miller, *Federal Practice and Procedure* 763-764 (1970); Note, *Sanctions for Enforcement of Discovery—Constitutionality of Rule 37*, 37 Wash.L.Rev. 175, 181-182 (1962); Note, *The Constitutional Limits of Discovery*, 35 Ind.L.J. 337, 349-350 (1960).

or without a trial.[20] This severe sanction was imposed even though petitioners stood ready to stipulate to the basic facts, once they ascertained with a fair degree of specificity what it was TWA was claiming, so that they might obtain on the stipulated facts an adjudication of whether those facts gave rise to liability and, if so, the extent thereof. The sanction was imposed even though the District Court, which had earlier refused to permit an interlocutory appeal, certified when it entered the order of default that a substantial question existed on which there was ground for difference of opinion about the court's jurisdiction and the immunizing effect of the CAB orders.

When petitioners filed their Notice of Position they took their chances on whether they were right or wrong about the applicable law. They gave up their right to challenge the factual allegations of the complaint. But they cannot be held to have admitted the legal conclusions of the complaint that their acts were illegal and that any damage suffered by TWA was the proximate result of the facts alleged. There can be no presumption of want of merit in their legal position when their refusal to proceed further was because they wished to stand on that legal position.[21] The holding below that because of the default ever the most

---

[20] The very size of the judgment in this case points up its punitive nature and raises serious due process questions. In *United States v. United Mine Workers of America*, 70 F.Supp. 42 (D.D.C. 1946), the District Court, after detailed findings, concluded that an individual and a union had willfully violated a court order in regard to a matter of great public importance and were guilty of criminal and civil contempt. A judgment of $3.5 million was entered against the union. This Court thought that "excessive" and reduced it to $700,000 unless the union failed to comply in the future with the District Court's orders. 330 U.S. 258, 305 (1947). In the instant case the dispute is solely between private parties, the person whose deposition was sought was never served and was not a party to the case, and the judgment was 42 times larger than the one deemed "excessive" in the *United Mine Workers case*.

[21] It is apparently costlier for some litigants to persist in a position in order to obtain appellate review than it is for others. In one case the District Court stayed an antitrust action pending consideration by the CAB. It would not allow a § 1292(b) appeal.

conclusory allegations of the complaint are admitted, and that the illegality and its causal relation to the damages are established, is unsupported by precedent and is a constitutionally impermissible punishment of petitioners for the position they took. It was and is the view of the petitioners that the conduct relied on by TWA had no relationship to a violation of the antitrust laws and that the admissions of TWA at the damage hearing established that fact.[22] The default did not, and constitutionally could not, establish the contrary.

But if a default has the novel effect that the lower courts, by their misreading of *Thomson* v. *Wooster*, have given it, it was contrary to Rule 37 to grant a default judgment. The District Court purported to rely on what were then Rules 37(b)(2)(iii) and 37(d). But Rule 37(b)(2) provided that "the court may make such orders in regard to the refusal as are just, and among others" might render

---

Plaintiff refused to present its claim to the CAB and simply did nothing for two years. The action was then dismissed without prejudice for want of prosecution. On appeal from that dismissal it was held, as plaintiff had contended all along, that the action should not have been stayed. The action was reinstated and plaintiff was allowed to proceed. *Allied Air Freight, Inc.* v. *Pan American World Airways, Inc.*, 393 F.2d 441 (2d Cir.), *cert. denied*, 393 U.S. 846 (1968).

[22] An example will illustrate the point. TWA was awarded more than $50 million in damages because of the "diversion" of six Boeing aircraft from TWA to Pan American. The so-called "diversion," according to the testimony of TWA's sole factual witness, consisted of a decision, announced in the spring of 1958, to cut back the number of long-range Boeing jets that TWA would receive, followed some months later by a release to Boeing of Toolco's contract rights to the planes, which rights could not be assigned to anybody other than TWA without Boeing's consent, and the sale of the planes by Boeing to Pan American. By no stretch of the imagination does this "diversion" have anything to do with a boycott of anybody or with a tie-in of anything or an attempt to monopolize the supplying of aircraft to TWA or anyone else. Indeed if, as alleged, Toolco was using or intended to use TWA as a captive market, the "diversion" is plainly inconsistent with the allegation. Thus solely because of the default judgment TWA was awarded over $50 million for the alleged "diversion."

a judgment by default.[23] If a default judgment establishes the illegality of the conduct with which a defendant is charged, it would not be "just" to enter a default judgment, the severest of all possible sanctions, when it is well understood that defendant's refusal to make further discovery is to test the illegality of the charged conduct. Although the limitation to "just" sanctions is addressed in the first instance to the trial courts, it is vigorously policed by the appellate courts, first, because of the constitutional issues lurking so closely in the background if overly drastic sanctions are imposed and, second, because of the general purpose of the Civil Rules to encourage dispositions on the merits. 4 Moore, *Federal Practice* 37.08 (2d ed. 1970); 8 Wright & Miller, *Federal Practice and Procedure,* § 2284 (1970).

The lower courts need direction, written in today's procedural idiom, on the effect of a default—and particularly of a default for failure to make discovery—rather than being required to look to an 1885 decision that is, as the decisions below indicate, readily misunderstood.

C. Conflict Between Circuits—increase in the ad damnum after default

The Second Circuit has taken a position directly contrary to that reached by the Ninth Circuit, as to whether a plaintiff can amend its complaint to increase the damages sought from the defendant *after* defendant has incurred a default for failure to make discovery. Such an increase violates Rule 54(c), which states: "A judgment by default shall not * * * exceed in amount that prayed for in the demand for judgment." See also Rule 55(d), which states: "In all cases a judgment by default is subject to the limitations of Rule 54(c)."

In *Fong* v. *United States,* 300 F.2d 400 (9th Cir.), *cert. denied,* 370 U.S. 938 (1962), default was entered against

---

[23] As a part of the 1970 amendments of the discovery rules, language limiting the court to such sanctions "as are just" was added to Rule 37(d). The courts, however, had always held that the express limitation stated in Rule 37(b)(2) applied also to Rule 37(d). Rosenberg, *Sanctions to Effectuate Pretrial Discovery,* 58 Col.L.Rev. 480, 494 (1958).

a defendant who failed to appear for the taking of his deposition. At the hearing on damages plaintiff was allowed to amend one count of its complaint to state a claim for actual damages in addition to the liquidated damages that it had originally claimed. The Ninth Circuit held that this could not be done. It pointed out that the limitation of Rule 54(c) was "very simple, clear and decisive" and that the court was thus "unable to escape the explicit and emphatic mandate of Rule 54(c) which unmistakably commands that upon the facts and circumstances of this case the judgment 'shall not be different in kind from or exceed in amount that prayed for in the demand for judgment' at the time of the entry of the default." 300 F.2d at 413.

In the face of this ruling, the Second Circuit quite candidly and explicitly recognized that "the authorities do not appear to be in agreement" on this issue and that it had not previously expressed itself on the question (App. 156a). Nevertheless it held that the District Court properly allowed an increase from $105 million to $135 million by amendment after petitioners defaulted and properly awarded the full sum asked in the amended prayer.[24]

Permitting an increase of almost 30 per cent in the amount claimed presents more than an important question of federal procedure. It also poses a due process question. A defendant who elects to refuse to continue discovery in order to test the merits of his legal position runs the risk that this may be costly if he is wrong about the law, but surely, as a matter of basic justice, he is entitled to know what the maximum cost may be.

The conflict between the Second Circuit and the Ninth Circuit on this point can only be resolved by this Court.

D. The Federal Aviation Act—immunity for antitrust violations

Acts authorized by the CAB under Section 408 of the Federal Aviation Act are exempt from the antitrust laws.

---

[24] In fact, before attorneys' fees and costs were added, the judgment was for $137,611,435.95, or more than $2.6 million in excess of even the amended prayer. The original prayer for $105 million is comfortably close to the $100.4 million actually awarded because of the transactions concerning the jet fleet. The increase to $135

So also are whatever other acts are necessary to carry out acts that the Board has authorized and approved. Section 414 of the Act is quite clear on this point. It provides that any person affected by any order made under Sections 408, 409, or 412 of the Act

> shall be, and is hereby relieved from the operations of the "antitrust laws", as designated in section 12 of Title 15, and of all other restraints or prohibitions made by, or imposed under, authority of law, insofar as may be necessary to enable such person to do anything authorized, approved, or required by such order. [App. 171a-172a.]

Despite this provision, the Court of Appeals on the interlocutory appeal refused to recognize any antitrust immunity for transactions between Toolco and TWA after Toolco's CAB-approved acquisition of control. And it did so even though it recognized that the Board had made orders, subsequent to its approval of control, "approving the specific transactions involving the acquisition of jet aircraft which are the subject matter of this litigation" (App. 31a).

The Court of Appeals did not address itself at all to this issue when the case came back to it, although, as pointed out by petitioners in their brief below, the case was then in a far different posture than it had been in 1964. In the earlier opinion the Second Circuit had only the complaint before it. When the case returned there was also the record of the damage hearing. This made a difference in two important respects.

First, a major portion of the complaint sets out claims for purported violations of the antitrust laws after the voting trust took control of TWA in 1960. Both the Second Circuit on the interlocutory appeal, and the CAB in its memorandum filed with this Court, relied in part on an argument that the Board no longer had jurisdiction over Hughes and Toolco, after Toolco relinquished control in 1960, and that there could be no immunity for

---

million may have been thought necessary to accommodate the change in accounting practices by TWA in 1963, on the basis of which the Special Master and the courts below allowed an additional $37.2 million in damages. See p. 12, *supra*.

post-1960 conduct (App. 29a; Memorandum for the Civil Aeronautics Board as Amicus Curiae at 18, *Hughes Tool Co.* v. *Trans World Airlines, Inc.*, 380 U.S. 248 (1965)). That argument for rejecting the claim of antitrust immunity is no longer available. At the damage hearing TWA abandoned its claims concerning the post-1960 events, as well as its claims of conspiracy with Atlas Corporation to merge TWA with Northeast Airlines. It sought and was awarded damages solely for events that occurred in the exercise of Toolco's control of TWA, a control that the CAB had approved.

Second, because it had only the complaint before it when it ruled in 1964, the Second Circuit inevitably was influenced, in passing on the immunity issue, by the allegations of boycotts and tying arrangements with which the complaint is replete. The damage hearing has established that, regardless of the label an artful pleader might put upon them, the acts complained of were decisions about when and how TWA would acquire its initial jet fleet, acts that are the normal incidents of the control that had been approved.

It is understandable that the Second Circuit should not speak again to an issue on which it had once ruled. But this Court has an opportunity to pass on this issue of the effect of CAB approval on the record as it stands today. That full record makes it even more anomalous than it was in 1964 that the courts below should fail to give full effect to the antitrust immunity conferred by Congress in Section 414.

The fact is that immunity was found to exist on one phase of the case but not on others. Immunity was recognized for violations allegedly present in the acquisition of control itself. The District Court said, and the Court of Appeals did not dispute, that:

> The antitrust violations that could possibly be present in such acquisition—that it was a contract in restraint of trade prohibited by section 1 of the Sherman Act, or was an attempt to monopolize prohibited by section 2 of the Sherman Act, or was an acquisition of stock prohibited by section 7 of the Clayton Act—were within the contemplation of the approval orders and pro-

tected by the exemption provided by section 414. [App. 7a.]

Yet the Second Circuit refused to find antitrust immunity for the other transactions that are the subject of this litigation. It ruled this way on the ground that the Board's approval extended to the individual transactions themselves, "not to the whole range of activities which over a period of years constituted the backdrop against which these transactions were effected" (App. 32a). It was never explained why immunity extends to the antitrust violations that could *possibly* be present when control was acquired but not to transactions carried out in the exercise of that control. Even if the views of the Second Circuit about the liability of a parent for "arrogating" the making of decisions in regard to its subsidiary had some validity, there is very little point in immunizing against antitrust attack only those acts that are not antitrust violations in the first place.

Moreover, if antitrust liability in this case, absent CAB approval, could properly have been based upon the novel doctrine of "potential competition" or "independent economic significance," as the Court of Appeals said in its latest decision, the immunity provided by Section 414 must have applied. It was because Toolco's aeronautical activities made it a potential supplier of aircraft to air carriers that Toolco's acquisition of control of TWA required CAB approval in the first place. Whatever "independent economic significance" Toolco can be said to have had, or whatever "potential competition" it may have represented, was well known to and examined in great length by the CAB prior to its approvals. See 6 C.A.B. 153, 155-156 (1944); 9 C.A.B. 381, 382 (1948); 12 C.A.B. 192, 216 (1950).[25]

---

[25] When Toolco in 1956 briefly contemplated manufacturing airplanes itself for TWA, the Board, on its own initiative, ordered an investigation to determine whether the proposed change in Toolco's activities in the field of aeronautics would be a transaction subject to Board approval under Section 408 and, if so, whether it should approve or disapprove. Order E-10360, June 8, 1956 (2d Cir. App. AX-2149). The investigation was terminated when the Board was advised that Toolco had abandoned the proposed manufacturing project. Order E-12604, June 6, 1958.

The Second Circuit took as restrictive a view of the subsequent CAB orders approving individual transactions between Toolco and TWA as it did of the original orders allowing control to be acquired. It was unwilling to hold that "* * * these individual and narrow Board orders immunized the defendants from the operation of the antitrust laws with respect to activities not specifically ruled upon by the Board" (App. 32a). Yet it also refused to recognize immunity as to matters that *had* been specifically ruled on by the CAB. In the judgment below $15.9 million was awarded TWA because in 1959 and 1960 Toolco leased 19 jets to TWA rather than selling them to TWA outright. Whatever may be said about the other elements of damage awarded, it is clear that the Board understood that the jets were being leased to TWA and that this was being done as an interim measure pending arrangements for permanent financing. The leasing of the jets was approved by the Board in five separate orders,[28] in each of which it found that these transactions were "just and reasonable and in the public interest."

The decision of the Court of Appeals will result in confusion about the proper role of the courts in relation to the Board and about the extent to which one who acquires control of an air carrier with CAB approval can rely on an order of the CAB approving a transaction as a grant of antitrust immunity. The decision leaves it to the courts to determine when an approved transaction is immunized and when it is not, depending on such subjective criteria as the court's view of what was the "backdrop" and whether the CAB was or was not aware of all of the facts. The decision reflects a lack of confidence in the agency's ability to make knowledgeable decisions.

The reason for the immunity conferred by Section 414 when applied to an acquisition of control is to permit a person engaged in a phase of aeronautics to assist the con-

[28] Orders E-13542, Feb. 26, 1959 (2d Cir. App. AX-2202); E-13873, May 15, 1959 (2d Cir. App. AX-2226); E-14169, July 1, 1959 (2d Cir. App. AX-2237); E-14504, Sept. 30, 1959 (2d Cir. App. AX-2245); E-14877, Jan. 29, 1960 (2d Cir. App. AX-2260).

trolled carrier without running afoul of the antitrust laws. The purpose of retaining jurisdiction over transactions between the two is to insure that the controller does not overreach in dealings with the air carrier by forcing the carrier to take unneeded equipment or the like. For a court to make a *de novo* determination of when or whether immunity is conferred would thwart the purposes of both Congress and the agency. And, at a time when many carriers are in difficult financial circumstances, the decision below would effectively deter anyone else in any phase of aeronautics from coming to a carrier's assistance, because he would not be able to rely on the antitrust immunity that CAB approval and Section 414 seem to confer.

The result reached below is contrary to this Court's holding in *Pan American World Airways, Inc.* v. *United States*, 371 U.S. 296 (1963), the so-called *Panagra* case. In *Panagra*, the Court examined the extent of the jurisdiction of the CAB over a complaint that charged violations of the antitrust laws in the exercise of control over air carriers by another air carrier and a common carrier. The Court recognized that if the control relationship met the standards of Section 408 as determined by the CAB, it could not violate the antitrust laws.

> It would also be odd to conclude that an affiliation between a common carrier and an air carrier that passed muster under § 408 should run afoul of the antitrust laws. Whether or not transactions of that character meet the standards of competition and monopoly provided by the Act is peculiarly a question for the Board, subject of course to judicial review as provided in 49 U.S.C. § 1486. [371 U.S. at 309.]

The Court observed that the CAB "* * * has its special standard of the 'public interest' as defined by Congress" and pointed out: "If the courts were to intrude independently with their construction of the antitrust laws, two regimes might collide." *Id.* at 310. The Court concluded that for this reason the CAB, and not the federal courts, had exclusive jurisdiction over the control relationship.

It misses the mark to say that the Board is not "any more qualified to consider such charges than the federal

courts, which daily encounter and resolve antitrust problems" (App. 30a). Congress has directed the Board to make a broader inquiry than is open in an antitrust action. Under the first proviso of Section 408 the Board is prohibited from approving any transaction that "* * * would result in creating a monopoly or monopolies and thereby restrain competition * * *." At the same time the Board itself "* * * has properly concluded, in light of the immunity from the antitrust laws conferred by § 414, that it must consider anti-competitive effects less extreme than those limned in the proviso in determining whether the transaction will 'be consistent with the public interest,' as defined in § 102 * * *." *Butler Aviation Co.* v. *CAB*, 389 F. 2d 517, 519 (2d Cir. 1968). But if there is an anti-competitive effect short of a monopoly, the Board may still approve if it finds that, in the light of all the factors listed in Section 102, the overall effect is in the public interest. Sections 408 and 414 become meaningless if a court, taking a monocular view of only the effect on competition, can award huge damages for a transaction that the Board, after the broad inquiry it is required to make, has found to be in the public interest.[27]

The Board, in its orders in 1944 and 1950, did not merely approve the acquisition by Toolco of a financial interest in TWA. It approved, as its orders show on their face and as Section 408(a)(5) of the Act requires, acquisition of "control." Nor did the Board approve control in the abstract without considering the incidents that go with control. When it first approved control it conditioned its approval in a fashion intended "to protect the public interest from any improper coercion of the air carrier by a controlling company on account of any further interest which

---

[27] Thus Professor Davis notes that "* * * the congressional policy expressed in the Federal Aviation Act includes both something more and something less than the antitrust policy." He suggests that a proper accommodation of CAB regulation with the antitrust laws would be to limit judicial action applying antitrust policies to proceedings on judicial review of Board orders. Davis, *Administrative Law Treatise* § 19.06 at 634 (1970 Supp.).

the controlling company may have in some other phase of aeronautics." 6 C.A.B. 153, 157 (1944). It was pursuant to that condition that it approved the specific transactions covering the jet aircraft that are the subject of this litigation. In this case, as is customary, the Board "* * * retained jurisdiction over the agreement to assure that no anticompetitive practices occur and to impose additional conditions if unforeseen contingencies arise." *National Aviation Trades Ass'n* v. *CAB*, 420 F. 2d 209, 221 (D.C. Cir. 1969). It was with regard to these particular parties that the CAB defined "control" as used in Section 408 of the Act as meaning "the existence of a right or power to direct or dominate, whether actually exercised or existing in potential use." 9 C.A.B. 381, 386 (1948). It specifically recognized that Toolco "has sufficient power and influence to control the board of directors of TWA and thereby to manage and direct the usual day-to-day business and financial affairs of the airline." *Id.* at 387. Its approval of Toolco's increased control of TWA was on the basis of a finding that both the public interest and TWA had benefited from Toolco's contributions to TWA, particularly "in the selection and purchase of its equipment * * *." 12 C.A.B. 192, 216 (1950).

The holding in this case that the antitrust laws were violated by Toolco's making decisions as to the manner in which TWA should acquire its jet aircraft, even though the CAB had authorized Toolco to make these decisions and had approved the specific transactions that resulted from the decisions, is plainly inconsistent with Sections 408 and 414 of the Act and with this Court's holding in *Panagra*.

E. The Sherman Act—a parent's decisions in regard to its subsidiary

The opinion of the Court of Appeals approves the award of more than $145 million in antitrust damages because of "[t]he illegality of Toolco's arrogation of all authority for buying aircraft * * *" (App. 142a). This ruling extends to a startling degree the liability of a parent corporation

for determining the manner in which its subsidiary does business.

The supposed "arrogation of all authority" consisted of Toolco's deciding that it would order jet aircraft for TWA instead of TWA's ordering precisely the same aircraft from the same manufacturers, the decision as to when these aircraft should be ordered, the later determination that it would be unwise to acquire too many first-generation jets and that TWA should take only 47 of the 63 jets initially ordered, and the decision that TWA should lease aircraft for a time until financing could be obtained to purchase them.

Decisions about when, from whom, and in what quantity a subsidiary should acquire capital equipment are customarily made by the parent. To the extent that these decisions have been too much influenced by the self-interest of the parent or have gone beyond the bounds of business judgment, the traditional remedy has been a claim under state law for breach of fiduciary duty or mismanagement. Note, *The Fiduciary Duty of Parent to Subsidiary Corporation*, 57 Va. L. Rev. 1223 (1971). It has never been supposed that the parent is subject to damages under the antitrust laws for dictating the manner and method by which its subsidiary acquired capital equipment when the parent was not a competitor of other suppliers. Even if the parent is a supplier "[a] subsidiary will in all probability deal only with its parent for goods the parent can furnish." *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 523 (1948).

The report to Attorney General Brownell of an eminent committee was quite emphatic on this point.

> It seems indeed inconceivable to hold *per se* illegal the mere fixing by a parent of a subsidiary's price or production, or the selection by the parent of those persons with whom its subsidiary may or may not deal. [*Report of the Attorney General's National Committee To Study the Antitrust Laws* 35 (1955).]

No case since 1955—except for the present case—has cast any doubt on that conclusion. But under the ruling below, a parent that decides that its subsidiary should buy from

X rather than Y may be held liable for antitrust damages if, with the wisdom of hindsight, the subsidiary can show that the decision was unwise.[28]

This result has the widest possible ramifications. The test of antitrust liability becomes whether the subsidiary has been injured by the decisions of its parent rather than whether these decisions restrain or monopolize trade. This is a distortion of antitrust law that will have a calamitous effect on the federal courts. All a plaintiff in these circumstances need do is invoke the language of antitrust for what is essentially a "mismanagement" case and there will be exclusive federal jurisdiction over what until now would have been a state law claim that in many instances could only be brought in the state courts.[29] With the tantalizing prospect of treble damages as a lure, few plaintiffs are likely to resist the invitation to make a federal case out of it.[30]

---

[28] The holding that the subsidiary may recover from the parent would seem to have the corollary that those who are excluded from the market represented by the subsidiary's needs because of the parent's decision also have a right of action under the antitrust laws. Yet in this case TWA did not want Douglas jets. Certainly neither Boeing nor Convair was excluded from supplying aircraft to the market represented by TWA's needs.

[29] TWA and Toolco are each Delaware corporations. It is only because the claims were under the antitrust laws that the federal courts have been burdened for more than a decade with this massive case. A different panel of the Second Circuit had a wiser perception when, one day before the decision in this case came down, it held that conclusory allegations in a complaint are not enough to "bootstrap" a "garden-variety customer's suit against a broker for breach of contract" into a violation of the Securities Exchange Act. *Shemtob* v. *Shearson, Hammill & Co.*, 448 F.2d 442, 445 (2d Cir. 1971).

[30] That this is the wrong moment in history to invite more antitrust cases is evident from the fact that the number of private antitrust actions commenced has increased from 228 in 1960 to 1445 in 1971. *1971 Annual Report of the Director of the Administrative Office* II-108.

F. Potential Competition—a Clayton Act test for a Sherman Act violation

The Court of Appeals has departed from decisions of this Court, and its own prior decisions, by improperly holding that the standards used to determine the existence of violations of Section 7 of the Clayton Act may be used to find violations of Section 1 and 2 of the Sherman Act. This unprecedented theory of antitrust liability will generate great confusion unless overturned by this Court.

In its complaint, TWA alleged that Toolco was a manufacturer and supplier of aircraft to air carriers, an allegation absolutely essential to its claims that Toolco restrained or monopolized the business of supplying aircraft. The evidence at the damage hearing, however, established that Toolco has never manufactured aircraft for sale to air carriers and has never been a competitor of those who do manufacture and supply aircraft to air carriers.[31] Only that "blind" court, against which Chief Justice Taft admonished in a famous passage, that does not see what "[a]ll others can see and understand * * *"—*Bailey* v. *Drexel Furniture Co.*, 259 U.S. 20, 37, (1922); *cf. United States* v. *Rumely*, 345 U.S. 41, 44 (1953)—could have any doubt on this point. Thus, though the Court of Appeals paid lip service in a paragraph to the notion that judicial notice cannot be taken of indisputable facts in CAB records (App. 133a), it recognized the weakness of that position and developed a new theory on which Toolco would be liable though, as is the fact, it has never manufactured aircraft for air carriers nor has it been a supplier of aircraft to air carriers other than its subsidiary, TWA.

The Second Circuit said that even if it is a fact that Toolco is not a major force as a supplier, this does not "negative the possibility that Toolco possessed independent

---

[31] In its brief in the court below TWA conceded that "* * * defendants did not manufacture and sell a 'Hughes jet' during the damage period * * *." Brief for Plaintiff-Appellant Trans World Airlines, Inc., p. 94.

economic significance" sufficient to support antitrust liability (App. 134a).[32]

The Court of Appeals cited no cases to support its theory that "independent economic significance" or a potential ability to compete are enough for Sherman Act liability. Nor could it. Indeed only recently the Eighth Circuit has affirmed dismissal of a complaint charging a Sherman Act violation where the most that could be said was that the defendant "would have the power potentially to engage in some unfair and predatory practices in this field, but there is no showing of unfair or predatory practices." *Hiland Dairy, Inc.* v. *Kroger Co.*, 402 F. 2d 968, 975 (8th Cir. 1968), *cert. denied*, 394 U.S. 903 (1969).

The Court of Appeals has taken an antitrust theory heretofore carefully limited to merger cases under Section 7 of the Clayton Act and converted it into an entirely new theory of Sherman Act violation. Indeed the standard it applied is not even the appropriate standard for Clayton Act liability, for there must be proof that a merger will *probably* injure potential competition and not merely *possibly* do so.[33] The Court of Appeals based liability on a

---

[32] The Court continued:

> There is evidence in the record of activities by Toolco or Hughes that suggest significant movement by Toolco and Hughes toward actual or potential commercial manufacturer or dealership in airplanes, especially jets, and their parts. * * *
>
> The evidence that Toolco's interests and ambitions in commercial air flights may have extended beyond mere management of TWA begins with Toolco's admitted role, initiated in World War II and continuing to the present day, as a substantial manufacturer of helicopters and aircraft parts for military purposes (and now of aerospace materials as well). Although Toolco stresses the non-commercial nature of this activity, it is clear that Toolco throughout the relevant period had the technical capability and sophisticated "know-how," to enter the commercial market without untoward delay if it had so chosen. [App. 136a.]

[33] The correct standard has been summarized by this Court as follows: " * * * Congress used the words '*may* be substantially to lessen competition' (emphasis supplied), to indicate that its concern was with probabilities, not certainties. Statutes existed for

mere possibility. But even if the standard used by the Second Circuit were the correct one in Clayton Act cases, it has no application in determining violations of Sections 1 and 2 of the Sherman Act.

This Court has consistently distinguished the differing purposes of these statutes. For example, in *United States* v. *E. I. du Pont de Nemours & Co.*, 353 U.S. 586, 597 (1957), the Court said:

> The Clayton Act was intended to supplement the Sherman Act. Its aim was primarily to arrest apprehended consequences of inter corporate relationships before those relationships could work their evil, which may be at or any time after the acquisition, depending upon the circumstances of the particular case.

And the Court has quoted from the legislative history of the 1950 amendments of the Clayton Act to show that that statute is based on "the concept of reasonable probability" since it "seeks to arrest restraints of trade in their incipiency and before they develop into full-fledged restraints violative of the Sherman Act." *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 323 n. 39 (1962).

These clearly delineated distinctions between the two statutes had previously been understood by the lower courts, including the Second Circuit.[34] With the stroke of a pen, and with no citation of cases, this decision has now undone this understanding of the law. To import the

---

dealing with clear-cut menaces to competition; no statute was sought for dealing with ephemeral possibilities. Mergers with a probable anticompetitive effect were to be proscribed by this Act." *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 323 (1962). See also *United States* v. *El Paso Natural Gas Co.*, 376 U.S. 651, 658 (1964).

[34] As a different panel of the same court said in another case:

> The legislative history of the amendment makes it plain that Congress intended by § 7 to forbid mergers which were beyond the reach of the Sherman Act as judicially interpreted. • • • Thus under § 7 as amended the Sherman Act test is no longer appropriate, • • • and conduct may fall under the ban of amended § 7 before it has attained the statute of an unreasonable restraint of trade. [*American Crystal Sugar Co.* v. *Cuban-American Sugar Co.*, 259 F. 2d 524, 527 (2d Cir. 1958).]

Clayton Act test into a Sherman Act case has no basis in precedent or logic.

Here, for example, the trade and commerce of supplying aircraft was not in any way restrained or monopolized because Toolco might have contemplated becoming at some time in the future a manufacturer of jet aircraft in competition with Boeing and Convair, particularly since any concrete steps in this direction by Toolco would have invited instant scrutiny by the CAB.[25] Nor did this potential competition or any "independent economic significance" Toolco may have possessed in any way injure TWA. TWA cannot have been damaged in the past because "the technical capability and sophisticated 'know-how' " of Toolco were such that it might possibly have played a different role in the future had it chosen to do so. In upholding recovery on these grounds, the Court of Appeals again has flung open the doors of the federal courts to a host of plaintiffs who will seek to test this novel theory for imposing treble damages in Sherman Act cases.

G. Proximate Cause—assumption of facts without proof to support them

When this case was before this Court in 1965, Justice White put the following question to counsel for TWA: "How can you prove how much you have been damaged without showing what you have been damaged from?" Transcript of Argument at 28, *Hughes Tool Co.* v. *Trans World Airlines, Inc.*, 380 U.S. 248 (1965). Seven years of further litigation have failed to provide an answer to that question.

Even if it be assumed, either because of the default or on some novel theory of "independent economic significance," that liability for some violation of the antitrust laws properly could have been found in Toolco's control of TWA, that liability does not mean—at least under traditional doctrines of antitrust law—that TWA could recover

---

[25] See note 25 *supra*, p. 29.

damages unless the injuries for which it claimed damages were "proximately caused" by the violations of law. Even where liability is admitted the burden is on plaintiff to establish a causal relation between the illegal acts and the injury. *E. V. Prentice Mach. Co.* v. *Associated Plywood Mills, Inc.*, 252 F. 2d 473 (9th Cir. 1958), *cert. denied*, 356 U.S. 951 (1958).

The Court of Appeals recognized that there was a "sense" in which it was "TWA's burden to show 'proximate cause,'" but immediately said that "[o]n the other hand, there was no burden on TWA to show that any of Toolco's acts * * * caused the well-pleaded injuries, except as we have indicated that it had to for the purpose of establishing the extent of the injury caused TWA, in dollars and cents" (App. 139a).

The damages awarded TWA were not because of any restraint on the trade of supplying aircraft to air carriers or because of any monopolization of that trade. Rather they were for conduct in the exercise of control that allegedly injured TWA, whether or not that conduct restrained or monopolized trade. Thus a substantial portion of the damages for which recovery was allowed were because, in the opinion of TWA's witness, Toolco was tardy in ordering from Boeing the Boeing planes that TWA wanted. Perhaps—though Toolco vigorously denies this—TWA was damaged by the delay in placing the orders, but it would be absurd to suggest that by that delay Boeing's trade or the trade of any other "potential competitor" of Toolco was restrained or monopolized.

Similarly TWA was awarded damages because it leased planes for a time from Toolco instead of buying exactly the same planes. It is true that TWA alleges that the leases, which were approved by the CAB, contained a condition that TWA would not purchase or lease planes from a competitor of Toolco. But the damages that TWA claimed, as Special Master Brownell recognized (2d Cir. App. following A-1966), were because of the greater cost of leasing than buying and had nothing to do with any alleged condition in the leases.

To its theory that a plaintiff may recover antitrust damages for conduct that did not restrain or monopolize trade, the Second Circuit has added the doctrine that proximate cause can be supplied by assumption, not proof. Prior to this case the lower courts had refused to approve a rule that would impose liability without any proof that the violation caused the injury. *Klinger* v. *Baltimore & O. R. Co.*, 432 F. 2d 506, 516 (2nd Cir. 1970). They had insisted that a plaintiff has the burden of establishing that he would and could have achieved the results he claimed that he was prevented from achieving by the alleged violation. *Milwaukee Towne Corp.* v. *Loew's, Inc.*, 190 F. 2d 561 (7th Cir. 1951), *cert. denied*, 342 U.S. 909 (1952).

Yet in this case TWA has been allowed to recover because it did not acquire 63 jet aircraft without any proof that it could have raised the $350 million required for the purchase. TWA apparently recognized that it had this burden, for it introduced expert testimony to show how it could have financed this fleet. *Both the Special Master and the District Court rejected this evidence* (2d Cir. App. following A-1966; App. 77a-79a). But the District Court held that because of the default TWA was not required to show that it could have financed the fleet (App. 64a-65a), while the Second Circuit proceeded to *assume* that TWA could have financed the purchase of 63 jets, citing the fact that other airlines had financed their jet fleets and ignoring the fact that those airlines were experiencing substantial profits while TWA was suffering losses (App. 147a).

Any loosening of the requirements of proof in antitrust litigation is an invitation for more suits of that kind and encourages attempts to convert routine state law claims into antitrust claims, with the genuine state law claim often joined as "pendent" to the antitrust claim. This Court should finally determine the nature and extent of a plaintiff's burden, before he may recover antitrust damages, to establish a causal relation between the antitrust violation and the damages and to show his ability to do what he claims he was prevented from doing by the violation.

H. Summary of Reasons

Seven detailed reasons why this Court should grant certiorari have been presented above. It would be unfortunate, however, if the details of particular reasons should cause sight to be lost of the overall effect of the proceedings below. What has happened in this case is an outrage. The lower courts, mistakenly thinking that their authority had been flouted to protect the privacy of a wealthy man, have responded in a fashion that not only departs alarmingly from the usual course of judicial process but also represents a denial of due process. The precedents they have created, if allowed to stand, will inflict serious wounds on sound principles of procedure and antitrust law and will impose heavy burdens on the federal courts.

CONCLUSION

For the reasons stated, this writ should be granted and the judgment of the Court of Appeals for the Second Circuit reversed.

214 Federal Supplement 106

UNITED STATES DISTRICT COURT
S. D. NEW YORK.

Feb. 7, 1963.

TRANS WORLD AIRLINES, INC., *Plaintiff*,

v.

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY, *Defendants*,

and

THE EQUITABLE LIFE ASSURANCE SOCIETY OF THE UNITED STATES ET AL., *Additional Defendants on Counterclaims.*

METZNER, District Judge.

Defendant Hughes Tool Company (Toolco) moves to dismiss the complaint pursuant to rules 12(b) (1) and 12(b) (6) of the Federal Rules of Civil Procedure on the grounds that the court lacks jurisdiction over the subject matter and that the complaint fails to state any claim upon which relief can be granted. The original notice of motion was filed on August 9th, 1961 and in addition to the grounds now urged requested summary judgment pursuant to rule 56 of the Federal Rules of Civil Procedure. In effect, the present notice of motion brings on for hearing the original motion.

In its brief Toolco has stated,

"At the suggestion of the Court (Transcript of pre-trial conference of September 6, 1961, pp. 50, 52)

Toolco agreed to postpone the motions and thereafter commenced its pre-trial examination of TWA."

The opinion of this court of January 19th, 1963 sets forth the numerous occasions on which counsel for Toolco agreed that the motion as originally filed was not ripe for determination. Consequently, it was not a suggestion of the court, to which Toolco courteously agreed, that the matter be postponed. Rather it was an understanding by counsel that under the decisions of this circuit summary judgment in this type of case should not be considered until the deposition proceedings are completed. (See also Poller v. Columbia Broadcasting System, 368 U.S. 464, 473, 82 S.Ct. 486, 7 L.Ed.2d 458 (1962)). The grounds now urged under rule 12(b) existed and were adverted to in the original notice of motion. Since counsel for Toolco has indicated he was prepared at that time to argue the matter, he could just as well have submitted it then, instead of requesting on January 14th, 1963 that the motion now be heard, when the taking of the deposition of Howard R. Hughes is imminent. Furthermore, the Special Master on October 25th, 1962 granted the second adjournment of this deposition, from October 29th to February 11th, 1963, and stated that the long adjournment of more than three months was in order to allow Toolco's counsel sufficient time to make whatever motions he thought were necessary.

On January 14th, 1963, when Toolco moved that its motion to dismiss be set down for hearing, it also requested that TWA first proceed by written interrogatories directed to Hughes, instead of by oral deposition. This request was formally denied on January 19th, 1963, after a pretrial conference held on January 17th.

Counsel for Toolco continually relates the taking of the deposition to a determination of the motion to dismiss. As I have indicated before, this deposition depends not

only on the existence of alleged valid claims against Toolco, but on Toolco's counterclaims for $385,000,000 against plaintiff and the additional defendants.[1]

So much for the underbrush. Now as to the merits of the motion, there is no doubt that the complaint on its face sets forth a claim against the defendant and is not subject to dismissal under rule 12(b) (6).

Briefly, the plaintiff, TWA, charges that Toolco, Hughes, and Holliday, named defendants, and Atlas Corporation have combined and conspired to restrain, and have attempted to monopolize, interstate and foreign commerce of the United States in the furnishing of jet aircraft and/or nonjet aircraft by sale, lease or other means, to TWA, and to TWA and other air carriers, in violation of sections 1 and 2 of the Sherman Act and sections 3 and 7 of the Clayton Act. It more specifically alleges that the defendants and Atlas combined to restrain commerce

---

[1] On the morning of the argument of this motion (February 6th, 1963) Toolco filed another notice of motion returnable February 8th, 1963 requesting that all further proceedings with respect to the counterclaims be stayed pending a disposition by the Civil Aeronautics Board of a "Complaint of Hughes Tool Company and Request for Investigation" which had been filed that day with the CAB. The only document attached to the notice of motion is a copy of the complaint filed with the CAB, seeking relief under sections 408, 409, 411 and 1002 of the Federal Aviation Act. That complaint names all of the additional defendants in the action pending in this court and also Pan American World Airways, Inc. and Juan T. Trippe. It sets forth some of the allegations contained in the counterclaims and also makes reference to the proposed merger of TWA and Pan Am. It further alleges that Trippe, the dominant force in Pan Am, also has been in the position to influence the policies of Metropolitan Life Insurance Company, a large lender to TWA and one of the additional defendants in this action. Thus, the conspiracy alleged in the counterclaims has been enlarged by including Pan Am and Trippe. Jurisdiction of the CAB is predicated upon a claim that the decision in Pan American World Airways, Inc. v. United States, 371 U.S. 296, 83 S.Ct. 476, 9 L.Ed.2d 325 (1963), grants the CAB primary jurisdiction.

by providing financing of the acquisition by TWA of aircraft only upon the condition that TWA acquire all such aircraft from Toolco, and that they required TWA to boycott all suppliers of aircraft except Toolco, in violation of section 1 of the Sherman Act; and that sales and leases of jet-powered aircraft were made on the condition that the purchaser or lessee would not buy or lease the goods of a competitor of the vendor or lessor, in violation of section 3 of the Clayton Act. The complaint also charges that acquisitions of the stock of a corporation were made in violation of section 7 of the Clayton Act.

The first claim is concerned with acts allegedly committed during and prior to December 1960 which, it is claimed, violate all of the above mentioned statutes. The second claim deals with events occurring subsequent to December 1960 which are alleged to violate sections 1 and 2 of the Sherman Act and section 7 of the Clayton Act. For these claims, plaintiff seeks treble damages, divestiture, and an injunction. The third claim charges that the defendants have wilfully and maliciously damaged the business of TWA by the acts alleged in the prior claims, and seeks damages and an injunction under the common law.

Defendant Toolco urges that the complaint be dismissed because the control by Toolco over the plaintiff was authorized by the CAB and was thereby exempted from the antitrust laws. The other ground urged is that the subject matter of the complaint is within the exclusive primary jurisdiction of the CAB.

Toolco indicates that it has withdrawn its motion for summary judgment. However, its brief relies on matter outside the complaint to justify dismissal on the ground that the acts done by Toolco were pursuant to the exercise of control over TWA authorized by the CAB and therefore exempt from the antitrust laws. Dismissal under rule 12(b) (6) is not warranted, though summary judg-

ment might be available. Putnam v. Air Transport Ass'n of America, 112 F.Supp. 885 (S.D.N.Y. 1953). The defendant appears to be in a procedural dilemma. Since defendant has raised the issue of exemption in its third affirmative defense, the court will consider this branch of the motion as one for judgment on the pleadings pursuant to rule 12(c). Matters dehors the complaint may be considered on the branch of the motion seeking dismissal for lack of subject matter jurisdiction. Cohen v. American Window Glass Co., 126 F.2d 111, 114 (2d Cir., 1942); Central Mexico Light & Power Co. v. Munch, 116 F.2d 85 (2d Cir., 1940); Moore v. Gorman, 75 F.Supp. 453 (S.D.N.Y. 1948).

Toolco relies on the 1944 and 1950 orders of the CAB permitting Toolco to acquire control of TWA. 6 CAB 153; 12 CAB 192. These orders were issued pursuant to section 408(5) of the Civil Aeronautics Act of 1938,[2] which makes it unlawful without CAB approval for "any person engaged in any other phase of aeronautics, to acquire control of any air carrier in any manner whatsoever". Toolco was considered as one engaged in a phase of aeronautics because of its activities in the development of aircraft and accessories.

Section 414 of the Federal Aviation Act, 49 U.S.C. § 1384, provides that

> "Any person affected by any order made under sections 408 [49 U.S.C. § 1378] * * * shall be, and is hereby, relieved from the operations of the 'antitrust laws' * * * and of all other restraints or prohibitions made by, or imposed under, authority of law, insofar as may be necessary to enable such person to do any-

[2] This section is now 49 U.S.C. § 1378(5). The Federal Aviation Act of 1958, 72 Stat. 737, 49 U.S.C. § 1301 et seq., superseded the Civil Aeronautics Act of 1938, 52 Stat. 973, making no changes relevant to the problem before the court.

thing authorized, approved, or required by such order."

It is Toolco's contention that all the acts complained of by TWA are immunized from claims of violations of the antitrust laws because of section 414. This leads to an examination of what action was approved by the orders issued pursuant to section 408(5) and what is the scope of the exemption provided by the words "insofar as may be necessary to enable such person to do anything authorized, approved, or required by such order", in section 414.

Statutory authority granted regulatory agencies to give exemption from the application of the antitrust laws is not unusual.[8] But the Supreme Court has clearly stated that immunity from the antitrust laws is not to be lightly implied. California v. Federal Power Comm'n, 369 U.S. 482, 485, 82 S.Ct. 901, 8 L.Ed.2d 54 (1962). Regulated industries are not per se exempt from the antitrust laws. United States v. Borden Co., 308 U.S. 188, 198-199, 60 S.Ct. 182, 84 L.Ed. 181. And it is elementary that repeals by implication are not favored. Georgia v. Pennsylvania R. R., 324 U.S. 439, 456, 65 S.Ct. 716, 89 L.Ed. 1051 (1945). In the latest decision by the Supreme Court, Pan American World Airways, Inc. v. United States, supra note 1, which will be discussed in detail below, the Court stated that

---

[8] See, e. g., 47 U.S.C. § 222(b)(1) (telegraph mergers approved by the Federal Communications Commission); 47 U.S.C. § 221(a) (telephone mergers approved by FCC); 46 U.S.C. § 814 (rate fixing and other agreements between water carriers approved by the Federal Maritime Board); 49 U.S.C. § 5 (railroad mergers approved by the Interstate Commerce Commission); 49 U.S.C. §§ 5a-b (agreements between carriers involving rates approved by ICC); 15 U.S.C. § 18 (exempting from the operation of section 7 of the Clayton Act transactions approved within their statutory authority by the CAB, FCC, Federal Power Commission, ICC, FMB, Secretary of Agriculture, and, in some cases, the Securities and Exchange Commission).

the regulatory scheme here in question would not be read as designed completely to displace the antitrust laws "absent an unequivocally declared congressional purpose so to do." 371 U.S. at 305, 83 S.Ct. at 482. It went on to say that the antitrust problems "expressly entrusted to [the CAB] encompass only a fraction of the total." Ibid.

The orders of 1944 and 1950 relied on by Toolco merely approved the acquisition of control of TWA by Toolco. The antitrust violations that could possibly be present in such acquisition—that it was a contract in restraint of trade prohibited by section 1 of the Sherman Act, or was an attempt to monopolize prohibited by section 2 of the Sherman Act, or was an acquisition of stock prohibited by section 7 of the Clayton Act—were within the contemplation of the approval orders and protected by the exemption provided by section 414. Cf. United States v. Southern Pac. Co., 290 Fed. 443 (D.Utah 1923). These orders did not give Toolco a license to engage in other acts that normally may be forbidden by the antitrust laws. What has been approved and exempted is the fact of "acquisition of control", not activities engaged in by the controlling party subsequent to acquisition, which may be illegal.

I have found no case and none has been cited to me which interprets the words "necessary to enable such person to do anything authorized, approved, or required by such order", or similar exemptive language in other statutes, in a way that will sustain Toolco's position. In Putnam v. Air Transport Ass'n of America, supra, the plaintiff was attacking a claimed boycott by the defendants. The court in applying section 414 stated that the boycott was "the inevitable result" of the agreement sanctioned by the CAB which by its terms permitted the defendants to choose with whom they would deal. This is far different from the immunization claimed by Toolco. Congress could not have intended that restraints or at-

tempts to monopolize, subsequent to an order allowing acquisition of control, were necessary to enable Toolco to do anything authorized or approved by the order.

One more point merits discussion under this branch of the motion. The second claim for relief is based on acts alleged to have been committed by the defendants and Atlas subsequent to December 1960. In December 1960 TWA moved before the CAB for modification of the original order of 1944 as amended. Approval was also sought

> "under section 408 * * * for the transactions contemplated under the financing plan. Similarly sought is approval * * * under section 409 of the Act, of the interlocking relationships arising out of the designation of Raymond M. Holliday, as a representative of Toolco, and of Ernest R. Breech and Irving S. Olds as representatives of the banks and institutional investors, to serve as Voting Trustees under a Voting Trust set up for the Toolco-TWA stock."

This relief was requested in connection with the jet aircraft financing transactions which resulted in Toolco's putting its 78% stock interest in TWA under a voting trust, which in effect gave control of TWA to the lenders who are named as additional defendants in this action.

On December 29th, 1960 the CAB entered its order on this motion (Order No. E-16195). In the course of the opinion, the CAB said at page 6:

> "Under these circumstances, we think it clear that Board action to facilitate TWA's acquisition of jet equipment is in the public interest. At the same time, however, it is evident that Toolco's control of TWA, as exercised through Hughes, has presented substantial problems requiring the Board's attention.
>
> "In short, and without further description of these problems, the Board wishes to make clear the fact

that it would anticipate the proper filing of an application under section 408 of the Act and the obtaining of the approval of the Board before Toolco would attempt to reassume control over TWA.[19] It is clear that such approval would not be forthcoming without a searching inquiry into the public interest factors affecting this control.[20] ''

Footnote 19 in the above quotation reads as follows:

''The Option Agreement requires Toolco, in exercising the option, to provide a satisfactory opinion of counsel that the exercise of the option, by purchase of the notes, does not require governmental or regulatory approval or that such approval has been granted and is in force. No such provision could, of course, preclude dissolution of the voting trust after the ten-year term has expired. Nonetheless, it is clear that Toolco should not resume direct control at that time unless prior approval of the Board is sought and obtained.''

It is clear from this opinion that the CAB does not look upon Toolco as controlling TWA after December 1960. Thus, anything done by Toolco subsequent to that date has not been approved by orders of the CAB and certainly no exemption exists as to the second claim.

We come now to the question of ''primary jurisdiction'' which is defendant's second ground for dismissal of these claims. In discussing the primary jurisdiction of the CAB in relation to this complaint, there is some overlap with the discussion as to the effect of an order issued under section 408(5) and the extent of the exemption granted by section 414. In this case we are concerned primarily with whether there exists exclusive primary jurisdiction in the CAB without regard to whether or not it has taken any action in relation to a particular transaction. Cf. Far East Conference v. United States, 342 U.S. 570, 72 S.Ct. 492, 96 L.Ed. 576 (1952).

Defendant places great reliance upon the recent decision of the Supreme Court in Pan American World Airways, Inc. v. United States, supra, popularly known as the Panagra case. In determining the scope of this decision we must first go to the next to the last sentence of the majority opinion, which reads:

> "We think the narrow questions presented by this complaint have been entrusted to the Board and that the complaint should have been dismissed." 371 U.S. at 313, 83 S.Ct. at 486.

The Court was dealing with section 411 of the act, 49 U.S.C. § 1381, which gives the CAB jurisdiction over "unfair or deceptive practices" and "unfair methods of competition" by air carriers. The acts charged to be antitrust violations were limitations of routes, divisions of territories, and the relation of a common carrier to air carriers, which the Court stated were "precise ingredients of the Board's authority in granting, qualifying, or denying certificates to air carriers, in modifying, suspending, or revoking them, and in allowing or disallowing affiliations between common carriers and air carriers." 371 U.S. at 305, 83 S.Ct. at 482. The Court went on to say:

> "It would be strange, indeed, if a division of territories or an allocation of routes which met the requirements of the 'public interest' as defined in § 2 were held to be antitrust violations. It would also be odd to conclude that an affiliation between a common carrier and an air carrier that passed muster under § 408 should run afoul of the antitrust laws. Whether or not transactions of that character meet the standards of competition and monopoly provided by the Act is peculiarly a question for the Board, subject of course to judicial review * * *." 371 U.S. at 309, 83 S.Ct. at 484.

If we substitute in this quotation the words "acquisition of control of any air carrier by any person engaged in any other phase of aeronautics" in place of "an affiliation between a common carrier and an air carrier", we have presented the fact situation upon which Toolco relies. However, the acts complained of by TWA are acts allegedly done by the controlling party after the acquisition had been approved, not only to the detriment of the carrier in question, but to other carriers and to competitors of the controlling party. This in my view is the distinguishing factor between this case and the Panagra case. While the acts charged here could be proper subjects for consideration by the Board in determining whether control of TWA by Toolco was in the public interest,[4] they are not the type of acts over which the Board has exclusive primary jurisdiction. They are not within the contemplation of the regulatory powers granted the CAB. Cf. Georgia v. Pennsylvania R. R., supra.

Furthermore, the Board has no power to award damages, and we do not reach the statement of the Court in the Panagra case to the effect that since the Board's essential regulatory powers deal with the division of territories, etc., then Congress must have intended to give it authority that was ample to deal with the evil at hand. Rather, the statement by the Court that a court has jurisdiction under the antitrust laws if the agency has no power to grant relief is controlling here. 371 U.S. at 313 n. 19, 83 S.Ct. at 486 n. 19.

It is also clear that once a regulatory agency has acted the court is competent to consider and determine the scope of the exemption claimed. River Plate & Brazil Conferences v. Pressed Steel Car Co., 227 F.2d 60 (2d Cir., 1955); Putnam v. Air Transport Ass'n of America, supra. The cases of American Airlines v. Standard Air Lines, 80

---

[4] See CAB Order No. E-16195 quoted at page 13, supra.

F.Supp. 135 (S.D.N.Y. 1948) and United States v. Railway Express Agency, 89 F.Supp. 981 (D.Del. 1950), relied on by Toolco, are not in point.

In addition to the determination that as a matter of law the Board does not have exclusive primary jurisdiction over the acts alleged in the complaint, the practical aspects of this case make especially apposite the statement in the River Plate case, supra, to the effect that a reference to the agency would be "useless and time-consuming" (227 F.2d at 63). Over 10,000 pages of testimony have already been taken by Toolco in deposition proceedings and over one and a quarter million documents have been produced in these proceedings by all parties. If there is any policy that would favor referral, it is not present in this case. See Atlantic Coast Line R. R. v. Riss & Co., 105 U.S.App.D.C. 380, 267 F.2d 657, 658 (1958).

Consequently, the motion to dismiss is denied. The application made upon oral argument for a certificate pursuant to 28 U.S.C. § 1292(b) was denied at that time. Toolco's application for a stay of all deposition-discovery proceedings pending an application for a stay to the Court of Appeals was granted on the oral argument to the extent that all deposition-discovery proceedings are stayed until 5 p.m. February 8th, 1963 to allow Toolco time to request a stay from the Court of Appeals beyond that time.

So ordered.

B.

32 Federal Rules Decisions 604

UNITED STATES DISTRICT COURT
S. D. NEW YORK.

May 3, 1963.

TRANS WORLD AIRLINES, INC., *Plaintiff*,

v.

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY, *Defendants*,

and

THE EQUITABLE LIFE ASSURANCE SOCIETY OF THE UNITED STATES ET AL., *Additional Defendants on Counterclaims.*

METZNER, District Judge.

The plaintiff Trans World Airlines, Inc. (TWA) has moved for an order pursuant to rules 37(b) (2) (iii), 37 (d) and 55(b) (2) of the Federal Rules of Civil Procedure directing the entry of a judgment by default against the defendant Hughes Tool Company (Toolco). It requests that a hearing be held to determine the amount of damages to be paid by Toolco for the injuries alleged in the complaint, and that Toolco divest itself of all of its right, title and interest in the stock of TWA. The motion also seeks leave to increase the *ad damnum* clause following paragraph 70 of the complaint, from $105,000,000 to $135,000,000. It further seeks a dismissal of the counterclaims with prejudice. The motion further requests that Toolco, its officers and employees, or anyone acting in concert with them, be enjoined from instituting any action based upon the counterclaims set forth in the answer of Toolco and from instituting any proceeding before an administrative agency of the United States in which TWA is a party and which is based upon the allegations of the counterclaims. Finally,

it is requested that the claims asserted by TWA against the defendant Holliday be severed from these proceedings.

Toolco owns 78% of the stock of TWA and Howard R. Hughes owns all of the stock of Toolco. It is clear that during all of the times covered by the complaint the management of TWA was controlled by Hughes personally.

Pursuant to an authorization from Hughes, the attorney for Toolco accepted service of a witness subpoena directed to Hughes by TWA. The deposition of Hughes was originally scheduled for September 24th, 1962 and was adjourned by the court to October 29th, 1962. On October 25th the Special Master adjourned the deposition of Hughes to February 11th, 1963. On December 28th, 1962 the Special Master stated that when this adjournment was granted there was no doubt that it was the intention and expectation that the deposition would start on the adjourned date and proceed until it was concluded according to law.

In the pretrial order of January 10th, 1963 the court affirmed this ruling of the Special Master, and stated that the date of February 11th, 1963 would be adhered to in the absence of extraordinary circumstances. The order of January 10th also directed Toolco to produce certain documents as to which it claimed an attorney-client privilege. The order pointed out that Toolco's opposition to producing such documents was in fact a reargument of the order of this court dated July 24th, 1962 which denied the claim of privilege.

The order of January 10th also denied Toolco's application to proceed at that time with the examination of two witnesses on the ground that such deposition would interfere with the taking of the Hughes deposition scheduled for February 11th.

On January 15th counsel for Toolco moved for an order that the Hughes deposition be taken on written interroga-

tories, or, in the alternative, that the motion to dismiss the complaint, pending since August 9th, 1961, be brought on for hearing. On January 16th Toolco's counsel was informed that he would be given until February 1st to submit all papers in support of his motion to dismiss. On January 19th Toolco's motion to take Hughes' deposition in writing was denied. The court, however, allowed counsel for Toolco time to indicate whether he desired the place of deposition to be changed for the convenience of Hughes. No such request was ever made.

On January 23rd the Court of Appeals denied Toolco's application for a stay of the orders of January 10th and 19th.

On February 1st, on Toolco's appeal from an order of the Special Master, the court affirmed that order, and directed that Toolco produce certain tax documents to TWA on a daily basis up to February 11th.

On February 6th a hearing was held on Toolco's motion to dismiss the complaint. The motion was denied from the bench with an indication that the formal opinion would be filed the following day. The denial of the motion embraced a finding that the court had jurisdiction of the claims. Toolco was granted a stay of deposition-discovery proceedings until 5 p.m. on February 8th, to afford it an opportunity to apply to the Court of Appeals for a further stay pending an application for a writ of mandamus.

The formal opinion of February 7th, 214 F.Supp. 106, denying Toolco's motion to dismiss the complaint, pointed out that the grounds urged for a dismissal existed and were adverted to in the original notice of motion filed on August 9th, 1961, and served several weeks prior to the assignment of this case for all purposes, pursuant to rule 2 of the general rules of this court. The court indicated that counsel for Toolco could just as well have argued the motion at the inception of the litigation, instead of waiting until the taking of the deposition of Hughes was imminent.

A pretrial conference was held on Friday, February 8th, at 5 p.m., on information that counsel for Toolco was not going to proceed with the deposition proceedings of Hughes on the following Monday. Toolco did not apply to the Court of Appeals for a stay pending an application for a writ of mandamus, but, rather, submitted a "Notice of Position" to the court at the time of the hearing. In essence, this document stated that because of the enormous expenses that would be incurred in further pretrial and trial proceedings, which in Toolco's belief would exceed the amount of damages provable by TWA under the complaint, Toolco decided to rest on the merits of its position, so that the Court of Appeals would have an opportunity to rule upon the propriety of the denial of the motion to dismiss the complaint.

At the hearing counsel for Toolco stated that he had advised his client of the sanctions available to TWA under rule 37, and that by insisting upon a right to obtain a review of the legal questions involved in the proceedings to date Toolco understood that it might be deprived of further defending on the merits. Counsel referred to this as a "business decision."

Counsel for Toolco specifically stated that Hughes would not appear for deposition on February 11th and that if it were necessary to clarify the record everyone could gather on the following Monday (February 11th) to

> "note the fact that the Tool Company is failing in [sic—and?] refusing to produce Mr. Hughes, and then you can have your record and you can take your remedy on it."

Counsel also stated that he did not intend to further litigate the counterclaims until after a determination of a complaint filed by Toolco with the Civil Aeronautics Board on February 6th which includes some of the allegations of the counterclaims.

Embraced within the refusal to proceed with the deposition of Hughes is the refusal to obey the orders of the court directing Toolco to produce the documents referred to above.

On the basis of this record TWA made the motion now before the court. It is clear that the deposition of Hughes is essential for the proper presentation of TWA's case. It is also clear that the failure of Hughes to appear on February 11th for his deposition was the result of a clear and studied determination by Toolco after all efforts to postpone the appearance of Hughes had failed. The default was deliberate and willful and justifies the court in entering a default judgment as provided in rule 37(b) (2) (iii) and 37(d). A judgment by default shall be entered in favor of TWA against Toolco, and the counterclaims asserted by Toolco against TWA shall be dismissed with prejudice.

That branch of the motion seeking to increase the *ad damnum* clause from $105,000,000 to $135,000,000 is granted. This is not a case where a party has defaulted in appearance. Here issue was joined and adversary proceedings continued in the pretrial stages of this litigation. The damages originally asserted were unliquidated and TWA is entitled to recover for whatever damage it can show it suffered. Furthermore, Toolco will be represented at the hearings necessary to assess damages under rule 55(b)(2). Rule 54(c); Peitzman v. City of Illmo, 141 F.2d 956 (8th Cir.), cert. denied, 323 U.S. 718, 65 S.Ct. 47, 89 L.Ed. 577 (1944); cf. Riggs, Ferris & Geer v. Lillibridge, 316 F.2d 60 (2d Cir. 1963).

Before entering the final judgment a hearing must be held to determine the amount of damages to be awarded TWA since the damages are unliquidated. Therefore, pursuant to rule 55(b) (2), the question of the amount of the damages to be paid by Toolco to TWA is referred to J. Lee Rankin, the Special Master heretofore designated by the

court, who has presided over the deposition-discovery p
ceedings for the past year.

TWA has also requested that Toolco divest itself
its 78% stock interest in TWA. The propriety of granti
this prayer for relief will be determined by the court

The determination of the application by TWA for
injunction will be held in abeyance pending the entry
the final judgment.

The application to sever the action against Holliday
been withdrawn on his election to be individually bou
by the defaults of Toolco. Consequently, the applicati
for a default judgment is deemed to include a requ
for similar relief against this defendant, and the dis
sition of this motion as to Toolco is also dispositive
to Holliday.

I am of the opinion that this order involves a controlli
question of law (see Pan American World Airways, I
v. United States, 371 U.S. 296, 83 S.Ct. 476, 9 L.Ed
325 (1963)) as to which there is a substantial ground
difference of opinion. Enormous expense has already b
incurred in this litigation, and the hearings before
Special Master on the question of damages, with a potent
recovery of $135,000,000 on the first two claims and $1
000,000 on the third claim, may well be prolonged. An i
mediate appeal from this order is justified, since it m
materially advance the ultimate termination of this l
gation.

So ordered.

Argued Nov. 13, 1963.
Decided June 2, 1964.

Before LUMBARD, Chief Judge, and KAUFMAN and HAYS, Circuit Judges.

LUMBARD, Chief Judge:

These separate appeals, heard together, are from two orders of the United States District Court for the Southern District of New York in the same case. In the first appeal, No. 28405, the defendants, Hughes Tool Company (Toolco) and Raymond M. Holliday, Toolco's chief financial officer,

attack the validity of an order which granted default jud ment in favor of the plaintiff, Trans World Airlines, In because of the defendants' failure to produce Toolco managing agent, Howard R. Hughes, for examination a their failure to produce certain papers and documents, F.R.D. 604 (S.D.N.Y. 1963). In the second appeal, N 28406, Toolco attacks an order which dismissed with pre udice its first five counterclaims against TWA and a grou of additional defendants and an order of the same da which granted summary judgment in favor of TWA on t sixth counterclaim.

TWA's complaint charged the defendants with a varie of violations of the antitrust laws as well as with havi committed willful and malicious injury to TWA's busine and sought divestiture of Toolco's interest in TWA, injun tive relief, and money damages, trebled with respect to t antitrust violations. On May 3, 1963, Judge Metzner o dered the entering of a default judgment in favor of TW against Toolco[1] but referred to a special master the iss of damages, on TWA's claim of $35,000,000 which the an trust statute would treble, and retained for further consi eration the question of divestiture. Judge Metzner d certify under 28 U.S.C. § 1292(b) that immediate appeal w justified inasmuch as a controlling question of law was i volved and hearings on the question of damages might prolonged. We granted leave to appeal limited to two que tions: first, whether the district court lacked jurisdiction the treble damage action by reason of primary jurisdictio over these matters residing in the Civil Aeronautics Boar and second, whether the issuance of certain orders by t CAB permitting the defendant to take certain actions co stitutes a good defense to the antitrust action. Thus t

[1] Due to the relationship of the parties, the district court accept the election of defendant Holliday, an officer and director of Tool to be bound by Toolco's decision to forego further discove proceedings.

propriety of the court's entering a default judgment against the defendants with respect to the complaint is not before us and we consider it only in connection with the court's dismissal of the five counterclaims asserted by the defendants. The second appeal is taken as of right from a final judgment which dismissed Toolco's first five counterclaims and granted summary judgment to TWA on the sixth counterclaim.

Background of the Litigation

An understanding of the issues requires a preliminary statement of certain background facts set forth in the pleadings and which on this record and in view of the default of the defendants we must take as established.

Commencing about five years after TWA was organized in 1934, Toolco, which at all times has been 100 percent owned and controlled by Howard Hughes, began to purchase TWA common stock, and by 1944 it held 45 percent of this stock. By 1958 Toolco had increased to 78 percent its interest in TWA's common stock; from 1944 until December 1960 it nominated a majority of TWA's directors.

Since 1955 the commercial air industry has largely converted to the use of jet aircraft. TWA's competitors began in that year to aid in the development of and to purchase jet planes. Prior to 1955 Toolco had entered into an arrangement with the General Dynamics Corporation (Convair) for the joint development of jet aircraft, but in that year the two companies terminated the arrangement. Toolco had also entered into a plan whereby it would develop and manufacture its own jet aircraft for sale or lease to TWA and its competitors. That plan was abandoned during 1956. During this period, Toolco arranged for the purchase on its own account of jet aircraft from Convair and the Boeing Company, these arrangements providing that Toolco could assign to TWA its rights to such aircraft.

Despite repeated requests by TWA, Toolco refused to assign any planes to TWA during the period 1956 to 1960. The only jet-powered aircraft which the defendants permitted TWA to use during this period were leased on a day-to-day basis by Toolco to TWA during 1959 and 1960 on the condition that TWA would not purchase or lease aircraft from any other potential supplier.

At some time prior to May 1960 Toolco and Atlas Corporation, which owns a controlling stock interest in Northeast Airlines, entered upon a plan to have Northeast propose to TWA a merger of the two air carriers. In November 1960, while the proposed merger plan was pending, Toolco diverted to Northeast six of the Convair jet aircraft which by previous agreement it had assigned to TWA.

The defendants pursued a continuous policy of refusing to permit TWA to undertake equity financing except on the condition that Toolco increase its equity position in TWA; as a result TWA was limited to obtaining funds through debt financing. When in 1960 Toolco and Hughes finally agreed to outside financing for TWA, the cost of such financing had risen greatly and the financing could be arranged only on less favorable terms than had theretofore been available, terms which had been secured by TWA's competitors. Under the 1960 financing arrangement Toolco's stock in TWA was placed in a voting trust.[1a] The CAB approved this financing arrangement and the voting trust on December 29, 1960, finding that these arrangements

---

[1a] The commitments of the various lending institutions had been conditioned upon the continuation of satisfactory TWA management. The lenders reserved the right to insist upon a voting trust during the term of the loan in the event of a change in TWA management which they deemed to be adverse to TWA's credit position. When Charles Thomas abruptly resigned as president of TWA in July 1960 the lenders offered to effect the transaction if Toolco agreed to place its stock in TWA in a voting trust. In December 1960 Toolco executed the voting trust agreement.

were in the public interest. Thereupon, the Metropolitan Life Insurance Company and the Equitable Life Assurance Society loaned TWA $92,800,000 and a group of banks for which the Irving Trust Company acted as agent loaned TWA $72,000,000. In March 1961 TWA's Board of Directors authorized the purchase of 26 Boeing jet aircraft. Thereafter the defendants continued their attempts to have TWA purchase from Toolco jet aircraft which Toolco had previously agreed to purchase from Convair. The defendants have also continued to press their demand for a merger of TWA and Northeast and have otherwise, despite the existence of the voting trust, attempted to prevent TWA from acquiring jet aircraft other than from Toolco.

THE FIRST APPEAL—Docket No. 28405

TWA's complaint alleges that the facts heretofore stated constitute violations of the Sherman and Clayton antitrust acts, insofar as the defendants have attempted to monopolize a substantial segment of interstate and foreign commerce and trade, have required that TWA boycott all suppliers of aircraft other than Toolco, and have agreed to provide financing and to sell aircraft to TWA on the condition that TWA not purchase or lease the goods of a competitor. The defendants assert that the Civil Aeronautics Board possesses primary jurisdiction over these matters and in the exercise of its powers has approved all of the transactions alleged in the complaint and thereby immunized the defendants from the operation of the antitrust laws. Judge Metzner held that nothing in the Federal Aviation Act precludes the district court from asserting jurisdiction in this case and that the CAB's approval of various transactions between TWA and Toolco did not confer immunity upon the defendants from the operation of the antitrust laws. We agree.

The proposition has so often been stated that it has become hornbook law that immunity from the operation of the

antitrust laws is not lightly to be inferred from the enactment of a regulatory statute. See Georgia v. Pennsylvania R. Co., 324 U.S. 439, 65 S.Ct. 716, 89 L.Ed. 1051 (1945). Yet Congress may effect such a design through explicit enactment of an immunizing provision, and Congress has done so on occasion.[2] Under § 408(a) (6) of the Federal Aviation Act, 49 U.S.C. § 1378(a) (6), no person engaged in any phase of aeronautics[3] may lawfully acquire control of any air carrier without the prior approval of the CAB. Section 411 empowers the Board to order any air carrier to cease and desist from "unfair or deceptive practices or unfair methods of competition." Section 414 of the Act provides that any person affected by any order made under § 408[4] "shall be, and is hereby, relieved from the operation of the 'antitrust laws' * * * and of all other restraints or prohibitions made by, or imposed under, authority of law, insofar as may be necessary to enable such person to do anything authorized, approved, or required by such order."

In attempting to ascertain the extent of the antitrust immunity conferred by the Aviation Act we do not explore wholly uncharted territory. In Pan American World Airways, Inc. v. United States, 371 U.S. 296, 83 S.Ct. 476, 9 L.Ed.2d 325 (1963) (Panagra) a case upon which all parties in this litigation principally rely, the Supreme Court considered the extent to which the Aviation Act has granted

---

[2] See, e. g., Clayton Act § 16, 38 Stat. 737 (1914), 15 U.S.C. § 26 (1958); Shipping Act § 15, 39 Stat. 734 (1916), 46 U.S.C. § 814 (1958); Interstate Commerce Act § 5a(9), 62 Stat. 473 (1948), 49 U.S.C. § 5b(9) (1958).

[3] In Transcontinental & Western Air, Inc., Control by Hughes Tool Company, 6 C.A.B. 153 (1944), the Board determined that Toolco was engaged in a phase of aeronautics and thus subject to Board action under § 408.

[4] Section 414 applies to 49 U.S.C. § 1379 (interlocking relationships) and 49 U.S.C. § 1382 (pooling and other agreements) as well as to § 408.

the CAB jurisdiction over matters involving the commercial aviation industry which might otherwise constitute antitrust violations.

Pan American, a major airline in interstate and foreign commerce, and W.R. Grace & Co., a common carrier, were charged in a civil action brought by the United States with violations of the antitrust laws arising from their relations with Panagra, an airline which had been formed by Pan American and Grace, each of which owned 50 percent of its stock. The government's complaint alleged restraints of trade in that Pan American and Grace had agreed that Panagra would have the exclusive right to traffic along the west coast of South America free of Pan American competition and that Pan American would enjoy the exclusive right to traffic in other areas in South America and between the Canal Zone and the United States; that Pan American and Grace had conspired to monopolize and did monopolize air commerce between the eastern coastal areas of the United States and western coastal areas of South America and Buenos Aires; and that Pan American had exercised its 50 percent control over Panagra to prevent it from securing authority from the CAB to extend its service from the Canal Zone to the United States.

The district court found a single violation in Pan American's activities with regard to the extension of Panagra's routes and ordered divestiture of Pan American's stock interest in Panagra. On direct appeal from the district court, the Supreme Court reversed the lower court judgment on the ground that the questions presented by the government's complaint had been entrusted to the CAB and the district court therefore lacked jurisdiction in the premises.

Noting that those aspects of antitrust problems entrusted to the Board are "but a fraction of the total," the Court emphasized that the limitation of routes, the division of territories, and the relation of common carriers to air car-

riers are "basic to [the] * * * regulatory scheme" of the Federal Aviation Act and that the acts charged in the government's complaint are "precise ingredients of the Board's authority." The term "unfair methods of competition" in § 411, the Court noted, must gather meaning from the context of the regulatory scheme envisioned in the Act, and it would be strange if the "public interest" standard incorporated into § 411[5] was deemed satisfied by the Board as to a particular transaction and yet that transaction was violative of the antitrust laws; it would be equally strange for a transaction approved under § 408 by the Board to be adjudged subsequently to be in violation of the antitrust laws.

---

[5] Title 49 U.S.C. § 1302 provides:

"In the exercise and performance of its powers and duties under this chapter, the Board shall consider the following, among other things, as being in the public interest, and in accordance with the public convenience and necessity:

"(a) The encouragement and development of an air-transportation system properly adapted to the present and future needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense;

"(b) The regulation of air transportation in such manner as to recognise and preserve the inherent advantages of, assure the highest degree of safety in, and foster sound economic conditions in, such transportation, and to improve the relations between, and coordinate transportation by, air carriers;

"(c) The promotion of adequate, economical, and efficient service by air carriers at reasonable charges, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices;

"(d) Competition to the extent necessary to assure the sound development of an air-transportation system properly adapted to the needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense;

"(e) The promotion of safety in air commerce; and

"(f) The promotion, encouragement, and development of civil aeronautics."

The striking dissimilarities between the operative facts in Panagra and those in the instant case as well as the whole tenor of the Supreme Court's opinion compel us to the conclusion that the district court properly asserted jurisdiction in this cause. The relationship between the allegedly unlawful activities in Panagra and the scope of the Board's powers to deal with such activities was direct. Under 49 U.S.C. § 1371, it is the specific function of the CAB to certify airlines to operate on a particular route between terminal points directed by the Board. The unlawful division of territories and allocation of routes with which Pan American, Grace and Panagra were accused were therefore directly within the ambit of powers explicitly granted the Board by the Congress. To permit the courts to intrude into this area would have been, as the Court noted, to permit the erection of an independent yet parallel body of law in direct contravention of the regulatory scheme embodied in the Aviation Act.

By contrast, in the instant case TWA's complaint alleges transactions which are unrelated to any specific function of the CAB. The Board is explicitly entrusted with the duty of considering for approval any potential acquisition of control over an air carrier by a person engaged in any phase of aeronautics; and to the extent of such approval—but only to that extent—the Act grants immunity from the operation of the antitrust laws. Surely Congress did not contemplate that CAB approval of an acquisition would be tantamount to approval of every transaction which might be entered into by the controlling party. The focus of the Board's powers in this sphere is the acquisition itself rather than the broad range of activities into which the controller may enter thereafter. Thus the plaintiff's complaint enumerates a variety of transactions over which the Board is given no explicit jurisdiction by the Act: an attempt to monopolize a substantial segment of interstate and foreign air commerce, imposition by the defendants on TWA of the condition that

the airline not purchase or lease aircraft from any supplier other than Toolco, and the tying of financing of aircraft acquisitions with the purchase of such aircraft from Toolco.

Nowhere in the Act is the Board specifically charged with the duty of monitoring each transaction which is ultimately effected between the carrier and its controller once an acquisition is approved. The Board concededly may condition its approval of a control acquisition upon such terms as it may find to be just and reasonable, and thereby retain a continuing jurisdiction over the activities of the controlling party.[6] In the exercise of this supplementary power the Board may investigate and regulate certain aspects of transactions effected between an air carrier and the controlling party. But the existence of this power—which was employed in approving Toolco's acquisition of control over TWA—hardly supports the defendants' claim that Congress placed the regulation of everything which might flow from such transactions within the exclusive jurisdiction of the CAB. The issue here is not whether the CAB may consider such matters but rather whether the federal courts have been excluded from their consideration by Congress. There is virtually no limit to the nature and variety of the transactions which fall within this category. In the absence of an explicit congressional mandate entrusting such transactions exclusively to the Board we can find no basis for declaring the federal courts to be without jurisdiction in such matters.

---

[6] Section 408, provides, in pertinent part:

"Unless, after such hearing, the Board finds that the consolidation, merger, purchase, lease, operating contract, or acquisition of control will not be consistent with the public interest or that the conditions of this section will not be fulfilled, it shall by order, approve such consolidation, merger, purchase, lease, operating contract, or acquisition of control, upon such terms and conditions as it shall find to be just and reasonable and with such modifications as it may prescribe * * *."

In Panagra the Civil Aeronautics Board could have considered the activities of Pan American under its broad power set out in § 411 of the Act to "investigate and determine whether any air carrier * * * has been or is engaged in unfair or deceptive practices or unfair methods of competition in air transportation * * *," a provision to which the Supreme Court explicitly adverted in holding that the matters there in dispute had been specifically entrusted by Congress to the Board. By contrast, the Board enjoys no such power to deal with the allegedly unlawful activities of Hughes and Toolco, inasmuch as § 411 is applicable solely to "any air carrier, foreign air carrier, or ticket agent." The limited applicability of § 411 merely underscores the limited jurisdiction conferred by Congress upon the Board to deal with the multifarious antitrust problems which may arise in the management and operation of the commercial air industry. Moreover, it is not even clear that the Board any longer possesses any jurisdiction over the activities of Hughes and Toolco, even under § 408 of the Act, inasmuch as the voting trust arrangement adopted in 1960 appears to have ousted Hughes and Toolco from control over the operations of TWA, such control being a prerequisite to the Board's acting under § 408.

We are reinforced in our conclusion by the Supreme Court's recognition of the limitations of its holding in Panagra. Characterizing the questions presented in the government's complaint as "narrow" ones, the Court, as we have noted, emphasized that the antitrust problems entrusted by the Act to the Board "encompass only a fraction of the total." The activities here drawn into issue by TWA's complaint fall without the ambit of that small fraction of antitrust problems placed within the Board's exclusive jurisdiction.

The Aviation Act itself bears testimony that matters such as those with which we are here concerned were not intended to be placed without the competence of the federal judiciary.

Title 49 U.S.C. § 1506 declares that "Nothing contained in this chapter shall in any way abridge or alter the remedies now existing at common law or by statute, but the provisions of this chapter are in addition to such remedies." Moreover, the Act fails to empower the Board to grant the very relief principally sought by the plaintiff in this action —the award of money damages, trebled under the mandate of the antitrust laws.

Even if we were to view as the subject of judicial discretion the question whether the CAB is to be given primary jurisdiction in the consideration of activities such as those here alleged, we could find no compelling reason to adopt such a course on the facts presented. While the entire regulatory scheme of the Federal Aviation Act demands that the Board be given great latitude in fashioning public policy with regard to the development of the commercial air industry through the acquisition of control over air carriers—and the Board possesses a substantial expertise in these matters—there is no such necessity for a uniformity of policy with regard to the consideration of the validity of individual transactions effected between an air carrier and its controller which are alleged to be unlawful under the antitrust laws. Nor is the Board any more qualified to consider such charges than the federal courts, which daily encounter and resolve antitrust problems. The disposition of such matters by the courts would not intrude upon the Board's function of fashioning the broad framework of control for the commercial air industry. We can thus find no warrant for adopting the position that the subject matter of this litigation was entrusted by Congress to the exclusive jurisdiction of the Civil Aeronautics Board.

Nor do we find any merit in the defendants' alternative contention that the Civil Aeronautics Board, in approving Toolco's acquisition of control over TWA and certain specific transactions thereafter, immunized the defendants from the operation of the antitrust laws as to all the

ramifications of these transactions. Title 49 U.S.C. § 1384 extends such immunity only "insofar as may be necessary to enable such person to do anything authorized, approved or required by such order." As Judge Metzner noted, the Board's approval of acquisition of control by Toolco over TWA did not carry with it approval of every transaction which Toolco might choose to effect in the exercise of its control. To give § 408 such a carte blanche effect would be to pervert the entire regulatory structure of the Aviation Act. Nor can any of the activities with which Toolco stands charged be deemed to have been necessary to the exercise of its control relationship.

In its original grant of approval of the acquisition of control over TWA by Toolco,[7] the Board restricted commercial transactions between the two companies to "transactions involving complete items of property, the price of which does not exceed $200 each, with the further limitation that the total annual expenditure involved in such commercial transactions by either party shall not exceed $10,000." Over the years the Board has occasionally modified this order to permit specific intercompany transactions. In 1959 and 1960 the Board issued five such modification orders approving the specific transactions involving the acquisition of jet aircraft which are the subject matter of this litigation. In each case, however, the Board's order states merely the specific terms of the transaction and none of the accompanying conditions which allegedly were foisted upon TWA.[8] Order No. E-13873, issued on May 15, 1959, for example, states that the modification "is desired to permit TWA to lease on an individual basis up to eleven Boeing 707-131 aircraft from Hughes as they become available, as well as to acquire from Hughes at

---

[7] Transcontinental & Western Air, Inc., Control by Hughes Tool Company, 6 C.A.B. 153 (1944).

[8] See Order No. E-13542, February 26, 1959; Order No. E-13873, May 15, 1959; Order No. E-14169, July 1, 1959; Order No. E-14504, September 30, 1959; Order No. E-14877, January 29, 1960.

Hughes' actual cost a supply of spare parts, not to exceed $3,500,000 in value, which are needed for the operation of these aircraft. In addition, modification is requested to permit the lease by Hughes of up to thirty spare jet engines to TWA." The Board stated in its order that the proposed arrangements did not violate the purpose of the original restriction in the control approval and that the modification ordered was just and reasonable and in the public interest; but the Board was careful to emphasize that its action should not be deemed a determination for rate-making purposes of the reasonableness of the transactions. There is no indication whatsoever—or any reason to believe—that the Board had been given any indication of the conditions which had been attached to Toolco's agreements with TWA. The Board's approval extended only to the individual transactions involved in these orders, not to the whole range of activities which over a period of years constituted the backdrop against which these transactions were effected. There is thus no cause to hold that these individual and narrow Board orders immunized the defendants from the operation of the antitrust laws with respect to activities not specifically ruled upon by the Board.

The defendants maintain that in any event the complaint fails to state facts sufficient to establish the jurisdiction of the district court. They claim that the allegations of antitrust violations in the complaint are wholly conclusory and that the specific transactions alleged to have been effected by the defendants do not state a cause of action under the antitrust laws. We do not agree. We cannot say that the specific transactions alleged in TWA's complaint—that Toolco refused to finance aircraft acquisitions by TWA unless TWA agreed to purchase planes from no supplier other than Toolco; that Toolco required TWA generally to boycott all other suppliers of aircraft; that the defendants have attempted through various means to monopolize a substantial segment of interstate and for-

eign air commerce—are on their face insufficient to support a claim of antitrust violations, a claim which surely falls within the jurisdiction of the district court. The allegations state the outlines of a tying arrangement, an economic boycott of the defendants' competitors, and an attempt to monopolize commerce, all unlawful under the antitrust statutes. It would be particularly inappropriate to find these allegations insufficient to establish the district court's jurisdiction inasmuch as the defendants denied the plaintiff the right through pre-trial discovery to add more detail and substance to the allegations set forth in the complaint. "[T]he Federal Rules of Civil Procedure do not require a claimant to set out in detail the facts upon which he bases his claim. To the contrary, all the Rules require is 'a short and plain statement of the claim' that will give the defendant fair notice of what the plaintiff's claim is and the grounds upon which it rests." Conley v. Gibson, 355 U.S. 41, 47, 78 S.Ct. 99, 103, 2 L.Ed. 2d 80 (1957). See Dioguardi v. Durning, 139 F.2d 774 (2 Cir. 1944); Knudsen v. Torrington Co., 254 F.2d 283 (2 Cir. 1958). Of course the Federal Rules apply with equal force to suits under the antitrust laws. Nagler v. Admiral Corp., 248 F.2d 319, 322-23 (2 Cir. 1957). We are satisfied that the complaint sufficiently states a cause of action and establishes the district court's jurisdiction.

THE SECOND APPEAL—Docket No. 28406

The defendants also appeal, as of right, from orders of the district court which dismissed with prejudice their first five counterclaims asserted against TWA and a group of additional defendants and which granted summary judgment in favor of TWA on a sixth counterclaim, because of the defendants' failure to produce Hughes for examination and their failure to produce certain papers and documents. The additional defendants are the three major lending institutions which participated in the 1960 financing and voting trust agreements, certain of their officers, the

incumbent president and chairman of the board of directors of TWA, and an investment banking concern which since early in 1959 has served as TWA's principal financial adviser.

The proper consideration of this appeal requires a chronological exposition of the lengthy and complicated pretrial proceedings engaged in by the parties. Late in 1961 Judge Metzner was assigned to serve as a judge for all purposes in this litigation under General Rule 2, General Rules of the United States District Courts for the Southern and Eastern Districts of New York. By order of February 7, 1962, Judge Metzner confirmed a series of prior orders which had awarded Toolco priority in the conduct of pretrial discovery, and he then appointed J. Lee Rankin, Esq. as Special Master to supervise the conduct of the discovery proceedings.

Shortly after the filing of the answer and counterclaims on February 12, the Special Master granted Toolco's motions to have the additional defendants produce a multitude of documents. On March 5, Judge Metzner modified the February 7 order so as to limit Toolco's priority in discovery to evidence which bore on the plaintiff's claims against Toolco. The March 5 order stated that "The additional defendants may participate in such depositions conducted by plaintiff, in furtherance of their own deposition proceedings, or may separately schedule such depositions to follow upon the completion of plaintiff's depositions." The court further ordered that upon the completion of the additional defendants' deposition proceedings Toolco could complete its own deposition proceedings.

On February 16, the Special Master had granted the motion of the additional defendants for the production of certain documents by Toolco. Toolco withheld certain of these documents on a claim of attorney-client privilege. After full consideration, the Special Master ordered the production of these documents on April 17. After affirm

ance by the district court of this order and of a second order to produce issued by the Special Master, and denial of review by this court, counsel for Toolco, in a letter to Judge Metzner on January 23, 1963, declared that Toolco would refuse to comply with any of these orders.

Meanwhile, on September 6, 1962, counsel for Toolco had accepted a subpoena calling for Hughes' personal appearance as a witness returnable on September 24, 1962. The district court later set October 29 as the date for the Hughes deposition. The court went on to adopt as its own a prior decision of the Master that in view of the close connection between Hughes and Toolco, Toolco would be responsible for Hughes' actions with respect to the subpoena, and that if Hughes failed to communicate with the Special Master he would be deemed to have acquiesced in this interpretation. No communication from Hughes was received by the Master.

On October 25, 1962, the Master granted Toolco's motion to adjourn the Hughes deposition, but set February 11, 1963, as a firm date therefor. By order of January 10, 1963, the district court affirmed the setting of this date, stating that "this date will be adhered to in the absence of extraordinary circumstances." Shortly thereafter, Toolco moved to hold the Hughes deposition on written interrogatories and to bring on for hearing its motion, pending since August 8, 1961, to dismiss the complaint for failure to state a claim upon which relief may be granted. On January 19, 1963, the district court denied the first motion.

In preparation for the Hughes deposition, the additional defendants had moved on January 9, 1963, for the production by Toolco of certain income tax returns, revenue agents' reports, accountants' work sheets and other documents which would allegedly substantiate a claim that Toolco and Hughes had been motivated by a desire to reap tax benefits at TWA's expense in their dealings with TWA concerning the acquisition of a jet-powered fleet of aircraft.

On January 22, 1963, the Master ruled that the documents were relevant to the issues in the case and that their production would not place an unreasonable burden upon Toolco. On February 1, the district court affirmed the order to produce, but Toolco failed to produce the documents, despite repeated demands by TWA and the additional defendants.

On February 6, 1963, five days before the scheduled Hughes deposition, Toolco filed a complaint with the Civil Aeronautics Board charging the additional defendants with violations of the Federal Aviation Act. On the same day Toolco moved the district court for a stay of all proceedings on the counterclaims pending disposition by the CAB of the Toolco complaint, on the ground that under the Supreme Court's decision in Panagra, filed on January 14, 1963, the Board possessed exclusive jurisdiction over the subject matter of the counterclaims. On February 6 the district court denied Toolco's motion to dismiss the complaint, 214 F. Supp. 106 (S.D. N.Y. 1963), and on February 8 it denied Toolco's motion for a stay of all proceedings on the counterclaims.

On February 8 counsel for Toolco informed the district court that Toolco had made a "business decision" not to proceed further with discovery proceedings, but rather to rest on the merits of the positions theretofore taken and seek judicial review thereof. Consequently, counsel for Toolco stated, Hughes would fail to appear for the deposition ordered for February 11. He further stated that Toolco was aware of the sanctions which could be imposed by the district court for such a willful and deliberate failure to proceed with the scheduled discovery proceedings.

The inevitable consequence of Toolco's default in producing Hughes as a witness and in producing the documents as the court had directed was that on May 3 the district court granted the motions of TWA and the additional defendants for dismissal of the counterclaims with prejudice, under Rule 37(b) (2) (iii) and Rule 37(d) of the

Federal Rules of Civil Procedure. From the final judgments entered pursuant to that decision, and from a final judgment entered the same day granting TWA's motion for summary judgment on the sixth counterclaim, Toolco appeals.

Inasmuch as the sixth counterclaim raises issues unrelated to the first five counterclaims, we shall treat the sixth counterclaim separately.

The First Five Counterclaims

The appellants raise several contentions: first, that the district court should have granted their motion for a stay of all proceedings on the counterclaims pending disposition of the complaint which the defendants had filed with the CAB; second, that the district court should have granted the defendants a voluntary dismissal of the counterclaims without prejudice; and third, that the district court orders which directed Hughes to appear for deposition as noticed by the additional defendants, and which directed Toolco to produce the tax documents and the documents involving the attorney-client privilege, were improper.

That there was no cause for granting a stay of all proceedings on the counterclaims appears clear from the nature of these counterclaims. The first counterclaim alleges that the additional defendants and the present management of TWA improperly sought to perpetuate their control over TWA by preventing termination of the voting trust according to its terms. The second charges that Metropolitan and Equitable had acquired control over TWA in violation of § 408 of the Aviation Act. The third counterclaim is brought derivatively on behalf of TWA and asserts that the additional defendants and the present TWA management have conspired in violation of the antitrust laws to monopolize the supplying of financing to air carriers. The fourth restates the allegations of the third counterclaim and alleges that Toolco has suffered damages in excess of $77,000,000. Finally, the fifth counterclaim charges a com-

mon law conspiracy to interfere with Toolco's rights as the owner of 78 percent of the stock of TWA and to extend the duration of the voting trust beyond the period permitted by the applicable Delaware statute.

In the light of the views we have above expressed regarding the first appeal, it is plain that all of these counterclaims save the second fall beyond the scope of the CAB's exclusive jurisdiction. They deal with alleged misconduct on the part of the lending institutions in their dealings with TWA and Toolco and in no respect with matters specifically entrusted to the Board in the Act. Acts such as those alleged in all but the second counterclaim may properly be made the subject of an action in a federal district court. Inasmuch as the Board possessed no exclusive jurisdiction as to these claims, the defendants presented no adequate basis for a stay of proceedings.

As for the second counterclaim—which alleges a violation by the additional defendants of § 408 of the Aviation Act—the Board clearly possesses exclusive jurisdiction. Under that section, the Board is empowered to investigate alleged violations, and the district court was without power to adjudicate this issue. The court should have dismissed this counterclaim for lack of jurisdiction, and we direct the modification of the judgment below accordingly.

The defendants maintain that the district court should have granted a voluntary dismissal without prejudice of the counterclaims. It suffices merely to note that at no juncture in the proceedings below did the defendants request that the court grant such relief. Indeed, the very purpose for the defendants' "business decision" to terminate all pretrial discovery was to gain judicial review of the positions which the defendants had taken below.

Finally, the defendants contend that the district court's dismissal with prejudice of the counterclaims was invalid because the discovery orders upon which the district court

based its order under Rules 37(b) (2) (iii) [9] and 37 (d) [10] were improper.

We think it clear beyond any question, in light of all the circumstances here presented, that the deposition of Hughes was necessary to all aspects of this litigation, and his willful and deliberate default constituted a sufficient basis under Rule 37 for the dismissal of the counterclaims with prejudice. Hughes has at all times been the sole owner of Toolco and the guiding light behind all the transactions between Toolco and TWA. Both TWA and the additional defendants had the right to depose Hughes. Although the

---

[9] Rule 37 provides:

"(b) Failure to Comply With Order.

"(2) *Other Consequences.* If any party or an officer or managing agent of a party refuses to obey an order made under subdivision (a) of this rule requiring him to answer designated questions, or an order made under Rule 34 to produce any document or other thing for inspection, copying, or photographing or to permit it to be done, or to permit entry upon land or other property, or an order made under Rule 35 requiring him to submit to a physical or mental examination, the court may make such orders in regard to the refusal as are just, and among others the following:

"(iii) An order striking out pleadings or parts thereof, or staying further proceedings until the order is obeyed, or dismissing the action or proceeding or any part thereof, or rendering a judgment by default against the disobedient party • • • "

[10] Rule 37 provides:

"(d) Failure of Party to Attend or Serve Answers. If a party or an officer or managing agent of a party wilfully fails to appear before the officer who is to take his deposition, after being served with a proper notice, or fails to serve answers to interrogatories submitted under Rule 33, after proper service of such interrogatories, the court on motion and notice may strike out all or any part of any pleading of that party, or dismiss the action or proceeding or any part thereof, or enter a judgment by default against that party."

defendants contend that the February 11, 1963 deposition was to be held solely for the benefit of TWA, Judge Metzner's order of February 7, 1962 made clear that the additional defendants could schedule separate deposition proceedings of their own, or in the alternative participate in TWA's deposition proceedings. On February 14, 1962, the additional defendants served notices to examine Toolco by Hughes, its managing agent. The additional defendants had the right under Judge Metzner's order to treat as their own the Hughes deposition scheduled for February 11, and it is abundantly clear from the record that they did so.

When Hughes chose not to appear for this deposition—which action was taken deliberately and with full knowledge of the sanctions available to the additional defendants under Rule 37—Judge Metzner was fully justified in entering judgments dismissing the counterclaims against TWA and the additional defendants. The sanction of judgment by default for failure to comply with discovery orders is the most severe sanction which the court may apply, and its use must be tempered by the careful exercise of judicial discretion to assure that its imposition is merited. However, where one party has acted in willful and deliberate disregard of reasonable and necessary court orders and the efficient administration of justice, the application of even so stringent a sanction is fully justified and should not be disturbed. See Nasser v. Isthmian Lines, 2d Cir., 1964, 331 F. 2d 124; Link v. Wabash Railroad Co., 370 U.S. 626, 82 S. Ct. 1386, 8 L. Ed. 2d 734 (1962); Gill v. Stolow, 240 F. 2d 669 (2 Cir. 1957).

Hughes' deposition was absolutely essential to the proper conduct of the litigation. Yet he and Toolco seized upon every opportunity to forestall this event. To this end they demanded the production of a multitude of documents by TWA and the additional defendants and secured successive adjournments of the deposition. Indeed, Hughes and Toolco seemed to look upon the entire discovery proceedings as some sort of a game, rather than as a means of securing the just and expeditious settlement of the important matters in dispute. It was only at the very eve of the Hughes deposition—after the other litigants had been put

to much delay and expense—that the defendants made a "business decision" to terminate discovery.

Hughes' conduct is particularly intolerable in a large and complex litigation such as this one. The protracted antitrust suit taxes the energies and resourcefulness of each party to the litigation; and it consumes much time of the court and the special masters it appoints. Tactics such as Hughes' serve only to frustrate the implementation of the discovery machinery devised by the federal judiciary to expedite the handling of such complex litigation. See Handbook of Recommended Procedure for the Trial of Protracted Cases, Report of the Judicial Conference Study Group on Procedure in Protracted Litigation, 25 F.R.D. 351 et seq. (1960).

In the light of all these circumstances, the district court was not obliged to employ sanctions less severe than the dismissal of the counterclaims with prejudice. Whatever lesser sanctions might have sufficed with regard to the documents withheld by the defendants, it seems to us that a dismissal of the counterclaims was appropriate, in view of Hughes' intransigence after intensive and expensive discovery proceedings already protracted for more than one year.

We are also of the view that the other two discovery orders were properly issued. After careful examination of the documents, both the Special Master and the district court determined that the attorney-client privilege claimed by the defendants as to the first group of documents had been waived as the result of the defendants' pleading advice of counsel as a defense and as the result of two affidavits, one of which was submitted to the CAB by Raymond A. Cook, one of Toolco's attorneys. As the Master noted, the Cook affidavit purports to be based upon information received by Cook as Attorney for Toolco and in many respects parallels the allegations made in the answer and counterclaims. The district court properly held that under these circumstances the affidavit constituted a waiver by Toolco of the attorney-client privilege. As for the documents concerning income tax information, there can be

little question of the relevance of this material to the litigation. The additional defendants might well have based a defense to the counterclaims upon a showing that Toolco's and Hughes' activities with regard to the financing of aircraft acquisitions by TWA were motivated by a desire to reap income tax benefits for Hughes at the expense of TWA. Of course, the test of relevance for discovery purposes is less stringent than that applied to the admissibility of evidence at trial. Moore, Federal Practice ¶ 34.10. The district court properly ordered the production of the tax documents.

The Sixth Counterclaim

The December 1, 1960 financing agreement required the subordination of prior indebtedness of TWA to Toolco, to be achieved through the issuance by TWA of interim subordinated notes in payment *pro tanto* of the prior indebtedness. TWA was then obliged to offer to its stockholders the right to purchase, at least at par, $100 million worth of subordinated debentures. The interest on both the interim notes and the debentures was set at 6½ percent. Toolco agreed to purchase the "principal amount" of the unsubscribed debentures within three business days of the close of the subscription offering. The agreement further provided that "TWA shall * * * refund the Interim Subordinated Notes * * * upon the purchase by Hughes [Toolco] of [the] Subordinated Debentures * * * and Hughes shall accept such Subordinated Debentures in any such refunding of the Interim Subordinated Notes up to the aggregate principal amount of Subordinated Debentures which Hughes is so obligated to purchase." The transaction was to be completed by TWA's turning over to Toolco the cash received from the subscription offering in addition to accrued and unpaid interest on the interim notes to the date of refunding.

The subscription offering expired on June 8, 1961. On June 13, three business days thereafter, TWA delivered to Toolco some $19 million in cash received in the offering

and nearly $81 million in unsubscribed debentures, totalling $100 million, the amount of the interim notes. TWA also paid Toolco interest on the $100 million to June 8 and interest on the $19 million through June 12. TWA paid no interest on the $81 million from June 8 through June 12 on the ground that it was substituting interest-bearing debentures for the interim notes.

In its sixth counterclaim, Toolco contends that under the terms of the financing agreement, TWA was obliged to pay interest on the interim notes to the date of refunding, June 13, and that TWA's failure to pay such interest resulted in Toolco's paying more than par value for the subordinated debentures, in violation of the terms of the agreement. We agree with Judge Metzner who found that "based on the overall arrangements between the parties, * * * it was their intention to substitute the debentures for the interim notes and that payment of double interest for the five days was not the intendment of the parties." The fact that the subordinated debentures were issued as of June 8 and bore interest from that date, in the same amount as the interim notes, indicates that the exchange for the notes was to be effective as of that date. The provision for having the closing three business days thereafter was merely to afford time for the preparation for that transaction. The most plausible reading of the financing agreement would seem to be one which eliminates the double interest for the period between June 8 and June 13 which Toolco now seeks. Judge Metzner properly granted summary judgment to TWA on this counterclaim.

Conclusion

As to the first appeal, we find that the district court had jurisdiction of the action and that the Civil Aeronautics Board orders do not constitute a good defense to the antitrust claim of the plaintiff.

The orders of the district court in the second appeal are affirmed with the exception of the order dealing with the second counterclaim. The second counterclaim is dismissed for lack of jurisdiction.

38 Federal Rules Decisions 499

UNITED STATES DISTRICT COURT
S. D. NEW YORK.

TRANS WORLD AIRLINES, INC., *Plaintiff*,

v.

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY, *Defendants*.

Nov. 16, 1965.

METZNER, District Judge.

Plaintiff seeks review of so much of an opinion and order of the Special Master as fails to adopt some of the proposed interim findings of fact requested by the plaintiff.

It is unnecessary to detail the long, drawn-out history of this complicated antitrust litigation. The present problem arose after the court directed the entry of a judgment by default pursuant to Fed. R. Civ. P. 37(b)(2)(iii) and 37 (d), and appointed a Special Master pursuant to rule 55(b)(2) to determine the amount of damages.

The plaintiff, in an attempt to facilitate the hearings before the Special Master, submitted proposed interim findings of fact to formalize the basic findings which it considered flowed from the default. The plaintiff disagrees with some of the views expressed by the Special Master in his opinion and with so much of his order striking portions of the proposed findings.

In the main I agree with the exposition by the Special Master of the law and procedures to be followed by him in assessing the damages in this case. There appears to be some ambiguity in one portion of his opinion which may need clarification.

He states that:

"For the reasons indicated the defendants, at this point, do not have the right to produce evidence to try

to establish in any manner that the allegations of the complaint other than as to damages cannot be maintained."

The opinion goes on to state:

"Recognizing that it is his duty on behalf of the court to be satisfied of the liability of the defendants, as well as of the proof, according to law, of the amount of damages claimed, he must also be satisfied by a preponderance of the evidence that any damages were proximately caused". * * *

The reference to a duty "to be satisfied of the liability of the defendants" may, in light of the first quotation above, indicate a conflict in approach, although a reading of the entire opinion does not warrant such a conclusion.

The order referring this matter to the Special Master pursuant to the authority of Fed. R. Civ. P. 55(b)(2) was intended to embrace this portion of the rule:

"If, in order to enable the court to enter judgment * * * it is necessary to * * * determine the amount of damages * * * the court may * * * order such references as it deems necessary and proper".

Liability is not an issue for the Special Master except in a very limited sense. The sufficiency of the complaint has already been established by the denial of defendant's motion to dismiss. 214 F. Supp. 106 (S.D. N.Y. 1963), aff'd, 332 F. 2d 602 (2d Cir. 1964), writ of cert. dismissed, 380 U.S. 248, 85 S. Ct. 934, 13 L. Ed. 2d 817 (1965). By virtue of the default the defendant has admitted the truth of the well-pleaded allegations of the complaint. Thomas v. Wooster, 114 U.S. 104, 5 S. Ct. 788, 29 L. Ed. 105 (1885).

Allegations are not well pleaded if they are shown to be indefinite or erroneous by other statements in the complaint (Thomson v. Wooster, supra); or where they are contrary to facts of which the court will take judicial notice (Glenn Coal Co. v. Dickinson Fuel Co., 72 F. 2d 885, 889 (4th Cir. 1934)); or where they are not susceptible of proof by legiti-

mate evidence (Cohen v. United States, 129 F. 2d 733 (8th Cir. 1942), Greeson v. Imperial Irr. Dist., 59 F. 2d 529 (9th Cir. 1932)); or where they are contrary to uncontroverted material in the file of the case (Interstate Nat. Gas Co. v. Southern Calif. Gas Co., 209 F. 2d 380, 384 (9th Cir. 1953), In re Woodmar Realty Co., 294 F. 2d 785 (7th Cir. 1961), cert. denied 369 U.S. 803, 82 S. Ct. 643, 7 L. Ed. 2d 550 (1962)). However, it may be shown by plaintiff, in the context of this case, that some matters of which the court may take judicial notice should not be so noticed. See McCormick, Evidence § 330 (1954). Where file material is involved, if the plaintiff did not have full opportunity to meet or controvert such material, then it should not be used to nullify the allegation. If evidence merely tends to show that an allegation is not true, the allegation must be taken as true in this default. Finally, the plaintiff is entitled to the benefit of all reasonable inferences from the evidence tendered.

Attempts by defendant to escape the effects of its default should be strictly circumscribed. It should not be afforded an opportunity to litigate what has already been deemed admitted in law. In the absence of an exceedingly strong showing that an allegation is untrue under the rules set forth above, the allegation stands as admitted.

The Special Master stated that the failure to adopt any proposed finding is not a determination that such finding

> "is false, or disproved, or that it will not be fully established by the close of the hearings on damages."

Such proposed findings are not at issue except to the limited extent noted above. The Special Master specifically stated that

> "the defendants are not allowed by the present refusal to adopt such tendered findings to contest them on the merits as they could do if there had been no default."

The matter is returned to the Special Master to proceed in accordance with these views. So ordered.

H.

308 Federal Supplement 679

UNITED STATES DISTRICT COURT
S. D. NEW YORK.

TRANS WORLD AIRLINES, INC., *Plaintiff*,

v.

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY, *Defendants*.

No. 61 CIV. 2324

Dec. 23, 1969.

METZNER, District Judge.

The special master, Herbert Brownell, Esq.. has submitted his report awarding plaintiff $137,611,435.95 as damages after trebling as provided in § 4 of the Clayton Act, 15 U.S.C. § 15. The matter had been referred to him for assessment of damages following the entry of a default judgment imposed as a sanction for failure of Howard R. Hughes to appear for deposition. Trans World Airlines, Inc. v. Hughes, 32 F.R.D. 604 (S.D. N.Y. 1963). In the ensuing discussion, plaintiff will be referred to as TWA and defendants Howard R. Hughes and Hughes Tool Company as Hughes and Toolco, respectively.

Both parties have filed objections to the report. The defendants move to confirm those portions of the report which are favorable to them and move to reject those portions which are adverse to their position. If their contentions are correct, TWA is not entitled to any damages. TWA objects to the report on the ground that the amount awarded is inadequate. The maximum figure for which it contends is $510 million plus prejudgment or moratory interest of over $175 million. The respective contentions of the parties will be discussed below.

The history of this litigation, in which TWA sought damages for claimed antitrust violations, shows that it has been long and complex. It was originally instituted on June 30, 1961. On August 31, 1961, the case was assigned to me for

all purposes pursuant to Rule 2 of the General Rules of this court. Since then it has been the subject of many pretrial rulings, opinions and appeals. The sufficiency of the complaint was upheld in an opinion reported in 214 F. Supp. 106 (S.D. N.Y. 1963). In that opinion this court also ruled adversely to defendants' contention that the acts complained of were exempt from the antitrust laws by virtue of certain orders of the Civil Aeronautics Board. After the court was informed that Hughes would refuse to appear for examination, it granted TWA's application for a default judgment. 32 F.R.D., *supra*. The Court of Appeals affirmed the rulings found in 214 F. Supp., *supra*, but refused to pass upon the propriety of the entry of the default judgment. 332 F. 2d 602 (2d Cir. 1964). On March 8, 1965, the Supreme Court dismissed writs of certiorari as improvidently granted. 380 U.S. 248, 249, 85 S. Ct. 934, 13 L. Ed. 2d 817, 818. The special master and the court then made preliminary rulings as to the effect of the default judgment on the damage hearings. 38 F.R.D. 499 (S.D. N.Y. 1965).[1]

---

[1] Despite these rulings defendants moved to compel TWA to come forward with evidence to preclude the finding of a fact which in effect would remove the basis of TWA's claim. In a memorandum opinion dated January 4, 1966, denying the motion, the court said:

> "A 7-inch stack of affidavits, briefs and supporting documents has been submitted in connection with this motion. After reading them and listening to defendant's extensive argument, one wonders why the case was never defended on the merits, if all that defendant contends for is true. At this late date, after the complaint has been sustained and a default judgment entered, with appeals to the Court of Appeals and a writ of certiorari dismissed by the Supreme Court, defendant now, in effect, seeks summary judgment in its favor. It asks that plaintiff come forward to negative a fact which defendant asserts as true. The shoe is on the other foot. The plaintiff has a judgment in its favor and the only limitation thereon has been spelled out in the order of the Special Master dated July 30, 1965 and the order of this court dated November 16, 1965. Together they outline the procedures to be followed before the Special Master, where the matter is properly pending. The court cannot conceive of any further reason for delay in proceeding before the Special Master until the hearings are completed."

The hearings before the special master commenced on May 2, 1966. Some 11,000 pages of testimony were taken from expert witnesses in the field of economics, engineering, finance and accounting. Over 800 exhibits containing 60,000 pages were admitted in evidence. The special master thereafter rendered a 323-page report. A hearing was held on the objections of the parties to the report. They submitted over 1,300 pages of briefs and memoranda, including a 62-page listing by defendants of 216 specific objections to the report.

At page 12 of his report, the special master states, "Despite prior rulings in the case, this [effect of the default] has been the subject of continuing disagreement between the parties in the damage hearings." I thought that this issue had been clearly disposed of in the preliminary report of the original special master, dated July 30, 1965, and in this court's opinion in 38 F.R.D. 499.

As stated in that opinion at page 501:

> "Liability is not an issue for the Special Master except in a very limited sense. The sufficiency of the complaint has already been established by the denial of defendant's motion to dismiss. 214 F. Supp. 106 (S.D. N.Y. 1963), aff'd, 332 F. 2d 602 (2d Cir. 1964), writ of cert. dismissed, 380 U.S. 248, 85 S. Ct. 934, 13 L. Ed. 2d 817 (1965). By virtue of the default the defendant has admitted the truth of the well-pleaded allegations of the complaint. Thomson v. Wooster, 114 U.S. 104, 5 S. Ct. 788, 29 L. Ed. 105 (1885)."

In the present report, the special master has referred to another case, Harshman v. Knox County, 122 U.S. 306, 7 S. Ct. 1171, 30 L. Ed. 1152 (1887), which on its facts is even stronger than Thomson v. Wooster, *supra*. Without going into the details of that case, it is sufficient to quote the Court's language at page 317, 7 S. Ct. at pages 1175-1176:

> "In the absence of a denial, the fact as stated in the petition of the plaintiff is confessed by the default, and

stands as an admission on the record, of its truth by the defendant."

In the hearings before the special master, TWA did not have to present any evidence to support the well-pleaded allegations of the complaint, and defendants may not offer evidence to controvert such allegations. To the extent that they did, it will be disregarded. That opportunity was forfeited by defendants as a result of the default.

Defendants may show, however, that an allegation is not well pleaded, but only in very narrow, exceptional circumstances. The *Thomson* and *Harshman* cases clearly support this rule. For example, an allegation made indefinite or erroneous by other allegations in the same complaint is not a well-pleaded allegation. Other examples, as detailed in 38 F.R.D. at 501, are allegations which are contrary to facts of which the court will take judicial notice, or which are not susceptible of proof by legitimate evidence, or which are contrary to uncontroverted material in the file of the case. That opinion went on to say:

"However, it may be shown by plaintiff, in the context of this case, that some matters of which the court may take judicial notice should not be so noticed. See McCormick, Evidence § 330 (1954). Where file material is involved, if the plaintiff did not have full opportunity to meet or controvert such material, then it should not be used to nullify the allegation. If evidence merely tends to show that an allegation is not true, the allegation must be taken as true in this default. Finally, the plaintiff is entitled to the benefit of all reasonable inferences from the evidence tendered.

"Attempts by defendant to escape the effects of its default *should be strictly circumscribed.* It should not be afforded an opportunity to litigate what has already been deemed admitted in law. *In the absence of an exceedingly strong showing* that an allegation is untrue

under the rules set forth above, the allegation stands as admitted." 38 F.R.D. at 501 (emphasis added).

This quoted language had in mind the impact of the failure of Hughes to appear for deposition. His default stymied TWA in the acquisition and presentation of evidence in support of its claim. As the Court of Appeals said (332 F. 2d at 614):

> "We think it clear beyond any question, in light of all the circumstances here presented, that the deposition of Hughes was necessary to all aspects of this litigation * * *."

And again at page 615:

> "Hughes' deposition was absolutely essential to the proper conduct of the litigation."

Defendants claim that there are allegations in the complaint which are contrary to facts of which the court will take judicial notice. They particularly refer to that portion of the third paragraph of the complaint which alleges that Toolco was engaged

> "since in or about 1939 in the development, manufacture and acquisition of aircraft and related equipment from the manufacturers thereof in various states and in the sale and lease of such aircraft to air carriers in various other states for use in interstate and foreign commerce."

They request that judicial notice be taken of the fact that Toolco never "manufactured" or engaged "in the sale and lease" of aircraft. I cannot take judicial notice of these matters because they are not indisputably true.

The question whether judicial notice can be taken of facts which are not indisputable has been the subject of disagreement among scholars. Wigmore thought that notice should not be limited to indisputable facts. He took the position that the taking of judicial notice of a fact merely

relieved the offeror of more formal proof. However, this did not prevent his opponent from disputing the fact by offering contrary evidence. 9 Wigmore, Evidence § 2567 (3d ed. 1940). See also Thayer, Preliminary Treatise on Evidence 308-309 (1898); Ohio Bell Telephone Co. v. Public Utilities Comm'n of Ohio, 301 U.S. 292, 301-302, 57 S. Ct. 724, 81 L. Ed. 1093 (1937); United States v. Aluminum Co. of America, 148 F. 2d 416, 445-446 (2d Cir. 1945). The more recent thinking is that only indisputable facts such as matters of common knowledge and matters capable of certain verification will be judicially noticed. When noticed such facts are binding on the trier of the facts. Morgan, The Law of Evidence, 1941-1945, 59 Harv. L. Rev. 481, 482-87 (1946); McCormick, Evidence § 330 (1954); McNaughton, Judicial Notice, 14 Vand. L. Rev. 779 (1961); Alvary v. United States, 302 F. 2d 790, 794 (2d Cir. 1962).

I do not have to resolve the debate among scholars concerning the taking of judicial notice during trial. It is clear to me that after a default only indisputable facts should be noticed to contradict allegations of the complaint. Otherwise a preliminary hearing would be necessary to afford plaintiff a chance to rebut factual material which a defendant claims should be judicially noticed. See the *Ohio Bell* and *Alcoa* cases, *supra*. In effect it would permit a defendant to litigate facts which are foreclosed by a default under the *Thomson* and *Harshman* cases, *supra*.

In determining indisputability, the courts will consider "the nature of the subject, the issue involved, and the apparent justice of the case." McCormick, Evidence § 330, at 709 (1954). Each of these factors counts against noticing the proposition offered by defendants. First, the subject of the proposition is not scientific, historical, geographic or statistical matter of the kind courts are most willing to notice. Instead it is a garden variety proposition about who did what, when and where. Second, the facts which defendants wish judicially noticed in this litigation would be relevant to the central issue of liability under the

antitrust laws. The more critical an issue is to a case, the more reluctant courts should be to determine it by taking judicial notice. Third, the apparent justice of the case in the posture of a default based upon wilful refusal to appear for deposition requires me to resolve all doubts against defendants.

The defendants are urging that certain facts are indisputable because they appear in orders of the CAB and material in the CAB files. While judicial notice may be taken of the existence and contents of such material, it does not follow that the court will take judicial notice of the truth or accuracy of the contents. Stasiukevich v. Nicolls, 168 F. 2d 474, 479 (1st Cir. 1948). In that case the court found that "the findings are merely evidence of the facts asserted," and went on to state that "of course, the other party may introduce evidence tending to prove the contrary of the facts asserted in the official report." Since a finding is merely evidence and is rebuttable, it cannot be considered indisputable. As to material in the CAB files, it stands on even weaker footing, since it has not been subject to any sort of examination of an adversary nature.

Defendants argue that TWA has failed to establish that it received late or inadequate deliveries of jet aircraft as a proximate result of the conduct of the defendants in violation of the antitrust laws. They assert that the claim "is defective for the further reason that the plaintiff has failed to establish by a preponderance of the evidence that, but for defendants' conduct, it would and could have accomplished the results now asserted."

It has been said of "proximate cause" that:

> "There is perhaps nothing in the entire field of law which has called forth more disagreement, or upon which the opinions are in such a welter of confusion * * * Much of this confusion is due to the fact that no one problem is involved, but a number of different problems, which are not distinguished clearly * * *." Prosser, Law of Torts 240 (3d ed. 1964).

The question of proximate cause involved in this case arises out of a distinction between the *fact* of damage and the *amount* of damage. The Supreme Court explained this distinction recently in Zenith Radio Corp. v. Hazeltine Research, Inc., 395 U.S. 100, 114 n. 9, 89 S.Ct. 1562, 1571, 23 L.Ed.2d 129 (1969):

> "Zenith's burden of proving the fact of damage under § 4 of the Clayton Act is satisfied by its proof of *some* damage flowing from the unlawful conspiracy; inquiry beyond this minimum point goes only to the amount and not the fact of damage."

Basically defendants seek to deny that they caused *any* injury to TWA, i.e., to deny the *fact* of damages. The fact of damages, however, is an element of liability. The complaint alleges that the defendants committed certain acts which caused injury to TWA. The allegations are admitted by the default and the fact of injury is thereby established. The only question remaining is the amount of damages defendants should pay TWA.

When we come to the computation of the amount of damages in an antitrust case, we look to the rules enunciated in Bigelow v. RKO Radio Pictures, Inc., 327 U.S. 251, 66 S.Ct. 574, 90 L.Ed. 652 (1946). Those rules are that the trier of the facts must use the most precise proof available, that even where a defendant by his own wrong has prevented a more precise computation, the award may not be based on speculation or guesswork, and that the award must be predicated on a just and reasonable estimate of the damage, based on relevant data.

Finally, the report must be reviewed in the light of the strong presumption in favor of the findings of fact made by the special master. They are to be accepted unless clearly erroneous. Fed.R.Civ.P. 53(e)(2); Anderson v. Mt. Clemens Pottery Co., 328 U.S. 680, 689, 66 S.Ct. 1187, 90 L.Ed. 1515 (1946); United States v. S. Volpe & Co., 359 F.2d 132, 134 (1st Cir. 1966); E. I. du Pont de Nemours &

Co. v. Purofied Down Prods. Corp., 176 F.Supp. 688, 691 (S.D.N.Y. 1959). This rule is the same as Rule 52(a), which is applicable to findings of fact made by the trial court in a nonjury case. Such a finding is clearly erroneous only where "the reviewing court on the entire evidence is left with the definite and firm conviction that a mistake has been committed." United States v. United States Gypsum Co., 333 U.S. 364, 395, 68 S.Ct. 525, 542, 92 L.Ed. 746 (1948).

The complexity of the proof in this case is attested to by the nature of the testimony proffered by the parties. Intricate questions of engineering, finance and economics were involved.[2] They were reviewed and resolved with

---

[2] An example of the complexities of the proof may be found in the following quotation from the report (page 94) which relates to testimony affecting only one aspect of an item of damage:

"The above formula for the B-331s was determined by a method commonly recognized by statistical experts for determining relationships between two variables, and known as regression analysis or as the method of least squares (Tr. 7805-6). As an example, by plotting on graph paper aircraft hours operated (independent variable) and amount of operating expenses (dependent variable) for several airlines, one can connect the dots on the graph with a straight line which represents an average relationship between the points. There are various standards for placing the straight lines, but the method of least squares fits the line to the various observations (dots) so as to reduce the squares of the deviations (differences) to a minimum. It produces a line showing the average of the various lines that might be fitted to the observations. If one squares the deviations and divides by the number of observations, one gets the standard error of estimate; and, given a normal distribution of errors, 68% of the observations should fall within one standard of error and 95% of the observations should fall within two standard errors. Relationships based on fewer observations tend to be more untrustworthy, and results showing a large proportion of observations outside the standard error of estimate likewise tend to be untrustworthy unless validated by independent means.

"No claim was made by Simat that regression analysis was anything more than a statistical method useful in testing the

painstaking care by a special master of extremely high competence. Especially apt here is the language of the court in Badenhausen v. Guaranty Trust Co., 145 F.2d 40, 53 (4th Cir. 1944), cert. denied, 323 U.S. 797, 65 S.Ct. 440, 89 L.Ed. 636 (1945), referring to the effect to be given to the findings of a special master who prepared a plan of railroad reorganization:

> "Especially imperative is the rule when, as here, the master has lived with the case for four years, has patiently studied the complex questions involved and has listened with painstaking care in extended hearings to the arguments and proposals of all the parties who desired to be heard."

To the same effect, see Santa Cruz Oil Corp. v. Allbright-Nell Co., 115 F.2d 604 (7th Cir. 1940).

Bearing these considerations in mind, I will first pass upon the specific objections by the defendants to the report of the special master.

Defendants' Objections to the Report of the Special Master

I. Determinations Relating to Defendants' Alleged Antitrust Violations.

A. Facts which defendants claim should have been found.

Objections 1-3 and 13. The suggested findings as to CAB approval are irrelevant to the proceedings and were so adjudged by this court on defendants' motion to dismiss (214

---

validity of assumptions made by non-mathematical observations and raw data and conclusions based thereupon. Nevertheless Simat was of the opinion that the statistics produced by regression analysis under the assumptions made in his report confirmed his expert opinion as to the financial results that would have been obtained under the relevant equipment assumptions."

F.Supp. 106), which determination was affirmed by the Court of Appeals (332 F.2d 602) when it said at page 610:

> "Nor do we find any merit in the defendants' alternative contention that the Civil Aeronautics Board, in approving Toolco's acquisition of control over TWA and certain specific transactions thereafter, immunized the defendants from the operation of the antitrust laws as to all the ramifications of these transactions."

Objection 4 with 11 subdivisions. These are suggested findings based on a suggested finding that Toolco never manufactured or supplied commercial transport aircraft to United States air carriers in competition with manufacturers and suppliers of such aircraft. First, the defendants by their default admit that they did engage in such activity. Second, the suggested findings do not necessarily clearly negative liability when all the allegations of the complaint are read together. Third, there is sufficient in the record on this default to justify the refusal of the special master to so find. In this regard, reference is made to the placing of orders by Toolco for Convair 880s built to the specifications of Capital Airlines, the placing of orders for Convair 990s built to the specifications of American Airlines, the sale of Boeing 331s to Pan American and the leasing of Convair 880s to Northeast Airlines.

Objections 5-8. The suggested findings that during the period covered by the complaint Hughes did everything to explore the source of supply of jets in the best interests of TWA fly directly in the face of the alleged wrongdoing by the defendants which is admitted by the default. Additionally the record contains evidence to the effect that Hughes was not acting solely in the best interests of TWA in the development of the Model 18 by Convair.

Objections 9, 9a, 9b and 10. These are suggested findings that defendants did not engage in financing the acquisition of aircraft in competition with insurance companies, commercial banks or other lending institutions and that TWA

obtained such financing from various airplane manufacturers and banks. I fail to see their relevancy in view of the charges contained in the complaint which are, in effect, that defendants dictated to TWA the methods and means of financing the acquisition of aircraft. See paragraphs 10(g), 23, 24, 26, 27 and 28 of the complaint.

Objections 11 and 12. These are suggested findings that Atlas never manufactured or developed aircraft and submitted a proposal pursuant to an agreement with Toolco for merger of Northeast Airlines and TWA which was reported as being fair. The default admits the allegations of the complaint regarding the conspiracy and that the proposed merger was advantageous to the defendants and disadvantageous to TWA. Further, as regards TWA reports favorable to the merger, the domination and control of TWA by Hughes must be taken into consideration in evaluating such reports.

B. Findings claimed to be clearly erroneous.

Objections 14, 15 and 17 to the findings that the activity by Toolco constituted "engaging in" the development and manufacture of aircraft by Toolco. The record is sufficient to sustain these findings.

Objection 16 to the finding that Toolco was engaging in this activity when TWA should have been arranging for purchases from other suppliers. This finding is sustained by paragraphs 16, 17, 24, 25 and 26 of the complaint.

Objections 18, 19 and 20 to the findings regarding the purchase of Pratt & Whitney engines, Toolco's trading on its delivery positions as to jets and Toolco's refusal to assign to TWA its rights to acquire jets. These objections are predicated on an assumption that the findings were made after a contested trial following full pretrial discovery procedures. Obviously it is not open to defendant to claim, as it does in objection 20, that it disproved the allegations in paragraph 18 of the complaint, or that the engines were

purchased for TWA's best interests and were not resold at a profit.

Objection 21 to the finding that TWA's management was dominated by Hughes is clearly frivolous. The finding is not only admitted by the default, but was so found in 32 F.R.D. at 606 and 332 F.2d at 614.

Objection 22 to the finding that the factory representatives were Toolco employees reporting to Rummel as the representative of Toolco is captious. The record shows that Rummel was Toolco's special representative even though he received compensation from TWA. The factory representatives reported to a TWA employee, Rourke, who reported to Rummel. If Rourke had been paid by Toolco, reimbursement would have been made to Toolco by TWA as part of the cost of the aircraft.

C. Conclusions of law claimed to be erroneous.

Objections 1-12 are directed to conclusions of law made by the special master. His findings of fact have been sustained by the rulings on the objections made above. Paragraphs 9 and 10 of the complaint have been admitted by the default and defendants' judicial notice argument has been rejected. The conclusions of law are further buttressed by the opinion of the Court of Appeals that the specific transactions alleged to have been effected by the defendants state a cause of action under the anti-trust laws. 332 F.2d 602, 611. These objections are overruled.

II. Determinations Relating to TWA's Claim That It Received an Inadequate and Late Jet Fleet.

A. Facts which defendants claim should have been found.

Objections 1, 2, 3 and 4 are suggested findings similar to those in objections 6 and 7 in I A, *supra*, and are similarly disposed of. It is frivolous to claim that this record could

possibly sustain a finding that TWA was an independent negotiator.

Objection 5. The suggested finding that defendants' negotiations with Convair in 1955 did not restrain trade takes a mediate fact, meaningless without other mediate facts, and draws a negative conclusion of law out of context.

Objections 6, 7, 8, 9, 11, 12, 13, 14 and 16. These suggested findings are misleading. They state facts which assume that the conditions were not of defendants' doing. The assumption is wrong, since the state of the record on liability shows that defendants' conduct brought about the fact situation, and it is this very conduct which is the basis of TWA's complaint. Furthermore, reliance on achieving better delivery dates with an increase in orders only buttresses TWA's position that prompt action with its welfare in mind would have achieved even better results.

Objections 10 and 15. These are suggested findings that TWA equalled its domestic competitors in jet service in 1959, and in 1960 flew more transatlantic seats relative to Pan American and earned a higher operating revenue than Pan American. Assuming the suggested findings to be true, they miss the point in issue that defendants' actions prevented even better results from being achieved.

Objection 17. This is a suggested finding that TWA has failed to show that it would have ordered jet aircraft in 1955 from Boeing rather than from Douglas absent the exercise of any control by defendants. The default precludes the necessity of making any such showing.

Objections 18, 19 and 20. The suggested findings that Toolco in 1959 determined that it was advisable to reduce the planned jet fleet and that Thomas and the firm of Coverdale & Colpitts agreed are negatived by the default and are not borne out by the record.

Objection 21. The suggested finding that in the spring of 1959 TWA was in poor financial condition ignores the

allegations of paragraphs 4, 10(b), 10(g), 23, 24 and 26 of the complaint regarding Toolco's domination and control of TWA.

Objection 22. The suggested finding that it was not unusual for an airline to cut back initial jet orders covers only part of the relevant fact. The remainder is that such an airline would, and did, at the same time increase orders for other models.

Objection 23. The suggested finding that TWA has failed to show domination by defendants preventing the exercise of independent judgment by the executives of TWA completely ignores the default.

Objection 24. The suggested finding that Rummel was a middle echelon executive with no power of decision as to what equipment could be purchased by TWA ignores the record, unless it be defendants' contention that the decision as to what equipment could be purchased was lodged in Hughes.

Objections 25 and 33. The suggested findings that the decision to reduce the size of the initial jet fleet and that the administration of the Convair contract by defendants were not in restraint of trade are contrary to the admissions made by the default.

Objection 26. The suggested finding that Thomas and the board of directors of TWA ratified the transfer by Toolco of six of the Boeing 331s to TWA's competitor Pan American overlooks the admitted exercise of control and domination of TWA by Hughes.

Objection 27. The suggested finding that the transfer was not in restraint of trade is contrary to the admissions made by the default.

Objections 28, 29 and 29A. These are suggested findings that TWA has failed to show that absent control by defendants it would have ordered 63 jets, that it could have financed such fleet and obtained earlier delivery dates.

The default precludes the necessity of making any such showing.

Objections 30, 31 and 32. These are suggested findings that failure to meet the delivery schedule of the Convair 880s was not defendants' responsibility, that such delay was attributable to Convair, even after January 1961. The suggested findings are contrary to the admissions inherent in the default and to the testimony in the record.

Objection 33. The suggested finding that TWA has failed to show that defendants' administration of the Convair contract unreasonably restrained trade ignores the effect of the default.

B. Findings claimed to be clearly erroneous.

The objections under this subdivision are numbered 34 through 74. In the main, the findings attacked are just the opposite of what defendants claim the special master should have found as set forth in objections 1 through 33 in II A above.

The findings made by the special master which are referred to in this subdivision are not clearly erroneous. As to objection 56 to the finding that the hypothetical jet fleet and reconstructed delivery dates constitute a proper basis for computing damages, I refer to the discussion of the *Bigelow* case, *supra*. Many of the findings are clearly established by the admissions inherent in the default. Others rely on disputed evidence in the record, but obviously this does not require their rejection under the "clearly erroneous" rule. In addition to these comments for overruling the objections, I refer to specific comments made in ruling on objections 1 through 33 in II A above.

C. Conclusions of law claimed to be erroneous.

Objections 1, 2 and 3 have been disposed of in the discussion of proximate cause and the *Bigelow* case, *supra*. The remaining objections 4 through 14 are directed toward

conclusions of law which are amply supported by the findings of fact sustained by the above rulings.

III. Determinations Relating to TWA's Claim That It Was Injured by Leasing Jet Aircraft from Toolco.

A. Facts which defendants claim should have been found.

Objection 1. The suggested finding that the leases of jets in 1959 and 1960 were made pending consummation of permanent financing disregards the admissions of the allegations in paragraph 20 of the complaint.

Objections 2 and 3. The suggested findings that the leases were approved by the CAB and did not disclose any restrictions in acquisitions by TWA are subject to the same rulings made on objections 1-3 and 13 in I A above. The leases were between Toolco and its controlled TWA.

Objections 4 and 5. The suggested findings that there is no evidence that the rentals were unreasonably high and that Toolco received no rental until December 30, 1960 are immaterial.

Objection 6. The suggested finding that there is no testimony that TWA would have purchased rather than leased the jets absent the alleged conduct of defendants in violation of the antitrust laws is subject to the same ruling made with regard to objection 17 in II A above.

B. Findings claimed to be clearly erroneous.

Objection 7 to the finding that the leased jets were the first made available to TWA by defendants during the years 1955 to 1960 is overruled because there is no such finding.

Objection 8 to the finding that the leases were made with the understanding that TWA would not lease or purchase jets from other potential suppliers is overruled because of

the admission of the factual allegations of paragraph 20 of the complaint.

Objections 9, 10 and 11 refer to statements of contentions by the special master and are not findings.

C. Conclusions of law claimed to be erroneous.

Objections 1 through 5. In view of the rulings and comments on the objections referred to in A and B of this part, the conclusions of law made by the special master, referred to in objections 1 through 4, are correct. Objection 5 to the use of interest cost of capital is more an objection to a finding of fact and is overruled because the finding is not clearly erroneous.

IV. Determinations Relating to TWA's Claim for Lost Operating Profits.

A. Facts which defendants claim should have been found with reference to the International Division.

Objections 1, 2, 3 and 4. These are suggested findings that TWA has failed to prove damage in this category based on assumptions of TWA's expert. They are predicated on finding that the figures of defendants' experts are correct. The refusal to make such findings was not clearly erroneous.

Objection 5 is a suggested finding that there is no evidence in the record to justify an assumption that TWA would have leased Boeing 331s to Northeast in October and November 1959. The assumption made by TWA's expert was justified on the facts as to the time of year and passenger demand.

B. Findings claimed to be clearly erroneous with reference to the International Division.

Objection 6 is to the finding that there would be an $89.3 million increase in operating revenue. This finding is not clearly erroneous.

Objections 7 through 7j. These objections except 7i are directed to findings as to the "competitive response" which defendants' expert relied on in his computations. The findings are supported by the record and are not clearly erroneous. Objection 7i is to the finding that TWA's comparative shortage of jet equipment caused it to lose its market position. The finding is supported by the record.

Objection 8 is to the finding relating to "beyond-the-gateway and charter service passengers." This finding is supported by the record.

Objections 9, 9a and 9b. These objections disagree with the special master's findings as to operating costs. The findings are supported by the record.

C. Facts which defendants claim should have been found with reference to the Domestic Division.

Objection 1. The suggested finding that there is no evidence that TWA would have leased four Boeing 720Bs or bought 18 Boeing 131Bs would not be a correct finding. The record justifies the opposite finding made by the special master.

Objection 2. The suggested finding that TWA has failed to prove that its net operating profits would have increased is predicated on accepting defendants' evidence. The conflict in the evidence was for the special master to resolve and his contrary finding is supported by the evidence.

Objection 3 is a suggested finding that TWA has failed to prove that its average rate of capacity could have been maintained with an added jet capacity. The suggested finding relies on the testimony of defendants' expert which the special master was entitled to reject.

Objection 4 is a suggested finding that in the 1959-1963 period there was an acute overcapacity which alarmed the CAB as well as the airline industry. The suggested finding

does not affect the fact that under proper conditions TWA would have been able at least to maintain its competitive position in relation to other carriers. See chart at page 138 of the report.

Objection 5 is a suggested finding that as airlines added jet capacity in 1959-1963 the load factors steadily declined. The implication of this suggested finding disregards the fact that with an adequate jet fleet TWA's position would have been different. See page 133 of the report.

D. Findings claimed to be clearly erroneous with reference to the Domestic Division.

Objections 6 and 13 to the findings as to increased transportation revenues and increased operating costs are overruled. The findings are supported by the record.

Objections 7 and 8 are to the findings as to TWA's shortage of jet equipment. The findings are supported by the record.

Objections 9, 9a and 9b to the findings using the average annual load factor in estimating added traffic are overruled. See comments on the immediately preceding objections 3-5.

Objection 9c. The objection does not encompass the complete finding of the special master.

Objection 9d. The finding objected to is correct in the context used by the special master.

Objections 10, 10a, 10b, 10c, 10d, 10e and 10f. These objections go to findings by the special master in which he refused to accept defendants' testimony as to "marginal load" factor as opposed to accepting TWA's testimony as to "annual average load factor." Here again there is present a conflict of testimony which the special master was justified in resolving as he did. See the findings to which objections 9, 9a and 9b immediately above are directed.

Objection 11 is to the finding that TWA testimony adequately takes into account changes in stage lengths accompanying the introduction of jets. The special master simply resolved the conflicting testimony on this subject and his finding is supported by the record.

Objections 12 and 12a. Here again the objections are predicated on the refusal of the special master to accept the testimony of defendants' expert as opposed to that of TWA's expert. The objections are overruled.

E. Fact which defendants claim should have been found with regard to the added cost of operating the Boeing 331s.

Objection 1. The suggested finding that there would have been increased costs in operating five 331s over the actual cost of operating five 331Bs which were leased is predicated on accepting defendants' testimony. The special master was justified in refusing to do so for the reasons stated in the report.

F. Facts which defendants claim should have been found with regard to mitigation of damages.

Objections 1 and 2. These are suggested findings that Toolco offered TWA four Convair 880s in 1961 which TWA refused and that TWA could have acquired additional jets in 1961-1963, which it failed to do. The suggested findings completely ignore the existence of the new management of TWA, its problems with defendants at the time, and its business judgment to concentrate on Boeing planes for the best interests of TWA.

G. Finding claimed to be clearly erroneous with reference to mitigation of damages.

Objection 3 to the finding that the purchase of four Convair 880s was not feasible as a business matter is overruled. See comment on the immediately preceding objections 1 and 2.

H. Conclusions of law claimed to be erroneous.

Objection 1. The import of the conclusion as set forth in this objection does not appear in the report.

Objection 2. The application of the standards of proof set forth in the *Bigelow* case, *supra*, is proper.

Objection 3. The special master was justified in accepting the testimony of TWA's expert.

Objections 4, 5 and 6. The special master acted properly with regard to the matters to which these objections are made.

Objection 7. This objection ties in with objection 1 in E immediately above and is similarly disposed of.

Objection 8. This objection does not correctly reflect the cited page of the report. The conclusion reached by the master there was proper.

V. Determinations Relating to TWA's Claim for Disruption of Its Business.

A. Facts which defendants claim should have been found.

Objection 1. The suggested finding that the defendants were not responsible for late deliveries of the 880s has been rejected above (II A, objections 30-33).

Objection 2. The suggested finding that TWA was not subject to expenses it would not otherwise have incurred is not sustained by the record.

Objections 3, 4, 5 and 6. These are suggested findings that TWA was not damaged by reason of certain payments made to maintenance instructors and crew members, or costs allocated for use of a simulator and transition training plane. The suggested findings overlook the fact that TWA was paying for enforced idleness and refresher training made necessary by the delays. These are proper items of damage.

VI. Determinations Relating to the Computation of the Amount of the Damage Award.

A. Facts which defendants claim should have been found.

Objections 1 and 2. The suggested findings relate to a $12.3 million increased cost of capital on advance deposits and progress payments for the reconstructed fleet. The special master explained that to make such findings would "involve elaborate calculations and several speculative assumptions." The suggested findings are not supported by the record.

Objection 3. The suggested finding regarding the cost of purchasing the theretofore leased jets is incomplete and misleading standing alone.

B. Findings claimed to be clearly erroneous.

Objection 4 is to the finding refusing to make provision for increased cost of capital on advanced deposits and progress payments. The finding is merely the opposite of what defendants claim should have been found as detailed in objections 1 and 2 in IV A above. The objection is overruled.

Objection 5 is to the finding which added interest cost on advance deposits for twenty 880s to TWA's capital base. The finding is not clearly erroneous.

Objections 6 and 7 are to the findings excluding capital expenditures for ratable parts, expendable parts and construction work. The findings are not clearly erroneous.

Objection 8 is to the finding limiting to the years 1959 and 1960 the increased interest cost of owning instead of leasing the jets. The special master was justified in making the finding.

C. Finding claimed to be erroneous regarding the use of TWA Exhibit 50.

Objection 1 is to the finding that the principles of combination and adjustment used by TWA's expert were proper. The special master was justified in making this finding.

D. Conclusions of law claimed to be erroneous.

Objection 1 is to the use of the external borrowing rate and is overruled.

Objection 2 relates to objection 4 in VI B above and is overruled.

Objection 3 to the adjustments of TWA's historical financial statements is overruled.

TWA's Objections to the Report of the Special Master

TWA has filed objections to the report on the following grounds:

1. The award as a whole is inadequate.

2. The special master erred in rejecting TWA's comparative profit measure of damages.

3. The award on TWA's claim for losses in operating profits is inadequate.

4. The award on TWA's claim for losses due to leasing jets from Toolco is inadequate.

5. The special master erred in denying damages for losses connected with financing the jet fleet.

6. The special master erred in denying damages for losses due to delay in disposing of the displaced piston aircraft.

7. The special master erred in finding that TWA is not entitled to an award of prejudgment or moratory interest.

I. Inadequacy of Total Award.

The contention that the award as a whole is inadequate is predicated on a claim that it permits the defendants to retain the fruits of their wrongdoing.

Toolco is alleged to have acquired its stock interest in TWA at a cost of $94 million. On May 3, 1966 it sold this stock for a net price of $545.8 million, with a resulting profit of $452 million. After payment of the 25% capital gains tax, the net profit after taxes is calculated at $339 million. I am advised that any judgment for damages in this case is fully deductible from current income for tax purposes. Therefore, on the award recommended by the special master, the ultimate cost to Toolco of paying such award would only be $75 million, leaving Toolco with a net profit of $265 million. TWA claims that Toolco should not be permitted to retain this amount since it violates the theory of unjust enrichment.

The fallacy in the application of this theory to this case is that the profit on the sale of the stock is not attributable to the illegal acts of the defendants. Defendants' control and domination of TWA ended on December 30, 1960. TWA does not seek damages for the period subsequent to 1963 because it claims that by the end of 1963 the ill effects of defendants' control had been eliminated. At that time the stock was selling at about $32 a share compared with $86 a share at the date of sale. Therefore, the high value that the TWA stock reached in 1966 had nothing to do with the acts of the defendants. There is no dispute that Toolco's acquisition of the controlling interest in TWA was legal. It was the improper exercise of control that is attacked by the complaint. 214 F.Supp. at 109-110. What TWA seeks under this objection is not damages based on unjust enrichment flowing from the acts of the defendants, but rather punishment not within the contemplation of any accepted measure of damages. The cases relied on by TWA (*Bigelow, supra;* Southern Pacific Co.

v. Darnell-Taenzer Lumber Co., 245 U.S. 531, 38 S.Ct. 186, 62 L.Ed. 451 (1918); Hanover Shoe, Inc. v. United Shoe Mach. Corp., 392 U.S. 481, 88 S.Ct. 2224, 20 L.Ed.2d 1231 (1968)) are not in point, since they speak of the unfairness of permitting a defendant to retain the profits flowing from his illegal acts.

This objection is overruled.

II. The Comparative Profit Measure of Damages.

TWA claims that the special master erred in not using its comparative profit studies as the measure of damages. One such study showed losses to TWA of approximately $170 million. Another showed losses of $121 million. TWA advanced a second measure of damages based on specifically computed losses claimed to flow from the defendants' conduct. The special master proceeded on this theory, but only awarded $45 million of TWA's claim of $105 million.

The first argument to support the comparative profit measure of damages is related to TWA's claim of unjust enrichment. Since the unjust enrichment theory has been rejected, this argument for the use of comparative profit studies fails.

TWA then argues that the comparative profit study is a proper and standard method of measuring damages without regard to the amount that it would produce. The special master rejected the comparative profit studies because there was a more precise method of ascertaining damages, which was the method he used. Further, he found that the comparative profit study was based on indefinite allegations of the complaint. The method he used was predicated on more specific allegations of the complaint. TWA's reliance on *Bigelow, supra,* for the use of the comparative profit measure of damages is misplaced. In that case the Court found at page 266 of 327 U.S. at page 580 of 66 S.Ct. that it was proper to use comparative receipts to measure damages because the defend-

ants' "wrongful action had prevented petitioners from making any more precise proof of the amount of the damage."

This objection is overruled.

III. Inadequacy of Award for Losses in Operating Profit.

TWA complains that in determining the "cost of capital" factor in computing operating profit the special master erred in using 6% for 1959 and 6.3% for 1960. If the jet fleet had been available for use by TWA at the times it should have been, TWA would have needed capital at those times to finance the purchase of the jets. The interest paid for borrowing the money would be a cost factor to be added to other operating expenses each year, and would be offset against the expected receipts to determine the operating profits that would be realized if there had been an adequate jet fleet.

The special master first determined the amount of money that had to be available beginning in 1959 to finance the purchases based on the "reconstructed" delivery dates of the aircraft. He then applied TWA's historical external borrowing rate at those times to arrive at the yearly cost of capital.

TWA contends that it was error to use this rate because its financial condition and the program of financing it followed were the result of the illegal acts of the defendants. It claims that if it had been free of restraint it could have undertaken financing in 1955, and that the maximum cost of borrowing would have been only the 4¾% paid by its competitors in 1955 and 1956 rather than the 6 to 6½% it paid in 1960.

The use of the lower rate for "cost of capital" would increase the operating profits found by the special master for the years in question, and would result in an increase

of $4.9 million (before trebling) in the award for this item of damage.

The special master rejected TWA's theory of damage on losses connected with financing the jets (see V below). Included in that loss was a projected cost of capital predicated on what TWA might have done in the area of financing in 1955. In view of this ruling, the rate of interest paid by competitors in 1955-1956 is not the true measuring rod. Rather, the rate paid by competitors in 1959 and 1960 is the more accurate figure. The record shows that it ranged from 5 to 6½%, not significantly different from the 6 and 6.3% rate used by the special master.

This objection is overruled.

IV. Inadequacy of Award for Losses Due to Leasing Jets from Toolco.

TWA seeks an increase of $1.6 million (before trebling) in the award for this item of damage. What has been said in III above applies equally as well to this objection. This objection is overruled.

V. Refusal to Award Damages for Injuries Alleged to Have Been Suffered in Financing the Jets.

It is the claim of TWA that the illegal acts of defendants with respect to financing the acquisition of jets by TWA caused it damage in the amount of $30 million. The claimed damage is based on the difference in its cost under the program which it was forced to adopt and a plan which it claims an independent TWA would have adopted. TWA offered expert testimony by Drexel Harriman Ripley, Inc., a firm of investment bankers, as to what an independent TWA would have done to provide adequate financing for the jet age. Defendants countered with their expert, Loeb, Rhoades & Co., a firm of investment bankers.

The special master reviewed the conflicting testimony in detail in pages 186 through 264 of his report. TWA claimed it would have undertaken financing operations in May 1955, October 1955 and May 1959. It appears that the latter two financings depended on "the prudence and doability of the May 1955 equity financing."

The special master referred to the standards of the *Bigelow* case (see page 12 of this opinion) and also noted that he was aware that TWA's financial condition in 1955 reflected the influences of Toolco. He then stated (page 258 of the report):

> "However, after careful deliberation, I have determined that TWA has not established that a prudent and competent management of TWA acting independently and free of any control or interference on the part of Toolco would and should have calculated in the spring of 1955 the amount of the financial requirements of TWA for the jet aircraft age. It is also my determination that an independent and prudent TWA management would not have accepted the recommendation of Drexel Harriman Ripley that TWA sell in May 1955 $55.5 million (net proceeds) in common stock of TWA.
>
> "For me to find to the contrary would in my opinion endow Drexel Harriman Ripley and an independent prudent Board of TWA in 1955 with a prescience, wisdom and perfection of timing that exceeds the natural capacity of the most experienced men acting without the benefit of hindsight."

The special master pointed out that no alternative theory of damages was presented by either TWA or the defendants. After discussing in detail the basis for his findings, the special master concluded that TWA had failed to sustain its burden of proof as to damages claimed to have been suffered as the result of the financing program that it was forced to adopt.

As already indicated, proof as to the amount of damages is unfettered by the effect of the default. The resolution of conflicting testimony is a question for the special master and the clearly erroneous rule is applicable.

This objection is overruled.

VI. Losses on Sales of Used Piston Aircraft.

TWA complains that the special master erred in refusing to award any damages for claimed losses on the sale of piston aircraft. It admits that no other area of damages presented quite such complex questions of computation. The amount of damages it seeks under this item is $2.7 million.

TWA takes the position that when jets were introduced into service pistons were made obsolete. Therefore, any delay in delivery of jets must have caused delay in the disposal of pistons. Since the market price of pistons steadily declined during this period, it is claimed that a loss to TWA resulted.

Here again the difference must be recognized between the fact of injury which is admitted and the amount of damages which TWA must show flowed from that injury. The special master found that TWA had failed to sustain its burden of proof on this item of damage and detailed his reasons on pages 272 through 295 of his report. I have reviewed those findings and find that they are supported by the record.

This objection is overruled.

VII. Moratory Interest.

TWA has asked to be awarded moratory, or prejudgment, interest on its recovery. This raises the question whether moratory interest is within my power to grant in an antitrust action for treble damages.

The right to interest on a sum recoverable under a federal statute is determined by federal, not local, law. Rodgers v. United States, 332 U.S. 371, 373, 68 S.Ct. 5, 92 L.Ed. 3 (1947); Brooklyn Sav. Bank v. O'Neil, 324 U.S. 697, 715, 65 S.Ct. 895, 89 L.Ed. 1296 (1945). Under federal law interest is not available on sums recovered as penalties. Rodgers v. United States, *supra;* United States v. United Drill & Tool Corp., 87 U.S.App.D.C. 236, 183 F.2d 998, 1000 (1950) (dictum). Some cases have ruled that interest is also unavailable on double or treble damage recoveries in certain circumstances. Brooklyn Sav. Bank v. O'Neil, *supra* (Fair Labor Standards Act); United States v. Globe Remodeling Co., 196 F.Supp. 652, 658 (D.Vt. 1961) (False Claims Act).

Relying on *Brooklyn Bank,* Judge Wyzanski denied moratory interest in a treble damage antitrust case. Cape Cod Food Prods., Inc. v. National Cranberry Ass'n, 119 F.Supp. 900, 911 (D.Mass. 1954). He cites an unpublished decision by Judge Caffey in this district which reaches the same result. A different result is suggested by the rationale of United Mine Workers v. Coronado Coal Co., 258 F. 829, 846-847 (8th Cir. 1919), rev'd on other grounds, 259 U.S. 344, 42 S.Ct. 570, 66 L.Ed. 975, 27 A.L.R. 762 (1922), but that decision came before *Brooklyn Bank* or *Rodgers.*

Interest should not be allowed in antitrust actions where the statute provides for punitive damages. Treble damages compensate a plaintiff handsomely for all his losses, including loss of the use of money rightfully his.

This objection is overruled.

Conclusion

The report of the special master awarding damages in the sum of $137,611,435.95 pursuant to 15 U.S.C. § 15 is confirmed.

So ordered.

I.

312 Federal Supplement 478

UNITED STATES DISTRICT COURT,
S.D. NEW YORK.

TRANS WORLD AIRLINES, INC., *Plaintiff*,

v.

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY, *Defendants*.

No. 61 Civ. 2324.

APRIL 13, 1970.

METZNER, District Judge.

Plaintiff, Trans World Airlines, Inc., moves for the award of reasonable attorney's fees and costs of suit as the successful party in this antitrust litigation. Clayton Act § 4, 15 U.S.C. § 15. Plaintiff requests counsel fees in the sum of $10,500,000 and costs of suit in the sum of $2,230,602.

This court has already awarded damages in the sum of $137,611,435.95. 308 F. Supp. 679 (S.D.N.Y. Dec. 23, 1969).

The general rule is that the fixing of counsel fees in an antitrust action is within the discretion of the trial court, "reasonably exercised." Montague & Co. v. Lowry, 193 U.S. 38, 48, 24 S.Ct. 307, 48 L.Ed. 608 (1904). The problem of how to exercise this discretion reasonably has been the subject of much discussion. Farmington Dowel Prods. Co. v. Forster Mfg. Co., 297 F. Supp. 924 (D. Me. 1969), modified on appeal, 421 F.2d 61 (1st Cir. 1969); Hanover Shoe, Inc. v. United Shoe Mach. Corp., 245 F. Supp. 258, 302 (M.D. Pa. 1965), vacated on other grounds, 377 F. 2d 776 (3d Cir. 1967), aff'd in part on other grounds, rev'd in part on other grounds, 392 U.S. 481, 88 S.Ct. 2224, 20 L.Ed.2d 1231 (1968); Noerr Motor Freight, Inc. v. Eastern R.R. Pres. Conf., 166 F. Supp. 163, 168 (E.D.Pa. 1958), aff'd 273 F.2d 218 (3d Cir. 1959), rev'd on other grounds,

365 U.S. 127, 81 S.Ct. 523, 5 L.Ed.2d 464 (1961). In *Hanover Shoe, supra,* the court detailed what appear to be the generally accepted factors to be weighed in determining a reasonable attorney's fee. They are:

"(1) whether plaintiff's counsel had the benefit of a prior judgment or decree in a case brought by the Government,

(2) the standing of counsel at the bar—both counsel receiving the award and opposing counsel,

(3) time and labor spent,

(4) magnitude and complexity of the litigation,

(5) responsibility undertaken,

(6) the amount recovered,

(7) the knowledge the court has of the conferences, arguments that were presented and of work shown by the record to have been done by attorneys for the plaintiff prior to trial,

(8) what it would be reasonable for counsel to charge a victorious plaintiff."

However, these factors are only general guidelines and in the final analysis, "The reasonableness of an attorney's fee can only be determined with reference to a particular case." *Noerr, supra,* at 168.

We have here an unprecedented recovery—some 30 times greater than the next highest recoveries on record. In Union Carbide & Carbon Corp. v. Nisley, 300 F.2d 561, 587 (10th Cir. 1961), petition for cert. dismissed per stipulation, Wade v. Union Carbide & Carbon Corp., 371 U.S. 801, 83 S.Ct. 13, 9 L.Ed. 2d 46 (1962), the treble damages were $4,400,000 and in *Hanover Shoe, supra,* at 302, they were $4,239,000. Obviously the fee to be awarded will be unprecedented, but the court will attempt to insulate itself

against the impact of the amount requested in determining what a reasonable attorney's fee should be in this case.

The action was instituted on June 30, 1961. On August 31, 1961 it was assigned to me for all purposes pursuant to rule 2 of the General Rules of this court. The suit was of great magnitude and complexity, and was bitterly contested from its inception. The first phase of the litigation started with defendant Hughes Tool Company conducting deposition proceedings and discovery being made by both parties. Massive sets of interrogatories were served by both parties. The deposition proceedings covered some 80 days of testimony embodied in 13,000 pages of transcript. During this period attempts were made by TWA to serve Howard Hughes so that his deposition might be taken. Toolco engaged in extensive legal maneuverings to forestall the taking of the deposition. Some of those activities are recited in 332 F.2d 602, 611-613 (2d Cir. 1964). Defendant finally moved to dismiss the complaint, which motion was denied, 214 F. Supp. 106 (S.D.N.Y. 1963). The culmination of the maneuvering occurred on February 8, 1963 when counsel for Toolco stated that Hughes would not appear for deposition. He referred to "a business decision" not to proceed further with discovery proceedings, but rather to rest on the merits of the positions theretofore taken and seek judicial review thereof. The Court of Appeals said:

> "Hughes' deposition was absolutely essential to the proper conduct of the litigation. Yet he and Toolco seized upon every opportunity to forestall this event. To this end they demanded the production of a multitude of documents by TWA and the additional defendants and secured successive adjournments of the deposition. Indeed, Hughes and Toolco seemed to look upon the entire discovery proceedings as some sort of a game, rather than as a means of securing the just and expeditious settlement of the important matters

in dispute. It was only at the very eve of the Hughes deposition—after the other litigants had been put to much delay and expense—that the defendants made a 'business decision' to terminate discovery." 332 F.2d at 615.

Twenty-one pretrial hearings were held by this court during this phase of the litigation, resulting in the entry of many orders and opinions after hearing argument and reading papers submitted on contested matters.

The first phase ended, as far as this court was concerned, with the striking of Toolco's answer for failure of Hughes to appear for deposition. A judgment by default was directed to be entered in favor of TWA against Toolco and the counterclaims asserted by Toolco against TWA were dismissed with prejudice. 32 F.R.D. 604 (S.D.N.Y. 1963). Separate appeals were taken by Toolco from these two determinations (214 F. Supp. 106 and 32 F.R.D. 604), and the hearing on the amount of damages to be awarded TWA was stayed pending these appeals. The Court of Appeals did not pass upon the propriety of the entry of the default judgment against Toolco with respect to the complaint. It limited its review and affirmance to the holding that the district court had jurisdiction of the treble damage action and that issuance of certain orders by the CAB did not constitute a defense to the action. 332 F.2d 602. At the same time it sustained the dismissal of the counterclaims with prejudice because of Toolco's failure to produce Hughes for examination and its failure to produce certain papers and documents. Id. at 615. It also affirmed the granting of summary judgment to the plaintiff on the sixth counterclaim. Id. at 616. The Supreme Court granted certiorari in both appeals, 379 U.S. 912, 85 S.Ct. 261, 13 L.Ed.2d 184 (1964), and after hearing oral argument on March 3 and 4, 1965, dismissed the writs of certiorari as improvidently granted, 380 U.S. 248, 249, 85 S.Ct. 934, 13 L.Ed.2d 817 (1965).

The second phase of the litigation commenced with the hearings on the damage claims before a special master. Preliminarily, some matters of procedure were disposed of, including an appeal to this court from a ruling of the special master (38 F.R.D. 499 (S.D.N.Y. 1965)), and a motion by the defendant which in effect asked for summary judgment in its favor. This latter motion was denied on January 4, 1966. The special master thereafter directed that on May 2, 1966 plaintiff submit in written form all of the testimony it proposed to offer as its affirmative case. Plaintiff offered eight witnesses who were cross-examined by the defendant for a period of 50 days. The defendant followed the same procedure of submitting the testimony of its witnesses in written narrative form and offered four witnesses who were cross-examined by plaintiff for a total of 35 days. The testimony covered some 11,000 pages of transcript with over 800 exhibits containing 60,000 pages admitted in evidence. Experts of recognized standing in the fields of economics, engineering, finance and accounting were called by both sides. At the conclusion of the hearings before the special master, some 745 pages of briefs were submitted by the parties. The special master then rendered a 323-page report. Cross-motions addressed to the report were submitted to the court with an additional 600 pages of briefs by the parties in support of their respective positions. The court's opinion on these motions was rendered on December 23, 1969. 308 F. Supp. 679.

In this application, counsel of record have stated that they have spent 64,000 hours on this case since they were retained by plaintiff. I have excluded some 4,000 hours that are credited to persons who worked on the case but who were not members of the bar in the year that the services were rendered. One of these persons is credited with 3300 hours over a three-year period. An additional 1400 hours have been excluded, since they are not within the period for which compensation should be considered. I have also made an adjustment of hours depending on whether, at the

time the services were rendered, the person involved was a partner or associate. The result is that the firm is credited with 58,600 hours, of which 20,000 hours are allocable to partners' time and 38,600 hours allocable to associates' time. These hours were all attributable to the problems of this litigation.

One of the factors to be considered in determining a reasonable fee is whether the plaintiff had the benefit of a prior government judgment or decree. Defendant contends that the default judgment in this case gave plaintiff even greater assistance than a prior government judgment would have offered. This is an oversimplification of the problem. The default occurred only after several years of intensive litigation with appeals by defendant all the way up to the Supreme Court. If there had been a prior judgment which would have the prima facie effect afforded by § 5(a) of the Clayton Act, 15 U.S.C. § 16(a), this effort might well have been unnecessary.

Despite the default the issue as to the amount of damages was severely contested. There still remained for disposition intricate and complex issues and proof on the question of damages, which are amply reflected in the report of the special master. In addition defendant relitigated the effect of the default and the scope of judicial notice, which had previously been disposed of (38 F.R.D. 499). The length and scope of the damage hearings belie defendant's argument that "So far as that was concerned [absence of a prior judgment] their job was a cinch. The default * * * left only arithmetic to be done by plaintiff's counsel." For example, an expert offered by defendant was cross-examined for 22 days on the basis of a 656-page report which he had used in putting together his direct written testimony. Subsequently this witness made corrections in his direct testimony which produced 13 volumes of computer printouts. A supplemental report was then filed by defendant for this witness which contained 230 additional

pages with more computer printouts and work papers. All of this had to be analyzed and met by plaintiff's expert witness in this one field of inquiry.

We come now to the question whether compensation may be granted for time spent in this lawsuit on matters unconnected with the award of damages. § 4 of the Clayton Act provides that:

> "Any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws may sue therefor * * * and shall recover threefold the damages by him sustained, and the cost of suit, including a reasonable attorney's fee." 15 U.S.C. § 15.

Defendant contends that time spent by plaintiff's counsel in seeking to obtain equitable relief may not be considered in determining the amount to be awarded as counsel fee. This is true since the allowance of attorney's fees is incidental to the statutory right to damages. Decorative Stone Co. v. Building Trades Council, 23 F.2d 426 (2d Cir.), cert. denied, 277 U.S. 594, 48 S.Ct. 530, 72 L.Ed. 1005 (1928) (request for an award of counsel fee rejected where only injunctive relief was sought); Ring v. Spina, 84 F. Supp. 403, 408 (S.D.N.Y. 1949), modified sub nom. Ring v. Authors' League of America, Inc., 186 F.2d 637 (2d Cir.), cert. denied, 341 U.S. 935, 71 S.Ct. 854, 95 L.Ed. 1363 (1951), and Alden-Rochelle, Inc. v. ASCAP, 80 F. Supp. 888, 899 (S.D.N.Y. 1948) (request rejected where damages and injunction were sought, but plaintiff successful in obtaining only an injunction). In this case, however, the development of the facts was the same for both grounds of claimed relief, and the hours eliminated would merely be those devoted to spelling out the claim for an injunction and applying therefor to the court. Such time would be minimal in the overall picture, but will be taken into account in fixing the fee.

Defendant also contends that the time spent in defending against the counterclaims may not be considered on this application. Bergjans Farm Dairy Co. v. Sanitary Milk Producers, 241 F. Supp. 476, 489 (E.D. Mo. 1965), aff'd, 368 F.2d 679 (8th Cir. 1966). This is certainly true as to the sixth counterclaim on which summary judgment was awarded plaintiff. But here again the amount of time involved on this issue is minimal. As to the other five counterclaims, they were inextricably bound up with the claims of plaintiff. Defendant itself stated that "In effect the facts asserted in the counterclaims constitute affirmative defenses to the allegations of the complaint." These affirmative defenses had to be overcome for plaintiff to succeed on its claim for damages and thus should be considered in making the fee award.

Defendant argues that the award of counsel fee should be limited to the time and effort necessary to prove items of damage sustained and may not include an award for time spent on claimed items of damage which were rejected by the trier of the facts. Union Leader Corp. v. Newspapers of New England, Inc., 218 F. Supp. 490 (D. Mass. 1963), vacated on other grounds sub nom. Haverhill Gazette Co. v. Union Leader Corp., 333 F.2d 798, 801 n. 2, motion to recall mandate denied, 333 F.2d 808 (1st Cir.), cert. denied, 379 U.S. 931, 85 S.Ct. 329, 13 L.Ed.2d 343 (1964); *Bergjans Farm Dairy Co., supra;* Osborn v. Sinclair Ref. Co., 207 F. Supp. 856, 864 (D. Md. 1962), rev'd on other grounds, 324 F.2d 566 (4th Cir. 1963). These decisions are refinements of the rule set forth in the *Decorative Stone, Ring* and *Alden-Rochelle* cases, *supra.* However, the courts in applying this limitation pointed out that they were concerned with cases where the recovery was small in relation to an asserted large claim. It is interesting to note that in *Union Leader* single damages were $29,442 with an award of counsel fee of $60,000 and in *Osborn* single damages were $325 with an award of $14,000. See also Darden v. Besser, 257 F.2d 285 (6th Cir.

1958), where single damages were $15,000 with an award of $30,000.

In the instant case the award, to say the least, is substantial. The failure of the plaintiff to achieve a recovery of $510,000,000 was not due so much to the failure to prove items of damage as it was to the rejection of its theory of measuring damages. There was a reasonable basis for urging the comparative profits theory (Zenith Radio Corp. v. Hazeltine Research, Inc., 395 U.S. 100, 123, 89 S.Ct. 1562, 23 L.Ed.2d 129 (1969); Bigelow v. RKO Radio Pictures, Inc., 327 U.S. 251, 264, 66 S.Ct. 574, 90 L.Ed. 652 (1946)) even though the court ultimately ruled against plaintiff on this theory.

Consequently, while reassessment must be made of the time and labor spent by plaintiff in these areas of work, this does not require extensive adjustments in the time factor. The court has been closely involved with this case since August 31, 1961 and is in a position to make a proper evaluation without further proof being called for. This is all the more true since, as indicated below, the time factor is not that crucial in a case such as this.

The firms of Cahill, Gordon, Sonnett, Reindel & Ohl, representing the plaintiff, and Donovan, Leisure, Newton & Irvine and Chester C. Davis, representing the defendants, are recognized as able and experienced counsel. In fact, the Donovan, Leisure firm was counsel for the successful plaintiff in the *Hanover Shoe* case, *supra*. The history of the proceedings attests to the great responsibility undertaken by counsel.

Defendant points out that plaintiff's application claiming 64,000 hours of time spent on this litigation amounts to a request for $164 an hour for all of the services rendered, whether by senior partners, junior partners, senior associates or junior associates. It then refers to computations made by it of awards in other cases, translated into

terms of hourly rates. The requested fee, if it is to be based on a "mix" rate of $164 an hour, could be excessive even in the City of New York. I would estimate that a "mix" rate of $75 an hour would be charged by outstanding, experienced law firms in this city. However, attributing substantial weight to an hourly rate is unfair in a case such as this where success and complexity of issues are such important factors. In *Hanover Shoe, supra,* where the treble damages of $4,239,000 were about the highest heretofore obtained, the court pointed out that it arrived at the fee award of $650,000 on bases other than hours spent by counsel. Consequently, the computation of hourly rates in that case had little meaning.

Similarly, a fee based on a percentage of recovery is not a satisfactory test for this case, although it appears to have been the sole one used in the *Union Carbide* case, *supra,* where the court held that "an allowance of 15 percent of the amount recovered * * * would be reasonable." 300 F.2d at 587. A percentage fee gives undue weight to the size of the recovery. In cases with small recoveries, it completely ignores professional skill and the complexity of the work involved, and could result in an insufficient award for services rendered. See *Union Leader, supra,* 218 F. Supp. at 493; *Noerr, supra,* 166 F. Supp. at 170. Conversely, where the recovery is extraordinarily high, it could result in an excessive award.

Finally, we come to the eighth factor, which has been framed by two judges as the ultimate test to be applied: that is, a fee which in the judgment of the trial court "would be reasonable for counsel to charge a victorious plaintiff. The rate is the free market price, the figure which a willing, successful client would pay a willing, successful lawyer." Cape Cod Food Prods., Inc. v. National Cranberry Ass'n, 119 F. Supp. 242, 244 (D. Mass. 1954); *Farmington Dowel, supra,* 297 F. Supp. at 926. On the other hand, this test has been characterized as the outer limits of recovery. *Noerr, supra,* 166 F. Supp. at 170.

It seems to me that the major factors bearing on the fixing of attorneys' fees in antitrust cases are the complexity of the problems presented, the skill of counsel, and the measure of success achieved by counsel. The other factors are subsidiary to these and may be helpful in evaluating them, but neither separately nor collectively do these other factors constitute the basis for fixing the fee.

In measuring the success of counsel, only single damages should be considered, since that is the amount produced through the efforts of counsel. Trebling is a penalty imposed by law and automatically attaches to the damages found. Twentieth Century-Fox Film Corp. v. Brookside Theatre Corp., 194 F.2d 846, 859 (8th Cir.), cert. denied, 343 U.S. 942, 72 S.Ct. 1035, 96 L.Ed. 1348 (1952); Milwaukee Towne Corp. v. Loew's, Inc., 190 F.2d 561, 571 (7th Cir. 1951), cert. denied, 342 U.S. 909, 72 S.Ct. 303, 96 L.Ed. 680 (1952). Consequently, the referable recovery here is $45,870,478.

As stated at the outset, the problem of how to reasonably exercise the court's discretion is a difficult one and in the final analysis it can only be resolved with reference to a particular case. A point is reached where the amount of plaintiff's recovery is unrelated to services of counsel. The large amounts involved do not add to the complexity of the problems, increase the responsibilities of counsel or require greater capabilities of counsel.

After carefully reviewing the entire matter and giving effect to the adjustments discussed above, it is my considered judgment that a reasonable attorney's fee in this case is $7,500,000.

Plaintiff requests $2,230,602 as "the cost of suit" allowable by § 4 of the Clayton Act. It concedes that, aside from attorney's fees, no case has ever gone beyond "taxable costs" which are awarded in any case to a successful party. 28 U.S.C. § 1920; Fed.R.Civ.P. 54(d). Similar requests by successful plaintiffs in private antitrust suits to be awarded their "reasonably incurred expenses of liti-

gation" have been uniformly rejected. *Farmington Dowel, supra,* 297 F. Supp. at 930. This request is accordingly denied.

Alternatively, plaintiff requests $396,596.43 as taxable costs. Included in this sum is $28,342.63 claimed for services in connection with attempts to serve Hughes. These charges are based on payments to lawyers and private investigators in several parts of this country and Mexico City. To the extent that these payments are allocable to attempts to serve a summons on Hughes as a defendant in this action, they clearly are not taxable costs against Toolco. They also are not taxable for that portion of the services involved in attempting to serve a witness subpoena on Hughes. § 1920 provides for taxation of fees of witnesses, not the expense of searching out the witness. On the record it is clear that Hughes and Toolco were one and the same, and therefore service of notice to take deposition would have sufficed for plaintiff's purposes. Consequently, this item is disallowed.

The sum of $19,145.20 for printing costs in the Court of Appeals and the Supreme Court is not taxable, nor are the costs applicable to printing more than 50 copies of the other documents.

As to the transcript of damage hearings, plaintiff may only tax its share of the cost of transcript furnished to the special master plus three additional copies.

Finally, plaintiff has again requested moratory interest to run from the date of the report of the special master. I rejected this plea in my opinion disposing of the motions addressed to the report of the special master. I see no reason to change that disposition in which I said:

> "Interest should not be allowed in antitrust actions where the statute provides for punitive damages. Treble damages compensate a plaintiff handsomely for all his losses, including loss of the use of money rightfully his." 308 F. Supp. at 696.

Judgment shall be entered accordingly. So ordered.

Judgment Entered April 14, 1970

[Doc. 531]

61 Civ. 2324

[CAPTION]

This action came on for hearing before the Court, the Honorable Charles M. Metzner, District Judge, presiding, and the issues having been duly heard, and the Court having rendered its decisions of December 23, 1969 and April 13, 1970, and having directed the entry of judgment thereon,

It is hereby Ordered and Adjudged

That the plaintiff Trans World Airlines, Inc. recover of the defendants Hughes Tool Company and Raymond M. Holliday, jointly and severally, the sums of $137,611,435.95 as damages, $7,500,000.00 as a reasonable attorneys' fee, and $336,705.12 as costs, for a total amount of $145,448,141.07, together with interest thereon at the rate of 6% as provided by law.

Dated at New York, New York, this 14th day of April, 1970.

CHARLES M. METZNER
U.S.D.J.
JOHN LIVINGSTON
Clerk of the Court

Judgment Entered 4/14/70

K.

314 Federal Supplement 94

UNITED STATES DISTRICT COURT,
S.D. NEW YORK.

TRANS WORLD AIRLINES, INC., *Plaintiff*,

v.

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY, *Defendants*.

No. 61 Civ. 2324.

June 10, 1970.

METZNER, District Judge.

Defendants move for a stay of execution, pending appeal, of the judgment entered in favor of the plaintiff without posting the usual supersedeas bond. Practically speaking, defendant Hughes Tool Company (hereinafter called Toolco) is the party involved in this motion.

F.R.C.P. 62(d) provides that "When an appeal is taken the appellant by giving a supersedeas bond may obtain a stay subject to the exceptions contained in subdivision (a) of this rule.* * *" Rule 33 of the General Rules of this court provides that such bond shall be in the amount of the judgment plus 11% and an additional $250 to cover costs. Plaintiff in this antitrust action was awarded single damages of $45,870,478.65, which after trebling and adding costs and a reasonable attorney's fee amounts to $145,448,141.07. The bond would have to be in the amount of $161,447,686.59.

Rule 31(b) of the General Rules of this court provides that every bond or undertaking must either:

"(1) be secured by the deposit of cash or government bonds in the amount of the bond, undertaking or

stipulation, or be secured by (2) the undertaking or guaranty of a corporate surety holding a certificate of authority from the Secretary of the Treasury * * *."

The third alternative provided by the rule is not applicable to this case.

It is Toolco's contention that either of the alternatives contained in Rule 31(b) "could not be effected without imposing an added penalty on [Toolco] by requiring it to engage in disruptive and time-consuming liquidation of assets or a costly and time-consuming financing program." It proposes that it either not be required to post any bond or undertaking, or that whenever the net worth of Toolco goes below three times the judgment the stay pending appeal shall be lifted.

Although the final judgment in this matter was not entered until April 14, 1970, the report of the special master recommending damages in the amount of $137,611,-436.95 was confirmed by this court on December 23, 1969. Defendants apparently did nothing from that time until May 5, 1970 (the date of the order to show cause bringing on this motion) to arrange for the posting of the required bond except to make inquiry of surety companies. Appended to the order to show cause are two letters from surety companies indicating that a bond of this size could be arranged only if secured with a deposit of collateral in the form of cash or government bonds or documents of similar liquidity in the full amount of the bond. The inability of surety companies to undertake such an obligation is fully understood and appreciated by the court.

Because of the unprecedented size of the judgment against what is in essence a single defendant, the court signed the order to show cause in an attempt to see if some satisfactory arrangement could be worked out whereby the interests of the successful plaintiff could be reconciled with

the understandable, practical problems facing Toolco. Hearings were held on May 11, May 20 and June 3 which were unproductive in bringing the parties close to a solution of the problem.

At the outset the brief submitted by Toolco took the position that the law was clear to the effect that the court has the power "in extraordinary circumstances such as those presented by this case, to grant a stay of execution without requiring the filing of a supersedeas bond in the ordinary form or the posting of any security." It argued that its net worth was in excess of $500,000,000 and that this was ample assurance that the plaintiff would be able, in the event of affirmance, to obtain satisfaction of its judgment without the posting of any security at the present time. In addition, it offered that a lien could be created on specific property having a value in excess of $45,000,000, the amount of the compensatory portion of the judgment. The plaintiff took the position that Rule 33, requiring a bond in the amount of 111% of the judgment, indicates that any lower figure is most unlikely to be sufficient security for the payment of a judgment.

With the adoption of the Federal Rules of Appellate Procedure, effective July 1, 1968, Rule 73(d) of the Federal Rules of Civil Procedure, which referred to supersedeas bonds on appeals to the Court of Appeals, was repealed. It had provided, among other things, that:

> "the amount of the bond shall be fixed at such sum as will cover the whole amount of the judgment remaining unsatisfied, costs on appeal, interest, and damages for delay, unless the court, after notice and hearing and for good cause shown, fixes a different amount • • • ."

These words had been inserted in the original rule in 1938 to cover situations where money judgments of enormous

sums had been entered and defendants were unable to give a supersedeas bond to stay the execution of a judgment. The language allowed the court, in a case of hardship of that kind, to issue a stay of execution so that, in effect, the defendant's right of appeal would not be destroyed. The language was not transferred to any other section of the rules by the amendment of 1968, and consequently the court is faced with F.R.C.P. 62(d) and our local district Rule 33. Despite the repeal of Rule 73(d), I am of the opinion that the court has the inherent power in extraordinary circumstances to provide for the form and amount of security for a stay pending appeal, based on the conditions it finds to exist in a particular case. See 9 Moore, Federal Practice ¶ 208.06[1] at 1416 (2d ed. 1969).

At the first hearing on May 11, the parties adhered to their diametrically opposed positions. The plaintiff pointed out that there was no assurance that Toolco's present net worth would continue to exist. It further took the position that during the period from December to May Toolco, with its asserted net worth, could have arranged for a loan to be used as an undertaking. Plaintiff suggested that Howard Hughes, the sole owner of the stock of Toolco, should guarantee the payment of the judgment and place his stock with the court as collateral for such guaranty.

If consideration was to be given to Toolco's proposal, plaintiff asserted that it should receive the same treatment as would be afforded any lending institution approached for a loan by Toolco. This would include certified, detailed financial statements, regular certificates by responsible officers of defendants as to the maintenance of net worth and limitations on transactions between Toolco and its 100% stockholder. However, plaintiff adhered to its view that Toolco should arrange for financing in order to secure the judgment in full.

The hearing was adjourned to May 20 with a direction to the defendants to conduct negotiations with lending in-

stitutions. Counsel were admonished to have continuing discussions so that on the adjourned date the plaintiff would not be faced with a new proposal for the first time.

The fear of the court was well founded since it appears that Toolco's new proposal was sent to plaintiff's counsel the day before the adjourned hearing. That proposal contained four provisos:

> "1. HTCo [Toolco] will furnish TWA with a Certificate by its Treasurer certifying that the present net worth of the Company, determined in accordance with generally accepted accounting principles applied on a basis consistent with prior accounting periods, without provison for the judgment, is in excess of $500 million, namely, substantially in excess of three times the amount of the judgment.
>
> "2. Thereafter, HTCo will provide TWA quarterly, or more frequently if desired, with a Certificate of its Treasurer certifying that the net worth of HTCo remains substantially in excess of three times the amount of the judgment.
>
> "3. Haskins & Sells advises that they will have completed their audit for the year ended December 31, 1969 by the end of the month. HTCo will immediately engage Haskins & Sells to make quarterly audits. Shortly after such engagement Haskins & Sells will be able to complete interim audit procedures for the first quarter of 1970.
>
> "4. HTCo will provide TWA with an appropriate Certificate of Haskins & Sells based upon such audits which will support the Treasurer's Certificate and, in addition, based upon interim auditing procedures Haskins & Sells will provide TWA from time to time with a confirmation in the form of a 'comfort letter', customarily furnished to underwriters, to the effect that

nothing has come to their attention subsequent to their last audit to indicate that the net worth of the Company has been reduced to an amount which is not in excess of three times the amount of the judgment."

The letter ended with the following statement: "Based on our telephone conversation, I expect to hear from you to arrange a meeting for this afternoon to discuss the matter further." On the same date plaintiff submitted a nine-page proposal as to what it was willing to accept.

The hearing proceeded on May 20, in which counsel for Toolco outlined the discussions had with the banks. The following statement by counsel appears on page 16 of the transcript:

"So you reduce all that and you say: What does that mean in terms of how much you can do?

"And they say: Well, we don't know exactly yet but we would be happy to do it.

"What will it cost?

"Well, we cannot exactly tell you what terms and conditions.

"But you put all those together and the only conclusion you come to is that it is not realistic * * *."

The interesting point about all this is that Toolco never requested the banks to follow through and come up with definitive answers. It took the position that whatever the cost, it would be unduly burdensome. If Toolco had wanted financing to conclude a business transaction, I am sure that there would have been no hesitancy on its part to get the concrete answers, but somehow it did not take that tack to solve this problem. The hearing was adjourned to June 3 with a direction to Toolco to furnish the plaintiff with the audited financial statements of its operations for

the year 1969 and a list of its assets worth $10,000,000 or more. This was done for the purpose of giving the plaintiff an opportunity to know what was being offered and to be in a position to evaluate whether it would be sufficient to secure its judgment.

Aside from charges and countercharges of bad faith, a large portion of the hearing on June 3 was devoted to a statement by defense counsel as to the huge capital demands being made on Toolco by its subsidiaries and affiliates. The sum total of all this was that there could be nothing available for the plaintiff by way of cash security. Business was to continue as usual with Toolco being the sole arbiter of what it wanted to do. Cash could be converted to fixed assets which would not affect the net worth of the company as reflected on a balance sheet. However, it could certainly affect what I would call the quality of that net worth insofar as the collection of the judgment is concerned. We read every day about the liquidity squeeze.

The figures which were furnished the plaintiff indicate that in the three-month period ending March 31, 1970 the quick current assets have been reduced by a third. In addition, the court received a letter from Toolco's counsel dated May 22, 1970 stating that the court should not be surprised to read an announcement in the press, either late that day or the next day, that Toolco had acquired the Dunes Hotel for a cash consideration of $35,000,000 and that there was a contemplated transaction in which Toolco would be called upon to lay out another $11,000,000 within the next six or eight months. There are additional examples of cash commitments in the financial notes to which I need not specifically refer.

Part of business as usual must include some recognition of the rights of this plaintiff that has acquired a judgment against Toolco for violation of the antitrust laws of the United States. Toolco requests plaintiff to forgo both

immediate collection of its judgment and full security for that judgment pending appeal. It must be prepared to assume some financial burden to achieve "business as usual." At the same time, I fully appreciate that under present conditions a supersedeas bond in the amount contemplated by Rule 33 is not practicable under the circumstances. I have come to the conclusion that Toolco can arrange to post security in the form required by Rule 31(b) in the amount of $75,000,000. This shall be done on or before June 22, 1970. The balance of $86,447,686.59 shall be secured along the lines suggested by the defendants as to the maintenance of Toolco's net worth at three times the amount of such balance. The details of this arrangement shall be worked out between counsel. Each knows what the other has proposed. The court cannot be expected, on the papers before it, to come up with a satisfactory resolution embodying such detailed and intricate financial considerations. It should not be required to devote the time necessary to preside over such a conference between counsel. Obviously, there has to be flexibility on both sides for this endeavor to be successful.

Counsel are directed to meet in continuous session and appear before the court on June 16 in Room 1106 at 10:30 A.M. with a proposal in such form that any needed resolution of disputes can easily be disposed of.

So ordered.

L.

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF NEW YORK

61 Civ. 2324

TRANS WORLD AIRLINES, INC., *Plaintiff*,

—against—

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY, *Defendants*.

Order

Defendants Hughes Tool Company ("HTCo") and Raymond M. Holliday having moved by order to show cause dated May 5, 1970 for an order granting a stay, pending appeal, of execution of the judgment in favor of the plaintiff Trans World Airlines, Inc. ("TWA") entered herein on April 14, 1970, and that motion having come on for hearing before the Court on May 11, May 20 and June 3 and the Court having rendered an opinion on June 10, 1970, it is

ORDERED that the execution of, and any proceedings to enforce, the judgment in favor of TWA entered herein on April 14, 1970, be stayed pending the determination by the United States Court of Appeals for the Second Circuit of defendants' appeal from such judgment, provided, however,

(1) That HTCo on or before June 22, 1970 file with the Court a supersedeas bond in an amount not less than $75,000,000 to be secured in the aggregate in the manner provided by Rule 31(b) of the General Rules of this Court; it being understood that in lieu of depositing cash or government bonds (including obligations guaranteed by the government) pursuant to the provision of Rule 31(b)(1) HTCo may deposit certifi-

cates of deposit and short-term commercial paper, with the right from time to time to substitute for such securities other similar securities so long as the total principal amount of securities is no less than $75,000,000 or to substitute in whole or in part for such deposit of securities an undertaking or guaranty under Rule 31(b)(2), it being further understood that the surety or sureties on such undertaking or guaranty shall remain liable in the amount of the undertaking or guaranty until all amounts finally determined to be due following appeal or expiration of time for appeal have been paid, and it being further understood that TWA shall take no steps to recover any such security or to enforce any such undertaking or guaranty until the expiration of a period of not in excess of 90 days following the final disposition of the appeal; and

(2) That HTCo maintains a net worth (stockholder's equity) in excess of $335,000,000.

It Is Further Ordered that the stay of execution herein provided shall terminate if at any time the net worth of HTCo should fall below $335,000,000.

It Is Further Ordered that so long as the stay of execution provided herein remains in effect HTCo shall furnish to TWA

(1) An audited balance sheet, on a quarterly basis, of HTCo and its subsidiaries, commencing with the balance sheet for quarter ending June 30, 1970, consolidated on an equity basis, in the form previously furnished to TWA for the year ended December 31, 1969, together with a certification by Haskins & Sells that such quarterly balance sheets were prepared in conformity with generally accepted accounting principles on a basis consistent with prior years and that such balance sheets reflect that the net worth (stock-

holder's equity) of HTCo, without provision for the judgment herein, is in an amount in excess of $335,000,000. HTCo will also furnish TWA with a schedule of the principal assets reflected on the balance sheet identifying each of the fixed assets of HTCo, including the location thereof, having a book value in excess of $5,000,000 and setting forth with respect to each such asset its book value and the nature and amount of any material existing liens or encumbrances thereon, and setting forth such additional information, if any, as shall be required to permit reconciliation thereof with the last preceding, similar schedule of principal assets filed pursuant to this order. The quarterly audited balance sheets and certifications thereof by Haskins & Sells and schedules of assets shall be furnished to TWA no later than 120 days following the close of each quarter.

(2) A certificate by the Treasurer of HTCo, on a quarterly basis, commencing with the quarter ending June 30, 1970, certifying that the net worth (stockholder's equity) of HTCo as of the date of the certificate, determined in accordance with generally accepted accounting principles applied on a basis consistent with prior accounting periods, without provision for the judgment herein, is an amount in excess of $335,000,000. At the same time that HTCo furnishes TWA with its Treasurer's certificate, HTCo will also furnish TWA with a letter from Haskins & Sells to the effect that since the last audit by Haskins & Sells and to the date of such letter nothing has come to their attention to indicate that the net worth (stockholder's equity) of HTCo is in an amount which does not exceed $335,000,000. Said certificates by the Treasurer of HTCo and said letters by Haskins & Sells will be furnished to TWA no later than 30 days following the close of each quarter.

IT IS FURTHER ORDERED that so long as the stay of execution herein provided remains in effect HTCo shall not make any distribution or transfer of its assets which would reduce its net worth below $335,000,000.

IT IS FURTHER ORDERED that the HTCo balance sheets and the schedule of assets heretofore supplied to plaintiff and all documents which HTCo may hereafter furnish to TWA pursuant to this order (the "HTCo Documents") shall be given confidential treatment in strict accordance with the conditions stated below provided that defendants shall have stamped thereon at the time of delivery to TWA a legend reading substantially as follows: "CONFIDENTIAL This document may be examined only by authorized persons and in accordance with the order of the U. S. District Court, S.D. N.Y., dated June 16, 1970."

(1) No HTCo Document may be used by or on behalf of TWA except to determine compliance by HTCo with the terms of this order or in connection with further proceedings related to such compliance and the continuance or termination of the stay of execution herein granted, provided that TWA shall not be barred from using information relating to the existence and location of HTCo assets contained in any HTCo Document in aid of proceedings to enforce the judgment herein should the stay of execution be terminated.

(2) No HTCo Document shall be reproduced or copied by TWA or its attorneys or anyone acting on their behalf. If the attorneys for TWA require additional copies, such copies shall be obtained from counsel for HTCo.

(3) No HTCo Document shall be voluntarily disclosed by attorneys for TWA to any person other than (a) members of the firm of Cahill, Gordon, Sonnett, Reindel & Ohl and its employees; (b) the following named members of Price, Waterhouse & Co., inde-

pendent public accountants: John C. Biegler, Donald H. Trautlein, Dean H. Secord and Robert E. Roth, or such member of Price, Waterhouse as counsel for TWA may hereafter designate in their stead by letter to the Court and to HTCo; (c) the following named officers or directors of TWA: Charles C. Tillinghast, Jr., Chairman of the Board of Directors, Barry T. Leithead, Chairman of the Litigation Committee of the Board of Directors, L. Edwin Smart, Senior Vice President-External Affairs and Raymond R. Fletcher, Jr., Esq., Vice President and General Counsel, or such director or officer as may succeed to their positions, and be designated in their stead by counsel for TWA by letter to the Court and to HTCo, provided, however, that any such disclosures shall be made only to persons actively concerned with or engaged in the handling of proceedings relating to the stay of execution on a "need-to-know" basis, and shall be as limited as reasonably may be possible, and except that disclosures may be made to a court having jurisdiction of this action in connection with proceedings relating to the stay of execution of the judgment herein.

(4) When not in such use as is permitted by the provisions of this order, attorneys for TWA shall keep the HTCo Documents in a locked filing cabinet and shall give access thereto only in conformity with the provisions of this order.

(5) All HTCo Documents which are delivered to this Court shall be maintained in a sealed file in the custody of this Court or its Clerk, and no such HTCo Document shall be made available to any person other than counsel of record in this action.

(6) Upon the termination of the stay of execution granted by this order, all HTCo Documents shall be promptly returned to HTCo.

(7) This order shall be binding upon each and every person who at any time has possession of or access to any HTCo Document, and no such person shall disclose any of the contents of any such document to any person not covered by the terms and intent of this order. The attorneys for TWA shall cause a copy of this order to be shown to each person to whom any HTCo Document is disclosed by them, and shall maintain a list of the names and addresses of all such persons, which list shall be made available to HTCo for inspection by it upon request.

Dated: New York, New York

UNITED STATES COURT OF APPEALS
FOR THE SECOND CIRCUIT

Nos. 883, 834—September Term, 1970.

(Argued May 7, 1971 Decided September 1, 1971.)

Docket Nos. 34902, 35114

TRANS WORLD AIRLINES, INC.,
Plaintiff-Appellant,

v.

HOWARD R. HUGHES,
Defendant,

and

HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,
Defendants-Appellants.

Before:

SMITH, KAUFMAN, and HAYS,
Circuit Judges.

Cross-appeals from a final judgment for plaintiff in the amount of $145,448,141.07, upon a previous default judgment entered on a complaint alleging violations of the antitrust laws, by the United States District Court for the Southern District of New York, Charles M. Metzner, *Judge*, following a hearing on damages before Special Master Herbert Brownell.

Modified with respect to interest on the judgment and as modified, affirmed.

JAMES V. HAYES (Ralstone R. Irvine, Mahlon F. Perkins, Jr., David A. Wier, *of counsel*; Donovan, Leisure, Newton & Irvine, New York, N. Y.; Davis & Cox, New York, N. Y., *on the brief*), *for defendants-appellants.*

DUDLEY B. TENNEY (Paul W. Williams, Immanuel Kohn, Marshall H. Cox, Jr., Abraham P. Ordover, Lawrence C. Browne, Michael P. Tierney, *of counsel;* Cahill, Gordon, Sonnett, Reindel & Ohl, New York, N. Y., *on the brief*), *for plaintiff-appellant.*

KAUFMAN, *Circuit Judge:*

We are presented in this case with cross-appeals from a final judgment entered April 14, 1970, premised upon a previous default judgment, in favor of plaintiff Trans World Airlines. Inc. (TWA) against defendants-appellants Hughes Tool Company and its chief financial officer, Raymond M. Holliday (Toolco), which, the district court tells us, 312 F. Supp. at 480, is some thirty times greater than the next highest monetary award ever entered.

The extraordinary aspect of this complex litigation is in large measure attributable to the elusiveness of Howard R. Hughes, progenitor and sole owner of Toolco, protagonist in its operations, in a sense the central character of this litigation as well, and yet not a party to this appeal because Hughes himself, although named as a defendant in TWA's complaint, could not be located for service of process.

I.

Since the facts in this litigation have been set forth in detail in many prior reported decisions, *see* 214 F. Supp. 106 (S.D.N.Y. 1963), 32 F.R.D. 604 (S.D.N.Y. 1963); 332 F.2d 602 (2d Cir. 1964); 38 F.R.D. 499 (S.D.N.Y. 1965); 308 F. Supp. 679 (S.D.N.Y. 1969); 312 F. Supp. 478 (S.D.N.Y. 1970), in the interest of avoiding unconscionable length of this opinion, we will limit our own initial statement to a brief resumé of the tortuous history of the case, sufficient to permit a meaningful statement of the issues raised.

More than a decade ago, by a complaint dated June 30, 1961, TWA filed its complaint in this action charging Toolco and Hughes with violations of the Clayton and Sherman Acts, 15 U.S.C. §§ 1, 2, 11, and 18, as well as with a claim, for which pendent jurisdiction was asserted, alleging malicious and willful injury to the business of TWA.

Convoluted and protracted pre-trial maneuvers culminated in the failure of Toolco to produce Hughes for a deposition scheduled by court order to be taken on February 11, 1963. As a result of Hughes' confessed unwillingness to appear, as well as the nonproduction by Toolco of certain papers and documents whose disclosure to plaintiff had also been required by court order, the Rule 2 judge assigned to the action (Rule 2, *General Rules for the Southern and Eastern Districts of New York*), Judge Metzner, on May 3, 1963 filed two orders. One entered the default against Toolco and granted TWA's motion to increase the *ad damnum* clause of its complaint from $105,000,000 to $135,000,000, after trebling. In the second order Judge Metzner also found Toolco in default with respect to five counterclaims that Toolco had asserted against TWA and several additional defendants. Judge Metzner dismissed these counterclaims and also granted TWA's motion for summary judgment on a sixth counterclaim.

We granted leave to take an interlocutory appeal from the former order, after Judge Metzner had certified that an appeal was appropriate under 28 U.S.C. § 1292(b). But we limited our review to considering whether the district court's jurisdiction over the antitrust action was ousted because primary jurisdiction lay with the Civil Aeronautics Board, which had approved various steps by which Toolco gradually assumed virtually complete control of TWA, holding about 78% of its stock at the time the complaint was filed, and whether certain of the CAB orders associated with those grants of approval constituted a good

defense to TWA's action. The interlocutory appeal was consolidated with defendants' parallel appeal as of right from Judge Metzner's dismissal of the counterclaims. A panel of this court ultimately ruled that the district court did properly assert its jurisdiction and that the CAB orders did not constitute blanket approval of the claims in the complaint and hence were not a defense to TWA's action. In the appeal on the counterclaims, the orders of the district court were affirmed with one exception, not relevant here (determining that the CAB had exclusive jurisdiction over one of the dismissed counterclaims). 332 F. 2d 602, *cert. granted,* 379 U.S. 92 (1964), *cert. dismissed as improvidently granted,* 380 U.S. 248, 249 (1965).

Judge Metzner's ruling adjudging Toolco in default necessitated an extensive hearing to determine damages. Herbert Brownell, Esq.,[1] appointed Special Master for this purpose, conducted hearings between May 2, 1966 and April 9, 1968. On September 1, 1968, in a thorough report, the Master awarded TWA trebled damages of $137,611,435.95. Both sides filed objections. On December 23, 1969, Judge Metzner adopted Brownell's report in all respects, 308 F. Supp. 679, and then in a subsequent opinion awarded attorneys fees of $7.5 million and assessed costs in the amount of $336,705.12. 312 F. Supp. 478. On April 14, 1970, the district court entered its final judgment, with 6% interest to run from that date, in the sum—impressive even by space age and inflationary standards—of $145,448,141.07.[2]

---

[1] Hon. J. Lee Rankin, appointed Special Master during pre-trial proceedings, was replaced when he resigned in December 1965 to become Corporation Counsel for New York City.

[2] A prayer for equitable relief included in the original complaint was mooted when Toolco sold all its TWA stock in May, 1966.

II.

A. *Toolco Appeal*

The first thrust of the Toolco appeal is directed at the default judgment itself and primarily concerns issues that were not the focus of the damage hearing before Special Master Brownell. The broad question pressed by Toolco is whether TWA is entitled to recover any amount whatever on the record before us, regardless of the adequacy of its proof of damages. Toolco contends (discussed in part III below) that the default judgment was improperly entered against it, in violation of its due process rights, and should be vacated; that (part IV) even if the default judgment is valid, the judgment does not justify assessing damages against Toolco for any antitrust violations, since in Toolco's view the evidence in the record conclusively refutes the possibility that any such violations could have occurred; and that (part V) even if the default judgment establishes antitrust infractions, TWA has not proved that any damages it might have suffered as a result of acts of mismanagement alleged in the complaint arose from antitrust violations. On each of these questions, we affirm the judgment below in all respects.

Toolco also contests Special Master Brownell's calculations of the damages. It argues that (part VI), even if proximate causation was shown, the damages were in several respects wrongly computed. In each of these respects we also affirm the reasoning and conclusions of the Master and of Judge Metzner.

Additionally, Toolco challenges under F.R. Civ. P. 54(c) Judge Metzner's grant of TWA's motion to increase the *ad damnum* at the same time he entered the default judgment (part VIII). It also argues that the award of attorney's fees is excessive and unreasonable (part IX). We believe Judge Metzner properly permitted TWA to raise the *ad damnum* and that the payment allowed for legal services was within the bounds of his discretion.

B. *TWA Appeal*

TWA takes issue with only one item of Brownell's report, *viz.* certain interest charges credited in mitigation of damages (part X). We affirm the Master's disposition of this issue. TWA also appeals from the denial by Judge Metzner of moratory interest as an element of the damages to be trebled under Section 4 of the Clayton Act, 15 U.S.C. § 15. It also questions Judge Metzner's holding that interest on the judgment should run from the date of the district court's judgment, rather than the date the Special Master filed his report, and contests the award of only 6% interest pursuant to New York judgments law, intead of the 7½% currently set by the state Banking Board as the maximum allowable commercial rate. We discuss these issues in part XI and affirm the district court on the first two points but hold that proper interest under current New York decisional authority is 7½%. TWA's last assertion (part XII) is that it may recover $1.6 million compensation for fees paid to experts as a component of its "cost of suit," 15 U.S.C. § 15. With this assertion we disagree.

III.

Toolco argues forcefully that Judge Metzner's entry of a default judgment having such drastic consequences resulted in a denial of due process and was otherwise an abuse of discretion under F. R. Civ. P. 37(b)(2)(iii) and 37(d). We are reminded not only of the severe nature of this particular default but of the fundamental importance of the right to an adversary hearing prior to judicial determination of rights and liabilities. We are in full accord with the general proposition, for which Toolco cites the three leading cases of *Hovey* v. *Elliott,* 167 U.S. 409 (1897), *Hammond Packing Co.* v. *Arkansas,* 212 U.S. 322 (1909), and *Societe Internationale* v. *Rogers,* 357 U.S. 197 (1958), that the totality of circumstances surrounding the

failure to make discovery must be considered in determining what sanctions to apply under Rule 37. As we understand Toolco's argument, those portions of the "totality of circumstances" it considers to control the invalidity of the default here are these: that TWA did not itself comply with Toolco's efforts to pursue pre-trial discovery sufficiently to lay an adequate foundation for the attempt to depose Howard Hughes; that, to similar legal effect, Judge Metzner on January 10, 1963, improperly denied Toolco's request for a Rule 16 hearing and permitted TWA to delay answering interrogatories served on it by Toolco in the fall of 1962 until after the Hughes deposition scheduled for February 11, 1963; that its own compliance with TWA's requests for discovery was substantial and in good faith; and that TWA did not and indeed could never have shown a need to depose Hughes. In sum it argues that in the face of all this, the district court grossly abused its discretion in not resorting to a less drastic alternative remedy before putting an end to litigation on the merits with a default judgment.

Although we agree with TWA that these arguments are unpersuasive, for the sake of clarity we pause to reject TWA's alternative theory that we may not consider the merits of the default judgment because we are required by either res judicata or collateral estoppel to follow the affirmance by the earlier panel of this court of the default judgment entered against Toolco on its counterclaims. Res judicata is singularly inappropriate in this context. As we have noted, leave to Toolco to appeal from the default judgment entered on TWA's antitrust complaint was narrowly confined and the panel expressly reserved the very question at issue here, "[t]he propriety of the court's entering a default judgment against the defendants with respect to the complaint . . . ." Prior to the judgment now appealed from, there had simply been no "final judgment" entered with respect to the merits of TWA's cause of

action against Toolco, and thus we lack the fundamental prerequisite for applying res judicata. See *Moore, Federal Practice* ¶ 0.405[1].

Nor will collateral estoppel avail TWA. The relevant issue "actually litigated and determined in the prior" appeal, *Lawler* v. *National Screen Service Corp.*, 349 U.S. 322, 326 (1955), was only that Judge Metzner properly entered the default on Toolco's counterclaims. This is a sharply distinguishable issue from the propriety of a different default judgment in favor of Toolco's adversary (this does not follow, as Toolco suggests, because the latter default is more drastic, but simply because the two questions are not the same). The issue of the propriety of the default here is not a right, question, or fact determined on the previous appeal. We believe we can fairly assume that TWA would not attempt to invoke collateral estoppel if the counterclaim had been asserted in a separate action. Combining two claims for trial as permitted for convenience under the Federal Rules does not dissolve the separate identities of the two claims or the two default judgments. Collateral estoppel and res judicata take aim at redundant litigation of identical issues or causes of action; they are not intended to foreclose consideration of the legal merits by analogy—however persuasive the analogies may be.

This is not to say that we will entirely disregard the obvious force of the prior determination on so closely related a question. This is foremost a matter of *stare decisis* and, of course, we *are* bound by collateral estoppel not to reopen subsidiary issues actually determined in the earlier appeal. We are persuaded that the most important considerations that prompted the earlier affirmance of the default on Toolco's counterclaims compel the same result here.

The essential details of the pre-trial proceedings that climaxed in the default are succinctly set out in Chief Judge Lumbard's earlier opinion, 332 F.2d 602, and we will en-

deavor to avoid unnecessary repetition. Because the factors bearing on the two default judgments are not identical, however, and in view of Toolco's attack on the district court's conduct of the pretrial proceedings, we cannot entirely avoid a brief sketch of the history of the litigation prior to the default.

One relatively minor justification put forward by the earlier panel in affirming the default judgment on the counterclaims related to Toolco's noncompliance with two discovery orders entered upon motions made by certain defendants who had been joined in the litigation by Toolco's counterclaim. Toolco now asserts that these production orders concerned matters irrelevant or at least of marginal importance to TWA's complaint. However this may be—and it is virtually impossible, because of the default and the nonproduction of the documents to evaluate this claim—we agree that the failure to comply with orders granted in favor of the other litigants would most likely not in itself have warranted the severe remedy of a default judgment in favor of TWA on the principal action.

But it is also apparent that these production orders are of trivial importance to the propriety of the default judgment in question here, in light of Howard Hughes' deliberate, knowing, willful, and plainly announced refusal to comply with an order requiring his appearance for the taking of his deposition on February 11, 1963, and which had been served long in advance of the return day. The reason that entry of the default was inevitable after Hughes' nonappearance can only be understood against the background of TWA's intensive efforts, first undertaken on the very day that it filed its complaint, to compel Hughes' personal testimony, as a witness and "managing agent" of defendant Hughes Tool Co. under F.R. Civ. P. 37(b)(2). TWA has consistently maintained, and continues to do so, that quite aside from the fact that he was Toolco's alter ego, Hughes' pretrial testimony was absolutely essential

for it adequately to frame the issues and prepare for trial because of Hughes' extraordinary secretive methods of doing business. It was the indispensable nature of Hughes' personal testimony, according to TWA, that prompted its diligent pursuit of Hughes from the inception of the litigation. TWA's campaign to depose Hughes, which opened with a motion for leave to do so on the date it filed its complaint, was temporarily frustrated when the motion was denied and Toolco was granted priority in the taking of depositions. But TWA renewed its efforts with a further unsuccessful motion and proposals to depose Hughes prior to Toolco's depositions. In early January, 1962, TWA adopted a new tactic and repeatedly sought with equal lack of success, to discover Hughes' whereabouts from Toolco. After further futile notices to depose Hughes served in January and February, 1962, TWA achieved a breakthrough when on June 4, the then Special Master rejected Toolco's objections to interrogatories directed to both Hughes and Toolco to locate Hughes so that he might be deposed. Toolco was ordered to answer the interrogatories unless Hughes should authorize counsel to accept service of a subpoena on his behalf for his appearance at the deposition.

On appeal the district court ordered that the interrogatories be answered as modified by it in an immaterial respect. Counsel for Toolco on July 27 informed the Master that Hughes had authorized counsel to accept service of a subpoena for Hughes to appear as a witness. An extended period of wrangling followed. Among other highlights of this period, Toolco refused a proposed stipulation and order to serve Hughes through Toolco's counsel, on the ground that agreeing to the stipulation might prejudice its right to object to the propriety of the deposition. Finally, on September 6, 1962, the same day that TWA charged that a purported authorization for counsel to accept service for Hughes was apparently a forgery, counsel for

Toolco informed Judge Metzner that another lawyer, Chester Davis, had in fact been served that day in California, pursuant to Hughes' personal authorization. On September 13, as part of its indignant response to the forgery allegation, Toolco submitted to the court the notice of deposition, a subpoena to Hughes, an affidavit of Davis stating his authority to accept service for Hughes, and a second affidavit from a Los Angeles notary stating that Hughes had indeed appeared in person before him and had acknowledged Davis' authority.

Subsequently, the district court adopted a decision of Special Master Rankin that Toolco would bear responsibility for Hughes' response to the subpoena, and stated that Hughes would be considered bound by this declaration unless he objected. No objections were ever made and there is, of course, no question that Toolco was responsible for the actions of the owner of all its stock. At Toolco's instance, the deposition date was twice postponed until by order of January 10, 1963, the court affirmed a final date set by Master Rankin requiring Hughes' appearance on February 11, a schedule "to be adhered to in the absence of extraordinary circumstances." Also on January 10, 1963, Judge Metzner denied an application for a Rule 16 pre-trial hearing that had been presented to it by Toolco on September 25, 1962, at the initial suggestion not of Toolco but of the Master. The motion was denied "without prejudice to renew on papers before the Court 30 days after the completion of the deposition of Howard R. Hughes." Judge Metzner also affirmed the denial by the Special Master of Toolco's motion to depose two financial institutions concerned primarily with issues raised by Toolco's counterclaim, the Irving Trust Co. and Dillon, Reed, & Co., on the ground that to grant the motion would interfere with the scheduled deposition of Howard Hughes.

Thus by mid-January Toolco had explored and exhausted myriad possible avenues for further delaying the day of

reckoning. On February 8, 1963, the Friday prior to Hughes' scheduled appearance the following Monday, Toolco announced a strategy decision. That day Toolco's counsel served on TWA and filed with the court a "notice of position" stating that in view of the court's denial of its motion two days earlier to dismiss the complaint, the denial of a certification permitting review of that order under 28 U.S.C. § 1292(b), and because of "the enormous expenses which would be incurred by Toolco . . . in further pre-trial *and trial* proceedings and the belief of Toolco *that such expenses would exceed the amount of damages provable by plaintiff under the complaint*" (emphasis added). Toolco "elects, subject only to whatever judicial relief it may hereafter obtain, to rest on the merits of its positions as heretofore taken so that it may avoid the burdens and expenses involved in further pre-trial *and trial* proceedings prior to the time that an appellate court has the opportunity to rule upon the decisions and orders heretofore made herein" (emphasis added).

At a hearing conducted February 8, 1963, Toolco's counsel, Davis, whose signature appeared on the "notice of position," admitted that "the subpoena on behalf of Mr. Hughes was valid, never was questioned." He also read from the record that portion of a ruling by the Special Master on September 15, 1962, imposing responsibility for Hughes' actions on Toolco, including the Master's comment that "I am piercing the corporate veil as to the Hughes Tool Company, and I am bringing what I hope is clear notice of very substantial sanctions" against Toolco "in case there should be at some later date a . . . failure to respond to the subpoena . . . ." Davis commented that Toolco was "aware of these rulings" and had accepted the responsibility imposed on it by the Master. Davis further explained that he had described to Toolco the sanctions available in the event Hughes should not appear, with particular regard to F. R. Civ. P. 37(d). Davis further

explained that the basis of Toolco's strategic judgment was that which had been expressed in the "notice" a calculation that TWA could not prove damages equal to the expenses of further litigation. Finally, Davis candidly and clearly recognized, and attributed the same awareness to Toolco, "that by insisting on a right to obtain a review on the legal questions which have been decided to date, and should it develop that they are in error . . . as a consequence *they may be deprived of further defending on the merits, other than on the question of damages*" (emphasis added). Davis described Toolco's decision to stand on Hughes' nonappearance as a "business decision" —the wisdom of which Davis himself pointedly would not vouch for—and responded affirmatively to the court's query whether Toolco's position was that "the plaintiff may take whatever proceedings it is advised to take by way of sanctions under Rule 37."

Short of express consent to the entry of a default judgment, a clearer case for the necessity and propriety of such a judgment could hardly be imagined. On appeal, as we have said, the complaint was held sufficient to state an antitrust claim under several theories and after all that was said at the February 8 hearing Toolco could hardly have been shocked that it then found itself left with nothing to litigate but damages.

The language of the panel on the previous appeal with respect to the Hughes non-appearance is as relevant in this context as it was to the issue presented by the default with respect to the counterclaims:

> "When Hughes chose not to appear for this deposition—which action was taken deliberately and with full knowledge of the sanctions available to the additional defendants under Rule 37—Judge Metzner was fully justified in entering judgments dismissing the counterclaims against TWA and the additional de-

fendants. The sanction of judgment by default for failure to comply with discovery orders is the most severe sanction which the court may apply, and its use must be tempered by the careful exercise of judicial discretion, to assure that its imposition is merited. However, where one party has acted in willful and deliberate disregard of reasonable and necessary court orders and the efficient administration of justice, the application of even so stringent a sanction is fully justified and should not be disturbed."

Chief Judge Lumbard further elucidated in words pertinent on this appeal:

"beyond any question . . . the deposition of Hughes was necessary to all aspects of this litigation. Hughes has at all times been sole owner of Toolco and the guiding light behind all the transactions between Toolco and TWA. Both TWA and the additional defendants had the right to depose Hughes.

. . . .

Hughes' deposition was absolutely essential to the proper conduct of the litigation. Yet he and Toolco seized upon every opportunity to forestall this event. . . . Indeed, Hughes and Toolco seemed to look upon the entire discovery proceedings as some sort of a game, rather than as a means of securing the just and expeditious settlement of the important matters in dispute. It was only at the very eve of the Hughes deposition—after the other litigants had been put to much delay and expense—that the defendants made a 'business decision' to terminate discovery.

Hughes' conduct is particularly intolerable in a large and complex litigation such as this one. The protracted antitrust suit taxes the energies and resourcefulness of each party to the litigation; and

it consumes much time of the court and the special masters it appoints. Tactics such as Hughes' serve only to frustrate the implementation of the discovery machinery devised by the federal judiciary to expedite the handling of such complex litigation." 330 F.2d at 614-15.

Nor was that panel's references to the necessity of Hughes' deposition to "all aspects of this litigation" gratuitous. It was prompted by Toolco's position on the earlier appeal that Hughes' deposition was relevant *only* to the TWA action and not to the counterclaims. Even if we are not bound in a strict legal sense by the previous ruling that Hughes' deposition was essential to TWA's claim, that holding was manifestly correct. As will be seen, many of TWA's asserted charges relied on interpretations of intent and of the significance of ambiguous projects quickly aborted, and of possible exploratory actions taken by Toolco that may or may not have been relevant to TWA's several antitrust theories. The reality behind the charges could hardly be tested without the testimony of the one man who personally directed Toolco's activities throughout the relevant period and whose singular penchant for secrecy was, after two years of frustrating delay in the conduct of the litigation, well known to the Master and the trial court. Clearly the court was entirely correct in concluding that the litigation would only continue its desultory course without the appearance on stage at the earliest possible moment of the hitherto unseen Prince of the drama. Thus, the court's decisions to postpone all further discovery by Toolco—discovery of the sort which had not substantially advanced the litigation in the past—were not only within its discretion but quite obviously correct. Indeed, in light of TWA's express reliance on Hughes himself to establish as much as 75% of its own case against Toolco, one would have expected that Toolco might have welcomed the opportunity to force

TWA to play the card that it had proclaimed was so important to its case, in the expectation that a disappointing deposition would open the way for an early termination of the case favorable to Toolco. Toolco's argument that TWA had not by February 8 laid a sufficient foundation for its case thus falls as well, because by failing to produce Hughes, Toolco deprived both TWA and itself of the opportunity to establish their respective positions. Finally, the suggestion that the court might have resorted to some sanction short of a default judgment after Toolco had announced a policy decision to take an action that would give it the right to take an immediate appeal—which only a final judgment on the merits would accomplish—and following the willful refusal to produce a witness whom the court had rightly found central to the expeditious progress of the lawsuit, has such an air of unreality about it as to bear its own refutation. Contrast *Rosenberg, Sanctions to Effectuate Pretrial Discovery, Colum. L. Rev.* 480, 495 (1958) (giving party "second chance" desirable in appropriate case).

Toolco intimates that throughout the litigation TWA sought in bad faith to win a fabricated case by exploiting Hughes' known craving for solitude. Nothing in the record would justify any such finding, and in any event the district court did offer to permit the deposition to be taken in as much privacy and under any other conditions that might suit Hughes' aversion to public appearance.

The cases relied on by Toolco are far afield and demonstrate by negative implication the inevitability of the default in this case. For example, in *Gill* v. *Stolow*, 240 F.2d 669 (2d Cir. 1957), the court reversed the entry of a default only upon a showing of a "real attempt to comply" with an order requiring the witness to travel from England to New York for the deposition, a trip the court found actually barred by his ill-health. There, the witness defied doctor's orders to appear for the deposition within

two months of the time scheduled for taking it. As far as we know, defendants have never in the eight years since the default judgment represented that Hughes was willing to be deposed were the default vacated. *Von Der Heydt* v. *Rogers*, 251 F.2d 17 (D.C. Cir. 1958) (per curiam) reversed a default judgment only upon a conclusion that the district court had not adequately set forth its findings. Concurring separately, then Circuit Judge Burger commented that "if the information sought is material to the case and not privileged, and if appellant was able to produce it, failure to produce warrants dismissal." *Id.* at 19. That is precisely the case here, except that the information sought was more than merely "material." It was essential. It could prove to be the life or death of the action. In *Independent Productions Corp.* v. *Loew's, Inc.*, 283 F.2d 730 (2d Cir. 1960), we simply found full compliance with the only court order outstanding at the time of the default judgment and concluded that the default judgment was improperly entered merely because when the witness appeared for the deposition he raised a Fifth Amendment privilege. See also *Bon Air Hotel, Inc.* v. *Time, Inc.*, 376 F.2d 118 (5th Cir. 1967), *cert. denied*, 393 U.S. 815 (1968) (Petitioner's failure to comply due to inability brought about neither by its own conduct nor by circumstances within its control did not warrant default judgment). Finally, *Societe Internationale* v. *Rogers*, 357 U.S. 197 (1957), as in *Gill*, reversed a default judgment only on the strength of findings by the Special Master, adopted by the district court, and approved by the court of appeals, that the party had made good faith and diligent efforts to execute a production order where compliance would have violated Swiss law.

Indeed, the circumstances mandating entry of a default judgment here are stronger than in *Hammond Packing Co.* v. *Arkansas*, 212 U.S. 322 (1909), where the party against whom a default judgment was entered claimed a privilege that it urged justified its noncompliance. Despite this,

the Court ruled that because the Hammond Co. "absolutely declined to obey the order," which required production of evidence that the court could only "assume was material," in view of the non-compliance, the default judgment was proper. As in this case, Hammond too relied on the denial of pretrial motions by the defaulting party that would have postponed compliance with or modified the order. The Court found no abuse of the district court's broad discretion to control pretrial procedures.

In light of the foregoing, it would appear that were less at stake in this litigation, the propriety of the default judgment would not have deserved the full discussion we have afforded it. The entry of the default judgment was inescapable and virtually invited by Toolco.

IV.

Toolco, assuming arguendo that we would hold that the default judgment was properly entered against it on TWA's complaint, seeks nevertheless to avoid any liability for the antitrust violations alleged by TWA on the ground that we are required to find as a matter of law that facts essential to establish any such violations, although alleged in the complaint, are in fact untrue and could not have been proved by TWA at a trial. To the extent that the allegations of antitrust infringements are not conclusively disproved, so Toolco asserts, the allegations themselves are either too vague or conclusory or otherwise insufficient to support any recovery whatever. We disagree.

Despite inevitable sharp contrasts of tone and emphasis in the voluminous briefs, the parties do not seem to disagree that Judge Metzner, in preliminary rulings prior to the damage hearing and again in his decision adopting the report of the Master, applied an entirely correct standard in defining the legal effect of a default judgment. We too find Judge Metzner's discussions of the law in this complicated area unexceptionable. Extracting justiciable

standards from the venerable but still definitive case, *Thomas* v. *Wooster,* 114 U.S. 104 (1885), Judge Metzner ruled that by its default Toolco admitted every "well pleaded allegation" of the complaint, a term of art which Judge Metzner interpreted to permit finding an allegation not to be "well pleaded" only "in very narrow, exceptional circumstances:"

> "For example, an allegation made indefinite or erroneous by other allegations in the same complaint is not a well-pleaded allegation. Other examples . . . are allegations which are contrary to facts of which the court will take judicial notice or which are not susceptible of proof by legitimate evidence, or which are contrary to uncontroverted material in the file of the case." 308 F. Supp. at 683.

Judge Metzner then discussed the meaning that the much-mooted phrase "judicial notice" should take in the present context, as distinguished from the much different circumstance of a full trial, and summarized his previous discussion as implying that "only indisputable facts"—facts which could not possibly be rebutted if the non-defaulting party were permitted a trial—may be judicially "noticed" to rebut factual material otherwise admitted by a default. Toolco now attempts to hoist Judge Metzner by his own petard in directing our attention away from the "judicial notice" standard to certain "material in the file of the case" introduced by Toolco during the hearing on damages which according to Toolco has not been "controverted" by TWA. But this argument stands the matter on its head and implies that it was TWA's responsibility to defend the allegations of its complaint by rebutting adverse matter introduced by Toolco in the damage hearing. TWA had no obligation to introduce any evidence whatever in support of the allegations of its complaint. Matter introduced by Toolco to disprove or mitigate damages which only *tends* to contradict the allegations of the complaint has no

legal effect except as it bears on the question of damages unless it could not conceivably have been refuted and disproved by TWA had there been a trial and thus is "indisputable." It would usher in a new era in the dynamics of litigation if a party could suffer a default judgment to be entered against it and then go about its business as if the judgment did not exist and as though, despite the opportunities to comply with the court's orders and to defend on the merits which had been ignored, the slate was wiped clean and a new day had dawned. To state the proposition is to expose the folly of it.

The applicable principles are clearly implied from *Thomas* v. *Wooster, supra,* where the court held that defendants who had defaulted in a patent infringement suit would not be permitted to show that the patent sued upon was invalid. Defendants had sought to introduce the original patent to show it differed from a reissued patent, which was the patent the plaintiffs sought to enforce. The court ruled that neither this proof nor evidence that defendants had delayed 14 years in seeking reissue were sufficient to defeat the contrary allegation of the validity of the patent contained in the complaint because, *inter alia,* the delay "might possibly have been explained, and the court could not say as a matter of law, it was insusceptible of explanation. . . ." We are instructed by *Wooster* that so long as the facts as painted by the complaint "*might* . . . have been the case" they may not now be successfully controverted by Toolco. There was a time for that and Toolco cannot elect to default and then defend on the merits. It cannot have its cake and eat it too.

Toolco's adversion to TWA's alleged failure to buttress its allegations in effect seeks to have us review the evidence presently in the record as though we were passing on a motion by Toolco for summary judgment supported by appropriate affidavits following normal discovery proceedings and prior to entry of any final judgment. In such

a case, we would grant the motion unless TWA "set forth specific facts showing that there is a genuine issue for trial." F.R. Civ. P. 56(e). But TWA need not introduce any facts whatever in support of its complaint. Judgment has already been entered in its favor on a complaint held on the earlier appeal to this court to state a sufficient claim. Only damages remained to be determined. As Judge Metzner ruled "[w]here file material is involved, if the plaintiff did not have full opportunity to meet or controvert such material, then it should not be used to nullify the allegation." This conclusion is the clear implication of the Court's refusal to permit the admission of the prior patent in *Thomas*.

We have, nevertheless, reviewed all the evidence introduced and relied on by Toolco in its attempt to negative its liability and conclude that Toolco has shown nothing that renders inconceivable the likelihood that TWA could have proved at trial that actions by Toolco which formed the basis for the award of damages were in fact, as alleged in the complaint, violations of the antitrust laws. Although we have found it desirable to set forth and affirm the propositions of law relied upon by the district court and by both Masters involved, it would serve no useful purpose to rehash in detail the arguments which defendants have repeatedly urged to show that the exacting test of *Thomas* v. *Wooster* has been met and which incidentally have been rejected both by Judge Metzner and Special Master Brownell in thorough and well-reasoned opinions.[3]

Briefly, as we said on the earlier appeal, the allegations of the complaint "state the outlines of a tying arrangement, an economic boycott of the defendants' competitors,

---

[3] We also are in agreement with the similar statements of the applicable principles of law contained in Brownell's report, as well as those in a preliminary opinion of Special Master Rankin dated July 30, 1965, and in an earlier opinion of Judge Metzner, reported at 38 F.R.D. 499 (S.D.N.Y. 1965).

and an attempt to monopolize commerce, all unlawful under the antitrust statutes." 332 F.2d 602, 611. Specifically, in the first of three claims set forth in the complaint—the only claim upon which TWA introduced evidence of damages—TWA contended that Toolco, 100% owned by Hughes throughout the relevant period, acquired control of TWA and made it a "captive market" for Toolco "with the primary purpose of restraining and monopolizing the trade and commerce" of TWA, which was alleged to constitute a substantial proportion of various defined markets for airplanes, including jets, and related equipment. TWA further alleged that defendants intended that Toolco would become the sole source of supply of jet-powered aircraft to TWA (thus by implication intending to monopolize a substantial portion of a defined market) and a dominant source of supply of jets to air carriers generally; that suppliers to TWA other than Toolco would be boycotted; and that defendants would cause Toolco to supply TWA with aircraft only upon condition that TWA would accept financing dictated by Toolco.

Quite apart from proof of intent, paragraph 9 of the complaint alleged that defendants conspired to restrain trade in violation of Section 1 of the Sherman Act; provided financing to TWA only on the condition that plaintiff buy all aircraft needed for its operations from Toolco; required TWA to boycott all suppliers of aircraft except Toolco; conspired to monopolize the TWA market in violation of Section 2 of the Sherman Act; attempted to monopolize the TWA market, also in violation of Section 2 of the Sherman Act; and sold and leased jets to TWA on the condition that TWA not buy or lease the goods of a competitor of Toolco, in violation of Section 3 of the Clayton Act.

Paragraphs 11 through 29 of the complaint set forth in detail specific acts performed in furtherance of the offenses charged and for the improper purposes alleged, as

outlined above. Thus, according to the complaint, Toolco first acquired TWA with the intent to make it its own market for supplying aircraft, an intention which was carried through into the advent of the commercial jet age during the years 1955-56. In 1956, according to these allegations, Toolco ordered a total of 33 Boeing jets and 30 additional Model 880 jets manufactured by General Dynamics Corporation ("Convair"). At the same time, defendants prohibited TWA from "making any arrangements for the acquisition, by sale, lease, or otherwise, of any jet-powered aircraft." The complaint goes on to say that throughout 1956-60, Toolco refused to assign to TWA the rights to acquire the jets on order from Convair and Boeing, despite TWA's requests that it do so and despite provisions in Toolco's contracts with Boeing and Convair that permitted it to do so. Jets leased to TWA by Toolco on a day-to-day basis in 1959-60 were the only jets made available to TWA during the years 1955 to 1960 and were inadequate to TWA's needs, it was charged. Each lease was conditioned on TWA's agreement and understanding that it would not purchase or lease aircraft from any other supplier. In 1960 six of the Convair 880's Toolco had ordered in 1956 were leased to Northeast Airlines, including three previously assigned to TWA. Similarly, in June, 1959, six of the Boeing jets ordered in 1956 were "diverted to the principal transatlantic competitor of TWA" (Pan Am). While thus restricting TWA's purchases of jets, the complaint alleged that Toolco also inhibited TWA's ability to obtain equity financing and caused TWA to rely chiefly on debt financing, thus rendering TWA unable to finance needed aircraft acquisitions except upon Toolco's approval. Toolco intended by this restriction to increase TWA's dependence on Toolco in furtherance of its unlawful purposes. From 1955-60 defendants prohibited TWA from obtaining financing for the acquisition of jets required for TWA's needs.

The damages which Brownell ultimately awarded to TWA consisted primarily of profits lost as a result of (1) diversion of the six Convair's to Northeast; (2) temporary retention by Toolco of four additional of the ordered Convair's and the ultimate lease of those jets to Northeast; (3) diversion of the six Boeings to Pan Am; (4) the lease, instead of outright sale, of jets in 1959-60; and (5) late delivery of 47 of the 63 jets ordered in 1956, which would have been avoided if, by allegations of the complaint, Toolco had not unlawfully constricted TWA's financing and acquisition of its own jet fleet. Although TWA also attempted to prove other damages resulting from Toolco's manipulation of its financing, and further damage arising from delayed sales of obsolete prop aircraft, Brownell found TWA's proof in these respects insufficient and TWA does not appeal from either determination. No damages were sought to be proved for alleged continuing antitrust violations by Toolco subsequent to December 15, 1960, when Toolco put all its TWA stock in a voting trust controlled by three voting trustees (including Holliday), thus relinquishing control of TWA, an action required as a condition of loans to TWA advanced by various banks and insurance companies to permit the purchase of new jets.

As it did before Brownell and Judge Metzner, Toolco now seeks to discredit primarily one part of paragraph three of TWA's complaint, in which TWA alleged that Toolco had been engaged since 1939 "in the development, manufacture and acquisition of aircraft and related equipment" and its "sale and lease" to air carriers, and to demonstrate the inadequacy of one antitrust theory that, according to Toolco, collapses if the allegations of paragraph three are untenable. Toolco thus would have us find *United States* v. *Yellow Cab Co.*, 332 U.S. 218 (1947), to be the linchpin of TWA's complaint, without which the remainder cannot hold together. In *Yellow Cab*, the Court reversed the grant of a motion to dismiss a com-

plaint which had alleged that a company engaged in the business of manufacturing taxis had established control of a substantial segment of cab operations in four cities and had exploited its control by extracting exclusive purchasing agreements from its owned cabs and taxi companies, thus excluding other manufacturers from the affected market with the ultimate effect, as the Court said, that "the appellees effectively limited the outlets through which cabs may be sold in interstate commerce." *Id.* at 226. This argument fails at each of three points. Toolco has not established to our satisfaction that TWA could not possibly have proven violations analogous to those alleged in *Yellow Cab*. Even if it had, additional specific allegations of antitrust violations in the complaint other than the one which rests on the holding in *Yellow Cab* are not conclusively disproved by Toolco's evidence. Nor has Toolco demonstrated that TWA's postulates for recovery are in any other manner not "well pleaded."

To disprove the allegation of paragraph 3 that Toolco was a "manufacturer" of commercial airplanes, Toolco relies primarily on (1) CAB opinions and orders dating from 1944-50 that concluded Toolco was not then engaged in or planning the manufacture of airplanes for commercial use, (2) schedules to CAB Form 41 Reports filed by domestic trunk airlines pursuant to 49 U.S.C. § 1377 indicating that between 1950 and 1966 none of these airlines purchased or leased a Toolco-made airplane, and (3) the fact that no TWA annual report ever mentioned the manufacture of a "Hughes plane." These documents, Toolco asserts, conclusively establish that Toolco was never a manufacturer of commercial aircraft and certainly not a competitor with the giant manufacturers—Boeing, Douglas, and Convair—and thus the exclusive dealing arrangements alleged in the complaint are entirely innocuous and incapable of producing the kind of market foreclosure alleged in *Yellow Cab*. Toolco similarly sets out to undermine the allegation that it was a "dealer" in aircraft, again directing attention to

CAB opinions and orders dated no later than 1950 finding no sales or leases of planes by Toolco to any airline but TWA; and again introducing the Form 41 Reports to the same effect but extending to 1961. The thrust of its argument is that under no view of the complaint, given the facts established by these documents, could TWA conceivably have proved more than that Toolco as a parent of TWA engaged in good-faith efforts to rescue it from financial crisis and to operate it as a successful business enterprise. Even if TWA could prove mismanagement by Toolco, that is insufficient, in Toolco's view, to intimate any possible foreclosure of competition—since Toolco was a mere manager or conduit and had no independent competitive significance—and accordingly TWA's theories must be found barren, since danger to free competition is the *raison d'etre* of the antitrust laws and some showing of such a danger in every case is a *sine qua non* of proving their infringement.

Both Judge Metzner and Master Brownell met Toolco's argument in this respect head-on, holding that courts could not consider as conclusively proven, facts merely recited in CAB orders and opinions and in airline reports that are the product of no adversary proceedings, distinguishing between the *existence* of such documents, of which courts might in an appropriate case take judicial notice, and the truthfulness of their contents, which would be subject to contrary proof had the trial precluded by Toolco's default actually been conducted. We agree with the reasoning of both opinions and find the authorities there relied on to be in point and sound. See *Stasiukevich* v. *Nicolls*, 168 F.2d 474, 479 (1st Cir. 1958); *McCormick on Evidence* § 328 at 704, § 330 at 709 (1954); *Morgan, The Law of Evidence*, 1941-45, 59 *Harv. L. Rev.* 481, 482-87 (1946); *McNaughton, Judicial Notice*, 14 *Vand. L. Rev.* 779 (1961).

Moreover the documents described above, while (if their contents were accepted as true) showing that Toolco was

not a major force as a supplier of aircraft other than to TWA, hardly negative the possibility that Toolco possessed independent economic significance, apart from its role as supplier to TWA, sufficient to support proof of any or all the antitrust theories limned by TWA's complaint. There is evidence in the record of activities by Toolco or Hughes that suggest significant movement by Toolco and Hughes toward actual or potential commercial manufacturer or dealership in airplanes, especially jets, and their parts. We cannot say that proof at a trial—prevented by Toolco's conduct—that Toolco was more than a conduit for TWA but rather possessed independent competitive significance with respect to the commercial aircraft market, would be insufficient, if combined with appropriate related proof of the intent, attempt, collusion, tying arrangements, boycotts, and monopolization alleged in the complaint, to support an antitrust judgment for TWA.

The evidence that Toolco's interests and ambitions in commercial air flights may have extended beyond mere management of TWA begins with Toolco's admitted role, initiated in World War II and continuing to the present day, as a substantial manufacturer of helicopters and aircraft parts for military purposes (and now of aerospace materials as well). Although Toolco stresses the non-commercial nature of this activity, it is clear that Toolco throughout the relevant period had the technical capability and sophisticated "know-how," to enter the commercial market without untoward delay if it had so chosen. Early in its history, Toolco acquired the rights to the first forty Constellation aircraft developed in cooperation with Lockheed in the early 1940's. Twenty-five of these were intended by Toolco for sale to airlines other than TWA. 6 CAB 153, 155 (1944). During and after the war, Hughes actively engaged in the development (ultimately unsuccessful) of a plan worthy of Jules Verne, for a 700-passenger plywood flying boat for commercial development. Manufacture by Toolco of aircraft in association with AVRO of

Canada, and of Caravelles as a licensee of Sud Aviacion of France, were considered during the middle 1950's. In 1956, Toolco ordered at least 300 Pratt & Whitney jet engines, later sold primarily to Boeing and Pan Am at a substantial profit. The engines could well have been intended for installation in the planned Toolco jets and in any event constituted Toolco as a competitor with other sellers of jet engines.

Also in 1956, secret discussions were commenced within the inner circles of Toolco and TWA for Toolco to manufacture commercial jets, a plan scuttled before the end of that year by the initiation of a CAB investigation into the matter which followed a TWA motion to the Board for approval to purchase up to 25 Toolco-manufactured commercial jets. Through most of 1955, Toolco was engaged with Convair in the development of a jet which again proved unfeasible. Evidence of these last mentioned aborted forays is consistent with allegations in paragraphs 14 and 15 of the complaint that defendants arranged with Convair to develop "a jet-powered aircraft to be manufactured by Convair and to be supplied by the defendants to air carriers" and that "defendants also entered into a plan under which Toolco would itself" manufacture jets to be furnished "both to TWA and to other air carriers."

Additionally, there was testimony that Toolco ordered seven Convair 880s manufactured to the specifications of Capital Airlines and thirteen Convair 990s built for American Airlines' requirements.

Finally, Toolco's activities with respect to the 63-plane fleet ordered in 1956, only part of which was ever delivered to TWA, further support an inference that Toolco contemplated that it was or might become more than a manager for TWA. Thus, Toolco conditioned its order for the Convair 880's on a stipulation that the price to it would be reduced progressively as Convair was successful in selling more of the planes beyond the initial orders by Toolco

and by Delta Airlines, Inc., a condition consistent with possible Toolco participation in marketing the 880. Non-assignment provisions in the purchase agreements do not conclusively negate the capacity of Toolco to have dealt in its Boeing and Convair contracts and priority rights with airlines other than TWA—and of course Toolco did not in fact exercise its right to assign the contracts to TWA. Ultimately, of course, as alleged in the complaint and demonstrated at the damages hearing, defendants did sell or lease 16 planes of the ordered 63-plane fleet to Pan Am and Northeast. As Master Brownell observed, the ability of Toolco to deliver these jets immediately may have given Toolco a significant competitive advantage over their own manufacturers. Late in 1959, Hughes negotiated with Lockheed for purchase of Electras at a time when Toolco's own actions indicated TWA was fully stocked with jets.

Toolco's response to most of these considerations is that each is consistent with a sole intent on its part to deal in aircraft and aircraft parts solely for the benefit of TWA. However, the allegation in the complaint that Toolco refused to assign the rights to the ordered fleet to TWA, although it was empowered to do so under the contracts of sale, is consistent with a contrary inference.

In any event, the question is not whether one inference or another is the stronger but whether Toolco's evidence—in light of its default and thus the absence of a trial—absolutely forecloses the possibility that Toolco enjoyed actual or potential independent competitive significance in the commercial aircraft market sufficient to support a finding of an antitrust violation under any of the several hypotheses put forward in the complaint, including, in addition to the *Yellow Cab* theory, (1) unlawful *intent* to monopolize a substantial portion of the commercial aircraft market in restraint of trade; (2) unlawful conspiracy to do so, see *Sunkist Growers, Inc.* v. *Winckler & Smith Citrus Products*

Co., 284 F.2d 1 (9th Cir. 1960), *rev'd on other grounds*, 370 U.S. 19 (1962); *Poller* v. *Columbia Broadcasting System, Inc.*, 368 U.S. 464 (1962); *Perma Life Mufflers, Inc.* v. *International Parts Corp.*, 392 U.S. 134 (1968); *Albrecht* v. *Herald Co.*, 390 U.S. 145 (1968); *Simpson* v. *Union Oil Co.*, 377 U.S. 13 (1964); (3) enforcement of an illegal boycott, see *Fashion Originators' Guild* v. *Federal Trade Commission*, 312 U.S. 457 (1941); *United States* v. *New York Great Atlantic & Pacific Tea Co.*, 173 F.2d 79 (7th Cir. 1949); *Klor's Inc.* v. *Broadway-Hale Stores*, 359 U.S. 207 (1959); (4) tying adequate financing of TWA to its purchase or lease of jets from Toolco, and vice-versa, see *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394 U.S. 495, 502-03 (1969); and (5) the lease of Aircraft to TWA on the condition that TWA not purchase or lease aircraft from other suppliers, see *International Salt Co.* v. *United States*, 332 U.S. 392 (1947); *Standard Oil Co. of California* v. *United States*, 337 U.S. 293 (1949).

Toolco's reply brief argues that the allegations of unlawful intent are unduly vague but this is unsupported by the cases it relies on, *Glenn Coal Co.* v. *Dickinson Fuel Co.*, 72 F.2d 885, 888 (4th Cir. 1934); *SCM Corp.* v. *Radio Corp. of America*, 407 F.2d 166 (2d Cir.), *cert. denied*, 395 U.S. 943 (1969) (mere conclusory and vague allegations and nothing more, of unlawful attempt or conspiracy to monopolize or to restrain trade, or, simply, to violate the antitrust laws, were held insufficient). By contrast, TWA's complaint alleges specific acts by defendants allegedly pursuant to an intent to monopolize specified markets by means which are described in detail in the complaint. These allegations are both adequate as a matter of proper pleading and sufficiently definite to support an award of damages entered on the default judgment.

Toolco's argument that a conspiracy among Holliday and Hughes, as officers and shareholders of Toolco, with Toolco itself, is as a matter of antitrust law unprovable, is an

and by Delta Airlines, Inc., a condition consistent with possible Toolco participation in marketing the 880. Non-assignment provisions in the purchase agreements do not conclusively negate the capacity of Toolco to have dealt in its Boeing and Convair contracts and priority rights with airlines other than TWA—and of course Toolco did not in fact exercise its right to assign the contracts to TWA. Ultimately, of course, as alleged in the complaint and demonstrated at the damages hearing, defendants did sell or lease 16 planes of the ordered 63-plane fleet to Pan Am and Northeast. As Master Brownell observed, the ability of Toolco to deliver these jets immediately may have given Toolco a significant competitive advantage over their own manufacturers. Late in 1959, Hughes negotiated with Lockheed for purchase of Electras at a time when Toolco's own actions indicated TWA was fully stocked with jets.

Toolco's response to most of these considerations is that each is consistent with a sole intent on its part to deal in aircraft and aircraft parts solely for the benefit of TWA. However, the allegation in the complaint that Toolco refused to assign the rights to the ordered fleet to TWA, although it was empowered to do so under the contracts of sale, is consistent with a contrary inference.

In any event, the question is not whether one inference or another is the stronger but whether Toolco's evidence—in light of its default and thus the absence of a trial—absolutely forecloses the possibility that Toolco enjoyed actual or potential independent competitive significance in the commercial aircraft market sufficient to support a finding of an antitrust violation under any of the several hypotheses put forward in the complaint, including, in addition to the *Yellow Cab* theory, (1) unlawful *intent* to monopolize a substantial portion of the commercial aircraft market in restraint of trade; (2) unlawful conspiracy to do so, see *Sunkist Growers, Inc.* v. *Winckler & Smith Citrus Products*

Co., 284 F.2d 1 (9th Cir. 1960), *rev'd on other grounds*, 370 U.S. 19 (1962); *Poller* v. *Columbia Broadcasting System, Inc.*, 368 U.S. 464 (1962); *Perma Life Mufflers, Inc.* v. *International Parts Corp.*, 392 U.S. 134 (1968); *Albrecht* v. *Herald Co.*, 390 U.S. 145 (1968); *Simpson* v. *Union Oil Co.*, 377 U.S. 13 (1964); (3) enforcement of an illegal boycott, see *Fashion Originators' Guild* v. *Federal Trade Commission*, 312 U.S. 457 (1941); *United States* v. *New York Great Atlantic & Pacific Tea Co.*, 173 F.2d 79 (7th Cir. 1949); *Klor's Inc.* v. *Broadway-Hale Stores*, 359 U.S. 207 (1959); (4) tying adequate financing of TWA to its purchase or lease of jets from Toolco, and vice-versa, see *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394 U.S. 495, 502-03 (1969); and (5) the lease of Aircraft to TWA on the condition that TWA not purchase or lease aircraft from other suppliers, see *International Salt Co.* v. *United States*, 332 U.S. 392 (1947); *Standard Oil Co. of California* v. *United States*, 337 U.S. 293 (1949).

Toolco's reply brief argues that the allegations of unlawful intent are unduly vague but this is unsupported by the cases it relies on, *Glenn Coal Co.* v. *Dickinson Fuel Co.*, 72 F.2d 885, 888 (4th Cir. 1934); *SCM Corp.* v. *Radio Corp. of America*, 407 F.2d 166 (2d Cir.), *cert. denied*, 395 U.S. 943 (1969) (mere conclusory and vague allegations and nothing more, of unlawful attempt or conspiracy to monopolize or to restrain trade, or, simply, to violate the antitrust laws, were held insufficient). By contrast, TWA's complaint alleges specific acts by defendants allegedly pursuant to an intent to monopolize specified markets by means which are described in detail in the complaint. These allegations are both adequate as a matter of proper pleading and sufficiently definite to support an award of damages entered on the default judgment.

Toolco's argument that a conspiracy among Holliday and Hughes, as officers and shareholders of Toolco, with Toolco itself, is as a matter of antitrust law unprovable, is an

illustration of the thrust of Toolco's approach to the question whether the decisive allegations in the complaint are "well-pleaded." Whether TWA might have proven such a conspiracy would have turned on the nature and weight of technical and secretive evidence bearing on the independent economic significance of each of the parties and also on subjective questions of intent and attempt. Toolco's conduct barred even initial exploration of these crucial factual issues. We are reminded that even summary judgment "should be used sparingly in complex antitrust litigation where motive and intent play leading roles, the proof is largely in the hands of the alleged conspirators, and hostile witnesses thicken the plot." *Poller* v. *Columbia Broadcasting System, Inc., supra* at 473. See also *White Motor Co.* v. *United States,* 372 U.S. 253, 259-60 (1963). We should be far more reluctant to grant summary judgment for Toolco following entry of judgment for TWA, as it now in effect requests us to do, when its own default barred even initial exploration of the crucial factual issues.

V.

The opinions below and the briefs submitted to us on this appeal reveal some confusion as to the proper scope of the hearing on damages. As the authorities cited above illustrate, a default judgment entered on well-pleaded allegations in a complaint establishes a defendant's liability. Also, at the hearing before Special Master Brownell it was incumbent upon TWA to introduce evidence showing the extent of the damages which resulted from the antitrust violations established by the default judgment. The difficulty arises as to a question that Toolco refers to in part II of its main brief as one of "proximate cause." To what extent did the default judgment dispense with a plaintiff's normal obligation to show that damages alleged were proximately caused by Toolco's illegal actions? The answer seems to us inherent in the question.

The default had the effect of admitting or establishing that the acts pleaded in the complaint violated the antitrust laws and that those acts caused injury to TWA in the respects there alleged. Because, however, the damages were unliquidated and uncertain, F.R.Civ.P. 55(b), it was necessary for TWA at the hearing to establish the *extent* of the injuries established by the default. The outer bounds of the recovery allowable are of course measured by the principle of proximate cause. The default judgment did not give TWA a blank check to recover from Toolco any losses it had ever suffered from whatever source. It could only recover those damages arising from the acts and injuries pleaded and in this sense it was TWA's burden to show "proximate cause." On the other hand, there was no burden on TWA to show that any of Toolco's acts pleaded in the complaint violated the antitrust laws nor to show that those acts caused the well-pleaded injuries, except as we have indicated that it had to for the purpose of establishing the extent of the injury caused TWA, in dollars and cents.

Thus, in *Sunkist Growers, Inc.* v. *Winckler & Smith Citrus Products Co.*, 284 F.2d 1 (9th Cir. 1960), *rev'd on other grounds*, 370 U.S. 19 (1962), cited by Toolco, the court held that an antitrust plaintiff could not recover for losses attributable to a watered-down product rather than to defendant's acts. To the same effect are the other cases relied on by Toolco, e.g., *Milwaukee Towne Corp.* v. *Loew's, Inc.*, 190 F.2d 561 (7th Cir. 1951), *cert. denied*, 342 U.S. 909 (1952) (plaintiff could not recover for losses based on defendant's illegal restriction on its distribution of first-run movies during a period when plaintiff's theatre was not equipped to show first-run movies). TWA purports to dispute Toolco's abstract statement of the appropriate scope of the damage hearing, relying on an unreported district court opinion whose reasoning on the issue of proximate causation we adopted in *Jones* v. *Uris Sales Corp.*, 373 F.2d 644 (2d Cir. 1967). While TWA cites *Jones* for the proposi-

tion that at the damage hearing it had no obligation to show proximate cause in any sense, the central language of the district court opinion in *Jones* which TWA relies upon belies its own assertion: "[t]he causal relationship is stated distinctly in the complaint by the allegation that Penn diverted profits belonging to the defendant Uris. All that remained to be supplied were the identities of the accounts and the enterprise *to which they were diverted*, and the amount of *the profits diverted* . . . ." (Emphasis added.) Implicit in the limiting words we have emphasized is the proposition that it was plaintiff's obligation following the default to establish that any lost profits for which it sought recovery were in fact those whose unlawful diversion was established by the default judgment. The default judgment proved the fact of the diversion (the injury) and its illegality. But to recover damages, plaintiff was necessarily required to establish that those damages were attributable to the diversion. Thus, however well-pleaded the allegation that profits were diverted, plaintiffs in *Jones* could not avoid, to the extent necessary to establish the causal nexus for the recovery of damages, introducing evidence relating to the diversion alleged.

Nor do we believe, contrary to Toolco's assertion, that Special Master Brownell misunderstood this issue. His formulation that the "burden of establishing proximate cause is satisfied *as to liability* if proximate cause is adequately alleged in the complaint" (emphasis added) is consistent with our own understanding of the law and, as we will elucidate shortly, we find his application of the proper principles to have been unexceptionable. In fact, Toolco helpfully reminds us that Special Master Brownell disallowed two major elements of damage alleged by TWA. We have reference to those supposedly arising from the assertions in TWA's complaint that it was chronically underfinanced by Toolco and from TWA's claimed tardy sale of its prop fleet. His conclusions on this score were based on his determination that TWA's proof that those damages

arose from the illegal acts and injuries established by the default judgment was inadequate.

Despite its present broad assertion (perhaps in an excess of caution), that "proximate cause" was in no sense an element essential to establishing recoverable losses, TWA's strategy at the hearing, with respect to the damages actually awarded, was in fact designed to prove causation. To illustrate, and to lay the foundation for our discussion of Toolco's various claims that in several respects TWA's proof of causation was inadequate, we conclude this portion of our opinion by sketching the contours of the evidentiary foundation of TWA's damage award.

TWA's most important witness was Robert W. Rummel, at the time of the hearing TWA Vice President for Planning and Research. Rummel testified to the effect that had Hughes and Toolco not interfered with TWA's operations in the manner alleged in TWA's complaint, TWA would have attempted to acquire in the commercial market a jet fleet of its own consisting of the same 63 airplanes we have made reference to—33 Boeing 707's and 30 Convair 880's—which Toolco did in fact order for TWA and which were ultimately delivered to Toolco in 1959-60. As we have noted, major elements in the damages awarded were losses incurred by TWA and caused by Toolco's diversion of 16 of these jets, 6 Boeings and 10 Convairs, to Pan Am and Northeast and delays in the delivery of the Boeings and Convairs that were not diverted. Brownell accepted only in part Rummel's testimony that the delays in the Convair deliveries were solely attributable to Hughes's misconduct, but he fully accepted Rummel's testimony as to the makeup of the "reconstructed" 63-jet fleet. His report concluded that only the Convair delays beyond those provided in a March 2, 1960, amendment to the original delivery schedule were chargeable to defendants, since delays reflected in that amendment were caused by Convair's own mismanagement.

John B. Connelly, Vice President and Assistant General Manager of Boeing Aircraft Division corroborated TWA's

claim that delays in Boeing deliveries were caused by defendants' failure to negotiate with reasonable diligence for priorities in delivery dates in 1955 when jets were first offered commercially. The thrust of the Connelly-Rummel testimony was that if defendants had not, as alleged in the complaint, prevented TWA from negotiating for itself, it would have ordered and received a full 63-jet fleet sooner than it in fact received the abbreviated 47-jet fleet from Toolco. Apart from a portion of the Convair delays, Brownell credited this evidence in its entirety. The illegality of Toolco's arrogation of all authority for buying aircraft was, as we have said, conclusively established by the default judgment.

Two other fact witnesses for TWA testified as to losses caused by disruptions in the transition from prop to jet operations attributable to defendants' interference with the Convair 880 deliveries. The Special Master adopted their computations without reservation and, except for Toolco's attack on the underlying finding of disruption already referred to, Toolco does not seem to press its argument that the proof with respect to these items was inadequate.

The testimony of TWA's four expert witnesses fared somewhat worse with the Special Master than did that of its so-called "fact witnesses." Brownell rejected a "Comparative Profit Study" report comparing TWA's actual profits with two of its competitors during two separate periods offered in an effort to prove TWA's losses. The report was prepared by Coverdale & Colpits, a consulting engineering firm, and testimony concerning it was given by a partner in the firm, Edward L. Wemple. The Special Master did, however, accept the computations contained in a second Coverdale report tracing in detail the operating losses attributable to Toolco's disruption of the jet fleet for the years 1959-63. These computations included an estimate of increased profits that would have accrued had

TWA owned outright certain Boeing 707's which Toolco only leased to it in 1959-60, as well as of profits that would have been realized otherwise from timely delivery of the reconstructed fleet.

TWA also attempted to prove damages resulting from Toolco's inadequate financing of TWA by introducing a study prepared by Drexel Harriman Ripley, Inc. (the DHR study) testimony concerning which was given by its Senior Vice-President, Edward J. Morehouse. Morehouse testified that if TWA had been independently and competently managed during 1955-60, it could have financed the purchase of the reconstructed fleet at much lower costs than those actually incurred through Toolco's management. The program of independent financing described by the DHR study was rejected by Brownell, as was a report prepared by R. Dixon Speas Associates estimating TWA losses from belated sales of piston airplanes.

Finally, John C. Biegler, a partner of Price Waterhouse & Co., testified with respect to a report in evidence and prepared by his firm under his supervision which reconstructed TWA's historical financial posture on the basis of TWA's evidence of disruptions and their supposed effects which were caused by Toolco. The Price Waterhouse study, as supplemented at times during the hearing, was the vehicle through which evidence of both sides bearing on the effect on TWA operations of supposed Toolco disruptions was translated into differences between actual and hypothetical TWA profits.

Toolco's direct case consisted of testimony of four expert witnesses, Gene M. Woodfin, partner in Loeb, Rhoades & Co., investment brokers, and Nathan S. Simat, Robert I. Helliesen and L. John Eichner, principals in the aviation consulting firm of Simat, Helliesen & Eichner, Inc. Each of defendants' experts sought to discredit the evidence of Wemple, Morehouse, and Speas.

Thus, as is apparent from the above summary, TWA did not rely only on its default judgment but introduced evidence linking each component of the damages claimed to the pleaded illegal acts of Toolco and injuries to TWA. Toolco contends, however, that TWA's proof should have been rejected by the Special Master and that TWA has not established that the delays in delivery, the diversions, or the Boeing leases caused any damage to TWA attributable to those acts and injuries.

VI.

Both sides agree that Special Master Brownell's findings, adopted by Judge Metzner, may not be disturbed at this juncture unless we agree with Toolco that they are "clearly erroneous," F.R.Civ.P. 52(a), the standard also properly applied by Judge Metzner himself in reviewing the Master's Report, F.R.Civ.P. 53(e)(2). Our function would seem to be in a sense redundant, since it appears that each of the substantial objections to the Master's conclusions raised by Toolco before us has already been considered and rejected by the district court. But because of the huge sums involved in this litigation, we have not been content to rest on Judge Metzner's appraisal of the Master's findings and have made our own independent review of those findings. We agree with Judge Metzner's assertion that it is relevant that Special Master Brownell's report is a product of "painstaking" analysis of highly complex questions following hearings on damages which extended over a period of two years, consisting of hundreds of hours of testimony and producing a transcript of 11,000 pages. See *Badenhausen* v. *Guaranty Trust Co.*, 145 F.2d 40, 53 (4th Cir. 1944), *cert. denied*, 323 U.S. 797 (1945); *Graver Tank & Mfg. Co.* v. *Linde Air Products Co.*, 336 U.S. 271, 274-75 (1949). We might add that his report reflects an extraordinary awareness of the issues raised and the applicable principles of law.

In this connection we observe that the Master, in considering the proof of both parties, did so with explicit reference to the classic statement of the applicable guidelines expressed in *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251, 264 (1946), permitting an award in cases such as this to be based "upon probable and inferential, as well as direct and positive proof," and imposing on the wrongdoer any "risk of uncertainty which his own wrong has created," *id.* at 264. Indeed, the Supreme Court recently observed:

> "Trial and appellate courts alike must also observe the practical limits of the burden of proof which may be demanded of a treble-damage plaintiff who seeks recovery for injuries from a partial or total exclusion from a market; damage issues in these cases are rarely susceptible of the kind of concrete, detailed proof of injury which is available in other contexts."

Zenith Radio Corp. v. *Hazeltine Research Inc.*, 395 U.S. 100, 123 (1969). In this case the reference to risk in *Bigelow* would seem to have even greater application. Toolco must bear the responsibility for any lack of preciseness of proof, and there is good reason that this should be so. The default itself by Toolco rendered precise proof of damages even more difficult than in the usual antitrust case, where the plaintiff may avail itself of the full battery of discovery procedures to prove damages as well as to prove liability. Toolco cannot be permitted to block the discovery of precise, clear and direct evidence and then be heard to complain that the evidence should have been more convincing.

In any event, our answer to each of the many objections that Toolco raises to the specific findings of the Special Master as to the "proximate cause" of the damages awarded TWA, is that each of the challenged findings is amply supported by evidence introduced during the hearing and that none is "clearly erroneous." Toolco's argu-

ments on this score are principally five, each of which we shall discuss sufficiently to demonstrate the basis for the Master's conclusions.

1. Toolco attacks first the validity of the entire basis of the damage award, the reconstructed 63-jet fleet which Brownell found constituted "a proper basis for computing damages." That he was justified in doing so is established first by Rummel's testimony that TWA *should* in fact have ordered the fleet that Toolco ordered for it, although with more dispatch. Rummel was TWA's senior engineer in 1943, chief engineer in 1949, elevated to Vice President in charge of Engineering in 1956, was throughout this period closely associated with Hughes himself in his early exploration of the commercial jet market and indeed may have been the only individual with whom Hughes entrusted a share of responsibility for aircraft procurement. Rummel testified that he reported directly to Hughes, had authority to commit funds under Toolco's contracts, and "the Toolco factory representatives at Boeing and Convair reported to me as special representative of Toolco responsible for the technical administration of the Toolco contracts . . . ." His primary responsibility throughout most of his employment with TWA "has been to recommend what size and what type fleets to procure . . . ." In addition to the historical fact that Rummel, chief procurement officer for TWA at the time and Hughes' confidant, participated in and concurred in the decision to acquire the 63-jet fleet, the assumption that TWA would have acted approximately as did Toolco in the interest of exploiting to maximum financial benefit the enormous potential of the jet age is entirely reasonable. Indeed, in view of the well-pleaded allegations of the complaint, asserting that defendants did not always act in the best interest of TWA, and defendants' contrary assertion that it did always so act, it ill-behooves defendants now to suggest that a well-managed TWA would have acted differently in evaluating its jet fleet requirement than did Toolco.

Assuming then that an independent TWA would have attempted to acquire the same 63-jet fleet ordered by Toolco, defendants contend that TWA would not have been able to finance such an undertaking, which would have cost about $353 million or $93 million more than TWA actually spent for its 47-jet fleet. Toolco notes that $100 million of the financing for the 47-jet fleet was supplied by Toolco itself through its purchase of TWA subordinated debentures. We find untenable Toolco's characterization as insufficient to support the Special Master's contrary assumption that an independent TWA would and could have financed the full 63-jet fleet, the evidence that United, American, and Pan American Airlines each were in fact able to finance comparable ventures during the same period. Toolco directs our attention to financial reversals experienced by TWA during the period preceding the time Brownell assumed TWA would have financed the fleet (1958-59). But the well-pleaded allegations of the complaint demonstrate conclusively that crippling TWA's financial posture and reducing it to a state of vassalage, dependent on Toolco's support, was part of defendants' overall antitrust violation. See Complaint ¶¶ 17, 18, 19, 22, 23, 24, 26, 50, 51, and 52(a). To the extent of negating Toolco's attempted reliance on TWA's asserted financial weakness, these allegations must be given effect. Any inferences other than that an independent TWA would have fared neither better nor worse than competing airlines in financing its jet fleet would have been unwarranted.

3. Assuming then that the 63-jet reconstructed fleet was a reasonable basis for assessing damages, Toolco nonetheless insists that Special Master Brownell erred in his findings that in several respects (concerning the delays in Boeing and Convair deliveries; the leasing of Boeings to TWA; and the diversion of 16 jets to TWA's competitors) an independent TWA would have been managed to better financial advantage. It first attacks the assumption, fully supported by testimony of Rummel and Boeing Vice-Presi-

dent Connelly, that more diligent bargaining for Boeing jets would have resulted in TWA enjoying approximately the same rights to priority in deliveries as did Pan Am, American and United. Rummel's testimony adequately supports the conclusion that TWA would and could have engaged in negotiations reasonably "calculated to preserve TWA's competitive position in the industry for early deliveries," to quote Brownell's words. Connelly, who was in a position to be entirely familiar with Boeing's policies with respect to delivery dates,[4] testified, contrary to Toolco's present contentions, that more diligent efforts by TWA would in fact have resulted in substantial parity of priorities.

Because of Master Brownell's and Judge Metzner's thorough discussions of these questions, and in the interest of curtailing this necessarily protracted opinion, we will not continue to discuss each of the other fine-drawn points raised by Toolco in an attempt to discredit this testimony. It is sufficient that we note we have thoroughly considered each of them and found them insufficient to support a holding of clear error.

4. Special Master Brownell concluded that defendants' dalliance in securing Convair deliveries and its active interference with Convair's production schedule was responsible for delays beyond the amended delivery schedule. This finding is amply supported by evidence of (1) Hughes's refusal to accept delivery of the Convair 880's when Convair was ready to deliver them; (2) his assumption of personal control of all matters concerning the deliveries and his direction that TWA was not to proceed with any acceptance procedures without personal clearance from Hughes; and

---

[4] Connelly testified that as Director of Contract Administration he was a member of a "headquarters group" at Boeing in 1955 and in 1956 became Vice President and General Manager in charge of the department at Boeing in which responsibility for commercial airline programs was centralized.

(3) Hughes's personal instructions to Toolco armed guards at one point to forcefully seize four CV-880's from the Convair production lines, thereby aggravating Convair's production difficulties. Moreover, it was uncontested that TWA received its planes on an average approximately 9.9 months later than provided in the original schedule, while deliveries to Delta were delayed by only 1.4 months.

5. Finally, the Master's assumption that TWA as a non-handcuffed independent operator would have purchased outright nineteen Boeings leased to it by Toolco in 1959-60 is supported by evidence in the DHR study establishing that as a general rule outright ownership was more desirable than leasing under the conditions existing at that time, subject to certain exceptions not applicable. Also, in cross-examination, defendant's expert Woodfin, admitted that the 1959-60 leases were an interim and unsatisfactory arrangement. The Master's observation that, of 2,036 aircraft operated by certified route carriers on December 31, 1960, only 117 were leased, is also relevant.

VII.

Our response to Toolco's objections to certain calculations by Special Master Brownell of damages, given that the elements of injury to TWA—from late deliveries, non-deliveries, leases instead of sales, and resultant disruption—were properly established, as we believe, is based on the same rationale that underlies our conclusions in the preceding portion of this opinion. Once again, we find none of Brownell's findings to be clearly erroneous.

There are essentially two issues raised with respect to the calculation of damages, which seem to be subdivided for purposes of analysis and emphasis many times in the briefs. The first concerns the degree of injury due to Toolco's failure to deliver the 10 diverted Convairs and 6 diverted Boeings in light of the size of TWA's jet fleet over the period of five years, 1959-63, for which dam-

ages were assessed. Toolco claims alternatively that certain aircraft purchased by TWA during that period made up for at least part of the lost profits that would otherwise have been incurred as a result of the lost 16 planes. Moreover, to the extent the losses were not thus compensated for, Toolco would attribute the fault not to the diversions but to the failure of TWA's new management to "mitigate" damages by purchasing other jets to replace the diverted ones (as we have noted, three voting trustees, two of whom were not controlled by defendants, assumed control of Toolco's voting stock on December 15, 1960). We do not believe that these claims are inconsistent, as TWA asserts. Rather they amount in the aggregate to a single contention that TWA did in fact partly mitigate damages but could and should have done so entirely, or at least to a greater extent.

The second issue raised is based on the argument that even if TWA's fleet size was decreased as a result of Toolco disruptions to the extent found by Brownell, one cannot calculate the extent to which the larger fleet would have increased TWA's profits.

A. *Fleet Size.*

All the issues raised with respect to the decrease in the size of TWA's fleet attributable to Toolco's mismanagement turn on the conflict between the testimony of Toolco's experts and that of TWA's expert, Wemple, of Coverdale & Colpits, who prepared and gave testimony concerning two reports estimating damages, assuming TWA had received the full reconstructed 63-jet fleet on schedule, rather than 47 jets late. As we have said, Brownell rejected one report, the Comparative Profits Study, but accepted entirely the calculations of the other, which we will refer to as the Wemple study. To rebut the Wemple study, Toolco introduced a report by Simat of Simat, Hellieson & Eichner, Inc., which Brownell rejected in its entirety.

According to the evidence accepted by Brownell, the six Boeings were diverted to Pan Am between November 5, 1959 and June 8, 1960 (they would otherwise have been received by TWA between July 19, 1959 and May 9, 1960). The ten Convairs were to be received between December 1959 and September 1960. On March 5, 1959, Toolco told TWA that it would not receive the Convairs. Six were then diverted to Northeast (and in 1963 repurchased by TWA). The other four were retained for a time by Toolco, then sold to Northeast (and never bought by TWA).

Brownell accepted Wemple's estimates that the Convair diversions resulted in the loss to TWA of the use of 5.1 planes in 1960, 9.9 planes in 1961, the 10 planes in 1962, and 7.9 planes in 1963. The six Boeings, unlike the Convairs, were suitable for international as well as domestic use. Brownell accepted Wemple's conclusion that their diversion resulted in a loss to TWA of use of the following quantities of planes in the stated years, for international and domestic use:

	International	*Domestic*	*Total*
1959	0.2	none	0.2
1960	3.6	1.4	5.0
1961	3.7	2.2	5.9
1962	4.8	1.0	5.8
1963	0.9	0.5	1.4

The markedly lower figures in each category for 1963 reflect the purchase by TWA in that year of the six diverted Convairs and the lease for use in 1962 and 1963 of five Boeing B-331B's (as substitutes for the diverted B-331's).

Brownell also accepted Wemple's testimony that even if it had received its full 63-jet fleet on schedule, TWA would still have leased, as it in fact did, four B-720B

aircraft (a medium range late model Boeing) during 1961-62 and would also have purchased 18 additional B-131B fan jets in 1962. Thus, these purchases were not considered as mitigating the damage caused by Toolco's diversions.

Toolco argues that there is no justification for Brownell's refusal to consider the purchase and lease of these B-720B's and B-131B's as at least partially mitigating damages. Alternatively, it contends that there is no support for the conclusion that any deficiency in TWA's fleet existing in 1959-60 as a result of Toolco's diversions, could have had effects that lingered for four years, into 1963, three years after Toolco relinquished control of TWA. Rather, Toolco insists, at least by 1962 and 1963 any deficiencies in the TWA jet fleet must be attributed either to TWA's business judgment that investment in replacements was not economically justified (thus there could have been no damage resulting from the earlier diversions) or to TWA's unjustified refusal to mitigate damages. The cumulative thrust of this pincer argument is that if TWA would have profited, as Brownell found, from the lost jets, why did not TWA replace them? If it would not have profited, there can be no damages.

We find Wemple's testimony that the B-131B purchases and the B-720B leases did not represent "substitutes" for the lost jets justified by several considerations. First, these assumptions were based on Wemple's background of expertise, and there is no basis in the record for finding they were dictated by TWA's counsel, as Toolco maintains. Second, no airline which commenced using commercial jets in the period during which damages were assessed stood pat and remained contented with its originally acquired fleet during that time. Thus, between 1960 and 1963, Pan Am increased its jet fleet from 38 to 64; United from 34 to 91; and American from 25 to 73 jets. It is entirely reasonable and appropriate to assume TWA

would also have expanded its fleet. Thus, it was not for the Master to conclude that the damages caused by the diversions had been entirely mitigated as soon as TWA acquired a fleet of 63 jets, as it did during 1962. It was not until 1963, the last year for which damages were assessed, that TWA obtained a fleet comparable to the 63 jets it should have had in 1959-60, plus those that it acquired in the meantime. Moreover, the transcontinental but not international-range B-131s may not have been an effective substitute for either the lost intercontinental-range B-331's or the diverted intermediate range Convairs. Finally, we note that Toolco failed to present a single expert witness to challenge the claim that the interim acquisitions did not mitigate damages, or to present an alternative assumption; indeed, Simat, Toolco's own expert, relied on Wemple's contention in this respect.

In support of its claim that TWA failed to mitigate damages, Toolco specifically cites (1) TWA's termination of the B-720B leases in 1962; (2) the decision of a Flight Equipment Committee appointed by TWA in 1961 to lease *only* four B-720B's, instead of six, as recommended by Rummel; (3) a reduction in its order of the B-131B's from an original 20 to only 18 actually purchased in 1962; and (4) its refusal in 1961 to buy the four CV-880's retained by Toolco which were ultimately sold to Northeast.

It is sufficient response to the latter contention to note that the complaint alleges that Toolco offered the CV-880's only on the illegal condition that TWA would not buy jets from Boeing, and Toolco has not shown that this contention was not well-pleaded. This adequately explains TWA's refusal to purchase the CV-880's offered by Toolco. Moreover, there is evidence that neither the B-720B's nor the B-131B's were adequate substitutes for the diverted jets, and thus TWA's actions with respect to those planes are not necessarily indicative of its ability and thus of a deliberate refusal to compensate for the diverted air-

craft. In any event, the burden of proof to establish failure to mitigate damages was on Toolco, see *Ellerman Lines Ltd.* v. *The President Harding*, 288 F.2d 288, 291 (2d Cir. 1961); *United States* v. *Warsaw Elevator Co.*, 213 F.2d 517, 518-19 (2d Cir. 1954); *United States* v. *Russel Electric*, 250 F. Supp. 2, 20 (S.D.N.Y. 1965), and Toolco failed to demonstrate TWA's financial capability to purchase substitute jets deliverable before 1963, or that any such jets were on the market. There is evidence in the record indicating that the lead time in the purchase of jet-powered aircraft, each of which is tailor-made in many respects for the specific customer, is several years. Finally, a holding, in the face of no evidence to the contrary offered by Toolco, that TWA was financially able in the time immediately after the transfer of control to restock its depleted fleet, would not be consonant with the allegation of ¶ 53(a) that Hughes's mainipulations of TWA had left it financially debilitated.

B. *Lost Profits From Decreased Fleet Size*

Toolco also attacks Wemple's testimony credited by the Special Master, that even if TWA had received all 63 jets, the additional 16 jets would have enjoyed a "load factor" (measure of the number of passengers carried on an average trip) equal to the average load factor for all jets of the same types during the years for which damages were assessed. Toolco's principal argument is that its own expert was correct in (1) considering the probable depressing effect on demand of introducing new jets into the commercial air flight market and (2) basing his estimates on TWA's specific records of profits for each of its separate jet routes.

But adding 16 planes to the market would have increased overall capacity of domestic American air carriers by only 3.7% at most. It is entirely reasonable to believe that TWA's new, modern jets would have attracted at

least as many extra passengers to TWA as might have been lost because of the added capacity. Thus one does not have to strain to recognize that TWA's competitors would have borne a loss of passengers. In any event, the effect hypothesized by Toolco is highly speculative and Toolco has not carried its burden of proof on this score.

Moreover, Toolco's approach of calculating the potential market for the lost planes only by looking at the capacity of each existing TWA route to absorb the new capacity is too rigid and the Master was not clearly in error to reject it. There is no reason to believe TWA could not have arranged its schedules to maximize its profits.

Finally, there is simply no sound reason to accept Simat's assumption that international competitors of TWA would have increased their transatlantic jet flights by four for each flight added by TWA. The Master was justified in rejecting this guesswork.

C. *Accounting Adjustments in the Price Waterhouse Study*

Toolco seeks to challenge certain adjustments made in the Price Waterhouse financial analysis, upon which both parties relied throughout the hearing to show the financial impact on TWA of various competing or alternative assumptions, some of which were ultimately resolved in favor of TWA, and some in favor of Toolco. Contrary to the claim in Toolco's reply brief, these adjustments were made by Price Waterhouse, not Biegler, who directed the study and testified concerning it. In Plaintiff's Exhibit 50, Biegler merely summarized the adjustments already made by Price Waterhouse and which were previously incorporated in its study. The exhibit included an index of references to the Price Waterhouse study that explained and justified each conclusion. Toolco raised no objections to any of these adjustments before the Special

Master, although it had ample time to study the Price Waterhouse report prior to Brownell's decision and in the face of Judge Metzner's clearly expressed and entirely appropriate suggestion that any technical problems that might arise after Toolco had thoroughly scrutinized the report should first be referred to Brownell so that rebuttal evidence could be put in the record. Toolco's failure to do so is inexcusable, particularly in litigation as complex and difficult as this is. It is precluded from raising these issues now since its conduct has denied TWA an opportunity to submit its own evidence on these intricate accounting matters to the Special Master.

In any event, Brownell's acceptance of the adjustments relied on by both parties and to which no objections were made can hardly be assigned as plain error unless the defect is patent and obvious on the face of the report. We find none of the adjustments complained of clearly erroneous, and indeed most, if not all, seem clearly justified as reflecting reasonable accounting procedures.

VIII.

In its May 3, 1963 order entering the default judgment on TWA's complaint, as we have already noted, the district court also granted TWA's motion to increase the trebled ad damnum from $105,000,000 to $135,000,000. Toolco assigns this as error under F.R.Civ.P. 54(c), which provides that "a judgment by default shall not . . . exceed in amount that prayed for in the demand for judgment." Although the authorities do not appear to be in agreement and this Circuit has not expressed itself on the question, we are of the view that there is no sound basis for restricting TWA to the precise damages originally sought in a case where damages alleged were unliquidated, and where defendant did not default by non-appearance, but rather because of non-compliance with discovery procedures, and indeed was granted a full trial on the question of dam-

ages actually caused by the allegations established by its default. See *Riggs, Ferris & Geer* v. *Lillibridge*, 316 F.2d 60, 62-63 (2d Cir. 1963); *Sarlie* v. *E. L. Bruce Co.*, 265 F. Supp. 371 (S.D.N.Y. 1967); 6 Moore, Federal Practice ¶¶ 54.61, 55.08 at 1206. Toolco cannot in good conscience complain of any unfairness or surprise, for, as we said in discussing the propriety of the default judgment, at no time has it sought to rectify its refusal to cooperate with the legitimate discovery orders, an act it easily could have performed after Judge Metzner granted the motion to increase the ad damnum. Moreover, at the February 8 hearing, prior to Hughes' non-appearance, TWA clearly announced its intention to apply for an increase in the prayer for damages to the trebled $135 million.

IX.

Judge Metzner awarded attorneys fees to TWA of $7.5 million based on the time expenditure of 56,000 hours and taking into consideration many relevant factors which are each thoroughly discussed in his opinion, 312 F. Supp. 478. Toolco assigns the award as error largely on the basis that the hourly rate (about $128) is excessive, thus ignoring the unprecedented size of the judgment (the allowance for attorneys fees is less than 6% of the award of damages), the complexity of the proceedings, and the fact that the default judgment was the product of intensive pre-trial activity for two years and was followed by exhaustive appeals and intricate damages proceedings during which Toolco persistently attempted to undo the effects of its own default. In extraordinary litigation such as this, it would be artificial to fix an arbitrary hourly rate without regard to other relevant factors, for example, quality of the representation, the success achieved, and the size of the award. There are no exact formulations of which we are aware, that would require a precise maximum hourly fee to be fixed in a vacuum. Under all the circumstances, especially in view of Judge Metzner's meticulous discussion

of the problem, we are unable to say that he exercised his broad discretion in this respect unreasonably. *W. Montague & Co.* v. *Lory*, 193 U.S. 39, 48 (1904); *Hanover Shoe, Inc.* v. *United Shoe Mach. Corp.*, 245 F. Supp. 258, 302 (M.D. Pa. 1965), *vacated on other grounds*, 377 F.2d 776 (3d Cir. 1967), *reversed in part on other grounds*, 392 U.S. 481 (1968).

TWA's Cross-Appeal

The five points raised by TWA on its appeal do not call for more than summary discussion.

X.

Its only objection to Brownell's computation of damages is that he sensibly permitted a deduction from TWA's damages for the cost of capital that TWA would have incurred if it had independently purchased its 63-jet reconstructed fleet because of interest charges that TWA would have incurred if the necessary capital had been borrowed in 1958-59. The Special Master calculated a somewhat higher interest rate (6.3%) for the Convairs than for the Boeings (6%) because the Convairs under the reconstructed plan would have been delivered later than the Boeings. In arriving at a rate of 6.3%, the Master relied on average interest rates charged to other airlines for similar loans during this period, and indeed paid by TWA itself on its own comparable indebtedness during that period. The 6-6.3% rate is identical to that which TWA's expert Morehouse had computed in a portion of his rejected financing plan which contemplated some additional borrowing, in 1959, supplementing earlier financing in 1955 at lower rates.

In seeking a smaller deduction for interest costs, TWA relies on (1) its Exhibit No. 314, showing interest rates on debts outstanding to various airlines in 1960, but without regard to the times that the debts were incurred or

the purposes for which they were incurred; (2) the rejected Comparative Profits Study; and (3) a Price-Waterhouse estimated financing charge premised on the rejected Morehouse report. For the reasons just indicated, each ground asserted is insufficient to establish that Special Master Brownell's adoption of the higher rate was clearly erroneous. In the absence of a viable alternative offered by TWA (and TWA does not contest the rejection of the Morehouse and Comparative Profits studies) the Master properly based his deduction for interest charges on the price of money at the time when financing would normally have been arranged for the 63-jet fleet.

XI.

TWA also argues that the interest allowances on the damage award and the judgment itself were incorrect.

TWA contends that it was improperly denied moratory interest as an element of "the damages sustained" by it under Clayton Act § 4, 15 U.S.C. § 15, to be computed from the time the damages were sustained and trebled to the date of judgment. We agree with the Seventh Circuit's contrary resolution of this issue in *Locklin* v. *Day-Glo Color Corp.*, 429 F.2d 873, 877 (7th Cir. 1970), *cert. denied*, 400 U.S. 1020 (1971). It is reasonable to interpret Congress' silence on the matter as indicating that trebled damages are sufficient penalty and that interest need not be included. See *Rodgers* v. *United States*, 332 U.S. 371 (1947). Moreover, trebled damages will more than adequately compensate TWA for its injuries. *Brooklyn Savings Bank* v. *O'Neil*, 324 U.S. 697 (1945). Thus, there is no inherent policy reason to award moratory interest here and not doing so avoids difficult questions of proof—including highly abstruse inquiries as to proper rates and the time from which interest should run. Since the trebled damage device in any event adequately serves the penal and remedial purposes of the antitrust laws, we believe that it

is sounder, absent contrary express Congressional intent, to consider that these difficult and time-consuming inquiries are intended to be avoided.

TWA also urges that interest on the judgment should run from the time the Master filed his report, rather than from the date of the district court's judgment, contrary to the apparently clear language of 28 U.S.C. § 1961, which speaks of an award of interest "from the date of the entry of the judgment" and applies by its terms to "any money judgment . . . recovered in a district court." TWA is not, as it attempts to show, "penalized" in any sense by any delay in judgment occasioned by the court's discretionary referral of the case to a Master. To the contrary, the salutary device of having the highly complex questions in this case heard and analyzed by a Master served to expedite this litigation. TWA cites no authority in point for its position [6] and we perceive no good reason to adopt its novel argument in the face of the plain words of Section 1961.

We do, however, agree with TWA that under New York law, applicable here pursuant to 28 U.S.C. § 1961 (interest on the judgment is calculated "at the rate allowed [on such judgments] by State law"), interest on the judgment should be at the rate of 7½% rather than the 6% allowed by Judge Metzner. Under N.Y.C.P.L.R. § 5004, interest on

---

[6] *Tilgham* v. *Proctor*, 125 U.S. 136 (1888), and other patent cases relied on by TWA do not involve the question of when interest begins to run on a judgment, but rather from when interest as an *element of damages* should be measured. The holding of the cases cited is that interest should run from the date that the fact and amount of damages cease to be "in earnest controversy and of uncertain issue," *id.* at 161, an event marked by the filing of the Master's report. Since we determine that moratory interest is inappropriate here, these cases are inapplicable. In *L. P. Larson, Jr., Co.* v. *Wm. Wrogley, Jr., Co.*, 20 F.2d 830 (7th Cir. 1927), a trademark and unfair competition case, the question at issue was also the time from which interest would be assessed "as an element of damages." *Id.* at 836. See also *Carter Products, Inc.* v. *Colgate-Palmolive Co.*, 214 F. Supp. 383, 417-18 (D. Md. 1963).

money judgments in New York "shall be at the legal rate." When this section was first adopted in 1963, it clearly referred to the rate then set as the maximum allowable interest rate prescribed by Gen. Bus. Law § 340 (6%). Section 340 was subsequently superseded by an identical provision codified as § 5-501(1) of the N.Y. Gen. Obl. Law. In 1968, that provision was amended to give the State Banking Board discretion to set the maximum rate of interest allowable on loans or their equivalent. The 6% rate was thereafter to prevail only if the Board prescribed no other maximum lending rate. In February, 1969 (the Court's judgment was filed in 1970), the Board prescribed a rate of 7½%.

Ever since the amendment to Section 5-501(1), there has been a lively controversy among New York courts and commentators as to which rate governs money judgments —6% or the rate set by the Board. The commentator to the C.P.L.R. argued persuasively in 1969 (see N.Y.C.P.L.R. 1970 Supp. at 146-49) that the sounder view was that the Board's rate should prevail, since the purpose of C.P.L.R. § 5004 was to set interest on money judgments at the going rate at the time in New York State, and the purpose of amending Section 5-501(1) was to permit that rate to be responsive to changing economic conditions. The commenator saw no need for leaving the rate of interest on judgments rigid after the state had determined that for commercial purposes the rate should be more flexible.

We agree with this reasoning. Toolco relies on our contrary decision in *Caldecott* v. *L. I. Lighting Co.*, 417 F.2d 994 (2d Cir. 1969), where we followed the tentative view of the then highest state court ruling on this question, *Belcher* v. *Kesten*, N.Y.L.J. July 29, 1969, p. 11, col. 7 (Sup. Ct. Queens County). Since *Caldecott* was decided by us, the Appellate Division, First Department, has unanimously held in *Rachlin & Co.* v. *Tra-Max, Inc.*, 308 N.Y.S. 2d 153 (March 5, 1970), that the 7½% rate should apply to a money judgment on a claim founded in contract. We see no

sound basis for distinguishing contract from tort actions in fixing the appropriate rate of interest on a judgment and since *Rachlin* is presently the most authoritative declaration of New York law interpreting C.P.L.R. § 5004, we will modify the judgment of the district court and direct that interest run from the date of the judgment at the rate of 7½%.

XII.

TWA's last contention is that it should be compensated for fees paid to its experts as part of its "cost of suit," 15 U.S.C. § 15. This precise issue has long since been decided contrary to TWA's position in this Circuit, *Straus* v. *Victor Talking Machine Co.*, 297 F. Supp. 791 (1924) and TWA has not persuaded us that that decision, or the unanimous host of cases relying on *Straus* in this and other jurisdictions should be overruled. See e.g., *Twentieth Century Fox Film Corp.* v. *Goldwyn*, 328 F.2d 190, 224 (9th Cir. 1964); *Union Carbide & Carbon Corp.* v. *Nisley*, 300 F.2d 561 (10th Cir. 1961), cert. dismissed sub nom. *Wade* v. *Union Carbide & Carbon Corp.*, 371 U.S. 801 (1962); *Farmington Dowel Prods. Co.* v. *Forester Mfg. Co.*, 297 F. Supp. 924 (D. Me.), aff'd and remanded, 421 F.2d 61 (1st Cir. 1969).

The judgment is modified to allow 7½% interest on the judgment. In all other respects, the judgment of the district court is affirmed.

Q.

Statutory Provisions Involved

UNITED STATES CONSTITUTION AMENDMENT V:

> No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation."

UNITED STATES CODE, Title 15:

§1. *Trusts, etc., in restraint of trade illegal; exception of resale price agreements; penalty.* Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is declared to be illegal; PROVIDED, That nothing contained in sections 1-7 of this title shall render illegal, contracts or agreements prescribing minimum prices for the resale of a commodity which bears, or the label or container of which bears, the trademark, brand, or name of the producer or distributor of such commodity and which is in free and open competition with commodities of the same general class produced or distributed by others, when contracts or agreements of that description are lawful as applied to intrastate transactions, under any statute, law, or public policy now or hereafter in effect in any State, Territory, or the District of Columbia in which such resale is to be made, or to which the commodity is to be transported for such resale, and the making of such contracts or agreements shall not be an unfair method of competition under section 45 of this title: PROVIDED FURTHER, That the pre-

ceding proviso shall not make lawful any contract or agreement, providing for the establishment or maintenance of minimum resale prices on any commodity herein involved, between manufacturers, or between producers, or between wholesalers, or between brokers, or between factors, or between retailers, or between persons, firms, or corporations in competition with each other. Every person who shall make any contract or engage in any combination or conspiracy declared by sections 1-7 of this title to be illegal shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding fifty thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

§ 2. *Monopolizing trade a misdemeanor; penalty.* Every person who shall monopolize, or attempt to monopolize, or combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding fifty thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

§ 14. *Sale, etc., on agreement not to use goods of competitor.* It shall be unlawful for any person engaged in commerce, in the course of such commerce, to lease or make a sale or contract for sale of goods, wares, merchandise, machinery, supplies, or other commodities, whether patented or unpatented, for use, consumption, or resale within the United States or any Territory thereof or the District of Columbia or any insular possession or other place under the jurisdiction of the United States, or fix a price charged therefor, or discount from, or rebate upon, such price, on the condition, agreement, or understanding that the lessee or purchaser thereof shall not use or deal in the goods, wares, merchandise, machinery, supplies, or other

commodities of a competitor or competitors of the lessor or seller, where the effect of such lease, sale, or contract for sale or such condition, agreement, or understanding may be to substantially lessen competition or tend to create a monopoly in any line of commerce.

§ 18. *Acquisition by one corporation of stock of another.* No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.

No corporation shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of one or more corporations engaged in commerce, where in any line of commerce in any section of the country, the effect of such acquisition, of such stocks or assets, or of the use of such stock by the voting or granting of proxies or otherwise, may be substantially to lessen competition, or to tend to create a monopoly.

This section shall not apply to corporations purchasing such stock solely for investment and not using the same by voting or otherwise to bring about, or in attempting to bring about, the substantial lessening of competition. Nor shall anything contained in this section prevent a corporation engaged in commerce from causing the formation of subsidiary corporations for the actual carrying on of their immediate lawful business, or the natural and legitimate branches or extensions thereof, or from owning and holding all or a part of the stock of such subsidiary corporations,

when the effect of such formation is not to substantially lessen competition.

Nor shall anything herein contained be construed to prohibit any common carrier subject to the laws to regulate commerce from aiding in the construction of branches or short lines so located as to become feeders to the main line of the company so aiding in such construction or from acquiring or owning all or any part of the stock of such branch lines, nor to prevent any such common carrier from acquiring and owning all or any part of the stock of a branch or short line constructed by an independent company where there is no substantial competition between the company owning the branch line so constructed and the company owning the main line acquiring the property or an interest therein, nor to prevent such common carrier from extending any of its lines through the medium of the acquisition of stock or otherwise of any other common carrier where there is no substantial competition between the company extending its lines and the company whose stock, property, or an interest therein is so acquired.

Nothing contained in this section shall be held to affect or impair any right heretofore legally acquired: PROVIDED, That nothing in this section shall be held or construed to authorize or make lawful anything heretofore prohibited or made illegal by the antitrust laws, nor to exempt any person from the penal provisions thereof or the civil remedies therein provided.

Nothing contained in this section shall apply to transactions duly consummated pursuant to authority given by the Civil Aeronautics Board, Federal Communications Commission, Federal Power Commission, Interstate Commerce Commission, the Securities and Exchange Commission in the exercise of its jurisdiction under section 79j of this title, the United States Maritime Commission, or the Secretary of Agriculture under any statutory provision vesting such power in such Commission, Secretary, or Board.

UNITED STATES CODE, Title 49:

§ 1378. (Section 408, Federal Aviation Act) *Consolidation, merger, and acquisition of control.*

(a) *Prohibited acts.* It shall be unlawful unless approved by order of the Board as provided in this section—

• • •

(5) For any air carrier or person controlling an air carrier, any other common carrier, or any person engaged in any other phase of aeronautics, to acquire control of any air carrier in any manner whatsoever;

• • •

(b) *Application to Board; hearing; approval; disposal without hearing.* Any person seeking approval of a consolidation, merger, purchase, lease, operating contract, or acquisition of control, specified in subsection (a) of this section, shall present an application to the Board, and thereupon the Board shall notify the persons involved in the consolidation, merger, purchase, lease, operating contract, or acquisition of control, and other persons known to have a substantial interest in the proceeding, of the time and place of a public hearing. Unless, after such hearing, the Board finds that the consolidation, merger, purchase, lease, operating contract, or acquisition of control will not be consistent with the public interest or that the conditions of this section will not be fulfilled, it shall by order approve such consolidation, merger, purchase, lease, operating contract, or acquisition of control, upon such terms and conditions as it shall find to be just and reasonable and with such modifications as it may prescribe:

• • •

§ 1384. (Section 414, Federal Aviation Act) *Legal restraints.* Any person affected by any order made under sections 1378, 1379, or 1382 of this title shall be, and is hereby, relieved from the operations of the "antitrust laws", as designated in section 12 of Title 15, and of all

other restraints or prohibitions made by, or imposed under, authority of law, insofar as may be necessary to enable such person to do anything authorized, approved, or required by such order.

UNITED STATES CODE, Title 28:

§ 1292. *Interlocutory decisions.*

• • •

(b) When a district judge, in making in a civil action an order not otherwise appealable under this section, shall be of the opinion that such order involves a controlling question of law as to which there is substantial ground for difference of opinion and that an immediate appeal from the order may materially advance the ultimate termination of the litigation, he shall so state in writing in such order.

• • • • • • • • • •

RULES OF CIVIL PROCEDURE

Rule 16. *Pre-Trial Procedure: Formulating Issues.* In any action, the court may in its discretion direct the attorneys for the parties to appear before it for a conference to consider

(1) The simplification of the issues;

(2) The necessity or desirability of amendments to the pleadings;

(3) The possibility of obtaining admissions of fact and of documents which will avoid unnecessary proof;

(4) The limitation of the number of expert witnesses;

(5) The advisability of a preliminary reference of issues to a master for findings to be used as evidence when the trial is to be by jury;

(6) Such other matters as may aid in the disposition of the action.

The court shall make an order which recites the action taken at the conference, the amendments allowed to the pleadings, and the agreements made by the parties as to any of the matters considered, and which limits the issues for trial to those not disposed of by admissions or agreements of counsel; and such order when entered controls the subsequent course of the action, unless modified at the trial to prevent manifest injustice. The court in its discretion may establish by rule a pre-trial calendar on which actions may be placed for consideration as above provided and may either confine the calendar to jury actions or to non-jury actions or extend it to all actions.

Rule 37. Refusal To Make Discovery: Consequences.

* * *

(d) *Failure of Party To Attend or Serve Answers.* If a party or an officer or managing agent of a party wilfully fails to appear before the officer who is to take his deposition, after being served with a proper notice, or fails to serve answers to interrogatories submitted under Rule 33, after proper service of such interrogatories, the court on motion and notice may strike out all or any part of any pleading of that party, or dismiss the action or proceeding or any part thereof, or enter a judgment by default against that party. [1]

---

[1] Rule 37 was amended March 30, 1970, effective July 1, 1970. The rule now provides, in pertinent part:

(d) *Failure of Party To Attend at Own Deposition or Serve Answers to Interrogatories or Respond to Request for Inspection.* If a party or an officer, director, or managing agent of a party or a person designated under Rule 30(b) (6) or 31(a) to testify on behalf of a party fails (1) to appear before the officer who is to take his deposition, after being served with a proper notice, or (2) to serve answers or objections to interrogatories submitted under Rule 33, after proper service of the interrogatories, or (3) to serve a written response to a request for inspection submitted under Rule 34, after proper service of the request, the court in which the action is pending on motion may make such orders in regard

Rule 54. *Judgment; Costs.*

• • •

(c) *Demand for judgment.* A judgment by default shall not be different in kind from or exceed in amount that prayed for in the demand for judgment. Except as to a party against whom a judgment is entered by default, every final judgment shall grant the relief to which the party in whose favor it is rendered is entitled, even if the party has not demanded such relief in his pleadings.

Rule 55. *Default.*

(a) *Entry.* When a party against whom a judgment for affirmative relief is sought has failed to plead or otherwise defend as provided by these rules and that fact is made

---

to the failure as are just, and among others it may take any action authorized under paragraphs (A), (B), and (C) of subdivision (b)(2) of this rule. In lieu of any order or in addition thereto, the court shall require the party failing to act or the attorney advising him or both to pay the reasonable expenses, including attorney's fees, caused by the failure, unless the court finds that the failure was substantially justified or that circumstances make an award of expenses unjust.

The failure to act described in this subdivision may not be excused on the ground that the discovery sought is objectionable unless the party failing to act has applied for a protective order as provided by Rule 26(c). [(A), (B), and (C) of subdivision (b)(2), referred to above, are:

(A) An order that the matters regarding which the order was made or any other designated facts shall be taken to be established for the purposes of the action in accordance with the claim of the party obtaining the order;

(B) An order refusing to allow the disobedient party to support or oppose designated claims or defenses, or prohibiting him from introducing designated matters in evidence;

(C) An order striking out pleadings or parts thereof, or staying further proceedings until the order is obeyed, or dismissing the action or proceeding or any part thereof, or rendering a judgment by default against the disobedient party;]

to appear by affidavit or otherwise, the clerk shall enter his default.

(b) *Judgment.* Judgment by default may be entered as follows:

(1) *By the Clerk.*

• • •

(2) *By the Court.* In all other cases the party entitled to a judgment by default shall apply to the court therefor; but no judgment by default shall be entered against an infant or incompetent person unless represented in the action by a general guardian, committee, conservator, or other such representative who has appeared therein. If the party against whom judgment by default is sought has appeared in the action, he (or, if appearing by representative, his representative) shall be served with written notice of the application for judgment at least 3 days prior to the hearing on such application. If, in order to enable the court to enter judgment or to carry it into effect, it is necessary to take an account or to determine the amount of damages or to establish the truth of any averment by evidence or to make an investigation of any other matter, the court may conduct such hearings or order such references as it deems necessary and proper and shall accord a right of trial by jury to the parties when and as required by any statute of the United States.

IN THE

Supreme Court of the United States

October Term, 1971

No.

TRANS WORLD AIRLINES, INC.,
Cross-Petitioner,

v.

HUGHES TOOL COMPANY and
RAYMOND M. HOLLIDAY,
Respondents.

CONDITIONAL CROSS-PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

Cross-Petitioner Trans World Airlines, Inc. ("TWA") respectfully prays that a writ of certiorari issue to review that portion of the decision of the United States Court of Appeals for the Second Circuit, entered in this proceeding on September 1, 1971, which denied certain parts of TWA's appeal to that Court in modifying and affirming a judgment in TWA's favor in the amount of $145,448,141.07, the writ to issue only in the event this Court should grant, in whole or in part, the petition for a writ of certiorari filed by Hughes Tool Company ("Toolco") and Raymond M. Holliday (together "defendants"), which has been assigned No. 71-827 (hereinafter, "defendants' petition").

TWA does not believe the decision of the Court of Appeals against the defendants involves any issue warranting consideration by this Court, which has already had before it upon prior writs of certiorari (Nos. 443 and 501, October 1964 Term) all significant aspects of this controversy except the amount of the damage award. TWA does not believe that the "Questions Presented" listed in defendants' petition are in truth presented on the record, since they assume facts not found to exist. Accordingly, TWA is opposing defendants' petition, and a brief in opposition will be filed. If, however, defendants' petition is granted in whole or in part, so that this litigation of ten and a half years is not now terminated, then TWA asks that its conditional cross-petition also be granted, so that this Court may consider also certain questions which were decided against TWA below.

OPINIONS BELOW

The decision of the Court of Appeals of which review is sought was set out in an opinion by Kaufman, C.J., writing for a unanimous court, reported at 449 F.2d 51 [108a *et seq.**]. It affirmed decisions of the District Court for the Southern District of New York, Metzner, D.J., reported at 308 F. Supp. 679 [50a *et seq.*] and 312 F. Supp. 478 [81a *et seq.*], which in turn confirmed and entered judgment upon a Report and Award by the Special Master, Hon. Herbert Brownell (the "Brownell Report"). The Brownell Report is reproduced with its original pagination in the Appendix to this cross-petition.

Earlier decisions in the litigation include an unreported decision by the Court of Appeals on January 23, 1963, which after briefing and argument denied defendants review by mandamus or interlocutory appeal of a series of discovery orders (including the orders which defendants ultimately refused to obey); and a unanimous decision the following year

* Citations with the suffix "a" are to pages of the appendix to defendants' petition.

per Chief Judge Lumbard, reported at 332 F.2d 602 (1964) [19a *et seq.*]. Two writs of certiorari to the latter Court of Appeals decision were dismissed by this Court at the October 1964 Term, after full briefing and argument, as having been improvidently granted, 380 U. S. 248 and 249 (1965).

Other orders and decisions herein by the District Court for the Southern District of New York are reported at 29 F.R.D. 523 (December 5, 1961); 214 F. Supp. 106 (February 7, 1963) [1a *et seq.*]; 32 F.R.D. 604 (May 3, 1963) [13a *et seq.*]; 38 F.R.D. 499 (November 16, 1965) [47a *et seq.*]; CCH 1966 Trade Cas. ¶ 71,653 (January 4, 1966); and 314 F. Supp. 94 (June 10, 1970) [94a *et seq.*].

JURISDICTION

The judgment of the Court of Appeals for the Second Circuit was entered on September 1, 1971. Defendants' petition for rehearing was denied on September 28, 1971. This Court's jurisdiction is invoked under 28 U.S.C. §1254(1).

QUESTIONS PRESENTED

1. Whether under Section 4 of the Clayton Act, 15 U.S.C. §15 (1970), a plaintiff can recover, as an element of his actual damages, interest computed on the loss sustained for the period preceding the judicial determination of the amount of the loss?

2. Whether, in a suit in which the determination of the amount of damages was referred to a special master whose award was thereafter confirmed in all respects, a plaintiff is entitled to recover interest on the amount thus determined from the date the master's report was filed to the date judgment was entered?

3. Whether under Section 4 of the Clayton Act, a successful plaintiff is entitled to recover, as an item of its actual cost of suit, payments for the services of firms and individuals retained as experts to establish the amount of damages?

4. Whether, in determining the amount of interest to be deducted from plaintiff's damages to reflect the "cost of capital" which plaintiff would have incurred had it been operating free from the unlawful restraints imposed by defendants, the fact that defendants had prevented plaintiff from borrowing money earlier at lower interest rates requires as a matter of law the cost of capital to be computed at such lower rates?

STATUTORY PROVISION INVOLVED

United States Code, Title 15:

"§ 15. *Suits by persons injured; amount of recovery*

"Any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws may sue therefor in any district court of the United States in the district in which the defendant resides or is found or has an agent, without respect to the amount in controversy, and shall recover threefold the damages by him sustained, and the cost of suit, including a reasonable attorney's fee."

STATEMENT OF THE CASE

This antitrust case is unique on its facts, and in its procedural history.

It is believed to be one of the oldest private lawsuits still in active litigation in the Federal courts, having been commenced June 30, 1961 in the Southern District of New York.

The plaintiff, TWA, is a major airline, the only United States flag airline authorized to conduct regularly scheduled operations on both transatlantic and transcontinental routes. Its stock has at all relevant times been listed and traded on the New York Stock Exchange.

Defendant Toolco is a corporation wholly owned by Howard R. Hughes, who has directed, controlled and dominated its activities. It has been engaged in the manufacture of oil drilling equipment and has also served as a vehicle for Hughes in a number of other enterprises, including the supply and leasing of aircraft. In 1939 Toolco purchased a minority stock interest in TWA. As a result of that purchase and a number of subsequent acquisitions over the years, Toolco at the time the complaint was filed had a beneficial interest in 78% of TWA's outstanding stock and—until six months previously—had acted as supplier and lessor of equipment to TWA; Hughes and Toolco had dominated all of TWA's activities in connection with the acquisition of aircraft and their financing. At the time this litigation was commenced, Toolco's TWA stock was held in a voting trust established in December 1960, with a majority of the voting trustees being designated by owners of senior debt securities of TWA. In 1966 Toolco sold its TWA stock for net proceeds of more than $546 million, realizing a gain of $452 million over its $94 million cost of acquiring such stock.

Hughes, whom Judge Kaufman termed the "unseen Prince of the drama" (449 F.2d at 61) [122a], was named in the complaint as a defendant, but TWA was never able to serve him as a party; the only valid and effective service ever obtained upon Hughes was as a witness, and it was arranged and vouched for by Toolco.

The third defendant named in the complaint, Holliday, was and is a vice president and director of Toolco, and at the time the complaint was filed was also a director of TWA.*

The complaint charged, in brief, that defendants had violated the antitrust laws by restraining trade in and monopolizing and conspiring to monopolize the supply of

* The complaint was served upon Holliday in January 1962 and his answer was filed in March 1962. In 1963, after Toolco had announced its program of wilful refusal to obey any discovery order of the district court, Holliday expressly elected to be bound for all purposes by Toolco's default, and has presented no separate defense.

aircraft to TWA, thus creating a captive market which they utilized in an attempt to establish themselves in a dominant position as suppliers of aircraft to the American airline industry. They are specifically alleged, *inter alia*, to have, for these purposes, tied the provision of financing for TWA to its purchasing or leasing jets from Toolco, and vice versa; to have enforced an illegal boycott; and to have leased aircraft to TWA on condition that TWA not purchase or lease aircraft from other suppliers. As a direct result of defendants' conduct, TWA was prevented from acquiring an adequate fleet of jet aircraft in a timely manner, and from arranging appropriate financing for such a fleet, to its great damage, originally estimated as being in excess of $35 million (subsequently enlarged to $45 million on notice to defendants, *infra*, p. 7n). Treble damages and an injunction were asked, pursuant to Sections 4 and 16 of the Clayton Act, 15 U.S.C. §§ 15, 26 (1970).

At the damage hearing, TWA eventually presented expert testimony estimating its lost profits, before trebling, as in excess of $105 million on one theory and in excess of $169 million on another theory; the actual damages awarded below amounted to $45,870,487.65. The various items making up the claimed damages and their relationships with the specific restraints alleged in the complaint are reviewed at 449 F.2d at 64-65 [128a-130a]. Judge Kaufman summarized the elements reflected in the final award as follows:

> "The damages which Brownell ultimately awarded to TWA consisted primarily of profits lost as a result of (1) diversion of the six Convairs to Northeast; (2) temporary retention by Toolco of four additional of the ordered Convairs and the ultimate lease of those jets to Northeast; (3) diversion of the six Boeings to Pan Am; (4) the lease, instead of outright sale, of jets in 1959-60; and (5) late delivery of 47 of the 63 jets ordered in 1956, which would have been avoided if, by the allegations of the complaint, Toolco had not unlawfully constricted TWA's financing and acquisition of its own jet fleet." (449 F. 2d 65-66) [131a].

In August 1961 Judge Charles M. Metzner was appointed to preside over the case for all purposes. Initial priority of discovery went to defendants. TWA was required to begin production of documents in August 1961, and Toolco commenced taking the deposition of TWA's new President, Charles C. Tillinghast, Jr., on January 5, 1962.

In February 1962 Toolco served its answer, which included extensive counterclaims both against TWA and against its new management and a number of financial institutions and their officers (referred to collectively throughout the litigation as the "additional defendants"). The counterclaims charged, in effect, that the disasters which had overtaken TWA during the preceding years had resulted not from the unlawful conduct of defendants, but from a supposed conspiracy by the additional defendants and TWA to force Toolco to give up control of TWA and to monopolize aircraft financing in the hands of the additional defendant financial institutions. Toolco's counterclaims alleged that both itself and TWA had suffered as a result (TWA to the extent of at least $45 million), and treble damages were asked.*

Thus TWA's complaint and Toolco's counterclaims were in essential agreement that TWA had suffered serious injuries and that those injuries were the result of violations of the antitrust laws although expressing opposed positions as to the identity of the wrongdoers responsible for those injuries.

---

* Toolco's higher evaluation of the damages suffered by TWA was one factor that led TWA's counsel to put defendants on notice (at the outset of the February 8, 1963 hearing at which Toolco announced its intention to default) that TWA had an application for leave to amend its *ad damnum* clause to ask damages of not less than $45 million.

Discovery was coordinated. Documents produced upon the request of any party were made available to all other parties. All were represented at and entitled to participate in the depositions and pre-trial conferences. It was recognized that the entire controversy would be the subject of a single trial, once discovery had been completed. A single final judgment encompassing all issues and binding upon all parties was to be expected, and that judgment would normally have been subjected to a single review by the Court of Appeals and (should certiorari be granted) by this Court.

As matters developed, however, early in 1963, after defendants had spent a year in deposition discovery of TWA (with two depositions completed, two others in progress and a long list still to come), and had, in the words of Judge Kaufman, "* * * explored and exhausted myriad possible avenues for further delaying the day of reckoning" (449 F.2d at 60) [118a-119a], the district court ruled that TWA and the additional defendants should be permitted to commence the depositions originally noticed by them a year previously. The first of these was to be the deposition of Hughes, the principal actor in all the events described in TWA's complaint, and the dominant figure behind Toolco's counterclaims. TWA's notice of this deposition was pursuant to a witness subpoena, while the additional defendants' notice was directed to Toolco, of which Hughes was the managing agent. Toolco conceded that the witness subpoena was valid and enforceable (it had itself arranged to accept service of the subpoena in lieu of answering interrogatories about Hughes's whereabouts). Toolco expressly stipulated that it was responsible for Hughes's compliance with that subpoena. Whatever significance the difference in the two notices might originally have had had evaporated by 1963.

Defendants at this point, first by written notice and then at a hearing in open court, formally refused to participate in any further discovery proceedings whatever, whether through oral depositions or the production of documents,* and stated that they would as a "business decision" default rather than defend upon the merits. This flat refusal to proceed with the litigation on the merits resulted in a final judgment dismissing Toolco's own counterclaims and in an interlocutory judgment in TWA's favor upon its complaint. No final judgment could be entered upon TWA's complaint until after an evidentiary hearing to establish the amount of its damages.

TWA asked that the damage hearing be held immediately, so that appellate review would follow entry of a final judgment on the complaint. However, the district court considered it appropriate to permit the jurisdictional issues raised by the complaint and counterclaims to be reviewed together, stating that an "immediate appeal from this order is justified" (32 F. R. D. at 608) [18a]. The Court of Appeals agreed, granting defendants an interlocutory appeal pursuant to 28 U.S.C. § 1292(b) (1970).

Both in the Court of Appeals and in this Court the procedurally separate appeals were heard together. Thus there were presented to both Courts at that time, on one or both appeals, the jurisdictional and procedural questions which the district court had passed upon in the

* While emphasis has been placed in the subsequent proceedings upon defendants' having blocked the oral deposition of Hughes, they also at the same time finally and flatly refused to produce a large number of documents, the production of which pursuant to two separate orders they had been contesting during the earlier discovery proceedings. Both TWA and the additional defendants considered these documents to be of great importance to the development of their respective cases on the merits. The maneuverings of defendants during this period are described in greater detail in Judge Lumbard's opinion, 332 F.2d at 612-13 [34a-37a] and in Judge Kaufman's opinion, 449 F.2d at 58-62 [115a-123a].

course of 19 pre-trial hearings, including all aspects of the conduct of pre-trial discovery and excluding only the amount of TWA's damages.

In connection with their default, defendants in 1963 made a number of concessions in open court, including an express acknowledgment of their liability in damages if the several jurisdictional grounds on which they were seeking appellate review were determined against them. As counsel for Toolco stated at the pre-trial hearing before Judge Metzner on February 8, 1963:

> "• • • we are fully aware—my client is fully aware—that by insisting on a right to obtain a review on the legal questions which have been decided to date • • • they may be deprived of further defending on the merits, other than on the question of damages." [2d Cir. App. A-276*]

As he explained at a later point in the same hearing:

> "My purpose of course is to obtain something which will enable me to get a review on the law as to whether or not you are entitled to be here in the first place. And then I am prepared, if I am wrong in that regard, to pay the consequences to the extent to which you are able to prove damages." [2d Cir. App. A-297]

TWA's counsel pointed out that the deposition of Hughes was pursuant to a valid witness subpoena, and that the witness himself had neither objected to it nor made any representation or suggestion to the court that he would be unavailable or would refuse to testify. It was TWA's

* Citations to "2d Cir. App. A- " are to the Joint Appendix filed in the Court of Appeals, a certified copy of which has been furnished to this Court by defendants.

position that, regardless of Toolco's "business decision", TWA was entitled to proceed with this vital discovery to establish the nature and extent of its damages, as well as defendants' responsibility for them. However, at Toolco's express request and in reliance upon its stated willingness to respond in damages, Judge Metzner stayed TWA from proceeding and directed that the deposition (then scheduled to commence in Los Angeles on the next business day) not be held.

The 1963-65 appeals resulted in affirmance by the Court of Appeals of the pertinent lower court decisions on all matters presented for review. As to defendants' procedural arguments, Chief Judge Lumbard stated:

> "Hughes' deposition was absolutely essential to the proper conduct of the litigation. Yet he and Toolco seized upon every opportunity to forestall this event. To this end they demanded the production of a multitude of documents by TWA and the additional defendants and secured successive adjournments of the deposition. Indeed, Hughes and Toolco seemed to look upon the entire discovery proceedings as some sort of a game, rather than as a means of securing the just and expeditious settlement of the important matters in dispute. It was only at the very eve of the Hughes deposition—after the other litigants had been put to much delay and expense—that the defendants made a 'business decision' to terminate discovery." (332 F. 2d at 615) [40a-41a]

Certiorari having been dismissed after full briefing and oral argument in this Court, the Court of Appeals affirmance then became final as to the counterclaims and constituted a binding adjudication against Toolco of the issues presented thereby (including, significantly, the contentions

made in the counterclaims as to where responsibility rested for TWA's losses).*

Following this Court's dismissal of certiorari in March 1965, defendants urged to the lower court, in spite of their prior concessions, that TWA should be required to prove the truth of the allegations of its complaint (default or no default, and without benefit of discovery) before a judgment in damages could be entered against them. Judge Metzner held, however, that defendants, having defaulted, were precluded except within the narrow limits established by *Thomson* v. *Wooster,* 114 U. S. 104 (1885), from contesting the truth of the allegations of the complaint, and that TWA was not required to introduce evidence to establish the truth of those allegations (38 F.R.D. at 501) [48a-49a]. With these principles finally laid down, the damage hearings themselves began in April 1966 before the Special Master, Hon. Herbert Brownell.

The hearings lasted altogether two and a half years, with Mr. Brownell's Report and Award being handed down on September 21, 1968. In addition to witnesses from TWA and the Boeing Company, TWA presented the expert testimony of a firm of consulting engineers, Coverdale & Colpitts, a firm of aviation consultants, R. Dixon Speas Associates, Inc., an investment banking firm, Drexel Harriman Ripley, Inc. and a firm of independent public accountants, Price Waterhouse & Co. Through these witnesses, as Judge Kaufman commented, "TWA * * * introduced evidence linking each component of the damages claimed to the pleaded illegal acts of Toolco and injuries to TWA." (449 F. 2d at 72) [144a] The direct testimony of all of TWA's

* TWA was a party defendant (in substance as well as in form) to the counterclaims. It joined in every motion and brief filed by the additional defendants. It is entitled to all benefits of the decisions rendered thereon, as fully as any other counterclaim defendant.

witnesses was submitted in written form on May 2, 1966, but defendants' study of this evidence and their cross-examination of TWA's witnesses continued through March 2, 1967.

Defendants' own case was presented thereafter entirely through expert witnesses, with several reports being presented by the aircraft consulting firm of Simat, Helliesen & Eichner, Inc. and a report by the investment banking firm of Loeb, Rhoades & Co. The material on which these reports were supposedly based included voluminous computer printouts, which required sophisticated analysis by TWA's experts in order that cross-examination could be carried on effectively. Indeed, after the testimony of defendants' witnesses came to a conclusion on March 27, 1968, TWA's short rebuttal case also included the testimony of a statistical expert on certain matters which had arisen in the course of cross-examination of defendants' witnesses. Recross was completed on April 9, 1968.

Briefing and the preparation by Mr. Brownell of his Report occupied the next six months. A year and a half was then occupied with the district court's review and confirmation of the damage award and the entry of judgment thereon on April 14, 1970, and another year and a half was devoted to the process of briefing and arguing the appeals to the Court of Appeals for the Second Circuit. That Court's unanimous opinion was handed down on September 1, 1971.

Assuming, hypothetically, that TWA is finally permitted on June 30, 1972, the eleventh anniversary of the filing of its suit, to enforce payment by defendants of the damages that the Special Master and the two lower courts have adjudicated in its favor, the eleven years between filing its

complaint and recovering its damages would have been spent as follows:

Period from filing of complaint (6/30/61) to defendants' admission of liability (subject to jurisdictional defenses and asessment of damages) (2/8/63)	1 yr. 7 mos.
Period from defendants' admission of liability (2/8/63) to disposition of appeals on jurisdictional and procedural matters (interlocutory as to complaint and answer, final as to counterclaims and replies) (3/8/65)	2 yrs. 1 mo.
Period from disposition of interlocutory appeals (3/8/65) to the filing of the Brownell Report (liquidating TWA's previously unliquidated damage claim) (9/21/68)	3 yrs. 6 mos.
Period from filing of Brownell Report (9/21/68) to entry of judgment (4/14/70)	1 yr. 7 mos.
Period from entry of judgment (4/14/70) to assumed completion of final appellate review, etc.	2 yrs. 3 mos.
	11 years

REASONS FOR GRANTING THIS WRIT IN EVENT COURT GRANTS DEFENDANTS' PETITION, IN WHOLE OR IN PART

1. The decision below erroneously excluded prejudgment interest from consideration as an element of actual damages under Section 4 of the Clayton Act.

A. Section 4 of the Clayton Act, 15 U.S.C. § 15 (1970), provides that a person injured by a violation of the antitrust laws "shall recover threefold the damages by him sustained."

The Second Circuit Court of Appeals, relying principally upon the reasoning of the Seventh Circuit in *Locklin* v. *Day-Glo Color Corp.*, 429 F.2d 873, 877 (1970), *cert. denied*, 400 U.S. 1020 (1971), held that TWA was not entitled to recover interest, as an element of the damages actually sustained, from the end of the period when the damages were inflicted upon it to the date of judicial determination of the amount of those damages. The Court of Appeals below stated that it was reasonable to interpret Congressional silence on the matter "as indicating that trebled damages are sufficient penalty and that interest need not be included" (449 F.2d at 80) [159a]. The Court further reasoned that treble damages "will more than adequately compensate TWA for its injuries" and noted the belief that "absent contrary express Congressional intent, [it is sounder] to consider that these difficult and time-consuming inquiries are intended to be avoided" [*ibid.*]. The two cases cited by the Court other than the *Locklin* case—*i.e.*, *Rodgers* v. *United States*, 332 U.S. 371 (1947), and *Brooklyn Savings Bank* v. *O'Neil*, 324 U.S. 697 (1945)—dealt with statutes each of which is not only different in purpose but quite different in language from Section 4 of the Clayton Act; neither purports to announce a general principle for interpreting other statutes providing for the recovery of multiple damages. There is nothing in the legislative history of Section 4 to indicate that Congress intended to exclude any element of actual damages customarily recognized by the courts.

At the time the Clayton Act was passed, it was already well established that, in a proper case, interest on a sum found to be due (even though unliquidated) from the time a plaintiff should have had that sum should be regarded as an element of his actual damages, quite separate from the interest which a court allows as a matter of law on judgments. *Lincoln* v. *Claflin*, 74 U.S. (7 Wall.) 132, 139

(1868); *Eddy* v. *Lafayette*, 163 U.S. 456, 467 (1896); *New Dunderberg Mining Co.* v. *Old*, 97 Fed. 150, 153-55 (8th Cir. 1899); *Brent* v. *Thornton*, 106 Fed. 35, 38 (5th Cir. 1901).

The only early reported antitrust cases on this point are entirely consistent with this analysis and are in conflict with the decision of the Court of Appeals below. In *Thomsen* v. *Cayser*, 243 U.S. 66, 74, 88-89 (1917), this Court cited with approval the fact that the jury had added interest to the damages found, thus confirming, in the Court's view, that the verdict was not based on "supposititious profits" but on an actual calculation of damages. Subsequently in *United Mine Workers* v. *Coronado Coal Co.*, 258 Fed. 829, 846-47 (8th Cir. 1919), *rev'd on other grounds*, 259 U.S. 344 (1922), the Eighth Circuit explained *Thomsen* v. *Cayser* as being a particular application of the rule of *Lincoln* v. *Claflin*, *supra*, and held that the prejudgment interest (awarded by the district court in that case as a matter of law) should have been left to the jury as a matter of damages. Both cases involved private antitrust plaintiffs and are predicated on the assumption that Congress intended that such plaintiffs—like other plaintiffs—could recover prejudgment interest as an element of damages.

TWA respectfully submits that the proper interpretation of "damages * * * sustained" in Section 4 is of importance to all private antitrust plaintiffs. This case is not unique in the fact that a substantial period of time has elapsed between the time when plaintiff's damages were actually sustained and the time when a judicial determination of the amount of those damages was made. Since two Circuits now hold that a private antitrust plaintiff cannot recover this actual element of damages sustained, unless certiorari is granted the view embodied in *Thomsen* v. *Cayser* and *UMW* v. *Coronado Coal* will have been, in effect, overruled,

without adequate consideration of the policies embodied in the Clayton Act.

B. It is particularly inappropriate in this case for defendants to escape the payment of compensatory interest for the extended period following their deliberate default. In a non-jury case, the award of such interest is a matter within the discretion of the court, *Miller* v. *Robertson*, 266 U. S. 243, 258 (1924), and the facts here establish a compelling case for the exercise of that discretion.

The adoption by this Court of the Federal Rules of Civil Procedure in 1937 was a historic landmark in the administration of civil justice under common law principles. It gave notice that the natural desire of parties for the courtroom advantage often available, if opponents can be forced to trial unaided by compulsory revelation in advance of potentially damaging evidence, would thereafter be subordinated to the public interest that all parties to a civil action must have a full and fair opportunity to discover and present the evidence relevant to their claims. The discovery rules, which enable parties to develop their evidence to the extent necessary by compulsory process against their opponents, are the basic procedural foundation on which the federal civil system has rested for the past thirty years.

Defendants' deliberate and wilful decision—so announced, with the explanation that it was a matter of business judgment—was to defy this discovery process, to compel, if at all possible, TWA to proceed without benefit of the evidence of intent and motive and of detailed transactions among co-conspirators which would have come out if TWA had been permitted to take the depositions and examine the secret documents to which the district court had found it entitled. Defendants' conduct has been twice reviewed in detail by the Court of Appeals for the Second Circuit, and vigorously condemned. Chief Judge Lumbard, speaking for a unanimous Court, characterized it in 1964 as "wilful and deliberate disregard of reasonable and

necessary court orders and the efficient administration of justice * * *" (332 F. 2d at 614) [40a]. After pointing out that "Hughes' deposition was absolutely essential to the proper conduct of the litigation" (332 F.2d at 615) [40a], he went on to say:

> "Hughes' conduct is particularly intolerable in a large and complex litigation such as this one. The protracted antitrust suit taxes the energies and resourcefulness of each party to the litigation; and it consumes much time of the court and the special masters it appoints. Tactics such as Hughes' serve only to frustrate the implementation of the discovery machinery devised by the federal judiciary to expedite the handling of such complex litigation." (332 F.2d at 615) [41a]

Judge Kaufman in 1971, also speaking for a unanimous court, reviewed the entire proceedings once again and in detail, and summarized its conclusions on this second review in this sentence:

> "The entry of the default judgment was inescapable and virtually invited by Toolco." (449 F.2d at 63) [125a]

Yet the ultimate and inevitable effect of the failure below to allow TWA compensatory interest for the post-1963 period is to reward the very disruptive tactics which the Second Circuit has twice with unanimity found intolerable.

2. The decision below erroneously excluded, in this private antitrust suit, the allowance of interest on the Special Master's award for the period between filing his Report and entry of judgment upon it.

Judge Metzner (312 F.Supp. at 485) [92a] and the Court of Appeals (449 F.2d at 80) [160a] held that TWA was not entitled to interest on the award from September 21, 1968 when the Brownell Report was filed to the entry of judgment thereon on April 14, 1970, although the award was confirmed in all respects.

Some delay is virtually inevitable whenever the question of damages is referred to a special master since—whatever the gain in judicial efficiency—an additional layer of judicial review is involved, and that takes time. The policy underlying Section 4 of the Clayton Act would appear to call for minimizing the adverse impact of such a delay upon a plaintiff whose injuries are the subject of the reference. However necessary the reference to a master may be to determine the damages in a complex antitrust case (and TWA concedes that this case is a classic example of one requiring such a reference), this necessity arises not from anything done by the plaintiff, but from defendants' wrongdoing for which Section 4 is intended to provide a remedy.

This Court has previously expressed its concern that parties not be unnecessarily penalized by references to masters. *LaBuy* v. *Howes Leather Co.*, 352 U.S. 249, 256 (1957); *Los Angeles Brush Mfg. Corp.* v *James*, 272 U.S. 701, 707 (1927). There surely is no practical reason why such a delay should operate to the monetary prejudice of the plaintiff, when there is available the simple solution of allowing interest on any sum found properly awarded from the date of the special master's award. This is exactly what courts have done for very many years in judgments entered on special masters' awards in other situations. *Illinois Central R.R.* v. *Turrill*, 110 U.S. 301, 303 (1884); *Tilghman* v. *Proctor*, 125 U.S. 136, 160-61 (1888); *L. P. Larson, Jr., Co.* v. *William Wrigley, Jr., Co.*, 20 F.2d 830, 836 (7th Cir. 1927), *rev'd in part on other grounds*, 277 U. S. 97 (1928); *Carter Products, Inc.* v. *Colgate-Palmolive Co.*, 214 F.Supp. 383, 417-18 (D. Md. 1963).

The Court of Appeals erred in considering this question to be governed by 28 U.S.C. § 1961 (1970), which provides that in a federal district court interest *must* be awarded on a money judgment from the date of entry thereof at

the rate prescribed by state law.* The omission from that section of the statute of any reference to prejudgment interest had not previously been construed to preclude the award of interest from an earlier date when sound reasons for such an award exist.**

3. The decision below improperly interprets the provision for recovery of "cost of suit" in Section 4 of the Clayton Act to exclude the cost of TWA's experts.

Should a successful plaintiff in a private antitrust suit bear his entire cost of presenting expert testimony on the complex issues relating to the proof of the amount of damages sustained without reimbursement by the defendant? While admittedly a long and uniform line of circuit and district court decisions, stemming from the Second Circuit's decision nearly half a century ago in *Straus* v. *Victor Talking Machine Co.*, 297 Fed. 791, 806-07 (1924), have answered in the affirmative, this Court has not passed upon the question, which is essentially one of interpreting the phrase "cost of suit" in Section 4 of the Clayton Act.

The legislative history with respect to the adoption of Section 4 is extremely sparse, there being, to our knowl-

---

* "Interest shall be allowed on any money judgment in a civil case recovered in a district court. Execution therefor may be levied by the marshal, in any case where, by the law of the State in which such court is held, execution may be levied for interest on judgments recovered in the courts of the State. Such interest shall be calculated from the date of the entry of the judgment, at the rate allowed by State law." (28 U.S.C. § 1961)

** The Seventh Circuit, in *Locklin* v. *Day-Glo Color Corp.*, *supra*, further confused this question with the availability of interest as damages discussed in Point 1 above, and announced the patently erroneous rule that recovery of interest is precluded whenever interest "is not enumerated as a recoverable item in the statute" (429 F.2d at 877). There is no authority whatever for such a rule, which in many situations would result in manifest injustice. *See, e.g., Moore-McCormack Lines, Inc.* v. *Richardson*, 295 F.2d 583, 592-95 (2d Cir. 1961), *cert. denied*, 368 U. S. 989 (1962).

edge, nothing in either the congressional debates or the relevant committee reports that seeks to define the phrase "cost of suit, including a reasonable attorney's fee." The most that can be concluded from the legislative history of Section 4, and from that of Section 7 of the Sherman Act (now repealed) from which Section 4 was derived, is that Congress intended to provide a genuine remedy that would encourage victims of violations of the antitrust laws to seek relief in the courts. *Perma Life Mufflers, Inc.* v. *International Parts Corp.*, 392 U.S. 134, 139 (1968); *Minnesota Mining & Mfg. Co.* v. *New Jersey Wood Finishing Co.*, 381 U.S. 311, 318 (1965); *Radovich* v. *National Football League*, 352 U.S. 445, 454 (1957).

Since the potentially enormous expense involved in bringing suit and prosecuting it to a conclusion is one of the major negative considerations which a prospective antitrust plaintiff must have in mind, it is far more consistent with the basic policy underlying Section 4 that major necessary expenses of suit should be reimbursed than that they should be excluded by interpreting "cost of suit" so narrowly as to include only costs ordinarily taxable by any successful litigant, without benefit of any special statutory provision. Moreover, a broader interpretation finds strong inferential support in the phrasing of the statute. The use of the word "including" is definitional: the "cost of suit" described is one which "includes" attorney's fees. Ordinary taxable costs never *include* such fees, 28 U.S.C. § 1920 (1970), and if such costs were all that was intended, the correct and natural phrase would have been "costs, *and* a reasonable attorney's fee."

TWA's total claim for its cost of this suit, exclusive of attorney's fee, was $2,230,602.83. Again, as it did in the Court of Appeals in order to simplify presentation of the issue, TWA here confines its claim to the fees which it had to pay for the services of firms and individuals retained

as experts in connection with the damage hearing—a total of $1,642,677.71. It is respectfully submitted that the suggested interpretation of Section 4 of the Clayton Act to permit reimbursement of this sum not only is more grammatically and logically justifiable than that of the Second Circuit in the *Straus* case, *supra*, which renders the phrase "cost of suit" mere surplusage, but also more reasonably effectuates the congressional policy behind the statute.

4. The decision below has misapplied a principle approved by this Court in the *Hanover Shoe* litigation by determining TWA's damages on the basis of a "cost of capital" computed in disregard of allegations of the complaint that defendants had precluded borrowings at lower interest rates.

In *Hanover Shoe, Inc.* v. *United Shoe Machinery Corp.*, 392 U.S. 481, 504 (1968), this Court approved the principle that, in determining the amount of the loss suffered by a plaintiff from a defendant's actions in violation of the antitrust laws, there should be subtracted from the amount by which the plaintiff shows his earnings were decreased an appropriate sum reflecting the probable interest cost, if any, which the plaintiff would have had to incur to acquire income producing equipment not in fact acquired. This deducted amount is described as the "cost of capital". In the *Hanover Shoe* case, in which the damages found stemmed from plaintiff's having been unlawfully required to lease machinery which would have been cheaper for it to buy, an interest charge calculated at 2.5% on the assumed purchase price of such machinery was deducted from the amount of the award.

The same principle was applied in this case by the Special Master, Mr. Brownell, and approved by the courts below. In this case the damages which TWA was awarded were based on loss of earnings resulting from its having

been unlawfully precluded from obtaining a sufficiently large fleet of jets in a sufficiently timely manner. The Brownell Report deducted from the award as "cost of capital" interest computed at the rates of 6.0% and 6.3% on the net assumed investment in the additional and earlier jet aircraft [Brownell Report, pp. 147-67, 173-85]. These interest rates were determined on the basis of interest rates being charged to TWA and others in the 1959-60 period on substantial borrowings for similar purposes. The amount deducted in this computation was very large—a total of $29.0 million was subtracted from the base damage figure, reducing the award, after trebling, by $87.0 million.

TWA does not now dispute the logic and general propriety of a "cost of capital" deduction from a damage award in a proper case. TWA does contend, however, that the courts below should not have charged TWA in this computation at the 6.0-6.3% rate based on interest rates prevailing around 1959-60, when the complaint (*admitted by defendants' default*) expressly alleges that in 1955 and 1956, at a time when funds were available at interest rates of 4% to 4¾%, defendants prevented TWA from making arrangements for financing. To charge TWA in the damage computation with a "cost of capital" based on any interest rate higher than 4¾% is to permit defendants to profit by their own wrongdoing.

The amounts involved, although much less than the $29.0 million actually deducted in the damage computation as "cost of capital", are still substantial. The computation can readily be made from the data presented in the Brownell Report, and would produce a "cost of capital" of $22.5 million—$6.5 million less than produced by Mr. Brownell's calculation. After trebling, the result would be to increase TWA's judgment by $19.5 million.

CONCLUSION

The issues raised by this cross-petition are peripheral to the basic controversy. Although involving very substantial sums, to TWA they are less important than bringing this ten-and-one-half years of litigation to a conclusion. The Brownell Report has been confirmed in its entirety by the district court and unanimously upheld by the Court of Appeals, which has twice reviewed in detail and approved the conduct of the pre-trial proceedings. TWA believes that there is nothing in defendants' petition for certiorari to warrant a further review at this time of what are essentially factual determinations.

Nonetheless, if the Court determines to grant defendants' petition, in whole or in part, TWA believes that the Court should take that opportunity to correct the erroneous results reached below on the questions presented in this conditional cross-petition.

APPENDIX TO CONDITIONAL CROSS-PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

AND

SUPPLEMENTAL APPENDIX TO ACCOMPANY BRIEF IN OPPOSITION

Explanatory Note

The Report and Award of Hon. Herbert Brownell, Special Master (the "Brownell Report"), was filed herein with the United States District Court for the Southern District of New York in printed form on September 21, 1968. A copy of the original 323-page Brownell Report was bound into the Joint Appendix filed with the United States Court of Appeals for the Second Circuit on the appeals to that Court, and in both courts below references were made to the original pagination of the printed Brownell Report. Cross-Petitioner and Respondent Trans World Airlines, Inc. ("TWA") is filing the Brownell Report in this Court, in the form in which it was originally submitted to the District Court in 1968, as an Appendix to TWA's own Conditional Cross-Petition for a Writ of Certiorari in No. and to supplement the Appendix filed by Petitioners and Respondents Hughes Tool Company and Raymond M. Holliday with their Petition in No. 71-827.

REPORT OF HERBERT BROWNELL, SPECIAL MASTER

Introduction—Prior History of the Case

This is an action by plaintiff Trans World Airlines ("TWA") against Howard R. Hughes ("Hughes"), Hughes Tool Company ("Toolco"), and Raymond M. Holliday ("Holliday"), an officer of Toolco and a director of TWA at the time of the filing of the complaint. The complaint was filed on June 30, 1961. Service was made on Toolco at that time, but service of process on Holliday was not made until January, 1962. Both Toolco and Holliday appeared and answered the complaint. Hughes was never served, and he has not appeared in the action.

The complaint sets forth three claims. The first claim alleges violations of Sections 1 and 2 of the Sherman Act

and Sections 3 and 7 of the Clayton Act. The second claim, based on certain of the acts alleged in support of the first claim but only those acts committed since December 31, 1960, also alleges violations of Sections 1 and 2 of the Sherman Act and Section 7 (but not Section 3) of the Clayton Act. These two claims allege that TWA is a major U. S. air carrier with both domestic and international routes, that Toolco "was and is engaged . . . since in or about 1939 in the development, manufacture and acquisition of aircraft and related equipment from the manufacturers thereof . . . and in the sale or lease of such aircraft to air carriers", and that Toolco has acquired 78% of the common stock of TWA. The first two claims further allege that through various acts the defendants and Atlas Corporation (named as a co-conspirator but not as a defendant) required TWA to acquire all of its jet aircraft from Toolco and to boycott all other suppliers, provided financing for the acquisition of jet aircraft only on the condition that TWA purchase all its jet aircraft from Toolco, and sold and leased jet aircraft on the condition that the purchaser would not buy or lease from any competitor. The third claim, based on pendent jurisdiction, alleges malicious and wilful interference with the business of TWA through the same acts pleaded in support of the first two claims. The complaint seeks treble damages and also injunctive relief requiring defendants to divest themselves of all stock in TWA and to refrain from acquiring any interest in TWA or seeking to exercise control or domination over TWA. In its answer to the complaint, Toolco asserted various counterclaims against TWA and also against others.

In August 1961, the case was assigned to Judge Charles M. Metzner for all purposes, pursuant to Rule 2 of the

General Rules of the District Court. On February 7, 1962 Judge Metzner appointed J. Lee Rankin as Special Master to supervise the discovery proceedings.

Simultaneously with filing the complaint, TWA moved by order to show cause on June 30, 1961 to take the deposition of Hughes. This motion was denied, however, and Toolco was allowed priority in the taking of depositions. On February 7, 1962, in the same order appointing the Special Master, Judge Metzner established a schedule of depositions, which was subject to change by the Special Master upon application of either party. This schedule called for Toolco to continue with the depositions of some twenty-four witnesses which had then been noticed, with the plaintiff to commence depositions immediately upon completion of Toolco's schedule. The last deposition by Toolco was set for April 19, 1962, and the depositions noticed by TWA were to commence with the deposition of Hughes on April 23, 1962.

This schedule was subsequently amended by the Special Master. The deposition of Hughes was set for September 24, 1962, then adjourned to October 29, 1962, and finally set for February 11, 1963. Although Hughes himself was never served with process as a party, the Special Master ruled that Toolco would be responsible for his appearance at the deposition, and Toolco did not contest this ruling.

On January 10, 1963, Judge Metzner denied an application by Toolco to further postpone the deposition of Hughes, so that Toolco might continue with its own depositions. On January 14, Toolco moved to have the deposition of Hughes taken only on written interrogatories, and in the event that this was denied, further moved to have set down for hearing a motion which it had originally made in August, 1961 to dismiss the complaint. Characterizing

this motion as appearing to be "another attempt to put off the deposition of Hughes", Judge Metzner denied the request to have the deposition taken by interrogatories. As to the second branch of the motion, Judge Metzner observed that the case "is not in a posture for a meaningful disposition of the motions to dismiss the complaint or for summary judgment" and noted the agreement of Toolco on several occasions that such a motion was premature. However, the Court further stated that it "cannot prevent defendant Toolco from pressing these motions at this time" and set the motions down for argument.

After oral argument on February 6, 1963, Judge Metzner denied Toolco's motion from the bench and entered a formal opinion and order the following day. (Reported at 214 F. Supp. 106). In that opinion, Judge Metzner stated that "as to the merits of the motion, there is no doubt that the complaint on its face sets forth a claim against the defendants and is not subject to dismissal under rule 12(b)(6)". Judge Metzner further ruled that the acts of the defendants alleged in the complaint were not exempted from the antitrust laws by virtue of certain orders of the Civil Aeronautics Board, and that the C.A.B. did not have exclusive primary jurisdiction over the subject matter of the complaint.

Almost immediately thereafter, at a pre-trial conference before Judge Metzner on Friday, February 8, 1963, counsel for Toolco announced that Hughes would not appear for the deposition scheduled for the following Monday, February 11. Toolco also declared its unwillingness to produce as previously ordered certain income tax returns, as well as certain other documents for which a claim of attorney-client privilege had been made but rejected by the court. Toolco also filed a written "Notice of Position" dated February 8, which recited in part that:

"Toolco hereby elects, subject only to whatever relief it may hereafter obtain, to rest on the merits of its positions as heretofore taken so that it may avoid the burdens and expenses involved in further pre-trial and trial proceedings prior to the time that an appellate court has had the opportunity to rule upon the decisions and orders heretofore made herein."

Counsel for Toolco elaborated on this position at the pre-trial conference on February 8. Adverting to the earlier ruling of the Special Master that Toolco would be responsible for Hughes' compliance with the deposition subpoena, with the possible sanction of a default if the subpoena were not complied with, counsel stated that "the Tool Company did not seek a review of those rulings of the Special Master by the Court and accepted in effect the responsibility placed on it by that ruling." (Tr. of Feb. 8, p. 9). He also stated Toolco's awareness of the possible consequences of a failure to comply with the discovery procedures:

"I have also had occasion to describe to my client, the Hughes Tool Company, the sanctions available under the Rules by reason of a respectful declination or election to stand on the questions of law which have been decided to date and not to proceed any further with respect to discovery proceedings. I have particularly called to their attention the provisions of 37(d) —Rule 37(d)—of the Federal Rules, with respect to the sanctions which could be applied by the Court on the Tool Company. [Tr. of Feb. 8, p. 9]

• • • • •

"The Tool Company does want to rest on the merits of its position, and it does so fully aware of the sanctions which the Court, in its discretion, may impose upon the Tool Company. . . . [*Ibid.*, p. 11]

• • • • •

"We are fully aware—my client is fully aware—that by insisting on a right to obtain a review on the legal questions which have been decided to date, and should it develop that they are in error, as indicated by your Honor's decisions and rulings, as a consequence they may be deprived of further defending on the merits, other than on the question of damages." [*Ibid.*, p. 12]

In response to questions from the Court, counsel advised that embraced within the contemplation of the "notice of position" was an advice to the Court that Hughes would not appear for the deposition on February 11, and that plaintiff could take any proceedings it is advised to take by way of sanctions under Rule 37. [Tr. of Feb. 8, p. 20] When counsel for TWA questioned whether Hughes would be bound by the anticipatory default, Toolco further waived the right to any defense against sanctions should Hughes in fact appear for the deposition:

"The Court: • • • Now, Mr. Davis says that as far as the defendant Hughes Tool Company is concerned, they will admit today that Mr. Hughes will not appear on Monday and that as a result you may then take whatever steps you wish to pursuant to Rule 37 [sic].

"I would also like Mr. Davis to state for the record that if by chance Mr. Hughes should appear at the courthouse on Monday, despite what has transpired here this afternoon, that will be no defense to any proceeding taken by T.W.A.

"Mr. Davis: I will so state, your Honor." [Tr. of Feb. 8, pp. 48-49]

Toolco also re-iterated its intention not to produce the documents which it had been ordered to produce, and the Court summarized the state of the proceedings to counsel for the plaintiff and the defendants on the counterclaims as follows:

"The record is now set for you to take whatever action you wish to take on the counterclaims and for Mr. Sonnett to take whatever action he wishes to take on the claims based on the default of Mr. Hughes on Monday.

"Secondly, you have the failure to produce the tax documents, which is an individual and separatr [sic] ground for proceeding; and you have the failure to produce the attorney-client documents, which are a separate and individual ground for proceeding." [Tr. of Feb. 8, pp. 59-60.]

After counsel for Toolco again stipulated as to the binding nature of these acts, the hearing was adjourned.

Thereafter, on February 15, 1963 TWA moved to amend the ad damnum portion of the complaint and formally moved for default judgment pursuant to Rule 37. At the hearing on February 8, counsel for TWA had intimated an intention to increase the amount of damages which TWA was seeking. On May 3, 1963 Judge Metzner granted the motion to amend the complaint and directed that default judgment should be entered for TWA, with a hearing to be held to determine the amount of damages. The question of "the amount of the damages to be paid" was referred to the Special Master previously designated to preside over the discovery proceedings. The counterclaims were also dismissed with prejudice. The opinion is reported at 32 F.R.D. 604. As will appear hereafter, the commencement of the damage hearings was long delayed.

In granting this relief to plaintiff, Judge Metzner reviewed the history of the proceedings to date, and stated:

"It is clear that the deposition of Hughes is essential for the proper presentation of TWA's case. It is also clear that the failure of Hughes to appear on February

> 11th for his deposition was the result of a clear and studied determination by Toolco after all efforts to postpone the appearance of Hughes had failed. The default was deliberate and willful and justifies the court in entering a default judgment. . . . " 32 F.R.D. at 607.

The order was certified by Judge Metzner for immediate appeal.

On June 2, 1964, the Court of Appeals, Second Circuit, affirmed the propriety of the entry of the default and also the earlier decision of Judge Metzner relating to the Court's jurisdiction. The decision of the Court of Appeals is reported at 332 F. 2d 602. After ruling that the Civil Aeronautics Board did not have primary jurisdiction over the anti-trust activities alleged and that prior orders of the C.A.B. did not immunize the acts alleged in the complaint from the operation of the anti-trust laws, the Court went on to uphold the complaint as stating a cause of action under the anti-trust laws:

> "The defendants maintain that in any event the complaint fails to state facts sufficient to establish the jurisdiction of the district court. They claim that the allegations of antitrust violations in the complaint are wholly conclusory and that the specific transactions alleged to have been effected by the defendants do not state a cause of action under the antitrust laws. We do not agree. We cannot say that the specific transactions alleged in TWA's complaint—that Toolco refused to finance aircraft acquisitions by TWA unless TWA agreed to purchase planes from no supplier other than Toolco; that Toolco required TWA generally to boycott all other suppliers of aircraft; that the defendants have attempted through various means to monopolize a substantial segment of interstate and foreign air commerce—are on their face insufficient to

support a claim of antitrust violations, a claim which surely falls within the jurisdiction of the district court. The allegations state the outlines of a tying arrangement, an economic boycott of the defendants' competitors, and an attempt to monopolize commerce, all unlawful under the antitrust statutes. It would be particularly inappropriate to find these allegations insufficient to establish the district court's jurisdiction inasmuch as the defendants denied the plaintiff the right through pre-trial discovery to add more detail and substance to the allegations set forth in the complaint.

* * * * *

"We are satisfied that the complaint sufficiently states a cause of action and establishes the district court's jurisdiction." 332 F. 2d at 610-11.

With respect to the dismissal of the counterclaims with prejudice, the Court held that one such counterclaim against additional defendants should have been dismissed for lack of jurisdiction, but otherwise affirmed the dismissal of the counterclaims with prejudice as a consequence of the default. In doing so, the Court affirmed the rulings of the District Court that required production of the tax documents and those documents as to which the claim of attorney-client privilege had been claimed, and affirmed the propriety of granting a judgment by default in view of the non-compliance with these orders and the failure of Hughes to appear as ordered.

"The sanction of judgment by default for failure to comply with discovery orders is the most severe sanction which the court may apply, and its use must be tempered by the careful exercise of judicial discretion to assure that its imposition is merited. However, where one party has acted in willful and deliberate disregard of reasonable and necessary court orders

and the efficient administration of justice, the application of even so stringent a sanction is fully justified and should not be disturbed. [citations omitted]

"Hughes' deposition was absolutely essential to the proper conduct of the litigation. Yet he and Toolco seized upon every opportunity to forestall this event. To this end they demanded the production of a multitude of documents by TWA and the additional defendants and secured successive adjournments of the deposition. Indeed, Hughes and Toolco seemed to look upon the entire discovery proceedings as some sort of a game, rather than as a means of securing the just and expeditious settlement of the important matters in dispute. It was only at the very eve of the Hughes deposition—after the other litigants had been put to much delay and expense—that the defendants made a 'business decision' to terminate discovery.

"Hughes' conduct is particularly intolerable in a large and complex litigation such as this one. The protracted antitrust suit taxes the energies and resourcefulness of each party to the litigation; and it consumes much time of the court and the special masters it appoints. Tactics such as Hughes' serve only to frustrate the implementation of the discovery machinery devised by the federal judiciary to expedite the handling of such complex litigation. See Handbook of Recommended Procedure for the Trial of Protracted Cases, Report of the Judicial Conference Study Group on Procedure in Protracted Litigation, 25 F.R.D. 351 et seq. (1960).

"In the light of all these circumstances, the district court was not obliged to employ sanctions less severe than the dismissal of the counterclaims with prejudice. Whatever lesser sanctions might have sufficed with regard to the documents withheld by the defendants, it seems to us that a dismissal of the counterclaims was appropriate, in view of Hughes' intransigence after intensive and expensive discovery proceedings already protracted for more than one year." 332 F. 2d at 614-15.

The Supreme Court granted certiorari as to the decision of the Court of Appeals, but the writ of certiorari was subsequently dismissed as improvidently granted. 380 U. S. 248-9 (March 8, 1965).

On May 10, 1965, TWA moved before J. Lee Rankin, the Special Master, for an order adopting certain interim findings of fact, based on the allegations of the complaint. The interim findings were sought by TWA "as a basis for the submission of its further evidence as to the amount of its damages." On July 30, the Special Master entered an order which outlined the effect of the default and which tentatively adopted some of the proposed interim findings while tentatively refusing to adopt others.

The failure of the Special Master to adopt the omitted findings was appealed by TWA to the district court. On November 16, 1965, Judge Metzner entered an opinion and order which did not deal with specific findings but which further stated the law pertaining to the effect of the default and returned the matter to the Special Master. 38 F.R.D. 499 (1965). These two decisions by the Special Master and Judge Metzner, as well as a subsequent decision by Judge Metzner noted below, are described more fully elsewhere in this opinion.

Shortly thereafter, Toolco moved before Judge Metzner for an order calling on TWA to set forth the facts which would preclude a finding that Toolco had never been engaged in the manufacture or supply of aircraft in competition with any other manufacturer or supplier. This motion was denied by Judge Metzner on January 4, 1966.

J. Lee Rankin, who had been appointed Special Master to determine the amount of damages, resigned this position upon being appointed Corporation Counsel of the City of

New York. The undersigned was appointed as Special Master under the same terms as the original reference.

On May 2, 1966, the hearing on damages formally commenced with the submission of the plaintiff's direct testimony on damages in written narrative form. Defendants' direct testimony was also thereafter submitted in written narrative form. All witnesses were subjected to thorough cross-examination, which (together with the oral testimony of one rebuttal witness for plaintiff) covers nearly 11,000 pages. More than 800 exhibits were also introduced by both parties. The hearings closed on April 9, 1968, and printed briefs have been submitted by both parties.

Effect of the Default

The first question which must be considered is the effect of the default on plaintiff's case and the extent of the burden which plaintiff must still meet in order to justify recovery. Despite prior rulings in the case, this has been the subject of continuing disagreement between the parties in the damage hearings.

Prior to the commencement of the hearings on damages, plaintiff moved before Special Master Rankin, as noted above, for certain findings of fact based on the allegations of the complaint, which were requested on an interim basis as a foundation for the submission of its evidence on damages. Plaintiff took the position that the default justified the entry of such findings without further offer of proof by plaintiff. After full written and oral argument, Special Master Rankin entered on July 30, 1965 an opinion and order which discussed in detail the effect of the default and which adopted certain of the proposed findings on an interim basis. However, Special Master Rankin declined,

also on an interim basis, to adopt the balance of the proposed findings. A full statement of his opinion is required to properly evaluate the positions of the parties in the damage hearings. The Special Master described the effect of the default as follows:

"The default having been entered for the reasons indicated above, the question remains as to its effect. The default is an admission implied by law as a result of the default, which thereupon dispenses with any proof of the facts alleged in the complaint, except as to unliquidated damages. The default not only has the legal effect of an admission of the allegations, but precludes any showing of defensive matters in regard thereto except as to damages. When the damages are not liquidated, there is no admission as to the damages by reason of the default, and proof thereof is required. (See 3 Freeman, Law of Judgments, Secs. 1281-1282, pp. 2662-2664 (Tuttle's Ed. 1925).

• • • • •

"All parties agree that *Thomson* v. *Wooster,* 114 U. S. 104 (1885) is the leading case by the Supreme Court of the United States on the effect of a default. It is recognized in that decision that upon the entry of a decree *pro confesso* all matters alleged with sufficient certainty are admitted. However, it is as to those matters not adequately alleged with regard to certainty, or subjects which from their nature and the course of the court proceedings require an examination of details imposing an obligation on the complainant to furnish proof, that differences arise.

• • • • •

"While conclusions of law are for the court in the determination of any judgment to be awarded and it thus decides whether the damages proved did in fact flow from the violations of law alleged, the defendants after their default no longer have the right to contest

whether the asserted violations did in fact occur. They are limited to pointing out such information or evidence as may be in the record where the court should take judicial notice of records or facts which show that the allegations could not be true.

"When the plaintiff has pleaded a 'statement of claim' showing that he is entitled to relief (F.R.C. P. Rule VIII (a)), he may yet be unable to prove the case alleged. But that is not a problem in a default where the allegations are, in legal effect, admitted. Defaulting defendants are allowed to raise questions as to allegations contrary to judicially known facts because when a pleader states matter as facts which is not out of harmony with that which the court judicially knows, such averments in the pleading are disregarded. *Greeson* v. *Imperial Irrigation District,* 59 F. 2d 529 (9th Cir. 1932); *Interstate Natural Gas Company* v. *Southern California Gas Company,* 209 F. 2d 380 (9th Cir. 1953). See also In Re: *Woodmar Realty Company,* 294 F. 2d 785 (7th Cir. 1961); *Cert. Denied,* 369 U. S. 803 (1962) and *Glen Coal Company* v. *Dickenson Fuel Company,* 72 F. 2d 885 (4th Cir. 1934).

• • • • •

"Thus, at this stage of the case, the court is obligated to arrive at a judgment and that judgment must be just. Therefore, whenever a court would take judicial notice of the proceedings of public bodies such as the Civil Aeronautics Board or other Federal commissions or the files of the court or any similar matters and such records and information would satisfy the court that any allegation of the complaint or any part of an allegation could not be true, the court is not required by reason of the default to accept such allegation, or such part of it.

"The effect of information appearing in the record up to this date, or as hereafter developed, bearing upon the truth of the allegations of the complaint, is somewhat different. Where such evidence clearly shows

that the allegation or part of an allegation could not possibly be true, the court will not stultify itself by accepting such allegation or part of it in the face of such evidence. Where, however, the evidence merely may tend to show that the allegation may not be maintained and the defendants by reason of the nature of their default have materially interfered with the plaintiff's ability to produce evidence which might support the allegation or disprove such record evidence, the court is not required to reject the allegations. Such a result would reward the defendants for their interference with the processes of the court.

"For the reasons indicated the defendants, at this point, do not have the right to produce evidence to try to establish in any manner that the allegations of the complaint other than as to damages cannot be maintained. That opportunity was given up by their decision to default. The rights of plaintiff resulting from the default should not be taken away by any refinements and legalistic reasoning of any considerations that do not reach to the level of necessary and proper requirements for a fair and just hearing on the question of damages.

"On the other hand, it should not be forgotten that the court in entering a judgment of default is performing 'a judicial act'. *Pope* v. *United States*, 323 U. S. 1. Furthermore, Rule 55(b)(2), under which the court directed that this hearing be held recognizes that such is the nature of the responsibility, at this point in the default proceeding, by stating:

> 'If, in order to enable the court to enter judgment or to carry it into effect, it is necessary to take an account or to determine the amount of damages or to establish the truth of any averment by evidence or to make an investigation of any other matter, the court may conduct such hearings or order such references as to it seems necessary and proper . . .'

"It is within the framework described that the Special Master must proceed. Recognizing that it is his duty on behalf of the court to be satisfied of the liability of the defendants, as well as of the proof, according to law, of the amount of damages claimed, he must also be satisfied by a preponderance of the evidence that any damages were proximately caused by the violations of law alleged in the complaint. Therefore, in the belief that the damage portion of the trial will be advanced by his doing so, the Special Master has sustained a considerable portion of the plaintiff's motion and has adopted certain findings requested, but only on an interim basis, for the purposes of the hearings on damages. He is reserving the right, however, before such hearings are closed to modify any or all of said interim findings if he finds it desirable or necessary in order that justice may be promoted in this case. The Special Master has also declined to adopt certain interim findings proposed in the motion. The findings adopted are set forth in Exhibit AA attached to this opinion and order and made a part hereof as fully as if set out herein. [Exhibit AA is not reproduced herein.]

"The failure to adopt, at this time, any proposed finding is not a determination by the Special Master that such finding is false, or disproved, or that it will not be fully established by the close of the hearings on damages. Such proposed findings have not been adopted at this time because in each instance they appear directly or indirectly to have a bearing upon the question of damages, and may be affected either partially or wholly by the evidence which is adduced in proof of damages herein.

"The failure to now adopt such proposed interim findings, is not to be construed as placing such findings at issue, except to the limited extent that there is any information of which a court would take judicial notice, or there is evidence in the record which would prove such findings to be false or there may be evidence prop-

erly adduced as a part of these hearings on damages which would establish such findings to be false and is brought to the attention of the Special Master before the hearings close. The defendants are not allowed by the present refusal to adopt such tendered findings to contest them on the merits as they could do if there had been no default."

On appeal by plaintiff to Judge Metzner from portions of the Special Master's opinion and order, the legal effects of the default were again thoroughly briefed and argued orally. On November 16, 1965, Judge Metzner entered an opinion and order disposing of the appeal (reported at 38 F.R.D. 499). This opinion and order made no reference to any specific proposed findings which the Special Master had agreed or declined to adopt. It did, however, summarize generally the legal effect of the default, clarified a seeming ambiguity in the opinion of the Special Master relating to liability and proximate cause, and returned the case to the Special Master for proceedings in accordance with the Court's opinion. That opinion is, of course, controlling here.

Pointing out that the reference to the Special Master was made "to determine the amount of damages", Judge Metzner described the effect of the default as follows:

"Liability is not an issue for the Special Master except in a very limited sense. The sufficiency of the complaint has already been established by the denial of defendant's motion to dismiss. 214 F. Supp. 106 (S. D. N. Y. 1963), *aff'd*, 332 F. 2d 602 (2d Cir. 1964), *writ of cert. dismissed*, 380 U. S. 248, 85 S. Ct. 934, 13 L. Ed. 2d 817 (1965). By virtue of the default the defendant has admitted the truth of the well-pleaded allegations of the complaint. *Thomson* v. *Wooster*, 114 U. S. 104, 5 S. Ct. 788, 29 L. Ed. 105 (1885).

"Allegations are not well pleaded if they are shown to be indefinite or erroneous by other statements in

the complaint (*Thomson* v. *Wooster, supra*); or where they are contrary to facts of which the court will take judicial notice (*Glenn Coal Co.* v. *Dickinson Fuel Co.*, 72 F. 2d 885, 889 (4th Cir. 1934)); or where they are not susceptible of proof by legitimate evidence (*Cohen* v. *United States*, 129 F. 2d 733 (8th Cir. 1942); *Greeson* v. *Imperial Irr. Dist.*, 59 F. 2d 529 (9th Cir. 1932)); or where they are contrary to uncontroverted material in the file of the case (*Interstate Nat. Gas Co.* v. *Southern Calif. Gas Co.*, 209 F. 2d 380, 384 (9th Cir. 1953); *In re Woodmar Realty Co.*, 294 F. 2d 785 (7th Cir. 1961), *cert. denied*, 369 U. S. 803, 82 S. Ct. 643, 72 L. Ed. 550 (1962)). However, it may be shown by plaintiff, in the context of this case, that some matters of which the court may take judicial notice should not be so noticed. See McCormick, Evidence § 330 (1954). Where file material is involved, if the plaintiff did not have full opportunity to meet or controvert such material, then it should not be used to nullify the allegation. If evidence merely tends to show that an allegation is not true, the allegation must be taken as true in this default. Finally, the plaintiff is entitled to the benefit of all reasonable inferences from the evidence tendered."

Judge Metzner's opinion makes clear that the failure of the Special Master to adopt certain of the findings did not constitute a determination that the allegations on which they are based are not well-pleaded:

> "The Special Master stated that the failure to adopt any proposed finding is not a determination that such finding
>
> 'is false, or disproved, or that it will not be fully established by the close of the hearings on damages.'
>
> Such proposed findings are not at issue except to the limited extent noted above. The Special Master specifically stated that

> 'the defendants are not allowed by the present refusal to adopt such tendered findings to contest them on the merits as they could do if there had been no default.'"

It is thus clear from the Court's opinion that even those findings not adopted by the Special Master are admitted by the default except to the extent that they can be disproved within the framework of the well-pleaded allegations rule as set forth by the Court. Furthermore, the Court's opinion also establishes that the allegations are presumed to be well-pleaded, and that the burden is on the defendants to show that they are not:

> "Attempts by defendant to escape the effects of its default should be strictly circumscribed. It should not be afforded an opportunity to litigate what has already been deemed admitted in law. In the absence of an exceedingly strong showing that an allegation is untrue under the rules set forth above, the allegation stands as admitted."

A subsequent opinion and order by Judge Metzner on January 4, 1966 also shows that the defendants carry the burden of disproving each allegation of the complaint, despite the Special Master's failure tentatively to adopt a finding based on a particular allegation.

One of the findings which the plaintiff had requested but which the Special Master failed to make at that point in the proceedings was to the effect that Toolco was engaged in the development and manufacture of aircraft, as alleged in the complaint. The Special Master did adopt a portion of the same finding which stated that Toolco was engaged in the acquisition of aircraft from manufacturers in various states and in the sale and lease of such aircraft in interstate commerce, but failed to adopt a further position to

the effect that such sales and leases were "to air carriers in various other states". The defendants, as above mentioned, moved before Judge Metzner in December, 1965 for an order requiring TWA to set forth the facts on which TWA would rely in order to preclude the entry of a finding of fact as follows:

> "The facts before this Court establish that at no time during the period covered by the complaint herein were the defendants, or any of them, engaged in the manufacture or supply of commercial transport aircraft in competition with any manufacturer or supplier of such aircraft."

Despite the failure of the Special Master to adopt the findings noted above, Judge Metzner ruled that the burden with respect to these facts still rested on the defendants rather than the plaintiff, and denied the motion:

> "It asks that plaintiff come forward to negative a fact which defendant asserts as true. The shoe is on the other foot."

Finally, it may be noted that there is no procedural requirement for making such interim findings before taking evidence in the hearing on damages, and the Special Master's disposition of the request for findings appears to have been simply an exercise of the Master's power to regulate the proceedings before him, which is generally subject to review only for abuse of discretion. See 5 Moore's Federal Practice, ¶ 53.06. In fact, during oral argument before Judge Metzner on the motion to review the Special Master's failure to adopt certain of the proposed findings, both counsel for Toolco and the Court treated the Special Master's order as an exercise of discretion in the conduct of the proceedings. Counsel for Toolco asserted that the Mas-

ter could have denied all of the proposed findings without committing reversible error, and the Court agreed, stating that the Master "wanted to lay down some ground rules which could perhaps shorten the hearing." (Tr. of Sept. 28, 1965, pp. 15-16)

It is, therefore, clear that the burden of disproving *all* the allegations of the complaint still rests on the defendants, and the failure of the Special Master to adopt certain findings of fact has not created in the plaintiff a burden of proving those facts. Although the defendants have asserted that the findings which were not adopted represent "gaps" in plaintiff's case which plaintiff is required to fill in through proof, this contention cannot be and is not sustained.

The burden assumed by a defaulting party is a heavy one. Its weight is illustrated by *Thomson* v. *Wooster*, 114 U. S. 104 (1885), which was cited by Judge Metzner, and by other early Supreme Court decisions. In *Thomson*, the plaintiff sued for infringement of a re-issued patent on a folding guide for sewing machines. The original patent was dated October 5, 1858, had been extended for seven years in 1872, and had been re-issued in December 1872. The complaint alleged that numerous suits had been brought and sustained against other infringers, and sought an accounting of profits and damages. The defendants appeared but failed to file an answer to the complaint, and a decree *pro confesso* was entered. The case was referred to a master to determine the profits and damages. After an award by the master, the defendants appealed, asserting among other arguments that the re-issued patent was invalid because it was for an invention other than the one covered by the original patent, and also because an excessive amount of time elapsed between the original issue

and the re-issue, and as a further reason because the complaint alleged that successful suits had been brought on the original patent, whereas invalidity or inoperativeness were conditions precedent of a re-issue. These arguments were rejected by the Supreme Court.

"A confession of facts properly pleaded dispenses with proof of those facts, and is as effective for the purposes of the suit as if the facts were proved; and a decree *pro confesso* regards the statements of the bill as confessed.

* * * * *

"... it seems clear that the defendants, after the entry of the decree *pro confesso*, and whilst it stood unrevoked, were absolutely barred and precluded from alleging anything in derogation of, or in opposition to, the said decree. . . . The attempt, on the hearing before the master, to show that the reissued patent was for a different invention from that described in the original patent, or to show that there was such unreasonable delay in applying for it as to render it void under the recent decisions of this court, was entirely inadmissible because repugnant to the decree. The defendants could not be allowed to question the validity of the patent which the decree had declared valid. The fact that the reissue was applied for and granted fourteen years after the date of the original patent would, undoubtedly, had the cause been defended and the validity of the reissued patent been controverted, been strongly presumptive of unreasonable delay; but it might possibly have been explained, and the court could not say as a matter of law, and certainly, under the decree of the court, the master could not say, that it was insusceptible of explanation. And on this appeal it is surely irregular to question the allegations of the bill. If anything appears in those allegations themselves going to show that the decree was erroneous, of course it is assignable for error; but any attempt

to introduce facts not embraced in those allegations, for the purpose of countervailing the decree, is manifestly improper. The introduction of the original patent, pending the appeal, was clearly irregular." (114 U. S. at 110 and 114)

The Supreme Court then noted the argument of defendants that as a matter of law the re-issued patent must be void, since (quoting the defendants' assignment of errors),

"'... the bill avers that during the fourteen years of the original term of patent the validity of said letters patent was established in numerous suits in the Circuit Courts of the United States, and that all persons sued took licenses and paid therefor, as well as many others not sued, thereby averring, in substance, that the original letters patent were *valid* and *operative*:

"'Wherefore, appellants ask this court to hold that the original letters patent having been *valid* and *operative,* as averred by complainant, for over fourteen years, no reissue thereafter could be legally obtained, because *invalidity* or *inoperativeness* are conditions precedent to the grant of a reissue.'

"The answer to this assignment is obvious. The suits brought on the original patent may have been for infringements committed against particular parts of the invention, or modes of using it and putting it into operation, as to which the specification was clear, full and sufficient; whilst, at the same time, there may have been certain other parts of the invention, or modes of using it and putting it into operation, as to which the specification was defective or insufficient, and which were not noticed until the application for reissue was made; or, in the original patent the patentee may have claimed as his own invention more than he had a right to claim as new—a mistake which might be corrected at any time. At all events, the court cannot

say, as mere matter of law, that this might not have been the case." (114 U. S. at 115)

The Supreme Court's disposition in *Thomson* of the defendants' attacks on the validity of the allegations in the plaintiff's bill shows the exceedingly heavy burden assumed by a defaulting party who attempts to disprove the allegations of the complaint. Even when relying on matters appearing of record, the defendant must show that such matters conclusively, and beyond all doubt, prove that the allegations could not be true.

Another case illustrating this heavy burden is *Harshman* v. *Knox County,* 122 U. S. 306 (1887). Plaintiff had sued the county on certain bonds which the county had issued, and when the county defaulted, obtained a judgment of $77,374.46. He then brought a proceeding by mandamus against the Justices of the county court to compel them to levy a tax sufficient to pay the judgment. The county defended on the ground that the bonds were issued pursuant to a special statute (incorporating a railroad) which authorized a certain rate of tax to support the bonds, that the county had levied such tax and still had insufficient money to pay, and that there was no authority to levy additional taxes. Although the bonds, which were attached to the original complaint, recited that they were issued pursuant to that special statute, the plaintiff in his complaint alleged that the bonds were issued pursuant to a different and more general statute which granted unlimited taxing power. As recited in the Supreme Court's opinion,

". . . the contention of the respondents in the Circuit Court was, that they were entitled to show by the recitals in the bonds themselves, in contradiction to those contained in the judgment founded upon them,

that they were in fact issued under the charter of the corporation, and not under the general law. On this point, the judgment of the Circuit Court was in their favor, denying to the relator the peremptory writ of mandamus, and this decision is now alleged as error, for which the judgment should be reversed." (122 U. S. at 316)

Noting that the question was whether the county was estopped to deny that the bonds were issued under the general statute, the Supreme Court opinion stated:

"The averment to that effect in the petition in the action, if material and traversable, was confessed by the default. * * * The averment as to the character of the bonds, and the grounds and authority upon which they were founded, so as to constitute them legal obligations of the county of Knox, contained in the petition, was clearly material to the plaintiff's cause of action. If the defendant had denied it by a proper pleading, the fact would have been put in issue, and the plaintiff would have been bound to prove it. * * * In the absence of a denial, the fact as stated in the petition of the plaintiff is confessed by the default, and stands as an admission on the record, of its truth by the defendant." (122 U. S. at 316-317)

The judgment of the Circuit Court was reversed, with directions to award a peremptory mandamus.

Proof of Basic Anti-Trust Allegations

Against the background of decisions such as these, and having established that defendants bear the burden of disproving the allegations in the complaint, regardless of the Special Master's interim findings, it must now be determined whether any of the allegations have been shown

to be disproved within the narrow confines of the "well-pleaded allegations" rule. The chief allegation which defendants claim to be disproved is the allegation that Toolco was engaged in the development and manufacture of aircraft and the supply of aircraft to air carriers. The defendants claim that this allegation is disproved by various C.A.B. opinions, orders and records which are said to be appropriate for judicial notice, and by certain exhibits introduced during the hearings on damages as well as by the testimony of certain of plaintiff's witnesses during the hearings.

The question of judicial notice is an important one, for it underlies a major portion of Toolco's defense on liability. However, Toolco's reliance upon judicial notice of official documents and records is misplaced. Although judicial notice may indeed be taken of official reports such as reports of administrative agencies, the notice extends only to the existence of the report and its contents, and not to the accuracy of facts recited in the report. For example, in *Stasiukevich* v. *Nicolls*, 168 F. 2d 474, 479 (1st Cir. 1948), Judge Magruder denied judicial notice as to facts recited in an official Congressional committee report:

> "The official report of a legislative or congressional committee is admissible in evidence in a judicial proceeding, as an exception to the hearsay rule, where the report, within the scope of the subject matter delegated to the committee for investigation, contains findings of fact on a matter which is at issue in the judicial proceeding. See Wigmore on Evidence, §§ 1662, 1670. Indeed, the court could properly take judicial notice of the report, without its formal introduction into evidence. But though the court may receive the report in evidence, or may take judicial notice of its existence and contents, this does not mean that the court must

accept the findings in the report as indisputable truth; the findings are merely evidence of the facts asserted. See Unitd [sic] States v. Aluminum Co. of America, 2 Cir., 1945, 148 F. 2d 416, 445, 446; Morgan, The Law of Evidence, 1941-1945, 59 Harv. L. Rev. 481, 485-86 (1946)."

McCormick on Evidence, §328 at p. 704, also notes that while courts will take judicial notice of official documents, this merely "dispenses with formal authenticating proof of the genuineness of the documents" and "does not mean that if the document is a statement of facts, such facts are themselves judicially noticed."

No authority has been cited to support taking judicial notice of facts merely because they are contained in the findings of an administrative agency, and indeed, such treatment would accord the findings of an administrative agency greater weight than is accorded the findings of a court of law. Determinations of fact by a court of law may be used in a separate proceeding only within the narrow confines of the doctrines of res judicata and collateral estoppel, and are not binding on other parties. A Court's reliance on findings of fact in another case may constitute reversible error. Cf. *Radovich* v. *Cunard,* 364 F. 2d 149 (2nd Cir. 1966). If judicial notice cannot be taken of facts contained in findings of a court of law, it would seem that *a fortiori* judicial notice may not be taken of facts simply because they are contained in findings of an administrative agency. Such findings may be of some probative value under the authorities cited above, and in the absence of a default the C.A.B. materials might be quite persuasive. However, they do not permit judicial notice to be taken of the assertion that Toolco was never a manufacturer or supplier of aircraft.

The existence and contents of an administrative order or a document filed with an administrative agency may under certain circumstances be of relevance to a judicial proceeding apart from the facts recited therein. This is true, for example, with regard to the question of whether an administrative agency has primary jurisdiction over the subject matter being litigated. *Interstate Nat. Gas. Co.* v. *Southern Calif. Gas. Co.*, 209 F. 2d 380 (9th Cir. 1953). However, the relevance of C.A.B. orders and filings to primary jurisdiction in this case has already been considered and disposed of by Judge Metzner and by the Court of Appeals.

Even if judicial notice were taken of the fact that no U. S. air carrier ever purchased a commercial transport aircraft manufactured by Toolco, this would not of itself be sufficient to disprove the allegation that Toolco was "engaged in" the development and manufacture of aircraft. In addition to the general allegation of "engaging" in paragraph 3 of the complaint, there is also an allegation that "defendants and General Dynamics Corporation (hereinafter called 'Convair') entered into an arrangement for the joint development of a jet-powered aircraft to be manufactured by Convair and to be supplied by the defendants to air carriers, including TWA" (Paragraph 14) as well as an allegation that "the defendants also entered into a plan under which Toolco would itself commence the manufacture of a jet-powered aircraft" with the intent that "Toolco would furnish this aircraft . . . both to TWA and to other air carriers." (Paragraph 15). While these efforts were eventually abandoned, they would appear to constitute "engaging in" the development and manufacture of aircraft. Also, they occurred at the period of time when TWA alleges that it should have been arranging for purchases from

other suppliers such as Boeing Aircraft Corporation (Boeing). Furthermore, there is evidence which would suggest that the development and manufacture of the Convair 880 aircraft, which did in fact take place, had elements of a joint venture between Toolco and Convair, with Toolco to benefit financially from the sale of such aircraft over and above the initial order for 40 placed by Toolco and Delta Airlines Inc. (Delta). There is also evidence that Hughes took steps to find buyers, including Delta, for the Convair 880. Defendants do not seriously contest these facts, and in many cases admit them. In view of the specific allegations of paragraphs 14 and 15 of the complaint, which are admitted by the default and which have not been disproved by the defendants under the "well-pleaded" rule, and in view of the additional evidence suggesting what might have been shown to be a joint venture between Convair and Toolco, it is not possible to find that the allegation of "engaging in" the development and manufacture of aircraft could not be true. The testimony of Robert W. Rummel cited at p. 55 of defendants' brief likewise does not show that the allegation could not be true, but at best tends to show that it may not be true. This is not a sufficient showing under the rules laid down in Judge Metzner's opinion:

> "If evidence merely tends to show that an allegation is not true, the allegation must be taken as true in this default."

The same holds true with respect to the allegations of the complaint that Toolco was a supplier of aircraft purchased from other manufacturers. The general allegation that Toolco was engaged in the supply of such aircraft to airlines (Paragraph 3) is supplemented by allegations

that Toolco purchased aircraft from Boeing and Convair (Paragraph 17), that defendants caused six of the Boeing aircraft to be "diverted" to the principal transatlantic competitor of TWA (Paragraph 18), that defendants caused six of the Convair 880 aircraft to be leased to Northeast Airlines Inc. (Northeast), of which three had previously been assigned to TWA (Paragraph 22), and that Toolco also agreed to purchase Convair 990 aircraft from Convair and sought to have TWA purchase these aircraft from Toolco, rather than purchasing additional aircraft from Boeing as TWA proposed to do (Paragraphs 37 and 38). There was also evidence that Toolco purchased a large supply of jet engines from Pratt & Whitney Aircraft Corporation, which it subsequently sold at a profit.

Toolco does not deny that it purchased aircraft, or that it sold aircraft to TWA. In fact, it asserts that all of the aircraft which it purchased were purchased for TWA and as a convenience to TWA, and that TWA would have been unable to purchase such aircraft itself because of financial considerations. It does not deny that six Boeing aircraft purchased by Toolco from Boeing were assigned to Pan American Airways Inc. (Pan Am), or that six of the thirty Convair 880 aircraft originally purchased by Toolco from Convair were leased by Convair to Northeast, but it does contend that these were merely the disposition of aircraft which had been determined to be excess to TWA's needs by TWA's own management. Furthermore, it contends that since all aircraft sold by Toolco were manufactured by Boeing or Convair, there can be no question of restraining competition by Boeing or Convair, while Douglas Aircraft Corporation (Douglas), the third major manufacturer, was not in the running for TWA's orders in any case.

Here again, it is difficult to say how the issues would have been resolved had this case gone to trial. However,

in the context of the default, it cannot be said that defendants have met the difficult burden of showing that the supplier allegations are not well-pleaded. While a prospective purchaser could purchase Boeing or Convair jets from Boeing or Convair rather than Toolco, the element of delivery time was a factor which might cause such a purchaser to turn to Toolco rather than to the manufacturer directly. Jet aircraft, being an enormously expensive commodity, are not manufactured and sold from open stock. A purchaser from a manufacturer at a particular point in time would be offered certain dates for future delivery, depending on the manufacturer's backlog and production facilities at the time of order. On the other hand, Toolco might be able to offer the assignment of aircraft which had been ordered previously and which were scheduled for delivery at dates earlier than those which the manufacturer could offer. To the extent that only one manufacturer is involved, then it is true that the total number of aircraft sold by that manufacturer remains the same. However, it cannot be said as a matter of law that Toolco's ability to offer certain delivery dates to Pan American for Boeing aircraft might not have influenced Pan American to forego purchasing from Douglas, or that Northeast might not have purchased or leased from some manufacturer other than Convair if the Toolco 880's had not been available. Furthermore, price increases over a period of time by a manufacturer might mean that the manufacturer's price at the time of negotiation with a new customer was higher than that paid by Toolco. In fact, this appears to have been the case with the Pratt & Whitney engines. The fact that Toolco in this litigation refused to make available certain documents and information which might have had a bearing on its sales of aircraft and engines and the

profits or tax savings which it may have derived therefrom, makes it particularly difficult to sustain Toolco's contention that it purchased only for the benefit of TWA. There is, moreover, an allegation in the complaint that "Despite repeated requests by TWA, Toolco refused throughout the period 1956 to 1960 to assign to TWA the rights to acquire" the jets which Toolco had ordered from Convair and Boeing (Paragraph 18). This allegation has not been disproved under the "well-pleaded allegations" rule and therefore stands as admitted. It tends to rebut the argument that the aircraft were ordered solely for TWA.

Much of defendants' argument that Toolco was not a supplier of aircraft centers around evidence that Hughes and Toolco were acting in an effort to secure "the newest and finest equipment" for TWA. (Defendants' brief, p. 74, and generally pp. 73-94). However, the fact that Hughes and Toolco were interested in securing good aircraft for TWA is not inconsistent with an intention to act as a supplier of aircraft to TWA and to other airlines as well. Nor is the fact that aircraft were ordered to TWA specifications of itself conclusive that such aircraft were intended solely for TWA, since certain of these aircraft were in fact sold or leased to other airlines, namely Pan American and Northeast. Furthermore, there is evidence that Toolco ordered Convair 990 aircraft which were to be built to the specifications of American Airlines.

Although there is evidence to suggest that Toolco may have been purchasing solely for TWA, this does not constitute a sufficient showing on the part of defendants. Furthermore, the intention of Toolco in ordering the aircraft is a subject which undoubtedly would have been developed more fully had the deposition of Hughes been taken. The default foreclosed fuller examination of this question.

Under all of the circumstances, it cannot be said that defendants have disproved the "supplier" allegations within the limits of the "well-pleaded allegations" rule.

In short, the evidence relied on by Toolco merely tends to support its position and does not conclusively establish that the allegations could not be true. Moreover, in addition to the allegations of the complaint cited above, it is also alleged that Hughes was the sole stockholder of Toolco and controlled its activities (paragraph 4) and that Toolco in turn had acquired more than 78% of TWA's common stock (paragraph 11), which is far more than a controlling interest. Judge Metzner in his opinion of May 3, 1963 stated that:

> "It is clear that during all of the times covered by the complaint the management of TWA was controlled by Hughes personally." 32 F.R.D. at 606

Therefore, even a conclusive showing that the six Boeing jets and ten Convair jets were declared excess to TWA's needs with concurrence of the Hughes-dominated TWA management would not necessarily establish as a matter of law that Toolco had no responsibility for the decision to cut back, which Toolco asserts was the sole reason for the sale of aircraft to carriers other than TWA.

One other allegation in the complaint which may require special comment is the allegation that Atlas, though not named as a defendant, was a co-conspirator with defendants in seeking to restrain competition. Since Atlas was not named as a defendant, it has not been represented by counsel at any stage of this case. Furthermore, the occurrence of the default has precluded any examination of whether there is any evidence to support the charge of conspiracy.

The law of the default appears to require that Atlas be deemed to have conspired with Toolco for purposes of this litigation. The complaint alleges generally that Atlas, together with the defendants, engaged in a conspiracy and attempt to restrain trade in violation of various provisions of the antitrust laws (paragraph 9), that the acts of Atlas were done in furtherance of the offenses charged and with anti-competitive intent, for the profit of Atlas (paragraph 10), and that more specifically, Atlas joined with Toolco in attempting to force upon TWA a merger with Northeast, which would have enlarged the defendants' captive market for aircraft and would have furthered the anti-competitive scheme (paragraphs 21 and 47). Since the allegations of conspiracy have not been disproved within the limits of Judge Metzner's order, they must be taken as admitted as far as the defendants in this case are concerned. The fact that Atlas was not named as a defendant does not prevent a charge that Toolco conspired with Atlas. *U. S.* v. *Griffith*, 334 U. S. 100, 103 (1948). However, the "fact" of the conspiracy is taken to be true only for purposes of this litigation and between the parties to this litigation. There is no intent to bind Atlas or to suggest what outcome would have resulted as to it had the allegations of the complaint been litigated.

Proximate Cause

Apart from the "well-pleaded allegations" rule, however, the defendants argue that under the opinion of Special Master Rankin, proximate cause is not admitted for any purpose by the default. They assert that plaintiff has the burden of proving that any injuries which it suffered were proximately caused by antitrust violations of the defen-

dants. Although admitting that the default may have established the existence of antitrust violations for purposes of this proceeding, they assert that the default did not relieve the plaintiff of establishing this causal connection by means of proof submitted in the hearing on damages. In support of this position, they point to the statement in the Special Master's opinion that he "must also be satisfied by a preponderance of the evidence that any damages were proximately caused by the violations of law alleged in the complaint", a requirement flowing from the Special Master's duty "on behalf of the court to be satisfied of the liability of the defendants, as well as the proof, according to law, of the amount of damages claimed . . . ."

However, defendants' position cannot be sustained. Judge Metzner in his opinion noted that the Special Master's mention of a duty "to be satisfied of the liability of the defendants" might appear to be inconsistent with an earlier statement by the Special Master that "the defendants, at this point, do not have the right to produce evidence to try to establish in any manner that the allegations of the complaint other than as to damages cannot be maintained." Referring to this as an "ambiguity . . . which may need clarification", Judge Metzner stated that the conflict in approach was only an apparent one in light of the Special Master's entire opinion, that the matter was referred to the Special Master to "determine the amount of damages", and that "[l]iability is not an issue for the Special Master except in a very limited sense." The sufficiency of the complaint had already been upheld, and the default admitted all well-pleaded allegations of the complaint. Therefore, liability was an issue only to the extent that the defendants could show, within the rules laid out in Judge Metzner's opinion, that particular allegations in the

complaint were not well-pleaded. Thus under Judge Metzner's opinion (which is binding here), the reference to proximate cause in the Special Master's opinion is interpreted to mean that the plaintiff (as is customary) has the burden of establishing proximate cause, but that this burden is satisfied as to liability if proximate cause is adequately alleged in the complaint, unless the defendants are able to show that such allegations are not well-pleaded. It does not mean that the plaintiff must always prove proximate cause with evidence, regardless of a default.

This conclusion is fortified by the few authorities which bear upon the subject. In the recent case of *Jones* v. *Uris Sales Corp.*, 63 Civ. 2018 (S. D. N. Y. June 27, 1966), *affirmed* 373 F. 2d 644 on the basis of the District Court's opinion on this issue, Judge MacMahon rejected a similar argument by a defaulting defendant that the plaintiff had the burden of proving proximate cause in a hearing before a special master on the question of damages:

> "Defendants' second contention, that even if the allegations are 'distinct and positive,' plaintiff must still prove 'a causal relationship between the allegation deemed admitted and the damage resulting therefrom,' is an obvious attempt to cripple the rule of *Thomson* v. *Wooster* by qualifying it. Defendants have cited no authority in support of their contention, and we seriously doubt that any exists. In any event, the causal relationship is stated distinctly in the complaint...."

The implication of Rule 55, Federal Rules of Civil Procedure, also suggests that proximate cause can be admitted by a default. Under Rule 55, judgment can be entered without any hearing whatsoever if the amount of damages is fixed. Cf. *Ferraro* v. *Arthur M. Rosenberg Co.*, 156 F. 2d

212 (2nd Cir. 1946). If a plaintiff alleges that a defendant has proximately caused damages in a fixed amount, then clearly he is not required to submit further proof of proximate cause, since no hearing is required. It is only when the amount of damages is uncertain and unliquidated that a hearing must be held to fix the amount of damages. Furthermore, a plaintiff's proof of proximate cause may well require evidence in the possession of the defendant. To hold that a plaintiff must always prove proximate cause regardless of a default might allow a defendant to avoid a judgment by withholding such evidence, regardless of the sanctions of Rule 37.

Authorities applying state law, while also relatively scarce, also support this position. In *Putney* v. *DuBois Co.*, 226 S. W. 2d 737 (Mo. Ct. of App. 1950), proximate cause was deemed admitted by the default, and in other cases, a plaintiff was allowed to recover, apparently without offering proof of proximate cause. *State of Maryland* v. *Travelers Indemnity Co.*, 197 A. 2d 265 (Dist. of Col. Ct. of App. 1964); *Anderson* v. *Gallman*, 99 A. 2d 560 (Dist. of Col. Ct. of App. 1953); *Baltimore Transit Co.* v. *Mezzanotti*, 174 A. 2d 768 (Md. Ct. of App. 1961); *Osborn* v. *Gibson*, 309 S. W. 2d 15 (Mo. Ct. of App. 1958).

On the other hand, defendants (as in *Jones* v. *Uris*, *supra*) have been unable to cite any authority for the proposition that proximate cause, even if alleged, is not admitted by a default. The case of *E. V. Prentice Mach. Co.* v. *Associated Plywood Mills, Inc.*, 252 F. 2d 473 (9th Cir.), *cert. denied*, 356 U. S. 951 (1958), cited by defendants at p. 112 of their brief for the proposition that plaintiff must show proximate cause despite an admission of liability, is not in point. This was not a default case, and the defendant, while admitting a violation of the anti-

trust laws, specifically excluded the question of whether the plaintiff had suffered harm therefrom. Defendants' contention cannot be sustained, and plaintiff may rely on well-pleaded allegations in the complaint to establish proximate cause.

Insofar as required to explain the basis for award of damages in this Report, reference will be made in later sections hereof to other specific allegations of the complaint which are deemed to be well-pleaded. Unless a contrary conclusion is specified herein, all allegations of the complaint on which damages are awarded are taken by me to be well-pleaded.

Evidentiary Rulings

At the time that defendants tendered certain documents as their Exhibits 321, 322 and 323, judicial notice was taken of some portions (representing C.A.B. opinions and orders which were also contained in plaintiff's Exhibit 315), while decision was reserved as to the balance. Judicial notice will not be taken of these remaining documents.

For the most part, these remaining documents are motions, contracts and similar papers submitted to the C.A.B. in connection with the proceedings which resulted in the orders which have been noticed. Defendants have offered them either for admission into evidence or for judicial notice. Special memoranda of law have been submitted by both parties, and it is clear that defendants intend to use these documents to contest the allegations of the complaint, including paragraph 20 concerning conditions on the aircraft leases from Toolco to TWA. As indicated earlier, defendants do not have the right to introduce evidence to contest the allegations of the complaint as to liability, and

therefore the only question is whether these documents should be judicially noticed.

There is some question as to whether these documents are a proper subject for judicial notice. However, they will not be judicially noticed on grounds of relevance, even if they are viewed as otherwise fit for such notice. It is clear, as shown above, that judicial notice of these documents would at best be judicial notice of their existence and contents. It would not constitute judicial notice of the truth of what they contain. They would at best be mere evidence to be weighed with other evidence relating to such truth.

For judicial notice to be taken of a fact, the better view, in my opinion, is that such fact must be indisputable. While Wigmore in Volume 9 of Wigmore on Evidence, 3rd Ed., does take the position that a fact judicially noticed may be contested through the introduction of evidence and need not be indisputable, Morgan (in "The Law of Evidence, 1941-1945", 59 Harv. L. Rev. 481, 1946) takes the opposite view and holds that facts must be indisputable to be noticed. If indisputable, rebuttal evidence would be improper. McNaughton, in a preliminary draft of his proposed revision of Wigmore's chapter on judicial notice, accepts the Morgan view and holds that judicial notice should be limited to indisputable facts. McNaughton, "Judicial Notice—Excerpts Relating to the Morgan-Wigmore Controversy", 14 Vanderbilt L. Rev. 779 (1961). The distinction may not be of overriding importance in the normal case, since as a practical matter it may not make much difference whether the propriety of notice is argued before notice is taken or after. However, in a default case, the spirit of the Supreme Court cases dealing with the effect of a default and the rationale of Rule 37 require

that judicial notice not be used broadly to permit a contest on the merits of the complaint, and that judicial notice be limited to those facts which are indeed indisputable. It cannot be said that the facts recited in the documents submitted are indisputable, and that as a matter of law, plaintiff would not have been able to produce contradicting evidence. It must be remembered that in *Thomson* v. *Wooster*, the defendant was not permitted to introduce a government document (a patent) in his effort to dispute the allegations of the complaint. Even though that patent would have been strongly presumptive of the invalidity of a reissued patent, the court went to great lengths to point out hypothetical means by which the two might be reconciled.

Defendants also argue that the documents as to which decision was reserved should be noticed on the ground that they are necessary for a full understanding of those opinions of the C.A.B. which have been noticed. However, the meaning of these noticed opinions is clear on their face, and in any event, since they would not be sufficient to disprove the allegations of the complaint, there is no reason for further detailed elucidation.

Other C.A.B. documents which have been considered are those offered as Defendants' Exhibit 358A, B, C and D. These are reports filed by various airlines with the C.A.B. showing acquisition of aircraft, and are cited by defendants in an effort to disprove the allegations of the complaint concerning Toolco's engagement in the manufacture of aircraft (Defendants' brief, p. 56). Defendants' brief suggests at pp. 46-47 that plaintiff has objected to this exhibit. However, plaintiff did agree that the reports were appropriate for judicial notice (Tr. 9590), and although intimating that an objection might be made on other

grounds, no such objection was raised. This exhibit has been considered, but it is insufficient to disprove the allegations of the complaint, for the reasons set forth above.

Certain other C.A.B. documents were introduced which bore not on the issue of liability but rather on the amount of damages. Decision was reserved at the time as to these exhibits, Defendants' Exhibits Nos. 255, 259 and 261, which bear on the issue of overcapacity in the airline industry during the early 1960's when TWA claims that it should have had more jets. Exhibit 255 is a statement before the House Subcommittee on Appropriations on January 29, 1963 by the Chairman of the Civil Aeronautics Board. Exhibit 259 is a C.A.B. order relating to a United Air Lines fare proposal, and Exhibit 261 is a letter from the President of United Air Lines to the Chairman of the C.A.B. in response to that C.A.B. order. Judicial notice will be taken that Exhibits 255 and 259 were issued, and Exhibit 261 (which is of questionable standing for judicial notice) will be deemed admitted into evidence. Neither the Chairman of the C.A.B. nor the President of United were available for cross-examination, but their statements have been considered for their appropriate evidentiary worth.

One other ruling on an evidentiary matter was handled separately, at request of defendants' counsel. They requested a ruling prior to filing of briefs on the introduction into evidence of DX 364 for identification. On June 13, 1968, I sustained the plaintiff's objection to such introduction. Defendants' counsel in their brief have requested reconsideration of my ruling. I have reconsidered it in the light of said request, and adhere to my former ruling which is set forth below in full:

"During the hearing on damages (transcript page 10,698) defendants offered in evidence certain portions

of the deposition of Emmet Osborn Cocke, a director and officer of plaintiff Trans World Airlines, which were marked for identification as Defendants' Exhibit 364. This deposition had been taken in the course of the discovery proceedings prior to the entry of the default against defendants. Plaintiff objected to the receipt of Exhibit 364 into evidence, and a ruling on the objection was reserved by the Special Master. That objection is now sustained for the reasons set forth below.

"Although Rule 26(d)(2), F.R.C.P. permits the deposition of an officer or director of a party to be used by an adverse party 'for any purpose', Rule 26(d) nevertheless makes clear that a deposition may be used only 'so far as admissible under the rules of evidence.' To the extent that proffered evidence bears on the amount of damages, it is within the scope of the hearings on damages in this case and the normal rules of evidence apply. On issues of liability, however, the rules of evidence have been substantially modified by virtue of the default. As to liability, the default has admitted the well-pleaded allegations of the complaint, and allegations bearing on liability may be contested only within the limits set forth in Judge Metzner's opinion of November 16, 1965 (38 F.R.D. 499).

"An examination of the proffered pages of the Cocke deposition shows that they are concerned with issues of liability rather than the amount of damages. For the most part, they deal with the proposed merger between TWA and Northeast Airlines, certain aspects of TWA's jet acquisition program, and the circumstances surrounding the institution of the present antitrust action. These proffered pages do not qualify for consideration on such issues of liability under the rules laid down in Judge Metzner's opinion.

"The only portion of Judge Metzner's opinion which might justify admission of Exhibit 364 is the reference in that opinion to 'uncontroverted material in the file

of the case.' There is substantial question whether this deposition represents 'uncontroverted' material and whether plaintiff had 'full opportunity to meet or controvert such material.' However, aside from this question, the deposition would not appear to be entitled to consideration. Mr. Cocke's deposition was not admitted into evidence prior to the default and does not constitute a part of the formal record in this case. If Mr. Cocke were called as a witness at this time, his testimony would be inadmissible because it would constitute a presentation of evidence on liability which is prohibited by the default. It is hard to see how Mr. Cocke's deposition can be admitted into evidence if his live testimony could not.

"There is also some question as to whether the deposition is admissible in light of the contention that plaintiff has had no adequate opportunity for cross examination, and a further question as to the relevance of many of the pages offered. However, there is no need to reach these questions in light of the considerations set forth above.

"The objection is sustained."

Other evidentiary rulings more appropriately appear hereafter in the discussion of the damage claims.

Damage Claims

The plaintiff's damage claims will now be discussed in the following Sections:

I. Losses in operating profits due to inadequacy of jet fleet caused by delays in delivery and failure to deliver jets.

(A) International division losses.

(B) Domestic division losses.

(C) B-331B's.

(D) Mitigation claim.

(E) Adjustment in interest cost.

(F) Damages under Section I.

II. Losses due to being required to lease jets from Toolco instead of buying jets from the manufacturers.

III. Losses connected with financing the jets.

IV. Losses due to delay in disposal of displaced piston aircraft.

V. Losses due to disruption of business.

VI. Alternative over-all claim for damages based upon comparative profitability study.

VII. Interest on damage claim.

VIII. Recapitulation and final award.

I. *Losses in Operating Profits Due to Inadequacy of Jet Fleet*

The plaintiff has elected, in its damage claims, to present specific evidence of damages with respect to only a

portion of the allegations of the complaint. The damages claimed are confined to those said to stem from actions of the defendants in the period from early 1955 to the end of 1960 when the Hughes-dominated board of directors of TWA was replaced, for management purposes, by independent voting trustees. In its claim for damages due to the inadequacy of its jet fleet (Section I) the plaintiff takes the position that the main effect of these 1955-60 actions of the defendants was felt by TWA in a period beginning in 1959 (when the planes TWA "should have" ordered in 1955 would have begun being delivered in substantial numbers) through the end of 1963 (when TWA's independent management achieved "a more nearly adequate fleet"). While actions of the defendants at earlier periods are alleged in the complaint, they are referred to by the plaintiff in the damage proceedings primarily for background purposes.

The complaint states:

> "During this period [in or about October 1955] when other United States-flag air carriers were placing orders for jet powered aircraft, and thereafter, the defendants caused and directed TWA to forego making any arrangements for the acquisition, by sale, lease or otherwise of any jet powered aircraft (par. 17) • • • TWA has further been injured in the following manner:
>
> (a) TWA was prevented from obtaining jet powered aircraft and was deprived of opportunity for adequate use of jet powered aircraft during the years 1958, 1959, 1960 and to date with a resultant loss in profits." (par. 52)

The complaint (pars. 9 and 10) also alleges that these actions of the defendants resulted from and were in furtherance of defendants' antitrust offenses.

It is undisputed that by 1955 aircraft manufacturers including Boeing and Douglas had prepared plans and drawings for the manufacture by themselves of jet powered aircraft intended for commercial use. At the same time the major U.S. air carriers were devoting substantial efforts to determine whether and how the jet powered aircraft then being developed by Boeing, Douglas or others could be best utilized by them.

Commercial jet aircraft concededly have a very great competitive advantage over piston aircraft or turbo-prop aircraft both in speed, comfort, efficiency and operating costs. From the first introduction of the jets into commercial service, passengers having the choice have chosen to travel by jet rather than by piston aircraft.

The principal witness of the plaintiff in support of its damage claim for loss in operating profits due to inadequacy of its jet fleet was Mr. Robert W. Rummel, Vice President, Planning and Research, of TWA. He joined TWA as a senior engineer in charge of new aircraft studies and future fleet planning in 1943. He became Chief Engineer of TWA in 1949 and held that position until 1956, when he was elected Vice President, Engineering. In 1959 he was appointed to his present position of Vice President, Planning and Research. From 1956 through 1960 he was also employed by Toolco as a consultant and special representative in connection with the acquisition of jet aircraft from Boeing and Convair, and the acquisition of jet engines. As Toolco's special representative during that period he reported directly to Hughes. He had authority to commit funds under Toolco contracts, and the Toolco factory representatives at Boeing and Convair reported to him as special representative of Toolco responsible for the technical administration of the Toolco contracts with such manufacturers (TWA Ex. 2).

Rummel testified that since 1943 he had been actively engaged in all of TWA's major aircraft procurement programs and had been intimately concerned both with the aircraft actually acquired through Toolco and also with aircraft which TWA considered for procurement. He stated that his activities included negotiations with aircraft manufacturers with respect to technical specifications, performance characteristics, provisioning and spare parts, delivery schedules and acceptance tests. He was cross-examined extensively as to his qualifications as an expert. I find him qualified as an expert in these fields. I reserved decision on the admissibility of his prepared testimony (TWA Ex. 2) until I had an opportunity again to review it in the light of the case as a whole.

In accordance with the foregoing discussion of the effect of the default, defendants' general objections (Nos. 1 and 2) to the testimony of Rummel, which were also reasserted as to plaintiff's other witnesses, are overruled. The first objection was founded on the argument that plaintiff had the burden of proving all allegations which were omitted by Special Master Rankin in his Interim Findings, and the second objection was based on the argument that plaintiff bore the burden of introducing evidence to prove proximate cause, regardless of the default. Neither of these positions can be sustained, for the reasons set forth above. Decision had also been reserved as to certain of the specific objections in part 3 of the objections to the testimony of Rummel (specific objections 4, 5(a), 10, 11, 12, 13, 14, 15, 18, 19 and 21), and these objections are also hereby overruled.

Similarly, I reserved decision on the admissibility of the prepared testimony of the witnesses for the defendants. I now rule that such testimony is likewise admitted into evidence. I likewise decide that the experts called by

the plaintiff and defendants as witnesses in these proceedings were qualified for the purposes for which they appeared.

Rummel testified that although TWA's principal competitors, both on domestic routes and on international routes, were engaged in serious negotiations for acquisition of jet aircraft either with Boeing or Douglas during the last six months of 1955, TWA and Toolco, which were during this period in all respects closely controlled in aircraft procurement matters by Hughes personally, did not engage in negotiations reasonably calculated to preserve TWA's competitive position in the industry for early deliveries of jet aircraft. Rummel also testified that he had recommended negotiations with Boeing before and during this period for acquisition of a jet fleet for TWA, but that Hughes did not authorize negotiations with Douglas and informed Boeing that Toolco and TWA were interested in ordering the Boeing jets only if Toolco could obtain a large priority in delivery positions (vis-a-vis its competitors). He also testified that Boeing refused this demand on the ground that it would wreck its commercial program.

Rummel testified that in general the major air carriers which placed orders first obtained the most advantageous delivery positions. He stated that in order for TWA to obtain competitive equality in early jet deliveries, TWA, Pan-Am and American Airlines, Inc. (American) would have had to commence and continue serious negotiations looking toward a commitment with Boeing for long range jets at about the same time; also, all three carriers would have had to have placed orders for these Boeing aircraft at about the same time. He stated that "at about the same time" does not mean that the actual signing of contracts or letters of intent must be simultaneous, since execution

of such formal documents is not the significant factor; and that minor differences in final contract dates are not significant so long as the negotiations have been substantially contemporaneous. He also testified that the size of the order would play a role in priority of delivery positions; that in fact the major carriers did place large orders and got priority of deliveries; and that a carrier's potential total order was more important than the size of the first order. He testified in detail, as hereinafter set forth, as to his estimate of the delivery dates that the plaintiff could have achieved and would have achieved if it had not been prevented by the defendants from ordering jets during the period under consideration.

The defendants have failed to disprove, in any manner open to them in the light of their default, that they prevented TWA from entering into negotiations with Boeing as alleged in the complaint or that Toolco failed seriously to negotiate with manufacturers during the latter half of 1955, all contrary to Rummel's advice and to TWA's demonstrable competitive needs, with the result of keeping TWA from ever getting as favorable delivery positions for long-range jets as those obtained by TWA's principal competitors in the years in question.

Mr. Ralph Damon, the then President of TWA, advised the Board of Directors of TWA on December 9, 1955 of the substantial orders for jets by TWA's principal competitors and pointed out that these jets would be coming into competition with TWA possibly in 1959 and surely in 1960 and 1961, at which time "Every airplane which TWA now owns or has on order or option will be either totally obsolete or heavily outclassed in speed, comfort, passenger acceptability and economics on competitive routes." (DX 44).

In his report to the Board he also predicted that any airline which did not have comparable equipment by that time would be practically out of business soon thereafter. Rummel testified that Damon had been kept out of any participation in the consideration of jet equipment by Hughes.

Hughes finally authorized negotiations with Boeing for acquisition of jets, presumably for TWA, in late December 1955. A protective order for eight delivery positions for Toolco for B-131s was secured from Boeing on January 6, 1956 (D Ex. 47). A contract for eighteen B-331s was entered into on March 19, 1956. Additional B-131 jets were ordered in a series of contracts entered into between March 2, 1956 and January 10, 1957, with an ultimate total of fifteen (TWA Ex. 2, p. 8; Ex. R-1; Ex. R-2; D Ex. 66, 67). The numbers of B-331s and B-131s finally fixed upon were based upon discussions between Rummel and Hughes as to the proper number of Boeing aircraft for TWA's foreseeable needs for long range jets as of that date.

The delivery dates for these Boeing jets were later than those obtained by the plaintiff's chief competitors. These aircraft moreover were not to be purchased by TWA but were to be purchased by Toolco, with Toolco retaining the power to make a later decision as to their ultimate use and destination.

Later, in April 1956, Hughes caused Toolco to enter into a contract with Convair for thirty CV-880 medium range jet aircraft which had been recommended to him by Rummel for inclusion in TWA's projected jet fleet. (See complaint par. 17.) Here again Toolco retained the power to make a later decision as to whether the planes would go to TWA (TWA Ex. R-3, R-4.) The plaintiff does not complain that the medium range jets should have been ordered earlier but

does allege that the defendants interfered with the production of the planes and caused late deliveries of some of the jets and diverted others of them to Northeast and prevented delivery to TWA of still others.

Experts for both plaintiff and the defendants submitted estimates of the changes in TWA's operating revenues and expenses which would have occurred if the additional aircraft had been secured and the existing aircraft had been delivered earlier. Their estimates were made on the basis of the following premises:

(a) TWA would have received six additional Boeing B-331 aircraft (long range jet aircraft suitable for non-stop trans-Atlantic operations) which were diverted to Pan-Am.

(b) Fifteen Boeing B-131 aircraft (a slightly shorter range jet suitable for trans-continental operations but not well suited for trans-Atlantic operations) and twelve B-331 aircraft, which were actually received by TWA, would have been received on earlier delivery dates.

(c) Twenty CV-880 aircraft, which TWA actually received, would have been received on earlier delivery dates.

(d) Ten additional CV-880's would have been received.

Estimates of the delivery dates for the additional Boeing and Convair aircraft in categories (a) and (d) and of the earlier "reconstructed" delivery dates for the aircraft in categories (b) and (c) were prepared by Rummel. The B-131 and CV-880 aircraft were all used in TWA's domestic operations, and the delivery dates are discussed in the section of this opinion dealing with domestic operations. The B-331 aircraft were used in both international and domestic operations. As to these, Rummel prepared a table

showing the improvement in delivery position he estimated that TWA would have achieved, taking into account both the six additional planes (which had been diverted to Pan-Am) and the delays in delivery of the twelve other Boeing B-331 jets. The table, shown below, lists in the first column the actual receipt date for the twelve B-331's by TWA and the actual receipt dates for the six additional B-331's by Pan-Am. Since all eighteen were part of the original Toolco contracts with Boeing, the delivery dates for all eighteen would have been advanced by making timely orders. The actual delivery dates were earlier than the contract delivery dates, so are used by the plaintiff in computing its damage estimates. Opposite each "actual receipt date" is the "reconstructed earlier receipt date" fixed by Mr. Rummel on the assumptions hereinafter described.

Actual Receipt Date	Reconstructed Earlier Receipt Date
*November 5, 1959	*July 19, 1959
November 10, 1959	August 22, 1959
November 10, 1959	August 28, 1959
November 25, 1959	September 22, 1959
*December 15, 1959	*October 6, 1959
December 23, 1959	October 27, 1959
*December 30, 1959	*November 5, 1959
January 18, 1960	November 10, 1959
*March 23, 1960	*December 15, 1959
April 1, 1960	December 30, 1959
April 5, 1960	January 18, 1960
April 14, 1960	February 29, 1960
*April 29, 1960	*March 23, 1960
May 9, 1960	April 26, 1960
May 25, 1960	April 29, 1960
*June 8, 1960	*May 9, 1960
July 1, 1960	June 8, 1960
July 1, 1960	July 1, 1960

* Diverted to Pan-Am

(In the case of two of the planes, Toolco failed to make payment when they were ready for delivery so the "ready for delivery" date is used in the above table rather than the "actual receipt" date.)

Since the B-331 aircraft were used by TWA in both international and domestic operations, the added availability of these planes was allocated between the international and domestic operations of TWA in the same proportion as the allocation actually made by TWA of its B-331 aircraft during this period. The details of this allocation of the additional B-331 availability are shown in the sections of this report dealing with TWA's international and domestic operations. As to responsibility for diversion of the six B-331 aircraft to Pan American, I have already rejected defendants' argument that ratification of the assignment by the Hughes-dominated TWA Board of Directors is sufficient, under the rules of the default, to relieve defendants of responsibility for this portion of plaintiff's claim.

The Rummel testimony was corroborated in many significant aspects by the testimony of Mr. J. B. Connelly, Vice President and Assistant General Manager of Boeing's Aircraft Division. (TWA Ex. 3) Connelly testified that he was familiar with the development, production, sales and deliveries of commercial jet aircraft by Boeing during the period 1954 to 1961 and in particular the jet aircraft known as the Boeing 707-120 and the Boeing 707-320 series.

The policies followed by Boeing concerning the sale of commercial jet aircraft to commercial air carriers throughout the period 1955 to 1961 were testified to by Connelly. He testified that he participated in and was generally familiar with the negotiations between Boeing and Pan-Am, between Boeing and American and between Boeing and Toolco as well as other air carriers. He stated that in 1955

Boeing wished to sell substantial numbers of 707 jet aircraft to TWA. This included the 707-330 Series, long-range jets suitable for TWA international service. (The configuration later chosen from this Series for TWA's use was designated as B-331.) It also included the 707-120 Series, suitable for transcontinental service. (The configuration in this Series chosen for TWA was B-131.)

Connelly testified that Boeing would have afforded TWA substantially as early delivery positions as those afforded to other customers of comparable interest to Boeing. He stated specifically that had TWA commenced negotiations and ordered jet aircraft comparable in number to those ordered by Pan-Am and American, respectively, at about the same time as such other customers ordered jet aircraft from Boeing, Boeing would have afforded TWA substantial equality in early delivery positions with Pan-Am and American. He stated that Boeing would have sought to provide substantial equality of early delivery positions as between Pan-Am and TWA for planes used primarily on international routes and substantial equality of early delivery positions as between American and TWA as to aircraft used primarily on domestic routes. He stated that Boeing would have agreed, assuming that TWA had placed such orders, to deliver and would have delivered to TWA jets of the B-120 and B-320 Series earlier than such aircraft were in fact delivered under the Boeing agreements with Toolco. He further testified that he had examined the "Statement of Improvement of Delivery Positions", prepared by Rummel and hereinafter discussed, and expressed the opinion that it constituted a reasonable estimate of the improvement in delivery positions which TWA would have obtained. With reference to the six B-331 jets which were originally ordered by Toolco and were later

delivered by action of Toolco to Pan-Am instead of TWA, Connelly corroborated the testimony of Rummel as to the earliest delivery positions Pan-Am could have obtained from Boeing for six such jets if they had been ordered from Boeing in July 1959. The Connelly testimony was not seriously controverted.

The Rummel and Connelly testimony reinforce the above-quoted allegations of the complaint in respect of the inadequacy of the plaintiff's long range jet fleet caused by action of the defendants.

In view of the fact that the "reconstructed" TWA possessed six additional Boeing B-331 jets and ten additional CV-880 jets, it was assumed that this larger fleet would have rendered unnecessary certain additions to the TWA fleet which were made when the management of TWA was turned over from the Hughes interests to independent voting trustees in December 1960. It was assumed that TWA would not have acquired five B-331B (fan jet) aircraft which it leased in 1962 and 1963, and that it would not have acquired six CV-880 aircraft which it purchased in 1963. However, it was assumed that even with the larger "reconstructed" fleet, TWA would nevertheless have acquired the four B-720B aircraft (a later model Boeing medium range jet) which were leased during 1961 and 1962, and would also have purchased the eighteen additional B-131B aircraft (fan jets) which it received in 1962.

The foregoing assumptions, which set forth a hypothetical jet fleet for TWA in 1959-1963, constitute the basic equipment premises for the estimates of the expert witnesses for both plaintiff and defendants. As to the piston fleet which would have been operated by TWA during this period, each expert made such adjustments in TWA's actual piston operations as, in his opinion, would have accompanied the hypothesized jet operations.

Defendants argue that there is no certainty that the hypothetical jet fleet recommended by Rummel, which forms the basis for that part of the plaintiff's damage claims due to inadequacy of its jet fleet, would in fact have been implemented by the plaintiff under an independent management. They stress that Rummel was not chief executive officer of TWA nor in any position to impose his equipment views on the Board of Directors. They cite various inter-office memoranda, introduced into evidence, indicating that there was a running exchange of comments, and differing opinions, among TWA officers and staff members from time to time over the types and amounts of jet equipment to be purchased. Defendants also introduced in evidence various opinions expressed by CAB officials, trade magazine editors and airline executives, including some TWA officials, to the effect that airlines may have overbought jet equipment capacity and would suffer adverse financial consequences if they did not cut back their jet programs. They conclude that the plaintiff's expert testimony is too speculative to be accepted as a basis for damages.

Given the well-pleaded allegations of the complaint, however, the testimony of Rummel, who was chief procurement officer for the plaintiff at the time and an equipment procurement representative of Hughes, as well as the Connolly testimony, and the evidence that the assumed additional fleets of B-331s, B-131s and CV-880s were in fact ordered in the same type and quantity by a Hughes-dominated TWA, although at later dates, I am of the opinion that the hypothetical jet fleet and reconstructed delivery dates constitute a proper basis for computing damages under this Section I. The evidence of the plaintiff's experts as to the reconstructed jet fleet is well within the standards of distinctness and positiveness of proof allowable in default sit-

nations under the doctrine of *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946).

By way of orientation for the detailed discussion which follows showing the methodology used by the various experts in making up their estimates of damages due to the inadequacy of TWA's jet fleet, it should be stated at this point that estimation of the changes in TWA's operating revenues requires a consideration both of the added revenues and costs that would have accompanied additional jet operations and of the decreased revenues and costs that would have resulted from eliminated piston operations. The estimates of revenues and costs produced by the plaintiff's experts and the defendants' experts were dramatically different (see Tables pp. 59 and 83). The plaintiff's experts estimated that TWA would have experienced an increase in net operating profits after appropriate adjustment for depreciation for the years 1959 through 1963 in the amount of 51.7 million dollars, whereas the defendants' experts estimated that if TWA had acquired and operated the hypothetical jet fleet as assumed by the plaintiff, it would have experienced a decrease in net operating profits after depreciation adjustments for these same years, of 95.91 million dollars. The defendants' brief states at page 220:

> "It was not, of course, Simat's [expert witness of defendants'] opinion that the management of reconstructed TWA would have permitted such staggering losses to accumulate. Management could have drastically cut schedules • • • but while such measures might have avoided the dire consequences of operating Wemple's [expert witness of plaintiff] added plane miles, they would not have sufficed to put the added fleet in the black."

At this point I shall separate the claims of the plaintiff with respect to the adequacy of its jet fleet into divisions

A and B, i.e., between claims for loss of operating profits of its International Division and claims for loss of operating profits of its Domestic Division.

(A) *International Division*

It will be useful, I believe, from time to time while reading the ensuing discussion as to the International Division to refer to the table which follows, comparing the amounts of the estimates of experts retained by the plaintiff and defendants. The table is a portion of plaintiff's Ex. 420 (Sch. C).

(Table reproduced on following page)

As to the International Division, the plaintiff's claim as shown on foregoing Table is for $22.4 million damages. It may usefully be divided into two parts. First, the reduction of the plaintiff's projected Boeing jet fleet by the conceded diversion of six of the eighteen B-331 jets by action of Toolco to Pan-Am, TWA's principal transatlantic competitor, at a time when fierce competition existed for the lead in the jet service on international routes (cf. complaint, pars. 9, 10). The amount of damages claimed by reason of this diversion is $17.6 million. Second, the delays in the delivery of that fraction of the B-331 jets assigned to the International Division which resulted from the original equipment orders being delayed by Toolco until after the earliest delivery positions for the long range jets had been preempted by Pan-Am. This second claim is for $4.8 million.

Source: Comparison of change in operating profits in reports of Coverdale & Colpitts and Simat, Helliesen & Eichner, Inc. (Revised), TWA Exhibit 345A, pages as indicated above.

Revenues—First Part

The plaintiff retained the firms of Coverdale & Colpitts (sometimes referred to as "Coverdale") and Price Waterhouse & Co. to calculate the change in operating profits based upon the foregoing assumptions.

Coverdale, with its predecessor firm, is a nationally known firm providing consulting engineering and financial services to industry and government. It conducts industrial studies involving mergers and reorganizations, management appraisals, transportation and product pricing analyses, plant location and operations studies. These studies have included all forms of transportation including air transportation. The Coverdale study in this case was presented through the direct testimony of Edward L. Wemple who has been a partner in the Coverdale firm since 1956. Studies in the airline field which have been made under his supervision have included analyses of operations programs for TWA, Flying Tiger Line and British Overseas Airways, as well as traffic and revenue studies for various airports, including O'Hare International Airport. He is a member of the American Institute of Consulting Engineers.

Before discussing the Coverdale report on the additional B-331 planes, it should be remembered that these planes were assumed to have obviated the leasing of five B-331B aircraft in 1962-1963. The international service actually operated with the B-331B aircraft were assumed to be performed by the additional B-331's. Revenue and cost figures were adjusted accordingly by all expert witnesses.

The Coverdale estimate of changes in operating profits relating to the six diverted B-331s will now be summarized. It starts with a computation from TWA equipment records of the annual average number of additional B-331 Boeing

jets that would have been available for commercial service for the International Division if there had been no transfer of the six B-331s to Pan-Am by action of Toolco and these planes had been in TWA's service (a jet in service for one-tenth of a year would show as one-tenth of a jet in the annualized figures):

The computation of such annual average number of additional jets is as follows:

1959	0.2 B-331s
1960	3.6 "
1961	3.7 "
1962	4.8 "
1963	0.9 "

Coverdale relied on actual TWA experience as to the time ordinarily elapsing between the date of receipt of a plane and the date of commencing service in fixing the date when an aircraft was "available for commercial service." Aircraft "available for commercial service" is a term which is defined to include not only aircraft actually employed in revenue-producing activities, but all other owned or leased aircraft on hand, once commercial service has been inaugurated with aircraft of the same type. (See TWA Ex. 4(c)(4), Ex. B, C; Tr. 4653-62, 4695-4703.) Thus the term includes aircraft not overhauled, aircraft being used for pilot training activity and other similar non-productive aircraft.

Coverdale assumed that an increase in the number of aircraft available for commercial service would produce a proportionate increase in plane miles flown, thus allowing for maintenance, training and other non-productive employment of the additional aircraft on a basis exactly proportionate to TWA's historical experience in the same year with aircraft of the same type. The Coverdale computa-

tions also implicitly assume that in any given year additional aircraft of any type would be employed in operations substantially similar in kind to those in which aircraft of the same type were employed by TWA in the same year.

The assumed additional aircraft available for commercial service in the International Division would have produced additional passenger revenue jet plane miles, as follows:

1959	0.1	million	miles
1960	6.3	"	"
1961	6.6	"	"
1962	8.4	"	"
1963	1.5	"	"

The estimates of these additional jet plane miles were obtained by applying the experienced annual utilization for the B-331s in a particular year to the assumed additional availability of that type of jet in the same year.

Coverdale then estimated the corresponding reduction of the number of piston aircraft miles. This estimate was based on determining the ratio between the increase in all jet plane miles flown historically in the International Division in a given year over those flown in the preceding year, and the decrease in all piston plane miles flown in this Division between the same two years, and estimating that a further increase in jet plane miles would have produced a further and proportionate decrease in piston plane miles for that year.

The corresponding reduction of piston passenger revenue plane miles was as follows:

1959	0.1	million	miles
1960	5.1	"	"
1961	1.6	"	"

These reductions would have been piston plane miles flown by Lockheed L-1649As and are obtained by applying

to the experienced annual utilization for the L-1649As in a particular year in the International Division their assumed lesser availability in that year.

The ratio of the number of transatlantic flights to millions of plane miles being fairly uniform, the number of assumed increased transatlantic flights was then computed on a basis directly proportionate to the net increase in plane miles; and on the basis of seating capacity of the B-331 aircraft, the number of increased available seats was computed, with the following results:

	Additional Flights	Additional Available Seats
1959	—	1.1 thousands
1960	228	89.1 "
1961	987	154.3 "
1962	1,793	251.0 "
1963	311	44.0 "

The additional seats in 1959 resulted from using aircraft of greater seating capacity, even though the number of flights remained the same.

The international operations of TWA consisted of transatlantic flights and continuation of certain of these flights "beyond the gateway" (the gateway being the point at which the eastward transatlantic flight made its first European stop). It was conceded there is no source to obtain the industry figures for the number of "beyond the gateway" scheduled passengers (Tr. 8498). It was accordingly assumed by Coverdale that increased TWA service for the International Division would have been divided between scheduled transatlantic operations and other international operations as historically divided.

During the years in question, the figures submitted by the plaintiff's experts showed a very close correlation between TWA's percentage of the total available transatlantic seats

and its percentage of total transatlantic passengers on all airlines constituting the members of the International Air-line Transportation Association (IATA). Their estimate of additional TWA transatlantic passengers which would have been obtained is therefore obtained by taking the increased percentage of seats and proportionately increasing the number of passengers.

Here it should be noted that in estimates for 1959-60, the additional seats offered by TWA would have been, in effect, a transfer of seats from Pan-Am to TWA, because TWA's additional aircraft would have been transfers of the six diverted B-331s from Pan-Am and there would have been no increase in the total U. S.-airline available transatlantic seats; but since Pan-Am could have obtained delivery of other similar jets from manufacturers in the spring of 1961, the annual total numbers of transatlantic seats available for the years 1961, 1962 and 1963 were assumed by the plaintiff to have been increased by the number of additional seats that would have been offered by TWA.

The industry competitive factors in 1959-60 were markedly different in international travel from the 1961-63 period. Notice of these differences is taken in discussing damage theories hereinafter.

The calculation of TWA's additional transatlantic passengers in accordance with the above premises produced the following results:

	Actual Passengers	Revised Number of Passengers
1959	146 thousand	147 thousand
1960	243 "	298 "
1961	208 "	275 "
1962	277 "	382 "
1963	359 "	377 "

There were then computed the additional revenues which would have been received by TWA in respect of these additional passengers. This was done by taking the actual International Division passenger revenues for each of the five years in question and increasing them by the same percentage as the increase in the number of TWA transatlantic passengers for each year in question.

The additional passenger revenues, so calculated, are as follows:

1959	$ 0.6	million
1960	18.9	"
1961	20.4	"
1962	29.5	"
1963	5.3	"

There was additional assumed revenue from mail, express, freight and excess baggage which all experts estimated at 5% of the assumed additional passenger revenue. The total estimated additional revenue from the assumed six additional B-331s was therefore $78.4 million for the International Division.

Hereafter we will discuss the estimates of the plaintiff's experts as to the amount of attendant increased operating expenses which amounted to $60.8 million leaving the net additional revenue of $17.6 million as the amount of the plaintiff's damage claim for the International Division with respect to the six additional B-331s transferred by reason of the action of Toolco to Pan-Am. Before reviewing the estimates for operating expenses, however, we will first discuss the computations of the defendants' experts with respect to the change in operating revenues related to the International Division from these six assumed additional B-331s.

The defendants retained as their experts to analyze the Coverdale estimates, and to prepare their own estimates

of changes in operating profits, the firm of Simat, Helliesen & Eichner, Inc. (sometimes referred to as "Simat").

The report of Simat was presented through direct testimony of Messrs. Nathan S. Simat, Robert I. Helliesen and L. John Eichner, officers of that organization. The Simat organization was formed in 1963 and engages in economic and transportation studies for government and private clients. It has conducted studies for various air carriers from every sector of the air transport industry. Simat was for many years employed by the Civil Aeronautics Board as a transportation economist. As Head Economist of the Analysis Division of the CAB, he prepared numerous operating and financial analyses dealing with air traffic, revenues and costs, feasibility of equipment purchase programs and he appeared in numerous commercial rate and mail proceedings. As Chief of the Certificates Section of the Routes Division of the CAB he prepared or supervised the preparation of studies dealing with the economic consequences of adding and deleting air services. He has acted in management and economic consulting capacities for Northeast Airlines and Sabena Belgian World Airlines.

Helliesen was for some years employed by American Airlines, Inc. in various economics and marketing capacities and held the office of Director of Schedule Planning and Business Research in that company. He has done economic research for the Air Transport Association of America in connection with the CAB general passenger fare investigation and has also been retained by the Convair Division of General Dynamics. He formed the Aircraft Exchange, which provided regular market reports of bids and offers for the purchase, sale and lease of used transport aircraft, and served as its head in 1958-1962. He joined the Simat organization in 1965.

Eichner served in responsible positions with Capital Airlines, Trans-Texas Airlines and from 1961 to 1966 was Assistant Vice President of Corporate Planning for American Airlines, Inc., where his duties included the preparation of special studies and forecast of revenues, expenses and ground facilities for various types of air equipment. He joined the Simat organization in 1966.

The Simat report assumed the same reconstructed earlier delivery dates for the jet equipment as the Coverdale report, and assumed all the other equipment assumptions of the Coverdale report, so that the size of the hypothetical jet fleet in both reports for the five year period 1959-1963 is identical. The defendants' experts used the Coverdale estimates for the number of added and deleted aircraft and aircraft miles and further used the assumption that all deleted piston aircraft services in TWA International Division had been operated with L-1649A aircraft. They also testified that it was not unreasonable to use the percentage share of available IATA transatlantic seats as a guide for estimating TWA's percentage share of transatlantic passengers and accordingly used the same number of TWA transatlantic seats assumed to be added.

It was their opinion, however, that Coverdale's estimate that TWA could increase its share of available transatlantic seats was erroneous. Simat's opinion was that the transatlantic market is the leading international air travel market in the world and the object of vigorous competition by nearly 20 air carriers exclusive of supplemental and charter carriers and that it was difficult, if not impossible, to conceive of a market where a likelihood of unilateral competitive action without response from other carriers in the market, is more remote.

Under this theory of "competitive response" developed by defendants' experts, and more fully stated hereafter, the reconstructed estimates for additional transatlantic passengers by Simat were:

1959	146 thousand
1960	281 "
1961	255 "
1962	343 "
1963	368 "

The opinion of Simat on this theory of competitive response was that Pan-Am, as TWA's principal transatlantic competitor, would have taken some of its long range jets off of its other international flights to maintain its "historic ratio" of available transatlantic seats vis-a-vis TWA, or else it would have retained some of the piston seats which were historically retired, or both. Simat was also of the opinion that foreign airlines would have likewise responded competitively. He selected the second and third quarters of the years 1960-63 (omitting the first and fourth quarters when various airlines observed different policies in the seasonal reduction of weekly frequencies) and noted that in these selected quarterly periods, for each flight (including pistons as well as jets) added by TWA, the following "pattern of competitive response" in annualized average additional planes was shown in 1960, 1961, 1962 and 1963: In the second quarter of said years Pan-Am added .07, 1.3, 2.1 and 1.9; foreign flag carriers added 3.3, 4.2, 5.4 and 5.3; and in the third quarter of said years Pan-Am added 1.7, 1.8, 2.5 and 2.7; foreign flag carriers added 4.4, 5.0, 4.4 and 6.4.

It will be illuminating to discuss the defendants' arguments separately for the 1959-60 period and for the 1961-63 period.

Simat estimated that in 1959 Pan-Am would have transferred .04 jet aircraft (on an annualized basis) to the transatlantic service from its other international routes but that the foreign competitors, since it was assumed that no increase in the total transatlantic service of U.S. airlines would be involved, would not have responded competitively. For 1960 Simat first estimated that for each flight added by TWA, Pan-Am would have responded competitively by adding one flight and other foreign competitors taken as a group would have responded by adding one flight; but since he did not assume that the additional seats generated by TWA through the replacement of piston flights by jet flights would have engendered a competitive response, he adjusted his estimates of competitive responses to the net addition of .85 transatlantic seats by Pan-Am and the same by the other IATA carriers for each seat that would have been added by TWA.

Conclusions as to Revenue Estimates

The severe worldwide shortage of jet equipment through 1960 was such in my opinion, as to make the assumed transatlantic competitive response unrealistic for the 1959-60 period. It is reasonable to assume that TWA's usage of the six diverted B-331s would have been proportionately the same as its usage of the curtailed fleet it did acquire, and thus that approximately one-third of the diverted six B-331s would have been used domestically by TWA. The total U.S. airline competition on the transatlantic route would thus have involved the use of two fewer jets during these years, thus appearing to rule out any probability of "competitive response" from foreign lines. As to Pan-American, piston aircraft with their higher cost and lower attractiveness were in no position to compete effectively

against jets. On cross-examination of Simat, it was brought out that essentially there was no "historical pattern" of response by competitors to additional TWA transatlantic service. The ratio of such TWA to Pan-American service, for example, varied from 53% to 82% in the years leading up to introduction of the jets (Tr. 8378).

Also it was shown that in 1960 TWA historically increased its percentage of transatlantic seats vis-a-vis Pan-Am, without competitive response, indicating that Pan-Am made a management decision that it preferred to use many of its jets on other international services to maintain or improve its position there. If Pan-Am had not received the diverted planes, it presumably would have been in an even less favorable position to exert a "competitive response" on the transatlantic service during the years in question. Pan-Am faced jet competition, for example, on the Pacific routes where Quantas and BOAC were operating jets. When Pan-American did receive B-331s in quantity, it transferred the B-131s theretofore used on the transatlantic service to the Caribbean service, thus further indicating the need on its part to distribute its jet equipment on a worldwide basis. All airlines dropped piston service on transatlantic routes as jets became available, because of customer preference for jets.

Finally, no testimony was introduced as to the effect financially on the other worldwide operations of TWA's transatlantic competitors of transfer of jet service from these other international operations to the transatlantic route. In the absence of such figures, and considering the facts summarized above, it appears to be sheer speculation to conclude that the managements of the competing airlines would have automatically made a competitive response in any given ratio to the changed conditions on the transatlantic route.

Support for this conclusion also may be found in an examination of Pan Am's Pacific operations and a comparison of the profitability of these operations with Pan Am's Atlantic operations. The table below, comparing Pan Am's Pacific and Atlantic divisions for both seat miles and operating profit, is taken from statistics in the C.A.B. *Handbook of Airline Statistics* 1965 Edition, which has been frequently relied on by both sides. This comparison shows that in the years in question, except for transition year 1959, Pan Am's Pacific operations were far more productive on a revenue per seat mile basis than were its Atlantic operations. It cannot be lightly assumed that Pan Am would have sacrificed its earnings on the Pacific in order to match T.W.A. flight increases on the less profitable Atlantic route.

COMPARISON OF PAN AM PACIFIC AND ATLANTIC OPERATIONS

(000's omitted)

	Pacific Division		Atlantic Division	
	Seat Miles (000)	Operating Profit ($000)	Seat Miles (000)	Operating Profit ($000)
1959	1,397,428	5,557	2,447,837	17,469
1960	2,108,703	18,672	3,220,514	16,593
1961	2,525,397	21,689	4,361,135	4,468
1962	2,915,237	30,965	5,123,207	12,489
1963	3,267,904	38,814	6,007,142	33,273

Source: C.A.B. Handbook of Airline Statistics, 1965 Ed., Part III Tables 83 and 85, Part IV Tables 83 and 85.

As to the availability of jet aircraft for foreign flag carriers from non-competitive sectors, it is not known whether or not the profitability of these non-competitive sectors would or would not inhibit the shifting of jet aircraft to the Atlantic. Also, it is not clear whether the individual non-

competitive sectors recorded by Simat were not merely intermediate portions of a longer flight, which could not be deleted if the longer flight was to be retained, or that these sectors were operated with jet aircraft suitable for transatlantic operations.

Finally, there is no evidence that scheduling considerations would have permitted the shifting of aircraft from their actual routes to the Atlantic. For example, elimination of a short non-competitive flight by Pan Am or some other carrier might not free enough jet hours for an additional transatlantic flight, and even if sufficient hours were available, there is no evidence that they would have been available at times which were commercially attractive for transatlantic operations.

The defendants' experts stated a further objection to the plaintiff's method of calculating changes in operating revenues in that the plaintiff's experts assume that the categories of passengers other than scheduled transatlantic passengers included in the International Division ("beyond the gateway" and charter service passengers) would increase in the same percentage as for IATA scheduled transatlantic passengers. Defendants' experts produced statistics designed to show that TWA's actual experience demonstrated that "beyond the gateway" International Division passenger revenues, as defined by them, increased during the years in question at only 52% of the rate of increase for transatlantic IATA passengers; that the percentage of "beyond the gateway" passengers, as defined by them, to the total TWA International Division passengers dropped from 40.4% in 1959 to 29.5% in 1963; and that in terms of absolute numbers such TWA "beyond the gateway" passengers remained relatively unchanged over this period except for a "spurt" in 1963, while its IATA transatlantic passengers increased almost fourfold.

The evidence was conflicting as to the proper basis for measuring the volume of "beyond the gateway" passengers (Tr. 8506; TWA Ex. 340).

The plaintiff's claim for the 1959-60 period, however, does not rest upon any increase in traffic from year to year. It assumes only that whatever traffic moved in the International Division area would have been proportionately redistributed in its favor, if it had the assumed increase in number and betterment in quality of equipment. Transatlantic passenger figures of the industry are used as a basis for computations because they are admittedly accurate and constitute the bulk of revenues for the International Division, whereas no one was able to produce satisfactory International Division territory figures for the industry for estimation purposes (Tr. 8498). As to overall charter service in the area served by the International Division, it seems reasonable to assume, as the plaintiff did, that it is obtained for the transatlantic service generally in proportion to capacity offered, assuming the same type of equipment is used.

The plaintiff points out, finally, that the defendants' experts assume that if TWA had failed to obtain a favorable customer response to a larger jet capacity offered to charter customers and to "beyond the gateway" customers, TWA nevertheless would have continued the same proportionate distribution of its International Division jet aircraft between transatlantic service and these other services as it did historically. They stated that any rational management, during this period of jet shortage, would have promply redistributed its aircraft assigned to the International Division so as to take advantage of the demand on the more profitable segments. If the more profitable segments consisted of transatlantic service, then service would have been transferred by management from the "be-

yond the gateway" service and the charter service to scheduled transatlantic flights.

As to the 1961-63 period, competitive conditions changed materially from the 1959-60 period. Jets had become available in greater quantity and the industry load factor dropped. Economic conditions were less favorable for international travel during most of the period. Piston service on the transatlantic route ceased, and TWA's comparative shortage of jet equipment in 1961 caused it rapidly to lose its market position. The plaintiff has assumed that in this period the total number of seats offered by the industry in general transatlantic competition would have increased because Pan-Am could have received delivery from Boeing directly of six B-331s which it decided to buy in 1959. Accordingly the plaintiff has estimated that TWA would have obtained its historical share of passengers based on the increased industry capacity. The net increase in operating profits estimated by the plaintiff for these years (on the basis outlined above) is substantially lower than for the 1959-60 period. The figures are as follows:

	Gross Estimated Additional Revenue	Estimated Increased Costs	Net Estimated Additional Revenues
1961	$21.4 million	$19.6 million	$1.8 million
1962	31.0 "	28.5 "	2.5 "
1963	5.6 "	5.9 "	(.3) "

For background purposes, it is noted at this point that during the 1961-63 period, Pan-Am's Atlantic Division historically made an operating profit of $50.3 million; and TWA's historic operating profit for this period in its International Division was $25.1 million.

The defendants make the same two points in respect of the 1961-63 period as discussed above to dispute the validity of the plaintiff's estimates—i.e.—"competitive response"

and disproportionate increase assumed for "beyond the gateway" and charter service. In reply the plaintiff makes several additional points in respect of the years 1961-63: (a) It is unrealistic and speculative to assume TWA's foreign competitors would have weakened their competitive position on other routes to meet such increased transatlantic competition as would have been produced by Pan-Am's assumed acquisition of six additional jets early in 1961. Pan-Am would have had during this period, under the posited assumptions, exactly the same number of jets that it historically had, and presumably would have distributed them worldwide as it historically did. (b) It is reasonable to assume that an increase in jet service by TWA with resultant increase in its proportion of total service offered by the industry, would have correspondingly increased its proportion of total traffic carried in its International Division.

The reasoning of the plaintiff appears to me to be valid and accordingly I accept the added revenue estimates in respect of the six diverted B-331s as computed by the plaintiff's experts for the International Division.

Estimates of Operating Costs

The added costs of operating the six additional jets in the International Division were computed in detail by the experts for the plaintiff and defendants. (See summary thereof in table on p. 83.)

A brief description of the methodology used by the plaintiff's expert in estimating changes in operating expenses attendant upon the assumed additional TWA operations in respect of the six diverted B-331s is set forth below. Changes in operating expenses are separately computed for the increases in jet operations and the decreases in piston operations. As to each category, hereafter described,

a determination was made of the extent to which it varied historically in the years in question as the scale of operations changed, and an estimate was made based on the assumption that further changes in the scale of operations would produce further changes in expenses on a proportionate basis. Following are the categories and the method used for each in computing the changes in expenses for the assumed changes in operations.

Flying operations and maintenance expense incurred for operating and maintaining aircraft were changed in proportion to the assumed changes in plane miles or number of aircraft available.

Aircraft servicing expenses which have to do generally with ground activities for aircraft were computed on the basis that the estimated net increase of plane miles operated would have been proportional to the increase in number of flights processed on the ground and accordingly plane miles were used as the index for calculation of changes in this class of expense.

Passenger service expense which has to do with passengers while in flight was computed insofar as cabin personnel is concerned in proportion to plane miles operated; and expenses for food supplies and liability insurance were varied in accordance with passenger revenues.

Traffic servicing expense which has to do with handling passenger and cargo traffic on the ground were varied in proportion to transportation revenues.

Service and administration expense which has to do with supervisory and administrative activities for servicing of aircraft and traffic was varied in accordance with changes in plane miles.

Promotion and sales expenses were varied in accordance with changes in transportation revenues.

General and administrative expense which has to do with corporation matters in certain activities such as financial, accounting, legal and general administration were varied in accordance with changes in transportation revenues.

Depreciation and amortization were computed by Price Waterhouse & Co. and certified by it as being appropriate under the assumed changes in equipment.

The detailed changes in operating expenses are set forth in the Coverdale Report, Volume I and summarized at pages 37 and 38 thereof by years.

The total increased costs found by the defendants' experts for this facet of the case were less than those found by the plaintiff's experts by reason of the fact that the defendants' experts had calculated costs on the basis of a smaller increase in traffic. The total added costs under this facet of the case found by the plaintiff's experts was $60.8 million; the corresponding total found by the defendants' experts was $51.9 million. If the estimates of the plaintiff's experts as to increased traffic and revenues for the International Division are accepted, and the cost estimates of the defendants' experts are recomputed on that basis but using their own costing methods, the recomputed cost estimates of the defendants' experts would be at least as low as those of the plaintiff's experts. Since the estimates of the plaintiff's experts are accepted by me as to traffic and revenues, their estimates as to operating cost should be accepted. Accordingly, at this point no detailed discussion of the different costing methodologies used by the experts for the International Division is called for.

Revenues and Operating Costs—Second Part of Claim

The second part of the plaintiff's claim as to the International Division, as stated above, is a claim for $4.8 million damages caused by delays in delivery of the 18 Boeing B-331 jets (insofar as a fraction thereof is assumed to be used in the International Division service) which resulted from orders therefor being delayed by Toolco until after the earliest delivery positions had been preempted by Pan-Am. The assumed earlier delivery dates would have affected operations only in 1959 and 1960 since the last of the B-331s was historically delivered in 1960.

There is agreement between the experts that the annual average added B-331 aircraft for the International Division under assumption of the earlier deliveries of the twelve B-331 jets for 1959 would be .9 aircraft and for 1960 would be .6 aircraft; that the added jet aircraft miles would be 1.6 million miles for 1959 and 1.1 million miles for 1960; that there would be a reduction of 1.6 million piston aircraft plane miles in 1959 leaving the International Division total plane miles unchanged; that there would be no reduction of piston plane miles in 1960 and accordingly the net increased plane miles for the International Division in 1960 would have been the same as the gross increase, i.e., 1.1 million plane miles; that the additional transatlantic seats for 1959 would have been only from the difference in size between the jets and the replaced pistons and would have amounted to 17 thousand additional transatlantic seats; and finally that the additional transatlantic seats for 1960 would be 27 thousand. Translating these figures into increased revenue, on the same basis as was used in the case of the six additional (Pan-Am) planes,

and adding thereto the 5% for additional revenues from cargo, the plaintiff's experts estimate that the total additional International Division operating revenues from assumed earlier delivery of twelve B-331s would have been $4.5 million in 1959 and $6.4 million in 1960. The defendants' experts would reduce these figures, as in the case of the six additional (Pan-Am) planes for the factors of (a) competitive response and (b) failure of "beyond the gateway" and charter traffic to increase proportionately to the increase in transatlantic service. The defendants' experts' figures, with these reductions, show assumed additional operating revenues of only $2.79 million in 1959 and $2.03 million in 1960. For the reasons above stated, the plaintiff's estimates of additional revenues are accepted.

As to operating costs, here again if the plaintiff's estimates on increased traffic and revenues are accepted, and the defendants' cost figures are recomputed under its own methods of costing but on the basis of the plaintiff's increased traffic and revenue figures, the result would be a total of operating costs at least as low as the plaintiff's cost figures. The plaintiff's operating cost estimates are accordingly accepted.

A recapitulation of the damages awarded in respect of the International Division is set forth at the end of Section I of this discussion of plaintiff's damage claims.

(B) *Domestic Division*

The next division of plaintiff's claims for damages with respect to inadequacy of its jet fleet is for loss of operating profits in its Domestic Division. Here because of the greater variety of aircraft types compared to the International Division, the opportunity for changing segment

(stage) lengths of flights, the more complicated fare structure, and the difficulty of computing applicable load factors, the estimation of changes in operating results is more difficult.

As a beginning to a review of this aspect of the case, it will be instructive to examine the following table showing the historical jet competitive picture between the plaintiff and its chief domestic competitors, the quantitative extent to which TWA historically lagged behind its chief domestic competitors in acquiring jets in the years 1959-63, and comparative operating profits:

Domestic Operating Profit (Loss)

vs.

Percent of 1964 Jet Fleet[1]

	American			United[3]			T.W.A.		
	Operating Profit (000)	*No. of Jets*	*% of 1964 Fleet*	*Operating Profit (000)*	*No. of Jets*	*% of 1964 Fleet*	*Operating Profit (Loss) (000)*	*No. of Jets*	*% of 1964 Fleet*
1959	$24,517	24	30.0%	$18,802	15	13.4%	$ 26,308	18	22.7%
1960	24,720	34	42.5	9,429	44	39.3	(883)	21	25.3
1961	19,089	49	61.3	3,100	76	67.9	(10,226)[2]	42	50.6

Sources: TWA Exhibit 46A and CAB Air Carrier Financial Statistics.

---

[1] Domestic year end inventories as a percent of 1964 year end inventories

[2] Excludes special adjustments. If these are included, the tendencies ar more accentuated. Thus, for American in 1963 inclusion of the adjustment result in operating profit of $43,900,000 and in 1961 for TWA results in operating losses of $24,200,000.

[3] Excludes Capital 1959-1960. If Capital is included, the United operating profit is $19,100,000 in 1959, and $3,100,000 in 1960. United's 1961 and (to some extent) 1962 operating results were affected by its acquisition on June 1, 196 of Capital Airlines which had already incurred operating losses in 1961 o $3,400,000.

The subdivisions of the plaintiff's Domestic Division claims are:

(a) failure to receive certain B-331s which were diverted by action of Toolco to Pan-Am and delay in delivery of other B-331s; and delay in delivery of fifteen B-131s;

(b) delay in delivery of twenty Convair 880s;

(c) failure to receive an additional ten Convair 880s of which six were diverted by action of Toolco to Northeast Airlines.

It will also be useful I believe, from time to time, while reading the ensuing discussion relating to the Domestic Division, to refer to the tables which follow comparing the amounts of the estimates of the plaintiff's experts and the final (or Supplemental) Estimates of the defendants' experts relating to the Domestic Division. The first table is plaintiff's Exhibit 420, Schedule B, showing the comparisons of the two sets of experts for each of the years 1959-63, as well as the comparisons of the totals for five years.

The second table is Schedule B1 of plaintiff's Exhibit 420. It sets forth the plaintiff's (Coverdale) estimates of each of said years by categories. Category II-1 relates to chapter II of the Coverdale Report dealing with the six additional B-331s. Category III-1 relates to chapter III of the Coverdale Report dealing with earlier receipt of B-131 and B-331 aircraft. Category IV relates to chapter IV of the Coverdale Report dealing with the delay in receipt of twenty CV-880 aircraft. Category V relates to chapter V of the Coverdale Report dealing with the failure to receive ten CV-880 aircraft.

The third table is Schedule B2 of plaintiff's Exhibit 420. It sets forth the final (or Supplemental) estimates of the

defendants' expert (Simat) for each of the five years—1959-1963. Simat, in its Supplemental Report referred to hereinafter, did not break down its estimates by categories (although it did so in its Original Report referred to hereinafter). The Final (or Supplemental) Simat Report gives, as will be noted, separate estimates for added jet revenues and costs, and for revenues and costs of deleted pistons, in lieu of breaking down the figures by the above mentioned categories.

B331's and B131's—Plaintiffs' Position

(a) We will first discuss the plaintiff's revenue estimates (Coverdale) for the B-331s allocated to the Domestic Division. The facts with respect to failure to deliver and delay in delivery of the Boeing B-331s have been set forth above. We have also previously listed (p. 52) the reconstructed earlier receipt dates for the B-331s as computed by Rummel and have set forth the underlying assumptions by which they were fixed.

The Coverdale report computed the change in operating profits for the Domestic Division by a different methodology than used by it for the International Division claims in certain particulars. These are set forth in the discussion, which follows, to the extent the methodology is different. The annual average number of B-331s which would have been available for commercial service (after the above-described adjustment for the B-331Bs and for a non-controverted short-term lease of aircraft time to Northeast) was computed for the Domestic Division under the same method heretofore set forth. They were as follows (TWA Ex. 4(c)(1), pp. 13, 27, 42):

	Planes Allocated from the 6 Diverted B-331s	Planes Allocated from Late Delivery of the 12 B-331s
1959	none	0.6
1960	1.4	0.7
1961	2.2	
1962	1.0	
1963	0.5	

These assumed additional jet aircraft would have produced (under the method heretofore described) additional

passenger revenue plane miles as follows (*id.*, pp. 28, 43, 44):

For the Diverted Planes	For the Late Deliveries
1960 — 2.0 million miles	1959 — 0.8 million miles
1961 — 3.3 " "	1960 — 1.0 " "
1962 — 1.4 " "	
1963 — 0.7 " "	

Using actual seats per aircraft and actual TWA average load factors for B-331s in Domestic Division service for each year (except the B-131 load factor was used for B-331 computation for 1959 when no B-331s were in domestic service) the resulting passenger miles for the additional jet aircraft would have been as follows (*id.*, pp. 28, 43, 44):

For the Diverted Planes	For the Late Deliveries
1960 — 156 million miles	1959 — 74 million miles
1961 — 206 " "	1960 — 78 " "
1962 — 76 " "	
1963 — 42 " "	

The reduction of piston passenger revenue plane miles, based upon the actual annual TWA experienced ratios in domestic service of all piston plane mile decrease to all jet plane mile increase, was as follows (*id.*, pp. 29, 43, 44):

For the Diverted Planes	For the Late Deliveries
1960 — 2.9 million miles	1959 — 0.8 million miles
1961 — 4.2 " "	1960 — 1.4 " "
1962 — 0.9 " "	
1963 — 0.2 " "	

The reduced piston passenger miles were then computed by using the average number of seats based on the average for all TWA piston aircraft for the year and actual annual average load factors of TWA's piston aircraft used

in the Domestic Division during the years in question. The resulting figures were (*id.*, pp. 30, 44, 45 and by calculation):

For the Diverted Planes	For the Late Deliveries
1960 — 123 million miles	1959 — 38.4 million miles
1961 — 182 " "	1960 — 59 " "
1962 — 44 " "	
1963 — 9 " "	

The net increase in passenger miles was then computed. Using TWA's annual average yield (Domestic Division actual passenger revenue, combined jet and piston, per passenger mile) the increase in Domestic Division revenues for the B-331 aircraft operations was estimated at (*id.*, pp. 30, 44, 45 and by calculation):

For the Diverted Planes	For the Late Deliveries
1960 — $1.9 million	1959 — $1.9 million
1961 — $1.4 "	1960 — $1.1 "
1962 — $2.0 "	
1963 — $1.9 "	

The additional revenue for non-passenger traffic (mail, express, freight, excess baggage) was calculated at 5% of the estimated additional passenger revenue. The resulting total additional revenue estimate was:

For the Diverted Planes	For the Late Deliveries of B-331s
1960 — $2.0 million	1959 — $2.0 million
1961 — $1.5 "	1960 — $1.2 "
1962 — $2.1 "	
1963 — $2.0 "	

The total of additional revenues thus claimed in respect of the B-331s under subdivision (a) is $10.8 million.

Next we summarize the plaintiff's revenue estimates in respect of the late deliveries of B-131s.

Rummel prepared a table showing the effect on delivery positions by reason of the delays in delivery of the B-131s. His underlying assumptions in computing the reconstructed earlier receipt dates therefor were the same as those discussed above (pp. 48-56) in respect of the B-331 earlier delivery dates, and are accepted for the reasons stated above.

The list below shows the actual receipt dates for the B-131s and opposite each such date is the corresponding reconstructed earlier receipt date. (TWA Ex. 4(c)(1), p. 40.) Each plane, as in the case of the B-331s, was fully identified, and actual receipt date verified for the record, from official CAB records.

Actual Receipt	Reconstructed Earlier Receipt
1/29/59	11/30/58
3/17/59	12/31/58
3/30/59	1/31/59
4/ 3/59	2/27/59
4/18/59	3/30/59
4/29/59	4/ 3/59
5/10/59	4/18/59
5/13/59	5/10/59
5/24/59	5/13/59
5/28/59	5/24/59
6/13/59	5/28/59
7/ 1/59	6/13/59
7/10/59	6/29/59
7/14/59	7/10/59
8/ 1/59	7/27/59

On the basis of TWA's experience as to time between receipt dates and commencing service, Coverdale computed that revenue service for the B-131s would have commenced

January 6, 1959. Only the year 1959 is involved in the B-131 computations.

Coverdale, using the same methodology as described above for B-331s assigned to domestic service, computed the additional annual average number of B-131s available for 1959 in the Domestic Division at 1.4 aircraft. The additional jet plane miles were 1.9 million miles. The additional passenger miles were 176 million miles. The corresponding reduction of piston plane miles was 1.9 million miles. The deleted piston passenger miles (using the number of seats in the L-1649A times the actual load factor) were 89.6 million miles. The increased passenger revenue estimate resulting from these computations is $4.1 million. To this figure 5% is added for non-passenger revenues. The plaintiff therefore estimates additional revenue from the assumed earlier delivery of the B-131s for the Domestic Division of $4.3 million.

The total estimated increased revenues under subdivision (a) of the Domestic Division claim is thus $15.1 million. We note in passing that Coverdale estimated combined increased expenses for subdivision (a) at $6.1 million leaving estimated additional net operating revenue of $9.0 million as the amount of plaintiff's damage claim for subdivision (a) of the Domestic Division claims. Discussion of costs will, however, be deferred until later.

B331's and B131's—Defendants' Position

We will next review the revenue computations of the Simat Report for subdivision (a). The Simat estimates use a different method of computation of the average stage length over which the added flights would be operated, a different method of computing load factors and a different method of computing passenger yields. Coverdale

assumed that the added jet services would be operated at the same average stage lengths as existing domestic jet services for planes of the same or similar types in the year that the added services would be operated; that added jet aircraft and displaced piston aircraft would be operated at the same average load factor (per cent of available seats which are occupied) as all flights operated in that year by TWA with aircraft of the same or similar types; and that added jet services and displaced piston services would yield revenues per passenger mile equal to the average yield experienced by TWA per passenger for the year in which added for the same or similar type plane.

The basic differences between the two reports, according to the Simat, arise from certain erroneous assumptions from the Coverdale report. Simat testified that jet aircraft, as they were received by the various carriers including TWA, were assigned to the most lucrative long-haul routes, where their attractiveness to passengers and operating economies could be most fully exploited. As additional jets would be received, they would be added to the best of the remaining routes, which were less advantageous than the original assignments, and according to Simat, the history of jet deliveries showed a pattern of assignment to routes of decreasing advantage. Simat asserted that the Coverdale study failed to take this pattern into consideration, and that as a result, the Coverdale report contained certain "fundamental errors" as follows (italics mine):

(1) The assumption that added jet aircraft and displaced piston aircraft would be operated at the same average *load factors* as the average of all aircraft of the same or similar types for the year is unrealistic. Added jet operations, Simat estimated, in fact would produce addi-

tional traffic at levels well below the average for existing jets, and displaced piston aircraft would be drawn from the most effective of the piston aircraft services, rather than services of average effectiveness.

(2) The assumption that added jet aircraft of a particular type would be used in *stage lengths* exactly as the average of all aircraft of the same or similar types for the year is not realistic because the added aircraft are not used as productively or as economically as available aircraft of the same or similar types. Additional aircraft would be operated at stage lengths shorter than average. By the same token displaced piston services were not average piston aircraft services but were long-haul services affording better-than-average use of piston aircraft with respect to productivity and operating economies.

(3) The assumption that passenger traffic added by added jet services or deleted by displaced piston services would have *revenue yields per passenger mile* equal to the average experienced yield per passenger mile for the year in which added, is unrealistic. Simat estimated that the yields from this added jet passenger traffic would be below average revenue yields per passenger mile and yields of traffic from displaced piston services would not necessarily be at the average revenue yield for the Domestic Division.

We will defer until later discussion of a Supplemental Simat Report, and now discuss the three factors which, in the original Simat Report, differentiate it from the Coverdale Report as to the Domestic Division.

The original Simat Report states his opinion that the assumed additional jet operations would not have produced additional net revenues for the plaintiff in the 1959-63 period. In support of this conclusion, Simat makes the following points:

1. The economic climate for increased airline capacity was not favorable during the years in question. In June 1960 the economy started a downward drift which continued through February, 1961. This was followed by a gradual recovery through the third quarter of 1962 and finally through the balance of 1962 and in 1963 by a period of accelerated growth.

2. While volume of domestic air travel has shown a long term trend of generally more rapid rate of growth than the economy as a whole, it mirrors the forces of decline and growth in the economy.

3. Actual load factors for the industry declined precipitously in 1959 through 1962, leveling out only in 1963. TWA's load factor in all its scheduled services declined from 71% in 1959 to 53% in 1963.

4. The U. S. air trunkline industry suffered a decline in earnings shown by the CAB Handbook of Airline Statistics, 1965 edition, as follows:

	Operating Profit	Adjusted Net Income
1959	$124 million	$71 million
1960	$ 80 "	$16 "
1961	$ 13 "	($36) "
1962	$158 "	$40 "
1963	$259 "	$77 "

5. From the same source, it was shown that from the beginning of 1959 to the end of 1961 approximately one billion dollars were added to the investment of U.S. domestic and international trunk line carriers in additional flight equipment, ground property and equipment and net working capital. For each dollar added there was a loss of 9 cents in operating profit.

6. The rate of return before investment tax credit—a measure employed by the CAB to gauge the appropriateness of airline earnings for regulatory purposes—reached a low of 4% for U.S. certificated route air carriers from 1959 through 1963. This was the lowest average rate of return for the industry for any five consecutive post-war years. It compares with an average rate of return of 7% for the preceding 1955-58 period and a rate of return of 11% for the 1964-68 period.

Simat next presented a mathematical study based upon computer calculations to support his conclusions. He expressed his opinion that *marginal load factor*, i.e., the ratio of the net passengers added by an additional flight to the seat capacity added by the flight, rather than annual average load factor for the type of plane for the year involved, should be the factor used in considering whether the addition of an assumed flight would be profitable in calculating damage estimates. He states that the marginal load factor for added flights is generally less than the actual load factor of existing flights because added flights compete to some extent with existing flights of the same carrier and divert traffic from other existing flights.

Simat then made an adjustment in his marginal load factor percentages, before applying it to his damage estimates, to compensate for traffic produced solely by "forces in the economy." The adjustment was intended to result in isolating the additional traffic that he estimated would have been due solely to the introduction of additional jets. This adjustment was in proportion to the increase in Disposable Personal Income, which is an index used by the Office of Business Economics of the U.S. Department of Commerce and which, in Simat's opinion, would have reflected the ability of people to engage in air travel for personal reasons.

The adjusted marginal load factors, by years, were applied by Simat to the agreed upon added plane miles for estimating added and deleted passenger miles. The average marginal load factors for the combined experience of all types of jets were used by Simat to obtain the marginal load factor for jet operations since, he stated, his studies showed a high degree of interrelation among the various categories of jets. The same method was used for non-jets to obtain the average marginal load factor for non-jets.

Simat found, as a result, that the Coverdale estimates of increase in passenger traffic from the addition of domestic jet services were "overstated" by 1.65 billion passenger miles, equal to 41.9% of the total estimate of added jet traffic. He also found that Coverdale "understated" the estimates of deleted piston aircraft traffic by 1.1115 billion passenger miles, equal to 63.3% of the total estimate. We reserve until later our opinion of the validity of the use of average load factor (Coverdale) or adjusted marginal load factor (Simat) in computation of damages.

The procedure followed by Simat to obtain domestic passenger revenue yields was to apply to his estimates of added jet and deleted piston passenger miles in each year, not the historical average yield for all passengers (as did Coverdale) but the particular yield which was found by him to be applicable in that year to trips of the average length that would have been taken by passengers who would have been added and deleted. This required three steps: (1) estimation of average stage lengths for the assumed added and deleted traffic; (2) estimation of average passenger trip lengths for the assumed added and deleted traffic; and (3) estimation of the average yield which would have been realized by TWA for different passenger trip lengths.

Simat reviewed TWA's domestic jet schedules and derived mathematical relationships between existing stage lengths of jet flights and the stage lengths of jet flights actually added in the years in question. Based upon these relationships, he estimated the stage lengths of the flights that would have been added with the assumed additional jet aircraft.

His relationships for estimating the stage lengths of added scheduled jet services for each type of jet aircraft are expressed in the formula (DX 271A, p. IV-3):

$$\textit{Average Stage Length of Added Jet Services (Miles)} = C1 \times \textit{Average Stage Length of Existing Jet Services (Miles)} + C2$$

Where C1 is an amount less than 1.0 applied to determine that part of the stage length of added jet services that varies in proportion to the actual length of existing jet services and

C2 is an additional number of miles that does not vary with the stage length of existing jet services.

For the B-331 aircraft, the specific relationship was:

$$\textit{Average Stage of Added Flights (Miles)} = 0.271 \times \textit{Average Stage of Existing Flights (Miles)} + 631.544$$

Adjustment was made for non-scheduled flights by assuming they would have had the same lengths as scheduled flights and would be flown in the same relative proportions as the miles actually flown in all service in the same years.

The above formula for the B-331s was determined by a method commonly recognized by statistical experts for determining relationships between two variables, and known as regression analysis or as the method of least squares (Tr. 7805-6). As an example, by plotting on graph paper aircraft hours operated (independent variable) and

amount of operating expenses (dependent variable) for several airlines, one can connect the dots on the graph with a straight line which represents an average relationship between the points. There are various standards for placing the straight lines, but the method of least squares fits the line to the various observations (dots) so as to reduce the squares of the deviations (differences) to a minimum. It produces a line showing the average of the various lines that might be fitted to the observations. If one squares the deviations and divides by the number of observations, one gets the standard error of estimate; and, given a normal distribution of errors, 68% of the observations should fall within one standard of error and 95% of the observations should fall within two standard errors. Relationships based on fewer observations tend to be more untrustworthy, and results showing a large proportion of observations outside the standard error of estimate likewise tend to be untrustworthy unless validated by independent means.

No claim was made by Simat that regression analysis was anything more than a statistical method useful in testing the validity of assumptions made by non-mathematical observations and raw data and conclusions based thereupon. Nevertheless Simat was of the opinion that the statistics produced by regression analysis under the assumptions made in his report confirmed his expert opinion as to the financial results that would have been obtained under the relevant equipment assumptions.

The average stage length estimated by Simat for the added B-331 domestic flights are set forth below, and are compared with the stage lengths used by Coverdale, which were based on the average stage lengths which TWA actually experienced with B-331 jets for that year (DX 271B, Ex. A-D):

	Coverdale	Simat
1959	1869 miles	1047 miles
1960	1869 "	1047 "
1961	1389 "	1009 "
1962	920 "	881 "
1963	799 "	848 "

The number of flights that would be performed with the added aircraft miles was obtained by dividing the added plane miles by Simat's estimated average stage length of the added services:

	Net Added B-331 Flights
1960	1600
1961	3122
1962	1613
1963	855

In obtaining his trip length data for added and deleted traffic, Simat noted that TWA's average passenger trip length historically trended steadily upward during 1959-1963—from 892.6 miles per passenger to 942.3 miles per passenger. TWA would have added 499,000 passengers and 725 million passenger miles during this period, giving an average trip length per added passenger of 1,453 miles. This is 1.6 times the 914 mile average stage length of TWA's domestic traffic in this period. Simat then derived a relationship between the stage lengths of added and deleted flights and the trip lengths of passengers added and deleted as a consequence of the flight changes. Separate ratios were established for jet and piston services, using various assumptions that Simat considered reasonable on the basis of his experience. Using these ratios, he estimates the average trip length of added jet passengers by increasing the estimated stage lengths of the added flight

by 144% and of deleted piston passengers by applying 168% to the stage lengths of the deleted piston flights.

He stated that the reason why revenue passenger yield realized by domestic air carriers varies with distance traveled is because the fares contain a fixed component in the form of a charge per ticket, which is intended to cover such costs as ticketing and handling of the passenger and baggage at airports (not dependent on length of trip) and a variable component in the form of a charge per mile. As the length of trip increases, there results a "fare taper." Adding to the effect of taper are such factors as that passengers on longer than average trips get a disproportionate part of fare discounts. By use of regression analysis Simat obtained a relationship between yields and trip distances on an industry basis for the years 1959-63. These figures were adjusted to TWA yields by comparing the actual passenger yield for TWA at an average trip length in each year with the yield estimated for the same trip length using the industry relationship.

The estimated revenue yields were applied to the estimated adjusted marginal load factors, computed as above described, and transportation revenues were obtained.

We now show the results of the methodology in the original Simat Report under subdivision (a):

The seat miles for the added B-331 planes are the same as under Coverdale assumptions. The adjusted marginal load factors and added passenger miles are (DX 271B, p. IV-25):

	Added Seat Miles (Millions)	Marginal Load Factor	Added Revenue Passenger Miles
1960	241.6	32.4%	78.3 million
1961	418.1	22.7	94.9 "
1962	180.9	49.2	89.0 "
1963	97.7	49.5	48.4 "

The average stage lengths, passenger trip length, and added passengers are (*id.*, p. IV-27):

	Average Added Stage Length (Miles)	Average Added Trip Length (Miles)	Added Passengers
1960	1,138	1,633	47,449
1961	1,009	1,447.9	65,543
1962	881	1,264.2	70,400
1963	848	1,216.9	39,773

Applying the yields for passenger revenues, computed as set forth above, the following estimated added revenues are obtained (*id.*, p. IV-29):

	Passenger Revenue Yield Per Mile	Total Added Revenues
1960	5.342¢	$4.39 million
1961	5.685¢	$5.67 million
1962	5.979¢	$5.59 million
1963	5.768¢	$2.93 million

As to displaced piston aircraft service, Simat noted that Coverdale had based its estimate on the experienced ratio of total such miles deleted to total jet miles added in each year, and had assumed that all the additional plane miles deleted in domestic service were flown with L-1649As or L-1049Gs. Simat disagreed with this latter assumption, and stated that by eliminating the piston aircraft with the largest number of seats, Coverdale had overstated the number of piston seat miles to be eliminated. Simat accordingly computed the additional piston miles deleted according to the type of piston plane proportional to the plane miles of each type actually deleted in the year in question. The results, applying marginal load factors, gave the estimated deleted passenger miles as follows (*id.*, p. IV-31):

		Deleted Available Seat Miles (Millions)	Marginal Load Factor	Deleted Passenger Miles (Millions)
M-404—	1960	22.	63.2	13.90
	1961	38.	57.3	21.77
L-049/749				
	1960	52.88	63.8	33.74
	1961	63.39	58.	36.75
	1962	50.78	72.6	36.87
	1963	5.51	69.4	3.82
L-1049	1960	33.51	64.4	21.58
L-1049G	1960	61.16	63.1	38.59
	1961	43.66	57.1	53.15
	1962	1.60	72.7	1.16
	1963	2.39	69.4	1.66
L-1049H	1960	.97	66.	.64
L-1649A	1960	10.09	63.5	6.41
	1961	80.24	63.4	50.87
	1963	9.10	84.8	7.72

The average stage lengths and average trip length of deleted passenger traffic having next been obtained, the numbers of deleted passengers were computed. The revenue yields were computed for each type of deleted piston and the resulting deleted revenues, were as follows (*id.*, p. IV-35):

		Deleted Revenues (Millions)
M-404	1960	$1.02
	1961	$1.67
L-049/749	1960	$2.08
	1961	$2.42
	1962	$2.64
	1963	$ .26
L-1049	1960	$1.30
L-1049G	1960	$2.23
	1961	$3.39

		Deleted Revenue (Millions)
L-1049G (cont.)		
	1962	$ .07
	1963	$ .11
L-1049H	1960	$ .03
L-1649A	1960	$ .37
	1961	$3.21
	1963	$ .47

The methods used in the original Simat Report for estimating changes in operations from the earlier delivery of certain B-131 and B-331 aircraft follow the procedures described above in respect of the changes from failure to receive certain B-331s, and the detailed figures appear in DX271A, Chapter V.

The original Simat estimate for subdivision (a) is that the total revenues would have been strikingly less than the Coverdale estimate if the Boeing jets had been introduced and operated under the posited equipment assumptions.

Discussion of costs relating to this subdivision (a) and my decision as between the methodologies of the plaintiff and defendants are deferred until later.

Twenty Convair 880's—Plaintiff's Position

Subdivision (b) of the plaintiff's claim for loss of profits in the Domestic Division is based upon the delayed delivery of twenty of the thirty CV-880 aircraft originally ordered by Toolco from Convair. On this subject paragraph 19 of the complaint states:

> "During the period 1956 to 1960, the defendants required Convair to make certain changes in the design of Model 880 aircraft on order by Toolco, but the defendants prevented TWA from arranging with Convair for certain design modifications which were de-

sired by TWA and which would not have interfered with the scheduled dates of delivery. During the year 1960 the defendants also prevented and restricted TWA from making acceptance and test flights from time to time of various specific Convair model 880 aircraft then on order with Convair by Toolco."

Paragraph 18 of the complaint provides, in part, with respect to the Convair 880's:

"Despite repeated requests by TWA Toolco refused throughout the period 1956 to 1960 to assign to TWA the rights to acquire such aircraft."

The background facts are that Toolco, in April 1956, contracted with Convair for thirty medium range CV-880 jets, a newly developed model. At or about the same time Delta contracted with Convair for ten of the CV-880 jets. These contracts provided for a subsequent allocation of delivery dates for the 40 planes between Toolco and Delta, which was to be worked out between the parties at a later date. The selection of CV-880 jets by Toolco for medium range operations was on Rummel's recommendation. He favored concentrating on pure jets in preference to buying turbo-prop aircraft for medium range operations. The number ordered by Toolco—i.e.—thirty aircraft, was also based upon Rummel's recommendation.

The plaintiff does not contend that a medium range jet could or should have been ordered at an earlier date. After a succession of modifications in the original Toolco and Delta contracts, Convair agreed in the final contract to the first delivery to be made in November 1959 and the fortieth in September 1960, with the allocation of specific dates still to be made by mutual agreement.

In the fall of 1958 when the production of the CV-880s had reached a point where it became essential to allocate particular aircraft between Toolco and Delta, so that the configurations would meet the respective requirements of the two airlines, Toolco refused to agree to any proposed allocation of delivery dates and Convair finally made a specific allocation on its own initiative (Rummel, TWA Ex. 2, p. 15; Tr. 1094-1095, 1108, 1552-1553). Delta executed a contract amendment incorporating the delivery schedule provided for it (TWA Ex. R10). Toolco never executed such an agreement, but the evidence shows that Toolco could have contracted for the contract delivery dates assigned to it by Convair. The plaintiff has accordingly assumed delivery dates so assigned by Convair (original contract delivery dates) in measuring the delays in delivery of twenty of the CV-880's.

Rummel testified (Tr. 307, 321, 444, 1538) that defendant Hughes assumed personal control of all matters connected with Convair deliveries; that no one else in TWA was permitted to become involved on matters of delivery; that in the fall of 1959 defendant Hughes instructed him that he was not to proceed with any acceptance procedures or even to continue acceptance flights without receiving personal clearance from defendant Hughes (Tr. 2949-50, 2987). The evidence as a whole bears out this Rummel testimony.

Rummel also testified that in December 1959 Toolco sent armed guards to the Convair plant who actually took control over the first four CV-880's coming off the production line and scheduled for delivery to TWA or Toolco; that these planes were subsequently bailed to Toolco and remained in that condition for many months, unavailable for final inspection test flight or acceptance procedures (Tr.

2788-90, 2810-17, 2839-40). The effect of this incident is discussed later.

Rummel also testified that removal of other CV-880's from the production line came as a direct result of the actions of defendant Hughes (Tr. 2836-37). Rummel also testified that when Convair subsequently tendered approximately seven or eight completed aircraft, they were refused because "we had not been cleared by Hughes to do so" (Tr. 2763-66).

Rummel also testified that Convair claimed damages from Toolco for delay in delivery and storage costs on nineteen of the twenty planes which eventually went to TWA and that in 1963 (when TWA purchased six additional CV-880s from Convair after repossession from Northeast Airlines) that Toolco agreed to credit Convair with a substantial sum in recognition of these claims (Tr. 2757-65; DX 145; TWA Ex. 21).

Delta during this period was accepting deliveries of aircraft under the contract with an average delay of 1.4 months per plane subsequent to the various contract delivery dates. Rummel testified that if TWA had been the purchaser, independent of defendants Hughes and Toolco, it was his opinion that Convair would have delivered the aircraft to TWA on a schedule at least closely approximating that of Delta (Tr. 1129-1139).

TWA's claim for damages under this facet of the case is based on the original Toolco-Convair contract delivery dates, as stated above. Its theory of damages is that by reason of the actions of Toolco, it is entitled to rely upon the schedule of deliveries which Convair was willing (prior to these events) to contract to meet.

Following is a table showing the original contract delivery dates, the actual receipt dates and the months difference (TWA Ex. 4(c)(1), p. 52):

Actual Receipt Date	Contract Delivery Date	Months Difference
5/18/60	11/59	6
1/ 1/61	1/60	12
1/ 5/61	2/60	11
1/ 6/61	3/60	10
1/ 8/61	3/60	10
1/12/61	4/60	9
1/21/61	4/60	9
2/ 2/61	5/60	9
2/15/61	5/60	9
3/15/61	6/60	9
3/18/61	6/60	9
3/20/61	7/60	8
4/26/61	7/60	9
5/ 6/61	7/60	10
5/25/61	7/60	10
6/ 9/61	8/60	10
7/ 9/61	8/60	11
8/10/61	8/60	12
9/ 2/61	9/60	12
10/13/61	9/60	13

The Coverdale Report computed the increase in annual average CV-880s which would have been available for commercial service if the original contract delivery dates had been met under this portion of the case, as follows (*id.*, p. 53):

1960—10.3 planes
1961— 5.2 planes

assuming the aircraft would have been received on the 15th of whatever month was specified in the contract for each aircraft.

Using TWA historical data for 1961 operation of CV-880s, Coverdale calculated the additional plane miles would have been 5.9 million for 1961; and again using 1961 data (since TWA was not operating CV-880s in 1960), it calculated the additional plane miles for 1960 as 11.6 million.

Using TWA's average of 88.3 seats offered for sale per CV-880 in 1961, it then calculated the additional seat miles as (*id.*, p. 54):

1960—1,024 million additional seat miles
1961— 521 million additional seat miles

Using TWA's 1961 average CV-880 passenger load factor, the resulting number of additional jet passenger miles for 1961 is 341 million miles. Since TWA did not have CV-880s to operate in commercial service in 1960, Coverdale took average load factor for 1960 for TWA's Boeing 331s and 131s used in the Domestic Division and thus computed additional jet passenger miles for 1960 for the CV-880s as 702 million miles. (*Id.*, p. 55.)

To obtain the corresponding reduction in piston plane passenger miles a complicated formula was used: An examination was made of the historical service patterns for the thirty specific pairs of cities in which TWA historically employed its twenty CV-880s when they were put into service in 1961 and for the six additional pairs of cities served by the six additional CV-880s when they were put into service in 1963. The historical decrease in piston service on those particular segments was totaled and was related to the amount of jet service introduced on such segments. It was found that the average decrease in piston plane miles was 52% of the increase in jet plane miles between the same cities. It was assumed that this percentage would be applicable to any earlier service and to any further increase in CV-880 service in similar operations; and

that in any given year the kinds of operations in which TWA would have used additional jets of a given type would have been essentially similar to the operations in which aircraft of the same type were used by TWA historically in the same year. Applying the 52% reduction factor to the additional CV-880 jet plane miles the additional reduction of piston plane miles becomes (*id.*, p. 62):

1961—3.1 million
1960—6.0 million

More than half of the reduction shown above was in flights of L-1049G aircraft, and the Coverdale Report used the average number of seats offered for sale in L-1049Gs for each of the two years in question, and the average load factor for such piston plane for each year, and thereby arrived at the following figures for reduced piston passenger miles (*ibid.*):

1960—286 passenger miles
1961—134 passenger miles

The above changes in jet and piston passenger miles and TWA's actual yields (computed as set forth above, at pp. 84-86) gives estimated net increase of passenger revenues as follows (*id.*, p. 63):

1960—$23.5 million
1961— 12.2 million

Adding the 5% estimate for non-passenger revenues these figures become (*ibid.*):

1960—$24.8 million
1961— 12.8 million

for the net estimated additional revenues under subdivision (b).

Twenty Convair 880's—Defendants' Position

The defendants take the position that there is no positive and distinct allegation in the complaint that the delays in delivery of the CV-880s were caused by the defendants; and that the plaintiff has failed during the damage hearings to introduce evidence to link the delays sufficiently with actions of the defendants. The defendants claim that the proof indicates that the delays were due primarily, if not exclusively, to Convair—i.e.—the manufacturer. The defendants cite at pages 142-150 of their brief the references to various contemporaneous documents which were introduced as exhibits in which TWA's representatives described actions or failures to act, on the part of Convair, which might have contributed to delays.

There is an allegation in the complaint that "during the period 1956 to 1960, the defendants required Convair to make certain changes in the design of Model 880 aircraft on order by Toolco. . . ." (Paragraph 19). However, this paragraph in the complaint does not allege that these changes in design resulted in any delays in the delivery of any aircraft, and no evidence of any such delay was introduced. The only specific action of the defendants prior to May 1960 (when the first 880s were delivered to plaintiff) cited by the plaintiff as being active interference by Toolco and defendant Hughes with the deliveries of the planes was the setting aside of three of the 880s from the production line in December 1959 and the stationing by Toolco of armed custodians to guard the planes. But it is clear from a contemporaneous document (Deft. Ex. 127) that Rummel did not consider this action by Toolco in itself to have delayed Convair's production schedule, although it was probable by this time that Convair was not going to be able to deliver on the original schedule.

In an inter-office memorandum written by Rummel to Mr. Charles Thomas, then President of TWA, under date of February 8, 1960, he stated:

> "Setting aside the three, now two, aircraft has not adversely affected the Convair production line. In fact this may have helped Convair materially by (1) beneficial reassignment of personnel, (2) permitting more timely completion of engineering, and (3) permitting more orderly, i.e., less out of station construction. Of course, delivery of the two aircraft now set aside is affected. They have been rescheduled for substantially later delivery * * *. Certification has not been adversely affected by setting aircraft aside."

I conclude that the defendants are not chargeable with responsibility for delays in delivery by reason of the December 1959 incident.

On March 2, 1960, the purchase agreement between Convair and Toolco covering all thirty of the CV-880s was changed by amendment No. 4 which established a new schedule for delivery of the planes as follows:

May	1960—4	planes
June	4	"
July	5	"
August	5	"
September	4	"
October	5	"
November	3	"

In my opinion the plaintiff's position that it was entitled to take the original contract delivery dates in measuring the amount of damages is not valid. Rather it should be bound by the revised delivery dates established in Amendment No. 4.

The evidence clearly shows, however, that commencing about May 1960 when Convair was able to offer deliveries, the defendants, as alleged in the complaint, prevented deliveries from being made and caused substantial delays in deliveries.

I have heretofore set forth the references to the testimony of Rummel showing that Hughes assumed personal control of all matters connected with Convair deliveries and that no one else at TWA was permitted to become involved on matters of delivery or acceptance procedures or even to continue acceptance flights. Rummel also testified that after TWA was rendered unable by Hughes to carry out final inspection procedures, numbers of additional aircraft were removed by Convair from the production line in a semi-complete state (Tr. 2807-8). This occurred progressively as TWA could not proceed with acceptance procedures (Tr. 2808). In "the summer" of 1960 Convair tendered seven or eight completed aircraft and Rummel testified that, "We didn't proceed with the flight testing because we hadn't been cleared by Hughes to do so." (Tr. 2766). Also, it is uncontroverted in the evidence that Convair claimed damages from Toolco for delay in delivery and storage costs on nineteen of the twenty planes which eventually went to TWA (Tr. 2757-58, 2764-65); and in 1963 Toolco settled Convair's damage claims for disruption of its business and delays in deliveries by crediting Convair with $3,750,000.

We turn now to the defendants' computations set forth in the Simat Original Report. Using his methodology described above for Boeing planes in domestic service, Simat reached the following results in respect of the assumed earlier delivery of 20 CV-880s:

Simat assumed the Coverdale estimates of 10.3 added planes for 1960 and 5.3 added planes for 1961; and the estimate of 11.7 million added jet plane miles for 1960 and 6.0 million jet added plane miles for 1961. By analysis of TWA domestic schedules for CV-880s over the period 1961-1963, Simat established by regression analysis the estimated stage lengths of added CV-880 jet service to be 752 miles, although the historical average stage length of existing CV-880 flights was 819 miles. The number of added flights becomes 15,558 for 1960 and 7,978 for 1961.

To the net assumed added seat miles, Simat then applied the "estimated adjusted marginal load factors" (32.3% for 1960 and 22.5% for 1961) and obtained added revenue passenger miles of 333.7 million miles for 1960 and 119.2 million miles for 1961. Since the average stage length of added service was estimated at 752 miles for both years, the number of added passengers becomes 309,239 for 1960 and 110,462 for 1961. TWA's actual average passenger revenue yield per mile was then adjusted proportionately in the same proportion as the actual average trip length bears to the adjusted trip length, and the total added revenues were (DX. 271A, p. VI-16):

1960—$19.5
1961—$ 7.3

As for piston aircraft operations, by regression analysis the estimated stage lengths of each type of displaced piston plane was calculated, and the number of deleted piston flights and miles was also estimated for each type of piston plane. The total deleted revenues from piston operations,

similarly computed for each type of piston, and then combined, were (*id.*, p. 20):

1960—$41.3
1961—$20.0

Simat, it will thus be seen, estimated very substantial losses in revenues for both years from the assumed additional operations of the twenty 880s.

Discussion of estimated changes in expenses under subdivision (b) is deferred until later. However, the figures for loss of revenue, apart from costs, are significant. In view of the clear preference by airline passengers for jets over pistons, it is almost impossible to accept the conclusion that replacements of piston flights by jet flights would have caused net revenues to decline from $41.1 million to $19.5 million in 1960 (more than 50%) and from $20.0 million to $7.3 million (more than 65%) in 1961. These figures should be contrasted with the views of the Civil Aeronautics Board as expressed in Order No. E-16195 (December 29, 1960, TWA Ex. 315.4, also reported at 32 C.A.B. 1363). That Order approved the loan agreement which substituted control by independent voting trustees for control by Hughes. Noting that the loan would enable TWA to take delivery of the 20 Convair 880's, the C.A.B. stated:

> It appears that the failure to receive this equipment as planned may have played a substantial part in TWA's recent inability to maintain its traffic position relative to its principal competitors. Thus, we note, for example, that the carrier's preliminary traffic reports for the month of November 1960 show that TWA's share of the Big Four domestic passenger market has declined from 23 to 20.2 percent. By way of contrast, United, which was behind TWA, has

> caught and passed it, increasing its share from 21.3 percent to 29 percent. It appears to be significant that TWA's major competitors have already taken delivery of much larger jet fleets than TWA is operating and have firm orders for delivery of more. [Footnotes omitted.]

Thus, the C.A.B., an impartial body which is certainly experienced in matters such as these, was of the opinion that the delay in delivery of the Convair 880's had probably resulted in a heavy loss of traffic to TWA, rather than a preservation of traffic as Simat asserts. Simat's conclusion that replacing piston flights with jet flights would result in a heavy loss of traffic can only be viewed with disbelief and reflects on the credibility of his entire approach.

Ten Convair 880's—Plaintiff's Position

Subdivision (c) of the plaintiff's claim for loss of profits in the Domestic Division is based upon the failure to receive ten of the thirty CV-880s originally ordered by Toolco from Convair.

In addition to the more general allegations of the complaint (see Par. 52) the following statements appeared therein:

> "In or about April 1956 the defendants arranged for Toolco to place orders for at least 30 Model 880 jet powered aircraft to be manufactured by Convair (par. 17)."

> "In November 1960 while the proposal for merger was pending, the defendants arranged for the lease by Convair to Northeast of six of the Convair model 880 aircraft which Toolco had ordered from Convair.

Among the aircraft so leased to Northeast were three aircraft which Toolco previously by an agreement with TWA of May 9, 1960 had assigned to TWA (par. 22)."

There is no disagreement over the fact that the remaining four 880s out of the ten involved in the claim under subdivision (c) were retained by Toolco for some time and later leased by it to Northeast (TWA Ex. 2, p. 10), and were never released by Toolco to the plaintiff.

Earlier we described the main major provisions of the contemporaneous contracts between Toolco and Convair, and Delta and Convair, for a total of forty CV-880s (pp. 101-03). Rummel testified that as a result of this and other reductions in the jets available to the plaintiff, caused by actions of Toolco, TWA was unable "to provide the schedule coverage that was advisable because of lack of equipment for a number of years" (Tr. 1085-86).

Rummel was informed on March 5, 1959 by Toolco representatives that TWA was not to receive ten of the Convair 880s which had been previously ordered (TWA Ex. 2, p. 9; R. Tr. 147). It appears that Toolco had had negotiations with Capital Airlines about selling six to ten of those CV-880s in January 1959. Rummel protested about the cutback in the Convair fleet (Tr. 762-65) as did other TWA officials (Tr. 1165-74, 1193-94). The opposition to the reduction was communicated to the executives of Toolco and to Hughes personally, but Hughes dismissed TWA's objections "summarily" (Tr. 1178-81).

The original contract delivery dates for the ten planes which the plaintiff takes as being the dates when it would have received the ten planes but for the aforementioned actions of Toolco, are as follows (TWA Ex. 2, p. 18; TWA Ex. 4(c)(1), p. 65):

December	1959
February	1960
April	1960
May	1960
June	1960
June	1960
July	1960
August	1960
August	1960
September	1960

and in each case it is assumed by Coverdale for damage computation purposes that the aircraft would have been received on the 15th day of the applicable month.

The additional annual average number of CV-880s available for commercial service was computed on this basis as (TWA Ex. 4(c)(1), p. 66):

1960	5.1
1961	9.9
1962	10.
1963	7.9

(The reduced figure for 1963 results from the fact that, as noted above, TWA actually purchased six of the ten planes in question from Northeast Airlines in the last quarter of 1963, and it was assumed that these six CV-880s would have been among the thirty aircraft in the original Toolco order for such planes).

The Coverdale calculation of additional passenger miles TWA would have recorded each year is similar to the calculations described above (pp. 104-06) for the twenty CV-880s involved in the delayed deliveries. It results as follows (*id.*, p. 67):

1960—351 million additional jet passenger miles
1961—648 " " " " "
1962—599 " " " " "
1963—506 " " " " "

It was assumed that service by TWA for the additional ten CV-880s would have been similar to that which it actually operated with a fleet of twenty CV-880s in 1960 and with a fleet of twenty-six commencing in 1963.

The Coverdale Report then took thirty-six pairs of cities where most of the CV-880 service was concentrated and found that the reduction of piston aircraft service for such pairs of cities was 51% of the jet aircraft service added. Using this ratio, the report then calculated reduction of piston aircraft service as follows (*id.*, p. 70):

1960 — 123 million miles
1961 — 235 " "
1962 — 247 " "
1963 — 195 " "

At TWA's average annual yields, computed on the basis above described, the following are the Coverdale calculations for net increase of passenger revenues (*ibid.*):

1960 — $12.9 million
1961 — $24.3 "
1962 — $21.5 "
1963 — $18.2 "

Using 5% additional revenue for non-passenger revenues the total additional revenue figures become:

1960 — $13.5 million
1961 — $25.5 "
1962 — $22.6 "
1963 — $19.1 "

In considering whether to allow the full amount of the plaintiff's claim under this subdivision (c) relating to the failure to receive ten CV-880s, the question arises as to whether the plaintiff is justified in using the original contract delivery dates or whether (as in the case of the calculation of damages in respect of the delays in delivery of the twenty CV-880s considered under subdivision (b)), the plaintiff should be required to use the amended delivery dates set forth in Amendment No. 4 of the contract between Toolco and Convair.

For the reasons stated above, it is my opinion that it is reasonable to use the contract delivery dates in Amendment No. 4 in computing its damages under this subdivision (c).

Ten Convair 880's—Defendant's Position

The original Simat estimates in respect of the failure to deliver the ten additional CV-880s are now considered.

Simat assumed the estimates of added planes and added plane miles as computed in the Coverdale Report. By regression analysis the stage lengths for the assumed added service were obtained, as were the stage lengths of the assumed deleted piston service, by types of planes. To the added seat miles assumed, Simat then applied the "estimated adjusted marginal load factors" (32.3 for 1960, 22.5 for 1961, 48.7 for 1962 and 49.4 for 1963) and obtained added revenue passenger miles of (DX 271A, p. VII-15):

1960	—	165.4	million miles
1961	—	224.5	" "
1962	—	519.1	" "
1963	—	435.2	" "

The assumed added passengers were (*ibid.*):

1960 — 163,487
1961 — 211,693
1962 — 494,193
1963 — 422,976

The average passenger revenue yield per mile (adjusted as described above) then produced total added revenues of (*id.*, p. VII-17):

1960 — $ 9.7 million
1961 — $13.7 "
1962 — $33. "
1963 — $26.6 "

The total deleted revenues from piston operations, similarly computed for each type of plane, and then combined, were (*id.*, p. VII-21):

1960 — $21.0
1961 — $37.8
1962 — $22.3
1963 — $10.2

Discussion of changes in costs under subdivision (c) is deferred until later.

I now take up the Simat Supplemental Report.

During the Simat cross-examination on the original Simat Report, plaintiff's attack was directed primarily to the validity of the concept of a marginal load factor—both before and after adjustment for economic growth. The use of this factor, more than any other, accounted for the wide variation in the estimate of the experts covering domestic operations.

The defendants countered with the statement that with the data then available to them they were confined to

pointing out the "fundamental errors" of the Coverdale Report—that they needed additional data from TWA records if they were expected to produce the best judgment of their expert (Simat) as to changes that would have occurred in operating profits.

The testimony of the defendants' experts was that any realistic estimation of the change in net operating profit requires the construction of an articulated TWA operating plan in which specific consideration is given to how the added jet capacity would be integrated with existing operations, to what types of service would be added, to what existing services would be eliminated in their entirety, and of what shifts in aircraft usage would occur as added jet aircraft displaced other aircraft from their existing usage to displace, in turn, other aircraft in a chain reaction. Since the scheduling and integration of new aircraft capacity is one of the most complex functions performed in the operation of an airline, Simat stated, it cannot be dealt with in generalities but an extensive bank of background information is needed to make appropriately informed judgments concerning the most probable and suitable use of additional aircraft on a route system as heterogeneous as that of TWA, and the resulting effect on operating profit.

The defendants accordingly made a demand for massive additional production of TWA's operating records to enable their experts to construct an operating plan for TWA for the years in question and thus test the validity of their underlying damage theories. This demand was vigorously contested by the plaintiff as unnecessary and too late. It was my opinion that because of the incredibly large spread between the estimates of the experts as to operating results to be expected from the assumed added jet fleet, the Special

Master and any court reviewing the matter were entitled to the best judgment of all the experts, based on every available TWA record, as to the factors involved in their judgment. The defendants' admission that the original Simat Report did not reflect the best judgment of their expert because of the limited source material available, also influenced me. Accordingly, the defendants' belated request was granted as to the production of all available records sought by it affecting the Domestic Division operations of TWA.

I decided that corresponding figures for the International Division operations need not be produced because of lesser complexity of the factors involved in the operations of that Division. For example, the computations of transatlantic load factors were basically undisputed, and the stage lengths of the flights of course did not vary to any considerable degree in the International operations.

This demand for production entailed a substantial delay in the completion of the damage hearings but resulted in a Supplemental Simat Report reflecting, in conjunction with its original report, its final revised estimate of changes in plaintiff's domestic operating revenues. The Supplemental Report did not change estimates of costs, so the Simat cost estimates for the Domestic Division are found in the original Simat Report.

The mass of material furnished by the plaintiff as a basis for the Simat Supplemental Report consisted mainly of TWA's routing charts and on-board reports and on-line passenger revenue yield information for the five-year period 1959-1963. Traffic and financial data for all scheduled flight services were made available by individual flight segments. For each segment of each flight, the information was converted into a form considered suitable by Simat

for computor processing. This information included flight itinerary, departure and arrival time, number of flights per month, type of equipment, classes of service and numbers of seats in each class, and distances between points served.

Basically the differences in method from the Original Report may be summarized as follows:

1. Rather than estimating the average stage length of added and deleted operations by the use of Domestic Division average relationships between stage lengths of existing added and deleted services, the report estimated directly the changes in flight operations by segments and derived the stage lengths from individual flight segment data.

2. Rather than estimating passenger miles on the basis of average divisional marginal load factors, the Report estimated them on the basis of individual segments.

3. Rather than estimating passenger trip lengths on the basis of divisional averages, the Report estimated them likewise on data from the individual flights.

Following is a more detailed description of the methodology used in the Simat Supplemental Report:

The routing charts show the flight patterns over a twenty-four hour period for each aircraft. The on-board reports provide monthly summaries of data by flight number, segment and type of equipment for all revenue flights. They show number of departures and number of revenue passengers. From the origin and destination points, data were obtained for computing aircraft miles and block hours. Block hours are defined as the elapsed time between departure from the gate position before take-off to arrival

at the gate position after landing. From these figures, seat miles were obtained for each aircraft in each segment for each month. Simat then computed the average monthly stage length (aircraft miles divided by departures) and the average monthly load factor (revenue passenger miles divided by seat miles).

The annual average stage lengths resulting were (DX 271A, p. II-12):

Pistons	1959	1960	1961	1962	1963
M-404	161	155	141	—	—

Simat next determined his estimate of the monthly operating profit or loss, based on distances actually flown and number of passengers actually carried. He did this first computing revenues and costs under the methodology used in his Original Report and second by computing them under the Coverdale methodology. He summarized his results in the following language:

> "While the profit or loss determined under the Simat procedures is, in our opinion, substantially more accurate, the difference is not significant to the present analysis. For both methods demonstrate, with equal certainty, although in different degree, that individual aircraft in each of TWA's jet fleets varied strikingly in their earning capacity, depending upon their scheduling, and they also demonstrate that, as jets were added, the additional jets were placed on routes where they began to contribute not profits, but losses."

The Supplemental Report does not make separate estimates according to categories of assumptions, as did the Simat Original Report and the Coverdale Report.

In deploying the assumed additional jet fleet, Simat built a constructive schedule just as TWA historically scheduled such equipment when it in fact received the additional equipment (with certain adjustments not material for understanding the methodology). It selected as

a basis for the schedule of the constructive fleet in each month ("constructive fleet month") the schedule pattern adopted by TWA in the "guide" month, i.e., a subsequent month when the actual jet fleet was closest in number to the constructive fleet. The average jet stage length was computed for each guide month and applied to the total jet miles in the constructive fleet month, to obtain total constructive jet departures. Piston fleet miles and departures were similarly constructed. To determine the traffic carried by the "constructive" fleet, Simat did not use the on-board data furnished by TWA but chose instead an intricate method of computing passengers from data from a competition study of the CAB made in 1966, which tabulates from samples the number of passengers who purchased tickets for travel on TWA, or other airlines, between each combination of cities served by TWA and other airlines. By regression analysis Simat then related the change in the volume of passenger miles between each two successive years, for each flight segment, with the corresponding changes in the volume of seat miles scheduled with jet and piston aircraft. Further regression analysis was used to convert the relationship between changes in non-stop on-line passenger traffic service (traffic carried between a point of origin and a point of final destination) as reported in the CAB Competition Survey, and changes in aircraft services to a relationship between changes in on-board traffic and changes in aircraft services.

Passenger yields were then applied (varying with the estimated length of passenger trip to show "taper" as described in the original Report). The ratio of length of passenger trip to stage length was also computed as in the original Report, with some refinements statistically.

Operating revenues resulted from this application of

yield figures to the passenger miles. The results showed an even greater net loss of revenue for the Domestic Division than shown in the original Report. Total revenues were estimated at $79.79 million and total costs at $191.74 million, or a net loss estimated for operating with the assumed additional Domestic fleet of $111.95 million. Some "alternative" computations are also set forth in the Supplemental Report to "validate" the findings of the Report, but are not otherwise relied upon (DX 371) and accordingly are not discussed in this Opinion.

Conclusions

I have described above the claims of the plaintiff for Domestic Division losses resulting from inadequacy of its jet fleet. I have also examined the methodology used in the reports of the plaintiff's expert witness (Wemple of Coverdale) and the defendants' expert witness (Simat) and their estimates of the financial results to TWA if the hypothesized jet fleet had been received and operated in the years 1959-63. Since the conflicting results as to the amount of damages are based largely upon three assumed factors, the reasonableness of those factors will now be discussed as a preliminary to award of damages under this part of the case (Section IB-Domestic).

The greatest portion of differing results stems from the use by Coverdale of the historical annual average load factor (percentage of available seats which are occupied) for each type of plane to compute the number of net additional passenger miles that would have been flown if the additional planes had been available; and from the use by Simat of the marginal load factor (ratio of the net traffic added by an added flight to the seat capacity added by the

flight) in his computation of the number of net additional passenger miles. (In his Supplemental Report Simat did not denominate this factor as marginal load factor, but for purposes of this discussion the term is applicable to both of his Reports.) In my opinion the historical average annual load factor of the same or similar type of plane involved in the computation is the proper measure to be used. Since it is computed separately for each year it adequately takes into account the steadily decreasing load factors experienced by TWA and by the industry during most of the period covered by the damage claims.

The defendants quite properly state that use of the annual average load factor would not be valid if applied to unlimited assumed additions to traffic. However, the Coverdale report was based upon a limited assumed increase in traffic—limited by the amount of increased traffic assumed by the equipment assumptions of the posited hypothetical TWA jet fleet.

The percentages of seat miles of all types of aircraft assumed to be added by TWA domestically in 1959-63 measured against the total of TWA, American and United; and the percentage of seat miles so added by TWA measured against TWA's historical jet domestic seat miles is shown in the following table (TWA Ex. 444):

TOTAL AVAILABLE SEAT-MILES OPERATED
DOMESTIC SCHEDULED SERVICE ONLY
TWA, UAL AND AAL
ALL AIRCRAFT TYPES, 1959-1963

Year	TWA, UAL and AAL Historical Seat-Miles (A)	TWA Estimated Additional Seat-Miles (B)	Percent Additions by TWA
	(Millions)		
1959	21,738	105	0.5%
1960	24,827	910	3.7
1961	29,020	1,018	3.5
1962	34,613	774	2.2
1963	37,969	638	1.7

Year	TWA Only Historical Seat-Miles (A)	TWA Estimated Additional Seat-Miles (B)	Additions Percent
	(Millions)		
1959	6,492	105	1.6%
1960	6,962	910	13.1
1961	7,487	1,018	13.6
1962	8,623	774	9.0
1963	10,042	638	6.4

(A) Source: CAB Handbook of Airline Statistics (1965 Edition).

(B) Source: C&C Report (May 2, 1966) Volume I, Chapters II-V; Exhibits TWA 42, 42A, 43A and DX 262.

As applied to this posited increase in traffic, I am of the opinion that use of the annual average load factor in the Coverdale Report is reasonable.

A comparison of industry average load factors (scheduled operations of the trunk line air carriers) for the years in question with the TWA average load factors used by

Coverdale also tends to confirm the reasonableness of the Coverdale computations. The industry figures are as follows (DX 271B):

	Jets	Non Jets
1959	79.9	59.7
1960	69.6	55.3
1961	59.5	53.
1962	53.6	52.6
1963	54.	53.3

The use of the marginal load factor by Simat to measure increase or decrease in number of passenger miles is, in my judgment, inappropriate. I note that Simat throughout his testimony refers to the marginal load factor as being appropriate to determine whether an assumed added flight would be profitable. That may well be so for an individual flight under normal industry conditions which do not involve a transition period in which there is introduced into the market a highly preferred new type of equipment. But it seems to me to erroneously exclude from consideration the probability that passengers would be diverted from competitors, who would not have had, under the assumptions here applicable, as great a quantity of jets as they had historically, to TWA which, under said assumptions, would have had more of the jet equipment so highly preferred by the traveling public. Indeed Simat stated (Simat Tr. 9123) "A truly accurate measure of marginal load factor should consider not only the competitive factors but also the other factors I mentioned of increased public acceptance, changes in quality and quantity of air services, and independent of the change in capacity alone." As applied in the Simat Report, these factors have not been sufficiently recognized. I am strengthened in my opinion by the follow-

ing statement of defendants in their brief (p. 220) that even though Simat's methodology led to the mathematical conclusion that TWA would have lost $95.91 million, if it had operated the assumed additional jet equipment as hereinbefore described: "It was not, of course Simat's opinion that the management of reconstructed TWA would have permitted such staggering losses to accumulate. Management could have drastically cut schedules * * * but while such measures might have avoided the dire consequences of operating * * * [the jet] added plane miles they would not have sufficed to put the added fleet in the black." A mathematical result which varies so widely from the estimate of what would in fact have occurred, must be regarded with great caution.

In terms of passengers carried, the Simat calculations (with marginal load factor being the greatest factor) also result in an unrealistic assumed loss to TWA over the five year period of over 3 million passengers, as follows (TWA Ex. 328):

	Jet Added	Piston Deleted
1959	79,768	138,635
1960	546,707	1,729,434
1961	387,698	1,915,988
1962	564,593	967,280
1963	462,749	350,869
Total	2,041,515	5,102,206

A factor which leads to such unrealistic mathematical results as does the marginal load factor as used herein, should be rejected.

Examples of the unreliability of the results reached by use of the marginal load factor are cited in the Plaintiff's brief (pp. 191-4) as follows:

"In 1959, for example, a period when TWA's actual jet load factor of 83.1% was such as to demonstrate that jet capacity of all airlines was far less than sufficient to fly the passengers who wished to fly in jets, the defendants employ a 'marginal load factor' in computing what would have occurred with more jets of 56.5%. In 1960, the actual figure is 68.6% but defendants use 37.1%. In the year 1961 the actual figure was 55.6%, while the marginal figure used is 31.7%.*

"The fallacies of this approach would be more apparent if quarter-to-quarter figures were employed. For example, in the fourth quarter of 1960, TWA was able to offer 829,780 jet available seat miles. In the first quarter of 1961, it was able to offer 873,704 jet available seat miles—the increase resulting primarily from the deliveries of the first few Convair 880 jet aircraft. Revenue passenger miles for the two periods were respectively 490,699 and 482,514. [TWA Ex. C & C 4 (24)] A simple computation following the principles that Simat espouses indicates a marginal load factor of zero—according to Simat the sole cause of TWA's falling load factors has to be its improvement in equipment, limited as that improvement was.

* * * * *

"From 1959 to 1960 TWA decreased the piston service which it offered by 1,171 million seat miles; the piston passenger traffic which it carried was decreased by 1,054 million revenue passenger miles. The simple-minded computation to which the defendants' cause and effect assumptions lead them is that TWA's piston miles were operated at a marginal load factor of 90%;** that is, that for every 100 piston seat miles subtracted

* After the adjustment against economic growth, discussed below, the figures are 53.7% for 1959, 31.5% for 1960 and 21.0% for 1961. The defendants' figures were changed several times, and DX 330 is believed to reflect the final estimates.

** The adjustment against economic growth is applied in reverse to make this figure, for computational purposes, an historic 94.5%.

or added by TWA in 1959, 90 revenue passenger miles were subtracted or added as a direct result [DX271B, p. C-23, as modified by DX330]. This being, according to defendants, the sole explanation of the historical trends, they conclude that further decreases of piston mileage offered would have had similar effects, so that any time TWA was led to cancel a piston flight in 1959 it would have cost itself the passengers which would have filled 90% of that piston's seats, while added jets would (according to defendants' jet analysis), have filled only 56.5% of their seats. Any such piston cancellation, whether or not involving a jet replacement, would obviously be a scheduling decision costing TWA a great deal of money.

"Indeed, if there were operative in actual fact something properly describable as a 90% marginal load factor for pistons in 1959, TWA and all other airlines should as a matter of sound business management have made every effort to increase piston mileage so as to take advantage of this extremely favorable market situation. The proper management decision would have been to reverse the developing situation and replace all of the limited existing jet mileage with piston mileage."

The reason for Simat's extraordinarily high estimates of the load factors on displaced piston flights seems to be a fundamentally unsound approach. Simat's marginal load factors for the deleted piston services were calculated by matching decreases in piston passenger traffic with decreases in piston flights. However, it is apparent that some of the decreases in piston passenger traffic were the result of passenger preference for jets, which caused fewer persons to use those piston flights which continued to be operated. Simat paired the deleted piston flights with the total decline in piston passenger traffic from all sources.

To take a hypothetical example, it may be assumed that an airline operated four flights from Point A to Point B with 50 seat piston aircraft, averaging 40 passengers per flight. If it is further assumed that jet competition would cause a loss of five passengers per flight, then each flight would be carrying only 35 passengers. If the airline then withdrew one of these flights, the load factor of the deleted flight should properly be 70% (35 passengers as against 50 seats). However, there has been a total loss of 55 passengers, if the first loss of five passengers per plane is added to the loss attributable to the deleted flight. Using Simat's method of matching deleted flights with the total decline in passenger traffic, the deletion of one 50 seat flight would be deemed to have resulted in the loss of all 55 passengers, rather than the loss of 35 passengers. It is this basic error of methodology which apparently has resulted in estimates of marginal load factors for deleted piston flights which exceed 100% (i.e. exceed the maximum capacity of the deleted aircraft). It is, moreover, apparent that passenger traffic was declining on all major piston flights which were feeling the effect of competition from jets, both on flights which were subsequently deleted and also on those flights which were continued in operation. Matching this total passenger decline with the deleted flights alone has resulted in a completely invalid marginal load factor for deleted piston services, and the result has been to vastly overstate the amount of revenues that TWA would have lost by deleting piston flights.

The defendants counter by giving examples of "absurd results" reached by the Coverdale method, as set forth below, but it is my opinion that the questions they raise in that connection can be rationally answered. At page 245 of the defendants' brief, they point out that Coverdale

would add nearly two billion revenue passenger miles to TWA's domestic traffic from 1959 through 1962, a period in which that traffic declined by 154 million passenger miles; that in 1961 Coverdale bestows on TWA 644 million additional passenger miles heedless of the fact that in that year the entire domestic trunk industry could add only 300 million; and that American Airlines suffered a decline of 500,000 passengers and 339 million passenger miles in 1961 in spite of having added fifteen jets. Where, the defendants ask, were the additional TWA passengers to come from? It appears to me they would probably have come from passengers that were attracted from competitors who would not have had as attractive equipment in type or quantity, vis-a-vis TWA, as they did historically during the years of jet shortage; and that new passengers would also have been attracted by the new and preferred assumed TWA jet equipment. The new jets did not *cause* the historical decreases in traffic admittedly experienced by the industry and by TWA, as the methodology used by Simat seems to dictate.

It should be emphasized that plaintiff has not sought to recoup from defendants its entire operating losses incurred historically during some of the years in question. For example, as pointed out at page 32 of plaintiff's reply brief, in 1961, a year in which Pan-Am and American operated at a profit, TWA's operating losses were $12 million and its net loss $15 million before special adjustments (TWA Ex. 94). Its damage evidence claimed that operating results were adversely affected by $10.6 million by its failure to receive the jets diverted to others and delays in receipt of the jets it did receive. It is that adverse effect upon its operating results alone, for which plaintiff seeks recovery

in its claims based on inadequacy of its jet fleets. Plaintiff has not sought to blame defendants here for the results of a general economic turndown. Rather, since jets were admittedly more attractive to the traveling public than pistons, it is the reflection of customer dissatisfaction with inadequate equipment attributable to defendants' conduct that is here the key element.

The adjustment made by the original Simat Report in the marginal load factor was intended to eliminate such part of the assumed added traffic as was attributable to economic changes. It is true that the economic changes for this period had already occurred and had been fully absorbed by the flight schedules which had historically been operated during those years. Thus, deletion of economic growth factors might be valid in determining the extent to which assumed additional flights might have produced additional passengers for the domestic airline industry as a whole. However, what is at issue here is not how many passengers would have been added to the entire airline industry, but how many passengers would have been added to TWA. While some might have been totally new passengers, others would represent a diversion of existing passengers from other airlines to TWA. In short, the addition of more jet flights might have resulted in a considerable redistribution of airline passengers with great increases for TWA, even though relatively few new passengers are produced for the airline industry as a whole. Therefore, the economic growth factor, while it may be applicable in other contexts, is not properly applicable here.

A second instance of different factors used by the experts was historical "average annual stage length" used

by Coverdale in estimating stage lengths of assumed added flights, as opposed to "marginal stage lengths" used for this purpose by Simat. The factor of annual average stage length of TWA, as used by Coverdale separately for jets and pistons, in my opinion, adequately takes into consideration the various changes in stage lengths accompanying the introduction of jets. The mathematical basis for confirming Simat's estimates of marginal stage lengths of added flights developed, on cross examination, to be unreliable (Tr. 7918-34; TWA Ex. 320; Tr. 7955). No reasonable alternative to use of the annual average stage length by type of plane, as used in the Coverdale Report, was presented to me and I accept the validity of its use as a proper factor to be employed in the calculations of damages. (See TWA Ex. 396). The acceptance of the use of the annual average stage length, as a proper factor, eliminates the need for any discussion at this point of the validity of the factor of average trip length of passengers as computed by Simat.

Also in my opinion the Coverdale Report is reasonable in using actual annual average yield per passenger in computing the dollar yield estimates for assumed added passengers. In my opinion the Simat estimates, using the so-called "fare taper" are less reliable because they fail to take into consideration adequately the jet fare surcharges in existence during much of the period involved, and the varying fare structures in operation for various periods and various classes of travel.

In adopting the Coverdale figures based on TWA's average performance rather than the Simat figures based on declining marginal productivity, I have been influenced by the overall picture of TWA's performance in relation to the performance of all of the other domestic trunk carriers

during the period 1959-1963. In 1959, TWA had the highest operating profit for its domestic operations of any U. S. trunk line. It also operated over many of the most densely traveled long haul routes in the country. Given the strength of its route structure and its 1959 operations, it is reasonable to assume that with adequate equipment TWA would have fared approximately as well in the ensuing years as the trunkline industry as a whole. If a condition of overcapacity had set in, it would be reasonable to assume that TWA would not have fared significantly worse than the other trunks, since it is not asserted that historical TWA was operating too many aircraft during this period. The statistics, however, show that TWA fared far worse during this period than the other trunks. It is clear that during 1960, 1961 and 1962, when plaintiff claims it was short of jets, TWA fell significantly behind the other carriers, and that beginning in 1962 and in 1963 and 1964, when TWA was catching up in terms of jet equipment, it also significantly improved its performance in relation to the other trunk carriers.

These statistics, which are set forth below, are taken from the CAB's 1965 Handbook of Airline Statistics. In Part III, Table 4, figures are given for the entire domestic operations of the domestic trunk carriers for revenue passenger miles, passenger originations and passenger emplanements. Individual figures for TWA are given in Part III Table 18. If the TWA figures are subtracted from the totals for all trunk lines, the TWA figures can then be compared with the totals for all trunk lines other than TWA. In all cases, figures are given as shown in the Handbook, with the final 000's omitted. The comparisons are shown in Chart 1. To compare TWA's post 1959 performance with that of the other carriers, the figures in Chart

1 can be expressed year by year in terms of the percentage increase or decrease in relation to 1959. This comparison is set forth in Chart 2. The divergence between TWA's performance after 1959 in comparison with that of the other trunk lines can be seen even more clearly when the percentage figures in Chart 2 are shown in the graphs which follow that chart.

CHART 1

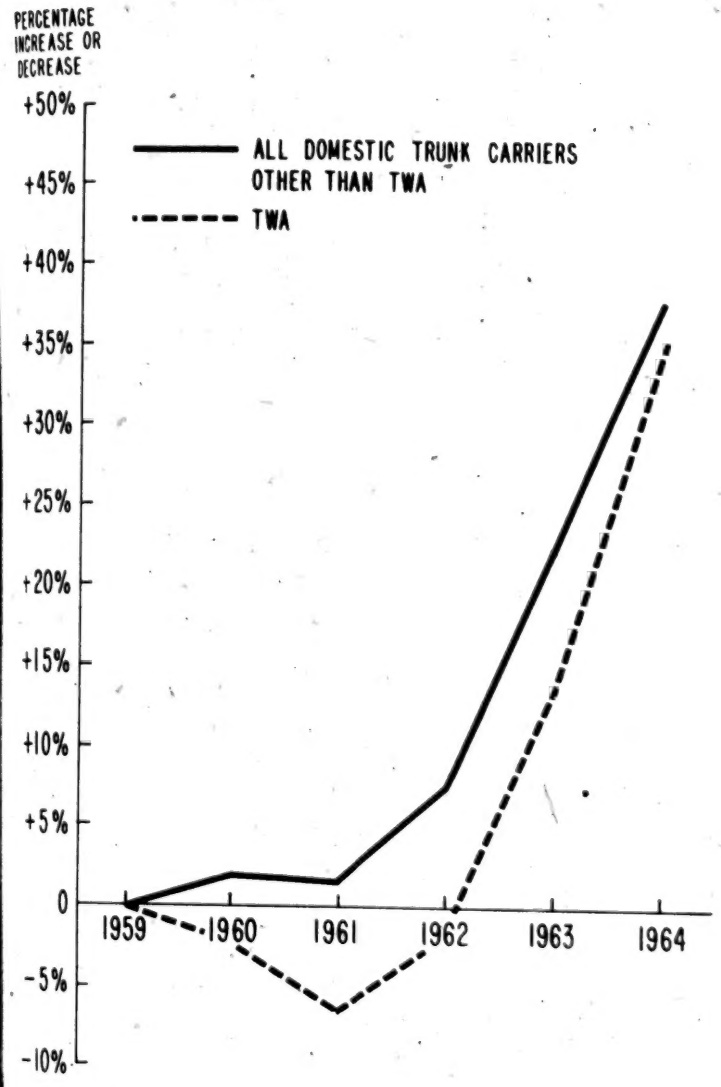
PERCENTAGE INCREASE OR DECREASE COMPARED TO 1959



From this it can be seen that TWA's performance in 1960 and 1961 was significantly worse, when compared to its 1959 performance, than that of the other trunk carriers. In 1962, it turned the corner of recovery, and by 1964 had nearly reached the same level of performance, vis-a-vis 1959, as the other trunks. This strongly suggests that TWA's shortage of jets in these years had a significantly adverse effect on its competitive position. Had TWA's performance been maintained at the same level as the other trunks, its passenger traffic would have been far greater than the levels which it actually experienced. In view of TWA's excellent route structure and its strong performance in 1959, the inference is strong that its failure to maintain its position in 1960 and the subsequent years was due to its shortage of jet equipment, which affected its ability to compete for the available passenger traffic. These statistics make it almost impossible to accept the Simat thesis that TWA would have suffered further drastic declines in passenger traffic if it had replaced piston flights with jets. Rather, the inference is that TWA would have obtained far higher levels of passenger traffic. Therefore, the Coverdale use of TWA's historical average figures to project the additional traffic from the jets would appear to be a conservative estimate.

As to the Domestic Division claims, the plaintiff's proof is sufficiently certain and direct to meet the standards in default situations (*Bigelow* v. *RKO Radio Pictures Inc.*, 327 U. S. 251 (1946)). The defendants, while raising doubts as to certain aspects of the claims which could undoubtedly have been cleared up if Hughes had been willing to testify, have failed to disprove these claims by any method open to them in the light of their default. Accordingly, I find as follows:

Subdivision (a). The plaintiff's estimates of revenues are reasonable and are adopted by me.

Subdivision (b). The plaintiff's use of original contract delivery dates in the Convair contract is not reasonable. Its estimates of revenues if computed instead on the basis of using the delivery dates provided for in Amendment No. 4 to said contract are reasonable and as so changed (as hereinafter set forth) are adopted by me. After appropriate adjustment of assumed changes in expenses, the net dollar reduction from plaintiff's claim is hereafter shown.

Subdivision (c). The plaintiff's estimates of revenues, modified similarly to use the delivery dates provided for in said Amendment No. 4, are reasonable and as so changed (as hereinafter set forth) are adopted by me. The appropriate related adjustment in expenses is hereafter shown.

As to costs of operation of the assumed added plane miles under subdivisions (a), (b) and (c), I find that if the methods of computation thereof, used by Simat, were applied to the increased traffic and revenue estimates by Coverdale, and which I have adopted as reasonable, they would produce at least as low expense estimates as those of Coverdale, and accordingly I adopt the Coverdale estimates of expenses applicable to subdivision (a), (TWA Ex. 449; Tr. 10,679-82) and the estimates of expenses under subdivisions (b) and (c) modified as above stated; provided, however, that a change in the applicable amount of net interest costs (hereafter discussed), is to be given effect.

After the record in the case was closed I requested counsel for the plaintiff to recompute the damage claim in respect of failure to receive and delay in delivery of the Convair 880s on the basis of using the delivery dates set forth in Amendment No. 4 to the Convair-Toolco con-

tract instead of the original contract delivery dates. The recomputation, with copy to counsel for defendants, has now been submitted to me. Since I have now decided (*supra,* p. 141) that the Amendment No. 4 dates are properly used for computation of damages, I set forth below the amount as computed by the plaintiff to be deducted from the plaintiff's claim in respect of the Convair 880s; and I have arranged to have the recomputation (Letter of Dudley B. Tenney to the Special Master dated August 30, 1968, with enclosures) filed with the Exhibits:

SUMMARY OF EFFECT OF APPLICATION OF REVISED ASSUMPTION THAT DELIVERY DATES FOR THIRTY CV880 AIRCRAFT WERE THOSE SET FORTH IN AMENDMENT NO. 4 IN LIEU OF THOSE SET FORTH IN ORIGINAL TOOLCO-CONVAIR CONTRACT

FOR THE PERIOD SEPTEMBER 30, 1955—DECEMBER 31, 1963

	(Amounts in millions)
Increase in income and special items before provisions for income taxes (Price Waterhouse & Co. report, Vol. I p. 5, as revised by $.2 million in TWA Exs. 42 and 43 and DX262)	$71.9
Adjustments—Add (deduct) (Note 1):—	
Decrease in gain from operations before provisions for depreciation, obsolescence and amortization, per Coverdale & Colpitts	($3.6)
Reduction in provisions for depreciation of airframes, engines and rotable parts due to later timing of the fleet, $1.9 million in 1960 and ($.1) million in 1962 (Note 2)	1.8

Decrease in proceeds relating to earlier sale of 103 piston aircraft: Per R. Dixon Speas Associates	(.8)	
Less—Reduction in "bad debts" (Note 3)	.2	
Decrease in reserve for overhaul of jet aircraft, eliminated at December 31, 1963, resulting from reduced maintenance expense (Note 4)	(.7)	
Total adjustments		(3.1)
Increase in income and special items before provisions for income taxes, as adjusted to reflect delivery of thirty CV880 aircraft on dates set forth in Amendment No. 4 of Toolco-Convair contract		$68.8

Since, however, I have elsewhere rejected the plaintiff's claim in respect of the earlier sale of piston aircraft, I eliminate from the foregoing recomputation the items

Decrease in proceeds, etc.	$(.8) million
Less reduction in "bad debts"	.2 "

Accordingly the recomputation, as so changed, results in a reduction of the plaintiff's claim in respect of the Convair 880s of $2.5 million.

(C) ***B-331B's***

An additional point is raised by the defendants in connection with the plaintiff's claim under this Section I. It asserts that the cost of operation of the five fan-jet B-331Bs

which were leased by the plaintiff from Boeing was less than the cost of operations of the additional B-331s it would have had in the assumed additional fleet underlying the plaintiff's damage claim. The defendants claim that the savings in operating the B-331Bs in the post-1963 period until the end of the leases in 1971 and 1972 should accordingly be deducted from any damages awarded under this Section I. They estimate such lease period for the five planes at 40.33 aircraft years. On the basis of a historically determined production rate of 4,000 block hours per aircraft, and applying a "conservative" cost advantage of $100 per block hour, the savings would aggregate $16.1 million (DX 271A, pp. VIII—10-12; Tr. 8818-19). The defendants state that it is the rule in both tort and contract cases that a plaintiff may recover only for the net effect of defendants' acts after deducting the value of any benefit caused by such acts.

The plaintiff points out that insofar as savings from the operation of the B-331Bs (as against the assumed additional B-331s) for the 1959-1963 period is concerned these estimated savings were deducted fully in the Coverdale computations. And the plaintiff makes no claim for damages based upon operations of its jet fleet in the post-1963 period.

The plaintiff further points out that the defendants had nothing to do with the decision to lease the B-331Bs; it was the Voting Trustees, after the defendants' control of the operations of TWA had ceased, who ordered them; and accordingly the rule of law cited by the defendants has no application to the facts in this case.

The plaintiff finally points out that if one were to attempt to calculate the relative benefit of operating the B-331Bs and the assumed jet fleet in the post-1963 period, it would

be necessary to take into consideration many additional factors ignored in the defendants' calculation. Four such items are listed in the plaintiff's reply brief at p. 130, as follows:

> "(i) During the period within which the six owned B-331s would have been fully depreciated, the rental expense for the five leased B-331Bs would have exceeded total depreciation upon the six B-331s by some $9.5 million [TWA Ex. 353; Simat Tr. 8805-06].
>
> "(ii) If TWA wished to continue operating the five B-331Bs at the end of the lease period, when reconstructed TWA would have owned six fully depreciated B-331s, historical TWA would either have to exercise its option to buy the planes at a substantial figure or have to enter into a new lease [Tr. 8813-15].
>
> "(iii) Six B-331s would have earned more revenue than five B-331Bs, but Simat made no allowance at all for such additional revenue although he thought it 'appropriate to consider the earnings power of the additional B-331, that is, the sixth aircraft' [Simat Tr. 8806, 8810].*
>
> "(iv) No account was taken of the resale value of the six owned B-331Bs [Simat Tr. 8814-16] despite the defendants' statement that airplanes 'cannot be thrown away' [Def. Br., p. 275].*

"*Defendants also take no account of either the ultimate resale value or the post-1963 earning power of the four additional CV-880s which reconstructed TWA would have had in its jet fleet if it had received all 30 CV-880s."

I am of the opinion that the defendants have failed to state any claim for a benefit due to their actions; that their computation of the value of the alleged benefit is fatally deficient; and accordingly no deduction should be made from damages awarded to the plaintiff by reason of the

alleged savings in operations of the B-331Bs in the post-1963 period.

(D) *Mitigation Claim*

Defendants also claim that the plaintiff should have mitigated its damages by "picking up the four unassigned 880s in 1961"; by accepting the opportunity, which it allegedly rejected, to acquire seven 880Ms available for delivery from Convair from June through December 1961 in Capital Airlines' configuration (or from October 1961 through April 1962 in plaintiff's configuration), and thirteen fan-jet 990s available from Convair for delivery from December 1961 through April 1962 in American Airlines' configuration. The citations in support of the mitigation claim (DX 56; DX 62 pp. V-4, V-9-10; DX 72; DX 74; Tr. 2332-33, 2351-52, 2364-67; DX 78, p. 4; Tr. 2405-08) are generally too indefinite or too incomplete to form a basis for a specific mitigation claim. Evidence from the defendants to complete the picture as to the underlying facts was not available to the plaintiff due to the defendants' default. Indeed, defendants do not even compute the dollar value of their mitigation claim.

The plaintiff correctly points out that Toolco owned the four unassigned 880s and had the rights to the seven 880Ms and the thirteen fan-jet 990s (Rummel Tr. 1534-37) so that Toolco's agreement would have been required to consummate any of the transactions. The independent Trustees of TWA were engaged in a series of bitter controversies, including threats of litigation, with Toolco in 1961-1962 (complaint, paragraphs 35, 37, 38, 39, 40-46), so that no transactions of the kind which the defendants envisage in their mitigation claim would have been feasible as a business matter, especially since the policy of the Voting Trus-

tees favored buying Boeing planes rather than additional Convairs. The defendants' mitigation claim is accordingly rejected.

(E) Adjustment to Reconstructed Interest Cost

The interest cost of the funds that would have been applied to the timely acquisition of a sufficient number of aircraft must next be determined.

TWA introduced the testimony of John C. Biegler, a partner of Price Waterhouse, who used the Drexel Harriman Ripley financial plan (TWA Ex. 5, Part II) and a reconstructed flight equipment fund take down schedule (TWA Ex. 7(b) 2, VI, B, Schedule B-3) to compute the total interest cost that would have been incurred by Reconstructed TWA during the period October 1, 1955-December 31, 1963 (TWA Ex. 7(b) 2, VI, B, Schedule B-1). This figure was compared with the actual interest cost incurred by Historical TWA (TWA Ex. 7(b) 2, VI, C, Schedule C). After appropriate adjustments Price Waterhouse found that there would be an increase in gross interest cost for Reconstructed TWA over Historical TWA in the amount of $9.9 million. In addition to this increased cost, Reconstructed TWA would also have incurred added expense to the extent of $1.0 million, a premium for its early payment of the $35 million 3¾ percent Equipment Mortgage Sinking Fund Bonds in July, 1955 (TWA Ex. 7(b) 2, VI, A, Schedule A). These costs appear in the plaintiff's "Condensed Summary of Effect of Application of Assumptions" as deductions from the alleged overall reconstructed gain in operating profits (TWA Ex. 50).

The defendants have not attempted to fix the appropriate interest cost. Since I have not accepted the Drexel Harriman Ripley financial plan (see pages 257-264) on which the Price Waterhouse computation relied, I have independently calculated the appropriate cost of interest. The testimony of Biegler indicated that a separate calculation of reconstructed interest expense would be feasible, granting certain additional assumptions. (Tr. 6361). I believe the record is sufficiently complete to allow these assumptions to be taken. However, in my opinion it is not necessary or feasible for me to construct a complex financial plan on the order of that presented by Drexel Harriman Ripley. Also, I do not find it necessary or feasible to extend my determinations by making detailed calculations reflecting complex and minor accounting adjustments.

In reconstructing the interest expense associated with the additional and earlier purchase of jet flight equipment I have assumed that funds were available at the time of the delivery of each aircraft. Except with respect to an item representing accrued interest on deposits for the purchase of twenty CV 880's, which is a matter of historical record and which is discussed hereafter at page 155, I have not made provision for funds for advance deposits and progress payments on aircraft purchases. For me to do so on a reconstructed basis would involve elaborate calculations and several speculative assumptions not required in recognizing the historical item of accrued interest on deposits for the twenty CV 880 aircraft. For similar reasons I have not considered any commitment fees and short-term investment returns that might be experienced with certain types of financing. The proceeds from the sale of piston aircraft were determined to have no material impact on the calculation of interest. In my opinion, these procedures and assumptions are fair and reasonable, and they avoid the

substantial amount of speculation or guesswork that would be involved with a more complex calculation.

In arriving at an appropriate deduction for cost of capital, I find that two components must be determined: (1) the amount of funds needed and the timing of the take-downs; and (2) the rate at which the funds are obtained.

(1) ***The amount of funds needed and the timing of the take-downs.***

(a) *six additional B-331 aircraft*—The six B-331 aircraft that were diverted became historically available to Pan American on the following delivery dates.*

Aircraft No.	*Date Received*
N701	November 5, 1959
N702	December 15, 1959
N703	December 30, 1959
N704	March 23, 1960
N705	April 29, 1960
N706	June 8, 1960

To avoid undue complexity I assume that one-third of the funds required for the purchase of these aircraft and related spare parts and equipment would be needed by TWA as of October 1, 1959, one-third as of January 1, 1960 and the balance as of April 1, 1960. As stated in the Price Waterhouse Report, the full purchase price of these aircraft and related spare parts and equipment would amount to a capital expenditure of $43.1 million (TWA Ex. 7(b) 2, VI, p. 35). I accept this figure.** Accordingly, I assume

* Source: Coverdale Report, TWA Ex. 4-c(1), p. 10. The impact of delivery to TWA at dates earlier than the above dates which Coverdale in its report described as "assumed receipt dates" is considered hereafter at pp. 150-155.

** Defendants' expert, Simat, relied on the Price Waterhouse Report for basic data in computing the cost of capital to effect purchase of the leased aircraft (Simat Report, DX 277A, IX-B-3).

that $14.4 million would be required as of the beginning of the fourth quarter of 1959, $14.4 million as of the beginning of 1960 and $14.3 million as of the beginning of the second quarter of 1960.

(b) *ten additional CV880 aircraft*—It was my determination above at page 141 that TWA would have acquired ten additional CV880 aircraft during 1960 and that delivery would have occurred from May through November of that year. As stated by Price Waterhouse, the full purchase price for these aircraft and related spare parts and equipment would have amounted to $48.1 million (TWA Ex. 7(b) 2, VI, p. 43). I accept this determination. Accordingly, I assume that one-third of this total amount, $16.1 million, would be needed as of April 1, 1960, one-third of $16.0 million as of July 1, 1960, and the balance of $16.0 million at October 1, 1960.

(c) *earlier delivery of jet aircraft*—I determined above at pages 52, 87 and 141 of this Report that TWA would have acquired its jet fleet prior to the historical delivery dates. With respect to the Boeing fleet, eleven B-131 aircraft and seventeen B-331 aircraft would have been acquired an average of 1.63 months earlier, and nineteen CV880 aircraft an average of 7.74 months earlier as shown in the calculations below.

Average Delay in Purchase of Fifteen B-131 and Eighteen B-331 Aircraft

$$= \frac{7.74}{12} = .6450 \text{ year}$$

[1] See determination page 141 this report.

For the purpose of calculating the effect on cost of capital with respect to the delayed Boeing aircraft I find that a determination that the aircraft would have been delivered earlier requires a matching determination that funds would be needed earlier to effect purchase. As above, in determining the capital amount needed I rely on those figures provided in the Price Waterhouse Report.

As stated by Price Waterhouse the initial cost of fifteen B-131 aircraft would have been $71.6 million and the cost of related spare engines $5.9 million or a total of $77.5 million (TWA Ex. 7(b) 2, VI, pp. 30 and 32). The schedule of reconstructed deliveries above indicates that only eleven of the B-131 aircraft were delayed. On a prorated basis the cost of these eleven aircraft would amount to $56.8 million.* Price Waterhouse also indicated that the total reconstructed cost for eighteen B-331 aircraft and related spare parts and equipment would have been $129.3 million (TWA Ex. 7(b) 2, VI, p. 35). Seventeen of the eighteen B-331 aircraft were delayed and the prorated cost of these aircraft is $122.1 million.** On a fleet basis, the total cost of delayed Boeing aircraft and related spare parts and equipment thus amounts to $178.9 million. Accordingly, I determine that TWA would have to have had this amount available an average of 1.63 months earlier in order to take delivery at the reconstructed earlier dates.

---

* 15 aircraft = $77.5 million = $5.16 million per aircraft
× 11 delayed aircraft
15 = $56.76 million for 11 aircraft

** 18 aircraft = $129.3 million = $7.18 million per aircraft
× 17 delayed aircraft
18 = $122.06 million for 17 aircraft

Similarly, on a reconstructed basis the funds necessary to effect the purchase of the delayed CV880 aircraft would have had to be available to pay for the aircraft on the earlier reconstructed delivery dates. I have determined, as set forth above that these aircraft would have been delivered an average of 7.74 months earlier than the historical delivery dates, and accordingly, actual funds would have had to be available more than seven months earlier.

As stated by Price Waterhouse, the initial cost of the nineteen CV 880 aircraft that would have been acquired earlier would be the historical capital outlay of $83.0 million, plus a reconstructed amount of $.5 million for the earlier purchase of spare parts (TWA Ex. 7(b) 2, VI, pp. 43 and 46). This total figure of $83.5 million includes a $4.1 million historical payment for interest on an advance deposit. Since I have determined that the funds to pay for the earlier purchase of these aircraft would have been available 7.74 months earlier it is reasonable to assume that the accrued interest on the advance deposit would be reduced. Therefore I determine that instead of the $4.1 million interest payment, TWA would have paid $3.5 million, a difference of $.6 million.* Such an adjustment reduces the total sum needed to purchase the nineteen delayed CV 880 aircraft from $83.5 million to $82.9 million.

(2) *The rate at which the funds are obtained.*

In Section II pp. 183-84 I have determined that the *Hanover Shoe* case is controlling on the question of the

---

* 1. Interest Payment of $4.1 million at 5.5% (TWA Ex. 7(b)2, VI, p. 44) indicates time period of 51 months.

2. Adjusted period:
$51 - 7.74 = 43.26$ months

3. Adjusted interest payment on advance deposit:
$4.1 million $\times$ 43.26 = $3.5 million

proper cost of capital to employ in measuring damages in antitrust cases. According to *Hanover,* the proper rate to employ is the company's external borrowing rate.

In examining the record I find that there is enough evidence of borrowing rates for the period in question to fix an approximate constructive rate for TWA which is both fair and reasonable under the facts and circumstances developed at the hearing. The record discloses that TWA historically negotiated major debt financings on several occasions during the general period in question, 1955-1963. The significant independent borrowings involved the following debt.*

1957	Chattel Mortgage Notes, 5¼% due December 1, 1960	$ 20.7 million
1957	Bank Loan, 5¼%	$ 12.0 million
1960	Equipment Mortgage Notes, 6½%, due December 31, 1972	$114.8 million
1960	Equipment Mortgage Serial Notes, 6%	$ 85.4 million
1961	Equipment Mortgage Notes, Series B, 6% due December 31, 1977	$ 57.0 million
1961	Equipment Mortgage Serial Notes, Series B, 5½%	$ 21.9 million
1961	Subordinated Income Debentures, 6½% due June 1, 1978	$111.9 million
1963	Convertible Subordinated Debentures, 5¾% due October 1, 1983	$ 38.5 million

Interest rates for these actual borrowings range from 5¼-6½ percent. Reference to long-term borrowings by

* Source: Price Waterhouse Report, TWA Ex. 7(b)2, VI, Schedule C4.

other airlines at or about this time (1957-1960) indicates that rates on debt financings generally ranged from 5-6½ percent.* Those straight financings (no convertible feature) of more than $25 million with indicated borrowing rates are listed below:

1958	*Delta* —Debentures due Oct. 1, 1974, 6%	$25.0 million
	Northwest —Credit 4¼-4⅝% due 1965	$32.5 million
	Northwest —Notes due October 1, 1978, 6%	$40.0 million
1959	*American* —Promissory Notes due Nov. 1, 1996, 5%	$30.0 million
1960	*Pan American* —Promissory Notes 1st installment due 1967, 6%	$50.0 million
	Capital —Secured Notes Series A due September 30, 1965, 5½%	$25.5 million
	American —Notes, 5¾%	$60.0 million

I also take note that one aspect of the Drexel Harriman Ripley financial reconstruction was a $90-100 million debt financing scheduled for May 1959 (TWA Ex. 5, Part II, p. 70). Drexel Harriman Ripley made the following appraisal as to the interest rate on this proposal:

---

*Source: Loeb, Rhoades Report DX270, Part II, Exhibit A.

"We believe that institutional investors, in the second quarter of 1959, would have charged TWA an interest rate of 6% on the used portion of the Series B Flight Equipment Notes, and a commitment fee of ½% per annum on the unused portion." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 70)

The Rate Applicable to the Reconstructed Purchase of the Boeing Fleet—On a reconstructed basis TWA would have purchased its entire Boeing fleet between November 30, 1958 and July 1, 1960.

The record discloses no large-scale financing by TWA at or about the time when arrangements for funds certainly would have been made to effect purchase during the above period, i.e., 1958-1959. Therefore I have looked to those points in the record that suggest a rate that might have been obtained at this time by an independent management seeking funds to purchase a substantial jet fleet. Considering the evidence on airline borrowings recited above on pages 155 through 157, I believe that it is fair and reasonable to fix TWA's borrowing rate for funds needed to purchase the Boeing aircraft on the reconstructed delivery dates at 6%.

The Rate Applicable to the Reconstructed Purchase of the Convair Fleet—However, I find a different interest rate should be used in respect of the thirty CV 880 aircraft. I have previously determined that the reconstructed and timely delivery of a fleet of thirty CV 880 aircraft would have occurred between May 15, 1960 and November 15, 1960. These deliveries would have occurred subsequent, in point of time, to the deliveries of the Boeing fleet. Of the total reconstructed Boeing fleet of thirty-three aircraft only two were delivered after delivery of the first Convair aircraft.

Unlike the case with the acquisition of the Boeing fleet, where there is no evidence in the record of financings directly related, in point of time, to the acquisition of the fleet, TWA did undertake large scale financing approximately seven months subsequent to the first delivery, on a reconstructed basis, of the Convair fleet. From the financial statements submitted in evidence it is reasonable to conclude that the historical purchase of twenty CV 880 aircraft was largely financed by the historical borrowings arranged in December, 1960, referred to above on page 156. Aside from the training aircraft which was delivered in May 1960 the first deliveries of the CV 880 fleet historically commenced immediately after the December 1960 financings.

Under the December, 1960 financing agreements provision was made to sell Equipment Mortgage Notes (of which $114.5 million were sold) at 6½%, and Equipment Mortgage Serial Notes (of which $85.4 million were sold) at 6%. The weighted average interest rate for these external borrowings is 6.3%.* There is no significant evidence that TWA could have borrowed at a lower or higher rate at or about the time of the reconstructed delivery dates. Accordingly, I determine that 6.3% should be the rate applicable in computing the additional interest cost that would be connected with the additional and earlier need of funds for the reconstructed acquisition of the CV 880 aircraft.

---

* Weighted Average interest rate (x)

$114.5 million	× 6.5%	=	7.443
$ 85.4 million	× 6.0%	=	5.124
199.9 x		=	12.567
		x =	.063

Reconstruction of Interest Cost

The basic components determined above, i.e., the amount needed, the timing of the take downs, and the rate, allow a computation of an interest cost that is an appropriate deduction from the overall increase in operating profits resulting from the reconstruction of TWA to include the additional and earlier use of jet aircraft. In computing interest charges, an adjustment should be made, however, to the gross capital investment required to give effect to the cash throw-off in the form of depreciation and amortization from the added capital investment. I note that such an adjustment was an integral part of the calculation introduced by Simat with respect to the constructive purchase of the leased aircraft (DX 271A, IX-B), and that plaintiff's counsel in their brief adopted this calculation (Plaintiff's Brief, p. 227). The depreciation and amortization figures associated with the reconstructed additional and earlier use of jet flight equipment have been calculated by Price Waterhouse. They were not materially challenged by the defendants and I accept them as stated. I have used them below in column 2 of Calculations A and B and also in Calculations C and D. Finally, it is assumed that the reconstructed borrowings necessary to finance the purchase of the additional jet equipment will not be paid off prior to December 31, 1963.

Proceeding on the foregoing assumptions and evidence, I have determined that Reconstructed TWA would have incurred additional interest cost over the period 1959-1963 in the amount of $8.3 million for adding six B331 aircraft, and $8.7 million for adding ten CV 880 aircraft, or a total of $17.0 million. The details of these determinations appear in Calculations A and B below.

Interest Cost 1959-1963

Adding Six B-331 Aircraft

($ millions)

	(1) Adjusted Capital Investment Beginning of Period	(2) Less Depreciation and Amortization for the Period[2]	(3) Adjusted Capital Investment End of Period	(4) Average Investment for the Period (1) + (3) ÷ 2	(5) Interest at 6 per cent	(6) Interest Cost for the Period (4) × (5)

1963	35.0	4.4	30.6	32.8	"	2.066
				Total increase in interest cost for period 1960-1963		$8.663

* Proration of annual depreciation of $2.0 million.

[1] See (1)(b) above on page 150.

[2] Source: TWA Ex. 7(d) as amended by letter of Price Waterhouse to Cahill, Gordon of August 30, 1968, Note 2.

[3] One-quarter of annual rate of 6.3 per cent.

Since historically TWA had the benefits of the earnings generated by the twenty-eight delayed Boeing aircraft and the nineteen delayed CV 880 aircraft after their historical acquisition, in determining damages for delay in receipt of these aircraft, I am concerned only with the loss of profits in the period between constructive deliveries and actual deliveries. I have determined, as stated above, that the average delay in acquisition of the Boeing aircraft was 1.63 months and that the average delay of the CV 880 aircraft was 7.74 months. I find that these are fair and reasonable periods to use in determining the additional interest cost to TWA which would be incurred in financing the earlier acquisitions. Accordingly, I determine that the additional interest cost related to the earlier ownership of the delayed Boeing aircraft would be $1.4 million, as shown in Calculation C below. The additional interest cost related to the earlier purchase of the delayed CV 880 aircraft amounts to $3.2 million as shown in Calculation D below.

CALCULATION C

Interest Cost 1958-1960

Earlier Purchase of Twenty-Eight Boeing Aircraft
($ millions)

Cost of 11 B-131 Aircraft delayed[1]	56.8	
Cost of 17 B-331 Aircraft delayed[1]	122.1	
a. Total cost of earlier Boeing Aircraft		178.
Less increase in depreciation as a result of the earlier purchase[2]		3.
b. Net value of earlier investment		175.
c. Average earlier investment (a + b ÷ 2)		177.
× annual interest rate[3]		.0
Increased interest cost for one year		10.62
× average delay		.135
		$1.43

[2] Source: TWA Ex. 7 (d) as amended by letter of Price Waterhouse to Cahill, Gordon of August 30, 1968, Note 2.

[3] See page 159 above.

The total increase in interest cost caused by the additional and earlier purchase of jet flight equipment aggregates $21.6 million as shown in Calculation E below.

CALCULATION E

Summary of Adjustments to Interest Cost
1958-1963

	($ millio
I. *Additional Purchase*	
Six B-331 Aircraft	$ 8.
Ten CV-880 Aircraft	8.
	$16.
II. *Earlier Purchase*	
Eleven B-131 Aircraft and Seventeen B-331 Aircraft	$ 1.
Nineteen CV-880 Aircraft	3.
	4.
Total	$21

As shown by the above table the proper amount to be deducted from the damages under Section I in respect of interest cost is $21.6 million. This represents an increase of $10.7 million over the deduction made by Price Waterhouse (TWA Ex. 50).

(F) *Damages under Section I*

For the reasons above stated, the amount of the damages under Section I is as follows:

A. International Division		$22,400,000.
B. Domestic Division	$29,300,000.	
Less adjustment as to Convair 880s:	($ 2,500,000.)	$26,800,000.
Total Net Revenues		$49,200,000.
Less adjustment relating to interest rate:		($21,600,000.)
Damages under Section I		$27,600,000.

An accounting adjustment related to the above damages is made in the final award in Section VIII.

II.

Losses due to being required to lease jets.

The following allegations in the complaint underlie the claim considered in this Section II:

"9. Beginning in or about the year 1939 and continuing up to and including the date of the filing of this complaint, the defendants, Atlas and other persons acting for each of them have been and are now engaged in:

• • •

"(f) Sales and leases of jet-powered aircraft on the condition, agreement and understanding that the purchaser or lessee shall not buy or lease the goods of a competitor or competitors of the vendor or lessor, in violation of Section 3 of the Clayton Act; and

• • •

"10. Each act of the defendants and Atlas hereinafter alleged was done in furtherance of the offenses charged in the preceding paragraph and was a part thereof and was done with the primary purpose of restraining and monopolizing the trade and commerce described above. It was the intent of the defendants and Atlas, *inter alia*:

• • •

"(h) That the defendants and Atlas would obtain substantial profits for themselves, at the expense of TWA and other air carriers, as the result of restrictions upon competition in the trade and commerce hereinbefore alleged.

• • •

"20. During the period 1959 to 1960, defendants arranged for the lease to TWA by Toolco of certain jet-powered aircraft on a day-to-day basis. Such aircraft were the first and only jet-powered aircraft made available to TWA by the defendants during the years 1955 to 1960 and the number of aircraft so leased by Toolco to TWA was inadequate for the needs of TWA. Such leases were given on a continuing condition, agreement and understanding that TWA would not purchase or lease aircraft from any other potential supplier thereof. The effect of such continuing condition, agreement and understanding was to foreclose, to all potential suppliers of jet-powered aircraft to TWA other than defendants, the opportunity for selling or leasing jet-powered aircraft to TWA."

The specific allegations set forth in Paragraph 20 above concern a fleet of fifteen B-121 jet aircraft and four B-331 jet aircraft that were historically leased by TWA from Toolco according to a schedule of delivery dates commencing in January, 1959 and ending in December, 1959. These nineteen leased aircraft are among the fleet of sixty-three jets considered in Section I. Except for two B-131 aircraft which were purchased in May, 1960, they were historically purchased by TWA on December 30, 1960.

The plaintiff and its experts contend that the defendants forced TWA to lease these jet aircraft from Toolco instead of permitting it to own them, with the result that TWA had to pay far more to have the use of these aircraft than it would have paid if it had originally bought the aircraft itself. TWA further contends that

"Toolco, on the other hand, not only profited through the receipt of rental payments but also, by taking depreciation on an accelerated basis, created a tax gain for which it claimed capital gains treatment upon ultimate sale." (Plaintiff's Brief, p. 220.)

Proof of Damages

TWA through its financial expert, Morehouse of Drexel Harriman Ripley, included among the "Fundamental Principles of Airline Finance" that an airline should own its flight equipment rather than lease it from other parties. Two minor exceptions to this general principle, the "seasonal interchange" type of lease and the "through run interchange" type of lease were stated. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 4)

The cross-examination of Morehouse developed the following points:

¶ The equipment represented by the two exceptions, *i.e.*, the "seasonal interchange" and the "through run interchange" type of lease, is a comparatively small part of the total fleet of any airline. (Tr. 3991-3992).

¶ In the opinion of Drexel Harriman Ripley an airline is not soundly financed if its major income producing facilities, as contrasted with what might be described as servicing equipment such as hangars and airport facilities, are not owned. (Tr. 3995).

¶ The principal distinction between the popularity of railroad car leasing and the unpopularity of airplane leasing is the much more rapid development of the state of the art in the aircraft field, but it might be appropriate for an airline to lease rather than buy if it thought that the particular aircraft which it needed presently might be outdated quite shortly. (Tr. 3996).

¶ There has been interest in the use of equipment trust financing for airlines. Equipment trust financing is not particularly germane to the leasing problem, but it is somewhat "in the same ball park." (Tr. 4000).

¶ There are under certain conditions tax advantages such as the investment credit which make it a good business decision to enter into leasing arrangements. The investment credit was not a factor, however, during 1955-1960. (Tr. 3997, 4020-1).

¶ After the investment credit became effective United Air Lines leased a sizeable number of airplanes through a third party group of commercial banks to whom the credit was more valuable than if United had owned or leased directly. (Tr. 4029).

¶ Among the factors to consider in a comparison of the cost of ownership with the cost of leasing would be an estimate of the cost of the capital involved in the purchase of an airplane, and the depreciation on the airplane, when owned, compared with the gross rentals involved in the lease alternative. (Tr. 4013-4014).

¶ Drexel Harriman Ripley believe that it is in the best interests of an airline to retain the greatest degree of control of its income-producing property. Ownership gives that greatest degree of control. A very long lease with reasonably flexible provisions probably involves the giving up of less of the control factor than the opposite extreme, a day-to-day lease which has no assurance of any reinstatement of the lease. (Tr. 4020, 4019).

Operating Profit Lost—TWA has claimed that had it owned the aircraft leased from Toolco in 1959 and 1960 from the date Toolco received them, it would not have incurred actual rental expense aggregating $7.8 million in 1959 and $16.4 million in 1960. These rental charges were historically incurred by TWA and were taken from Form 41 reports filed with the Civil Aeronautics Board (CAB) (TWA Ex. 4(c)(1), p. 9). Assuming ownership, TWA's

accounting expert, Biegler of Price Waterhouse, estimated that depreciation on these nineteen aircraft during the actual lease period would be $4.4 million in 1959 and $8.5 million in 1960. (TWA Ex. 7(d)). By subtracting these depreciation estimates from actual rentals Wemple of Coverdale computed a "Total Improvement in Gain From Operations" amounting to $3.4 million in 1959 and $7.9 million in 1960. In addition, Price Waterhouse estimated a further improvement in gain from operations in the amount of $1.4 million, representing a reduction in depreciation and amortization expense for TWA on a reconstructed basis during 1961-1963 if the aircraft were owned rather than leased ($1.0 million in 1961, $0.1 million in 1962 and $0.3 million in 1963 (TWA Ex. 7(d)). The total improvement in operating profits over the period 1959-1963 before provision for the cost of funds necessary to achieve earlier ownership would then aggregate $12.7 million. (Plaintiff's Brief, pp. 221-222).

The cross-examination of Wemple of Coverdale presented the following points:

¶ The leases from Toolco to TWA were approved by the CAB. (Tr. 5040).

¶ Coverdale did not inquire into the question whether TWA should have owned rather than leased aircraft in 1959 and 1960. (Tr. 5047).

¶ No inquiry was made as to whether TWA was in the financial condition to buy the airplanes in 1959 and 1960. (Tr. 5048).

¶ In measuring the difference between owning and leasing insofar as it affects operating expenses cost of capital would not be considered but it would normally be considered in a feasibility analysis of the entire project. (Tr. 5053).

The Cost of Capital—The cost of funds that would be necessary to pay for the ownership of the aircraft which historically were leased is reflected in the Price Waterhouse Report (TWA Ex. 7(b) 2, VI, B) in the form of interest cost. Plaintiff's Brief states the following position:

> "This cost of the borrowed money which reconstructed TWA needed to buy the Boeing jets instead of leasing them appears in the reconstructed financial statements prepared by Price Waterhouse & Co., as part of a total provision for all of TWA's financial needs, including, for example, CV-880s as well as Boeings. It is possible, if desired, to allocate a portion of TWA's cost of borrowed money to the acquisition of these jets so as to derive a separate net damage figure for the effects of the wrongful acts alleged in paragraph 20 of the complaint. As indicated in TWA Ex. 314, as of December 31, 1960, reconstructed TWA's weighted average interest rate on outstanding debt was 4.75%, and that is plainly the cost of money properly applicable to buying the leased jets. Applying this interest rate to Simat's average net book value figures for the leased jets for 1959 and 1960 [DX 271A, pp. IX-B-3-4], TWA's 1959 cost of money to buy the leased jets would have been $2.4 million in 1959 ($51.3 million x 4.75%) and $3.4 million in 1960 ($72.1 million x 4.75%). Reconstructed TWA's cost of capital to own the leased jets during 1959 and 1960 would thus have been $5.8 million,* not the $12.6 million calculated by Simat, and on this basis, TWA's net losses from not being allowed to buy the leased jets, stated separately, would aggregate $6.9 million (before trebling)." (Plaintiff's Brief, pp. 226-227)

---

*"It must be emphasized that this interest expense is already reflected in the Price Waterhouse & Co. Report as part of the interest which would have been paid by reconstructed TWA. It is not an additional deduction from TWA's claim of $104.5 million, before trebling."

TWA's basic contention is that the only cost of capital which can be considered in antitrust cases is interest on borrowed money. They cite *Hanover Shoe, Inc.* v. *United Shoe Machinery Corp.*, 377 F. 2d 776 (3rd Cir. 1967), *rev'd on other grounds*, 88 S. Ct. 2224 (1968), as authority for this position.

Defendants' Answer

The Defendants' Brief asserts that TWA has not presented any evidence in support of its leasing claim other than the computation of Coverdale. Defendants further state that the plaintiff:

> " . . . relies solely on paragraph 20 of the complaint, the allegations of which purport to set forth a violation of section 3 of the Clayton Act. (Pl. Memo., p. 220) Apart from the legal and factual defects of the section 3 charge, nothing in paragraph 20 provides a foundation for the claim that plaintiff was injured by being required to lease aircraft rather than own them. (See pp. 17-18, 103-04 *supra*) There is no claim and no evidence that the rentals were excessive.* Indeed, all of the leases received CAB approval. (CAB Orders E-13542, E-13873, E-14169, E-14504, E-14877)." (Defendants' Brief, pp. 292-293)

* "The rentals were no higher in relation to the value of the aircraft than those paid by plaintiff's post-1960 management to Boeing for the four 720Bs, also a short-term lease which included installed engines. The rental rate for the 720Bs of $80,000 a month per plane is equivalent to a daily rate of $2,630, compared with the daily rates of $2,500 for the B-131s and $2,940 for the B-331s. (TWA C & C-4(2) for qtrs. ended March 31, 1960 and December 31, 1961) In each case the daily rate amounts to 0.05% of the value placed by plaintiff on the leased aircraft ($5.1 million each for the 720Bs, $4.6 million each for the B-131s and $5.8 million each for the B-331s)." (*Ibid.*)

In an effort to support the propriety of the lease arrangements, the defendants introduced the report of Simat.

Simat testified that the leasing of flight equipment is a common practice among U. S. airlines and that during the period 1955-1963 eleven different trunklines and Pan American leased flight equipment for their scheduled operations at rentals in excess of $100,000 per year in at least one year, and in some cases in each year, of the period. Simat stressed that the leasing of equipment can, in many instances, reduce the overall costs of the airlines, including the cost of capital, by substituting the credit of the lessor for the credit of the lessee. (Simat Report, DX 271A, Vol. 1, IX and Exhibit IX-A).

Woodfin of Loeb, Rhoades, defendants' financial expert, disputed Drexel Harriman Ripley's contention that an airline should own rather than lease its equipment.

> "The relevance to his report of Mr. Morehouse's second principle, that an airline should own rather than lease its equipment, escapes us. We know of no such general principle. A decision as between ownership and leasing must depend upon the facts of each particular situation and requires not only a comparison of the relative costs, including the cost of capital, but also a determination of a company's needs and objectives. We do not attempt to set forth here the reasons why an airline might choose to lease rather than own equipment, but note that leasing of aircraft took place during the 1955-1960 period and remains a fairly common practice in the airline industry today." (Loeb, Rhoades Report, DX 270, Part II, p. 13).

Loeb, Rhoades' representative, Woodfin, was cross-examined on the firm's opinion of this matter and the following points were developed:

¶ Generally, the airlines own their airplanes. Tax considerations dominate the decision to lease. Today, there are a great number of airlines that don't own their airplanes because of tax benefits derived from leasing. (Tr. 7100)

¶ There would not be much concern if a lessor who owned 75 per cent of an airline was leasing planes to the airline on a day-to-day basis because the lessor would be principally interested in keeping the planes in use producing income. (Tr. 7104A-7106)

¶ It would not be of material concern that every jet aircraft that TWA had in 1959 was leased, and that they were all subject to mortgages taken out by Toolco. (Tr. 7106)

¶ Woodfin would not dispute the following view of his partner, Kenrick Gillespie, which was expressed in an advisory letter dated June 8, 1959. (TWA Ex. 258, p. 2):

> "The cost of the overall jet program will run well in excess of $300 million, and permanent financing has not yet been crystallized. The commitment for purchase of the jets was made by the parent, Hughes Tool, and to date the planes are being leased to TWA on a month-to-month basis. This is an interim and unsatisfactory arrangement. We believe that a solution to this problem is imminent and will involve ownership of the aircraft by TWA and permanent financing of a satisfactory nature." (Tr. 7111-7112)

Cost of Capital Defense—The defendants persistently challenged TWA's proof of damages on the leasing claim on the basis that an improper provision was made for the cost of funds necessary to purchase the aircraft. In their

brief defendants argue that TWA's imputation of a debt expense of owning these aircraft as reflected in the overall cost of the financial program designed by Drexel Harriman Ripley is not a sufficient showing of cost.

Instead of using merely debt expense as a cost of capital for the leased aircraft the defendants assert that an overall cost of capital including the cost of equity as well as debt expense should be employed.* Evidence on this point was presented by defendants' witness, Simat, who adopted the cost of capital applicable to TWA which had been established at 10.25% by the CAB for rate-making purposes (Simat Report, DX 271A, IX-6).

Simat computed the average additional investment in the nineteen leased aircraft after depreciation and multiplied this figure by 10.25%. His findings were as follows:

> " • • • if they had been owned during 1959 instead of leased [the average additional investment], would have been $51.3 million greater than historical TWA. With a cost of capital at 10.25%, this would have cost $5.2 million for 1959. Similarly, the average additional investment in the B-131 and B-331 aircraft after depreciation, if they had been owned during 1960 instead of leased, would have been $72.1 million greater than historical TWA. Applying the 10.25% cost of capital, this would have cost $7.4 million for 1960 (Simat Report, DX 271A, IX-7).

Simat concluded that if TWA had owned the fifteen B-131s and the four B-331s instead of leasing them in 1959 and 1960, the costs of ownership (depreciation, amor-

* The concept of "cost of capital" as used by defendants was defined by the District Court in the *Hanover Shoe* case as:

"the rate of return expected by investors on capital funds they place at • • • [a concern's] disposal." (245 F. Supp. at 289-290)

tization and capital) would have exceeded the costs of leasing (rentals paid) by $1.3 million. (Simat Report, DX 271A, IX-8).

The defendants also contend that *Hanover Shoe, Inc.* v. *United Shoe Machinery Corp.* should not be interpreted to exclude the cost of equity capital from the computation of antitrust damages in all cases. Defendants' Brief cites several alleged grounds of distinction that exist in this case. Defendants argue that while the Circuit Court characterized the concept of cost of capital as a novel one which had not yet reached the point of general acceptance among economists, and the measurement of which was vague and not susceptible of general agreement, that there are no such questions about the concept in the regulated airline industry.

> "[cost of capital] has long been a topic for concern and investigation by the CAB, which must ensure that subsidies and passenger fare levels are adequate to cover all the capital costs of an airline, both debt and equity (DX 271A, pp. IX-5-6) . . . Nor is the measurement vague. After extensive hearings in the General Passenger Fare Investigation, Dkt. 8008 32 C.A.B. 291 (1960), the CAB found the cost of capital for the 'Big Four' domestic trunks, which includes TWA, to be 10.25%. (Id. at IX-6). The figure is susceptible of general agreement. Plaintiff's financial expert, Morehouse, testified that he would accept the cost of capital established by the CAB in determining the costs of ownership" (Tr. 4015-17) (Defendants' Brief, p. 277).

Defendants' counsel raise a further alleged distinction.

> "The most important distinction from *Hanover* is the finding in that case by the District Court that Han-

over at all times had sufficient capital to purchase the machinery in question and that, if additional capital had been needed, it would not have raised equity capital but borrowed the necessary funds at an interest rate of 2.5%. 245 F. Supp. 258, 289-92, 299. This finding, affirmed by the Circuit Court, was the sole ground upon which the Supreme Court decided this issue in favor of Hanover. (36 U.S.L. Week at 4649) It did not decide or intimate that the overall cost of capital should under no circumstances be deductible in antitrust cases. The circumstances here are the opposite of those in Hanover. Plaintiff charges that it did not have enough equity, and Morehouse's reconstructed financing provides for the issuance of common stock and convertible debentures. A composite cost of equity and debt is therefore apt for TWA." (Defendants' Brief, p. 278).

The cross-examination of Simat yielded the following pertinent points:

¶ The 10.25 per cent figure is a figure which the CAB concluded was a reasonable figure for the cost of capital of a major airline such as TWA. It includes not only the cost of debt securities but also the cost of equity securities which are no less a cost to the company than the cost of debt. (Tr. 8820).

¶ The Price Waterhouse Report does not cover the full cost of capital, i.e., it covers only that portion of the cost of capital which is represented by the cost of debt financing. (Tr. 8825).

¶ If a business achieves a return in the course of its operations sufficient to meet its cost of capital that portion of the return which relates to the return on equity would appear in the income statement as net earnings or profits. (Tr. 8827).

¶ The cost of equity is actually an estimate of the return on investment which investors must be able to expect from a company's future operations but it is no more an estimate than depreciation expense, and the expired costs of any other assets of the company which are only partially consumed during the period. (Tr. 8832).

Determination of Damages

The allegations of the complaint set forth above (pages 168 and 169) are taken to be "well pleaded." As a result of their default, defendants are found to have admitted each of the allegations included in the paragraphs of the complaint dealing with aircraft leases during the period 1959 through 1960.

The defendants have argued that the principal paragraph in the complaint relative to the leasing claim (par. 20) does not specify any injury as a result of Toolco leasing aircraft to TWA rather than TWA owning these same aircraft. Indeed, the defendants stress that there is no claim that the rents were excessive and that all of the leases received CAB approval. (Defendants' Brief p. 292-293) A reading of paragraph 20 without the other related allegations of the complaint would support this contention. It appears that the singular thrust of the paragraph goes toward the claim that the 1959-1960 leases did not provide a sufficient number of aircraft for TWA's needs and that the provisions of the lease agreements prohibited TWA from buying *or leasing* other jet aircraft from another potential supplier. This aspect of TWA's overall claim is the subject of Section I above, and has been decided in favor of TWA. I am not, however, persuaded that the inquiry under this Section II into the question of damages as a result of these leases should be arrested on the basis of the silence within paragraph 20. I find that

other general allegations in the complaint specify enough grounds of injury to base my findings in this portion of the claim on an evaluation of all the evidence presented rather than on an omission in a specific allegation. For instance, it would appear that the above quoted paragraph 10 subsection (h) would be sufficient to cover damages resulting from leasing rather than owning the aircraft.

TWA's financial expert, Morehouse of Drexel Harriman Ripley, believed that it was a "fundamental principle" for airlines to own rather than lease their flight equipment. The ability to control primary income producing property was cited as of paramount importance. The defendants' expert, Woodfin of Loeb, Rhoades, disputed the Drexel Harriman Ripley proposition as a general principle and cited that leasing of aircraft was a fairly common practice in the airline industry from 1955 onward. (Loeb, Rhoades Report DX 270, Part II, p. 13). However, in cross-examination on the question of the Toolco-TWA leases, Woodfin stated that he would not dispute the view of his partner, Gillespie, that the 1959-1960 leases were an interim and unsatisfactory arrangement. (Tr. 7111-7112)

The defendants' expert, Simat, gave additional testimony that the leasing of aircraft was common among airlines from 1955-1963; however, no evidence was presented that other airlines leased all their jets during 1959-1960 or that flight equipment rentals of any one airline approximated the $24.2 million spent by TWA during those years for jets.

There was indication that United Air Lines took some advantage of the investment credit by leasing aircraft through commercial banks but this tax advantage was unavailable in 1959 and 1960. (Tr. 3997, 4020-1). There was no evidence presented that aircraft manufacturers had sufficient financial resources and were willing to lease, or as to the existence of a third party financier who was

ready, willing and able to act as lessor to TWA during the period. I have also noticed that as of December 31, 1960 that of 2,036 aircraft operated by certificated route air carriers in system operations, 1,919 were owned and 117 were leased (Civil Aeronautics Board, Handbook of Airline Statistics, 1961 edition, PI-1).

In view of the paucity of evidence showing that the lease arrangements were superior to ownership, or that TWA was unwilling or incapable of purchasing jets during 1959-1960, I am persuaded, that absent Toolco's control, that TWA would have purchased the 15 B-131 and 4 B-331 aircraft directly from Boeing.

Given this determination, the question of damages from leasing rather than owning centers on the calculation of damages presented in evidence by TWA's expert, Wemple of Coverdale.

As indicated above the calculation was based on two factors: (1) the historical rental payments on the jet aircraft from TWA to Toolco; and (2) a computation of the appropriate depreciation and amortization applicable to the leased jets. Defendants have not disputed the accuracy of the rental payments used in the calculation and no material challenge was made to the determination of depreciation and amortization constructed by Price Waterhouse and testified to by their representative, Biegler (Tr. 6327-6343). I therefore accept the figure of $12.7 million as the extra costs incurred by TWA by reason of its being forced to lease rather than own the nineteen jet aircraft, but this amount is before the necessary deduction of the cost of funds required for their purchase.

The defendants have urged that the computation of the difference between leasing and owning flight equipment must include an additional deduction of the cost of ownership or "cost of capital." The foundation of this "cost of

capital defense" rests on including as part of the cost of capital an appropriate cost attributable to the cost of equity. Using as their overall cost of capital the rate of 10.25% which had been established by the CAB for rate-making purposes the defendants claim that it would be more expensive to own than lease.

TWA and its counsel have not objected to Simat's formula for computing financial differences between leasing and owning. In fact TWA's counsel adopts Simat's figures for "average additional investment" in computing their own leasing claim separately from their general operating claim. (Plaintiff's Brief, p. 227). However, TWA has vigorously disputed Simat's use of a cost of capital which includes a cost of equity rather than its own estimate of cost of capital which is solely limited to its reconstructed borrowing rate, i.e., 4.75%. TWA's counsel also argues that the recent case of *Hanover Shoe Inc.* v. *United Shoe Machinery Corp.*, 377 F. 2d 776 (3rd Cir. 1967) *rev'd on other grounds* 88 S. Ct. 2224 (1968) is dispositive on the question of excluding a cost of equity in the computation of damages in antitrust cases. Despite defendants, attempt to distinguish *Hanover* from the facts of this case I find the following language to be a clear statement favoring TWA's position:

> "United contends that Hanover's so-called cost of capital should have been treated as an element of the cost of acquiring the machinery. The court below disallowed this item, which was defined as 'the rate of return expected by investors on capital funds they place at * * * [a concern's] disposal,' after hearing the conflicting testimony of expert economists called by each party. It found that 'cost of capital' is an economic concept which allows a company to decide if a certain investment is sound by computing the rate of return which will be required on that investment to jus-

tify expending funds on it rather than in an alternative investment, and that it is measured in terms of percentage of earnings per share of common stock to price per share, and of percentage of net profits after taxes to stockholders' equity. It also found that the measurement of cost of capital was vague and not susceptible of general agreement in its application and that in any event it was not a proper element in the calculation of damages but was only a guide to investment.

"The novel concept which United sought to have approved has not yet reached the point of general acceptance even among economists. We agree with the court below that cost of capital is not sufficiently related to actual costs to be included in an antitrust damage calculation." (377 F. 2d at 791-92)

The U. S. Supreme Court has expressed agreement with this finding. 88 S. Ct. 2224, 2237 (1968).

Accordingly, I do not accept the defendants' figure for the cost of capital as computed by Simat since it is an inappropriate measure of the cost of ownership. I am persuaded that the correct external cost of capital is the appropriate borrowing rate for TWA during the period in question. However, since I have not accepted TWA's reconstructed financial plan which is considered in Section III hereof, the rate which TWA asserts (4.75 per cent) must also be rejected. In Section I pages 147 to 167 of this report I have discussed the problem of adjusting the overall interest cost that must be deducted from the total "loss" in operating profits that I have awarded as a fair measure of damages. There it was determined that an appropriate rate to apply to the purchase of Boeing aircraft would be 6 per cent. Adopting the figures of average additional investment for the nineteen jet aircraft during 1959 and 1960 upon which both parties agree, I have determined

that on a separate basis TWA's damages would amount to $5.3 million as set forth below:

Determination of Separate Net Damage Resulting From Leasing Rather Than Owning Jet Aircraft

Year	(1) Average Additional Investment in Jets (Net Book Value)	(2) Assumed Interest Rate on Borrowed Funds	(3) Cost of Capital to Own Jets (1) x (2)
1959	$51.3 million[1]	6%	$3.1 million
1960	$72.1 million[1]	6%	4.3 million
Total			7.4 million

	($ millions)

III.

Losses connected with financing the jets.

The following allegations of the complaint underlie the claims considered in this Section III.

> "7. The trade and commerce involved in this action concerns:
>
> * * * * *
>
> "(f) The financing in interstate commerce of the United States of the acquisition by sale, lease or other means of aircraft for use by TWA in air transportation in interstate and foreign commerce of the United States."

Paragraph 9 of the complaint alleges that defendants and others engaged in a combination and conspiracy to restrain interstate and foreign commerce in violation of Sections 1 and 2 of the Sherman Act and Sections 3 and 7 of the Clayton Act.

Paragraph 10 of the complaint alleges, in part, as follows:

> "10. Each act of the defendants and Atlas hereinafter alleged was done in furtherance of the offenses charged in the preceding paragraph and was a part thereof and was done with the primary purpose of restraining and monopolizing the trade and commerce described above. It was the intent of the defendants and Atlas, inter alia:
>
> * * * * *
>
> "(g) That defendants would supply TWA with the aircraft essential to its business only on the condition that TWA would accept such financing arrangements relating to the aircraft as the defendants dictated, and in turn that defendants would allow

TWA to procure financing essential for the acquisition of the aircraft it needed only on the condition that TWA would accept such aircraft as the defendants dictated; and"

• • • • •

The allegations with respect to equity financing are set forth in paragraph 23 of the complaint. The allegations with respect to debt financing are set forth in paragraphs 24 through 28, inclusive, and paragraph 52(c) and (d) of the complaint and are more fully discussed hereafter.

The Proof of Damages

In proof of damages, TWA offered as direct expert testimony the report of Drexel Harriman Ripley, a firm of investment bankers with experience during the 1955-1960 period under consideration, in the financing of airlines and manufacturers of aircraft and jet equipment. Drexel Harriman Ripley "reconstructed" on the basis of certain assumptions given them by TWA's counsel, the TWA financial structure so as to provide what, in their opinion, would be adequate financing for a 63-plane jet fleet and in doing so made the central assumption that beginning in 1955, TWA's management was free to do what was best for TWA. Drexel Harriman Ripley assumed "neither that there was nor that there wasn't" a majority stockholder of TWA such as Toolco. (Tr. 3933)

In their report, Drexel Harriman Ripley stated:

"This report is written in response to the request of Cahill, Gordon, Reindel & Ohl that we give our opinion as to whether Trans World Airlines, Inc., if it had been under an independent and competent management not influenced by any consideration other than the prudent conduct of its operating and financial affairs, during the 1955-1960 period, could have fi-

nanced its projected capital requirements for those years, including specifically the purchase of 15 Boeing 707-131s, 18 Boeing 707-331s, 30 Convair 880s, and all the piston aircraft which were purchased by it and delivered during the foregoing period; and, if so, that we describe the methods by which, in our opinion, such capital requirements should have been financed.

"We have been advised, and assume for purposes of this report, that if Trans World Airlines had been adequately financed the 33 Boeing aircraft could and would have been ordered by an independent and competent management in the fall of 1955 for delivery in 1959 and 1960, and that the 30 Convair aircraft could and would have been ordered by such management in 1956 for delivery in 1960." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 1)

• • • • •

"We are assuming for the purposes of this report that we were engaged by Trans World Airlines as its investment bankers throughout the 1955-1960 period, and that we were thus in intimate and frequent contact with the management and had access to all current information and data having a bearing on finance." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 3)

• • • • •

"We have designed the foregoing financing program* on the basis of projected and reconstructed capital expenditures prepared by Price Waterhouse & Co.; on the basis of reconstructed financial statements prepared by Price Waterhouse & Co.; and on the basis of forecasts of funds generated prepared by Coverdale & Colpitts. And we have used various statements of figures furnished to us by Trans World Airlines pertaining to historical balance sheets, income

* Described below on page 190 of this report.

accounts, and certain other historical financial data." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 2)

Drexel Harriman Ripley also considered such other historical data as general financial information about the economy, the airline industry and the stock market.

The Drexel Harriman Ripley Report asserted that there are certain fundamental principles which should govern prudent management of a major airline in arranging its corporate financing, as follows:

"We have consistently maintained that the fundamental principles which should be followed in airline finance, throughout the 1955-1960 period under review, are as follows:

The airline should get, or endeavor to get, its equity or junior capital prior to or simultaneously with getting its senior borrowed capital.

The airline should own its own equipment rather than lease it from other parties.

* * * * *

Contractual commitments for capital expenditures should be prepared for reasonably in advance of the time they are to become due. By this we mean that the airline should plan and arrange its financing program so as to have sufficient liquid capital and/or credit standing to afford reasonable expectation of obtaining the funds required to meet its forward commitments." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 4-5)

In determining TWA's financial requirements and whether it had sufficient equity capital and credit standing to fulfill these financial requirements, Drexel Harriman Ripley accepted the assumptions given it by TWA's counsel, as described above, and proceeded to reconstruct the

financial condition and results of operations of TWA for the 1955-1960 period. In effecting the reconstruction, Drexel Harriman Ripley made adjustments in the historical figures principally to reflect the acquisition and financing of jet aircraft and their operation subsequent to 1958. Timely delivery of jet aircraft was assumed. Drexel Harriman Ripley relied upon a reconstruction of income (loss) and a projected capital expenditure program for 1955-1960 which had been prepared by Price Waterhouse and also gave consideration to projections of cash flow made by Coverdale. (See IV. "Premises and Assumptions," Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 5.)

Based on the foregoing considerations, Drexel Harriman Ripley summarized their opinion as follows:

> "In our opinion Trans World Airlines could have financed, and if we had been advising it during the 1955-1960 period we would have advised it to finance, the acquisition of the foregoing aircraft and its other capital expenditures by means of the following program, which will be more fully described hereinafter, in addition to the estimated internally generated funds." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 1)

The financing program recommended was composed of four separate elements, summarized in Plaintiff's Brief as follows:

> "(i) An underwritten common stock issue in May 1955 offered preemptively on a share-for-share basis at $17.50 per share to provide net proceeds of $55.5 million.
>
> "(ii) A private placement long-term loan commitment with institutional investors in October 1955 for

$150 million minimum—$170 million maximum at 4% interest.

"(iii) An underwritten non-preemptive offering in May 1959 of $60 million of 5% subordinated debentures, convertible into common stock.

"(iv) A private placement long-term loan commitment with institutional investors in May 1959 for $90 million minimum—$110 million maximum at 6% interest." (Plaintiff's Brief, pp. 60-61)

TWA claims that by reason of Toolco's preventing TWA management from adopting and following the above financing program, that TWA has been damaged to the extent of $97.8 million, of which $36.9 million ($12.3 million before trebling) is attributable to Toolco's interference with TWA's equity financing, and $60.9 million ($20.3 million before trebling) is attributable to defendants' refusal to permit TWA to arrange debt financing as TWA claims was done by other airlines when the prevailing cost of money was lower.

Plaintiff's Brief states in respect of its claim of $12.3 million in damages (before trebling) attributable to Toolco's interference with the equity financing:

"TWA is claiming $12.3 million in damages (before trebling) for the wrongful acts of defendants set forth in paragraph 23.

"This damage is measured by the difference between:

"(i) the net proceeds from a 1-for-1 common stock offering which TWA was forced to make in 1957, when the market price for TWA stock was at one of its lowest points historically and TWA's financial condition was very shaky, so as to enable Toolco to increase its equity interest in TWA, and

"(ii) the net proceeds of a 1-for-1 common stock financing which Drexel Harriman Ripley would have recommended be made by TWA in the spring of 1955 (assuming they were advising TWA in 1955), when the market for stock was far more favorable for a successful equity financing, when TWA's prospects even in the opinion of Toolco's expert witness were rosy, when TWA should have been preparing for the needs of the jet age, and when TWA had already for many years (as set forth in the complaint) been starved of equity." (Plaintiff's Brief, p. 69)

Plaintiff's Brief states in respect of a claim of $20.3 million in damages (before trebling), attributable to defendants' refusal to permit TWA to arrange debt financing:

"TWA is making a separate claim of $20.3 million (before trebling) for the wrongful acts of defendants set forth in the foregoing paragraphs.

"This separate claim is based upon the difference between:

"(i) The present value (*i.e.*, the present equivalent of the future burden) of future payments for debt service on TWA's long-term debt historically outstanding on December 31, 1963, and

"(ii) The present value (i.e., the present equivalent of the future burden) of future payments for debt service on long-term debt for reconstructed TWA as of December 31, 1963 with a debt structure of the kind and in the amounts recommended by Drexel Harriman Ripley." (Plaintiff's Brief, p. 120)

In answer to TWA's claim for damages, defendants introduced as direct testimony the Report of Loeb, Rhoades (DX 270) in which its conclusions are stated, as follows:

"The equity financing plan suggested by DHR in the Morehouse testimony as of the Spring of 1955 would have been a plan so contrary to the best interests of TWA and its stockholders that it would not have been accepted or implemented by prudent and competent officers and directors of that company.

"We would not have recommended to TWA or to its stockholders that TWA engage in Mr. Morehouse's proposed equity financing in the Spring of 1955. It could not have been accomplished without Toolco actively participating by subscribing to its proportionate share of the proposed equity offering, and it would not have been in the best interests of TWA's stockholders for Toolco to have done so at that time.

"Our opinion that TWA would have rejected Mr. Morehouse's 1955 equity financing plan is the same on the assumptions that TWA could not or would not have looked to Toolco for assistance in such a financing, or that TWA was widely held with no controlling stockholder.

"Lastly, TWA without the assistance of Toolco, could not have financed the so-called 'reconstructed' capital requirements of $544.8 million during the period October 1955 through December 1960, on any reasonable basis." (Loeb, Rhoades Report, DX 270, Part II, p. 3)

I have concluded that the investment banking firms of Drexel Harriman Ripley, and Loeb, Rhoades and the witnesses who participated in the preparation of their direct testimony and who submitted to cross-examination with respect thereto are well qualified as experts competent to give testimony as to TWA's financial affairs in the 1955-1960 period. The direct testimony of each discloses a thoroughness of preparation and a familiarity with the subject. The cross-examination of the witnesses was extensive

and searching and most helpful in considering the issue of damages.

The Equity Financing

This Report will consider first the evidence with respect to damages introduced in connection with equity financing.

Paragraph 23 of the complaint alleges as follows:

> "23. Subsequent to the acquisition of stock by Toolco in TWA, defendants for reasons of self-interest continuously refused to allow equity financing by TWA except on condition that, as a result of any such financing, Toolco would be enabled to increase its equity position in TWA and instead caused TWA to obtain funds chiefly by means of debt financing. TWA was thus rendered unable to seek the financing it needed for the acquisition of aircraft except upon the approval of defendants. The purpose of the defendants in rendering TWA dependent upon them for such assistance in financing as defendants might choose to provide, and the effects thereof, were, among other things,
>
> "(a) to create and maintain control in the defendants of the business of financing the purchase of aircraft for use by TWA, and
>
> "(b) to strengthen defendants' control over the acquisition of aircraft by TWA."

The Drexel Harriman Ripley Report and Morehouse Testimony Relating to Equity Financing

Drexel Harriman Ripley states that TWA should have known early in 1955 that the jet age was imminent and that provisions must be made for funding substantial capi-

tal expenditures (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 6 and 10).

The circumstances of the airline industry in early 1955, as seen by Drexel Harriman Ripley, is stated in their report as follows:

> "Prior to 1955, the major airlines had experienced five years of good earnings with the trend generally upward. In early 1955 it was generally recognized that the jet age was coming and that large amounts of additional capital from outside sources would be required to acquire jet aircraft and other facilities. However, there were wide differences of opinion as to the type of jet aircraft which would be preponderant. One school of thought favored the 'straight jet'; another favored the gas turbine driven propeller type, generally referred to as the 'prop-jet' or 'turbo-prop'. None of the airlines, so far as we know, could at that time estimate with any degree of certainty just how much additional capital would be required. But it was generally recognized that the amounts would be very large." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 6)

The Drexel Harriman Ripley Report cites the annual reports of commercial aircraft manufacturers as evidence of the awareness of the airline industry in early 1955 that the advent of the jet age was imminent, but, only the Annual Report of the Boeing Company for the calendar year 1954 (DX 187), which was issued on March 7, 1955, can be helpful in understanding the airline industry's thinking in early 1955. Referring to the Boeing 1954 Annual Report, the Drexel Harriman Ripley Report states:

> "*Boeing*: In its 1954 annual report, published in the early part of 1955, Boeing refers to its B-47 (a jet bomber) as being 'well established' in the military

> service, and states that considerable active interest had developed among airline operators in a commercial application of its jet prototype tanker-transport." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 7)

Drexel Harriman Ripley also cited the Annual Reports for 1953 and 1954 of National Aviation Corporation, a closed-end investment trust which concentrates its investments in the airline and aircraft manufacturing industries, as follows:

> "*National Aviation 1953 Report*: This report states categorically that it was all but a certainty that the (then) piston-engined newcomers (presumably the DC-7 and the Lockheed Super Constellation) were the last of their kind for mass travel by air, the reason being that the few companies concerned with commercial transport were all working on jets.
>
> "*National Aviation 1954 Report*: This report refers to the British invasion of the U. S. domestic airline market with the Vickers Viscount turbo-prop. And it states that the new 'shape of things to come in 1955-58 is in ferment * * * *.'" (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 8)

Capital Expenditure Requirements in the Jet Age

The Drexel Harriman Ripley Report asserts that in early 1955 TWA could have formed an opinion as to its capital expenditure requirements in the jet age. It stated:

> "We doubt that in early 1955 the TWA management could make an accurate estimate of its forward capital expenditure program. But it seems reasonable to presume that the management would have at that

time estimated the six-year total at over $300 million, and probably nearer to $400 million." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 10).

Shortage of Equity Capital

Drexel Harriman Ripley compiled certain statistics which it employed as "yardsticks" for measuring the TWA equity capital in comparison with that of its major competitors (Pan American Airways, American Airlines and United Air Lines). These statistics consisted of (i) Total Operating Revenue; (ii) Net Operating Income; (iii) Net Income Including Capital Gains; (iv) Revenue Airplane Miles Flown; and (v) Available Seat Miles. In addition, Net Operating Income per Revenue Airplane Mile and per Million Available Seat Miles for five years, 1950-1954, and for one year, 1954, were set forth in comparative form (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 11).

Drexel Harriman Ripley applied these "yardsticks" and determined that TWA had a shortage of equity capital. Plaintiff's Brief summarized and stated this matter as follows:

"* * * On the basis of 1954 revenue miles flown and available seat miles, respectively, TWA was 33% to 28% larger than Pan American, 10% to 7% smaller than American, and 9% to 5% smaller than United; using these figures as yardsticks, TWA was short of proprietary capital by from $69 million to $74 million in comparison with Pan American, by from $27 million to $30 million in comparison with American, and by $17 million to $21 million in comparison with United. Using available ton miles as a yardstick, TWA was 12.7% larger than Pan American, 15.6% smaller than American and 13.6% smaller than United, indicating a proprietary capital shortage of $53 mil-

lion when compared to Pan American, $21 million when compared to American and $13 million when compared to United. [Drexel Harriman Ripley Report, Part II, pp. 9-10]" (Plaintiff's Brief, pp. 82-83)

The Drexel Harriman Ripley Report then proceeds to conclude with respect to additional equity required, as follows:

> "In the light of the foregoing, and recognizing that TWA was the only company conducting both U. S. transcontinental and transatlantic operations, we believe that TWA would have been well advised in early 1955 to obtain not less than $50 million of additional proprietary capital. TWA's book net worth at December 31, 1954 was only $67.2 million, a very low amount in relation to the capital expenditure program which it faced in the (then) next few years.
>
> "It is our opinion that we would have advised TWA in early 1955 to raise not less than $50 million of additional equity capital. And that it be raised by an underwritten preemptive offering of common stock." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 10)

Drexel Harriman Ripley supports its opinion that TWA should and could have raised at least $50 million additional equity capital in 1955 by citing, in addition to TWA's operating results in the 1950-1954 period which compared favorably with its principal competitors, the announcement in March 1955 that TWA's earnings per share in 1954 were double earnings per share for the preceding year 1953, the fact that the general stock market was strong and advancing and that the market for TWA common stock from January 1, 1954 to June 30, 1955 showed a greater percentage advance than the Standard & Poor's Index of Air

Transport Stocks or the Dow Jones Industrial Index, and performed better than its three major competitors.

Drexel Harriman Ripley then concluded:

> "Thus, the market for TWA stock in the first six months of 1955 showed no sign that investors were worried about the TWA losses reported for the first quarter. The seasonal character of TWA's operations and those of other airlines was generally recognized." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 17)
>
> • • • • •
>
> "From the foregoing it will be noted that the market for TWA stock was strong in terms of price and trading volume in early 1955, and that market prices were much above book values." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 17)

The TWA loss for the first quarter referred to above was a loss of $3,898,000, announced on May 5, 1955 (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 13).

The Drexel Harriman Ripley Report compares the price earnings ratios of TWA with its three major competitors during the period 1950-1955 and notes that TWA was selling at about the same price earnings ratio as United Air Lines, although United Air Lines had a better long-term historical earnings record than TWA and was paying cash dividends whereas TWA was not. During the same period Pan American and American Airlines sold at higher price-earnings ratios. Drexel Harriman Ripley also indicated that in early 1955 the major financial advisory services regarded TWA as an appropriate "hold." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 19-20).

The recommendation of the Drexel Harriman Ripley Report with respect to an equity issue by TWA is set forth as follows:

"We would have advised and urged TWA, in the spring of 1955, to put out a major equity issue in the first half of that year. The stock market was strong and its trend was upward. The first half of 1955 was the time for TWA to correct its obviously short proprietary capital position and prepare for the jet age.* We would have recommended that the equity financing be effected in April or May. The regular 1954 year end audit would comply with the SEC rule for listed companies. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 21)

* In February 1955 General Motors issued and sold $328 million of common stock. Goodyear Tire & Rubber sold $45 million in July.

Cross Examination of Morehouse

There is set forth below certain supplemental information developed in the defendants' extensive cross-examination of Edward J. Morehouse of Drexel Harriman Ripley and certain exhibits admitted in evidence. The information set forth is selected to illuminate the Drexel Harriman Ripley Report. However, I did not confine my consideration solely to the information listed below.

¶ Any change in the timing of the financing (including the equity financing) would affect the amount of damages computed under the Drexel Harriman Ripley approach (Tr. 3892).

¶ If, hypothetically, common stock were offered in October 1955 when the market price of TWA stock was $22 as compared to $31 in May 1955, there could have been an effect on the amount raised and, therefore, an effect on damages (Tr. 3884-3885).

¶ The Boeing Annual Report dated March 7, 1955 (DX 187) contains the following sentence which had been omitted from the Drexel Harriman Ripley Report:

"Our entry into the commercial field is as yet undetermined. We desire such a commercial development, if it can be accomplished on a sound financial basis and without interfering with our military commitments." (Tr. 4109)

¶ The Boeing 707 prototype was flown in July 1954 (Tr. 4120).

¶ On November 19, 1954, William H. Allen, President of Boeing, quoted a price of $4.25 million for the commercial version of the jet tanker (DX 95). On December 21, 1955, Noah Dietrich, then Vice President of Toolco and a director of TWA, wrote to Fred Ayers, Senior Vice President of Toolco and also a director of TWA:

"For several years it has been assumed in the air transport industry that jet aircraft would play a prominent role when their design reached the stage of development as to be commercially feasible. Early this year [1955] TWA engineers and representatives of the Tool Company concluded that the time was ripe to commence negotiations for the design and manufacture of jet airplanes which would suit the peculiar requirements of TWA. Because of the tremendous cost of newly designed jet aircraft it was a foregone conclusion that the Tool Company would have to lend substantial financial assistance to TWA. The exact form and extent of such support being left open, pending final determination as to the requirements and the existing financial capabilities of TWA itself." [DX 46]

¶ The article by Selig Altschul, entitled "Financing Patterns to Change for Jet Transport Acquisitions" appearing in the November 7, 1955 issue of AMERICAN AVIATION (DX 31, p. 27) "is probably a reasonably good

description of the picture as it then existed * * *" (Tr. 3985), but Morehouse disagreed with the following statement as being "too general":

> "'It is important to note that the bulk of financial requirements for the airlines for ordering jets will not come until four years or so from now. This gives them time to work out financing programs.'" (Tr. 3987-3988)

¶ A memorandum from J. P. Ripley of Drexel Harriman Ripley to Berry and Morehouse of the same firm, dated September 23, 1955 (DX 182), summarizing a conference with Curtis Barkes, Financial Vice President of United Air Lines, states:

> "'Barkes said that just off the top of his head he is thinking along the following lines. He is wondering if we could work out a transaction with Metropolitan by the terms of whch [sic] UAL would borrow from the Metropolitan $30,000,000 within the next two or three months and make a commitment to borrow the balance (presumably about $90,000,000) on the condition that UAL sell $30,000,000 of preferred stock. Then UAL could sit down and consider the risks involved in selling the preferred stock right now or waiting until later to sell it. He appreciates the risks involved, but he thinks the market might be better next summer.'" (Tr. 3965)

There is no indication that Ripley asserted the foregoing violated a fundamental principle of Drexel Harriman Ripley or that he was offended by the suggestion of Barkes, contained in DX 182 (Tr. 3967-3968).

¶ The timetable for the hypothetical sale of equity in the spring of 1955, assuming a June 1, 1955 closing and

the retention of Drexel Harriman Ripley by TWA in January 1955 would be (i) two or three weeks to conduct the survey to conclude that TWA required equity financing and to formulate a plan (Tr. 4104); (ii) receipt of approval of recommendations and commencement of work approximately in the middle of March 1955 at the latest (Tr. 4099); and (iii) the filing of a registration statement with the SEC on April 19, 1955, the preparation of which would have commenced as late as a month prior thereto (Tr. 4097), but might take longer so that it might have commenced somewhere between February 19 and the middle of March 1955 (Tr. 4098).

¶ Morehouse expressed doubt that in January 1955 Drexel Harriman Ripley would have known that the Government would on August 1, 1955 give the required consent to Boeing to use Government facilities to manufacture commercial jet aircraft (Tr. 4127).

¶ Drexel Harriman Ripley were instructed to assume that orders for jet aircraft would have been placed in the fall of 1955 and Morehouse stated that:

> "... it is not unreasonable to assume that only a few months earlier than that time they would have had enough information about probable costs and probable needs to have estimated that their capital expenditure program would have been in the order of the numbers we have set down here" (Tr. 4169).

¶ In the spring of 1955, the airline would probably have had enough information to know that its needs were going to be in the order of $300 million to $400 million (Tr. 4171).

¶ Sometime in the second half of 1955, United Air Lines (for whom Drexel Harriman Ripley was then acting as

investment bankers) first came to some conclusion with respect to what its anticipated expenditures might be for jet aircraft (Tr. 4172).

¶ In concluding that TWA was short of equity, Drexel Harriman Ripley compared TWA revenue per seat miles and available ton miles with its competitors, but did not consider that TWA, during 1954 at the time the comparisons were made, had taken the lead in promoting coach travel (Tr. 4157-4158), and that the statistics for one of the competitors, American Airlines, reflected a 24-day pilot strike in 1954 (Tr. 4157). Thus the TWA revenue per seat mile, "a yardstick" used by Drexel Harriman Ripley in developing the shortage in TWA equity, appears higher in relation to its competitors and according to the Drexel Harriman Ripley approach, resulted in a greater shortage of equity (Tr. 4157-4166).

¶ Airline stocks during May and June 1955 "were volatile and investments in them were speculative in nature." (Tr. 4196).

¶ During the period from January 1, 1946 to May 12, 1955 the equity financing of all airlines aggregated $47,272,425 (Tr. 4256), the largest of which was an offer by Braniff of $5,700,000 (Tr. 4257), and TWA accounted for the other three large equity financings, one in 1949 and two in 1952 (Tr. 4256). On July 3, 1945, there was an equity issue of $42,398,000 by Pan American Airways, coupled with stock purchase warrants to purchase an additional $36,800,000 (Tr. 4258) (very few of the stock purchase warrants were exercised because of the sharp drop in the Pan American Airways' stock (Loeb, Rhoades Report, DX 270, Part II, p. 8).

¶ The Drexel Harriman Ripley Report recommended a 1-for-1 rights offering of TWA stock in May 1955, yet Ripley in a letter dated August 25, 1955 (DX 193) in speaking of a prospective rights offer of common stock of United Air Lines admitted that a 1-for-3 rights offering would be very high and that "even one to five is pretty high" (Tr. 4262).

¶ Application of the "yardsticks" to TWA produced a TWA equity shortage ranging from $13 million to $74 million, the upper end of the range being produced by comparison with Pan American Airways, the only one of the comparable competitors flying the transatlantic run. The absolute dollar comparison of capital indicates that the amount of equity shortage would have been fixed in the upper range. (Tr. 4166)

¶ TWA's need for additional equity was "so bad" that in the opinion of Drexel Harriman Ripley TWA should have rushed to the market and raised the equity in May of 1955 rather than at some later date in the summer. (Tr. 4167)

¶ It is not clear from Drexel Harriman Ripley's records that they actually recommended equity financing to United Air Lines in the fall of 1955. The next equity financing of United Air Lines subsequent to the fall of 1955 was in 1960. (Tr. 4307)

The Loeb, Rhodes Report and Woodfin Testimony Relating to Equity Financing

The Loeb, Rhoades Report (DX 270) constitutes the direct testimony of Gene M. Woodfin, a general partner of Loeb, Rhoades, an investment banking firm of New York City.

value which continued below par value for about eight years. The market price of the common stock did not reach the conversion price based on redemption until December 1954. Also cited was the $43.4 million sale of capital stock of Pan American on July 3, 1945 through an underwritten offering of capital stock with stock purchase warrants attached, exercisable at $18 a share. Because of the market decline in 1946 very few of the warrants were exercised (Loeb, Rhoades Report, DX 270, Part II, p. 8 and footnotes). Common stock offerings of domestic trunk airlines during the period from January 1946 to June 1957 were rare and in very small dollar amounts. Of the four major offerings, two were by TWA, one in 1952 for $10.7 million and the other in 1957 for $43.4 million, and each of the four larger offerings were underwritten in whole or in part by a principal shareholder (Loeb, Rhoades Report, DX 270, Part II, p. 9).

"This dearth of equity financing was not by design. The airlines were forced to rely on debt financing during the post-war piston era because airline equities had no investment status and most airlines were simply unable to obtain equity financing. For example, W. C. Barkes, Vice President of Finance and Property for United Airlines, explained United's 1955 debt financing program in testimony before the CAB in 1957 in the General Passenger Fare Investigation as follows (United Ex. U-2, Docket No. 8008, pp. 12-13; attached hereto as Exhibit D):

"'The 1955 financing program for United was handled entirely by arranging for issuance of debt. This was not a matter of choice, for the ability of United, as well as the industry, to sell equity has been limited. That further increase in equity is necessary and desirable is apparent, but it is equally

apparent that it cannot be accomplished satisfactorily until the present period of depressed earnings is brought to an end.'

"In 1955 airline shares were speculative securities and they were not held in quantity by institutional investors." (Loeb, Rhoades Report, DX 270, Part II, pp. 10-11)

As of June 30, 1955, none of the airlines had obtained any financing for jet aircraft and prior thereto had financed their equipment purchases chiefly out of earnings, cash accumulations from fast depreciation and tax amortization certificates and short-term bank credits. Long-term debt was obtained infrequently. The Pan American 25-year $60 million loan from a group of insurance companies in May 1955 was for the purpose of financing the acquisition of piston aircraft. (Loeb, Rhoades Report, DX 270, Part II, pp. 11-12)

The fundamental principles of Drexel Harriman Ripley, summarized on page 189 of this report, were challenged by Loeb, Rhoades, which stated:

"We believe that it is unrealistic to postulate a set of principles to which diverse companies in a growth industry with varying needs and abilities should conform."

• • • • •

"With respect to Mr. Morehouse's first principle, getting equity prior to or simultaneously with senior debt, it is our experience that most companies raise funds through the sale of common equity or convertible securities only when the need therefor is clearly demonstrable. It is common practice for a lending institution to make a commitment to lend senior debt conditioned upon equity or subordinated debt financ-

ing being done prior to or contemporaneous with the later takedown of the senior funds. A well organized financing plan raises equity only when required, not in unknowing anticipation of possible future needs some years away. As we shall show below, the fact of the matter is that historically no major airline followed Mr. Morehouse's first principle. The facts indicate that during the 1955-1960 period none of the airlines sold equity or securities convertible into equity until the latest date possible and then in amounts as minimal as possible. This is reasonable and what one would expect, rather than the converse suggested by Mr. Morehouse's first principle.

"Mr. Morehouse's third principle, that contractual commitments for capital expenditures should be prepared for reasonably in advance of the time they are to become due, is difficult to quarrel with as a general proposition. The statement of the principle, however, totally fails to answer the important questions of timing and amount. No guidelines are given as to how much money should be raised, by what method or what is meant by 'reasonably in advance.'

"In short, we do not believe that a realistic financing program can be devised or reconstructed upon any such a set of principles of airline finance. Instead, a careful analysis of the factual situation existing in the securities markets, the airline industry at large, and the individual company is required." (Loeb, Rhoades Report, DX 270, Part II, pp. 12-14)

Loeb, Rhoades stated that TWA had no need for equity in early 1955 and that it was doubtful that any TWA management would have been persuaded that TWA, in 1955, was short of equity in comparison with the other airlines. Loeb, Rhoades knows of no airline that bases its equity or debt financing upon its relationship to other airlines using

"yardsticks" such as formulated by Morehouse. (Loeb, Rhoades Report, DX 270, Part II, p. 15)

According to Loeb, Rhoades, the results obtained using the "yardsticks" show a variance in the indicated equity shortage from $13 million to $74 million.

> "A widely accepted measurement of the strength of a company's capital structure is its debt-equity ratio. On that basis, TWA with its ratio of 78.4% equity to 21.6% debt (p. 10 Morehouse Report) was in a better financial position than American, United and Eastern and equally as well off as Pan American.
>
> "• • • While it likely was recognized by all of the airlines and by their financial advisers in the forepart of 1955 that, at some time in the future, both additional equity and debt financing would be required by each of them to meet the oncoming jet age, no one could be sure of 'when' or of 'how much.'" (Loeb, Rhoades Report, DX 270, Part II, p. 16)

It was Loeb, Rhoades' opinion that the equity issue proposed by Drexel Harriman Ripley was excessive in amount and that it is unrealistic to state that it could have been sold in the spring of 1955.

> "It is clear that the $58.4 million common stock offering proposed by Mr. Morehouse for the Spring of 1955 would have been of astounding size, exceeding by more than $11 million the sum total of all domestic trunk common stock offerings during the 1946-1955 period.
>
> "• • • To suggest, as Mr. Morehouse does, that TWA or any other domestic trunk airline, could have sold in the Spring of 1955 what was a theretofore unheard of dollar amount of stock is in our opinion utterly unrealistic, unless a financially sound majority stockholder for some reason insisted upon it and

agreed in advance to assure its success." (Loeb, Rhoades Report, DX 270, Part II, pp. 17 and 18)

Loeb, Rhoades thought that the proposed equity financing in May 1955 was premature:

"To have accomplished an offering of $58.4 million of common stock in the Spring of 1955 Mr. Morehouse would have to have made his recommendations to TWA and had them accepted early in 1955.

"It is common knowledge that in early 1955 there were not yet any jet aircraft available for order by TWA or any other airline and that the magnitude of the orders and investment required by the airlines was unknown. We agree with Mr. Morehouse (p. 6) that, while it was generally recognized that the amounts would be very large, none of the airlines could estimate with any degree of certainty just how much additional capital would be required. Certainly no airline management could have foreseen in early 1955, when or in what amounts, funds would be required for the purchase of jet aircraft." (Loeb, Rhoades Report, DX 270, Part II, pp. 18-19)

The first carrier to order jets was Pan American which placed an order in October 1955 for 25 Douglas DC-8s and 20 Boeing 707s, at a cost of $269 million. The $60 million loan arranged May 10, 1955 by Pan American was to finance the acquisition of piston aircraft and to increase working capital. A $30 million loan on December 19, 1956 was to finance the purchase of 9 DC-7s and make advance payments on 23 707s and 21 DC-8s. Pan American had no equity financing until July 29, 1959. American Airlines ordered 30 707s in November 1955 and in the same month placed privately $75 million of 4% notes. The following year on September 1, 1956, American placed privately an

additional $60 million at 4¼% the proceeds of which were added to general funds and were available for the purchase of jet aircraft. American raised no equity until June 15, 1959. United ordered 30 DC-8s at a cost of $175 million in late October 1955 and also ordered 45 piston aircraft. On December 22, 1955, United arranged with three insurance companies to borrow, prior to March 1, 1959, up to $120 million and at the same time arranged a $30 million standby revolving credit with a group of bankers. Two years later, in December 1957, United arranged for another $130 million bank credit. It was not until November 1960 that it sold equity in the form of convertible debentures (Loeb, Rhoades Report, DX 270, Part II, pp. 19 and 20).

Loeb, Rhoades in their Report concluded that:

> "The actions of these airlines clearly indicate that competent management did not raise equity in the mid-1950's as a part of long-range financing for the purchase of jet aircraft." (Loeb, Rhoades Report, DX 270, Part II, p. 20)

Finally Loeb, Rhoades stated that TWA had no use for equity funds in the spring of 1955 since $35 million of the proceeds of the equity issue was to be used to pay off a 15-year 3¾% equipment mortgage which had been arranged with Equitable in December 1954. (Loeb, Rhoades Report, DX 270, Part II, p. 21)

In the opinion of Loeb, Rhoades, the 1-for-1 preemptive offering recommended by Drexel Harriman Ripley is a drastic measure without historical precedent, unless a major stockholder willingly participates. On such an offering, the market price for TWA would drop lower than $17.50 as stated by Drexel Harriman Ripley and even at

$17.50, TWA stockholders would suffer a self-inflicted loss in the aggregate indicated market value of $44,990,000, and a stockholder who did not purchase additional stock would find his holdings diluted in market value by $13.50 per share (Loeb, Rhoades Report, DX 270, Part II, pp. 22-23).

No competent management would approve the dilution of the equity position of its stockholders and reduce stock leverage unless the need is clearly apparent and the circumstances pressing:

> "In our opinion a prudent and competent management would have considered both dilution and leverage in weighing Mr. Morehouse's proposal to raise equity in the Spring of 1955, and would have decided to postpone any equity financing until the need for the money could be more clearly demonstrated. In our view these considerations would have led to the same result whether the shares of the company were widely held by the public or largely held by a majority stockholder.
>
> "The fact that TWA actually did a one-for-one rights offering in 1957 does not change our view. This was not a public offering underwritten by investment bankers. There was a definitive and immediate need for the funds* and the issue was underwritten by Toolco which had agreed to provide TWA with a minimum of $34 million of proceeds, exceeding Toolco's pro rata portion by approximately $2 million. Actually, Toolco subscribed to $35 million or 80.69% of the issue. (DHR Exhibit: Trans World 7)." (Loeb, Rhoades Report, DX 270, Part II, pp. 24-25)

* See Purposes of Issue Section, DHR Exhibit: Trans World 7.

The Report then took up alternative assumptions as to Toolco:

"(i) If we assume that TWA had accepted Mr. Morehouse's recommendation with respect to the $58.4 million equity offering in the Spring of 1955 and that Toolco had agreed to take up its pro rata share of the offering in order to maintain its percentage of ownership, such a financing probably could have been done. It is our opinion, however, that such an expensive, premature and unnecessary financing would have been a bad business decision. We would not have recommended such a financing to TWA management or to the stockholders of TWA in the Spring of 1955. If such a recommendation had been made, it is our opinion that it would not have been accepted by TWA management, by its majority stockholder or by its other stockholders.

"(ii) If Toolco could not have been looked to for participation in the suggested equity offering, it is our opinion that it could not have been accomplished. We would not have participated in such an underwriting and it is our opinion that a syndicate could not have been formed to have underwritten such an offering. We have already discussed the difficulties of accomplishing such a large financing under any circumstances, and we believe the impact on the financial community of a declination by Toolco to subscribe to its share of the offering would have doomed the proposal at the outset. In short, had Toolco declined to participate, Mr. Morehouse's suggested 1955 equity financing in our opinion, could not have been accomplished.

"(iii) It is difficult to comment upon the purely hypothetical question presented by the assumption that there was no Toolco and that TWA was a widely-held company with no controlling stockholder. Such was not the case. Moreover, in view of the assistance TWA received as the result of Toolco's financial backing in the post-war years, it is difficult to assume that TWA, absent Toolco, could have been in as good a financial

condition as it was in historically, in the Spring of 1955. Even indulging in the assumption that it was, it is our opinion that no prudent and competent management with due regard for the interests of its stockholders would have accepted the suggested equity financing plan, and if it had, we do not believe that such an offering could have been underwritten." (Loeb, Rhoades Report, DX 270, Part II, pp. 25-27)

Loeb, Rhoades concluded that Drexel Harriman Ripley's proposal was not "doable" and in relation to the amount of common stock sold by the domestic trunk airlines during the entire 1946-1956 period it was "stupendous."

"• • • if the offering had not been held precisely in the Spring of 1955, the subsequent history of TWA's earnings would have made any later offering even more difficult to consummate. Earnings for the third quarter of 1955 were $4.2 million compared to $7.1 million for that quarter in 1954 and the fourth quarter earnings dropped to $100,000 from $1.3 million the preceding year. (Exhibit F). The years 1956, 1957 and 1958 were all loss years for TWA. (DHR Exhibit: Financials—5). Commencing in June 1955 the stocks of the airline group declined counter to the general market. (DHR Exhibits: General 5 and 7). TWA shares declined from a high of 31⅝ in June to a low of 22¾ in October 1955, and, of course, went much lower thereafter. (DHR Exhibit: Trans World 9). Even accepting Mr. Morehouse's fortuitous selection of late May or early June 1955 for the proposed equity financing, we do not believe it could have been done without the assistance of Toolco. The selection of a somewhat later date would have made the success of any such a proposed financing even more improbable." (Loeb, Rhoades Report, DX 270, Part II, pp. 27-28)

Cross-examination of Woodfin

There is set forth below certain supplementary information developed in the plaintiff's cross-examination during 5½ days of Woodfin, a general partner of Loeb, Rhoades and certain exhibits admitted in evidence. The information set forth below is selected to illuminate the Loeb, Rhoades Report. However, I did not confine my consideration solely to the information listed below.

¶ Woodfin had experience in negotiating the financing of pipelines (Tr. 6762) but prior to 1959, claimed no expertise in airline financing (Tr. 6763).

¶ Woodfin was associated with Loeb, Rhoades when two Seaboard World Airlines' financings were done in 1960 and 1966. Seaboard was exclusively a cargo carrier with a record of operating losses and the financings were effected in part to adjust creditors' claims (Tr. 6767-6771).

¶ Loeb, Rhoades also acted as investment bankers for Northeast Airlines in 1956 and had connections with Capital Airlines (Tr. 6772-6773).

¶ It was not "in the cards" for any independent competent management (forgetting Toolco) to have jumped in and have had a rights offering when they did not need the money in May 1955. (Tr. 6808)

¶ Historically it took a lot of help from Toolco to finance a program substantially less than the $550 million capital program recommended by Drexel Harriman Ripley. Woodfin does not see how TWA could have financed such a substantial program without the help of Toolco. (Tr. 6813)

¶ The fact that in May 1957 TWA sold 3,337,036 shares of common stock for $43,381,486 means that with Toolco cooperation TWA could have sold the common stock in May 1955. (Tr. 6822-6823)

¶ It is significant that at the time of the May 1957 equity issue TWA had a real present need for the funds and sold stock despite the downtrend in earnings commencing in June 1955, which was not arrested until the year 1959. (Tr. 6828)

¶ Loeb, Rhoades would not have advised any financing in 1957 if Toolco was content to make the down payments on equipment acquisitions. As pressure to pay installments mounted, a better case was made for financing. Neither Drexel Harriman Ripley nor Loeb, Rhoades would have done the equity financing in 1957. (Tr. 6840)

¶ The 1957 financing was not intended to cover the jets but to pay for the Lockheed 1649 A and 1049 G aircraft and spare parts. (Tr. 7217-7218)

¶ While American Airlines in May 1955 had a ratio of 78% equity to total capitalization and was in a strong balance sheet position to borrow for the jet program, this in the opinion of Woodfin does not mean that an airline should be so operated. With a high equity ratio earnings available for stockholders are going to be reduced. The CAB encourages a 50% debt ratio which provides leverage beneficial to stockholders. (Tr. 6871-6875)

¶ The growth of the domestic passenger airlines particularly in 1953, 1954 and 1955 was not reflected by enthusiasm on the part of stockholders. Airline stocks were speculative without a broad investment appeal (Tr. 6863) but as of October 27, 1954 Loeb, Rhoades stated in an

investment "informatory" (TWA Ex. 207): "The strength in airlines reflects a widening interest in this group which we have been recommending for some time, believing that finally some of the basic problems are being overcome." (Tr. 6887A)

¶ A Loeb, Rhoades informatory on American Airlines commented that its 80% ratio of equity to total capital puts it in the strongest position of any airline to meet the financial demands of the jet program (Tr. 6875).

¶ In 1954-early 1955 the outlook for commercial jets continued uncertain. Boeing had not received permission from the U. S. Air Force to use the tanker-jet tooling and the Renton, Washington plant to build a commercial version of the tanker-jet, there remained questions about the functioning of jet aircraft in hot weather, noise, and whether the airline industry would decide upon turboprops such as the Electra (Tr. 6889-6892).

¶ Several issues of aviation trade journals in the late summer and early fall of 1954 carried accounts of Boeing's prospects for the manufacture of a commercial jet, its ability to satisfy U. S. Air Force obligations and also meet commercial requirements and the estimate that the capital requirements of the commercial airline industry would range between $1.5 billion to $3 billion over the next 10 years. (Tr. 6900-6907).

¶ On November 19, 1954 Allen, President of Boeing, wrote Damon, President of TWA, with a carbon copy to Hughes (DX 95A), stating that the time had arrived to negotiate with the airlines for a commercial ship but pointing out that before actual construction can begin, Boeing must obtain from the Air Force permission to use the tool-

ing designed and constructed for the Air Force contract and also permission to use a portion of the Government-owned plant at Renton, Washington. To assist in negotiating with the Government, Boeing suggested a "production type contract", which would become binding upon both parties on receipt of notice given by Boeing if the final price is within the maximum price and the delivery schedule is as favorable and the aircraft specifications are substantially the same as set forth in the production notice contract. The indicated sales price was in the neighborhood of $4,250,000 per aircraft assuming a quantity of 50 (Tr. 6908-6912).

¶ American Aviation Daily of December 3, 1954 (TWA Ex. 216) observed that the prototype aircraft for the Boeing 707 jet had 40 hours flight time with the original set of jet engines which was a remarkable record for prototype aircraft according to Boeing (Tr. 6914-6915).

¶ Woodfin was aware in December 1954 that Pan American was negotiating for Boeing commercial jets (Tr. 6937, TWA Ex. 219).

¶ Loeb, Rhoades was aware that there was active interest in commercial jets in the fall of 1954 and considered this in preparing their direct testimony. But at that time no one could ascertain who would order what and when, and what the delivery timetable would be. Loeb, Rhoades' opinion would not be affected by knowledge that Pan American Airways was seriously negotiating, for that was a fact. (Tr. 6920-6923)

¶ Woodfin was aware in January 1955 that United was negotiating for DC-8 jets for delivery starting in 1960 and

possibly 1959 and United actually ordered jet aircraft in the fall of 1955 (Tr. 6943-6944).

¶ In January 1955 Boeing was interested in commencing active negotiations with TWA on specifications for its jet aircraft (Tr. 6947, DX 10).

¶ The payment of $10,000,000 for an option to purchase 15 jet aircraft to be delivered four years later at a total cost of $75,000,000 would not, in Woodfin's opinion, require raising money to finance the option in January 1955. (Tr. 6950-6951).

¶ When asked was it not obvious in early 1955 to everyone in the airline business that millions and millions of dollars would be required for financing jet aircraft? Woodfin replied:

> "A. As to exactly when the sums of money would have to be produced and how much outside money would have to be produced was all a function of how the airlines operated, what cash flow off they had from depreciation and earnings, what cash they had available, from tax acceleration certificates, and the rest of it, how much outside money was going to be needed and how many airplanes were actually going to be ordered. I don't think anybody knew. There was a lot of speculation, of course." (Tr. 6957)

¶ Woodfin did not consider the equity financings by other airlines in the years covered by the complaint prior to 1955. TWA Ex. 224 sets forth a record of equity financings, including convertible preferred stock, for the period from 1939-1945, inclusive (Tr. 6980-6983).

¶ The price of an airline's common stock is a highly material consideration to an airline company and its investment bankers contemplating an issue. (Tr. 7046).

¶ In determining whether a common stock issue is doable an underwriter would look at the common equity financing of other companies in the same period. It would do no good to examine issues of convertible preferred, convertible debentures or any other different securities (Tr. 7073-7074).

¶ In December 1955 United Air Lines completed the "largest single financing program in the history of the airline industry * * * as part of its long range preparation for jet airliner operations." This aggregated $150 million. (TWA Ex. 180, p. 6, Tr. 7084).

¶ In May 1955 TWA did not know what aircraft was to be ordered. When the equipment program had been determined they would have discussed their money needs with Equitable who held their equipment mortgages. However, contrary to United which had its best year in 1956, TWA earnings started downhill in the second half of 1955 and operations continued to show a loss in 1956, 1957 and 1958. This barred TWA from approaching Equitable (Tr. 7114-7116).

¶ Loeb, Rhoades would not determine TWA's financial requirements by employing the "yardsticks" used by Drexel Harriman Ripley. These yardsticks are used to measure efficiency of airline operations and the efficient use of capital and the statistics are more meaningful for flight engineers and operating people (Tr. 7122-7123).

¶ In May 1955 there had not been a sizeable common equity offering by airline companies for several years and Loeb, Rhoades had serious doubts that the stock market would absorb a $50,000,000 issue. (Tr. 7130).

¶ Woodfin agrees "as a generalization" that stock should be sold first before selling debt, a general principle set

forth by John F. Childs, Vice President, Irving Trust Company, in an article entitled "Long Term Financing" appearing in the Corporate Treasurer's and Controller's Encyclopedia, Volume 2, page 435 (Tr. 7133), but none of the airlines sold equity before selling debt and the most natural and normal practice is to couple the sale of debt with equity (Tr. 7136).

¶ On May 3, 1955 Loeb, Rhoades stated in a Research Department informatory (TWA Ex. 201) that American Airlines with a ratio of 78% of equity to total capitalization was in need of no financing until the jet program and then probably would be in the strongest position of any of the airlines to finance the program (Tr. 7189).

¶ Woodfin is in fundamental disagreement with the Drexel Harriman Ripley proposal that capital be doubled and stock be sold below book in May 1955 when TWA had no precise information with respect to its aircraft requirements (Tr. 7249).

¶ Woodfin objects to paying off in June 1955 an equipment mortgage loan obtained from Equitable Insurance Company in December 1954 believing it would put TWA in a very strange position in the fall of 1955 when it returned to the insurance companies to get a loan commitment (Tr. 7250-7251).

¶ In 1957 when historically TWA sold common stock to its stockholders the jet age was much closer and there was a very definite use for the money. 75% of the 25% minority stockholders subscribed for the stock (Tr. 7261-7262).

¶ TWA was the only one of the big four airlines which did not pay a dividend. If funds were sought from stockholders in May, 1955 before the details of the jet acqui-

sition program were known and when there was no immediate need for the funds it would be taxing the stockholders (Tr. 7285).

¶ Offering additional stock substantially below the market involves the risk of depressing the after-market to the detriment of all stockholders (Tr. 7307-7308).

¶ In January or February of 1955, none of the airlines were able to determine the amount of money required and when it would be needed (Tr. 7197).

¶ Late in 1955 United completed a $150 million financing program designed to cover its commitments for the 30 DC-8 jetcraft ordered late in 1955 together with related ground equipment and facilities. This financing was privately arranged because United did not have a sufficiently high potential rating to go to a public offering and was entirely a debt issue because in the words of United Air Lines: "This was not a matter of choice, for the ability of United, as well as the industry, to sell equity has been limited. That further increase in equity is necessary and desirable is apparent, but it is equally apparent that it cannot be accomplished satisfactorily until the present period of depressed earnings is brought to an end." (Loeb, Rhoades Report DX 270, Exhibit D, pp. 12-13, Exhibit U-2 in CAB Docket No. 8008).

The Debt Financing

TWA's claim for damages in respect of the defendants' interference with TWA's debt financing is founded upon paragraphs 24 through 28 inclusive and paragraph 52(c) and (d) of the complaint which are set forth below.

Paragraphs 24 through 28 of the complaint provide:

"24. From 1955 until December, 1960, the defendants used their power over the financing of aircraft thus obtained to compel TWA to acquire aircraft of the type and in the manner dictated by the defendants and used their power over TWA's acquisition of aircraft, obtained as hereinbefore alleged, to compel TWA to obtain financing for the acquisition of such aircraft of the type and in the manner dictated by the defendants.

"25. At least as early as 1955, the needs of United States air carriers for the extensive financing required for acquisition of jet-powered aircraft were recognized throughout the air carrier industry and by others, including the defendants.

"26. In 1955 and continuously thereafter until December, 1960, the defendants, pursuant to and in furtherance of their plan to control TWA in a manner advantageous to themselves, directed TWA to make no efforts itself to obtain financing necessary for the acquisition of jet-powered aircraft required for the needs of TWA.

"27. Commencing in the year 1955 and continuing thereafter, various other air carriers, including competitors of TWA, made appropriate arrangements for the financing of jet-powered aircraft. In 1955 and 1956 various United States air carriers were able to obtain funds at a cost (or interest rate per annum) in 1955 of 4%, and in 1956 at costs ranging from 4¼% to 4¾%.

"28. In 1955 and thereafter for a period of several years, the defendants discussed with others various proposals for the financing of jet-powered aircraft, but the defendants did not make arrangements for such financing nor allow TWA to make such arrangements until December 1960, at which time the prevailing cost of funds (or interest rates) for debt financing was approximately 6-6½%."

Paragraph 52 of the complaint provides, *inter alia*:

> "52. TWA has further been injured in the following manner:
>
> * * * * *
>
> "(c) TWA was foreclosed from obtaining financing on more advantageous terms than those available to it in December 1960 and thereby suffered a loss by virtue of the greater cost of borrowing it ultimately experienced.
>
> "(d) TWA's ability to obtain financing for its needs was substantially impaired."

It is helpful to note particularly that the foregoing allegations, all of which are admitted by defendants' default, assert that (i) defendants dictated the type and manner of acquiring aircraft and manner of financing the acquisition (par. 24); (ii) United States air carriers recognized in early 1955 the need for extensive financing in order to acquire jet aircraft (par. 25); (iii) defendants directed TWA to make no efforts itself to obtain financing for the acquisition of jet aircraft (par. 26); (iv) various other air carriers, including TWA competitors, made arrangements for financing commencing in 1955, and in that year and in 1956, obtained commitments at interest rates ranging from 4% in 1955 to 4¼-4¾% in 1956 (par. 27); (v) defendants discussed various proposals for financing TWA jet requirements in 1955 and for several years thereafter made no arrangements for financing nor was TWA allowed to arrange financing until December 1960, when interest rates were approximately 6-6½% (par. 28); and (vi) TWA was foreclosed from obtaining advantageous interest rates and thereby suffered a loss (par. 52(c)).

The debt financing recommended by Drexel Harriman Ripley in their Report was summarized at pages 190-91 of this Report and is repeated herewith:

> "(ii) A private placement long-term loan commitment with institutional investors in October 1955 for $150 million minimum—$170 million maximum at 4% interest.
>
> "(iii) An underwritten non-preemptive offering in May 1959 of $60 million of 5% subordinated debentures, convertible into common stock.
>
> "(iv) A private placement long-term loan commitment with institutional investors in May 1959 for $90 million minimum—$110 million maximum at 6% interest." (Plaintiff's Brief, pp. 60-61)

On the basis of the allegations of the paragraphs of the complaint set forth above, TWA purported to establish damages before trebling in the amount of $20.3 million, which was determined as follows:

> "This separate claim is based upon the difference between:
>
> "(i) The present value (*i.e.*, the present equivalent of the future burden) of future payments for debt service on TWA's long-term debt historically outstanding on December 31, 1963, and
>
> "(ii) The present value (*i.e.*, the present equivalent of the future burden) of future payments for debt service on long-term debt for reconstructed TWA as of December 31, 1963 with a debt structure of the kind and in the amounts recommended by Drexel Harriman Ripley." (Plaintiff's Brief, p. 120)

The date of December 31, 1963 was selected for the purpose of calculating damages because according to TWA's

counsel that date permitted the simplest and most logical assumptions. As of December 31, 1963, the debt structures of Historical TWA and of Reconstructed TWA were comparable because (i) the jet fleet had been delivered and financing arranged, (ii) both Historical and Reconstructed TWA had outstanding long-term non-convertible and convertible debentures and the total amount of debt outstanding was comparable, and (iii) the shares outstanding of Historical and Reconstructed TWA as of December 31, 1963 were practically identical. If calculations had been made at a later date, additional assumptions would have been required to make adjustments for conversions of convertible debentures which occurred in respect of Historical TWA. (Plaintiff's Reply Brief, pp. 73-74)

October 1955 Debt Financing

Drexel Harriman Ripley Report and Morehouse Testimony

In forming their opinion with respect to debt financing in October 1955and their recommendation that TWA should have and could have arranged mortgage loan commitments from institutional investors which would have provided over the next three years a minimum of $150 million and a maximum of $170 million, Drexel Harriman Ripley took the following approach:

(i) A pro forma balance sheet as of September 30, 1955 was prepared for Reconstructed TWA in which effect was given to the May 1955 sale of common stock providing net proceeds to TWA of $55.5 million. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 23-25 and Exhibit thereto "Financials—7")

(ii) A capital expenditure program for Reconstructed TWA was projected by Price Waterhouse as of September 30, 1955, which indicated that Reconstructed TWA would require capital expenditures from the fourth quarter of 1955 through December 1960, aggregating $375.3 million (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 26-27 and Exhibit thereto "Financials—8")

(iii) A source of funds forecast from October 1955 to December 1960 for Reconstructed TWA as of September 1955 was prepared by Coverdale (Drexel Harriman Ripley Report, TWA Ex. 5, Part III, Volume 2 "Financials—9")

(iv) The balance sheets of Historical TWA and Reconstructed TWA as of September 30, 1955 were then compared with those of their three principal competitors, the balance sheets of American Airlines and United Air Lines as of September 30, 1955, and the balance sheet of Pan American Airways as of December 31, 1955.

In this comparison Historical TWA had a book net worth less than its three principal competitors by the following amounts: Pan American Airways $40 million, American Airlines $42 million, and United Air Lines $29 million; whereas Reconstructed TWA would have shown a greater book net worth than its competitors by the following amounts: Pan American Airways $15 million, American Airlines $13 million, and United Air Lines $26 million. Reconstructed TWA would have had no funded debt, showing 100% equity in its capital structure compared to 67.9% for Pan American Airways, 79.2% for American Airlines and 73.3% for United Air Lines; whereas Historical TWA would have had a ratio of 67.4% of equity to total capitalization. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 25)

Drexel Harriman Ripley stated in their report that they would not have recommended short-term financing because funds required by TWA were very large and the returns on their investment in form of earnings were several years off. They would, therefore, have recommended that between July 1 and September 30, 1955, that TWA take corporate proceedings to authorize a flight equipment mortgage and in the fourth quarter of 1955 to arrange with institutional investors for a commitment to purchase flight equipment mortgage notes in the principal amount ranging between a minimum of $150 million and a maximum of $170 million, with an interest rate of 4% and a commitment fee of ½% on the unused portion. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 31) A summary of the principal provisions of the equipment mortgage and the October 1955 loan agreement are set forth in the Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 29-30, 32, 33.

Lastly, Drexel Harriman Ripley in their Report set forth a five year projection as it would have appeared in September 1955, showing as of December 31 for each of the years 1956-1960, inclusive, the outstanding equipment mortgage notes, their percentage of net tangible assets and the "Leeway" for the issuance of additional funded debt within the 60% voluntary action limit of funded debt to consolidated net tangible assets required by the mortgage. Drexel Harriman Ripley concluded that Reconstructed TWA could expect to be able to take down by 1959 the maximum of $170 million available from the equipment mortgage financing while remaining comfortably within the 60% limitation.

Cross-examination of Morehouse

There is set forth below certain supplemental information developed in the defendants' extensive cross-examination of Morehouse of Drexel Harriman Ripley and certain exhibits admitted in evidence. As was the case earlier in this Report, the information set forth below is selected to illuminate the Drexel Harriman Ripley Report. However, I did not confine my consideration solely to the information listed below.

¶ In formulating the $170 million debt financing in October 1955, Drexel Harriman Ripley made no assumption as to whether interest rates were going up or going down and took no advantage of hindsight in knowing that interest rates substantially increased over the five year period from the fall of 1955 to the end of 1960. (Tr. 3888-3889)

¶ The proposed debt financing of October 1955 assumed and was dependent upon the successful consummation of the May 1955 equity financing. Since in ordering aircraft equipment the lead time is in many cases so long, an airline need not necessarily arrange financing prior to entering into a contractual commitment for the equipment if it is satisfied that its credit standing and liquid capital give it a reasonable expectation that total financing is available. (Tr. 4038)

¶ It would not be proper for an airline to rely upon the credit standing of a parent holding 75% of its stock. (Tr. 4039)

¶ In planning the TWA May 1955 financing, Drexel Harriman Ripley would not have necessarily discussed with Equitable Life "rolling over" $35 million of the equipment mortgage placed in December 1954 and would have men-

tioned possible additional financing in the fall of 1955 in general terms rather than specific terms. (Tr. 4250)

¶ In formulating its recommendations for October 1955 Drexel Harriman Ripley would have believed in the summer of 1955 that TWA in the fall of 1955 would have been negotiating with Boeing for 33 jet transports, of which 15 would be Boeing 707-131s and 18 Boeing 707-331s. (Tr. 4299-4300)

¶ Drexel Harriman Ripley assumed that TWA entered into the long-term financing arrangements on October 1, 1955 and that there would have been some negotiations with Boeing prior thereto. (Tr. 4300)

¶ Drexel Harriman Ripley's recommendations for October 1955 were not based on 20/20 hindsight even though the Capital Expenditure Projections prepared by Price Waterhouse admittedly used 20/20 hindsight. (Tr. 4335)

¶ While the general operating characteristics of jet aircraft were not known in September 1955, Drexel Harriman Ripley were of the opinion that a potential lender could have been satisfied with reasonable forecasts based on the known general operating characteristics. (Tr. 4338)

¶ Coverdale projected TWA revenue income to be greater than the actual results of operations of Historical TWA which showed a loss. On the basis of historical results TWA would not have been able to take down the amounts of money projected by Drexel Harriman Ripley under the 1955 mortgage equipment loan because of the provision of the mortgage limiting funded debt to 60%. (The limitation of debt to 60% of consolidated net tangible assets.) (Tr. 4351)

The Loeb, Rhoades Report and Woodfin Testimony Relating to the October 1955 Debt Financing

The Loeb, Rhoades Report disagreed with the Drexel Harriman Ripley opinion that TWA could and should have made arrangements in October 1955 to borrow between $150 million and $170 million from institutional lenders. Loeb, Rhoades stressed that the Drexel Harriman Ripley Report and testimony of Morehouse recommending the October 1955 debt financing assumed and was dependent upon the successful consummation of the equity financing in May 1955 producing net proceeds of $55.5 million. (Loeb, Rhoades Report, DX 270, Part II, p. 28)

Loeb, Rhoades proceeds to state that in its opinion even if the October 1955 financing was not dependent upon the May 1955 equity financing, it could not have been successfully arranged. The Loeb, Rhoades Report states their opinion as follows:

"In assessing the likelihood of success for Mr. Morehouse's projected $150-170 million flight equipment mortgage loan of October 1, 1955, we think it relevant to consider the following:

(i) By October 1, 1955 no jets had been ordered by any airlines;

(ii) By October 1, 1955 none of the airlines had arranged any financing (debt or equity) for the purchase of jet aircraft; (Exhibit A)*

* The debt financings referred to by Morehouse on page 32 of his Report (see also Financials—13) were arranged on the following dates: Pan American May 10, 1955; Northwest June 30, 1955; Eastern October 31, 1955; American, November 1, 1955 and United December 21, 1955. However, the earlier Pan American and Northwest financings were for the purpose of acquiring the latest series of pistons ordered. (Exhibit A).

(iii) The maximum $170 million mortgage commitment which Mr. Morehouse assumes TWA could have obtained substantially exceeds the long-term commitments obtained by any other airline in 1955.** The large commitments obtained by United, Eastern and American later in the Fall of 1955 were the largest in the history of the airline industry. Indeed, a $150-170 million loan to TWA on October 1, 1955, would have been almost three times as large as any long-term commitment that had been made to that date to any airline for any purpose, and would have exceeded the commitments to the other airlines by a minimum of $30-50 million. (Exhibit A).

(iv) Detailed projections with respect to the Boeing 707-331s and the Convair 880s could not have been prepared as of October 1, 1955. Lending institutions, such as life insurance companies did not make commitments of the size envisaged by Mr. Morehouse without making a comprehensive analysis of the planned use of the funds. Jet aircraft were an unknown and untested commodity in the Fall of 1955. Any insurance company asked to lend large sums of money for such a purchase during this period would have demanded detailed information as to the type and size of the fleet, cost, terms of payment, delivery dates, earning power, depreciation, planned usage, configuration and the like.

We are advised by counsel that we may assume, based upon the record in the case to date, that the intercontinental Boeing, the 707-320 series, was not ordered by any airline until December, 1955 and that detailed information on that aircraft such as described

---

** American obtained $75 million; Eastern obtained $90 million; and United obtained $120 million of long-term debt. Financing done by other airlines during this period was for much smaller amounts. (Exhibit A).

above was not available to the airlines until some time after October 1, 1955. We do not believe that funds could have been borrowed for the acquisition of this aircraft until detailed projections containing information relating to cost, terms, delivery, earning power and the like could have been made available to prospective lenders. We note that such detailed projections, although hypothetical, were in fact included as a part of Mr. Morehouse's Report (Financials—8, 9 and 10) but that his projections were based upon information apparently not yet available to the industry. We also note that detailed projections which United in fact used in order to obtain its loan commitment in December 1955. (Defendants' Exhibit 197 in evidence.)

Moreover, Mr. Morehouse assumed that TWA's proposed borrowing on October 1, 1955 would have included a $25 million projected down payment for medium/long-range airplanes not yet selected. As to the last item, it is our opinion that a commitment of this size could not have been obtained as of October 1, 1955 to buy an unspecified number of unselected airplanes which had not yet been developed or identified.

(v) Although not disclosed by Mr. Morehouse's exhibits, TWA's earnings, as compared to 1954, began to fall in the second quarter of 1955 and dropped sharply in the third and fourth quarters. (Exhibit F)." (Loeb, Rhoades Report, DX 270, Part II, pp. 29-31)

In conclusion the Loeb, Rhoades Report stated an opinion with respect to the October 1955 debt financing as follows:

"In view of the above, and even assuming, contrary to our view, that the proposed 1955 equity financing had been accomplished, it is our opinion that TWA would not have and could not have obtained a commitment for $150-170 million on October 1, 1955." (Loeb, Rhoades Report, DX 270, Part II, pp. 31-32)

It is noted that Loeb, Rhoades emphasizes that prior to October 1, 1955 none of the airlines had arranged any financings (Debt or Equity) for the purchase of jet aircraft and that the $60 million financing of Pan American and the $29.5 million financing of Northwest arranged on May 10, 1955 and June 30, 1955, respectively, were in each case to finance the acquisition of piston planes, not jets, and in the case of Pan American also for working capital. The first financing specifically concerned with the acquisition of jets was the Eastern Air Lines financing arranged on October 31, 1955 amounting to $90 million of which $40 million was earmarked for future jet orders. The first financing earmarked solely for acquisition of jets was the American Airlines financing of $75 million effected November 1, 1955 and the United Air Lines financing of $150 million effected December 21, 1955, of which $30 million was arranged with thirty-eight banks and $120 million with insurance companies.

Cross-examination of Woodfin

There is set forth below certain supplemental information developed in TWA's extensive cross-examination of Woodfin and certain exhibits admitted in evidence. As was the case earlier in this Report, the information set forth below is selected to illuminate the Loeb, Rhoades Report. However, I did not confine my consideration solely to the information listed below.

¶ The United Air Lines Annual Report for the calendar year 1955 stated in referring to a financing program arranged in December 1955:

> "The largest single financing program in the history of the airline industry was completed by United in December as part of its long-range preparation for

jetliner operations. Included were arrangements for a maximum of $150,000,000 in new capital, to be available over the next five years. Of that amount, $120,000,000 may be realized from the sale of new debentures and up to $30,000,000 may be borrowed under a new bank credit agreement. No equity financing is involved.

"Series D, 4 per cent sinking fund debentures will be sold as funds required from February 1, 1956 through March 1, 1959, to the Metropolitan Life Insurance Company, The Prudential Insurance Company of America and The Mutual Life Insurance Company of New York. . . .

"The new credit agreement is with a group of 38 banks headed by The First National City Bank of New York. Replacing an earlier agreement dated March 1, 1955, it makes loans available through December 31, 1960, with repayment over a five-year term thereafter." (TWA Ex. 180, p. 6, Tr. 7084)

¶ Most of the airline financing from 1946 to the 1955 period was with banks, mostly five year money. (Pan American in October 1946 had a $40 million credit agreement with the National City Bank.) Only Pan American, United and TWA had placed any long-term money with institutions. (Tr. 7182-7183)

¶ Prior to October 31, 1955, when Eastern Air Lines arranged a $90 million financing with Equitable Life Assurance Company, of which $40 million was to finance jet acquisitions, there had been only the following long-term financings arranged with insurance companies: (i) a $60 million financing of Pan American Airways arranged on May 10, 1955 with a group of several insurance companies, (ii) the $40 million financing arranged by TWA with Equitable Life Assurance Company to replace a 1953 bank

credit and to purchase 20 Lockheed 1049-Gs, and (iii) three financings of United Air Lines arranged with Metropolitan Life and MONY, a $12 million financing in 1947, a $10 million financing in March 1952, and a $20 million financing in July 1954, the last two of which were stated to be for general purposes. (DX 270—Exhibit A—pp. 2, 4, 5 and 6, Tr. 7250-7251)

¶ On October 25, 1955, the Board of United approved the purchase of 30 Douglas DC-8's at a total cost of $175,000,000; on October 14, 1955, Pan American Airways ordered 25 Boeing jets and 20 Douglas jets; and in November, 1955 American Airlines ordered 30 jets (Tr. 7382-7383).

¶ An agreement in principle is reached between the lender and the borrower some time before the execution of the formal written documents evidencing the loan commitment. (Tr. 7388)

¶ In October 1955, after giving effect to the $55.5 million May 1955 equity financing and the $170 million October 1955 debt financing, TWA on a pro-forma basis had a more favorable ratio of debt to total capitalization (57%) than did United Air Lines which had a ratio of 61%. But it is doubtful that TWA could have raised more long-term money than United Air Lines. Long-term lenders would be interested in earnings as well as amount of equity and TWA was not doing well in the latter part of 1955. (Tr. 7409-7410)

¶ In Woodfin's opinion it would have been a mistake to terminate in May 1955 the $40 million financing arranged by TWA with Equitable Life in December 1954. Institutional lenders do not like to have recently completed financings terminated even if Equitable Life had been will-

ing to "roll over" the $40 million financing. Woodfin doubts that Equitable together with other insurance companies would have been willing to participate in an additional $150-170 million financing in October 1955 as recommended by Drexel Harriman Ripley. Such a financing involved a larger commitment than a group of large insurance companies gave subsequently to TWA's three principal competitors. Woodfin would hold this opinion whether or not TWA had effected the $55.5 million equity financing in May 1955. Only a relatively few number of large life insurance companies were participating in airline financing in 1955. (Tr. 7250-7255)

The May 1959 Debt Financings

Drexel Harriman Ripley recommended that Reconstructed TWA in May 1959 make (i) an underwritten non-preemptive offering of $60 million 5% Convertible Subordinated Debentures and (ii) a private placement with institutional investors of a long-term loan commitment ranging from $90 million to $110 million and bearing interest at 6%.

In formulating their recommendation, Drexel Harriman Ripley first considered the reconstructed situation of TWA in September 1956, again for the period from 1957 through mid-1958 and lastly in 1959.

As of September 30, 1956

It was assumed that TWA had placed orders in September 1956 for 30 Convair 880 jet aircraft for delivery in 1960 at a total price of $157,900,000 and that a down payment of $26,300,000 was made at the time the orders were placed with substantially no further payments required until the third quarter of 1959, the funds for the down

payment being obtained from a takedown on July 1, 1956 of $50 million of the Series A Mortgage Notes arranged for by Reconstructed TWA in October 1955.

The report proceeded to examine the financial posture of TWA as of September 1956 in the light of its then projected capital expenditure program and considered what, if any, financing arrangements might have been indicated in September 1956.

Drexel Harriman Ripley considered TWA's reconstructed operating results during the first nine months of 1956, which showed a loss of $500,000 and internal cash generation of $17.5 million and noted that by September 1956 Reconstructed TWA was running well behind the Coverdale forecast of funds generated prepared as of September 1955. They also considered (i) a reconstructed balance sheet as of September 30, 1956, which gave effect to the receipt of $55.5 million net proceeds of sale of common stock in May 1955 and the takedown of $100 million under the October 1955 debt financing, (ii) TWA's capital expenditure program projected by Price Waterhouse as of September 30, 1956, and (iii) the projection of TWA money requirements as of September 30, 1956, which indicated a peak requirement by the 1960 third quarter of $233.5 million, which was $163.5 million in excess of the $70 million remaining available out of the $170 million 1955 mortgage commitment.

Drexel Harriman Ripley concluded as follows:

> "In summary, then, TWA's financial posture at September 30, 1956 was about as follows: It had experienced sizable operating losses during the nine-month period then ended, and C&C was forecasting further losses in 1957. TWA had a projected peak requirement for $163.5 million in new outside funds (over and above what had been provided for in the 1955 mortgage financing) and it appeared that some form of junior

security would have to be included in the financing of this requirement. But the new money did not appear to be needed before the first quarter of 1959, almost 2½ years hence.

We conclude that under the circumstances prevailing in September 1956 we would have recommended to TWA that it not attempt, at that time, to formalize further financing arrangements even though all indications were that it would have to do so later. We believe that TWA would have held conversations with its major institutional lenders to advise them of the enlargement of its projected money requirements, indicating (a) that it would be approaching them at a later date to discuss further borrowing arrangements, and (b) that it recognized the indicated need for junior financing prior to or in conjunction therewith.

It would not have been practical, in September 1956, to attempt to pinpoint a target date for a financing two years or so away. We believe that it would have been logical to plan in terms of a financing sometime in the latter part of 1958 or early in 1959. However, since the junior financing would doubtless involve the sale of common stock, either directly or through the use of a convertible security or warrants, we believe that TWA and we, as their investment bankers, would have been keeping a weather eye on the market for airline securities with a view toward a possible earlier financing should stock market conditions permit." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 38)

1957 Through Mid-1958

Drexel Harriman Ripley then proceeded to consider the reconstructed TWA situation in 1957 through mid-1958. They assumed that the $70 million remaining balance of the $170 million financing arranged in October 1955 had been taken down, $50 million on April 1, 1957 and $20 million on January 1, 1958, and that Reconstructed TWA had the same aircraft leases as Historical TWA. They noted

that reconstructed generation of funds from internal sources for the twelve months ended September 30, 1957 exceeded by $13.9 million the forecast made by Coverdale in September 1956, but that in the last quarter of 1957 internal cash flow on a reconstructed basis was $4.8 million lower than the forecast for that quarter and that cash flow continued to lag behind the forecast for the next two quarters so that the accumulated lag in cash flow for the period from September 30, 1956 to June 30, 1958 was $3.5 million. On instructions from TWA's counsel, Drexel Harriman Ripley assumed that in the fourth quarter of 1957 TWA made a commitment to acquire four L1649A piston aircraft and four L1049H piston aircraft, although the expenditures for these eight piston aircraft were not included in the Price Waterhouse Projection of Capital Expenditures made as of September 1955 and September 1956. The net cash expenditures by TWA for these eight aircraft totalled $17.3 million and were to be made in the last quarter of 1957 and the first three quarters of 1958, and Drexel Harriman Ripley assumed that these acquisitions would be financed by the takedown on January 1, 1958 of the last $20 million available under the October 1955 financing. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 39-40)

On the basis of the foregoing considerations, Drexel Harriman Ripley in their report made the following comments with respect to the situation in mid-1958:

> "As a result of the foregoing factors, TWA would have been aware, by mid-1958, that funds required from outside sources to meet projected capital expenditures would be larger than indicated by the September 1956 projection. Timing of the money requirement had not changed, however. It appeared that the airline should be able to meet its scheduled progress

payments on the jets, and its other capital requirements, without obtaining new funds from outside sources until the spring or summer of 1959.

TWA, however, was on 'thin ice' with respect to the funded debt restrictions of the Flight Equipment Mortgage. Exhibit: Financials—27 indicates that throughout the first half of 1958 TWA's reconstructed funded debt as a percentage of net tangible assets would have hovered right around the 60% figure set forth in the voluntary action covenant of the funded debt limitation. It did not appear that there was any immediate danger of reaching the 65% default level." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 41)

Operating under these considerations Drexel Harriman Ripley stated that TWA probably would have given thought to doing some junior financing in 1958 in order to provide some additional "cushion" beneath its outstanding funded debt and thereby avoid the possibility of default under the 65% provision of the outstanding Flight Equipment Mortgage. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 43)

After comparing the market prices of TWA stock with Standard & Poor's Index of Air Transport Stocks as well as the AIMV (Aggregate Indicated Market Value) and the book value of TWA shares and noting the decline of TWA common from a mid-1955 high of 31⅝ to 12¾ in March 1958, when the historical book value per share was $15.09, and after also considering published comments on airline stocks of Moody's Stock Survey, Drexel Harriman Ripley commented as follows:

"So, throughout the first half of 1958 TWA's shares, and the shares of its principal competitors, were selling at prices only slightly recovered from their then recent lows. But the market generally seemed to be expecting an improved performance from airline shares

during the forthcoming months. Since TWA's period of outside money need still appeared to be at least twelve months away, we believe that we would have recommended that TWA adhere to its plans for a financing in 1959 rather than attempt to accelerate part of the program. It appeared to be a good business risk that market conditions for an equity offering by TWA (which would clearly be the cornerstone of the financing) would be better by mid-1959 than they were in mid-1958.

Thus, commencing in the summer of 1958, we believe that TWA, in consultation with its lawyers, accountants, investment bankers, institutional lenders, etc., would have been engaged in the task of designing and preparing for a major financing, in the spring or summer of 1959, involving the sale of both senior and junior securities." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 43)

Early 1959

In preparing for the major financing in the spring or summer of 1959, Drexel Harriman Ripley considered various earnings and other data relating to TWA and its principal competitors including a tabulation of TWA operations, both historically and reconstructed, year by year, 1954-1958, compared with its three main competitors. Drexel Harriman Ripley observed that the operating results of all four airlines during the five year period showed the effects of the high cost of preparation for the introduction of jet equipment, but noted that TWA, with losses from operations in three out of the five years, turned in by far the poorest performance of the four airlines. The report then turned to consideration of a more detailed income account for Reconstructed TWA for the five years 1954-1958, inclusive, and set forth brief summaries of TWA news releases commenting on revenues and operat-

ing results put out on April 1, 1959 and April 23, 1959. Consideration was also given to a summary of items appearing in the current section of Moody's Transportation Manual from January 1, 1959 to June 30, 1959, relating to the CAB monthly earnings reports of TWA and its competitors and also the earnings reports of TWA and its competitors for the year ended December 31, 1958 and interim reports, which in each case were compared with the similar period a year earlier. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 47-52)

Having considered operating figures of TWA and its three principal competitors as summarized above, the report then turned to a consideration of the general stock market situation and the market quotations for the common stocks of TWA and its three principal competitors. It noted that the stock market in general was strong and advancing through 1958 and the first half of 1959, referring to the Dow Jones Industrial Average during that period, which indicated a percent advance over the 18 month period ranging from a high of 43% to a low of 41% and for the six month period ended June 30, 1959 ranging from a high of 8% to a low of 6%. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 53)

In commenting upon the market quotations for the common stock of TWA's competitors, the Report noted that over the 18 months ended June 1959, the stocks of TWA's main competitors advanced in greater amounts percentagewise than the Dow Jones Industrials. With respect to the market for the TWA common stock, the Report commented:

> "TWA, although operating at a loss in the first quarter of 1959, was sharply reducing its loss in that quarter as compared with the corresponding quarter of 1958. TWA stock advanced strongly in price during the first half of 1959, in fact, more than double that of the Standard & Poor's Index of Air Transport

Stocks. And it was selling well over its book value." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 54)

A comparative tabulation showing volume, price per share and approximate dollar volume of trading in TWA common stock for the entire year 1958 and the first six months of 1959 was then set forth, and also a tabulation giving a comparison of the market prices of TWA stock with its historical book value at year-end over the five year period preceding 1959 and at the middle of 1959.

The Report commented upon the price-earnings ratios of TWA and its three principal competitors as follows:

"Translating the foregoing figures into price/earnings ratios (P/E), and using the Standard & Poor's figures of earnings per share, brings the following results:

	Price/Earnings Ratios-Times			
	TWA	PAA	AAL	UAL
Five-Year Average 1954-1958	30.8	19.6	15.8	10.9
Three-Year Average 1956-1958	—	20.7	15.9	10.7

Note: Prices taken at average market price—April, May, June 1959. Using the AAL figures including the 'special credit' for 1954, the ratio for the five-year average 1954-1958 becomes 15.1 times (instead of 15.8 times).

It will be noted that TWA shows no figure for the P/E ratio for the three-year period 1956-1958, the reason being that TWA operated at a loss in each of the three years. Its three main competitors operated profitably in each of the five years 1954-1958. Nevertheless, as stated hereinbefore, TWA stock was strong in the market in early 1959, doubtless because of anticipated future operating profits." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 56)

The Report then noted that Standard & Poor's was advising investors to hold TWA, buy Pan American and American Airlines, and hold United Air Lines. It then noted that Moody's Stock Survey published a relatively bullish article on the subject of airline stocks in the spring of 1959 and that both Moody's and Standard & Poor's were emphasizing the importance of the coming jet airplanes.

Again the report reconstructed the TWA situation in March 1959 resorting to a reconstructed balance sheet, a capital expenditure program as projected by Price Waterhouse as of March 1959, and a projection of money requirements as of March 1959, noting that the latter projection indicated a peak money requirement by the 1960 third quarter of $160.7 million.

Lastly the Report, in coming to its recommendations as to the 1959 debt financing, noted that (i) as of March 31, 1959, reconstructed funded debt as a percentage of net tangible assets was 59.1%, (ii) as of that date not more than $100 million could have been raised by the issuance of additional equipment mortgage notes, assuming a total financing of $160 million, and (iii) all of the new money would not be required by TWA until the third quarter of 1960, by which time TWA's net tangible asset position should improve through retention of forecast earnings. The Report stated its recommendation as follows:

> "Under the above circumstances, we believe that we would have recommended junior financing in the amount of $60 million. Subject to the sale of $60 million of junior securities, we believe that TWA could have obtained commitments from institutional investors for the private purchase of Series B Flight Equipment Mortgage Notes to provide, over the next two years, a minimum of $90 million and a maximum of $110 million." (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 61)

The Report then turned to specific consideration of the essential terms for the junior financing and the senior debt financing.

Junior Debt of $60 Million

Drexel Harriman Ripley ruled out issuing common stock because of the poor earnings record of TWA and also excluded the issuance of a straight or convertible preferred because the dividends would not be deductible for tax purposes by TWA. The Report concluded that convertible subordinated debentures should be publicly offered in May 1959 and that the offering should be underwritten rather than making a preemptive offering to stockholders.

It was Drexel Harriman Ripley's opinion that the conversion rate should be "right on" or very close to the market at the time of offering. As the announcement of a proposed offering of convertible subordinated debentures of the magnitude contemplated frequently has a depressing effect on the market, Drexel Harriman Ripley in arriving at the conversion price of $18.50 per share discounted by 15% the mid-May 1959 market price of $21.75 per share (first concluding, based on a consideration of the historical and reconstructed earnings of TWA that a reconstructed market value would have been approximately the same as the historical value). (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 66)

An interest rate of 5% was recommended, which was the same rate being paid on similar issues by American Airlines and Eastern Air Lines and slightly above a 4⅞% rate being paid by Pan American Airways and a 4¾% rate being paid by KLM.

An outline of the specific terms of the proposed subordinated debentures is set forth on pages 68 and 69 of the Drexel Harriman Ripley Report.

Senior Debt Financing

Drexel Harriman Ripley were of the opinion that TWA could and should have obtained in May 1959 from institutional investors commitments to purchase from $90 million to $110 million Flight Equipment Mortgage Notes subject to the prior sale of $60 million convertible subordinated debentures, the funds to be taken down over a period ending December 31, 1960.

The recommended interest rate was 6%, which was admittedly higher than the interest rate on current unsecured borrowings of its principal competitors, Pan American Airways, American Airlines and United Air Lines. Only Delta and Northwest Airlines were paying a 6% rate on their senior debt. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 70)

It is important to note, and the Drexel Harriman Ripley Report acknowledges, that Reconstructed TWA, giving effect to the May 1959 financings, would have had a higher debt ratio and lower earnings and cash flow coverages than the other six trunk airlines, except that TWA's cash flow would have exceeded that of Pan American Airways and Delta. However, as a counter-consideration, Drexel Harriman Ripley in their Report cited as favorable factors for TWA (i) a "strong forecast of earning power" arising from ownership by December 1960 of a jet fleet which would have equalled or surpassed the fleets of each of its three main competitors, (ii) a strong mortgage security for its senior debt as compared with the other airlines whose debts were unsecured, and (iii) a higher interest rate except for Delta and Northwest. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 70-71)

The terms of the loan agreement pursuant to which the mortgage equipment notes would be issued are set forth on page 71 of the Drexel Harriman Ripley Report.

Lastly, the Report compared the balance sheets of Historical and Reconstructed TWA with those of Pan American Airways, American Airlines and United Air Lines, and also compared the historical and reconstructed capital structure of TWA as of December 31, 1960, which indicated that Reconstructed TWA would have had a total funded debt of $320,180,000, of which $260,180,000 was senior, compared to the historical total funded debt of $223,242,000, of which $123,242,000 was senior. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 74)

The Loeb, Rhoades Report Relating to the May 1959 Debt Financing

Loeb, Rhoades in their Report stated that notwithstanding their conviction that neither the May 1955 equity nor the October 1955 debt financing recommended by Drexel Harriman Ripley could have been accomplished, they would assume that for the purpose of commenting on the proposed 1959 financing, the 1955 financings as recommended by Drexel Harriman Ripley had been accomplished. Their Report noted that the proposed convertible debentures financing of $60 million substantially exceeded any equity financing done by Pan American, American, Eastern or United during the 1955-1960 period, mentioning that Eastern sold $25 million of convertible subordinated notes on October 21, 1958, American sold $40 million of convertible subordinated debentures on June 18, 1959, Pan American sold $46.97 million of convertible subordinated debentures on July 29, 1959 and United sold $25 million of convertible subordinated debentures on November 30, 1960. In view of these circumstances and the fact that the reconstructed earnings of TWA during the years 1956, 1957 and 1958 were disappointing, Loeb, Rhoades questioned that the

offering would have been doable. Further, Loeb, Rhoades found it difficult to believe that it would have been possible to have had two equity financings—one in 1955 and one in 1959—and catch the market each time at or near its high over a thirteen-year period. (Loeb, Rhoades Report, DX 270, Part II, p. 33).

Turning to the proposed private placement of $90 million to $110 million of 6% mortgage notes in May 1959, Loeb, Rhoades expressed doubt that an institutional investor would have been willing to enter into the commitment again in light of the poor earnings and cash flow coverages as well as the high senior debt ratio of 60.7% indicated for the first quarter of 1960 on page 70 of the Drexel Harriman Ripley Report. In commenting on the schedule, Loeb, Rhoades stated:

> "(c) The May 1959 $90-110 Million Loan Commitment
>
> With respect to the private placement of $90-110 million of 6% mortgage notes in May 1959, we doubt that an institutional investor would have been willing to enter into the commitment in light of the poor earnings and cash flow coverages and the high senior debt ratio of 60.7% shown for reconstructed TWA in Mr. Morehouse's schedule at page 70. According to the schedule, on a pro forma basis reconstructed TWA had earned an average over five years (1954-1958) of only half of the interest that would have been payable had the total reconstructed senior debt of $280 million been outstanding. The 12 months ended March 31, 1959 were not much better than the five year average, as only 70% of the interest had been earned. None of these figures would seem to justify an institutional lender making an additional $90-110 million senior debt investment in reconstructed TWA.
>
> Based upon our dealings with insurance companies in arranging financing for our clients, we know that all

insurance companies, including the major lenders, are regulated in their investments by state laws, which prevent the lenders from acquiring obligations which are predominantly speculative in character.

We note that Mr. Morehouse speculated as to the quality of both his proposed October 1955 mortgage obligations and his $60 million May 1959 convertible subordinated debentures. In Mr. Morehouse's opinion the institutional investors would have viewed the October 1955 obligations as 'not quite up to Baa quality' (page 31). As to the May, 1959 convertible subordinated debenture issue, he states that it 'might have been rated no higher than B'.* (page 68). However, he gives no clue as to a possible rating for the $90-110 million May 1959 mortgage notes. It is our opinion that the May 1959 mortgage notes would have been considered at best of B quality, and thus might well have presented to institutional lenders a question as to whether such an investment would have complied with applicable state laws. (Loeb, Rhoades Report, DX 270, Part II, pp. 33-35)

---

* Although DHR Exhibit: General 1 defines Baa and Ba ratings, no definition of a B rating is given. Moody's defines a B rating as follows: 'Bonds which are rated B generally lack characteristics of the desirable investment. Assurance of interest and principal payments or of maintenance of other terms of the contract over any long period of time may be small.'"

The Loeb, Rhoades Report then turns to a consideration of the reconstructed capital requirements of TWA from October 1, 1955 through December 31, 1960 appearing in the Drexel Harriman Ripley Report as Exhibit: Financials—31, which showed a total requirement of $544.8 million to cover the cost of the 63 jet planes originally ordered by Toolco for TWA, as well as the cost of the piston acquisitions TWA historically incurred. Apart from funds generated from operations assumed on a reconstructed basis, TWA would have been faced with raising in excess of

$300 million of new money to carry out the hypothetically reconstructed capital requirement program in the period from October 1, 1955 through December 31, 1960. Loeb, Rhoades concludes that in view of the diminishing reconstructed earnings in 1955 and the losses incurred in 1956, 1957 and 1958, TWA could not independently have raised $300 million on reasonable terms.

After listing on page 36 of their Report the financial aid given TWA historically by Toolco in the 1955-1960 period which assisted TWA historically in acquiring 47 jet planes and various piston planes, Loeb, Rhoades states as its opinion that TWA could not have independently financed the capital requirements of the hypothetical program which were even greater than that met historically by TWA with Toolco's assistance. In conclusion, Loeb, Rhoades reverts to the May 1955 equity financing of $58.4 million recommended by Drexel Harriman Ripley as the cornerstone of its program and repeats its opinion that the equity financing could not have been completed without Toolco's participation and that without Toolco, no prudent and competent management without the benefit of hindsight would have adopted such a program.

Cross-examination of Witnesses on 1959 Debt Financing

The cross-examination of the expert witnesses as to that portion of their respective reports relating to the 1959 debt financing was not as extensive as the cross-examination devoted to the May 1955 equity financing and the October 1955 debt financing, possibly because their direct testimony as embodied in their respective reports was especially detailed and explicit. No supplemental information developed on cross-examination addressed to the May 1959 debt financings needs to be noted herein.

Determination of Damages Related to Financing

I find that those paragraphs of the complaint that form the basis of TWA's claim for damages related to financing, specifically paragraphs 7(f), 10(g), paragraphs 23 through 28 inclusive and paragraph 52(c) and (d) are "well pleaded" and in considering and determining the damages claimed by TWA, I accept these allegations as proved.

It may be helpful once again to restate below in summary form the essence of these allegations as follows:

1. For the purpose of creating and maintaining control of the business of financing the purchase of aircraft for use by TWA and strengthening control over the acquisition of aircraft by TWA, the defendants rendered TWA dependent upon them for such assistance in financing as defendants might choose to provide, refusing to allow equity financing by TWA except on condition that as a result Toolco would increase its equity position in TWA and causing TWA instead to obtain funds chiefly by means of debt financing, thus rendering TWA unable to seek financing needed for the acquisition of aircraft except upon the approval of defendants. The actions complained of commenced subsequent to the acquisition by Toolco of a stock interest in TWA and the action continued throughout the period covered by the complaint. (Par. 23).*

2. From 1955 until December 1960 defendants dictated the type and manner of acquiring aircraft and the manner of financing the acquisition of aircraft. (Par. 24).

3. At least as early as 1955 United States air carriers recognized the needs for the extensive financing required for the acquisition of jet powered aircraft. (Par. 25).

---

* Toolco first acquired stock of TWA in 1939 (6 CAB 153, 154) and continued its actions until December 31, 1960.

4. In 1955 and continuously thereafter until December 1960 defendants directed TWA to make no efforts itself to obtain financing necessary for the acquisition of jets required for TWA needs. (Par. 26).

5. Commencing in 1955 and continuing thereafter various other air carriers, including TWA competitors, made appropriate arrangements for the financing of jet aircraft, and in 1955 and in 1956 obtained commitments for funds at interest rates ranging from 4% in 1955 to 4¼%-4¾% in 1956. (Par. 27).

6. In 1955, and for several years thereafter defendants discussed various proposals for financing TWA jet aircraft, but made no arrangements for such financing, nor was TWA allowed to make any such arrangements until December 1960, when interest rates for long-term debt were approximately 6-6½% (Par. 28); and

7. TWA was foreclosed from obtaining financing on more advantageous terms than those available to it in December 1960 and thereby suffered a loss because of the greater cost of borrowing and TWA's ability to obtain financing for its needs was substantially impaired. (Par. 52(c) and (d)).

The well pleaded allegations restated above, which are accepted as facts, lead to the determination that with one important exception noted below, the existence of Toolco, its ownership of stock and the role played by it historically in making or guaranteeing loans to TWA or in buying TWA equity all must be ignored in considering and determining damages to TWA attributable to the foregoing allegations of the complaint. To give weight to the existence of Toolco, its TWA stock ownership and the role played by it in TWA financial affairs would be in deroga-

tion of the allegations and not permissible as I interpret the doctrine of *Thomas* v. *Wooster* (114 U. S. 104) discussed on pages 21 through 24 of this Report. Notwithstanding this exclusion, I must consider the actual Balance Sheet as of December 31, 1954 and the actual operating results for the year 1954 and the first two calendar quarters of 1955, as did TWA and its experts Drexel Harriman Ripley, and as must have an independent Board.

Proof of Damages. TWA in submitting its proof of damages has endeavored to establish through the expert testimony of Drexel Harriman Ripley what it would have recommended to TWA in the early part of 1955, in October 1955 and in May 1959. Further through the expert testimony of Drexel Harriman Ripley and through cross-examination of Woodfin, a general partner of Loeb, Rhoades, the expert retained by the defendants, TWA has endeavored to establish that if the Board of TWA in early 1955 and continuously thereafter had been composed of directors acting prudently, independently and free from any control or dominance by Toolco or any other major stockholder, it would have approved and could have carried out the recommendations of Drexel Harriman Ripley.

TWA and its expert, Drexel Harriman Ripley, state quite clearly and repeatedly that the debt financings recommended in October 1955 and May 1959 assumed and were conditioned upon the sale in May 1955 of common stock bringing net proceeds to TWA of $55.5 million (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, pp. 23-25; Tr. 3981, 4313-4314). The recommendations with respect to the May 1959 sale of $60 million convertible debentures and the placing of $90-$110 million equipment mortgage notes assumed and were additionally conditioned upon the successful placing in October 1955 of a $150-$170 mil-

lion equipment mortgage (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 58).

It is, therefore, understandable why TWA, its expert and counsel devoted a substantial amount of attention to the prudence and doability of the May 1955 equity financing and why the defendants, their expert and counsel similarly addressed an equivalent amount of attention to proving that the May equity financing was imprudent, premature and not doable.

No alternative theory of damage was presented by TWA or the defendants and I must, therefore, address myself to TWA's contention that an independent and prudent Board of TWA could and should have sold in May 1955, $58.5 million of common stock of TWA which would bring net proceeds to TWA of $55.5 million.

In the receiving and hearing of evidence on damages I have been guided by the principle of *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U. S. 251 (1946). The Supreme Court in *Bigelow* stated that "the most elementary conceptions of justice and public policy require that the wrongdoers shall bear the risk of the uncertainty which his own wrong has created." (327 U. S. 251, 265). However, the Court defined the responsibilities of the trier of fact in the following language at page 264:

> "In such a case, even where the defendant by his own wrong has prevented a more precise computation, the jury may not render a verdict based on speculation or guesswork. But the jury may make a just and reasonable estimate of the damage based on relevant data, and render its verdict accordingly."

I recognize that with respect to participation in the financing of commercial airline companies and aircraft manufacturing companies, Drexel Harriman Ripley, and

its senior officers who participated in the preparation of their Report are eminently qualified. As a product of careful and sophisticated statistical research and presentation their Report is commendable. However, after careful deliberation, I have determined that TWA has not established that a prudent and competent management of TWA acting independently and free of any control or interference on the part of Toolco would and should have calculated in the spring of 1955 the amount of the financial requirements of TWA for the jet aircraft age. It is also my determination that an independent and prudent TWA management would not have accepted the recommendation of Drexel Harriman Ripley that TWA sell in May 1955 $55.5 million (net proceeds) in common stock of TWA.

For me to find to the contrary would in my opinion endow Drexel Harriman Ripley and an independent prudent Board of TWA in 1955 with a prescience, wisdom and perfection of timing that exceeds the natural capacity of the most experienced men acting without the benefit of hindsight. I am aware that in the spring of 1955 the equity capital of historical TWA reflected the influences of the major stockholder, Toolco, over several years prior thereto, but I am not persuaded that it has been convincingly established that TWA was "obviously short of proprietary capital" in the early part of 1955 (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 21).

TWA and Drexel Harriman Ripley compared the net worth in absolute dollars of TWA with the net worth of its principal competitors and showed that at best TWA was short by $25.7 million (United Air Lines) and at worst short by $39.1 million (Pan American) (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 9). In addition, TWA and Drexel Harriman Ripley resorted to

a comparison of certain "yardsticks" applied to TWA and to its principal competitors. Several "yardsticks" were employed: (i) Total Operating Revenue; (ii) Net Operating Income; (iii) Net Income Including Capital Gains; (iv) Revenue Airplane Miles Flown; (v) Available Seat Miles; and (vi) Net Operating Income Per Revenue Airplane Miles and Per Million Available Seat Miles for 5 years 1950-1954 and for one year 1954. Defendants' expert, Loeb, Rhoades, stated that these "yardsticks" are tools normally used for measuring operating performance. On that basis TWA, which as the record discloses had revenue and earnings up to December 31, 1954 that compared favorably with those of its principal competitors, might be said to have made the most efficient use of its equity capital (Tr. 7122-7123). It is deemed significant that a comparison of debt-equity ratios as of December 31, 1954, indicated that TWA with a ratio of 78.4% equity to 21.6% debt was in a better financial position than American and United and about equal to Pan American. (Drexel Harriman Ripley Report, TWA Ex. 5, Part II, p. 9).

Loeb, Rhoades was of the opinion that TWA having placed with Equitable Life a $40 million Equipment Mortgage Loan in December 1954, was adequately financed. I accept this opinion of Loeb, Rhoades. In January and February 1955 the performance characteristics of commercial jet aircraft and the dates on which they were to be delivered were still far from being settled. It was acknowledged that the delivery dates for jet aircraft were three or more years away. While there was discussion in the trade press and periodicals that commercial airlines were almost certain to be using commercial jets in the future, it was still an open question whether they were to be pure jets or turbo-prop jets (Loeb, Rhoades Report, DX 270, Part II, pp. 6-7). While the Annual Report in 1953

of the National Aviation Corporation, a closed-end investment trust, concentrating on airline and aircraft manufacturing industries regarded the DC7 and the Super Constellation as the last of their kind for mass air travel. Its Report for 1954 referring to the advent of the Vickers Viscount turbo-prop stated that the new "shape of things to come in 1955-58 is in ferment * * *" (See page 196 this Report). In the early months of 1955 Boeing could not say when it would commence the manufacture of commercial jets. Its Annual Report for the calendar year 1954 which bears the date March 7, 1955, was far from definite. The manufacturing facilities, tools and equipment used by Boeing for the manufacture of the U. S. Air Force jet tankers were owned by the U. S. In early 1955 Boeing was seeking, but had not obtained, the consent of the U. S. Air Force to use these facilities for the manufacture of commercial jets (this consent was not obtained until August 1955) (Tr. 6889).

During the spring and summer of 1955 the specifications and performance characteristics of the commercial jet continued to be the subject of speculation and discussion. The functioning of jet aircraft in hot weather, noise at airports and the choice between pure jets and turbo-props, such as the Electra and Vickers Viscount was still unresolved (Tr. 6889-6893). It was not until October, November and December of 1955 that delivery schedules were arranged and firm contracts were signed. It was in those months that the airlines made arrangements to finance the acquisition of jets. The first financing arranged was by Eastern Air Lines on October 31, 1955 for $90 million, of which $40 million was earmarked for the purchase of jets. This was followed by the American Airlines financing of $75 million

arranged on November 1, 1955 and the United Air Lines financing of $150 million arranged on December 21, 1955, these being solely to finance the acquisition of jets.

I find it unlikely for an independent Board of TWA to have acted upon the Drexel Harriman Ripley recommendation with respect to initiating a plan to secure $300-400 million over six years in the first quarter of 1955 when there was no proven need for equity capital and when specific information with respect to the performance characteristics and delivery dates of jet aircraft was still unavailable and uncertain. That is to say, I am not persuaded that this information was available in sufficiently definite form to permit the formulation of the financial program of the magnitude which Drexel Harriman Ripley states it would have recommended, and I conclude that an independent prudent Board of TWA would not have accepted and acted upon the Drexel Harriman Ripley recommendations and that the sale in May 1955 of common stock of TWA for $58.5 million netting TWA $55.5 million would not have occurred.

But even if an independent prudent Board of Directors of TWA would have concluded in the early months of 1955 that a program should be formulated and acted upon to provide funds with which to finance the long-term acquisition of jet aircraft, I am persuaded by and accept the expert testimony of Loeb, Rhoades to the effect that such a Board would not have implemented the plan advocated in the Drexel Harriman Ripley Report. Loeb, Rhoades in their direct testimony and their cross-examination established the following points: (i) TWA was not clearly in immediate need of equity capital as asserted by Drexel Harriman Ripley; (ii) the $58.5 million common stock offering exceeded by more than $11 million the sum total

of all domestic trunk common stock offerings during the 1946-1955 period; (iii) the terms of the one-for-one offering involved an extreme dilution of stockholders' interest; and (iv) the $58.5 million offering exceeded by $23 million the sum total of common stock offerings of all other airlines between May 1955 and 1960 (Loeb, Rhoades Report, DX 270, Part II, Exhibit A). It is also significant to note that United Air Lines which was being advised during the period in question by Drexel Harriman Ripley sold no equity to finance jets until 1960, when it issued convertible debentures in the amount of $25 million.

The recommended October 1, 1955 mortgage debt financing amounting to $150-170 million was stated by TWA's expert, to be largely dependent on the successful completion of the May 1955 common stock offering. Testimony of both plaintiff and defendants indicated that an improved balance sheet based on a reconstruction of TWA as of September 30, 1955 incorporating the added equity would be a crucial step in securing the large amount of debt conceived by Drexel Harriman Ripley for the fall of 1955.

TWA's expert was faced with a difficult task in offering to prove that large scale financing would have been obtained in 1955 in an amount and on the terms estimated. Relative to the previous year, TWA's quarterly earnings were dropping rapidly after the first quarter of 1955. (Loeb, Rhoades Report, DX 270, Part II, Exhibit F.) It appears that in order to secure the amount indicated at favorable terms that TWA would have had to complete jet financing commitments before lending institutions became cognizant that TWA's earnings deterioration was more serious than a mere seasonal variation. Against this history TWA and Drexel Harriman Ripley endeavored to show that an independent TWA Board would have had

the singular foresight to plan both the common stock offering of $55.5 million and the October 1, 1955 debt financing of $150-$170 million well ahead of its competitors. As indicated above, the advent of commercial jet aircraft was the subject of discussion in the trade press in November and December of 1954 and January of 1955 and was commented upon in the Boeing Annual Report of 1954 which was dated March 7, 1955, and the cost of a commercial jet aircraft was generally accepted to be in the neighborhood of $4,250,000. Nevertheless, I am satisfied from the record that there remained to be determined as of August-September 1955 (the time which the debt financing would have had to be negotiated) much vital information regarding specific aircraft orders, performance and delivery schedules before realistic bargaining for such large scale funds could take place. Indeed, a $150-$170 million loan to TWA on October 1, 1955, would have been almost three times as large as any long-term commitment that had been made to that date to any airline for any purpose. (See page 234 this Report). I conclude that TWA has not proved that either of the 1955 financings could have been reasonably negotiated at the time, in the amount and according to the terms suggested, by an independent and prudent management.

Since the May 1959 equity financing of $60 million and debt financing of $90-110 million assumed and were dependent upon the 1955 common stock and mortgage debt financings and since I have determined that the latter on their face as proposed by TWA's expert could not have taken place under the historical circumstances established in the record, I thus find a failure of proof with regard to these subsequent financings. Although the complaint alleges damages attributable to defendants' interference with the proper and timely financing of TWA, I do not feel that I, as Special Master, can independently, with the

record available, make an ultimate determination of any specific amount of damages with respect to financing. Therefore I determine on the whole that no damages be awarded to TWA in respect of the allegations of the complaint set forth above.

In view of my determinations above it is not necessary for me to consider the calculation of the debt burden as of December 31, 1963. However, I do think it might be proper for me to observe that an independent prudent management might have subsequent to December 31, 1963 found opportunities to refinance all or part of the funded debt at more favorable terms and thus nullify the significance of a present value comparison as far as damages are concerned.

IV.

Loss Due to Delay in Disposal of Displaced Piston Aircraft

Plaintiff alleges in paragraph 52 of its complaint that it "was foreclosed from the opportunity for early sales of its obsolescent piston-engine aircraft, causing loss to TWA". It claims that the earlier delivery of the jet aircraft would have allowed it to retire many of its piston aircraft earlier and at least as early as its competitors did (TWA Ex. 2, pp. 22-23) and that a decline in the market prices obtainable for these aircraft during that period caused TWA damages of $6,880,600, before trebling (TWA Ex. 6B, pp. 9, 24-26). TWA has lowered this claim to $5,700,000 before trebling by taking into consideration possible losses due to uncollectible items receivable (Plaintiff's Brief 231).

TWA does not contend that the acquisition of any particular jet airplane would have caused the retirement of any particular piston plane or planes (Tr. 1649), and it states that as the jet aircraft were delivered over a period of time, they displaced piston aircraft from certain routes which in turn displaced other piston aircraft from other routes, and so on, in a chain reaction which made piston aircraft available for sale which were not necessarily the particular planes which had been serving the routes to which the jet aircraft were assigned (Tr. 1649-50, 1799-1800). Nor does TWA contend that there is a specific relation in terms of seating capacity between the jet aircraft and the piston planes retired in connection with their acquisition (Tr. 1683, 1799). Its claim rests on the broader assertion that until it received jet aircraft it was re-

quired to keep sufficient piston aircraft to carry on its business (Tr. 1596, 1600, 1798). The proof it offers as to the loss it sustained is put forward as a reasonable estimate of the number of sales of piston aircraft which were delayed, the extent of the delays, and the cost to TWA of the delays (Plaintiff's Brief 230).

It will be recalled from the discussion under Section I of this Report that the hypothetical jet fleet of reconstructed TWA used in computing lost operating profits consisted of 63 jet aircraft. As a basis for computing damages under this Section IV, Rummel constructed Annex F to TWA Exhibit 2 (hereinafter "Annex F") in which he first listed the delivery dates of the first 63 jets historically received by TWA and the delivery dates of the first 63 jets assumed to have been received by reconstructed TWA. Rummel next determined how many days earlier reconstructed TWA would have received each of its first 63 jets than it historically received each of its first 63 jets ("jet gain days"). Rummel also listed chronologically the sales dates for 103 piston aircraft which TWA historically sold between December 31, 1958, and July 20, 1962 (the latter date being the date on which TWA sold the last piston aircraft it sold before receiving its 63rd jet) (Tr. 1593, 1630). Rummel then determined reconstructed piston sale dates by moving forward the sale date of each of the 103 pistons a number of days ("piston gain days") equal to the jet gain days of the reconstructed jet with which it was linked (Tr. 1607, 1690). The pistons were linked to the jet by the following method:

Rummel linked the first jet received to those (four) of the 103 piston aircraft which TWA sold prior to the receipt of that jet airplane (Tr. 1647). He then took the period the delivery of the jet was delayed, jet gain days,

which is 60 days, and advanced the date these four piston aircraft were actually sold by 60 days to arrive at a "reconstructed piston retirement" date. The actual retirement date listed for each piston aircraft is the date the airplane was historically sold and the reconstructed retirement date is the date on which TWA claims for damages purposes the plane would have been sold if the delivery of the "linked" jet aircraft had not been delayed (Tr. 1631-32, 1653, 1689-90, 1724). The second jet received by TWA was delivered on March 17, 1959.* In Annex F, TWA has linked to the second jet the piston aircraft actually sold prior to the delivery date of that jet airplane and subsequent to the delivery date of the jet airplane previously received (Tr. 1700-01). As the second jet is claimed to have been delivered 76 days late, TWA asserts in Annex F that the piston aircraft linked to it would have been retired 76 days earlier.

This system is used throughout Annex F to attribute to each of the 103 piston aircraft a reconstructed retirement date. The number of days by which the reconstructed dates are advanced vary from 11 to 707. As each piston aircraft is linked to the first jet airplane which was delivered after the piston plane was sold, jet airplanes which were delivered after the delivery of other jet airplanes by an interval in which no piston aircraft sales took place are not linked to any piston aircraft and therefore play no part in TWA's computation of days by which piston retirement dates are reconstructed. For example, no piston aircraft were actually sold between March 25, 1959, when the airplane listed on Annex F as Piston No. 7 was sold, and June 26, 1959, when the airplane listed

*The date March 17, 1958, appearing in Annex F is a typographical error; the plane was delivered on March 17, 1959 (Tr. 1696).

on Annex F as Piston No. 8 was sold. Between these two dates, nine jet aircraft were delivered at various times from March 30, 1959, to June 13, 1959, but eight of these nine jet airplanes are not linked to any piston aircraft. Although TWA does not contend that any particular piston airplane would in fact have been sold on its reconstructed retirement date, it offers Annex F as "a reasonable construction of events that could have been expected" to occur (Plaintiff's Brief 234, Tr. 1632).

Plaintiff based its estimates as to the price which it would have obtained for the displaced piston aircraft upon a study made by R. Dixon Speas Associates, aviation consultants with extensive experience in evaluating aircraft. The study was presented through the prepared testimony of Mr. R. Dixon Speas (TWA Ex. 6B). The report reflected a study made by Speas Associates of the market for used piston aircraft offered for sale by the various United States trunk line air carriers for the years in question and concluded with the opinion that if the 103 piston aircraft had been sold earlier at the reconstructed retirement dates, TWA would have received 6.9 million dollars greater proceeds than it did historically for those aircraft.

To determine the price which TWA would have obtained on the reconstructed retirement date for each of the piston aircraft, Speas has constructed by statistical analysis sales price trends, by types of aircraft, of all the aircraft sold by United States trunk line air carriers from January 1, 1958, to June 30, 1964. These sales price trends are depicted in the figures set forth at pages 33-43 of TWA Exhibit 6B, where in every class of aircraft the trend line so constructed by TWA declines throughout the period. To determine the damages claimed for each piston air-

craft, Speas, at pages 24-26 of TWA Exhibit 6B, applies the rate of market price decline for aircraft of that type to the period of delay equal to "piston gain days" arrived at in formulating reconstructed retirement dates in Annex F.

For purposes of reference it is noted that the prices actually received by TWA for the piston aircraft it sold in the period from January 1, 1958, to June 30, 1964, including the 103 aircraft it links to the delivery of jet aircraft, are set forth at pages 80-85 of TWA Exhibit 6B, and the prices received by other United States trunk line air carriers in the sales of piston aircraft in the same period are set forth at pages 122-154 of the same exhibit.

Defendants attack the validity of TWA's proof. They contend that the reconstructed retirement dates for piston aircraft are meaningless without proof that the earlier delivery of particular jet airplanes would have advanced the sale of particular piston airplanes, and advanced them an equal number of days (DX 324, p. 5). Defendants also attack TWA's price trend lines. Although they do not dispute the validity of the mathematical basis for the trend lines given all the assumptions used by Speas, they contend that the lines are constructed with reference to inappropriate data (Defendants' Brief 281). They point out that the condition of the aircraft and the nature of the sales transactions were not considered and that the trend lines are based in part on data for periods not relevant to the aircraft in question (DX 324, pp. 5-6). Defendants also point out that TWA's computations give no consideration to benefits which TWA could offset against losses in sales prices, such as depreciation and the use of the aircraft while allowing the usable flight time after overhaul of air frames, engines, and propellers to expire

(DX 324, p. 6), and that the average cost of a full overhaul on the two-engine planes, which are the M-202 and M-404 aircraft, exceeds $100,000 and the cost of overhaul of larger piston aircraft is greater (DX 324, pp. 32-34). Defendants also contend that there was not a steady market for each of the types of piston aircraft retirement by TWA (Defendants' Brief 284-86). They further contend that any comparison of the sales by TWA to the sales by other airlines should entail an examination of the percentage of each airline's piston aircraft sold during the initial period of jet aircraft acquisition. (DX 324, p. 7).

In supporting their contention that the sales transactions were not sufficiently homogeneous to warrant their use in the construction of price trend lines, defendants maintain that sales which were actually trade-ins on jet acquisitions or sales to buyers which entailed a high risk of default were made at prices far higher than could be obtained from arm's length, financially responsible buyers (DX 324, pp. 14-17). Defendants also contend the sales of any aircraft for less than $100,000 were not sales for use as airplanes but as scrap (DX 324, p. 17), implying that either these aircraft were not usable for flying or there were no buyers. In addition, defendants contend that TWA did not require the 103 piston aircraft during the period in question, and to illustrate this they set forth tables comparing the normal utilization of certain aircraft types with TWA's utilization during that time (DX 324, pp. 21-26).

TWA attempts to meet defendants' contention that the reconstructed retirement dates cannot be taken as dates when the aircraft would have been sold by arguing that it cannot be said that the absence of sales at any time within the period means there were no buyers, for sales took place throughout the period and to say that an absence of sales indicates an absence of buyers is "improb-

ably deterministic" (Plaintiff's Brief 235). As TWA asserts, its claim is based on the proposition that market prices declined steadily and continuously during a six-year period beginning in mid-1958 (Plaintiff's Reply Brief 119). TWA attempts to meet defendants' contentions that the trend lines are based on sales which are too disparate to be compared by arguing that the factors which distinguish particular sales average out in the formulation of the trend lines (Plaintiff's Brief 239-44). In particular, TWA contends that any differences in sales prices accounted for by differences in flying time since overhaul are random and that airlines provide "progressive maintenance" and do not allow aircraft to be flown without maintenance until they require a complete overhaul (Plaintiff's Brief 239). TWA also contends that each piston aircraft it sold was, on an average basis, approximately 50 per cent "run out of time" (Plaintiff's Brief 244).

Proof of any actual relation between the acquisition of jet aircraft and the retirement of the piston aircraft, other than the chronology set forth in Annex F, was not introduced. It was apparently available to TWA, for Rummel testified that TWA had charts showing probable piston aircraft retirements as a function of the acquisition of jet aircraft (Tr. 1801) and made several references in his testimony to a specific piston retirement plan.* He also

*"Forward planning regarding fleet composition" (Tr. 556), "the removal of a fleet or fleets would be on a plan known basis" (Tr. 562), the disposition "did reflect planning" (Tr. 1611), "the development of plans" (Tr. 1619), "the specific plan for retirement" (Tr. 1638), "the plan" (Tr. 1641), "the plan to retire pistons" (Tr. 1653), "in the overall piston retirement plan we spoke of release of airplanes in terms of what they would do" (Tr. 1722), a "disposal plan" (Tr. 1745), and an "overall plan" (Tr. 1755). TWA personnel were assigned the formulation of a plan to retire piston aircraft (Tr. 1616, 1628-29). There was a broad plan in writing contained in the Jet Plans and Premises Manual which did not link the retirement of particular piston planes to specific jet deliveries (Tr. 1624), and certain exhibits introduced by defendants are taken from this source (Tr. 1666, 1670).

testified that he chose the dates of actual sales "rather than a plan" as the basis of TWA's proof on this issue (Tr. 1641).

I accept as "well-pleaded" the allegation of paragraph 52 of the complaint that plaintiff was foreclosed from the opportunity for early sales of piston aircraft, but I determine for the reasons set forth below that TWA is not entitled to the damages it claims in its proof with respect to losses due to delay in having piston aircraft available for sale. Defendants have proved conclusively that TWA's decisions to retire or retain many of the 103 aircraft were based on considerations having no connection with the acquisition of jet aircraft or defendants' acts and that the losses claimed in the proof offered by TWA with respect to the remainder of these aircraft cannot be said to be the result of defendants' acts. Instances of these failures in proof are set forth in the detailed review which follows. Moreover, the statistical analysis used by the plaintiff is deficient for the reasons advanced by the defendants and summarized above. The detailed application of the analysis of each type of piston plane sold by TWA, as set forth below, indicates clearly the unreasonableness of the results obtained under the methodology used, and plaintiff's claim under this Section IV is rejected in its entirety.

M-202A Aircraft

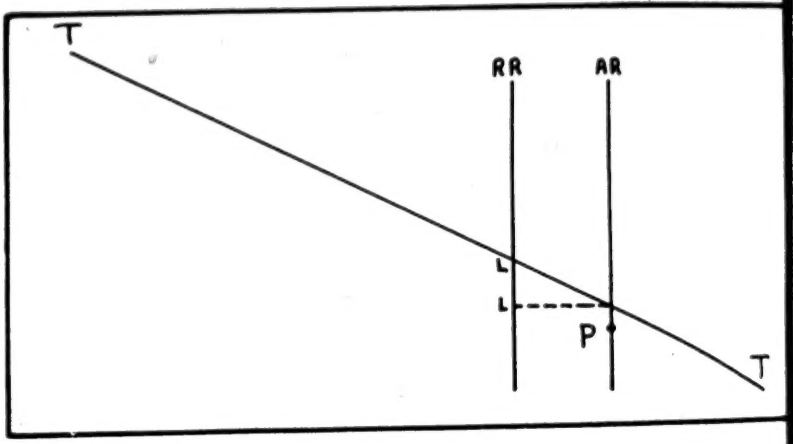
TWA claims damages of $75,800, before trebling, for delay in having eleven M-202A aircraft available for sale (TWA Ex. 6B, p. 9). These are short-range, two-engine airplanes. According to TWA's proof, the earliest date at which any of these aircraft would have been sold had there been no delay in the receipt of jet aircraft is No-

rember 1, 1958, which is the "reconstructed retirement date" set forth in Annex F for Piston Aircraft No. 1. The proof shows, however, that TWA historically made these aircraft available for sale in December 1957 and that on February 15, 1958, TWA announced that they were retired from service (Tr. 1656, 1661, DX 35). As these aircraft were put up for sale and retired from service prior to their reconstructed retirement dates, TWA's claim that a delay in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained. My reasoning in support of this conclusion follows:

TWA's claim is for losses due to a delay in having certain aircraft available for sale. It has computed its damages for that delay in a series of steps, the first of which, as described above, are (1) the computation of piston gain days, (2) the formulation by statistical analysis of trend lines which show the market price for each type of aircraft declining throughout the period at a steady rate, and (3) the determination of the decline in market price during the period between the reconstructed retirement date and the actual retirement date by translating the piston gain days for each aircraft into quarters of delay and multiplying the quarterly rate of market decline for the particular type of aircraft by the number of quarters of delay. The next step is to put forward the resulting amount not only as the decline in market price between the reconstructed retirement date and the actual retirement date but also as the amount of damages claimed for delay in having the aircraft available for sale. The claim that the delay in acquiring jet aircraft caused a loss in this amount is apparently based on the contention that TWA's failure to sell the aircraft between the recon-

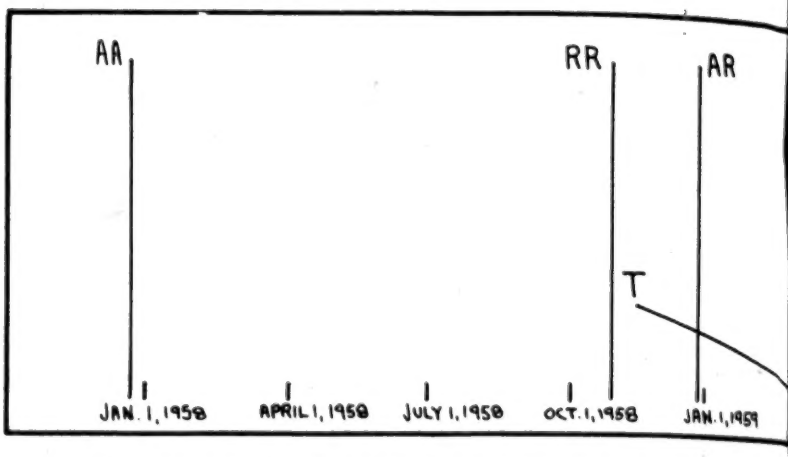
structed retirement date and the actual retirement date was caused by delay in receiving jet aircraft. An alternative possible basis would be the contention that this amount equals the decline in market price during earlier, but equal, periods of the delay in having aircraft available for sale.

At first Rummel testified that the theory of TWA's proof was that the piston aircraft were not available for sale prior to the date of actual retirement (Tr. 1612, 1613-14) and he also testified that the piston aircraft were needed at the reconstructed retirement dates because of the lack of having jet aircraft (Tr. 1633). This testimony indicates that it is TWA's contention that because of the jet delivery delays the aircraft could not be given up prior to their actual retirement dates and therefore that the fall in market price between the reconstructed retirement date and the actual retirement date is TWA's actual loss. TWA's proof in this respect may be set forth in graph form as follows:



The line TT represents a TWA trend line of market prices for a particular type of aircraft over a period of time, where time is measured horizontally and price is measured vertically. The time and price at which a particular airplane is sold is represented by the point P. Thus a vertical line AR passing through P represents the actual retirement date, and a vertical line RR placed to the left of AR by the amount of piston gain days for the aircraft represents its reconstructed retirement date. The decline in market price during the period of piston gain days is therefore represented by a segment the length of LL.

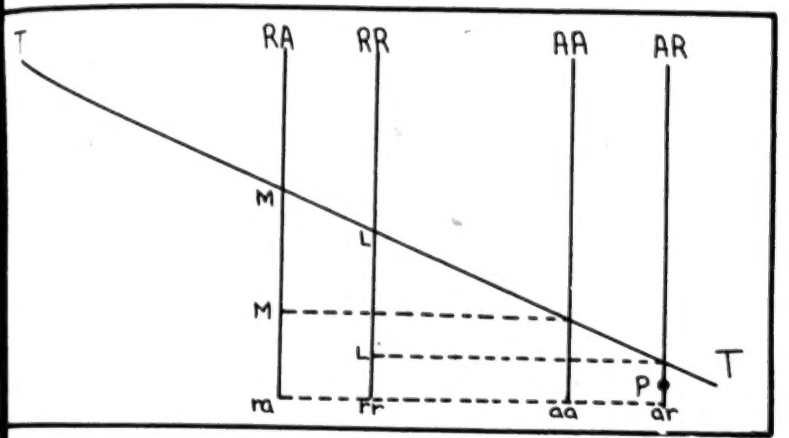
It was established, however, that TWA actually made many piston aircraft available for sale not only in advance of their actual retirement dates but in advance of their reconstructed retirement dates. In some instances piston aircraft were actually made available for sale approximately two years prior to the earliest reconstructed retirement date for any aircraft of that type (DC-4 aircraft; DX 324, p. 67; Annex F). In the case of M-202A aircraft, the planes were available for sale at least as early as December 1957 while the earliest reconstructed retirement date set forth in Annex F for any aircraft of this type is November 1, 1958, and the earliest actual retirement date for these aircraft is December 31, 1958. A graph showing these dates with respect to the first M-202A airplane sold would appear as follows, with the line AA representing a date as of which the proof has established the aircraft was actually available for sale:



Rummel also testified that piston aircraft were available for sale earlier than the dates listed in Annex F and that the reconstructed retirement date is not the date an airplane would have been available for sale but the date it is assumed it would have been sold (Tr. 1631-32, 1633, 1692, 1751, 1754, 1756). He testified that in Annex F TWA assumed that if the jet aircraft had not been delayed, the piston aircraft would have been available for sale in advance of the reconstructed retirement dates "exactly to the same degree" that the dates they were actually made available for sale preceded the actual retirement dates (Tr. 1751) and that the time it would have taken to make the reconstructed sale may be assumed to be the same as the time it took to make the actual sale (Tr. 1753). This testimony indicates that TWA seeks as damages the difference in market prices on the reconstructed retirement date and the actual retirement date on the theory that, although aircraft were available for sale prior to the reconstructed retirement dates, it takes a certain amount of time to sell any particular airplane even when a market exists. Possibly TWA contends alternatively that that amount is equal to the decline

in market value during the period it actually complains of, that is, the period of delay in having the aircraft available for sale, which decline would be equal to the decline in market price in the later period between the reconstructed retirement date and the actual retirement date because (1) the lead times between having aircraft available for sale and selling them would be the same in both cases and (2) the trend line shows a market price decline at a steady rate.

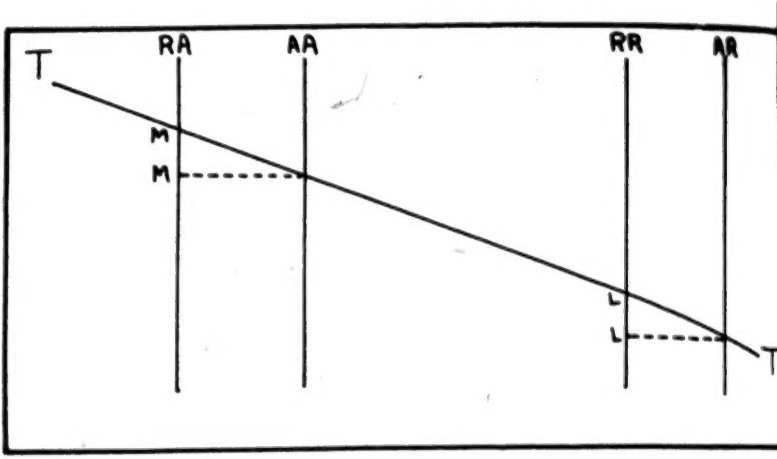
Rummel's introduction of the factor of equivalent lead times may be set forth in graph form as follows:



The vertical line AA plotted to the left of AR represents the date the aircraft was actually available for sale, and on TWA's assumption that the time it took to effect the sale would have been the same at any earlier time, a vertical line RA representing the reconstructed availability date would lie as far to the left of RR as AA is from AR. The segments shown on the graph as ra-rr and aa-ar are equal, and therefore adding the segment rr-aa to each of them results in the segment ra-aa being equal to rr-ar.

The segment MM therefore equals the segment LL, which expresses the conclusion that the decline in market price in the period of delay in having aircraft available for sale equals the decline in market price between the reconstructed retirement date and the actual retirement date.

Where the proof shows that an aircraft was actually available for sale prior to its reconstructed retirement date, a graph would show the lines AA and RA to the left of line RR:



In this situation the particular proof of loss attributable to defendants' acts put forward by TWA cannot be sustained. No matter which of the theories described above underlies TWA's claim, the damages claimed are based upon the assertion that the aircraft would have been sold on certain dates, the earliest of which, in the case of M-202A aircraft, is November 1, 1958, while defendants have shown that the aircraft were available for sale prior to that time, at least as early as December 1957 for M-202A

planes. If there was a market throughout the period, as TWA asserts (Plaintiff's Brief 235, Tr. 3688, Plaintiff's Reply Brief 119, 122)) and must assert to support its contention that planes could have been sold throughout the period earlier than they were, the delay in selling these planes after they were no longer needed cannot be said to be caused by defendants' acts. The proof does not show that there is any particular number of months or years required to effect the sale of an airplane once it is placed on the market. On the contrary, the evidence shows that planes of the same type, even when made available for sale at the same time, were sold at widely varying times after becoming available for sale. The contention of TWA that it may be assumed that the period between availability and sale would be the same whenever a plane is made available for sale, thereby requiring an earlier, reconstructed availability date to enable a sale to take place on the reconstructed retirement date, is conclusively disproved. As defendants were not responsible for TWA's failure to sell these aircraft from December 1957 on, I am unable to find that the loss it claims in its proof to have sustained upon the sale of the M-202A aircraft, which sales occurred over the period December 31, 1958, to October 1, 1959 (Annex F), is due in any part to a delay prior to December 1957 in having the aircraft available for sale or that the damages claimed may be a measure of a loss attributable to the period of delay in availability. Moreover, the proof conclusively shows that these aircraft were made available for sale prior to "mid-1958" which TWA asserts was the commencement of a six-year price decline (Plaintiff's Reply Brief 119). In addition, in view of TWA's assertion that there was a market for the sale of the aircraft, I conclude that TWA has failed in its proof

based on the assertion that, as a reasonable reconstruction of events that would have occurred, an airplane would have been sold on a certain day if the acquisition of jet aircraft had not been delayed, where defendants have shown that the aircraft was actually made available for sale by TWA prior to that time.*

In considering TWA's proof above, I have treated as valid its basic assumption that there was a market throughout the period, the existence of which would have enabled airplanes to be sold on their reconstructed retirement dates at market prices which declined at a steady rate. Rummel testified, however, that the market was glutted by the time TWA's planes were available for sale (Tr. 1636),** and if that is the fact TWA's methodology is further invalidated.

Moreover, TWA's proof shows that from 1959 to 1963 there was an elimination of 15,000 short-segment departures resulting from a TWA decision "to eliminate the short stage length departures operated with piston aircraft, because they were not profitable and had nothing whatsoever to do with the advent of the long-range aircraft, which is the

---

* Rummel conceded that a document showing M-202A aircraft to be available for sale in February 1958 indicated that he could not say that the first four of these aircraft sold were timed to the first jet as is shown in Annex F (Tr. 1668). Rummel also testified that he could not say the M-202A listed in Annex F as Piston No. 21 and linked to Jet No. 16 was needed by TWA until the delivery of that jet in view of proof that TWA leased the piston plane on January 14, 1959 (Tr. 1679) and again on June 13, 1959 (Tr. 1681-82). The reconstructed retirement date for that plane in Annex F is June 17, 1959. Similarly, the M-202A airplane listed in Annex F as Piston No. 22 was leased twice prior to its reconstructed retirement date of June 17, 1959, the second leasing taking place on June 6, 1959 (Tr. 1685-86). Piston No. 13 was leased on June 27, 1959, and has a reconstructed retirement date of June 29, 1959 (Tr. 1690-91).

** Defendants showed that TWA did not lag behind its competitors in 1958-1959 in selling piston aircraft (Tr. 3692-93) and takes the position that the market decline took place at that time (Defendants' Brief 285).

subject of our analysis and estimates." (Tr. 10642-43 and TWA Ex. 443). That the M-202A aircraft were all operating on average stage lengths of less than 300 miles and were the subject of this managerial decision (Defendants' Brief 290) is undisputed. The elimination on this scale of the short stage length departures operated with piston aircraft having no connection with the introduction of the jet aircraft into service makes it impossible to conclude that the short-range M-202A aircraft were retained because the delivery of long-range aircraft was delayed. The claim for damages with respect to these aircraft is disallowed in its entirety. It is noted that the first four aircraft of this type which were sold form the starting point of the trend line set forth at page 33 of TWA Ex. 6B. There is no evidence to support the conclusion that higher prices were obtainable for aircraft of this type between November 1, 1958, and the date on which they were sold, December 31, 1958, and the trend lines of market prices constructed by TWA do not purport to show that higher prices were available prior to the initial sales which constitute the starting points of the trends (Tr. 3610-11, 3612). For that reason also, TWA's proof does not support the damages it claims with respect to these aircraft.

L-1049, L-1049G and L-1049H Aircraft

TWA claims damages of $808,100, before trebling, for delay in having eleven aircraft of the types L-1049, L-1049G, and L-1049H available for sale (TWA Ex. 6B, p. 9). Speas testified that he considered the L-1049, L-1049G, and L-1049H aircraft to be enough alike to use the same market decline in computing damages for aircraft of all these types (Tr. 3644). The trend line constructed for the market price of these aircraft is apparently based

solely on data of L-1049 sales, and the data for L-1049G and L-1049H aircraft were not used in determining the trend line (TWA Ex. 6B, pp. 24, 26, 38, 85, Tr. 3643), although the quarterly market declination rate constructed with reference to L-1049 aircraft is used as the basis for computing the claimed loss attributable to L-1049G and L-1049H aircraft (TWA Ex. 6B, pp. 24-26). TWA contends that using the sales data for the L-1049H aircraft would result in a trend line which would not be reliable because it would have a low coefficient of correlation (Tr. 3789). All nine of TWA's L-1049 aircraft were listed for sale on February 6, 1959 (Ex. G annexed to DX 324), while according to TWA's proof the earliest date on which any of the planes would have been sold if the jet aircraft had not been delayed was July 18, 1959, which is set forth in Annex F as the reconstructed retirement date for Piston No. 16, the damaged L-1049G for which TWA claims no damages on the ground that it was damaged prior to its reconstructed retirement date. (TWA Ex. 6B, p. 24; Tr. 1707, 1737). The next earliest reconstructed retirement date was September 24, 1959, which is set forth in Annex F as the reconstructed retirement date for the L-1049 airplane listed as Piston No. 26. Only five of the nine L-1049 aircraft were sold by June 30, 1964 (TWA Ex. 6B, pp. 80-85).

As these aircraft were listed for sale prior to the earliest reconstructed retirement date for aircraft of any of these types and are enough alike for TWA to value them on the same trend line, for the reasons set forth above with respect to M-202A aircraft, TWA's claim that a delay in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained. Moreover, if only the data of

L-1049 sales will serve as the basis of a trend line having a reliable coefficient of correlation, TWA's claim that losses with respect to the other types may be measured by the trend line, with which their own data is incompatible, is not accepted. The claim with respect to these aircraft is therefore disallowed in its entirety. It is noted that the aircraft which is plotted on page 38 of TWA Ex. 6B as sold in the second quarter of 1963 is the same plane that is also plotted as having been sold in the fourth quarter of 1960, having been repossessed in the interim (Tr. 3643). It was therefore available for sale at least as early as the time of its first sale. It is also noted that if the sale of this aircraft, which occurred after the period of the sale of the 103 aircraft, had not been considered, TWA's claim would concededly be reduced by $120,250 (Tr. 3779).

DC-4 Aircraft

TWA claims damages totalling $91,800, before trebling, with respect to delay in having available for sale six DC-4 aircraft (TWA Ex. 6B, p. 9). On July 27, 1957, TWA authorized the sale of all these aircraft (DX 324, p. 67, Tr. 1729-30, 1739) and offered aircraft of this type for sale through an aircraft broker on January 2, 1959 (DX 324, p. 67 and Ex. G annexed thereto where this type is referred to as C-54). The earliest of the dates to which TWA's proof shows the sale of any of these planes would have been advanced if the delivery of jet aircraft had not been delayed is June 8, 1959, which is the reconstructed retirement date set forth in Annex F for Piston Aircraft No. 8. As these aircraft were for sale prior to any period of delay in their sale claimed to be caused by the delay in receipt of jet airplanes, for the reasons set forth above with respect to M-202A aircraft, TWA's claim that a delay

in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained. Moreover, minutes of TWA's Board of Directors show that TWA made these planes available for sale because they were being operated at a loss, not because they were no longer needed by reason of the acquisition of jet aircraft (Tr. 1729-30, DX 37). The date they were made available for sale was prior to "mid-1958" which is the time TWA asserts the six-year price decline commenced (Plaintiff's Reply Brief 119). In addition, these aircraft were all configured for cargo or engine carrying service rather than passenger service (DX 324, p. 67, Tr. 1716). The claim for damages with respect to these aircraft is disallowed in its entirety.

It is noted that in a sale of a group of four of these planes by TWA in 1959 the price paid by the buyer and plotted by TWA at page 35 of its Exhibit 6B, purchased not only four aircraft but also 29 extra engines (Tr. 3657). One of the other of these four-engine aircraft which is plotted on the same chart was apparently sold with only one of its engines (Tr. 3658-59). TWA's proof indicates that the factor of extra engines would reduce the quarterly market price decline from $12,400 to $12,000 (Tr. 3784). It is also noted that if sales in the first three quarters of 1958 and the fourth quarter of 1962 had been eliminated in determining the rate of market price decline for this type of aircraft, TWA's claim would concededly be $37,740 less (Tr. 3772).

L-1649A Aircraft

TWA claims damages of $1,461,900, before trebling, with respect to delay in having available for sale four L-1649A aircraft (TWA Ex. 6B, p. 9). These are long-range air-

craft which were directly replaced in function by the jet aircraft. In view of Rummel's testimony that TWA would have liked to sell these aircraft earlier because they were uneconomical but delayed their retirement because they were substantially undepreciated (Tr. 1800), any loss resulting from a decline in the market price obtainable for these aircraft cannot be attributed to the acts of defendants.[1] The claim for damages with respect to the delay in the availability of L-1649A aircraft for sale is therefore disallowed in its entirety.

The damages claimed with respect to the first two aircraft sold of these four would have to be disallowed in any event, for they were the first aircraft of that class to be sold by any airline in the period from January 1, 1958, to June 30, 1964, and each brought the highest price obtained to the date of its sale. There is no evidence to support the conclusion that a higher price was obtainable for aircraft of this type between January 1, 1958, and the dates on which they were sold in the fall of 1960, and the trend lines of market prices constructed by TWA do not purport to show that higher prices were available prior to the initial sales which constitute the starting point of the trend (TWA Ex. 6B, p. 39, Tr. 3610-11, 3612). Similarly, the damages claimed for the last two aircraft sold of this type would have to be reduced, for their reconstructed retirement dates are dates prior to the initial sales, and plaintiff's computations in effect extend the price trend lines to times prior to the commencement of the trend. All the sales of aircraft of this type were sold by TWA, and the

[1] There is other TWA proof that aircraft of this type were ordered with full knowledge of the coming of jet aircraft because of their "cash generating power" and that even with the advent of jet planes there would be a need for aircraft of this type for several years (Tr. 3795).

first four of these sales were to a buyer outside the country and without a credit rating, factors which TWA admits would affect the sales prices (Tr. 3621). These planes were later repossessed by TWA (Tr. 3628).

L-749A Aircraft

TWA claims damages of $346,000, before trebling, for delay in having three L-749A aircraft available for sale (TWA Ex. 6B, p. 9). The proof shows that TWA sold two L-749 and three L-749A aircraft during this period (TWA Ex. 6B, pp. 81-85) and that it offered "several Lockheed model 749 and 749A Constellation airplanes for sale" as early as July 25, 1958 (Exhibit F Annexed to DX 324). As TWA's L-749A aircraft were listed for sale prior to the earliest reconstructed retirement date for aircraft of this type, which is set forth in Annex F as July 13, 1959, (Piston No. 23) for the reasons set forth above with respect to M-202A aircraft, TWA's claim that a delay in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained. TWA's claim for damages with respect to L-749A aircraft is therefore disallowed in its entirety.

Even apart from the proof that TWA made these aircraft available for sale in July, 1958, its claim for damages could not be granted in the amount requested. The first L-749A airplane sold by any airline in the period between January 1, 1958, and June 30, 1964, was the plane listed in Annex F as Piston Aircraft No. 23 (TWA Ex. 6B, p. 37). This airplane was sold at a substantially higher price than any other aircraft of its type. There is no evidence to show that a higher price would have been obtainable had the plane been sold at an earlier date, and, as shown above with

respect to M-202A and L-1649A aircraft, the trend line constructed by plaintiff does not purport to show higher prices prior to the initial sale. TWA's claim for damages with respect to this airplane would therefore be disallowed in any event.

The second aircraft of this type sold by TWA is the plane listed in Annex F as Piston Aircraft No. 58. This plane was actually sold on November 24, 1961, and according to Annex F, it would have been retired by March 12, 1960, except for the defendants' delay in furnishing jet aircraft. The proof shows, however, that at least as early as August 17, 1960, TWA considered that this aircraft was not needed, for at that time it leased it to another company (Tr. 1771), and therefore the fact that TWA did not sell this plane in the period from August 17, 1960, to November 1961 cannot be attributed to its claimed need to retain aircraft because of delay in receiving jet aircraft. The period from March 12 to August 17, 1960, is one of 1.7 quarters rather than the 6.8 quarters which was used to compute the damages attributed to this plane at page 25 of TWA Exhibit 6B, where the aircraft is listed as No. 44 under its registration number N-6017C. Using TWA's method of computing damages, the maximum decline in market price which could have been related to delay in receiving the jet aircraft referred to in Annex F as Jet No. 52 is $37,230, which is the rate of quarterly market decline for this aircraft type computed by TWA of $21,900 (TWA Ex. 6B, p. 25) for a period of 1.7 quarters.

Not all of this loss could be attributable to the acts of defendants, however. As has been determined above, defendants are not responsible for part of the delay in the delivery of the 30 Convair 880 jet aircraft. In Annex F, the last 48 of the 103 piston aircraft, Piston Nos. 56-103,

are related to timely deliveries of Convair 880 jet aircraft with respect to which defendants are not responsible for 60 days of the delivery delay, and this particular piston airplane, Piston No. 58, is linked to the nineteenth Convair 880. Therefore, even if damages could be awarded with respect to any aircraft of this type, defendants could not have been responsible for damages for delay with respect to this airplane for a period greater than one quarter.

The third aircraft of this type with respect to which TWA claims damages is the plane listed in Annex F as Piston Aircraft No. 103. This plane has registration number N-6012C and appears also as No. 103 at page 26 of TWA Exhibit 6B. The plane was actually sold on July 20, 1962, and TWA has assigned it a reconstructed retirement date of August 12, 1960. At approximately that time an aircraft of the same type was sold for $164,000 (TWA Ex. 6B, p. 78). The aircraft actually sold in the third quarter of 1960 is the only airplane of this type sold by an airline other than TWA in the period January 1, 1958, to December 31, 1964, and there were only five sold by TWA. The actual sale of an airplane of this type at the time of the reconstructed sale date raises the question whether the better evidence of the price TWA would have obtained for this plane is the price actually obtained by its competitor at that time or the higher price claimed by TWA, which is the price actually received for the airplane later plus the amount the market price declined from the reconstructed retirement date to the actual sale date as shown by the trend line TWA has set forth at page 37 of its Exhibit 6B.

TWA attributes the fact that particular sales prices fall above or below its trend lines to random differences in the condition of the aircraft of any particular type (Plain-

tiff's Brief 239-40, 242). The only two aircraft of this type for which the engine and airframe condition are in evidence are the TWA aircraft bearing registration numbers N-6012C and N-6017C (TWA Ex. 421, p. 3). These planes brought approximately the same price although N-6017C was sold on November 24, 1961, and N-6012C was sold on July 20, 1962. The trend line set forth at page 37 of TWA Ex. 6B represents a decline in market price of approximately $58,400 in that time, and as there are so few aircraft on which this trend line is based, if the condition of the plane which was sold later was equivalent to or better than that of the plane which was sold earlier, there would be reason to refer to the actual sales price at the reconstructed retirement date, rather than to apply the trend-line market price decline to the price later received. According to TWA, reference to actual sales at the reconstructed sale dates would be a valid method of determining loss (Tr. 3685). TWA's Exhibit 241 shows, however, that the later-sold airplane had more hours of flying time before an airframe overhaul was required and before an overhaul was required of any of its four engines. This difference in the condition of the two airplanes is consistent with TWA's explanation of deviation of particular prices from the trend lines and supports the validity of the trend line constructed for this type of aircraft. In the absence of similar information with respect to the aircraft actually sold in the quarter of the reconstructed retirement date, TWA's reliance on the trend line is accepted for this purpose with respect to aircraft of this type.

Even if damages could be awarded with respect to aircraft of this type, the damages of $170,830 claimed by TWA with respect to this airplane would have to be diminished in view of the determination made above that

defendants were not responsible for part of the delay in the delivery of the 30 Convair 880 aircraft. Annex F shows that the last 48 of the 103 aircraft are related to deliveries of jet aircraft of this type and that this particular piston airplane, which is the last of the 103 piston aircraft to be sold, is linked to the twenty-seventh Convair 880 airplane. Any period of the delay in retiring piston aircraft No. 103 attributable to the acts of defendants would therefore have been diminished by 60 days with the result that damages with respect to this aircraft would necessarily have been diminished by at least $14,600 to $156,220.

M-404 Aircraft

TWA claims damages of $1,009,300, before trebling, for the delay in having 37 M-404 aircraft available for sale (TWA Ex. 6B, p. 9). These are short-range, two-engine aircraft, and, as shown above with respect to M-202A aircraft, TWA's proof shows that from 1959 to 1963 there was an elimination of 15,000 short-segment departures resulting from a TWA decision "to eliminate the short stage length departures operated with piston aircraft, because they were not profitable. It had nothing whatsoever to do with the advent of the long-range jet aircraft, which is the subject of our analysis and estimates." (Tr. 10,642-43 and TWA Ex. 396, 443). For this reason, as in the case of the M-202A aircraft, TWA's claim with respect to M-404 aircraft is disallowed in its entirety. Although it is therefore unnecessary to examine in detail the computation of damages with respect to M-404 aircraft, it should be noted that TWA had aircraft of this type available for sale from a time not shown by the proof until March 11,

1959 (Ex. E annexed to DX 324) and that 18 aircraft of this type were gradually sold by March 20, 1961,[1] when TWA declared the remaining 19 aircraft surplus (Tr. 1747-48, DX 39). In addition, no damages could be granted with respect to the first three aircraft of this type sold by TWA, listed in Annex F as Piston Nos. 5, 6 and 7, as, for the reasons set forth above with respect to M-202A and L-1649A aircraft, these aircraft form the starting point of TWA's trend line (TWA Ex. 6B, p. 34), and there is no reason to believe that the market price was higher at an earlier time than the prices obtained for these aircraft. Moreover, as the last 19 of these aircraft were actually available for sale from March 20, 1961, prior to both the reconstructed and actual retirement dates, the delay in effecting sales of these aircraft after that date, which amounted to more than nine months in the case of the planes listed in Annex F as Piston Nos. 59-75, cannot be attributed to defendants' acts. These limitations alone would reduce the damages claimed by TWA for these aircraft by $361,641, as damages for the aircraft listed in Annex F as Piston Nos. 5-7 would be disallowed in their entirety, and the quarters of delay would be limited to 3.3 for Piston No. 48, 3.2 for Piston No. 49, and 3.67 for Piston Nos. 59-75.

L-049 Aircraft

TWA claims damages of $3,087,000, before trebling, for delay in having 31 L-049 aircraft available for sale (TWA

[1] Sales of these aircraft occurred in February, March, August, and November 1959, January, February, March, June, and September 1960, and February 1961. Two of these aircraft, numbers N-40432 and N-40441, were leased to another company in November 1959 (Tr. 1749), more than six months prior to their actual retirement date in June 1960 (Annex F, p. 3).

Ex. 6B, p. 9). These are intermediate-range, four-engine airplanes. TWA's L-049 fleet, or at least "several" airplanes of it, was for sale as early as July 15, 1958 (DX 349), but none was sold before the sale of one on August 26, 1959 (TWA Ex. 6B, p. 81), and a second one was not sold until April 30, 1961 (TWA Ex. 6B, p. 83). The aircraft of this type are listed in Annex F as Piston Nos. 20, 43-47 and 76-100, where the earliest reconstructed retirement date for any of them is May 12, 1959, and the next earliest is May 5, 1960. As TWA considered these aircraft available for sale as early as July, 1958, for the reasons set forth above with respect to M-202A aircraft, TWA's claim that a delay in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained. The claim for damages with respect to having aircraft of this type available for sale is therefore disallowed.

Although TWA's offering of its aircraft of this type for sale in 1958 shows that defendants are not responsible for the delays claimed in TWA's proof with respect to L-049 aircraft, there are other reasons which would require the disallowance of TWA's claim with respect to all of these aircraft. It is undisputed that the 30 of the 31 aircraft TWA still had in 1961 were operating at stage lengths of less than 300 miles (Defendants' Brief 290, Annex F, TWA Ex. 396) and the proof shows that elimination on a large scale of such piston flights was the result of a decision having nothing to do with the acquisition of jet aircraft (Tr. 10642-43, Defendants' Brief 290). There are separate reasons why the claim with respect to a different 30 of these aircraft must be disallowed, and these 30 aircraft are the first five and the last 25 which were sold.

TWA made particular efforts to sell four aircraft of this type in March, 1959 (Ex. E Annexed to DX 324), but four aircraft of this type were not disposed of until May, 1961 (Annex F, TWA Ex. 6B, pp. 80-83). The fifth aircraft of this type to be sold, listed as Piston No. 46 and assigned a reconstructed retirement date of May 14, 1960, in Annex F, was removed from service on November 24, 1959 (Tr. 1761). As these five aircraft were available for sale prior to their reconstructed retirement dates, for the reasons set forth above with respect to M-202A aircraft, TWA's claim that a delay in the availability of these aircraft for sale due to a delay in receiving jet aircraft caused the loss to TWA claimed in its proof cannot be sustained.

The sixth aircraft of this type which was sold by TWA is listed in Annex F as Piston No. 47 where it is linked to a Convair 880 airplane with respect to which it has been determined defendants are not responsible for 60 days of the delay in acquisition.*

The proof shows that TWA would not be entitled to any damages for the remaining 25 aircraft in any event. When they were sold, the flying time after overhaul of the airframes and engines was substantially used up (TWA Ex. 421). TWA had been granted a time extension to operate the engines for 2,000 hours between overhauls (DX 354, p. 2) and for all practical purposes had used up even the additional times granted prior to selling the aircraft. Three of the aircraft were "incomplete, uncertified and non-flyable" and parts had been removed which would not be replaced (DX 354, p. 2). Three other aircraft were

*The number of quarters set forth at page 26 of TWA Ex. 6B for this aircraft, which is listed there as No. 66, is apparently incorrect, for the entire period of delay claimed of 13 months and 10 days equals 4.4 quarters rather than 4.6.

in "minimum ferry condition" and were not in "airworthy condition" (DX 354, p. 2). The remaining 19 aircraft complied with federal airworthiness directives only up to December 31, 1961 (DX 354, p. 2). Sales of "non-operating" aircraft of this type by another airline were omitted by TWA in computing the market price decline (Tr. 3773-74).

As noted above, these airplanes were made available for sale on June 21, 1961. Piston No. 47, which was sold on June 23, 1961, had over seven-eighths of its flying time after overhaul remaining for its airframes and approximately three-fourths of its flying time after overhaul remaining for its engines (Aircraft N90830 in TWA Ex. 421). In view of the proof that a complete overhaul of a four-engine aircraft costs more than $100,000 and in view of TWA's argument that its trend lines are valid despite differences in overhaul times because airlines provide progressive maintenance and do not allow aircraft to be flown until they require a complete overhaul (Plaintiff's Brief 239) and the significance which TWA attaches to the time since overhaul in determining the value of aircraft (Tr. 1723, 3633), TWA's claim with respect to these 25 aircraft would be disallowed.

Even if all 25 airplanes had been airworthy, the difference in value between these airplanes in a completely used up condition and Piston No. 47 which was sold shortly after these planes were made available for sale is at least three-fourths of the cost of overhaul or at least $75,000 per airplane. TWA received an average of approximately $16,000 for each of these 25 aircraft, and the price received for Piston No. 47 (TWA Ex. 6B, p. 83) was not more than $75,000 higher.

It should be noted that even if damages could be awarded with respect to these 25 aircraft, defendants would not be responsible for 60 days of the delay in making them available for sale because these 25 aircraft are Piston Nos. 76-100 in Annex F, the retirement of which is linked to the Convair 880 aircraft. This limitation alone would result in a diminution of TWA's damages by $810,000 before trebling.

V.

Losses due to disruption of business.

Plaintiff makes a separate claim for damages for disruption of its business at the time of transition to jets. It bases this claim primarily upon the following allegations of the complaint:

> "53. As additional results of the offenses hereinabove alleged, TWA further has been immediately and irreparably injured in that: * * * (f) the period of disruption caused by the transition from non-jet to jet operations has been extended * * * (g) the co-ordination of the change from non-jet to jet operations has been disrupted over an extended period of time; * * * (h) the management and business of TWA has been disrupted over an extended period of time."

Plaintiff presented its detailed evidence to support this claim through the prepared testimony of Raymond F. Rowe, Staff Vice President—Transportation Training (TWA Ex. 8) and Virgil L. Walstrom, Director—Maintenance and Overhaul Planning (TWA Ex. 9). The damages are stated by these witnesses to be the direct result of defendants' activities which delayed the deliveries to the plaintiff of Convair 880s. The amount of the claim under this Section V is as follows:

(1) $350,246 in monthly guaranteed salaries which TWA paid to 24 captains and 14 flight engineers who had to be held off schedules because the Convair 880 aircraft, for which they had been trained, had not arrived; and since there were no other aircraft available on which they were qualified to operate, TWA paid the above sum to these employees while they remained idle and "substantially unproductive" to the Airline. (TWA Ex. 8, p. 3).

(2) $177,260 as the cost of refresher training for 62 captains, 40 first officers and 45 flight engineers. (TWA Ex. 8, p. 4).

(3) $42,972.65 as the cost of subsequent retraining of the ground crew. (TWA Ex. 9, pp. 3-5).

These three claims total $570,478.65, and they appear not to overlap in any way the claims reflected in the computations of Price, Waterhouse (TWA Ex. 7) or Coverdale (TWA Ex. 4).

Rowe testified that TWA's training plans at first were based on the original contract dates for delivery of the CV-880s, i.e., that deliveries were to commence in November 1959, with scheduled service to commence in March 1960. Delays in delivery ensued, however, and full scale training of flight crews did not commence until February 1960. As noted elsewhere in this opinion it was clear to the plaintiff at or about this time that deliveries would not begin until May 1960. It appears to me that the plaintiff was justified in commencing the flight training courses in February 1960, as Rowe testified, in preparation for deliveries in May.

The first CV-880 was in fact delivered in May 1960 and used for training purposes. Rowe stated (TWA Ex. 8) that "by summer of 1960, adequate flight-crews had been trained." Elsewhere in this opinion, I have concluded that commencing in May 1960 the further delays in deliveries of 880s were caused by defendants. Rowe testified, without contradiction that in the summer of 1960 flight crew training was drastically reduced because the 880s had not been delivered; co-pilots were returned to service on piston equipment; but captains and flight engineers could not be returned for such service without additional retraining;

that TWA was obligated to pay their salaries even though no 880s were available. (TWA Ex. 8, pp. 2 & 3).

Deliveries of the 880s were resumed in January 1961, by which time the flight crews required refresher training in order to be qualified under TWA standards and FAA regulations (id. p. 4). Walstrom testified that similar refresher training in December 1960 was required for ground crews. (TWA Ex. 9).

I am of the opinion that the plaintiff took reasonable steps to mitigate its losses caused by the delays in deliveries that were due to the defendants' actions.

There is set forth below certain supplementary information developed in the cross-examination of Rowe:

¶ Annex A to TWA Ex. 8 does not list all captains and flight engineers who had completed Convair training prior to the commencement of 880 revenue service in January 1961, but only those who were held off regular service flights so that they would be available to fly Convair 880s when delivered (Tr. 6594).

¶ A TWA pilot normally would fly about 750 to 800 hours a year (Tr. 6597).

¶ While a pilot is in training, the pilot does not perform regular service flight on other types of aircraft (Tr. 6599-6600). In order to qualify for scheduled flight operation, FAA regulations require that a pilot complete a proficiency check every six months on the type of equipment he is going to perform on, and also complete at least three take-offs and landings to a full stop within the last 90 days (Tr. 6601).

¶ TWA regulations for safety reasons prohibit a pilot from flying piston equipment after he has completed tran-

sition on jet equipment without transition back to the piston equipment (Tr. 6602).

¶ Training for a captain or first officer consists of three weeks of ground school, 12 to 18 hours of simulator training, 8 to 20 hours transition training on the aircraft, and then 20 hours of line time (regular commercial service with passengers) under supervision. Training for a flight engineer is the same except that he requires four weeks of ground school (Tr. 6602-6603).

¶ Because of TWA safety regulations, when a captain or flight engineer begins training on a new type of aircraft, he devotes his full time to that training and does not fly other craft even though he is otherwise qualified to fly them (Tr. 6607).

¶ The above-stated TWA regulation does not apply to first officers [co-pilots] (Tr. 6609, [6613]).

¶ TWA regulations are approved by the FAA and consequently must be complied with like any other FAA regulation (Tr. 6610-6611).

¶ In order to return to piston equipment, a captain is required to complete one hour of transition on piston aircraft and at least one ILS approach and three take-offs and landings. Then in order to return to jet aircraft again, he is required to complete two hours of transition training and three take-offs and landings with jet equipment (Tr. 6611-6612).

¶ The guaranteed salary of captains, co-pilots and flight engineers was computed on the basis of an 85 hour month even though the union contract only guaranteed salary for a 60-hour month (Tr. 6615-6616).

¶ Mr. Rowe felt that the real reason for not returning the captains and flight engineers to piston aircraft was the belief that the Convair 880s were expected momentarily and crews would be needed to serve on them. (Tr. 6626).

There is set forth below certain supplementary information developed in the cross-examination of Walstrom:

¶ About 80 hours of classroom training was necessary to qualify a ground crew mechanic for service on a Convair 880 aircraft (Tr. 6550-6551).

¶ The minimum of 80 hours training was a TWA requirement and not specifically required by the FAA (Tr. 6555-6556).

¶ The ground crew were trained mainly where they were domiciled although there was a "minor amount of travel involved" (Tr. 6556-6557).

¶ Refresher training of the ground crew would be necessary whenever the "considerable time" of three months or more had elapsed since initial training and actual contact with the airplane (Tr. 6570).

¶ TWA did not hire any additional instructors to conduct the refresher training on Convair 880s (Tr. 6573).

¶ All the refresher training listed in Annex A consisted of classroom training (Tr. 6573).

¶ Refresher training took place in lieu of regular productive work (Tr. 6574).

¶ While taking refresher training, the ground crew was not on overtime pay (Tr. 6574).

¶ Walstrom was "sure" that maintenance suffered during the period that refresher courses were given, and that "it resulted in some degree of overtime over what we would

normally have had." Walstrom guessed that "it is just axiomatic that it has to be handled in some way, the work that has to be done. And one way it can come out is overtime." (Tr. 6574-6575).

The supplementary information thus developed in cross-examination of Rowe and Walstrom supports the plaintiff's entire claim under this Section V, and accordingly said claim is allowed for the full amount of $570,478.65.

VI.

Alternative over-all claim for damages based upon comparative profitability study.

Up to this point we have considered the plaintiff's claims for damages suffered by it as a result of specified allegations of the complaint. The plaintiff also claims under this Section VI damages "for the totality of its injuries set forth in the complaint." It claims certain additional injuries not covered by the preceding portions of this opinion as follows:

1) Injuries to TWA piston fleet, being included in the term "aircraft" in the following portion of paragraph 10 of the complaint:

"It was the intent of plaintiff and Atlas, inter alia • • •

(d) that defendants would have TWA as a captive market and would supply the requirement of TWA for aircraft, including jet-powered aircraft, upon terms advantageous to themselves;

(e) that the requirements of TWA for aircraft, including jet-powered aircraft, would be enlarged for the benefit of defendants and Atlas by various means."

Other paragraphs of the complaint cited under this heading are as follows:

"TWA has been denied the right freely to acquire aircraft necessary to its operations and has received such aircraft as were made available to it in an untimely manner (par. 50)."

"TWA has been further and immediately injured in its business • • • in that defendants have allowed TWA to procure financing essential for the acquisition of

aircraft only upon the condition that TWA would accept such aircraft as the defendants dictated, * * * ." (par. 51)

2) Injuries relating to the disruption of the management and business of TWA. Under this heading plaintiff cites paragraph 53(h) of the complaint reading as follows:

"As additional results of the offenses hereinabove alleged TWA further has been immediately and irreparably injured in that * * *

(h) The management and business of TWA has been disrupted over an extended period of time."

3) Injuries relating to the disruption of the transition from non-jet to jet operations (over and above the disruption claims previously discussed above under Section V of this opinion). Under this heading the plaintiff cites paragraphs 53(f) and (g) of the complaint which were quoted above in discussion of the disruption claimed under Section V.

4) Injuries to TWA's good will (and consequent ability to attract passengers in competition with other airlines) due to the many years of victimizing of TWA by the defendants. Under this heading plaintiff cites paragraph 52(e) of the complaint which reads:

"TWA had been further injured in the following manner * * *

(e) TWA's good will in its business in serving passengers throughout the world was diminished."

This Section VI claim is presented by plaintiff as an over-all alternative claim, i.e., it includes damages incident to all of the claims discussed above in Sections I-V and

damages for the above listed four categories of additional injuries not covered by Sections I-V.

The testimony in support of this alternative over-all claim for damages was presented in the form of a very brief comparative profit study prepared by Coverdale & Colpitts. It attempted to measure the extent to which the operating profits (not net profits) earned by the plaintiff during the years 1959-1963, inclusive, fell short of such profits that plaintiff would have attained had its profits for those years been on the same level vis-a-vis certain other air carriers, as the profits earned by it during the years 1964 and 1965. The comparison used for TWA's International Division was with the Atlantic Division of Pan-Am. The comparison for TWA's Domestic Division was based upon a comparison with American Airlines, Inc. These airlines were the ones most nearly comparable in the opinion of Coverdale & Colpitts with TWA. The basis upon which the study was made was that during the years 1959-1963 the plaintiff's business was handicapped by unlawful restraints or monopolization of the defendants, whereas during the so-called base years of 1964 and 1965 the effects of the defendants' alleged illegal actions had been substantially dissipated and accordingly the profit figures for those two years represented operations when the plaintiff's business was not handicapped by unlawful restraints or monopolization. The comparative profitability study is plaintiff's Exhibit 4(b) and was prepared under the direction of Wemple and submitted as a portion of his sworn direct testimony. No study of comparative operations policies or physical facilities or service policies was made by Coverdale.

The Coverdale Report found that TWA's 1959-1963 route structure was not materially different from what it was in

1964 and 1965. It also concluded that the route structures of the Atlantic Division of Pan-Am and of American were not materially different in 1959-1963 from what they were in 1964 and 1965.

The operating profits during the base years 1964 and 1965 of TWA's Domestic and International Divisions and of the air carriers for purposes of comparison were as follows:

	1964	1965	Average
	(Millions)		
TWA International	$34.6	$47.6	$41.1
TWA Domestic	50.9	49.8	50.3
PAA-Atlantic	26.1	33.7	29.9
American (Domestic)	61.2	70.9	66.1

The ratios of TWA's operating profits to those of the air carriers selected for comparison in 1964 and 1965 were as follows:

	1964-1965 Average Operating Profit (Millions)	Ratio, TWA to Other
TWA International	$41.1	
		1.37
PAA-Atlantic	29.9	
TWA Domestic	$50.3	
		.76
American (Domestic)	66.1	

The operating profits (losses) in each of the years 1959 through 1963 of TWA and the selected air carriers were as follows:

	1959	1960	1961	1962	1963	Total
	(Millions)					
AA-Atlantic	$17.5	$16.6	$ 4.5	$12.5	$33.3	$ 84.4
merican Domestic)	24.5	24.7	19.1	19.3	43.9	131.5
WA International	(—7.8)	17.1	(—13.5)	15.3	23.3	34.4
WA Domestic	26.3	(—0.9)	(—24.2)	(—7.4)	17.5	11.3

Application of the TWA profit ratios determined for the base years 1964 and 1965 to the total 1959-1963 profits of the selected air carriers, establishes that TWA's profits would have been as set out below if TWA had attained a profit level comparable to that reached by TWA in 1964 and 1965:

1959-1963 Profits	(Millions)	1964-1965 Profit Ratio, TWA to Other	Calculated 1959-1963 TWA Profits (Millions)
PAA-Atlantic	$ 84.4	1.37	$115.6
American (Domestic)	131.5	.76	99.9

The difference between the profits calculated by this method and TWA's actual profits are as follows:

Comparison Airline	Calculated 1959-1963 TWA Profits (Millions)	Actual TWA Profits		Difference (Millions)
PAA-Atlantic	$115.6	TWA International	$34.4	$ 81.2
American (Domestic)	99.9	TWA Domestic	11.3	88.6
				$169.8

The operating profits earned by TWA's International Division in the period 1959 through 1963 were about $81 million less than they would have been if that Division's profit, as compared with PAA-Atl., had been as high as in the years 1964 and 1965. The operating profits earned by TWA's Domestic Division in the period 1959 through 1963 were about $89 million less than they would have been if that Division's profit, as compared with American, had been as high as in the years 1964 and 1965.

In my opinion the Coverdale comparative profit study does not provide an acceptable measure of damages in this proceeding, and I disallow the over-all claim based upon it. The allegations in the complaint relating to it are very much less definite and certain than the specific allegations with which the claims under Sections I-V of the opinion have dealt and to a considerable extent are overlapping therewith. Under Sections I-V of this opinion, the plaintiff claims a total of approximately $104 million and accordingly the claim for additional damages under this alternative claim amounts to an additional $65 million of general damages based solely upon the comparative profit study.

The objections of the defendants to the basis of the study, and the validity of the comparisons made therein for the purpose for which it is sought to be used are, in the main, valid.

The fact that many of the routes of the airlines used for comparative purposes parallel those of TWA (see maps attached to the study) is in itself not a sufficient basis for indicating that comparable earnings should follow therefrom. Some additional factors required to make the comparison valid in such a complex business, all of which are missing from the study, are comparative equipment and physical facilities and a myriad of management accounting and service factors. The variance in historical load factors in earlier years between TWA and the other airlines is one reflection of the importance of these missing factors. See *Wolfe* v. *Nat'l Lead Co.*, 225 F. 2d 427 (9th Cir.) 1955.

Furthermore, it seems inherently invalid to raise T.W.A.'s 1959-1963 results by using the 1959-1963 levels of operating profit of American and Pan-Am. Both of these carriers actively compete with TWA on its major routes. If TWA were to have significantly increased its revenues by introducing additional jet service in 1959-1963, it is

obvious that much of the increased revenue would have represented a diversion from its major competitors, including American and Pan-Am. Since the improvement in TWA would have lowered the operating profit of its two major competitors, it would not seem proper to estimate the operating profit of reconstructed TWA on the basis of the unreduced levels of operating profit of American and Pan-Am.

It also seems to me that the two alternative methods used by Coverdale in computing damages contain significant inconsistencies (TWA Ex. 4(b) and 4(c)). In my opinion the methodology used by Coverdale in plaintiff's Exhibit 4(c) is more precise and realistic than that shown in its comparative profitability study (TWA Ex. 4(b)). At one point the following colloquy occurred during the cross-examination of Wemple (Coverdale):

> "Q. Have you any opinion, Mr. Wemple, as to which between 4B and 4C represents the proper approach or the better approach to the determination of net operating profits? A. I have no opinion on that matter.
>
> Q. In 4(c) you come out with * * * $64 million and here you come out with $170 million, and still you have no opinion. A. Correct." (Tr. 6139-40) (See also Tr. 6134 and Simat Def. X 271A. p. XI-1).

The plaintiff did not call any other witness to support the Comparative Profit Study.

In my opinion the evidence to support the study is conjectural. The damages awarded in respect of Section I-V of this opinion adequately reflect the totality of the plaintiff's damages. When applied to the underlying facts the Comparative Profit Study produces results which are unrealistic (Def. Brief, p. 305).

VII.

Interest on damage claim.

The plaintiff in its brief takes the position that any award should carry interest, as an exercise of the discretionary authority of the trier of the facts to include in the award a sum constituting prejudgment (or moratory) interest, which would itself be subject to trebling (Plaintiff's Brief, p. 284). It alleges that the defendants, "through skillful exercise of their rights of appeal and through vigorous and lengthy contests of TWA's damage case," have succeeded in postponing for over five years a determination of the sum that should be awarded to TWA. Furthermore, TWA asserts that failure to record the operating profits which should have been recorded in each year, 1959 through 1963, and other elements of damage, have deprived plaintiff not only of the absolute amounts, but also of the normal increment on these sums.

The defendants in their brief state that the matter of award of interest should not be covered in the Special Master's opinion on damages but should be reserved for the trial judge who passes upon the Special Master's report.

I have interpreted the order of reference to the Special Master as requiring me to express my opinion on this subject.

The first line of cases to be considered establishes the Federal rule that interest may be allowed upon unliquidated claims.

In *Miller* v. *Robertson,* 266 U. S. 243, 258 (1924), the court allowed interest upon unliquidated claims:

> "Generally interest is not allowed upon unliquidated damages. *Mowry* v. *Whitney,* 14 Wall. 620, 653, 20 L. Ed. 860 (1871). But when necessary in order to arrive at fair compensation, the court in the exercise of a fair discretion may include interest or its equivalent as an element of damages."

In *Miller* the claim was capable of reduction to a specific monetary amount with a minimum degree of difficulty. There the buyer refused to accept ore and the seller sued for the difference between the contract price and the lesser price obtained when the seller resold ore after the buyer's refusal. The Supreme Court said the lower court properly allowed interest since the claim was a "debt" but suggested that such an award was within its discretion.

In *Concordia Insurance Co.* v. *School District No. 98,* 282 U. S. 545 (1931), the following statement appears:

> "In the absence of an authoritative state decision to the contrary, there was nothing in either [statute] which required the trial court in rendering its judgment to depart from the rule in respect of the allowance of interest which this court has recognized, namely, that, even in the case of unliquidated damages, 'when necessary in order to arrive at fair compensation, the court in the exercise of its sound discretion may include interest or its equivalent as an element of damages.' (citing *Miller, supra*)" 282 U. S. at 544-545.

In *National Airlines, Inc.* v. *Stiles,* 268 F. 2d 400 (5th Cir. 1959) the court concluded that interest was clearly in order. The case appears to be an expansion of the doctrine insofar as it allows interest in a situation where the damage is pecuniary but not subject to close valuation. An action had been brought under the Death on the High Seas Act by the widow of a passenger who was killed when the

defendant's airplane crashed. In awarding interest, the court pointed out that a party suffering a financial loss from the death of a "breadwinner", just as from the destruction of a ship, could be adequately compensated for the loss only "if the award is made at the time of the loss or if interest for the time between loss and payment is allowed." 268 F. 2d at 405. In so holding, the court stated:

> "It is quite clear that with as many uncertain factors as there are for consideration by the court in arriving at the fair value of plaintiff's pecuniary loss the length of time to the date of judgment may sometimes be taken into consideration by the court in determining the amount of its award." 268 F. 2d at 405.

After reviewing the congressional intent, the court affirmed the lower court's award stating:

> "... Congress clearly did intend to provide full compensation for the loss; and . . . the courts cannot carry out this clear mandate without taking into account the inadequacy of delayed compensation." 268 F. 2d at 406.

The court pointed out that admiralty stands on a different footing from the common law regarding damages, "for the general rule in common law had traditionally been that prejudgment interest could not be allowed on an unliquidated tort claim."

Shortly after the *National Airlines* decision, a Federal case was decided which laid to rest the question of power of the Federal courts to award prejudgment interest on unliquidated claims under Federal statutes. This case, which involved the High Seas Act, was *Moore-McCormack Lines, Inc.* v. *Richardson,* 295 F. 2d 583 (2d Cir. 1961), *cert. denied,* 368 U. S. 989 (1962). In the *Moore-McCormack* decision, the court stated:

> "Interest was never refused on unliquidated claims from any doubt that some financial loss is actually suffered from delay in receiving money. Theoretically, refusal was based on the concept that interest was payable only on a 'debt' and that no debt could be due until the liability had been fixed. (citation omitted) McCormack traces the distinction to a survival of the medieval distaste for interest as 'usurious.' (citation omitted) A further explanation sometimes advanced is that a debtor should not be burdened with prejudgment interest upon an obligation so nebulous that he must necessarily look to the courts to fix its scope. Similar considerations would, however, seem to support the disallowance of prejudgment interest where liability is in doubt as to a 'liquidated' claim. But since the courts have not seen fit to deny prejudgment interest in the latter case, we see no reason why they should not grant it in the former." 295 F. 2d at 594.

It thus appears that the Federal courts have discretionary authority to allow interest on unliquidated claims, as well as liquidated claims, in proper cases where the statute is silent as to award of interest.

Next to be considered is a series of Federal cases standing for the proposition that when a penalty is authorized by the statute, it may be improper to award interest in addition. These cases first arose under the Fair Labor Standards Act but their rule of law regarding interest was made applicable to the private antitrust field by Judge Wyzanski in *Cape Cod Food Products, Inc.* v. *National Cranberry Association,* 119 F. Supp. 900 (D. Mass. 1954).

Cape Cod was an action by a food products company against individuals and corporations for damages claimed to have been sustained by the plaintiff by reason of an alleged conspiracy on the part of the defendants to violate

the antitrust laws. Judge Wyzanski charged the jury as follows:

"Finally, I instruct you . . . that you are not to allow any interest of any kind. The problem of interest is one which has not yet been authoritatively settled by the Supreme Court of the United States. The ruling that I make is in accordance with the ruling of Judge Caffey in the Southern District of New York, and contrary to an earlier ruling of my own. But I am now bearing in mind a decision in the Supreme Court of the United States in connection with the Fair Labor Standards Act, 29 U. S. C. A. §201 *et seq.*, and double damages, and I have concluded that in a statute where treble damages are available, interest is not appropriately allowed. So you will please not take into account the problems of interest of any kind." 119 F. Supp. at 911.

Judge Wyzanski cites in support of his conclusion *Brooklyn Savings Bank* v. *O'Neil*, 324 U. S. 697 (1945).

Brooklyn Bank was an action for back wages and liquidated damages under Section 16(b) of the Fair Labor Standards Act. That aspect of *Brooklyn Bank* relevant to the situation presently under consideration centers around the court's consideration of whether an employee recovering minimum wages and liquidated damages under Section 16(b) is also entitled to interest on the sums so recovered. Mr. Justice Reed, speaking for the Court, first stated that the question of the right to interest on sums recoverable under a federal statute is a question of federal, not local, law. He then went on to disallow the interest requested and, in so doing, made the following statements at pp. 715-16:

"Interest is not recoverable in judgments obtained under §16(b). As was indicated in our decision in *Overnight*

Motor Co. v. *Missel,* 316 U. S. 572 (1942), §16(b) authorizes the recovery of liquidated damages as compensation for delay in payment of sums due under the Act. Since Congress has seen fit to fix the sums recoverable for delay, it is inconsistent with Congressional intent to grant recovery of interest on such sum in view of the fact that interest is customarily allowed as compensation for delay in payment. To allow an employee to recover the basic statutory wage and liquidated damages, with interest, would have the effect of giving an employee double compensation for damages arising from delay in the payment of the basic minimum wages. See *Royal Indemnity Co.* v. *United States,* 313 U. S. 289, 296. Allowance of interest on minimum wages and liquidated damages recoverable under §16 (b) tends to produce the undesirable result of allowing interest on interest. See *Cherokee Nation* v. *United States,* 270 U. S. 476, 490. Congress by enumerating the sums recoverable in an action under Section 16(b) meant to preclude recovery of interest on minimum wages and liquidated damages."

Shortly after the *Brooklyn Bank* decision, the Supreme Court applied the rule in that case to penalties incurred under the Agricultural Adjustment Act of 1938. In *Rodgers* v. *United States,* 332 U. S. 371 (1947), the District Court rendered judgment in favor of the Government for penalties incurred under the Act for marketing cotton in excess of farm quotas plus interest from the date the penalties became due to the date of judgment. The Circuit Court of Appeals affirmed this decision and the Supreme Court granted *certiorari.* In an opinion by Mr. Justice Black, the Supreme Court reversed the lower court's decision and denied the propriety of awarding interest.

In *Rodgers,* the petitioner produced and sold more cotton than allotted him under Part IV of the Agricultural

Adjustment Act of 1938 as amended. Stat. 31, 55-60; 55 Stat. 203; 7 U. S. C. A. §§ 1281 *et seq.* The United States instituted suit to recover money "penalties" to which non-cooperating farmers are "subject" for quota violations. Mr. Justice Black, after stating that federal law controls since the penalties are imposed under an act of Congress, said:

"Since penalties under the Agricultural Adjustment Act are imposed under an Act of Congress, they bear interest only if and to the extent such interest is required by Federal law (citations omitted). There is no language in the Agricultural Adjustment Act or in any other act of Congress which specifically allows or forbids interest on penalties such as these prior to judgment. But the failure to mention interest in statutes which create obligations has not been interpreted by this Court as manifesting an unequivocal congressional purpose that the obligation shall not bear interest. (citation omitted) For in the absence of an unequivocal prohibition of interest on such obligations, this Court has fashioned rules which granted or denied interest on particular statutory obligations by an appraisal of the congressional purpose in imposing them and in the light of general principles deemed relevant by the Court. (citation omitted)" 332 U. S. at 373.

The opinion next contains the following statements cited in the Plaintiff's brief in support of the proposition that interest should be awarded in a private antitrust action:

"As our prior cases show, a persuasive consideration in determining whether such obligations shall bear interest is the relative equities between the beneficiaries of the obligation and those upon whom it has been imposed. And this court has generally weighed these relative equities in accordance with the historic judi-

cial principle that one for whose financial advantage an obligation was assumed or imposed, and who has suffered actual money damages by another's breach of that obligation, should be fairly compensated for the loss thereby sustained." 332 U. S. at 373.

However, the actual holding of *Rodgers* undercuts the relevance of this statement to the present situation. *Rodgers,* as mentioned above, appears to be the application by the Supreme Court of the rule it established in *Brooklyn Bank.* In disallowing prejudgment interest, the Court made the following observations:

". . . [W]e think that the question of interest on the penalties provided in the Agricultural Adjustment Act on non-cooperators should be governed by the rule previously applied by this Court to criminal fines. Although Congress neither wholly prohibited nor made it a crime for a farmer to market cotton in excess of his quota, still it imposed sanctions upon non-cooperators analogous to those of the criminal law. The purpose of Congress in requiring payment of penalties into the Federal Treasury for marketing above the allotted amount was not to raise revenue for the Government's financial advantage but to deter farmers from planting and marketing more than their quotas. In fact, the whole philosophy of the Agricultural Adjustment Act is based on the theory that the public will be benefited, not damaged, if farmers produce and market within these quotas, thereby avoiding the payment of penalties." 332 U. S. 374-375.

The penalties imposed by the Fair Labor Standards Act and the Agricultural Adjustment Act are analogous for the question here under consideration to those imposed by the trebling of damages in a private antitrust action. The situation in which TWA finds itself is not unlike the situa-

tion of the government in the *Rodgers* case insofar as the penalties are concerned and *Rodgers* leaves no doubt but that interest cannot run on that part of the treble damages which is the "penalty" or "deterrent factor." But, as *Rodgers* was speaking only to penalties in and of themselves, the case does not necessarily mean that interest could not run on the primary damage claim. That interest can run on this primary amount is, in fact, the contention of TWA.

In *Brooklyn Bank, supra,* the court merely stated, without severing withheld wages from liquidated damages, that "[t]o allow an employee to recover the basic statutory wage and liquidated damages, with interest, would have the effect of giving an employee double compensation for damages arising from delay in the payment of the basic minimum wages." 324 U. S. at 715. It would seem, then, that *Rodgers* did in no way qualify the *Brooklyn Bank* holding. *Rodgers* was discussing only penalties so the Court talked in terms of penalties. *Brooklyn Bank* was discussing actual damages plus liquidated damages, and the Court spoke in terms of disallowing interest on both with the suggestion that the liquidated damages had the same effect as interest insofar as the claimant was concerned. Therefore, the *Rodgers* decision seems in no way to support TWA's contention that interest should be allowed on the primary amount in the situation presently being considered.

This interpretation of *Brooklyn Bank* is borne out in *Asselta* v. *149 Madison Ave. Corp.*, 95 F. Supp. 856 (S. D. N. Y. 1951). There the problem and its solution depended upon an interpretation of the effect of § 11 of the Portal-to-Portal Act of 1947, 294 U. S. C. A. § 260, on § 16(b) of the Fair Labor Standards Act, 29 U. S. C. A. § 216(b).

Under the Portal-to-Portal Act, the awarding of liquidated damages as provided in the Fair Labor Standards Act was no longer mandatory, but, by § 11, was placed within the sound discretion of the court. Judge Kaufman, in distinguishing the *Brooklyn Bank* decision, made the following observations:

> "Clearly, interest on an award in which no liquidated damages were granted, such as in the present case, would not be barred by the holding in Brooklyn Savings Bank v. O'Neil. An analysis of the opinion in the O'Neil case indicates that the Court regarded the provision for liquidated damages as a substitute for interest, which, the Court said, 'is customarily allowed as compensation for delay in payment.'" 95 F. Supp. at 858.

The stage was then set for Judge Wyzanski's adoption of the Federal Rule concerning interest on penalties to private antitrust litigation where treble damages are available.

Although interest is traditionally considered compensation for delay in the payment of money rightfully due the claimant, it appears that where penalties are involved, as in the trebling of the principal amount in a private antitrust action, such penalty is conceptually in lieu of interest. TWA, in the situation presently under consideration, is not entitled to moratory interest.

VIII

Recapitulation and Final Award

The schedule below compiles the separate determinations (prior to adjustments as set forth below) made in the foregoing sections of this Report.

SUMMARY OF SEPARATE DETERMINATIONS

		($ millions)		
SECTION I	*Losses in operating profits due to inadequacy of jet fleet*			
	(1) International Division		22.4	
	(2) Domestic Division	29.3		
	less: adjustment with respect to earlier delivery of Convair aircraft	2.5		
			26.8	
			49.2	
	less: cost of capital to effect earlier and additional purchase of jets (increase in gross interest cost)		21.6	
				$27,600,000

SECTION II	*Losses due to being required to lease jets*		
		12.7	
	less: cost of capital to effect purchase of jets	7.4	
			5,300,000
SECTION III	*Losses connected with financing the jets*		
	(1) Damages with respect to equity financing	-0-	
	(2) Damage with respect to debt financing	-0-	
			-0-
SECTION IV	*Loss due to delay in disposal of displaced piston aircraft*		-0-
SECTION V	*Loss due to disruption of business*		570,478.63
	TOTAL		$33,470,478.63

The determination of the amount of damages in the previous sections of this Report has generally followed the separate statement of the several aspects of the over-all claim as set forth by TWA. However, these various interrelated aspects of the over-all claim were consolidated by Price Waterhouse and adjusted in connection with TWA's historical financial statements. The result of the Price Waterhouse analysis, which was put forward by plaintiff as its final claim, developed the total sum of $104.5 million before trebling (TVA Exs. 7 and 50).

The defendants have not raised any serious question as to the Price Waterhouse analysis. Although I have not accepted some of the underlying calculations by other experts which were incorporated into the Price Waterhouse report, I do accept the basic principles of combination and adjustment. The Price Waterhouse results have been modified to incorporatethe specific determinations in the foregoing sections of this Report.

In Section III of this Report I have set forth my determination that thereshould be no damage award with respect to financing. Thisdetermination reduces the Price Waterhouse total sum by $32.6 million, leaving $71.9 million. In Sections I and IV I have made specific determinations which accept in part and reject in part the underlying data upon which this figure of $71.9 million is based. These adjustments include a reduction with respect to the Domestic Division operating claim, of $2.5 million; an increase in gross interest cost of $29.0 million; and making no provision for any increase in proceeds with respect to the sale of piston aircraft and other property retirements.

These adjustmets appear in tabular form below in the "Consolidated Statement of Award". Adopting the adjusted Price Waterhouse formulation together with the separate award for losses due to disruption of business

stated in Section V, I determine that the over-all award for damages should be $45,870,478.65 (before trebling).

CONSOLIDATED STATEMENT OF AWARD

	($ millions)	
A. *Increase in gain from operations with respect to earlier delivery, additional purchase, and owning rather than leasing jet aircraft*	76.8*	
less: adjustment with respect to earlier delivery of Convair aircraft	2.5	
	74.3	
less: increase in proceeds relating to earlier sale of piston aircraft	-0-	
less: increase in gross interest cost	29.0	
		$45,300,000
B. *Losses connected with financing the jets*		
(1) Damages with respect to equity financing	-0-	
(2) Damages with respect to debt financing	-0-	
		-0-
C. *Loss due to disruption of business*		570,478
		$45,870,478

* Source: TWA Ex. 50 as amended by TWA Exs. 42 and 43 and DX 262.

On April 9, 1968, TWA moved on the record to amend its complaint to ask damages in such amount as the Special Master should find to have been established by the evidence. TWA gave written notice on May 2, 1966, of intent to make such motion at the close of the hearing, and there is no suggestion of surprise. I have determined that no amendment of the complaint is required in order to award the plaintiffs the damages hereby awarded because the previous motion of the plaintiffs to amend their complaint to increase the amount of damages sought to be recovered, as granted by Judge Metzner, was sufficiently broad to authorize the award hereby made.

Pursuant to 15 U. S. C. § 15, the damages of $45,870,478.65 determined above are trebled to $137,611,435.95.

The plaintiffs' request for award of counsel fees and costs is referred to the District Court for decision.

The foregoing Report shall constitute my findings of fact and conclusions of law.

/s/ HERBERT BROWNELL
Special Master

Summary of Argument	21
Argument	
A. Defendants were not denied due process of law by the district court's pretrial discovery orders. (Petition, Section A)	25
B. It is not a violation of due process to enter and enforce a default judgment under Rule 37 against defendants who wilfully and with full knowledge refuse to permit discovery of evidence of vital importance on all contested issues. (Petition, Section B)	32
C. There is no basis in law or in conscience for defendants to pay less than the amount of damages for which they were found liable after a contested evidentiary damage hearing. (Petition, Section C)	38
D. The default judgment was not precluded by the Federal Aviation Act or any action of the Civil Aeronautics Board. (Petition, Section D)	41

PAGE

E. That Toolco "mismanaged" TWA's affairs is no defense to liability under the antitrust laws. (Petition, Section E) 47

F. Defendants cannot refuse discovery and defend on the merits on the basis that there is no proof they were more than "potential" competitors. (Petition, Section F) 49

G. The Special Master and the courts below correctly found that TWA, in proving the amount of its damages, had demonstrated that each item recovered flowed from the allegations of unlawful conduct and resultant injuries admitted by defendants' default. (Petition, Section G) 51

H. The precedential impact of the decisions below. (Petition, Section H) 56

OCTOBER TERM, 1971

No. 71-827

HUGHES TOOL COMPANY
and
RAYMOND M. HOLLIDAY,
Petitioners,

v.

TRANS WORLD AIRLINES, INC.,
Respondent.

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

BRIEF FOR RESPONDENT TRANS WORLD AIRLINES, INC. IN OPPOSITION

The petition herein seeks review of a decision by the United States Court of Appeals for the Second Circuit entered September 1, 1971 [108a *et seq.**] on which rehearing was denied on September 28, 1971 [163a-164a] and which is reported at 449 F.2d 51. The decision of the court of appeals modified as to the rate of interest applicable and otherwise affirmed the opinions and judgment of the United States District Court for the Southern District of New York reported at 308 F. Supp. 679 [50a *et seq.*] and 312 F. Supp. 478 [81a *et seq.*]. These decisions of the district court and of the court of appeals confirmed in its entirety

* Citations with the suffix "a" are to pages of the appendix to the petition.

the Report and Award of the Special Master in this case, Hon. Herbert Brownell, filed September 21, 1968 (the "Brownell Report").

By their petition, Hughes Tool Company ("Toolco") and Raymond M. Holliday (collectively, "defendants") are also seeking reconsideration of matters previously decided by the United States Court of Appeals for the Second Circuit in a decision entered on June 2, 1964 and reported at 332 F. 2d 602 [19a *et seq.*]. Writs of certiorari with respect to this earlier decision were granted on November 16, 1964 and, after full briefing and argument, were dismissed on March 8, 1965 as having been improvidently granted, as had been suggested during oral argument by counsel for TWA. 379 U. S. 92 [44a], 380 U. S. 248, 249 [45a, 46a].

ORDERS AND OPINIONS BELOW

The "Opinions Below" listed in defendants' petition at pp. 1-3, and the separately bound appendix accompanying defendants' petition, omit (a) the opinions and orders of the district court in the course of supervising pretrial discovery, which the first two of defendants' "Questions Presented" ask this Court to review, (b) the opinion and order of the district court dated January 4, 1966, refusing to make the finding of fact on which the fifth of defendants' "Questions Presented" is logically dependent, and (c) the Brownell Report, which sets forth the Special Master's findings that plaintiff Trans World Airlines, Inc. ("TWA") had established that it was damaged in the amount of $45,870,478.65 by defendants' conduct in violation of the antitrust laws, as alleged in the complaint.

The Brownell Report, with its original pagination, has been filed herein and in No. 71-830 as a separately bound

Appendix to TWA's Conditional Cross-Petition for a Writ of Certiorari and Supplemental Appendix to Accompany Brief in Opposition. Certain of the relevant pretrial orders and opinions of the district court, not otherwise available to this Court, are also reprinted as an annex at the end of this brief.*

QUESTIONS PRESENTED

The seven "Questions Presented" listed in the petition are dealt with, in the same order, in the Argument (p. 25 *et seq., infra*). That Argument and the Counter-Statement of the Case (p. 4 *et seq.*) demonstrate that none of these questions is actually presented on the record in this case.

A threshold question is presented, however, as to the extent to which principal issues defendants seek to reargue are judicially foreclosed. The propriety of the very same discovery orders, the claimed right of defendants to make a "business decision" not to obey them, and the correctness of the district court's conclusion that this refusal of discovery compelled the entry of an order against defendants under the default provisions of Fed. R. Civ. P. 37—these precise issues were adjudicated in the court of appeals' final (not interlocutory) judgment in 1964. This was the judgment which affirmed the dismissal with prejudice of Toolco's counterclaims against TWA and others, never alluded to in the petition, and a writ of certiorari with respect to it (No. 501) was dismissed by this Court as

* Citations with the suffix "t" are to the annex to this brief; citations with the suffix "a" are to the appendix to defendants' petition; citations to "Brownell Report" are to TWA's appendix to conditional cross-petition and supplemental appendix to this brief in opposition; citations to "2d Cir. App. A- " are to the Joint Appendix in the court of appeals, a certified copy of which has been furnished to this Court by defendants; citations to "AX- " are to the Joint Appendix of Exhibits in the court of appeals, a certified copy of which has been furnished to this Court by TWA; and citations to "Doc. " are to documents in the record before the court of appeals not otherwise reproduced.

having been improvidently granted. 380 U. S. 249 [46a]. In its 1971 decision the court of appeals held that its prior decision was not binding on the present appeal, and therefore found it necessary to re-examine these questions and the record of pretrial proceedings, reaching the same conclusions as the 1964 panel. TWA suggests, however, that all of the elements calling for application of established doctrines of judicial finality are here met and that this alone is a sufficient reason for not granting the writ with respect to issues adjudicated in dismissing Toolco's counterclaims. *Cromwell* v. *County of Sac*, 94 U. COUNTER-STATEMENT OF THE CASE

This lawsuit was commenced on June 30, 1961. Plaintiff TWA was a corporation with more than 13,000 public stockholders (now 38,000), the stock of which has at all relevant times been traded on the New York Stock Exchange. It was and is the only United States-flag airline authorized to conduct regularly scheduled operations on both transatlantic and transcontinental routes. The named defendants were Howard R. Hughes, Toolco, a diversified corporation wholly owned by Hughes, and Raymond M. Holliday, an officer and director of Toolco and a director of TWA.

Until the end of 1960, six months before the complaint was filed, TWA had been for many years dominated by Hughes and Toolco. At that time, TWA had available for service only 27 jet aircraft, of which 17 were on day-to-day leases from Toolco [AX-101].* On December 30, 1960, at

* Hughes, indeed, appears to have been personally negotiating at around this time for the sale to American Airlines of 15 of the 27 jets operated by TWA [2d Cir. App. A-203].

the insistence of TWA's senior creditors, Toolco's holdings of TWA stock (amounting at the time to 78% of the outstanding shares) were placed in a voting trust. In an opinion and order dealing with this and certain related transactions, the Civil Aeronautics Board (the "CAB") stated:

> "We have not been told officially of the reasons which motivated the decision of the insurance companies and banks to seek this protection. However, we have not been unaware of TWA's problems.
>
> "For example, it is a matter of public record that TWA's major competitors arranged the financing of their jet fleets at a significantly earlier date than did TWA. The impact of this fact may be indeed far-reaching.
>
> • • • • •
>
> "Moreover, it is probable that the delay in arranging financing has also prevented TWA from securing delivery of a substantially large portion of the jet fleet which was ordered on its behalf. • • • It appears that the failure to receive this equipment as planned may have played a substantial part in TWA's recent inability to maintain its traffic position relative to its principal competitors. • • • It appears to be significant that TWA's major competitors have already taken delivery of much larger jet fleets than TWA is operating and have firm orders for delivery of more.
>
> "Under these circumstances, we think it clear that Board action to facilitate TWA's acquisition of jet equipment is in the public interest." (32 C.A.B. 1363, 1364-65, Order No. E-16195 (Dec. 29, 1960))

Of the three voting trustees, two were prominent independent businessmen appointed by the creditors: Irving S. Olds, former Chairman of the Board of Directors of United States Steel Corporation, and Ernest R. Breech, former Chairman of the Board of Directors of Ford Motor Company. The third was the defendant Holliday, representing

Toolco and Hughes; Holliday, however, opposed all of the steps thereafter taken by the trustees.

At a special stockholders' meeting early in 1961 the trustees caused a sufficient number of directors to be replaced to establish a new, independent majority of the board, which elected Charles C. Tillinghast, Jr. (formerly Vice President—International Operations of The Bendix Corporation) as president.* The new board also retained independent counsel with no prior connections with either TWA or Toolco "* * * to determine whether [TWA] has a cause of action to recover damages from any party or parties in connection with the procurement of aircraft, ground equipment, training aids, financing thereof, or any other matter" (Minutes of TWA's Board of Directors Meeting, March 20, 1961, p. 12). On the recommendation of such counsel, made after an investigation of such sources as were available to TWA, this lawsuit was brought against Hughes, Toolco and Holliday.

The complaint

The complaint charged defendants with a combination and conspiracy to restrain and monopolize and an attempt to monopolize a substantial segment of trade, beginning in 1939, the objects of which were to monopolize the supply of aircraft to TWA and to use TWA as a captive market in making Toolco a dominant source of supply of aircraft to air carriers generally—all in violation of Section 1 of the Sherman Act, 15 U.S.C. § 1, and Section 2 of the Sherman Act, 15 U.S.C. § 2 [complaint, pars. 9, 10, 11].**

* In addition to Tillinghast and Breech, who became chairman of the board, the new directors were Clifford F. Hood, former President of United States Steel Corporation; Barry T. Leithead, President of Cluett, Peabody & Co. Inc.; Houston M. McBain, former Chairman of Marshall Field & Co.; and John A. McCone, former Chairman of the Atomic Energy Commission.

** TWA's complaint is at 2d Cir. App. A-1 *et seq.*

The complaint charged that, for the purpose of establishing complete domination and control over TWA's acquisition of aircraft, Toolco conditioned the supply of aircraft to TWA upon TWA's confining itself to such financing as Toolco provided for it, and conditioned the provision of financing to TWA upon TWA's accepting such aircraft on such terms as Toolco dictated [complaint, pars. 9, 10, 23, 24]. It charged that Toolco imposed upon TWA a boycott of manufacturers that could have supplied aircraft to TWA directly [complaint, pars. 9, 10, 17, 20] and that, during the years 1959 and 1960, pursuant to the conspiracy, day-to-day leases of aircraft by Toolco to TWA were conditioned on an understanding that TWA would not acquire aircraft except from Toolco [complaint, pars. 9, 20].*

It charged that there were other conspirators besides defendants, one being Atlas Corporation, in which Hughes was individually an 11% stockholder, and which in turn controlled Northeast Airlines [complaint, par. 6]. Atlas was alleged to have joined the conspiracy at an unknown date prior to May 1960. An attempt, participated in by Atlas, to impose upon TWA a merger with Northeast on terms disadvantageous to TWA was alleged, as was a transfer to Northeast of six Convair 880 jet aircraft ordered by Toolco, three of which had previously been contractually assigned to TWA [complaint, pars. 21, 22].**

The mechanics of the attempt during 1955 and 1956 to use the TWA captive market for aircraft to secure a dominant position in the supply of jet aircraft were

* The leasing of jets on the illegal condition was alleged, in addition, to violate Section 3 of the Clayton Act, 15 U.S.C. § 14. A violation of Section 7 of the Clayton Act, 15 U.S.C. § 18, was also alleged, and divestiture and other equitable relief were asked, in addition to damages. These claims for equitable relief were mooted, however, on Toolco's voluntary sale of all of its TWA stock in 1966, for $546 million in cash, at a profit to Toolco of over $450 million.

** Subsequent to the filing of the complaint, Toolco acquired control of Northeast from Atlas, and leased four other Convair 880s to Northeast.

alleged in considerable detail [complaint, pars. 14-17]. Defendants engaged in a joint venture with the Convair Division of General Dynamics Corporation to develop a jet aircraft which TWA would be required to buy as an initial captive customer [complaint, par. 14]. To preserve this captive market during this period, when TWA's principal competitors were placing direct orders with Boeing and Douglas, Toolco prevented TWA from arranging either for direct acquisition of jet aircraft or for the financing of such aircraft. When the initial joint venture effort with Convair failed, defendants were alleged to have thereafter planned the direct manufacture by Toolco of jet aircraft—also to be marketed to airlines generally, with the TWA market as a captive marketing base [complaint, pars. 15, 16, 17, 26]. In 1956, jet aircraft were ordered by Toolco from other manufacturers (Boeing and Convair), but it was alleged that Toolco repeatedly refused to assign rights to such aircraft to TWA [complaint, par. 18].

It was alleged that defendants' attempts to prevent TWA from acquiring aircraft directly from manufacturers instead of through defendants had continued subsequent to 1960, and examples were given [complaint, pars. 36-48].

The injuries caused TWA by this course of conduct were spelled out [complaint, pars. 50-53]. They consisted principally in its having been prevented from obtaining jet aircraft and deprived of opportunity for adequate use of jet aircraft from 1958 on, with a resultant loss of profits [complaint, par. 52(a)], and in its having been prevented from obtaining financing in 1955 and 1956, when interest rates were low and when its competitors obtained such financing. Among the specific examples of injuries alleged, in addition to such matters referred to above as the assignment of Convair 880s to Northeast and the day-to-day leases of jets in 1959 and 1960 on unlawful conditions, was the diversion by defendants

of six long-range Boeing jet aircraft to Pan American World Airways, TWA's principal transatlantic competitor [complaint, par 18]. Other injuries were alleged to include TWA's inability to dispose of its used piston aircraft (because of the insufficiency of its jet equipment) until the market for such aircraft had dropped considerably, impairment of TWA's ability to secure financing, loss of goodwill, and general disruption of TWA's management and business [complaint, pars. 52, 53]. Damages were estimated as in excess of $35,000,000 [complaint, par. 54].

Thus, TWA's complaint charged that its late financing, the delay in delivery and inadequacy of its jet fleet, and its loss of competitive position, to which the CAB had referred in Order No. E-16195 (*supra,* p. 5), and the disastrous losses which had resulted, *were caused by defendants' wrongful conduct and were the result of a conspiracy and attempt to monopolize in violation of the antitrust laws.*

The answers and counterclaims: issues presented

It proved impossible for TWA to serve process on Hughes. Toolco's answer (adopted in substance by Holliday) put in issue substantially all of the averments of TWA's complaint, and also included extensive counterclaims against TWA and nine additional defendants.* The counterclaims charged that TWA and its new management, a number of financial institutions and their officers (referred to collectively throughout the litigation and here as "additional defendants") had been engaged in a conspiracy in violation of the antitrust laws to force Toolco to give up control of TWA and to monopolize aircraft financing in the hands of the financial institutions.

*Toolco's Answer and Counterclaims is at 2d Cir. App. A-41 *et seq.* and Holliday's Answer is at 2d Cir. App. A-99 *et seq.*

TWA's losses (stated to have exceeded $45 million [Toolco answer, par. 99], the amount to which TWA subsequently amended its own *ad damnum* clause) were charged to have been the result of this conspiracy, and Toolco was stated to have suffered damages amounting to $77 million.*

By its answer, Toolco identified the critical issues as to which evidence would be needed, in addition to evidence of the extent of TWA's losses. For example, Toolco denied that Hughes had directed, controlled and dominated it [Toolco answer, par. 4], and denied that it had engaged in the combination, conspiracy and attempt charged or that any of the specific acts which it had admittedly done were done pursuant to such a combination, conspiracy and attempt, or pursuant to an intent on the part of the defendants to utilize TWA as a captive market for aircraft and to become a dominant source of supply of aircraft to air carriers [Toolco answer, par. 1]. It denied that it had engaged in a joint venture with Convair to develop a jet aircraft to be supplied by defendants to air carriers including TWA, for which aircraft TWA would serve as a captive market [Toolco answer, par. 10]. It denied that defendants had caused and directed TWA to forego making any arrangements for the acquisition of jet aircraft [Toolco answer, par. 13]. It denied that it had refused to assign rights to acquire jet aircraft to TWA, denied that the transfer of long-range Boeing jets to Pan American was caused by defendants, and affirmatively alleged that this transfer had been recommended and approved by TWA's management [Toolco answer, par. 14]. It denied that it

* Defendants' omission of any mention of these counterclaims is not an oversight. There has been an adjudication against Toolco which is final and binding on every issue involved. Factually, that final judgment constitutes a rejection of defendants' version of what really happened. Defendants are very anxious to avoid any consideration of the implications of the dismissal with prejudice, factual as well as legal.

had prevented TWA from making test and acceptance flights of specific Convair 880 aircraft [Toolco answer, par. 15]. It denied that its day-to-day leases of aircraft to TWA were conditioned on the understanding that TWA would not acquire aircraft from any other potential supplier [Toolco answer, par. 16]. It denied that it did not allow TWA to make its own arrangements for financing aircraft [Toolco answer, par. 1].

This partial list sufficiently indicates the scope of the issues on the merits of TWA's claims to which discovery—by TWA as well as by defendants—was necessarily directed. Central to the establishment by TWA of its right to recover under the antitrust laws were the issues as to defendants' intent and purposes in establishing control over TWA, its financing and its aircraft acquisitions, and whether—and why—Toolco prevented TWA from ordering its own aircraft and arranging its own financing, and diverted jet aircraft needed by TWA to TWA's competitors. The nature and purpose of the arrangements which defendants made with Convair, and the nature and purpose of defendants' equipment transactions and negotiations with airlines other than TWA, were identified by the pleadings as issues of critical importance. Toolco's denial of control by Hughes (accompanied by a denial of each allegation of the complaint connecting Hughes with the specific actions and events charged) also placed in issue the details of Hughes's operating relationships with both Toolco and TWA.

Discovery

Initial priority of discovery went to defendants, and TWA was required to begin production of documents in August 1961 [1t]. On August 31, 1961 the case was assigned by the Chief Judge to Judge Charles M. Metzner for all purposes, pursuant to Rule 2 of the General Rules for the United States District Court for the Southern District of

New York [2d Cir. App. A-33]. Pursuant to a schedule fixed by Judge Metzner [6t-7t], Toolco began its deposition of Tillinghast, TWA's president, on January 5, 1962 [Doc. 53].

Although Tillinghast had come from outside TWA, had been president for less than three months when the complaint was filed, and had no personal knowledge of events before he joined TWA, defendants were still taking his deposition in July 1962, with no signs of bringing it to a conclusion. On July 12, 1962 Judge Metzner ordered the deposition to be completed by July 25, 1962 [9t]. The deposition transcript was 6,729 pages long at the conclusion of Tillinghast's testimony [Doc. 222]. Thereafter, a deposition of Robert W. Rummel, TWA's principal procurement officer, was taken and concluded on October 16, 1962 [Doc. 227, p. 1928]. Two other depositions were commenced by defendants but still had not been completed on February 8, 1963, when defendants informed the district court and the parties that they would refuse to participate in any further discovery proceedings.

Before February 8, 1963, TWA and the additional defendants were prevented from engaging in deposition discovery, but Toolco, the additional defendants and some non-parties were required to produce documents in response to various demands. It became apparent that critical documents were to be found in three areas: (a) such records of Hughes's conversations and directives as had been preserved, partly in Toolco's telephone and message center at 7000 Romaine Street, Los Angeles, and partly in the form of notes preserved by third parties of telephone conversations with Hughes;* (b) documents involving the lawyers through whom many of Hughes's and Toolco's busi-

* Apparently as a matter of practice, Hughes never corresponded. Communication with him was solely by telephone, and the Los Angeles message center operated 24 hours a day, 365 days a year, to facilitate this unique operating method.

ness negotiations had been conducted, as to which defendants claimed attorney-client privilege; and (c) documents which would reveal the financial aspects of defendants' dealings in aircraft, not only with TWA, but with others.

In the first area, the available records were fragmentary in the extreme; occasional verbatim messages were kept for later delivery, when the two parties could not be put in direct contact, but the message center record of any actual conversation was limited to such comments as "They talked" or "Omit. They talked" [AX-665-728 *passim: e.g.*, AX-669, AX-673, AX-691, AX-694]. Subjects of particular interest were from time to time summarized in "memoranda", and the raw telephone records destroyed. Unfortunately no memoranda were produced, defendants explaining that they, too, had been destroyed [Doc. 215, pp. 3412-13; Doc. 306, pp. 2-3; Doc. 307, pp. 5-7]. It was thus plain that oral discovery of Hughes was necessary to develop the relevant, material facts.

In the second area, defendants claimed attorney-client privilege. Special Master J. Lee Rankin, who had been appointed to supervise discovery proceedings [3t-4t], twice held and the district court twice agreed that the privilege—if any—had been waived, that the documents were material and relevant, and that they should be produced [11t-12t, 21t-22t]. Defendants disregarded these orders, and as of February 8, 1963 were in open and admitted defiance of still a third order to produce this material [2d Cir. App. 305-06].

In the third area, tax returns and audited financial statements of Toolco through 1960 were produced (with such extraordinary precautions as to secrecy that the documents are still sealed and appear nowhere in the printed record). No work papers or detailed audit reports were produced, and the extreme brevity of the returns and balance sheets and income statements made it impossible to determine with any precision the specific transactions reflected by any

particular entry. A motion was made for the production of work papers and other material which would clarify these and related matters, specifying 23 categories of documents in all, and including a demand for material subsequent to 1960 [2d Cir. App. A-133-36]. The documents were held relevant and material; Toolco advised the parties that at least nine cartons of such documents existed. Ordered to turn them over to TWA and the additional defendants, counsel for defendants, in open court, flatly refused [2d Cir. App. A-133-36, A-304-05].

TWA informed the court that its principal evidence on the critical issues of the litigation would come from Hughes. It exhibited documents which demonstrated that Hughes had been the prime mover in every matter described in the complaint [*e.g.*, Docs. 165, 166, 167]. The district court (which conducted in this period over 19 pre-trial hearings) found: "It is clear that during all of the times covered by the complaint the management of TWA was controlled by Hughes personally" (32 F.R.D. at 606) [14a]. It further found: "It is clear that the deposition of Hughes is essential for the proper presentation of TWA's case" (32 F.R.D. at 607) [17a].

Defendants' conduct during this period has been extensively reviewed, not only by the district court but by two panels of the Court of Appeals for the Second Circuit. Defendants' motives were transparent—to conduct their own discovery interminably while resisting at all cost any meaningful discovery by TWA and the additional defendants.* Chief Judge Lumbard summarized the unanimous view of the court of appeals in these words:

> "Hughes' deposition was absolutely essential to the proper conduct of the litigation. Yet he and

* It was, of course, TWA and not Toolco that was ultimately vulnerable to the financial burdens of interminable litigation. As pointed out below, Toolco was worth "several" hundreds of millions of dollars by its own assertion, while TWA was in desperate financial straits during the first two years after it was freed from Hughes's control. The repeated assertions in defendants' petition that TWA's lawsuit constituted financial oppression of Toolco (*see* Petition, pp. 14, 16, 17, 18) are utter nonsense.

> Toolco seized upon every opportunity to forestall this event. To this end they demanded the production of a multitude of documents by TWA and the additional defendants and secured successive adjournments of the deposition. Indeed, Hughes and Toolco seemed to look upon the entire discovery proceedings as some sort of a game, rather than as a means of securing the just and expeditious settlement of the important matters in dispute." (332 F.2d at 615) [40a-41a]

Judge Kaufman, also speaking for a unanimous court, stated:

> "Clearly the court was entirely correct in concluding that the litigation would only continue its desultory course without the appearance on stage at the earliest possible moment of the hitherto unseen Prince of the drama." (449 F.2d at 61) [122a]

The default; amendment of *ad damnum* clause

The default was eventually established in open court at a hearing held at the close of business on Friday, February 8, 1963, the last business day before the deposition of Hughes was to begin in Los Angeles at 10 a.m. on Monday, February 11.* Demands by Toolco that extensive interrogatories be answered by TWA and that issues be

* The deposition had been originally scheduled for April 23, 1962, on the assumption that Toolco would have concluded its depositions by that time [7t]. TWA's attempts to serve a witness subpoena on Hughes having been unsuccessful, Toolco was twice ordered in July to answer interrogatories as to Hughes's whereabouts [8t; Doc. 103]. In lieu thereof, Toolco arranged to accept service of a witness subpoena on Hughes's behalf, and it expressly vouched for the validity of this service [2d Cir. App. A-272]; elaborate precautions were taken by the court to assure that Hughes was personally advised of what had been done in his name and its potential consequences [15t-17t]. That subpoena provided for the deposition to commence on September 24, 1962. This was postponed by court order to October 29, 1962 to permit Toolco to carry its own discovery further [*ibid.*] and then further postponed to February 11, 1963, which date, however, was expressly stated to be subject to no further adjournments "in the absence of extraordinary circumstances" [19t].

limited in a so-called "Rule 16" conference prior to commencement of the Hughes deposition had been denied, the court providing that TWA would be permitted to examine Hughes before it was required to answer the interrogatories, and stating that, since Hughes's deposition would "facilitate an intelligent ruling upon Toolco's application pursuant to Rule 16", the denial of the application was without prejudice to a renewal after Hughes's examination had been completed [20t]. No suggestion was ever made that there was any medical or other obstacle to Hughes's appearing, and as the court of appeals pointed out, Judge Metzner had offered to have the deposition taken "in as much privacy and under any other conditions that might suit Hughes's aversion to public appearance" (449 F.2d at 62) [122a].

On February 8, 1963 Toolco served upon the Special Master, TWA and the additional defendants a document entitled "Notice of Position" stating that Toolco "hereby elects * * * to rest on the merits of its positions as heretofore taken so that it may avoid the burdens and expenses involved in further pre-trial and trial proceedings * * *" [2d Cir. App. A-268-69]. At TWA's request the district court scheduled a further pretrial hearing at 5 p.m. that day to establish the meaning and implications of this communication.

At the outset of the February 8 hearing, TWA's counsel gave formal notice that TWA claimed and now expected to prove damages of at least $45 million before trebling, and that TWA intended to move to amend its complaint in that respect [2d Cir. App. A-271].

After this notice had been given, counsel for defendants formally stated that it was his clients' "business decision" that the deposition would not be held, and to proceed no further with any pretrial discovery, in defiance of all court

orders [2d Cir. App. A-280]*. The meaning and effect of this decision was explored at length, and it was made quite clear that defendants accepted that they would be liable in damages if the several grounds on which they were seeking review were determined against them. Counsel for Toolco stated:

> "• • • we are fully aware—my client is fully aware—that by insisting on a right to obtain a review on the legal questions which have been decided to date • • • they may be deprived of further defending on the merits, other than on the question of damages." [2d Cir. App. A-276]

At a later point in the same hearing he explained:

> "My purpose of course is to obtain something which will enable me to get a review on the law as to whether or not you are entitled to be here in the first place. And then I am prepared, if I am wrong in that regard, to pay the consequences to the extent to which you are able to prove damages." [2d Cir. App. A-297]

Since Hughes's deposition was to be taken pursuant to a valid witness subpoena, and Hughes had neither objected to it nor made any representation that he would be unavailable or would refuse to testify, TWA took the position that, regardless of Toolco's "business decision", TWA was entitled to proceed with this vital discovery [2d Cir. App. A-292-98]. However, at Toolco's express request and in reliance upon its stated willingness to respond in damages, Judge Metzner stayed TWA from proceeding and directed that the deposition not be taken [2d Cir. App. A-307].

---

* It was at this February 8 hearing that counsel for defendants gave as a reason for the "business decision" the cost of proceeding with the Hughes deposition, of which so much is made in defendants' petition [2d Cir. App. A-280]. He estimated it at $5 million (explaining that the figure was supplied by his clients and declining to vouch for its accuracy)—a ridiculous estimate that TWA at the time called "obviously absurd" [2d Cir. App. A-293].

There followed inevitably the entry by the district court on May 3, 1963 of a final judgment dismissing Toolco's own counterclaims with prejudice and an interlocutory judgment in TWA's favor upon its complaint (32 F.R.D. at 607) [17a; 2d Cir. App. A-323]. No final judgment could be entered upon TWA's complaint until after an evidentiary hearing to establish the amount of its damages. It was ruled, however, that since Toolco would be represented at the damage hearing and in a position to contest TWA's damage proof, TWA was entitled to recover such actual damages as it could establish, and its motion to amend its complaint was accordingly granted (32 F.R.D. at 607-08) [17a].

The 1963-1965 appeals

Following entry of the default judgment on TWA's complaint and dismissal of Toolco's counterclaims with prejudice, defendants were granted immediate review of the decisions below. Toolco appealed as of right from the dismissal of its counterclaims (an order pursuant to Fed.R.Civ. P. 54(b) having been entered), and after appropriate certification by the district court, the court of appeals allowed defendants an interlocutory appeal, pursuant to 28 U.S.C. §1292(b), with respect to the complaint (32 F.R.D. at 608) [18a] (332 F. 2d at 605) [20a]. Both in the court of appeals and later in this Court these separate appeals were heard together. Thus, there were presented to both appellate courts at that time, on one or both appeals, not only the jurisdictional but also the procedural questions which the district court had passed upon in the course of the various pretrial hearings, including all aspects of the conduct of pretrial discovery.

The 1963-1965 appeals resulted in affirmance by the court of appeals of the district court's decisions on all matters presently relevant. Certiorari was granted as to both appeals, and there was full briefing and argument, including acceptance by this Court of a brief *amicus* filed on behalf of

the CAB, which supported the correctness of the decisions below insofar as they dealt with matters of primary jurisdiction and the asserted exemptive effect of the CAB's prior orders.

As his first point on oral argument, counsel for TWA urged that certiorari be dismissed because the decisions below were plainly correct (Transcript of Argument in No. 443, p. 18). On the next decision day both writs were dismissed as improvidently granted.

Defendants' petition attributes this dismissal to the fact that the appeal from the judgment in TWA's favor, No. 443, was interlocutory, not final (Petition, p. 10); but the appeal from the dismissal with prejudice of Toolco's counterclaims, No. 501, was from a final judgment, plainly binding unless reversed. This Court's order left standing in its entirety the court of appeals' affirmance of the district court's decision, as a final adjudication of every issue involved in the dismissal with prejudice of the counterclaims.*

The damage hearings

The damage hearings followed next, before Special Master Brownell. They extended over a period of 2½ years —3½ years if time spent in determining various preliminary matters relating to the scope of the default is

* An attempt by Toolco, initiated after the default, to reacquire control of TWA through acquisition of the power to replace the independent voting trustees was rejected by the court of appeals late in 1964, on an appeal from a CAB order disclaiming jurisdiction. The court of appeals held that no such reacquisition of control was permissible without a public hearing. A petition for certiorari filed by Toolco as intervenor, in which the CAB did not join, was denied by this Court. *Trans World Airlines, Inc.* v. *Civil Aeronautics Board, (Hughes Tool Company, Intervenor)*, 339 F.2d 56 (2d Cir. 1964), *cert. denied*, 382 U. S. 842 (1965).

included.* The transcript of testimony taken at the damage hearings totalled almost 11,000 pages, substantially all of it cross-examination, since the direct testimony of witnesses was presented in written form. Over 60,000 pages of documents were admitted in the record as exhibits. The scope and thoroughness of these hearings and the intensity with which each issue was contested are reflected in the Brownell Report. Every point which defendants' petition attempts to make to this Court was raised in the damage hearing and is considered and rejected in the Report, except solely their arguments with respect to the conduct of the discovery proceedings and that the CAB had exempted their unlawful conduct from the antitrust laws (Sections A and D of the Petition), both of which had been expressly raised and rejected on the previous appeals.

Defendants' objections to the damage award were voluminous. In all, more than 1,300 pages of briefs and memoranda were submitted to the district court. Consideration of the objections and review of the record occupied the district court for over a year, after which the Brownell

* One of these preliminary matters was an express refusal by the district court to find that the allegations of paragraph 3 of TWA's complaint were untrue [32t-33t]. Such a finding was again requested of the Special Master at the close of the damage hearing, and was again expressly refused [Brownell Report, pp. 26, 28-33]. This factual determination, confirmed yet again by the district court in 1969 after a review of the entire record (308 F.Supp. at 686) [60a] and affirmed unanimously by the court of appeals (449 F.2d at 67-68) [133a-136a], is still disputed in defendants' present petition on the basis of entirely unsupported assertions of facts not found below. Defendants' contention, now four times rejected, heads the list of items in the footnote at pp. 11-12 of defendants' petition which are described as "facts, none of which had ever been in dispute" and which were, it is claimed, "confirmed in the course of the cross-examination of TWA's witnesses". That entire list, indeed, consists of restatements of factual contentions and related claims of innocent motivation which defendants attempted to prove at the damage hearing, which they asked the Special Master to find, and which he refused to find.

Report was confirmed by Judge Metzner in its entirety, each of the objections filed (those of TWA as well as those of defendants) being expressly overruled.

The appeal which followed was given correspondingly careful attention. The parties were permitted to file briefs without regard to the ordinary length limitations. Counting the various annexes bound in with the briefs, the appellate briefs totaled 719 pages, and the printed Joint Appendix and Joint Appendix of Exhibits consisted of 12 bound volumes. A full day was set aside for oral argument. The meticulous attention given by the court of appeals to all of defendants' arguments—including those which had been previously made, unsuccessfully, in the course of the 1963-1965 appeals—is fully apparent from Judge Kaufman's opinion. Except for a modification of the rate of interest on the judgment, the decisions below were unanimously affirmed in every respect.

Summary of Argument

While this lawsuit is unusual and perhaps unique, both with respect to the factual issues involved in the basic controversy and the unprecedented use by defendants of default as a tactic in a continuing litigation, there are no special and important reasons for further review by this Court. Such a lawsuit as this is not likely to recur, and as a defaulted case it lacks the factual record necessary for adequate consideration of the substantive antitrust questions tendered by defendants.

Nothing that has happened since this Court's dismissal of certiorari in 1965, after briefing and oral argument, has made the case more worthy of consideration by this Court. The questions of law involved in the post-1965 proceedings for the most part consist of long-established principles applicable to wilful defaults. These principles are seldom invoked because of the relative infrequency of such defaults by parties wishing to continue in active litigation. Defend-

ants' strategy of discover, default and defend on the damages has not been widely imitated.

Only two of the seven legal questions now tendered by defendants for decision by this Court were not presented in 1965* and none can be fairly described as of general significance. The decision below is not in conflict with the decision of another circuit on the same matter**; it is not a decision of an important question of federal law which requires settlement by this Court or which is in conflict with applicable decisions of this Court. Nor is the exercise of this Court's power of supervision called for by any departure by the courts below from the accepted and usual course of judicial proceedings.

Indeed, the action taken by the lower courts, once defendants had taken the highly unusual step of electing to disregard the district court's discovery orders and thus deprive TWA of access to critical evidence, was the minimum that was fair to a plaintiff so disadvantaged. TWA could not thereafter be required to prove the facts alleged in the complaint, as defendants obviously understood when they first announced and explained their "business decision", but the lower courts did require TWA to prove its damages in exhaustive detail. In the course of the damage hearing and subsequent judicial review—the only aspect of this proceeding taking place subsequent to this Court's 1965 dismissal of certiorari—defendants were accorded full opportunity for cross-examination, submission of rebuttal evidence and oral and written argument, and they exercised these rights abundantly.

The questions now advanced by defendants as a basis for review by this Court are merely artfully phrased efforts to extract from this controversy over defaults and damages

---

* No. 7 and the last clause of No. 2.

** The conflict between circuits alleged at p. 25 of the petition is not a real one; confronted with the same facts there is no reason to believe the circuits would have ruled differently. See pp. 39-40, *infra*.

some legal issues of general significance. They simply are not there. All of the questions posed are based on assertions or assumptions of fact which are refuted by the record or which the courts below declined to find because of defendants' election not to submit their contentions to the scrutiny of discovery.

A. Defendants' first proposed question hinges on their factual assertion that the complaint and pretrial proceedings prior to the scheduled deposition of Hughes did not identify the allegedly illegal conduct "with reasonable specificity." The complaint here is in fact a very specific one, upheld as sufficient by the lower courts, and there is no merit to the charge of failure of specificity. The illegal transactions were clearly identified. Defendants had no constitutionally protected right to refuse to comply with lawful discovery orders in order to force TWA to establish its case on the merits without benefit of discovery. Their contrary argument is frivolous. (pp. 25-31, *infra*)

B. Defendants' second question relies on assertion of the fact, not found by the Special Master or either court below, that the circumstances of the default did "not permit a presumption that the defendant has no defense to the action." If any presumption is to be made with respect to the real reasons for the default, the normal presumption that defendants realized that they could be shown to have acted unlawfully cannot be excluded. Having deliberately chosen as a "business decision" to refuse to comply with lawful discovery orders with respect to evidence of vital importance on all contested issues, and with the express expectation that a default judgment might be entered, defendants were not denied due process by the entry of a default judgment which ruled that the well-pleaded, material and traversable allegations of the complaint were admitted. Any other result would constitute a serious deprivation of substantial justice and due process to the plaintiff TWA to which discovery was denied. (pp. 32-38, *infra*)

C. The implicit premise of the third question posed by defendants is that the defaulting defendant had no notice of the proposed amendment of the *ad damnum* clause at the time of its decision to default and had no opportunity thereafter to change its decision. In this case, that premise is plainly false. Defendants had notice of the proposed amendment at the time they elected to default and despite such notice stood by that election. Moreover, the default judgment was not entered until three months later, but defendants never offered to comply with the district court's discovery orders. (pp. 38-40, *infra*)

D. Defendants' fourth question, which probably did not survive the default in any case (see pp. 41-42, *infra*), is based on the unstated premise that there was no unlawful and undisclosed motive underlying the acts performed by defendants in the exercise of their control over TWA. The question of motivation would have been explored, if defendants had been willing to permit discovery, and the present record is therefore incomplete as to the critical facts needed to resolve the question now posed by defendants. The CAB's brief *amicus* filed when this case was here in 1965 confirms that the Board's past orders, approving solely defendants' acquisition of control over TWA, were not intended to and did not immunize them from liability in damages to TWA for conduct admitted by their default to be pursuant to a conspiracy to restrain and monopolize and in furtherance of their attempt to monopolize a substantial segment of trade. (pp. 41-46, *infra*)

E. Similarly, the fifth question raised by defendants embodies the assumptions that the parent corporation (here Toolco) is not a competitor of equipment suppliers and is not acting for unlawful purposes. These assumptions do not and could not rest on any factual finding below, and are at variance both with the allegations of TWA's complaint

and with evidence available to TWA concerning Toolco's dealings in aircraft. In any event defendants' failure to make discovery precluded building a record and making a finding on this issue. (pp. 47-48, *infra*)

F. Defendants' sixth question assumes that they "in no way restrained or monopolized a particular area of commerce." This assumption is flatly contrary to the basic allegations of the complaint admitted by the default. The Special Master and both courts below found that the evidence supported the inference that Toolco's extensive activities had important competitive impact in the relevant market and "combined with appropriate related proof of the intent, attempt, collusion, tying arrangements, boycotts and monopolization alleged in the complaint" would have supported an antitrust judgment for TWA in a trial on the merits, had there been one. (pp. 49-51, *infra*)

G. Defendants' final question assumes that plaintiff's evidence of damage was not related to the alleged restraint or monopolization and that plaintiff did not show that without defendants' interference it could have financed the purchase of aircraft. These assumptions are obviously not justified on the record as made in the damage hearing, and the findings of the Special Master and the courts below that TWA in fact made a sufficient showing were clearly warranted. (pp. 51-56, *infra*)

ARGUMENT

A. Defendants were not denied due process of law by the district court's pretrial discovery orders. (Petition, Section A)

Defendants' constitutional argument depends upon the proposition that their right to due process of law was violated when the deposition of Hughes was ordered before the procedures of Fed. R. Civ. P. 16 had been used to

limit and narrow the issues, and before TWA answered interrogatories propounded by defendants. This argument is frivolous on its face.

Nothing can be plainer than that the discovery which TWA sought and which the district court held TWA was entitled to, was reasonably calculated to develop or discover the existence of relevant evidence—evidence relevant, for example, to a determination

> (i) that defendants had in fact engaged in the conspiracy to restrain and monopolize trade and the attempt to monopolize charged in the complaint (*cf.* Petition, Section B),
>
> (ii) that defendants' activities of which TWA complained were such that they had not been and indeed could not be exempted from operation of the antitrust laws by orders of the CAB (*cf.* Petition, Section D),
>
> (iii) that such activities did not constitute "normal and natural" conduct of a majority stockholder in relation to its subsidiary but instead represented steps in a larger scheme, one part of which was a deliberate attempt to establish and exploit a captive market for anticompetitive purposes (*cf.* Petition, Section E),
>
> (iv) that that scheme had been translated into action with others than TWA (*cf.* Petition, Section F), and
>
> (v) that all of the foregoing was the cause of TWA's admitted losses—losses which defendants themselves had alleged in their counterclaims to be in excess of $45 million (*cf.* Petition, Section G).

Defendants could not construct in their petition a challenge to the materiality, relevance and probable availability of such evidence. They are therefore reduced to claiming—as a constitutional right—that a private antitrust plaintiff

must first go through various preliminary tests as to the sufficiency of the evidence already available to it before being allowed the benefit of the discovery provided by the Federal Rules. Before TWA was permitted to take a single deposition, the petition urges, the district court was required by the Constitution to compel TWA to answer all defendants' interrogatories and to hold a conference under Rule 16 for the limitation and definition of the issues even though the district court did not believe the case was ripe for such action.

The petition makes no attempt to hide the fact that what defendants really wanted was summary judgment, prior to discovery by plaintiff. Summary judgment under such circumstances being forbidden by the decisions of this Court, *e.g.*, *Poller* v. *Columbia Broadcasting System, Inc.*, 368 U.S. 464, 473 (1962), they sought, and now claim as a constitutional right, the same thing under a different name.

At p. 15 of the petition defendants say:

> "Petitioners' reaction to the complaint was that this case was a classic one for summary judgment because the key facts apparently relied upon gave rise to no antitrust claim, and petitioners were ready to stipulate them."

Yet nothing could be plainer than that they were never prepared to stipulate the basic, critical facts which the complaint alleges. Indeed, each of those facts was then, has been since, and is still contested—defendants are still asking for summary judgment in their favor based on their contrary assertions, without allowing TWA its rights of discovery.

It is revealing to examine the nature of the interest for the protection of which defendants are invoking this claimed constitutional right to freedom from discovery. The only interest now claimed is defendants' financial inter-

est in not being subjected to the expense of litigation. The deposition was "expected to take at least 'a good two or three months'," it would have been "enormously burdensome", it would have required expenditure of "an astronomical amount" by Toolco (Petition, pp. 9, 16, 17).

Toolco had already taken depositions of its own for much longer than "a good two or three months." The "enormous" burdens of the litigation to Toolco were no less burdensome to TWA. As to the "astronomical cost", whatever the true cost might have been of a single deposition to Toolco, it could not have been significantly different for TWA.

Toolco's own answer alleges that it had assets in 1961 and 1962 of "several hundred million dollars" (Toolco answer, par. 3). TWA on the other hand was near bankruptcy. In 1961 and 1962 it recorded losses totalling over $44 million [AX-478]. At the end of 1962 its remaining tangible assets, less liabilities and deferred credits, were only $62.5 million [AX-476]. It was TWA, not Toolco, that was under a near-breaking financial strain. It was TWA, not Toolco, which might be ruined if the cost and delays of this litigation were unnecessarily multiplied.

Why, then, the flat refusal to permit further discovery? Plainly because this particular discovery might bring out the truth. That was why defendants made a "business decision" to prevent further discovery at all cost. They gambled that they could minimize their risks by depriving TWA of the access to evidence which the Federal Rules normally guarantee to a plaintiff as to any other party, and to which the court had held TWA entitled.*

---

* Defendants pretend to find a precedent for their "election" in the position taken by the government in *United States* v. *Procter & Gamble Co.*, 356 U.S. 677 (1958) (Petition, p. 14). The crucial difference, however, is that in both *Procter & Gamble* and *United States* v. *Ryan*, 402 U.S. 530 (1971), which defendants also cite, refusal to comply with the discovery orders was directed at testing the validity of the discovery orders themselves. Both cases make plain that if the discovery orders were lawful, the disobedient litigant would suffer the appropriate sanction for his refusal.

By the various references to Manuals and Handbooks (Petition, pp. 15-18), defendants seek to suggest the existence of a body of authority that mandates the precise order of depositions and timing of pretrial conferences, depriving the trial court of all discretion. In fact, of course, the situation is quite otherwise.

> "The suggestions made herein are subject always to the discretion of each judge to adapt the procedures to the particular case or to deviate and innovate where necessary or desirable." MANUAL FOR COMPLEX AND MULTI-DISTRICT LITIGATION, at 0.4 (1970).

In this case, from the time the complaint was filed, the case was given the most careful attention in the district court; a single judge presided over it for all purposes; a special master was appointed to supervise discovery and close control over all discovery was maintained by the district judge; and defendants' contentions were carefully considered—not just once, but many, many times. It is this close attention and continuous supervision that the Manuals and Handbooks are concerned with, not any mechanical series of orders—and particularly not any automatic grant of indefinite absolute priority of discovery to a filibustering defendant.

By their interrogatories and their motion for a Rule 16 proceeding, defendants were seeking not just a definition of issues—the pleadings had accomplished this—but a limitation of issues, a binding order as to what TWA would have the right to prove at trial. Judge Metzner held that TWA should have access to the key witness before answering interrogatories of this character, and stated that the deposition of that key witness would "facilitate an intelligent ruling" upon the Rule 16 application by the court [20t]. Many experienced commentators have agreed that adequate prior discovery is essential to proper use of these

procedures. Discussing the New Jersey state practice, Mr. Justice Brennan said in 1956:

> "It is our conviction, justified by experience, that the full benefit of pretrial conference procedure will not be realized unless each litigant is afforded in advance of the conference the fullest possible opportunity to find out all he can as to his own and his adversary's case." W. BRENNAN, *Pretrial Procedure in New Jersey—A Demonstration,* 28 N.Y.S. BAR BULL. 442, 445 (1956).

This relationship between adequate discovery and issue-limiting pretrial procedures is equally apparent in federal practice. A symposium held in 1951 on "The Practical Operation of Federal Discovery" produced this comment by United States District Court Judge Bard of the Eastern District of Pennsylvania:

> "Pre-trials are valueless unless there has been liberal use of discovery, or unless there has been a free voluntary exchange of information which is frequently given now because of the discovery provisions in the federal rules. In other words, the discovery procedure has induced pre-trials and made pre-trials effective." (12 F.R.D. 131, 153)

Professor Moore's FEDERAL PRACTICE RULES PAMPHLET (1971) says at p. 641:

> "The deposition and discovery rules are particularly helpful in obtaining factual data as a basis in moving for and opposing motions for summary judgment. * * * And in affording the parties and the court with a knowledge of the case *so that pretrial Rule 16 may function properly.*" (emphasis added)

See also J. WRIGHT, *Pre-Trial on Trial,* 14 LA. L. REV. 391, 399-400 (1954) ("Much of the benefit from pre-trial is impossible without discovery").

Defendants are not simply arguing that it would be better practice for this Court to require trial courts to engage in

preliminary issue-limiting procedures before permitting a plaintiff to engage in pretrial discovery. They are arguing that this is not a matter for the exercise of judgment at all. They assert they were entitled to limit the issues before the deposition as a matter of due process—a constitutional right of defendants.

If that is true, the present Federal Rules could hardly withstand constitutional attack. Rule 26(d), for example, now expressly contemplates as the *normal* procedure that there should be no such thing as absolute priority of discovery, even on a temporary basis, and a defendant who has a legitimate interest in avoiding or narrowing discovery must seek his remedy under Rule 26(c) or not at all. Professor Fleming James points out as to the specific contention that a Rule 16 proceeding should have preceded the Hughes deposition:

> "Rule 16 does not compel the federal district courts to hold pretrial conferences and it leaves the court which does use it the greatest latitude in prescribing the time and manner of holding it." F. JAMES, CIVIL PROCEDURE 223 (1965).

For, as has been generally agreed by all commentators:

> "• • • one of the principal ideas embodied in the rules is that it is wise to leave many details of procedure to the informed discretion of the judge, acting in the circumstances of the particular case, rather than regulating such details by rigid provisions." C. A. WRIGHT, FEDERAL COURTS 433 (2d ed. 1970).

It is frivolous for defendants to contend, as they do, that the district court abused its discretion in 1963 in deciding when to hold a hearing to narrow the issues. It is presumptuous to present that contention to this Court as an important question of law, and it is nothing short of absurd to denominate it as a question of constitutional law, involving deprivation of due process rights.

B. It is not a violation of due process to enter and enforce a default judgment under Rule 37 against defendants who wilfully and with full knowledge refuse to permit discovery of evidence of vital importance on all contested issues. (Petition, Section B)

Defendants themselves admit that:

> "When [defendants] filed their Notice of Position they took their chances on whether they were right or wrong about the applicable law. They gave up their right to challenge the factual allegations of the complaint." (Petition, p. 23)

These two sentences, although obscured by defendants' assault upon this Court's holding in *Thomson* v. *Wooster*, 114 U. S. 104 (1885), still amount to a concession that the rulings below as to the effect to be accorded the default judgment in this case were correct.

As the Brownell Report and the opinions of the district court and the court of appeals make clear, the judgment in this case is grounded upon specific well-pleaded allegations of TWA's complaint, allegations originally placed in issue when defendants appeared and answered, but which they could no longer challenge because of their default. Since defendants' decision to bar discovery into the critical issues effectively blocked all access to evidence of the motives and intent that led defendants to act as they did, no other result from that "business decision" was ever conceivable, and it is apparent on the record that no other result was expected by defendants at the time. As Chester C. Davis, Toolco's counsel, stated to the court:

> "I have also had occasion to describe to my client, the Hughes Tool Company, the sanctions available under the Rules by reason of a respectful declination or election to stand on the questions of law which have been decided to date and not to proceed any further with respect to discovery proceedings." [2d Cir. App. A-274]

And again:

> "The Tool Company does want to rest on the merits of its position, and it does so fully aware of the sanctions which the Court, in its discretion, may impose * * *." [2d Cir. App. A-275]*

Summarizing, in response to TWA's statement that the Hughes deposition should proceed, "business decision" or no "business decision", Mr. Davis also said:

> "* * * if it will help your record, Mr. Sonnett, on Monday * * * you can note the fact that the Tool Company is failing in [*sic*—and?] refusing to produce Mr. Hughes, and then you can have your record and you can take your remedy on it." [2d Cir. App. A-297]

As Judge Kaufman stated for the court of appeals:

> "It would usher in a new era in the dynamics of litigation if a party could suffer a default judgment to be entered against it and then go about its business as if the judgment did not exist and as though, despite the opportunities to comply with the court's orders and to defend on the merits which had been ignored, the slate was wiped clean and a new day had dawned. To state the proposition is to expose the folly of it." (449 F.2d at 63-64) [127a]

If defendants were right, the correct litigation tactic for any defendant charged with an antitrust violation, proof of which lies largely in his own hands, would be (a) to attempt to wear down the plaintiff by extended discovery, (b) to refuse any significant discovery himself and instead default, (c) to continue to assert his innocence, and (d) to count on exoneration because the plaintiff would be left

* See, also, statements quoted at p. 17, *supra*.

without the means of proving liability.* The result would be a true denial of due process: the plaintiff would be denied not just the rights accorded to him under the Federal Rules, but effective access to the courts upon his claims. *Hammond Packing Co.* v. *Arkansas*, 212 U.S. 322, 351 (1909).

Under present law, a refusal to make discovery in a civil case is, as it should be, rare indeed. Defendants refer to no other case where such a refusal was described as an "election" and justified as a "business decision". But in those rare cases in which, for whatever reasons, defendants have wilfully refused to permit lawful discovery of important evidence, the courts have consistently found that entry of a default judgment "was compelled * * * in order to protect the statutorily-created right of discovery and the constitutionally-guarded due process rights of plaintiff." *Norman* v. *Young*, 422 F.2d 470, 474 (10th Cir. 1970); see also *Jones* v. *Uris Sales Corp.*, 373 F.2d 644, 647-48 (2d Cir. 1967); *Pioche Mines Consolidated, Inc.* v. *Dolman*, 333 F.2d 257, 269 (9th Cir. 1964), *cert. denied*, 380 U.S. 956 (1965); *Fong* v. *United States*, 300 F.2d 400, 408-09 (9th Cir.), *cert. denied*, 370 U.S. 938 (1962); *Michigan Window Cleaning Co.* v. *Martino*, 173 F.2d 466, 468 (6th Cir. 1949). These cases confirm the basic wisdom of the presumption announced in *Hammond* v. *Arkansas*, that the refusal to produce material evidence is an admission of want of merit in the asserted defense. That is the analysis, of

* These tactics would open a novel means of evading this Court's repeated admonition against deciding complex antitrust litigation on motions to dismiss or for summary judgment while issues of anti-competitive motive and intent remain unresolved by trial. *Poller* v. *Columbia Broadcasting System, Inc.*, 368 U. S. 464, 473 (1962) ("* * * summary procedures should be used sparingly in complex antitrust litigation where motive and intent play leading roles, the proof is largely in the hands of the alleged conspirators, and hostile witnesses thicken the plot."). *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394 U. S. 495, 499-500 (1969); *Norfolk Monument Co.* v. *Woodlawn Memorial Gardens, Inc.*, 394 U. S. 700, 704 (1969).

course, which was expressly relied upon by the Advisors (see Original Committee Note of 1937 to Fed. R. Civ. P. 37) when they developed the system of pretrial discovery, enforceable by all of the sanctions provided for in Rule 37, which today forms the basic framework for the administration of civil justice in the federal courts.*

Defendants' present criticism of *Thomson* v. *Wooster* as a museum piece and their rejection of the standards fixed by it reflect a remarkable change in the move to Washington from New York. Typical of their previous view is their description of *Thomson* v. *Wooster* in 1965 as "the fountainhead of judicial wisdom on the effect of a default" (Memorandum in Opposition to Plaintiff's Motion for Interim Findings of Fact, June 2, 1965, p. 15). Rationally, a default judgment grounded upon a refusal to permit discovery essential to plaintiff's case could have no other effect than that given it by the courts below, grounded on the principles laid down by this Court in *Thomson* v. *Wooster* and *Hammond* v. *Arkansas*.

Charges that the allegations of TWA's complaint are "conclusory" or mere "legal conclusions" cannot assist defendants. The distinctions which they are trying to make are at best a throwback to 19th century pleading and are as semantically incorrect in those terms as they are under the present Rules. Nothing makes this clearer than defendants' own example to illustrate the kind of complaint in which "the facts admitted by the default give rise to

* Defendants throughout the petition refer to the final judgment below as if it were a money fine imposed by the district court as a punishment for Toolco's contemptuous conduct [*e.g.*, "The judgment below for $145 million * * * was entered as a sanction under Civil Rule 37" (p. 4); defendants "were penalized by entry * * * of a default judgment * * * 30 times the largest judgment ever awarded * * *" (p. 22); and see n. 20 at p. 23]. Of course, the default judgment carried no money amount whatever; $137 million (and cost of suit) was awarded, after hearing, because Toolco had admitted, by its default, that it violated the antitrust laws and injured TWA thereby and because TWA proved the actual amount of its damages to be over $45 million.

liability" (Petition, p. 21). According to defendants, one such complaint is that which "• • • alleges that on a particular day at a particular place defendant negligently drove a motor vehicle against plaintiff as a result of which plaintiff was thrown down and had his leg broken and other injuries• • • " (*ibid.*). The allegation that defendant "negligently drove a motor vehicle against plaintiff" is, of course, admitted by a default. But whether that admission of *negligence* is an admission of fact or of mixed fact and law, or of a conclusory allegation, is immaterial to the effect to be accorded the admission by default. The allegation is proper, material and traversable and by defaulting a defendant admits it, and all the legal consequences that flow from it. *Harshman* v. *Knox County,* 122 U. S. 306, 316-17 (1887).

As early as *McAllister* v. *Kuhn,* 96 U. S. 87 (1877), a case cited by defendants (Petition, p. 21), this Court held that where a complaint states a cause of action, a defendant's default in failing to answer admits the allegation that defendant *converted* stock belonging to plaintiff:

> "If the statements contained in the petition are true, and McAllister had actually converted the stock to his own use, Kuhn was entitled to his damages. By his default, whatever had been properly pleaded was confessed. Had issue been joined upon the averment of conversion, it would have been necessary to show the existence of facts which in law constituted a conversion; but, for the purposes of pleading, the ultimate fact to be proven need only be stated. The circumstances which tend to prove the ultimate fact can be used for the purposes of evidence, but they have no place in the pleadings. We think the complaint does state all the facts necessary to constitute a cause of action." (96 U. S. at 89)

So *negligence* and *conversion* are typical conclusory allegations of "ultimate fact", the type of fact to which

Pomeroy is referring in the quotation on p. 20 of defendants' petition, the type of fact which is admitted by a default under the rule of *Thomson* v. *Wooster,* which held *validity* of a patent to be admitted. In precisely the same way defendants admitted here, by the default, TWA's allegations of *conspiracy to restrain and monopolize and attempt to monopolize* a particular segment of trade or commerce, set out in paragraphs 9 and 10 of the complaint [2d Cir. App. A-8-10]. These allegations as to the overall scheme in which defendants were engaged, and of the relation to that scheme of the specific acts that injured TWA and are the basis for TWA's recovery, must be taken as admitted by the default, no less than the allegation of negligence in defendants' example, the allegation of conversion in *McAllister* v. *Kuhn,* or the allegation of the validity of the reissued patent in *Thomson* v. *Wooster.**

Defendants' suggestion (Petition, pp. 21-22) that antitrust cases should be treated differently because they present difficult and complex questions is wrong in present law and unsound as a suggestion for future policy. Private antitrust plaintiffs are not a disfavored class of litigants upon whom specially onerous burdens of pleading and proof are to be placed. *Perma Life Mufflers, Inc.* v. *International Parts Corp.,* 392 U. S. 134, 139 (1968); *Radovich* v. *National Football League,* 352 U. S. 445, 454 (1957) ("* * * this Court should not add requirements to burden the private litigant beyond what is specifically set forth by Congress in [the antitrust] laws").

* In *Fong* v. *United States,* 300 F.2d 400 (9th Cir.), *cert. denied,* 370 U.S. 938 (1962), the defendant's refusal to return from South America to complete a deposition in progress resulted in entry of a default judgment against him. That default judgment was accorded the same effect as the default judgment here. When defendant sought at the damage hearing to require the government to prove the allegation in its complaint that he was the *alter ego* of certain corporations and hence responsible for their acts, the court ruled that this critical allegation (of "ultimate fact", in the old terminology) was admitted by his default and not subject to challenge (300 F.2d at 409).

In the unique circumstances here, the courts below could have done nothing other than what they did.

C. There is no basis in law or in conscience for defendants to pay less than the full amount of damages for which they were found liable after a contested evidentiary damage hearing. (Petition, Section C)

1. The supposed conflict of authority as to the propriety of permitting an *ad damnum* clause to be amended in a case like this is wholly imaginary, and the petition is able to construct that imaginary conflict only upon a misstatement of the order of events surrounding defendants' default.

However early defendants may have reached their decision to refuse discovery, it was not until the hearing before Judge Metzner on February 8, 1963 that their studied noncompliance with the court's discovery orders was formalized as a default. The transcript is clear that, as the court of appeals states,

> "* * * at the February 8 hearing, prior to Hughes's non-appearance, TWA clearly announced its intention to apply for an increase in the prayer for damages to the trebled $135 million." (449 F.2d at 79) [157a]

Although on notice of TWA's intention to amend, defendants nonetheless went forward with their default. Three months ensued before the default judgment was actually entered against them on May 3, 1963 during which not the slightest suggestion was heard from defendants that they would be willing to remedy their default. The petition's argument of the supposed question in terms of "due process" and "basic justice" is simply not justified by the facts of this case, as those facts have been found by the courts below.

2. In any event, TWA was entitled to recover the full amount of the damages which it was able to prove. The

courts below agreed that this was the only just interpretation of the Rules where a claim for damages in an unliquidated amount is involved, the default followed appearance and answer, and plaintiff at the damage hearing would be required to prove, and defendants in a position to contest, every dollar of the claimed damages.

There is no contrary authority to the position taken by the courts below. In his opinion permitting the amendment Judge Metzner cites *Peitzman* v. *City of Illmo,* 141 F. 2d 956, 962 (8th Cir.), *cert. denied,* 323 U.S. 718 (1944), which —although the facts of the case are somewhat confused— plainly stands for the proposition that if the defendant is in a position to contest the plaintiff's proof of damage, he is liable for the entire amount found to be proven. Both Judge Metzner and the court of appeals refer to *Riggs, Ferris & Geer* v. *Lillibridge,* 316 F.2d 60, 62-63 (2d Cir. 1963), which deals with the basic principle that damages if unliquidated must be proven in their entirety, and that a plaintiff under the modern procedure can obtain such damages (or other relief) as he can prove he is entitled to. In *Sarlie* v. *E. L. Bruce Co.,* 265 F. Supp. 371, 377-78 (S.D.N.Y. 1967), the district court in a default case reached the same conclusion as was reached in the instant case. Professor Moore is in accord. See 6 J. MOORE, FEDERAL PRACTICE ¶54.61, at p. 1206, ¶55.08, at p. 1823 (2d ed. 1971).

Fong v. *United States,* 300 F.2d 400 (9th Cir.), *cert. denied,* 370 U. S. 938 (1962), does not take a contrary view. In the *Fong* case there were originally several claims for relief, some of which claimed actual damages for such matters as conversion and wrongful sale of the vessels which were the subject matter of the action. A contract claim for liquidated damages per ship of $100 per day for each day up to 180 days during which the vessels were not scrapped and $25,000 for any period thereafter was upheld; the other claims were held insufficient as

a matter of law. After appearing, the defendant defaulted and was forbidden to contest the factual allegations of the complaint. Judgment by default was entered against him after a damage hearing at which the government sought to recover actual damages in addition to liquidated damages. On defendant's motion, the court amended its judgment to limit the award to the liquidated damages, rejecting the government's argument that the demands made in the insufficient claims could be used to support the higher recovery. The Court of Appeals for the Ninth Circuit held that, since each claim seeking actual damages had been found not to state a claim, it would be unjust to import into the single sufficient claim the entirely different theories of damage computation embodied in the insufficient claims.* There is no conflict between that decision and the decision reached below.

Any other result than that reached below would be contrary to the principles which the Federal Rules were intended to embody. Certainly, Fed. R. Civ. P. 54(c) is to be read in conjunction with the provision of Fed. R. Civ. P. 15(a) that leave to amend a pleading "shall be freely given when justice so requires." Since defendants were on notice, before their default, of TWA's intention to amend its *ad damnum* clause and in fact exercised their right to defend as to the amount of damages, permitting the amendment was plainly just.

---

* The United States did not petition for certiorari; the petition which was filed and denied was by the defendant and based on an asserted right to dispute well-pleaded allegations of the complaint despite his default. See footnote, *supra*, p. 37.

D. The default judgment was not precluded by the Federal Aviation Act or any action of the Civil Aeronautics Board. (Petition, Section D)

Defendants' arguments, now as in 1965, are directed to the interpretation and application of particular orders of the CAB issued many years ago and without any continuing effect whatever today. After full briefing and argument, this Court declined to consider these issues of antitrust exemption when the case was last here seven years ago. There is no reason why certiorari should be granted to consider them now. Recent decisions of this Court and of the courts of appeals in cases like *Carnation Co.* v. *Pacific Westbound Conference*, 383 U. S. 213, 220-23 (1966), have adequately charted the law. Compare, for example, *Allied Air Freight, Inc.* v. *Pan American World Airways*, 393 F.2d 441, 445-48 (2d Cir.), *cert. denied*, 393 U. S. 846 (1968).

None of defendants' activities which have been held to have violated the antitrust laws, and none of the specific actions resulting in injury to TWA, for which TWA has been awarded damages, has ever been approved by the CAB, formally or informally, by order or otherwise. The orders on their face plainly include no such approval. The CAB expressly stated in its brief *amicus* on the prior review in Nos. 443 and 501, October Term 1964, that no such approval was ever intended, and that it lays no claim to the power to immunize such activities from the reach of the antitrust laws even if it had the desire to do so.

It is by no means clear that defendants are entitled to raise these matters following a default for refusal to permit relevant discovery. Neither the defense that their conduct was exempted from the antitrust laws by order of the CAB nor the related defense urged on the prior appeals that the subject matter of the claims was within the "primary jurisdiction" of the CAB is jurisdictional, in the

sense of going to the power of the district court to hear and determine the questions presented to it. *Cf. Bell* v. *Hood,* 327 U. S. 678 (1946). Indeed, they are plainly affirmative defenses which under Fed. R. Civ. P. 8(c) are to be pleaded as such. Defendants' refusal to allow discovery to proceed prejudiced the consideration of the defenses of primary jurisdiction and antitrust exemption, just as it did of the other issues raised by the pleadings.

In any event, the district court and the court of appeals correctly concluded that the conduct alleged in the complaint and which formed the basis for the default judgment was not exempted or insulated from antitrust prosecution. To establish an exemption defendants must bring their conduct within the scope of the Board's authority, and point to orders of the Board conferring the exemption. They can do neither.

The only relevant authority of the Board to exempt conduct from the antitrust laws derives from Sections 408 and 414 of the Federal Aviation Act, 49 U.S.C. §§ 1378, 1384. Section 414 provides, in pertinent part, that any person affected by any order made under Section 408 "shall be, and hereby is, relieved from the operation of the 'antitrust laws' * * * insofar as may be *necessary* to enable such person to do anything *authorized, approved* or *required* by such order" (emphasis supplied).* Section 408(b) provides, with respect to an acquisition of an air carrier by a person engaged in any other phase of aeronautics that:

> "Unless, after such hearing, the Board finds that the * * * acquisition of control will not be consistent

* The language of Section 414 is perfectly clear that the exemption, if it applies at all, is not only from the "antitrust laws" but from "all other restraints or prohibitions made by, or imposed under, authority of law * * *." Literally, this would include the restraints of the common law applicable, *e.g.*, to frauds, deceits, and breaches of fiduciary duty. Such broad language emphasizes the importance of Congress's further direction that the exemption should only be available "insofar as necessary" to enable the doing of something "authorized, approved or required."

with the public interest or that the conditions of this section will not be fulfilled, it shall by order *approve such * * * acquisition of control,* upon such terms and conditions as it shall find to be just and reasonable and with such modifications as it may prescribe * * *." (emphasis supplied)

It is evident from the language of these provisions that the Board's only power is to approve the acquisition and the only thing exempted is the acquisition itself. The default judgment here, however, is not based upon an allegedly unlawful acquisition.

Judge Lumbard put the matter succinctly in his opinion for the Second Circuit in its first review of this case:

> "Surely Congress did not contemplate that CAB approval of an acquisition would be tantamount to approval of every transaction which might be entered into by the controlling party. The focus of the Board's powers in this sphere is the acquisition itself rather than the broad range of activities into which the controller may enter thereafter." (332 F.2d at 608) [27a]*

The original orders authorizing the acquisition of first 45% and then 73% of TWA's stock were intended, as the court of appeals found, only to approve the acquisitions, nothing more (332 F.2d at 610) [30a-31a]. This was all the Board could approve and all it did approve. The subse-

* In its brief *amicus* when the case was previously before this Court, the CAB strongly supported this interpretation:

> "But orders authorizing control do not approve prospectively all things that may be done in the exercise of control; and the Board's orders did not permit Toolco to utilize its power as a means of violating the antitrust laws. As the court below summarized TWA's complaint, it charges 'the outlines of a tying arrangement, an economic boycott of the defendants' competitors, and an attempt to monopolize commerce' (332 F.2d at 611). Such conduct plainly did not constitute acts 'necessary to enable' Toolco to do 'anything authorized [or] approved' by the Board's order." (p. 15)

quent orders amending the original orders to permit particular transactions in no way broadened, nor could they have broadened, the scope of the exemption which flowed from the original orders.

The Board, in its *amicus* brief, confirmed the accuracy of this construction of its orders and pointed out that its concern was only to prevent Toolco from pressing unneeded equipment on TWA, not to police possible antitrust violations:

> "• • • no immunity was conferred by the various orders modifying the basic orders of approval.• • • The orders were entered solely on the basis of motions filed by TWA, and without hearings or adversary pleadings. The Board stressed the limited nature of its approvals by pointing out that it was appraising the transactions in the light of the original intent of the restriction in the control order, thus focusing upon whether Toolco was using its control relationship to sell to TWA aircraft not economically justified by its operation. It also stated that it was not passing upon the reasonableness of the transactions for ratemaking purposes. *In short, the Board did not purport to approve anything but the specific transactions involved, and the misconduct alleged in the complaint was no more necessary to the consummation of those transactions than it was to the original acquisition of control.* (Amicus brief, pp. 15-16) (emphasis added)

The CAB is without jurisdiction under the Federal Aviation Act over either the acquisition of equipment by air carriers or their financing. Moreover, no CAB order ever dealt at all with the particular transactions which caused injury to TWA. TWA was awarded damages for the following actions of defendants, each taken pursuant to the conspiracy and attempt to monopolize alleged in the complaint:

> (1) Precluding TWA from ordering Boeings in 1955:—no CAB order approved such preclusion;

(2) Diverting 6 Boeings to Pan American:—no CAB order approved such diversion;*

(3) Denying 10 Convairs to TWA:—no CAB order approved such denial;

(4) Preventing timely delivery of 20 Convairs to TWA:—no CAB order approved such prevention;

(5) Conditioning the leasing of planes to TWA upon TWA's acquiring planes from no one else:—no CAB order approved such condition; and

(6) Disrupting the training of TWA's flight crews and ground personnel:—no CAB order approved such disruption.

The real thrust of defendants' argument, as the courts below and the CAB have recognized, is that when Toolco was authorized to acquire control, they secured blanket immunity from the antitrust laws. The ruling of the court of appeals that they did not, that the legality of the acquisition of control does not carry with it the legality of each exercise of that control, is a simple application of principles which this Court has consistently taught. See *Silver* v. *New York Stock Exchange*, 373 U. S. 341, 357 (1963); *Continental Ore Co.* v. *Union Carbide & Carbon Corp.*, 370 U. S. 690, 707 (1962). It has long been emphasized that statutory provisions granting or authorizing exemptions from the antitrust laws are to be kept within the narrowest of limitations. *E.g., United States* v. *Borden Co.*, 308 U.S. 188, 206 (1939); *Georgia* v. *Pennsylvania R.R.*, 324 U.S. 439, 456-57 (1945); *California* v. *Federal Power Commission*, 369 U.S. 482, 485 (1962); *United*

* Toolco seeks to present these diversions and those of the Convair 880s to Northeast as if they did not involve dealings in aircraft —profitable dealings—by Toolco (Petition, pp. 11n, 24n). They were assignments of contracts for planes, at a profit. The diversion of the Boeings is described in Pan American's Annual Report for 1959 as follows:

> "Six long-range Intercontinentals were *purchased from Hughes Tool Company* during the year at a cost of $40,000,000." [AX-868; emphasis added]

With the working papers withheld, the details are not available, but Toolco's secret tax returns leave no doubt that its profit in deals like this in 1959 and 1960 amounted to many millions of dollars.

States v. *Philadelphia National Bank*, 374 U.S. 321, 350-51 (1963). Even without that cautionary rule, however, it would be plain that nothing the Board has done had the effect of immunizing from liability the conduct which formed the basis of the present judgment.

Once it is concluded that the Board has not expressly exempted Toolco's conduct from antitrust liability, no viable argument of primary or exclusive agency jurisdiction remains. The court of appeals in 1964 carefully and accurately distinguished *Pan American World Airways* v. *United States*, 371 U. S. 296 (1963), pointing out, *inter alia*, that in that case the conduct complained of was at the heart of the Board's jurisdiction whereas here the conduct was beyond the Board's reach, and that there injunctive relief was sought, of a kind which could be provided by the Board whereas here TWA seeks treble damages for past conduct, which the Board has no power to award. In *Carnation Co.* v. *Pacific Westbound Conference*, 383 U. S. 213 (1966), this Court emphasized the difference:

> "The award of treble damages for past and completed conduct which clearly violated the Shipping Act would certainly not interfere with any future action of the Commission." (383 U. S. at 222)

This observation is particularly pertinent here since the CAB has not only no remedy available to give TWA redress, but no continuing jurisdiction at all over Toolco's conduct.*

* The court of appeals pointed out (332 F.2d at 609) [29a] that the Board's jurisdiction to deal at all with Toolco's conduct vis-a-vis TWA probably expired in 1960 when Toolco ceased to control TWA. Toolco misses the principal point of the court of appeals comment when it suggests (Petition, pp. 27-28) that the situation is somehow altered by TWA's decision not to attempt to prove damages attributable to Toolco's post-1960 conduct. The point is that after 1960 the Board lacked power to reach any of Toolco's conduct, whether it antedated or post-dated 1960. The Board simply lost jurisdiction over Toolco—and could only regain it in connection with a new acquisition of control.

E. That Toolco "mismanaged" TWA's affairs is no defense to charges under the antitrust laws. (Petition, Section E)

It is obviously no defense to antitrust charges that a parent's conduct also amounted to "breach of fiduciary duty" and "mismanagement" (Petition, p. 34). *Cf. Superintendent of Insurance* v. *Bankers Life & Casualty Co.*, 40 U.S.L.W. 4001, 4003 (U.S. November 8, 1971), rejecting a similar argument that mismanagement that also amounts to illegal conduct in connection with the purchase or sale of a security is not cognizable under the Securities Exchange Act. Such an argument, indeed, comes with singular ill grace from a "fiduciary" which, having chosen concealment over disclosure, has defaulted to antitrust charges instead of complying with discovery orders.

Before their wilful default, it was open to defendants to prove, if they could, that nothing which they had done amounted to anything more than normal oversight by Toolco of the aircraft acquisitions of its 78%* subsidiary. That argument, however, is no longer open. The basic charge of the complaint was that Toolco's arrogation of all authority for buying aircraft was illegal and violated the antitrust laws because it was pursuant to, and a principal part of, defendants' unlawful scheme to make TWA a "captive market" upon which defendants could build in fulfilling their purpose to secure a dominant position in the supply of aircraft to air carriers. Judge Kaufman's summary of TWA's complaint (449 F.2d at 64-65) [128a-130a] emphasizes that the specific acts alleged, upon which the damages ultimately awarded were based, all were "performed in furtherance of the offenses charged and for the improper purposes alleged" (449 F.2d at 65) [129a].

* During the critical 1955-56 period, Toolco owned 74% of TWA's stock. It had started buying stock in 1939 and by 1945 had accumulated 45%, which increased to 73% in 1948. The 78% was not reached until 1958.

It is mere sophistry, under these circumstances, to assert that the court of appeals' decision "extends to a startling degree the liability of a parent corporation for determining the manner in which its subsidiary does business" (Petition, pp. 33-34) or amounts to a ruling that "a parent that decides that its subsidiary should buy from X rather than Y may be held liable for antitrust damages if, with the wisdom of hindsight, the subsidiary can show that the decision was unwise" (Petition, pp. 34-35).* Such statements, like the assertion that "the *mere* fixing by a parent of a subsidiary's price of production or the selection by the parent of those persons with whom its subsidiary may or may not deal" is not, without more, *per se* illegal (Petition, p. 34, emphasis added) have no relevance to the present case.

TWA's success in a trial on the merits was in no way dependent on a showing of *per se* violations, as this Court reaffirmed recently in *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394 U.S. 495, 499-500 (1969). All that was required of TWA was to plead allegations which, taken as a whole, spelled out violations whether *per se* or not. It did so.

The fundamental issue of defendants' motivation and intent in limiting to Toolco the acquisition of all aircraft for TWA was raised by the allegations of the complaint and the denials in defendants' answers. It was a proper subject for discovery and a matter to be determined at trial (*supra*, pp. 10-11). But defendants chose not to defend on the merits, and they cannot now pose as an issue for this Court one that presupposes their motives to have been only the innocent anxiety of a parent for its subsidiary's welfare.

---

* Whether defendants' decisions were wise or unwise is irrelevant here, but TWA's damages show how costly they proved for TWA, while Toolco's secret tax returns show how profitable they were for Toolco.

F. **Defendants cannot refuse discovery and defend on the merits on the basis that there is no proof they were more than "potential" competitors. (Petition, Section F)**

> "We cannot say that proof at a trial—prevented by Toolco's conduct—that Toolco was more than a conduit for TWA but rather possessed independent competitive significance with respect to the commercial aircraft market, would be insufficient, *if combined with appropriate related proof of the intent, attempt, collusion, tying arrangements, boycotts, and monopolization alleged in the complaint,* to support an antitrust judgment for TWA." (449 F.2d at 67) [134a] (emphasis added)

These words have been omitted from the quotation in which defendants discern the "potential competition" theory that they then go on to belabor (Petition, p. 37n). The omission demonstrates that this attack is directed against a straw man.

The court of appeals did not formulate any new substantive rules, let alone devise "a Clayton Act test for a Sherman Act violation" (Petition, p. 36). In the usual case the trier of fact would decide what role the alleged antitrust violator had played and what effect his alleged antitrust violations had had within the relevant field of commerce. Here, however, defendants barred TWA from access to evidence about this subject and attempted instead, on the basis of the limited evidence offered at the damage hearing, to convince the Special Master and the courts below that Toolco had nothing at all to do with the business of supplying aircraft to air carriers. The question which those courts had therefore to consider was whether the evidence to which Toolco pointed was such as to foreclose the possibility that TWA with benefit of discovery would have been able to show that Toolco played a role sufficient to support a finding of an antitrust violation

"under any of the several hypotheses put forward in the complaint * * *." (449 F.2d at 68) [136a]*

Both the Special Master [Brownell Report, pp. 38-42] and the court of appeals (449 F.2d at 67-68) [134a-136a] have reviewed at some length the evidence showing how actively Toolco and Hughes participated in the commercial aircraft market *outside* of the TWA market which they completely monopolized. The district court also referred to certain of the relevant evidence in confirming the Special Master's *refusal* to find that Toolco never engaged in the manufacture or supply of commercial transport aircraft to United States air carriers in competition with manufacturers and suppliers of such aircraft (308 F. Supp. at 686)

---

* The court of appeals catalogued these "several hypotheses" as including

> "* * * in addition to the *Yellow Cab* theory [*United States* v. *Yellow Cab Co.*, 332 U.S. 218 (1947)], (1) unlawful intent to monopolize a substantial portion of the commercial aircraft market in restraint of trade; (2) unlawful conspiracy to do so, see *Sunkist Growers, Inc.* v. *Winckler & Smith Citrus Products Co.*, 284 F.2d 1 (9th Cir. 1960), *rev'd on other grounds*, 370 U.S. 19 (1962); *Poller* v. *Columbia Broadcasting System, Inc.*, 368 U.S. 464 (1962); *Perma Life Mufflers, Inc.* v. *International Parts Corp.*, 392 U.S. 134 (1968); *Albrecht* v. *Herald Co.*, 390 U.S. 145 (1968); *Simpson* v. *Union Oil Co.*, 377 U.S. 13 (1964); (3) enforcement of an illegal boycott, see *Fashion Originators' Guild* v. *Federal Trade Commission*, 312 U.S. 457 (1941); *United States* v. *New York Great Atlantic & Pacific Tea Co.*, 173 F.2d 79 (7th Cir. 1949); *Klor's Inc.* v. *Broadway-Hale Stores*, 359 U.S. 207 (1959); (4) tying adequate financing of TWA to its purchase or lease of jets from Toolco, and vice-versa, see *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394 U.S. 495, 502-503 (1969); and (5) the lease of aircraft to TWA on the condition that TWA not purchase or lease aircraft from other suppliers, see *International Salt Co.* v. *United States*, 332 U.S. 392 (1947); *Standard Oil Co. of California* v. *United States*, 337 U.S. 293 (1949)." (449 F.2d at 68-69) [136a-137a]

Defendants refer to none of the cases cited in the above quotation. Indeed, the only decision by this Court in a private antitrust case mentioned by defendants is *LaBuy* v. *Howes Leather Co.*, 352 U.S. 249 (1957), cited for a non-antitrust proposition (Petition, p. 18n).

[60a]. Defendants continue to ignore such matters as Toolco's sale of Boeings to Pan American, leases of Convairs to Northeast, and temporary corner on jet engines in 1956—marketed "in competition to Pratt & Whitney", as that manufacturer complained [2d Cir. App. A-178-79].

The express assumption of this particular argument as stated by defendants in their summary formulation in "Questions Presented" No. 6 (Petition, p. 4) is that Toolco "has in no way restrained or monopolized a particular area of commerce."

That assumption is contrary to the findings by the Special Master and the courts below. It is negatived even by the limited evidence that defendants permitted to be developed before their default. It contradicts essential allegations of TWA's complaint. The argument based on it is simply not available on the record.

G. The Special Master and the courts below correctly found that TWA, in proving the amount of its damages, had demonstrated that each item recovered flowed from the allegations of unlawful conduct and resultant injuries admitted by defendants' default. (Petition, Section G)

Defendants again ignore the state of the record in making their "proximate cause" argument.

The answer to Mr. Justice White's question—"How can you prove how much you have been damaged without showing what you have been damaged from?" (see Petition, p. 39) is that TWA did in fact show what it was damaged from. Despite what would appear from defendants' selective quotations from the court's opinion (*cf.* Petition, p. 40), the court of appeals so found:

> "The default had the effect of admitting or establishing that the acts pleaded in the complaint violated the antitrust laws and that those acts caused injury to TWA in the respects there alleged. Because,

> however, the damages were unliquidated and uncertain, F.R. Civ. P. 55(b), it was necessary for TWA at the hearing to establish the *extent* of the injuries established by the default. The outer bounds of the recovery allowable are of course measured by the principle of proximate cause. The default judgment did not give TWA a blank check to recover from Toolco any losses it had ever suffered from whatever source. It could only recover those damages arising from the acts and injuries pleaded and in this sense it was TWA's burden to show 'proximate cause'. On the other hand, there was no burden on TWA to show that any of Toolco's acts pleaded in the complaint violated the antitrust laws nor to show that those acts caused the well-pleaded injuries, except as we have indicated that it had to for the purpose of establishing the extent of the injury caused TWA, in dollars and cents." (449 F.2d at 70) [144a]

TWA was damaged by the specifically pleaded deprivations it suffered in its jet fleet—inadequate in number, received too late, initially available only through day-to-day leases from Toolco—as a result of the defendants' primary concern with establishing themselves as suppliers of aircraft to air carriers generally [see complaint, pars. 9, 10, 14, 17-20, 22-24, 26, 28, 49-53]. As to the effect to be given to these allegations see pp. 35-37, *supra*. The amount of the losses which TWA suffered from these fleet deprivations was proven in the course of a bitterly contested two-year hearing before the Special Master, whose 323-page Report is itself a complete refutation of defendants' pretense that proof of damage was lacking. The Special Master's findings with respect to each of TWA's damage claims were expressly related to the allegations of its complaint [Brownell Report, pp. 45, 100-01, 112-13, 168-69, 186-87, 194, 224-26, 265, 296, 302-03]. Judge Kaufman found that TWA "did not

rely only on its default judgment but introduced evidence linking each component of the damages claimed to the pleaded illegal acts of Toolco and injuries to TWA" (449 F.2d at 72) [144a].

Apart from disagreeing (Petition p. 40) with this express finding, defendants utilize their "proximate cause" argument chiefly to argue that TWA failed to prove that it could have financed the acquisition of additional jets.

TWA historically received and paid for 47 jets. TWA presented evidence that, except for defendants' activities, it would have received 6 additional Boeing B-331 jets and 10 additional Convair 880 jets. This evidence was accepted by the Special Master, who expressly found that the resulting "hypothetical jet fleet and reconstructed delivery dates constitute a proper basis for computing damages * * *" [Brownell Report, p. 56]. As to the financing of this additional equipment, the Special Master found that (a) "the full purchase price of [the 6 additional Boeings] and related spare parts and equipment [would have amounted] to a capital expenditure of $43.1 million" [Brownell Report, p. 149], and (b) "the full purchase price for [the 10 additional Convairs] and related spare parts and equipment would have amounted to $48.1 million" [Brownell Report, p. 150]. Thus, a total of $91.2 million of additional funds would have been needed to acquire the 16 jets that defendants' unlawful conduct kept TWA from acquiring. The Special Master, for purposes of his "cost of capital" computations, treated all of these funds as borrowed. In light of the default and his rulings on the evidence, he made what he described as the "fair and reasonable assumption" that "funds were available at the time of the delivery of each aircraft" that TWA did not receive because of defendants' unlawful conduct,

stating that the record was "sufficiently complete to allow these assumptions to be taken" [Brownell Report, p. 148].*

After weighing the very same argument that defendants now put to this Court, the court of appeals held:

> "Assuming then that an independent TWA would have attempted to acquire the same 63-jet fleet ordered by Toolco, defendants contend that TWA would not have been able to finance such an undertaking, which would have cost about $353 million or $93 million more than TWA actually spent for its 47-jet fleet. Toolco notes that $100 million of the financing for the 47-jet fleet was supplied by Toolco itself through its purchase of TWA subordinated debentures. We find untenable Toolco's characterization as insufficient to support the Special Master's contrary assumption that an independent TWA would and could have financed the full 63-jet fleet, the evidence that United, American, and Pan American Airlines each were in fact able to finance comparable ventures during the same period. Toolco directs our attention to financial reversals experienced by TWA during the period preceding the time

* The Special Master had before him an extensive body of information relevant to TWA's capability to have arranged for the additional funds if it had not been the victim of defendants' unlawful combination and conspiracy to restrain and monopolize and attempt to monopolize in violation of the antitrust laws. Among other things, the record includes (a) the well-pleaded allegations of TWA's complaint—accepted by the Special Master and entitled to controlling weight in any consideration of what TWA could have done if defendants had not violated the law and injured it [see Brownell Report, p. 254]; (b) expert testimony that an independent TWA could have financed the acquisition of an adequate jet fleet, including the 16 additional jets [AX-353, AX-429]; (c) evidence that each of TWA's principal competitors—United, American and Pan American—successfully financed a fleet larger than the 63-jet fleet (449 F.2d at 74) [147a]; and (d) evidence of TWA's actual financing and the various possibilities available to it to have raised any additional money needed [AX-861, AX-865]. Traffic and accounting studies demonstrated that availability of the earlier and larger jet fleet would have produced a large increase in funds internally generated from operations. The increase in 1959 and 1960 alone would have provided the major part of the necessary funds [AX-479].

> Brownell assumed TWA would have financed the fleet (1958-59). But the well-pleaded allegations of the complaint demonstrate conclusively that crippling TWA's financial posture and reducing it to a state of vassalage, dependent on Toolco's support, was part of defendants' overall antitrust violation. See Complaint ¶¶ 17, 18, 19, 22, 23, 24, 26, 50, 51 and 52(a). To the extent of negating Toolco's attempted reliance on TWA's asserted financial weakness, these allegations must be given effect. Any inferences other than that an independent TWA would have fared neither better nor worse than competing airlines in financing its jet fleet would have been unwarranted." (449 F.2d at 74) [147a].

Thus, defendants' "proximate cause" argument simply ignores both their default and what was decided below.

As for their concern for "loosening of the requirements of proof in antitrust litigation" (Petition, p. 41), this Court's views need no reaffirmation. The basic guidelines for determining the amount of damages to be awarded a plaintiff injured by violations of the antitrust laws were laid down in *Eastman Kodak Co.* v. *Southern Photo Materials Co.*, 273 U.S. 359 (1927); *Story Parchment Co.* v. *Paterson Co.*, 282 U.S. 555 (1931); and *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946). The Court has never departed from the rules set forth in those three cases, but has reaffirmed them again and again—most recently in *Zenith Radio Corp.* v. *Hazeltine Research, Inc.*, 395 U.S. 100, 123-24 (1969).

As this Court noted in *Bigelow*, "The most elementary concepts of justice and public policy require that the wrongdoer shall bear the risk of the uncertainty which his own wrong has created" (327 U.S. at 265). By defaulting, defendants admitted the antitrust violations alleged in the complaint, and the fact that injuries resulted from those violations. All that was left was to calculate the amount of damages necessary to compensate TWA for those in-

juries. That amount was determined in the Brownell Report, which the court of appeals characterized as reflecting "an extraordinary awareness of the issues raised and the applicable principles of law" (449 F.2d at 73) [144a]. Twice that Report has been painstakingly reviewed and confirmed in all respects, first by the district court and then by the court of appeals. As the court of appeals observed:

> "Toolco must bear the responsibility for any lack of preciseness of proof, and there is good reason that this should be so. The default itself by Toolco rendered precise proof of damages even more difficult than in the usual antitrust case, where the plaintiff may avail itself of the full battery of discovery procedures to prove damages as well as to prove liability. Toolco cannot be permitted to block the discovery of precise, clear and direct evidence and then be heard to complain that the evidence should have been more convincing." (449 F.2d at 73) [145a]

H. The precedential impact of the decisions below. (Petition, Section H)

Defendants pretend that the decision below "is an outrage" which will "inflict serious wounds on sound principles of procedure and antitrust law" and "impose heavy burdens on the Federal Courts." In every respect except the factual determination of the amount of TWA's damages, the decision below is nearly eight years old, and this Court's dismissal of certiorari occurred seven years ago. No such impact has been visible. No court has suggested disagreement with the earlier decision, nor, indeed, has any court suggested that that decision broke any new ground. No great number of defendants has "elected" to defy discovery orders, but instances of such defiance were equally rare before.

The one real possibility that the course of this litigation would result in drastic changes either in procedure or in substantive law would arise if the litigation were to culminate in defendants' arguments being upheld.

CONCLUSION

For the reasons stated, the petition for a writ of certiorari should be in all respects denied.

Respectfully submitted,

[Doc. 44]

UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

61 Civ. 2324

TRANS WORLD AIRLINES, INC.,

Plaintiff,

against

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,

Defendants.

A pretrial conference was held in this cause on September 6, 1961, wherein the following proceedings were had.

I.

• • •

II.

Plaintiff TWA has already gathered some of the documents called for by the subpoena duces tecum served on TWA on August 16, 1961 by defendant Hughes Tool Co. TWA shall continue gathering the material called for by this subpoena duces tecum and shall complete compliance with the subpoena by Friday, October 13, 1961. Defendant Hughes Tool Co. may commence the inspection and copying of said documents on September 7, 1961.

III.

Plaintiff's motion pursuant to F.R.C.P. 34 shall be argued on September 21, 1961 at 10:30 a.m. in chambers.

Defendant Hughes Tool Co. shall serve and file its papers in opposition prior to 10 a.m. on September 18, 1961.

IV.

The question as to when defendant Hughes Tool Co. shall commence taking depositions and when it shall comply with any order entered on plaintiff's motion pursuant to F.R.C.P. 34 will be argued in conjunction with said motion.

V.

The motion by defendant Hughes Tool Co. to dismiss the complaint pursuant to F.R.C.P. 12 and for summary judgment pursuant to F.R.C.P. 56 shall be held in abeyance. Said defendant shall notify the Court when it desires the motions to be heard. A date will then be fixed for the serving and filing of papers in opposition and argument on the motions.

VI.

The service of subpoenas by defendant Hughes Tool Co. may continue.

SO ORDERED.

Dated: New York, N. Y.
September 7, 1961.

Pretrial Order, February 7, 1962

[Doc. 59]

UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

61 Civ. 2324

TRANS WORLD AIRLINES, INC.,

Plaintiff,

against

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,

Defendants.

Pretrial conferences were held in this cause on January 10, 1962 and January 23, 1962, wherein the following proceedings were had.

• • •

II.

The deposition of the plaintiff by Charles C. Tillinghast, Jr., shall be continued and the depositions of the other witnesses shall be commenced in accordance with the schedule annexed hereto. The Special Master hereinafter appointed may vary this schedule upon application of either party if in his opinion the circumstances require such variance.

III.

Upon the consent of counsel for the plaintiff and the defendant Hughes Tool Company, the Court was empowered to appoint a Special Master. J. LEE RANKIN, ESQ., of 36 West 44th Street, New York 36, New York is hereby appointed Special Master to act in connection with the depositions and other discovery proceedings undertaken by any person now a party or any person who may hereinafter

become a party, with the following powers: to preside over and supervise the conduct of depositions and in connection therewith to rule on such objections to questions, whether heretofore made or to be made, as have not been reserved by stipulation of the parties to the time of trial; to rule on objections, whether heretofore made or to be made, with respect to the production of documents; to make any and all other rulings which may be required pursuant to the provisions of Rules 26 to 37, and 45, of the Federal Rules of Civil Procedure and such other rules as may from time to time become applicable.

IV.

Any action taken or ruling made by said Special Master shall be subject to review by the Honorable Charles M. Metzner, United States District Judge for the Southern District of New York, upon timely application with reasonable notice.

V.

The Special Master shall be reimbursed for such expenses as are reasonably and necessarily incurred by him and the compensation of the Special Master is to be fixed at $60.00 per hour. Such reimbursement and compensation are to be taxed as costs at the conclusion of this action; provided, however, that until the taxation of costs the compensation of the Special Master is to be paid at monthly intervals, fifty per cent (50%) by plaintiff Trans World Airlines, Inc., and fifty per cent (50%) by defendant Hughes Tool Company, and provided, further, that such payments shall be subject to reallocation among any additional parties who may hereafter be joined and who may participate in the depositions.

VI.

Defendant Hughes Tool Company shall file its answer to the complaint herein upon the day following the completion, in accordance with the annexed schedule, of the deposition of plaintiff by Charles C. Tillinghast, Jr., Robert W. Rummel and E. O. Cocke.

VII.

The deposition of plaintiff by A. V. Leslie, in view of his present illness, is adjourned without date and shall be re-scheduled by the Special Master upon reasonable notice by the defendant at an appropriate time in light of the health of the witness and at a date not in conflict with the annexed schedule.

VIII.

Any request for a change in the date fixed for the production of writings and other material by the defendant Hughes Tool Company, presently set for March 15, 1962 by order of this Court dated December 18, 1961, shall be made to the Special Master.

So Ordered.

LOSE IN CENTER

Pretrial Order, July 12, 1962

[Doc. 101]

UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

61 Civ. 2324

TRANS WORLD AIRLINES, INC.,

Plaintiff,

against

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,

Defendants.

A pretrial conference was held today on the respective appeals by the plaintiff and defendant Hughes Tool Company from rulings of the Special Master.

1. Defendant Hughes Tool Company appeals from a ruling of the Special Master overruling Toolco's objections to interrogatories propounded to it by plaintiff. After hearing counsel and reading the papers submitted in support of and in opposition to the appeal, the ruling of the Special Master is modified as indicated below and as modified is sustained.

Interrogatory No. 1 is modified by striking the words "or attorney". It is further modified by limiting any knowledge, information or belief of a director to such knowledge, information or belief which said director has acquired as a director of the defendant Toolco.

As to Interrogatory No. 4, the defendant need not make any answer thereto insofar as any of the named persons in this interrogatory are former employees or consultants.

However, the defendant in its answer to this Interrogatory No. 4 shall indicate which of said persons are former employees or consultants. Insofar as consultants are concerned, the term shall embrace those persons who are in normal usage considered as independent contractors.

Interrogatory No. 7 refers to employees, agents and/or representatives of Toolco. The information requested by this interrogatory shall be furnished as to such persons only if those persons performed services of a personal nature or otherwise for Hughes individually and if such services were compensated for by the defendant and not by Hughes personally.

The dates referred to in the interrogatories shall be computed from the date of this order.

2. Plaintiff has appealed from a ruling of the Special Master denying the motion of the plaintiff for an order determining that rule 4 of the Civil Rules of the United States District Court of the Southern District of New York is applicable in the instant case. After hearing argument of counsel and reading the papers in support of and in opposition to this motion, the appeal is disposed of as follows:

Irrespective of rule 4, the court has the power to vary any order heretofore entered fixing priority of deposition-discovery proceedings. In view of the number of days which the defendant Toolco has devoted to the deposition of Tillinghast, the president of the plaintiff, defendant is directed to complete that deposition on or before July 25th, 1962. It shall commence taking the depositions of the other noticed individuals immediately thereafter. Plaintiff may renew its motion before the Special Master on September

20th, 1962 if at that time it is advised that the depositions scheduled upon the completion of the Tillinghast deposition are not moving as expeditiously as possible, and that any further delay in the taking of the depositions of the defendant would be prejudicial to the plaintiff.

So Ordered.

U.S.D.J.

Opinion and Order, July 24, 1962 (Memorandum Endorsed on Motion Papers Dated May 11, 1962)

[Doc. 93]

UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

61 Civ. 2324

TRANS WORLD AIRLINES, INC.,

Plaintiff,

against

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,

Defendants.

Defendant Hughes Tool Company has applied to the court to review the opinion of the Special Master rendered on April 17, 1962 and the order of the Special Master contained in his letter of May 2d, 1962, as modified by his letter of May 3d, 1962, to the extent that the defendant is required to produce for inspection and copying by adverse parties any privileged communications between attorney and client.

The court has reviewed the opinion of the Special Master which appears in the transcript at pp. 4361-4369 and the letters referred to above. The Special Master has made an exhaustive study of the law applicable to the attorney-client privilege. The court agrees that the law is as stated by the Special Master both as to the privilege and the waiver thereof. The court sustains the ruling of the Special Master as he has applied the law to questions presented to him. If there are any specific documents concerning which the defendant desires specific rulings as to their ad-

missibility, they may be submitted to the Special Master pursuant to the directions appearing at p. 4391 of the transcript and in the letter of May 2d, 1962, as modified by the letter of May 3d, 1962.

So ORDERED.

U.S.D.J.

Pretrial Order, September 21, 1962

[Doc. 122]

UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

61 Civ. 2324

TRANS WORLD AIRLINES, INC.,

Plaintiff,

against

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,

Defendants.

A pretrial conference was held on September 19th, 1962 upon a notice from the attorneys for the plaintiff that it was appealing from so much of the Special Master's ruling of September 15th, 1962 as denied the plaintiff the right to proceed with the deposition of Howard R. Hughes on September 24th, 1962. After hearing counsel for the plaintiff, the defendant Hughes Tool Company and the additional defendants, and after reading the transcript of the hearing before the Special Master on September 15th, 1962, the appeal is disposed of as follows.

Sometime prior to July 12th, 1962 the Special Master evidenced his serious concern about whether or not Howard R. Hughes would be available as a witness in this proceeding if and when his deposition was properly reached under the orders of the court. This concern of the Special Master was not aroused in connection with any application by the plaintiff to interfere with the priority of deposition previously determined by order of the court dated February 7th, 1962 as amended by the order of March 5th, 1962. In order to resolve that problem prior to the time of request-

ing Howard R. Hughes to appear as a witness, the Special Master afforded the Tool Company alternative procedures. Either it was to answer certain interrogatories as to the whereabouts of Howard R. Hughes, in order to facilitate the service of a witness subpoena, or counsel for the Tool Company was to provide satisfactory proof that he was authorized to accept service of the subpoena on behalf of Howard R. Hughes.

Interrogatories were framed by the plaintiff and served upon the Tool Company which thereafter were amended by order of the court dated July 12th, 1962. Subsequently, by order dated July 26th, 1962, the time for the Tool Company to answer the interrogatories was fixed for August 27th, 1962. Counsel for the Tool Company then served and filed with the court a document which he asserted gave him the authority to accept service of the witness subpoena on behalf of Howard R. Hughes. At this time the court reserves for future determination any question raised by the plaintiff regarding the authenticity of that document.

Pursuant to the document filed with the court, Chester C. Davis, counsel for the Tool Company, accepted service of a witness subpoena on behalf of Howard R. Hughes on September 6th, 1962. That subpoena was issued out of the United States District Court for the Southern District of California upon the notice by the attorneys for the plaintiff served upon Chester C. Davis, which stated that the deposition of Howard R. Hughes as a witness would be taken at the United States District Courthouse for the Southern District of California in Los Angeles on September 24th, 1962. The return of the marshal, indicating service upon Chester C. Davis in Los Angeles, was accompanied by an affidavit by Mr. Davis stating that he had

been authorized in writing by Howard R. Hughes to accept such service.

Pursuant to the order of the court dated July 12th, 1962 and the suggestion made by the court at a hearing held on September 6th, 1962, the plaintiff moved before the Special Master on September 15th, 1962 for permission to suspend the taking of the depositions by the Tool Company in order to permit plaintiff to commence taking the deposition of Howard R. Hughes on September 24th, 1962, and that the suspension of the taking of depositions by the Tool Company be continued until the deposition of Howard R. Hughes was completed. The Special Master denied the application of the plaintiff.

However, in connection with this denial the Special Master directed Chester C. Davis to write to Howard R. Hughes and inform him that the Special Master considered that the subpoena is binding upon Mr. Hughes and that he is subject to appear pursuant to that subpoena on September 24th, 1962 or at any other date fixed by the court. The Special Master stated for reasons set forth in the record that unless Howard R. Hughes communicated with him by today, Friday, September 21st, 1962 he would consider that Mr. Hughes has acquiesced in this interpretation and that if Mr. Hughes subsequently either attacked the validity of the subpoena or failed to appear pursuant to that subpoena on September 24th, 1962, or at any future time that the court might direct for the taking of the deposition of Mr. Hughes pursuant to that subpoena, he, the Special Master, would consider the imposition of sanctions upon the Tool Company, and that he would entertain a motion to strike the answer of the Tool Company and enter judgment against it.

Without passing upon the power of the Special Master

to grant the entry of such judgment, the court adopts the interpretation and conditions expressed by the Special Master. Any determination by the Special Master on an application for a default judgment would, of course, be reviewable upon appeal to the court.

On the hearing of this appeal the court inquired of Chester C. Davis as to whether he had followed the directions of the Special Master. Mr. Davis advised the court that he had written to Howard R. Hughes on Monday, September 17, 1962, and enclosed the pages of the transcript of the hearing before the Special Master on September 15th, 1962 which contained the views of the Special Master. Howard R. Hughes has neither communicated with the Special Master nor the court as of 5:30 p.m. today, which is the end of the business day. Therefore, I find that Mr. Hughes has acquiesced in the interpretation and conditions expressed by the Special Master.

The Special Master has presided over the deposition proceedings practically since their inception. The propriety of plaintiff's application is peculiarly within his competence. He is aware of the court's views contained in the last paragraph of the order of July 12, 1962. Plaintiff has not made an adequate showing at ths time that the ruling of the Special Master within this framework is in error. I approve and affirm the ruling of the Special Master denying the application of the plaintiff to proceed with the deposition of Howard R. Hughes on September 24th, 1962 to the extent that the return date of September 24th, 1962 contained in the subpoena served upon Howard R. Hughes is adjourned by order of this court to October 29th, 1962 at the same time and place. The Tool Company may apply to the Special Master on October 22nd, 1962 for a further adjournment of the date now fixed for the deposition of Howard R. Hughes.

Pretrial Order, September 21, 1962

Chester C. Davis is directed to notify Howard R. Hughes of this determination before 9 p.m. tonight, Eastern Daylight Time, both by telephone communication and by mailing a copy of this order air mail special delivery to Howard R. Hughes.

So Ordered.

UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

61 Civ. 2324

TRANS WORLD AIRLINES, INC.,

Plaintiff,

against

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,

Defendants.

A pretrial conference was held on January 9th, 1963 to consider various matters brought to the court's attention by notices of appeals from rulings of the Special Master. These matters are disposed of as follows:

1. The appeal by TWA, pursuant to a telephone request, to review an order of the Special Master adjourning the deposition of Howard R. Hughes to February 11th, 1963 is withdrawn by counsel for TWA pursuant to an application filed January 8th, 1963.

2. The appeal by Hughes Tool Company dated January 3rd, 1963 seeking to review an order of the Special Master dated December 28th, 1962 denying Toolco's application to examine Ben-Fleming Sessel and the Irving Trust Company by Sessel and Arthur L. Wadsworth and Dillon, Read & Co. by Wadsworth is denied and the ruling of the Special Master is affirmed. The court adopts the statement of the Special Master appearing on page 11 of the transcript of

proceedings before the Special Master dated December 28th, 1962, which states:

> "I do not think it [the depositions of Sessel and Wadsworth] would advance the proper administration of this case since it would in my judgment inevitably branch out into the issues of the counterclaims, or result in such continuous controversy as to the exact limits of such issues that it might interfere with the taking of Mr. Hughes' deposition at the time and place fixed."

The court has previously indicated that priority of deposition is not sacrosanct, and even without the adoption as of July 1st, 1962 of rule 4 of the Civil Rules of this district the court has the power to alternate the taking of depositions by the parties.

During a ten-month period the defendant has conducted over 80 days of depositions of the plaintiff, which have consumed over 10,000 pages of testimony. It will have substantially completed the deposition of the plaintiff this month with the testimony of Cocke and Leslie. It has then scheduled the depositions of other witnesses, including Sessel and Wadsworth, which can consume a very long period of time. The deposition of Howard R. Hughes by the plaintiff and the additional defendants should now go forward. This deposition was originally scheduled for September 24th, 1962 and then adjourned to October 29th, 1962. It has now been adjourned to February 11th, 1963 and this date will be adhered to in the absence of extraordinary circumstances. The complicated nature of this action necessitates long and involved deposition-discovery proceedings and it is only fair that plaintiff be allowed to proceed without waiting for the defendant to complete its deposition proceedings. This is especially true where the

plaintiff claims that 75% of the proof necessary to sustain its claim is obtainable from Hughes personally.

Furthermore, the completion of such deposition will advance materially the date when the court could meaningfully entertain the various motions which Mr. Davis has indicated he would like to press for a dismissal of the complaint and for summary judgment. It will also facilitate an intelligent ruling upon Toolco's application pursuant to rule 16 of the Federal Rules of Civil Procedure and the sufficiency of TWA's compliance with interrogatories served on October 11th, 1962 and the further interrogatories served on November 13th, 1962.

The court concurs in the ruling of the Special Master contained in his order of December 28th, 1962 clarifying his order of October 25th, 1962, directing that Howard R. Hughes appear on February 11th, 1963 for deposition in Los Angeles. The return date of the subpoena served on September 6th, 1962 as adjourned by order of this court dated September 21st, 1962 and the notice to take deposition are adjourned to February 11th, 1963 at the same time and place. The provisions of the order of this court dated September 21st, 1962 are reaffirmed and reiterated, and Mr. Davis is directed to notify Howard R. Hughes of the directions of the court contained in this order by telephonic communication and by written communication to be made and sent by 5 p.m. on January 11th, 1963.

3. The motion by Hughes Tool Company, pursuant to rule 16 of the Federal Rules of Civil Procedure, to authorize the Special Master to conduct pretrial conferences, with recommendations to the court for the form and terms of a pretrial order defining and limiting the legal and factual issues in this case, is denied without prejudice to a renewal

30 days after the completion of the deposition of Howard R. Hughes.

4. The appeal by Hughes Tool Company dated September 19th, 1962 from an order of the Special Master made on September 15th, 1962 which requires Hughes Tool Company to produce for inspection and copying by opposing counsel, prior to a further definition of the issues, the documents with respect to which Hughes Tool Company claims attorney-client privilege is denied and the order of the Special Master is affirmed.

A reading of the briefs and the oral argument would indicate that the application under advisement is in fact a reargument of the order of this court dated July 24th, 1962. At that time the court indicated that it had reviewed the opinion of the Special Master which appeared in the transcript at pages 4361-4391 and the letters of the Special Master dated May 2nd, 1962 and May 3rd, 1962. The court concurred with the opinion of the Special Master and directed that if there were any specific documents concerning which Hughes Tool Company desired specific rulings they should be submitted to the Special Master.

At pages 122 et seq. of the transcript of September 15th, counsel for the Hughes Tool Company stated that he had made available to the Special Master the documents concerning which the defendant was asserting the attorney-client privilege. Counsel went on to state that the documents were made available for a ruling by the Special Master not as to whether they would be normally covered by the attorney-client privilege, but "whether or not the attorney-client privilege had been waived." He then went on to say at page 124 that:

> "What is developing is simply the question of the procedure to be followed in obtaining rulings of the

> Special Master with respect to individual documents, applying the principles of law announced by the Special Master and affirmed by Judge Metzner, and the only area which I am aware constitutes a difference of opinion, perhaps, is whether those documents are to be produced at this time on the ground that prior to this time there had been a waiver of the privilege."

Documents heretofore submitted to the Special Master shall be made available to all parties by noon on January 14th, 1963. If there are any additional documents to which the defendent Hughes Tool Company asserts a non-waived attorney-client privilege, such documents shall be submitted for a ruling to the Special Master by noon of January 14th, 1963 and a list thereof furnished at the same time to counsel for all parties.

5. The appeal by TWA, pursuant to a telephonic request, to review an order of the Special Master denying its motion to quash or strike interrogatories served by Toolco on October 11th, 1962 is denied except that the order of the Special Master is modified to the extent that TWA shall answer the interrogatories within 60 days after the completion by TWA of its deposition of Howard R. Hughes. Objection to specific interrogatories shall be made to the Special Master within 55 days after the completion of the deposition of Howard R. Hughes.

6. The appeal by TWA dated December 20th, 1962 from an order of the Special Master appearing in the transcript of the proceedings before the Special Master on December 3rd, 1962 is denied except that the order of the Special Master is modified to the extent that TWA shall answer the interrogatories within 60 days after the completion by TWA of its deposition of Howard R. Hughes. Objection

specific interrogatories shall be made to the Special Master within 55 days after the completion of the deposition of Howard R. Hughes.

So Ordered.

Pretrial Order, January 19, 1963

[Doc. 146]

UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

61 Civ. 2324

TRANS WORLD AIRLINES, INC.,

Plaintiff,

against

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,

Defendants.

Defendant Hughes Tool Company (referred to as Toolco) has moved for an order pursuant to rule 30(b) of the Federal Rules of Civil Procedure that the deposition of Howard R. Hughes be taken on written interrogatories or, in the alternative, that if such relief pursuant to rule 30(b) is denied that the motions of Toolco to dismiss the complaint or for summary judgment pursuant to rules 12(b) and 56(b) be brought on for hearing and determination. The motion further requests that the order of this court dated January 10th, 1963 be stayed until the determination of the motions to dismiss or for summary judgment.

This case was assigned to me for all purposes by the Chief Judge on August 31, 1961 pursuant to rule 2 of the General Rules of this court. After the disposition of several preliminary matters concerning production of documents and scheduling, Toolco commenced taking depositions of the plaintiff in February 1962. The parties requested that a Special Master be appointed to supervise the deposition proceedings and the court designated J. Lee Rankin for this purpose. Since that time over 80 sessions

have been held and over 10,000 pages of testimony have been taken.

Sometime prior to July 12th, 1962 the Special Master indicated his serious concern about whether or not Howard R. Hughes would be available as a witness in this proceeding if and when his deposition was reached. Without detailing the subsequent events, all of which are set forth in the order of this court dated September 21, 1962, the problem seemed to have been resolved when counsel for Toolco filed with the court a document purportedly signed by Howard R. Hughes authorizing said counsel to accept service of a witness subpoena on behalf of Howard R. Hughes. Plaintiff attacked the authenticity of this authorization. Counsel for Toolco flew to Los Angeles and accepted service of a witness subpoena from a Deputy United States Marshal for the Southern District of California at 7 a.m. (10 a.m. New York time) on September 6th, 1962, the morning of the hearing before this court on plaintiff's claim of forgery. The disposition of that matter has been held in abeyance. The subpoena provided for the appearance of Howard R. Hughes at the United States District Courthouse in Los Angeles on September 24th, 1962.

Subsequently, plaintiff moved before the Special Master to suspend the taking of depositions by Toolco in order to permit plaintiff to commence taking the deposition of Hughes pursuant to the subpoena. The Special Master denied this application and this court affirmed that ruling by its decision and order of September 21st to the extent that the deposition was adjourned to October 29th, 1962. Leave was given Toolco to make application to the Special Master for a further adjournment if in its opinion this was necessary. Such application was made on October 22nd, 1962 and the Special Master adjourned the return

date of the subpoena to February 11th, 1963. The court has affirmed that ruling. During the months of September, October, November and December, Toolco has proceeded with its deposition of the plaintiff.

On December 28th, 1962 defendant Toolco made application to the Special Master to take the deposition of two additional witnesses which if granted would have necessitated a further adjournment of the Hughes deposition. The Special Master denied this application and the ruling of the Special Master was affirmed by the court in its decision and order of January 10th, 1963.

Counsel for Toolco has repeatedly indicated since the assignment of this case to me that motions theretofore made to dismiss the complaint and for summary judgment would be noticed for argument, but agreed that they were premature.[1]

The present motion appears to be another attempt to put off the deposition of Hughes. As I stated in my order of January 10th,

> "The complicated nature of this action necessitates long and involved deposition-discovery proceedings and it is only fair that plaintiff be allowed to proceed without waiting for the defendant to complete its deposition proceedings. This is especially true where the plaintiff claims that 75% of the proof necessary to sustain its claim is obtainable from Hughes personally.
>
> "Furthermore, the completion of such deposition will advance materially the date when the court could

> meaningfully entertain the various motions which Mr. Davis has indicated he would like to press, for a dismissal of the complaint and for summary judgment. It will also facilitate an intelligent ruling upon Toolco's application pursuant to rule 16 of the Federal Rules of Civil Procedure and the sufficiency of TWA's compliance with interrogatories served on October 11th, 1962 and the further interrogatories served on November 13th, 1962."

Because of the issues involved in this litigation and the nature of the proof sought from Hughes, the use of written interrogatories would be a wholly unsatisfactory procedure. Contemplated answers to specific interrogatories may not be forthcoming, which would render meaningless subsequent questions. Answers given might suggest further questions to sufficiently probe for the facts, but such questions would not appear in the interrogatories. None of the grounds asserted or implied are sufficient in this case to justify proceeding initially by written interrogatories. Consequently, the first branch of the motion, seeking relief pursuant to rule 30(b), is denied.

As I have indicated above in the quotation from the January 10th order, it would appear to the court that the case is not in a posture for a meaningful disposition of the motions to dismiss the complaint or for summary judgment. The motion papers filed before the assignment of the case pursuant to rule 2, which I assume are the motions Toolco is now bringing on for hearing, were predicated upon the grounds that the complaint fails to state a claim upon which relief can be granted, that this court lacks jurisdiction of the subject matter of the action, and that there is no genuine issue as to any material fact. More specifically, it is stated that the transactions complained of were subject to and approved by orders of the CAB under section

408 of the Federal Aviation Act of 1958 and therefore pursuant to section 414 of that act there is an exemption from the operations of the antitrust laws, that if there is any question as to the scope or the enforcement of the above orders, they are matters within the exclusive jurisdiction of the CAB, and finally that the activities of Toolco subsequent to 1960 which are alleged to have constituted a malicious and willful interference with TWA's business were taken on advice of counsel.

The court, of course, cannot prevent defendant Toolco from pressing these motions at this time. However, since counsel for the defendant has been contemplating the motions for more than a year and a half, he obviously does not need the six weeks which he requests for the preparation of his papers. Counsel for plaintiff has indicated that he will cooperate in relieving defendant of a schedule with regard to motions pending in a companion action in Delaware, so as to free counsel for the defendant to devote his efforts entirely to these motions. As I indicated to counsel in an informal conference on January 16th, I will fix the date of February 1st, 1963 at noon for defendant to file all additional papers in support of its motions, and plaintiff shall be given until noon of February 8th, 1963 for answer. If upon reading defendant's papers the court is of the opinion that there is doubt as to its preliminary observations that these motions are premature, it will advise counsel of a short adjournment of the deposition of Hughes. In the meantime, this deposition shall go forward as ordered, on February 11th, 1963.

The order of January 10th will not be stayed pending a determination of the motions to dismiss and for summary judgment. The documents which the court has directed be turned over to the plaintiff shall be furnished as provided

in the order of January 10th, 1963 except that the date of January 14th, 1963 as fixed in paragraph 4 of that order is amended to read "January 22nd, 1963".

At the hearing before the Special Master on January 17th, counsel for defendant was reluctant to indicate whether he desired to hold the deposition at some place other than the United States Courthouse in Los Angeles. As counsel for the plaintiff and the additional defendants have indicated, they are amenable to cooperate in any reasonable request of counsel for the defendant, but it is necessary that advice of a change be given so that necessary arrangements can be made. Consequently, unless counsel for the defendant indicates by noon on January 22nd, 1963 a desire to change the designated place, the deposition shall proceed in the United States Courthouse in Los Angeles.

So ORDERED.

Pretrial Order, February 1, 1963

[Doc. 168]

UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

61 Civ. 2324

TRANS WORLD AIRLINES, INC.,

Plaintiff,

against

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,

Defendants.

A pretrial conference was held in the above action on January 28th, 1963 at 5 p.m.

Four matters were presented to the court for consideration:

1. A motion by the defendant Hughes Tool Company, returnable February 8th, 1963 at 4 o'clock, to adjourn the deposition of Howard R. Hughes presently scheduled for February 11th, 1963 until after a final adjudication of said defendants' motion to dismiss the complaint. This motion was advanced for argument to January 28th, and on the record of the pretrial conference, the attorney for Hughes Tool Company withdrew the motion.

2. A motion by the plaintiff Trans World Airlines to withdraw its motion to dismiss the counterclaims, except that portion of said motion which attacks the second counterclaim for failure to state a claim and the motion for summary judgment with respect to the sixth counterclaim. This motion is granted and plaintiff is directed to file its reply to the counterclaims of defendant Hughes Tool Com-

pany within ten days after the conclusion of the deposition of Howard R. Hughes.

3. A motion by the additional defendant Charles C. Tillinghast, Jr. for leave to answer the counterclaims of the defendant Hughes Tool Company ten days after the conclusion of the deposition of Howard R. Hughes. This motion is granted.

4. A motion by the defendant Hughes Tool Company to review an order of the Special Master dated January 22nd, 1963 requiring the defendant Hughes Tool Company to produce for inspection and copying the so-called tax documents. As to the nine boxes of papers which the court is informed may contain pertinent documents in relation to the request to produce, the defendant Hughes Tool Company is directed to send them today to counsel for the plaintiff, who shall make arrangements for producing copies thereof for the plaintiff and the additional defendants. If the defendant Hughes Tool Company contends for some reason or other that said documents are not subject to production, then the nine boxes shall be sent today to the Special Master, who shall rule upon any objections that the defendant shall make to the production of specific documents. Any other documents subject to the notice and affidavit of January 9, 1963 shall be produced on a daily basis on or before February 11th, 1963.

So Ordered.

U.S.D.J.

Opinion and Order, January 4, 1966

[Doc. 496]

UNITED STATES DISTRICT COURT

SOUTHERN DISTRICT OF NEW YORK

61 Civ. 2324

TRANS WORLD AIRLINES, INC.,

Plaintiff,

against

HOWARD R. HUGHES, HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,

Defendants.

METZNER, D. J.

Defendant has moved for a pre-hearing order calling upon the plaintiff to set forth the facts supported by the record or by matters judicially noticeable or by evidence which the plaintiff is prepared to offer, upon which plaintiff would rely to preclude the entry of the following finding of fact:

> The facts before this Court establish that at no time during the period covered by the complaint herein were the defendants, or any of them, engaged in the manufacture or supply of commercial transport aircraft in competition with any manufacturer or supplier of such aircraft.

The defendant then requests that if this proposed finding of fact is supported notwithstanding the material set forth in the plaintiff's offer of proof, the finding of fact shall be made and the case dismissed as a matter of law.

A 7-inch stack of affidavits, briefs and supporting documents has been submitted in connection with this motion.

After reading them and listening to defendant's extensive argument, one wonders why the case was never defended on the merits, if all that defendant contends for is true. At this late date, after the complaint has been sustained and a default judgment entered, with appeals to the Court of Appeals and a writ of certiorari dismissed by the Supreme Court, defendant now, in effect, seeks summary judgment in its favor. It asks that plaintiff come forward to negative a fact which defendant asserts as true. The shoe is on the other foot. The plaintiff has a judgment in its favor and the only limitation thereon has been spelled out in the order of the Special Master dated July 30, 1965 and the order of this court dated November 16, 1965. Together they outline the procedures to be followed before the Special Master, where the matter is properly pending. The court cannot conceive of any further reason for delay in proceeding before the Special Master until the hearings are completed.

MOTION DENIED. SO ORDERED.

ON CONDITIONAL CROSS-PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

BRIEF IN OPPOSITION

Trans World Airlines, Inc. ("TWA") has filed a cross-petition, asking that if this Court grants the petition for certiorari, No. 71-827, filed by Hughes Tool Company ("Toolco") and Raymond M. Holliday (together "defendants") that it also consider certain additional issues tendered by TWA.

Defendants' petition presents issues of recurring importance in the conduct of civil litigation in the federal courts. TWA's cross-petition raises issues that it correctly describes as "peripheral to the basic controversy" (Cross Petition 24) and that are either of no general significance or controlled by long-established precedents. Basically

TWA's complaint is that the judgment for $145,448,141.07 that it has received is inadequate and that it should have received more—more interest, more costs, and more treble damages.

A.

The essential facts about the proceedings below are set out in defendants' petition. The Statement of the Case in the cross-petition is misleading in several respects that deserve comment.

1. TWA states (Cross Petition 7) that the fact that Toolco included in its answer a derivative counterclaim on behalf of TWA establishes that TWA was seriously injured and that these injuries resulted from violations of the antitrust laws. The statement will not withstand analysis.

The counterclaim alleged a violation of the antitrust laws based on a conspiracy among lending institutions and others to seize control of TWA for their own purposes. Among the acts alleged in furtherance of this conspiracy was the ordering of more jet aircraft than TWA needed or could afford. Clearly a claim that TWA has been injured by ordering too many jets is not an admission that it was injured by having too few jets. Equally clearly, a claim that the antitrust laws were violated by the conspiracy of the lenders and others to seize control has no relevance to whether defendants violated the antitrust laws in the decisions they made in the exercise of their CAB-approved control of Toolco's subsidiary.

2. TWA erroneously characterizes statements made by counsel for defendants at the time they gave their Notice of Position as "an express acknowledgment of [defend-

ants'] liability in damages if the several jurisdictional grounds on which they were seeking appellate review were determined against them'' (Cross Petition 10). The statements quoted by TWA in no way support the conclusion TWA seeks to draw from them because ''liability in damages'' cannot be separated from ''damages for what?'' Defendants do not question that, if they were wrong in their view of the applicable law, they would be liable in damages for injuries proximately caused by conduct constituting a tie-in, boycott, or attempt to monopolize. They have never agreed that they would be liable for conduct that did not violate the antitrust laws nor for injuries that did not result from any violation of the antitrust laws.

3. TWA ends its Statement of the Case with a table showing the length of time that various phases of this litigation have taken (Cross Petition 14). Defendants agree that a tragic amount of time has been spent on this case by the courts as well as the litigants. This waste of time has been quite unnecessary. This case would have ended years ago had TWA been willing to define the issues and to reveal the factual basis of its claim in a Rule 16 proceeding as urged by Special Master Rankin. It is hardly Toolco's fault that TWA successfully resisted the efforts of the Special Master to speed progress in this case or that TWA was able to conceal until the damage hearing the fact that the injury for which it claimed damages had no conceivable connection with the violations of the antitrust laws it had alleged.

B.

TWA is not satisfied with interest at the rate of 7½% from the date of the judgment. It claims that interest should have started to run before the judgment was entered.

The Second and Seventh Circuits are clearly right in saying that where treble damages are awarded, moratory interest has no place in the computation of damages. One may admire the ingenuity with which TWA seized one sentence in the opinion of this Court in *Thomsen* v. *Cayser*, 243 U.S. 66 (1917), describing the award below as including interest, and a holding in *United Mine Workers* v. *Coronado Coal Co.*, 258 Fed. 829 (8th Cir. 1919), *reversed on other grounds*, 259 U.S. 344 (1922), that a judge may not award interest if the jury has not done so, as a basis for claiming that a conflict exists. The fact that TWA can find no better authority for its position than two cases more than 50 years old, in one of which moratory interest was not awarded and in the other of which the propriety of awarding such interest was not discussed, is a clear indication that for more than a half century courts have not included moratory interest in treble damage awards.

This would be an inappropriate case in which to reexamine this longstanding practice. As the Court of Appeals recognized, the award of moratory interest would give rise to difficult questions of proof, "including highly obstruse inquiries as to proper rates and the time from which interest should run" (App. 159a). The peculiar facts, or lack of facts, in this case would compound the problem. The holding below was that there was no need to show "that any of Toolco's acts pleaded in the complaint violated the antitrust laws nor to show that those acts caused the well-pleaded injuries" (App. 139a). To try to determine when moratory interest might properly be awarded would be impossible in a miasma where both cause and effect are lacking.

TWA claims in the alternative that it should have received interest from the date of the report of the Special Master, rather than from the date of the judgment. Its

novel claim ignores "the plain words of Section 1961" (App. 160a), it ignores the view of the Court of Appeals that the reference served to expedite the litigation, and it ignores the fact that defendants did not request the reference and should not be penalized because of it.

C.

TWA argues that in addition to costs and attorneys' fees of $7,836,705.12 awarded it by the District Court, it should receive an additional $1,642,677.71 to reimburse it for payments made to experts who testified for it at the damage hearing. It contends that Section 4 of the Clayton Act, which allows recovery of "cost of suit, including a reasonable attorney's fee," really means "cost of suit, including not only a reasonable attorney's fee but also any other expenses incurred that would not otherwise be taxable as costs." The simple answer to this contention is that the statute does not say what TWA would have it say. If Congress had meant to include payments to expert witnesses and the like as part of the cost of suit, it would have said so. What TWA concedes to be "a long and uniform line of decisions" (Cross Petition 20) have read the statute naturally and rejected the claim now made. Nor is this case, in which the Special Master rejected in whole or in part the testimony of all of the major expert witnesses that TWA produced, an apt vehicle for reconsidering what has come to be accepted law.

D.

TWA's final claim is that it should have been awarded an additional $19.5 million because the courts below should have assumed that TWA would have financed the hypotheti-

cal fleet of jets, on which it based its damage claims, at the interest rates prevailing in 1955 and 1956 instead of at the rates prevailing in 1958-1960 when the hypothetical fleet, according to TWA, would have been delivered. Even TWA is unable to explain what question of wide application is presented by whether the Special Master should have used one interest rate or another as the "cost of capital." The question may be novel but it depends solely on the particular facts of this case. Moreover, the assumption that long before the planes were to be delivered TWA would have raised the vast sums required to pay for them is quite remarkable. That TWA can advance such an assumption only emphasizes that damages were awarded without any showing that TWA could at any time have financed the hypothetical jet fleet.

CONCLUSION

The cross-petition should be denied.

IN THE

Supreme Court of the United States

October Term, 1971

No. 71-827

HUGHES TOOL COMPANY

and

RAYMOND M. HOLLIDAY,

Petitioners,

v.

TRANS WORLD AIRLINES, INC.,

Respondent.

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

REPLY BRIEF FOR PETITIONERS

Respondent's 57-page discussion[1] of the merits of the questions presented in the petition shows how far apart

1 Petitioners plainly cannot answer all of the factual assertions made by respondent, particularly in the light of the voluminous papers already filed. One of respondent's assertions, however, may illustrate the caution with which the Court should address itself to respondent's brief. Respondent states that its attorney called the $5,000,000 estimate for taking Hughes' deposition "obviously absurd" at the time the estimate was made (Brief in Opposition 17 n). Actually, what TWA's counsel called "obviously absurd" was petitioners' claim that they were resisting discovery in order to avoid the great expense involved (2d Cir. App. A-293). He did not contest the figure itself.

the parties are on these questions of law and only emphasizes the importance of authoritative resolution of the questions by this Court. To take but one example, those engaged in any phase of aeronautics who are considering coming to the assistance of an air carrier need to know whether CAB approval of their acquisition of control, coupled with continuing CAB surveillance of all transactions between the parent and the carrier, provides antitrust immunity for those transactions that take place as a normal incident of control or whether it immunizes only the acquisition itself. That TWA thinks the latter view is correct (Brief in Opposition 45) does not make the question any less significant or less worthy of the attention of this Court.

TWA's position throughout is colored by its reluctance to have this Court speak to the effect to be given a default. *Thomson* v. *Wooster*, 114 U.S. 104 (1885), the case on which both parties necessarily rely in the absence of more recent guidance from this Court,[2] teaches that a default admits "facts properly pleaded." *Id.* at 110. No matter how broadly "facts" may be read, it is a concept that does not include conclusions of law. When TWA asserts, as it has throughout this litigation, that "by defaulting, defendants admitted the antitrust violations alleged in the complaint"

---

2 TWA's repeated suggestion that defendants are making an "assault" on or a "criticism of" the *Thomson* case (Brief in Opposition 32, 35) is wrong. Defendants expressly rely on the *Thomson* case and object to the misreading of it by the lower court (Petition, 20, 22).

(Brief in Opposition 55), TWA ignores that distinction. Defendants, in announcing their business decision to proceed no further, said that they did so in order that they might "stand on the questions of law which have been decided to date" (2d Cir. App. A-274, quoted at Brief in Opposition 32). Within the *Hovey-Hammond* rule (Petition 22), they cannot be held to have admitted the legal propositions that they expressly sought to test. Yet TWA finds support for its opposition to review of Questions 4 to 7 in the petition by attributing to the default a broader effect than it properly has, while at the same time arguing that this Court need not speak on the effect of a default.

At the same time—and quite inconsistently—TWA ignores the benefits that did come to it from defendants' business decision. Repeatedly it asserts that the novel and unsound rulings of the courts below were made necessary because the defendants' course had barred it from proving its case in accordance with familiar legal standards (*e.g.*, Brief in Opposition 42, 48, 49). Because of the default, however, the facts must be taken as TWA alleged them, read in the light of what the damage hearing showed about the meaning of particular allegations. If, with the advantage accruing to it from the default, all that TWA can show is that Toolco was at most a potential competitor of aircraft manufacturers, that the supposed violations of the antitrust laws were nothing more than a parent making decisions for its subsidiary, and that this control of the subsidiary was approved by the CAB, TWA must face squarely whether all of this is a violation of the antitrust

laws, rather than contend that different antitrust principles apply to those who are in default than to those whose conduct has been proven at a trial.

Questions Presented 3

Statement of the Case
(Limited to Issues of TWA's Cross-Petition) 4

Summary of Argument 10

ARGUMENT

I. The decisions below erroneously excluded prejudgment interest from consideration as an element of damages under Section 4 of the Clayton Act 13

II. Alternatively, the decisions below erroneously failed to allow interest on the Special Master's award for the period between the filing of his Report and the entry of judgment 23

III. The decisions below should have determined TWA's net damages on the basis of a "cost of capital" established by the allegations of the complaint that defendants wrongfully precluded borrowings at lower interest rates 29

PAGE

IV. The decisions below improperly interpreted the provision for recovery of "cost of suit" in Section 4 of the Clayton Act to exclude the expense necessarily incurred by TWA when it retained expert witnesses to assist in proving the amount of its damages 35

IN THE

Supreme Court of the United States

OCTOBER TERM, 1972

No. 71-830

TRANS WORLD AIRLINES, INC.,

Cross-Petitioner,

—v.—

HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,

Respondents.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

BRIEF FOR CROSS-PETITIONER TRANS WORLD AIRLINES, INC.

Opinions Below

The decision of the United States Court of Appeals for the Second Circuit under review is reported at 449 F.2d 51 (A-2739 *et seq.*).* It affirmed decisions in favor of plain-

* Citations with the prefix "A-" are to volumes A-I through A-VII of the printed Appendix and those with the prefix "AX-" are to volumes AX-I through AX-VII of the printed Appendix of Exhibits, filed with this Court in Nos. 71-827 and 71-830; citations to "Doc." are to documents in the original record certified to this Court in Nos. 71-827 and 71-830 and not otherwise reproduced; those with the prefix "Tr." refer to pages of the stenographic transcript of the damage hearing before Special Master Herbert Brownell (Doc. 554); citations to "TWA Ex." are to the exhibits offered by TWA in the damage hearing. Citations to "Brownell Report" are to the Report of the Special Master (Doc. 508), a copy of which is bound into volume A-V of the printed Appendix following p. A-1966.

tiff Trans World Airlines, Inc. ("TWA") and against defendants Hughes Tool Company ("Toolco") and Raymond M. Holliday by the United States District Court for the Southern District of New York, reported at 308 F.Supp. 679 (A-2027 *et seq.*) and 312 F.Supp. 478 (A-2060 *et seq.*), which in turn had confirmed in its entirety and entered judgment upon a Report and Award by the Special Master, Hon. Herbert Brownell ("the Brownell Report") (A-1966).

Earlier decisions in the litigation include an opinion and order of the district court on May 3, 1963, directing entry of an interlocutory default judgment for TWA against the defendants, and a final judgment dismissing Toolco's counterclaims, reported at 32 F.R.D. 604 (A-317 *et seq.*); and a unanimous decision in TWA's favor in 1964, written by Chief Judge Lumbard, affirming the district court's May 3 decision in all pertinent respects, reported at 332 F.2d 602 (A-328 *et seq.*). Writs of certiorari to the court of appeals with respect to its 1964 judgments (A-324-27) were dismissed by this Court at the October 1964 Term, after full briefing and argument, as having been improvidently granted, 380 U.S. 248, 249 (1965) (A-2737-38).

Jurisdiction

The judgment of the court of appeals was entered on September 1, 1971. Defendants' petition for rehearing was denied on September 28, 1971 (A-2799). TWA's cross-petition was filed December 23, 1971, and was granted and consolidated for argument with defendants' petition in No. 71-827 on February 22, 1972, 405 U.S. 915. This Court's jurisdiction is invoked under 28 U.S.C. § 1254(1).

Statutory Provision Involved

Clayton Act, Section 4,
United States Code, Title 15:

"§ 15. *Suits by persons injured; amount of recovery.*

"Any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws may sue therefor in any district court of the United States in the district in which the defendant resides or is found or has an agent, without respect to the amount in controversy, and shall recover threefold the damages by him sustained, and the cost of suit, including a reasonable attorney's fee." (38 STAT. 731 (1914))

Questions Presented

1. Whether under Section 4 of the Clayton Act a plaintiff can recover, as an element of actual damages, interest on losses of revenue for the period commencing after those losses were experienced to the entry of final judgment (here the period between December 31, 1963 and April 14, 1970)?

2. Alternatively, whether in a suit in which the determination of the amount of damages was referred to a special master, whose award of damages was thereafter confirmed in all respects by the district court, a plaintiff is entitled to recover interest on the amount thus determined for the period from the date the master's report was filed to the date final judgment was entered (here the period from September 21, 1968 to April 14, 1970)?

3. Whether, in determining TWA's actual net loss attributable to defendants' unlawful activities, the Special

Master should have deducted from TWA's proven lost revenues a "cost of capital" based on the lower interest rates which defendants prevented TWA from securing rather than the higher rates which TWA incurred later?

4. Whether under Section 4 of the Clayton Act a successful plaintiff is entitled to recover, as a part of his "cost of suit," the expense of retaining experts to establish the amount of damages?

Statement of the Case

(Limited to Issues of TWA's Cross-Petition)

In this statement we will not attempt to set out fully the facts of the case as we view them; such a statement will be reserved for our brief on the issues raised by defendants' petition in No. 71-827. We set out here only the facts pertinent to a consideration of the narrow legal issues as to computation of damages, interest and cost of suit, which are raised by TWA's cross-petition in No. 71-830.

On June 30, 1961 TWA filed its complaint against defendants Howard R. Hughes, Hughes Tool Company ("Toolco") and Raymond M. Holliday (A-1 *et seq.*) in the Southern District of New York seeking treble damages pursuant to Section 4 of the Clayton Act.[1]

On August 31, 1961 the case was assigned for all purposes to District Judge Charles M. Metzner pursuant to Rule 2

---

[1] TWA also sought equitable relief under Section 16 of the Clayton Act, 38 STAT. 737 (1914), 15 U.S.C. § 26, but this request became moot in 1966 when Toolco disposed of its interest in TWA at a profit of $452 million.

of the General Rules for the Southern District of New York (A-33), and from then on Judge Metzner continued in charge of the case.

Defendants obtained priority under the then practice in the Southern District of New York (A-2077) and conducted discovery of TWA for one and a half years. Then, on February 8, 1963, in defiance of the district court's order that Toolco produce Hughes for his deposition, pursuant to Toolco's undertaking to do so and following acceptance by Hughes of a witness subpoena (A-123-24), and also in defiance of several outstanding orders for the production of certain vital documents (A-133-36, A-304-05; A-2268-69, A-124-26, A-305-06), defendants formally and expressly refused, as the result of what they called a "business decision", to continue with pretrial or trial of the case (A-268-69).

On February 16, 1963 TWA filed its formal motion for a default judgment (Doc. 180). On May 3, 1963 the district court, pursuant to Fed.R.Civ.P. 37, entered a default judgment against defendants on TWA's complaint, directing that the amount of TWA's damages be determined by a special master (A-321). On the basis of Toolco's default, the district court also entered a judgment dismissing Toolco's counterclaims against TWA and certain other parties (A-323). Defendants were granted a permissive appeal under 28 U.S.C. § 1292(b) with respect to the interlocutory judgment of default upon TWA's complaint (A-2736), and Toolco appealed as of right from the final judgment dismissing its counterclaims. The court of appeals on June 2, 1964 unanimously affirmed the decisions of the district court in all respects presently material (332 F.2d 602, A-328 *et seq.*).

Petitions for certiorari were granted as to both appeals (379 U.S. 92, A-2737); after full briefing and oral argument, this Court on March 8, 1965 dismissed the writs as improvidently granted (380 U.S. 248, 249, A-2738). This Court thereby left standing both the final judgment dismissing Toolco's counterclaims against TWA and certain other parties, and TWA's interlocutory default judgment against defendants for an amount of damages which had yet to be determined.

After remand, and following the appointment of Hon. Herbert Brownell as Special Master, the damage hearing commenced. At the Special Master's direction TWA submitted all of its direct testimony in written form on May 2, 1966, and tendered its witnesses for cross-examination. This was one day short of three years after entry of the default judgment against defendants. The cross-examination of TWA's witnesses consumed nearly 9 months, and was followed by TWA's cross-examination of defendants' witnesses on the basis of their written reports, which consumed eight and one-half months. On March 27, 1968 TWA put in a short rebuttal case, and defendants' cross-examination on the redirect testimony took place on April 9, 1968. The damage hearing was then closed.

The Special Master's Report, totalling 323 printed pages, was filed on September 21, 1968. Mr. Brownell found that TWA had proved it suffered a loss in its 1959-1963 operating profits totalling $74.3 million as a consequence of defendants' conspiracy to restrain and monopolize and their attempt to monopolize. He found that these losses resulted from TWA's receiving too few jets too late and from the fact that it could not buy jets in 1959-1960 but was forced to lease them from Toolco. From that amount the Special

Master then deducted a "cost of capital" of $29 million (Brownell Report, pp. 158-67, 184-85, 322; A-1966). This sum was the amount of the interest which he determined that TWA would have had to pay on the additional capital investment necessary to purchase a 63-plane jet fleet on the schedule established by the testimony of its witnesses, including jets that defendants had denied TWA and jets which TWA had been required to lease from Toolco. In calculating this "cost of capital", the Special Master used interest rates of 6 per cent and 6.3 per cent (the rates he concluded TWA would have had to pay to borrow money in 1959 and 1960) and not the lower rates of 4 per cent to 4¾ per cent at which borrowings could have been arranged in 1955 and 1956 as alleged in the complaint (Complaint, pars. 23, 26-28, A-15-16).

By deducting the $29 million "cost of capital" from TWA's proven $74.3 million loss in operating profits, the Special Master derived a net operating loss of $45.3 million, to which he added the sum of $570,478.65, representing additional proven losses sustained by TWA through disruption of certain training operations. The Special Master thus found that, as a result of defendants' antitrust violations, as of December 31, 1963 TWA had been damaged in the total amount of $45,870,478.65 before trebling (Brownell Report, p. 322; A-1966). However, the Special Master declined to make a further award of interest as damages ("prejudgment interest"), concluding that such an award is not legally available in treble damage antitrust suits (Brownell Report, pp. 309-18; A-1966).

While defendants below challenged the amount of damages found by the Special Master, they have not, in their petition in No. 71-827, sought further review of that determination by this Court. It is now undisputed that TWA

suffered losses of at least $45,870,478.65 from the specific injuries alleged in the complaint.[2]

Approximately a year and a half was then occupied with the district court's review and confirmation of the damage award. In an opinion on December 23, 1969 Judge Metzner considered and overruled all of the objections to the Special Master's Report filed by defendants and by TWA, and confirmed the Report in its entirety (308 F.Supp. 679, A-2027 *et seq.*); in an opinion on April 13, 1970 he ruled upon TWA's application for its cost of suit including a reasonable attorney's fee (312 F.Supp. 478, A-2060 *et seq.*). In those opinions, he rejected TWA's contention that the Special Master had deducted too large a "cost of capital" in fixing TWA's net operating losses (308 F. Supp. at 694, A-2054-55), affirmed the Special Master's ruling disallowing prejudgment interest (308 F.Supp. at 696, A-2058-59), and rejected TWA's alternative claim for interest from the filing of the Brownell Report to entry of judgment (312 F.Supp. at 485, A-2072). Upon TWA's application for its cost of suit, Judge Metzner awarded TWA $7,500,000 as a reasonable attorney's fee and $336,705.12 as taxable costs. He held as a matter of law, however, that TWA was entitled to recover as its cost of suit only such of its reasonable and necessary out-of-pocket expenses in prosecuting the action (other than attorney's fees) as are normally recovered as taxable costs; he therefore denied the rest of TWA's claim for its actual expenditures, principally consisting of the fees and expenses TWA paid to its expert witnesses at the damage hearing (312 F.Supp. at

[2] Indeed, Toolco itself had asserted in its counterclaims filed early in 1962 that TWA had suffered losses of this magnitude as a result, *inter alia*, of late deliveries of jets and borrowings at too high interest rates (Toolco Answer, pars. 98-99, A-89-90).

485, A-2071-72). On April 14, 1970 Judge Metzner entered final judgment for TWA in the amount of $147,448,141.07 (A-2073).

Another year and a half was spent in briefing, argument and determination of appeals to the court of appeals. That court on September 1, 1971 handed down a unanimous opinion affirming the judgment of the district court in all respects (except for increasing the rate of interest on the judgment to 7½ per cent per annum from entry of judgment, in accordance with applicable New York law and 28 U.S.C. § 1961 (449 F.2d at 80-81, A-2796-97)).

Review in this Court will extend this case well into its twelfth year, with the first eleven years having been spent as follows:

Period from filing of complaint (6/30/61) to defendants' formal announcement of a "business decision" that they would not continue with pretrial or trial of the case (2/8/63)	1 yr. 7 mos.
Period from defendants' refusal to proceed (2/8/63) to entry of final judgment dismissing Toolco's counterclaims and entry of interlocutory judgment in favor of TWA for damages yet to be assessed (5/3/63)	3 mos.
Period from entry of judgments (5/3/63) to disposition of appeals in this Court (3/8/65)	1 yr. 10 mos.
Period from disposition of appeals (3/8/65) to the filing of the Brownell Report (liquidating TWA's damage claim) (9/21/68)	3 yrs. 6 mos.

Period from filing of Brownell Report (9/21/68) to entry of final judgment for TWA (4/14/70) ..... 1 yr. 7 mos.

Period of appellate review from entry of judgment (4/14/70) to June 30, 1972 .... 2 yrs. 3 mos.

At the damage hearing it was established that defendants' conduct resulted in losses of operating revenues to TWA which continued through the year 1963. As of December 31, 1963 the amount of these losses (after deduction of the cost of capital applied by the Special Master) aggregated $45,870,478.65. Defendants' responsibility to pay whatever damages might be determined to exist was settled on February 8, 1963 when Toolco announced its business decision to default—or, at the latest, on May 3, 1963, with the entry of a default judgment in TWA's favor. The more than six years to the entry of final judgment for TWA on April 14, 1970 is a period during which TWA was deprived through no fault of its own of the use of moneys which it would have had in hand, absent defendants' wrongdoing.

Summary of Argument

The care with which the Special Master weighed the evidence presented at the damage hearing is apparent in his 323-page Report. Both courts below in their opinions analyzed the record and the applicable law and concluded that the Special Master's determinations were in every instance sound and well supported. TWA is not challenging in this Court any of the findings of fact made below. The questions presented in TWA's cross-petition are specific, narrow questions of law and policy.

I. It is the general rule in federal cases that, where necessary to compensate the plaintiff fully for his injuries, interest may be awarded as an element of plaintiff's actual damages from the date when the damages were sustained to the entry of judgment. There is nothing in the language or legislative history of Section 4 of the Clayton Act to support the ruling of the court of appeals below that this general federal rule is inapplicable to private antitrust cases. The early federal cases support the discretionary award of such prejudgment interest. By denying the recovery of prejudgment interest as a matter of law, the Second Circuit below and the Seventh Circuit in *Locklin* v. *Day-Glo Color Corp.*, 429 F.2d 873, 877 (7th Cir. 1970), *cert. denied*, 400 U.S. 1020 (1971), have failed to give effect to the mandate of Section 4 of the Clayton Act that a private antitrust plaintiff recover threefold "the damages by him sustained."

II. If TWA is not entitled to prejudgment interest from the close of the period during which its operating losses were sustained to the entry of judgment, TWA is at least entitled to compensation for the delay between the initial determination of the amount of its damages by the court's Special Master and the entry of judgment thereon by the district court. That interest on a master's award subsequently confirmed should run from the date of the award has been firmly established by decisions of this Court for nearly a hundred years. *Illinois Central R.R.* v. *Turrill*, 110 U.S. 301, 303 (1884); *Tilghman* v. *Proctor*, 125 U.S. 136, 160-61 (1888); *Crosby Steam Gage & Valve Co.* v. *Consolidated Safety Valve Co.*, 141 U.S. 441, 458 (1891). Those decisions involved patent cases, but no statutory reason or policy ground exists for restricting the principle to such cases. As announced, the rule was one of general

applicability, and to deprive a successful antitrust plaintiff of its benefit violates the congressional policy expressed in Section 4 of the Clayton Act.

III. TWA's complaint includes specific well-pleaded allegations that defendants, in furtherance of their antitrust violations, prevented TWA from arranging financing for jet aircraft in 1955 and 1956, when its competitors were arranging financing at rates of 4 per cent to 4¾ per cent per annum. These allegations were admitted by defendants' default. In calculating the "cost of capital" to TWA of financing a full 63-plane jet fleet, the Special Master did not give effect to these allegations and instead charged TWA with interest at the rates of 6 per cent to 6.3 per cent which TWA paid when it borrowed money at a later date. The Special Master's failure to utilize the lower rates available in 1955 and 1956 permits defendants to profit by their own wrongdoing.

IV. By adhering to the analysis of Section 4 of the Clayton Act in *Straus* v. *Victor Talking Machine Co.*, 297 F. 791, 806-07 (2d Cir. 1924), the court of appeals has failed to recognize the mounting cost to private antitrust plaintiffs of expert witnesses essential to the successful proof of damages resulting from violations of the antitrust laws. The strained and illogical construction of Section 4 adopted by the court in *Straus* limits the recovery of "cost of suit" to that small portion of the antitrust plaintiff's actual and necessary out-of-pocket expenditures which are ordinarily awarded to any successful plaintiff as taxable costs without special statutory provisions. Such a construction makes the statutory phrase mere surplusage and does violence to the purpose and plain meaning of Section 4. The logical interpretation of the language which Congress chose is

that a successful antitrust plaintiff was intended to be specially favored by recovering the actual "costs of the litigation." *Cf. Hawaii* v. *Standard Oil Company of California,* 405 U.S. 251, 266 (1972).

ARGUMENT

I.

The decisions below erroneously excluded prejudgment interest from consideration as an element of damages under Section 4 of the Clayton Act.

Section 4 of the Clayton Act provides that a person injured by a violation of the antitrust laws "shall recover threefold the damages by him sustained." The court of appeals, affirming the decisions of the district court and the Special Master, held that, as a matter of law, the trier of fact in a private treble damage antitrust case does not have discretion to award interest upon the damages established from the last date when the harmful effects of the defendants' illegal activities were sustained (here December 31, 1963) to entry of judgment (here April 14, 1970) (449 F.2d at 80, A-2795).

This ruling misinterprets the plain words of Section 4 of the Clayton Act.

In this case, the period of time from December 31, 1963 to the entry of judgment was six years, three months and 14 days (or 6.28 years). During that period TWA was deprived of the money which it would have had but for defendants' wrongdoing and which, as part of TWA's earning base, would have strengthened the airline's weakened financial structure—the legacy of its captivity by defendants (Complaint, pars. 52(d) and 53(a), A-26). At the same time, defendants, who on February 8, 1963 had an-

nounced their readiness to pay such damages as TWA could prove (A-297), retained under their control, and invested as they saw fit, the funds necessary for such payment.

The general federal rule is that interest may be awarded as an element of damages, whether the claim is liquidated or unliquidated and whether it sounds in contract or in tort, where necessary to make the plaintiff whole for the injuries sustained because of the defendant's wrongdoing. *Miller* v. *Robertson,* 266 U.S. 243, 258 (1924) ("• • • when necessary in order to arrive at fair compensation, the court in the exercise of a sound discretion may include interest or its equivalent as an element of damages"); *Marshfield Steel Co.* v. *NLRB,* 324 F.2d 333, 338 (8th Cir. 1963) (award of back pay by N.L.R.B.); *Moore-McCormack Lines, Inc.* v. *Richardson,* 295 F.2d 583, 592-95 (2d Cir. 1961), *cert. denied,* 368 U.S. 989 (1962) (recovery of pecuniary loss under Death on the High Seas Act); *Norte & Co.* v. *Huffines,* 416 F.2d 1189, 1191-92 (2d Cir. 1969), *cert. denied,* 397 U.S. 989 (1970) (judgment in derivative suit for securities fraud).

The prime consideration in determining whether to include interest as damages is whether such interest would in fact be "compensatory." *Rodgers* v. *United States,* 332 U.S. 371, 373 (1947); *Norte & Co.* v. *Huffines, supra* at 1191. Where the plaintiff has been deprived of the use of a sum of money by the defendant's wrongdoing, the inability to use the money is a real injury resulting from the wrong, for which he is entitled to be compensated. *Louisiana & Arkansas Ry.* v. *Export Drum Co.,* 359 F.2d 311, 317 (5th Cir. 1966); *Petition of City of New York,* 332 F.2d 1006 (2d Cir.), *cert. denied,* 379 U.S. 922 (1964). *See also* J. D. Guilfoil, *Damage Determina-*

tion in Private Antitrust Suits, 42 NOTRE DAME LAW. 647, 655 (1967).

In state courts, too, on the basis of either case law or legislative enactment, the recovery of interest as damages in noncontract cases is commonly permitted, either as a matter of right or in the discretion of the trier of fact.[3] Writing in 1935, Professor McCormick said of the class of cases "where the sum claimed is neither 'liquidated' nor based on standardized valuation, but yet is pecuniary in its nature":

> "The earlier judges, with their distaste for interest upon unliquidated claims where the debtor cannot know the precise sum which the law will exact, frowned upon interest in this class of claims, but the marked tendency to-day is toward the allowance of interest in such cases." MCCORMICK ON DAMAGES, § 56, p. 222.

[4] *See, e.g., Robert C. Herd & Co.* v. *Krawill Mach. Corp., supra* at 953 (plaintiff compelled to expend large sums of money over a period of years as a result of defendants' wrongs would be denied full compensation if prejudgment interest was not recoverable); *E. M. Fleischmann Lumber Corp.* v. *Resources Corp. Int'l, supra* at 844 ("Adequate compensation is the fundamental principle of damages and the additional compensation for the detention of the damages, measured by the allowance as interest, is permitted in

At the time the Clayton Act was passed, the general federal rule, permitting the award of interest on a sum found due (even though unliquidated) from the time a plaintiff should have had the sum as an element of his actual damages, was already well established. *Eddy* v. *Lafayette,* 163 U.S. 456, 467 (1896) (negligent damage to property); *New Dunderberg Mining Co.* v. *Old,* 97 F. 150, 153-55 (8th Cir. 1899) (wrongful conversion of property); *Brent* v. *Thornton,* 106 F. 35, 38 (5th Cir. 1901) (illegal seizure and detention of property). The practice of awarding interest as damages in such a case long predated the adoption even of the Sherman Act. *Lincoln* v. *Claflin,* 7 Wall. 132, 139 (1868) (fraudulent obtaining of property).

It may be argued that the antitrust plaintiff's right to treble damages justifies restricting the computation of his actual damages more narrowly than might otherwise be

---

order to make the awarded damages adequate in amount."); *Bridenstine* v. *Iowa City Elec. Ry., supra* 165 N.W. at 440 ("* * * where payment is resisted and the obligation is denied until the case has been prosecuted to final judgment after the lapse of months or perhaps years, an allowance of interest is quite essential to the accomplishment of full justice."); *DeLong Corp.* v. *Morrison-Knudson Co.,* 20 App. Div.2d 104, 105-06, 244 N.Y.S.2d 859, 861 (1st Dep't 1963), *aff'd,* 14 N.Y.2d 346, 200 N.E.2d 557 (1964) ("* * * in the case of intentional tort resulting in pecuniary injury measurable by economic standards and not involving personal injuries, interest must be added if the victim of the tort is to be made whole."); *Emery* v. *Tilo Roofing Co.,* 89 N.H. 165, 195 A. 409, 412-13 (1937) (liquidated-unliquidated distinction must give way to "* * * fundamental principle that damages in a given case should give full compensation for the loss sustained. * * * Where property has been wrongfully taken, detained, destroyed, or damaged and the owner thereby deprived of its use, full compensation may often require that judgment be given for an amount sufficient to put the owner in as good a position as he would occupy if payment had been made contemporaneously with the loss."); *Colonial Refrigerated Transp., Inc.* v. *Mitchell,* 403 F.2d 541, 555 (5th Cir. 1968) (applying Texas law: "The damages suffered by the loss of use of money are real damages").

appropriate, perhaps by analogy to decisions under state law which have denied interest where "exemplary" or "punitive" damages are awarded.[5] But the express statutory mandate of the Clayton Act requires trebling the "damages by him sustained", and nothing in the statute suggests that those damages should be subject to any special limitations or exclusions. Indeed, not a shred of legislative history that we are aware of even hints at an intention to change the general rules as to how the amount of actual damages should be determined.

In the only early reported cases on the point, the possibility of interpreting the treble damage provisions of the antitrust laws as precluding application of the principles of *Lincoln* v. *Claflin, supra,* does not appear to have occurred to the courts. It was assumed instead that a private antitrust plaintiff—like any other plaintiff—could recover prejudgment interest as damages. *See Thomsen* v. *Cayser,* 243 U.S. 66, 74, 88-89 (1917), in which this Court cited the fact that the jury had added interest to the damages as confirming that the verdict was not based on "supposititious profits" but on actual calculation. *See also United Mine Workers* v. *Coronado Coal Co.,* 258 F. 829, 846-47 (8th Cir. 1919), *rev'd on other grounds,*

---

[5] *Riss & Co.* v. *Feldman,* 79 A.2d 566 (D.C.Mun.Ct.App. 1951) (interest not allowable on punitive damages except as additional punishment); *Schulte* v. *Louisville & N.R.R.,* 128 Ky. 627, 108 S.W. 941, 942-43 (1908) (dictum—no interest recoverable where exemplary damages allowed); *Rayonier, Inc.* v. *Polson,* 400 F.2d 909, 922 (9th Cir. 1968) (Washington treble damage statute for wrongful removal of timber is penal in character and must be strictly construed—no interest on award). A somewhat different approach is taken in *DeLaughter* v. *Borden,* 431 F.2d 1354, 1359 (5th Cir. 1970), which approves the allowance of prejudgment interest by the district court, limited to the single damage portion of a treble damage award for violation of a Louisiana milk marketing statute.

259 U.S. 344 (1922), which notes that *Thomsen* v. *Cayser* is a particular application of the rule of *Lincoln* v. *Claflin*, and holds that prejudgment interest (awarded by the district court in that case as a matter of law) should have been left to the jury as a matter of damages.

To support its contrary holding, the Second Circuit below relied principally on *Locklin* v. *Day-Glo Color Corp.*, 429 F.2d 873, 877 (7th Cir. 1970), *cert. denied*, 400 U.S. 1020 (1971), which held that a private antitrust plaintiff is not entitled to recover interest as an element of his damages because the damages are trebled. The Seventh Circuit in *Locklin* cited no authority for this proposition and gave no explanation for rejecting the plaintiff's argument there that the general tort rule permitting interest as damages should apply.

The Second Circuit, on the other hand, did discuss briefly the reasons for reaching the same conclusion as the court in *Locklin*. In addition to asserting that trebling of the damages "will more than adequately compensate TWA for its injuries," the court below stated that it is reasonable to interpret congressional silence on the matter "as indicating that trebled damages are sufficient penalty and that interest need not be included" (449 F.2d at 80, A-2795). Like the court in *Locklin*, the court below did not explain what basis there is for rejecting the much more logical assumption that Congress intended by its silence to adopt the prevailing practice concerning the measure of damages available in tort actions.

In addition to the *Locklin* case, the court of appeals cited two decisions of this Court in other fields as authority for its holding: *Brooklyn Savings Bank* v. *O'Neil*, 324 U.S. 697 (1945), and *Rodgers* v. *United States*, 332 U.S. 371

(1947). These cases deal with two quite different statutory schemes, and in neither did this Court suggest that there was any overriding general principle to be applied.

The *Brooklyn Savings Bank* case involved a suit for back wages plus interest from the date when the wages were due under the Fair Labor Standards Act of 1938, which expressly provides in Section 16(b), 52 STAT. 1069 (1938), 29 U.S.C. § 216(b) (1970), for recovery of any unpaid wages plus "an additional equal amount as liquidated damages." Citing its earlier decision in *Overnight Motor Transp. Co.* v. *Missel*, 316 U.S. 572 (1942), that such "liquidated damages," which are geared to unpaid back wages, are intended to compensate for delay in payment for sums due under the Act—the delay which is compensated for in tort cases by prejudgment interest—this Court held that prejudgment interest should not be awarded in addition to such "liquidated damages." However, there is nothing in the language or history of Section 4 of the Clayton Act to indicate that the trebling of damages thereunder is intended to compensate for delay in payment or that it is intended to constitute "liquidated damages" in lieu of actual damages.

In the *Rodgers* case, this Court held that penalties payable to the United States under the Agricultural Adjustment Act of 1938, 52 STAT. 31 (1938), 7 U.S.C. § 1281 (1970), by a farmer who had exceeded his agricultural quota for cotton were most closely analogous to criminal fines, as to which it is well established that no interest is payable. Fines, of course, do not reflect a measurable loss suffered by the Government, and cannot reasonably be considered to be compensatory in the sense that the actual damages recovered by a private antitrust plaintiff, *i.e.*, "the damages by him sustained," are compensatory. 332

U.S. at 374. Therefore, since the language and purpose of Section 4 is so completely different from the statutes in *Brooklyn Savings Bank* and *Rodgers*, the interpretation given to those statutes by this Court is inapplicable to the Clayton Act, and neither case lends support to the decision of the Second Circuit below or that of the Seventh Circuit in *Locklin*.

The court below also indicated some reluctance to become involved in what it considered to be the "difficult and time-consuming inquiries" required to determine the amount of prejudgment interest to which TWA is entitled (449 F.2d at 80, A-2795). Without agreeing with the court's characterization, TWA is prepared, in order to avoid any possibility that such a problem might arise, to accept the following basis of computation, which is the most favorable to which the defendants might be entitled:

(1) The date from which the prejudgment interest is to run can be fixed at the latest possible date—that is, the last day when TWA has proved it was still suffering direct injuries from defendants' conduct, thus disregarding the fact that some of the proven losses were experienced as early as the first quarter of 1959. *Cf. Colonial Refrigerated Transp., Inc.* v. *Mitchell*, 403 F.2d 541, 554-55 (5th Cir. 1968). This latest possible date for the commencement of interest charges would be December 31, 1963.[6]

[6] TWA's expert Wemple testified that, since by the end of 1963 TWA had historically come within five aircraft of the full 63-plane fleet which it would have had but for defendants' wrongdoing, he had recommended that the computation of estimated changes in TWA's operating results not be continued beyond that point (AX-99-100; Wemple Tr. 4902). The period covered by the damage studies of TWA's experts was accepted by the Special Master as the proper period within which to examine the effects on TWA of the defendants' unlawful conduct (Brownell Report, pp. 79, 141-43; A-1966).

(2) The rate of interest can be fixed at the lowest arguably compensatory figure—that is, the lowest point reached by the prime rate during the entire period from the end of 1963 to 1970. This lowest possible rate would be 4½ per cent,[7] a rate which throughout the period was well below both the legal rate established in New York[8] and the actual cost to TWA of any of its borrowings.[9] The amount of prejudgment interest to which TWA is entitled can thus be computed as follows:[10]

TWA's proven losses:	$45,870,478.65
rate of interest:	.045
number of years (12/31/63 to 4/14/70):	6.28
$45,870,478.65 × .045 × 6.28 =	$12,962,997.26
	× 3 (trebling)
	$38,888,991.78

[7] The prime rate increased steadily during this period of time: 4½% in 1963, 4½-5% in 1964-65, 5-6% in 1966-67, 6-6¾% in 1968, and 7-8½% in 1969-70. 56 FED. RESERVE BULL., No. 12, p. A33 (December 1970).

[8] Under N.Y. GEN. OBLIG. LAW § 5-501 (McKinney 1964), the legal rate of interest was 6% per annum until July 1, 1968 when it was increased to 7¼%; it was then raised to 7½% effective February 16, 1969 (see note 14, p. 28 *infra*).

[9] TWA actually paid well above the prime rate on borrowings of over $160 million in 1963-66 (TWA Exs. 96-99). TWA continued to pay for its money at or above the prime rate throughout the rest of the period through 1970, as its annual reports, available to the public, demonstrate.

[10] An alternative calculation to reflect the fact that TWA is entitled to have its damage award increased as set forth in Point III *infra* is set out as Annex A at the end of this brief.

II.

Alternatively, the decisions below erroneously failed to allow interest on the Special Master's award for the period between the filing of his Report and the entry of judgment.

If this Court should hold that TWA is not entitled to prejudgment interest from the last date when it directly sustained damages as a result of defendants' wrongdoing until the entry of judgment, as set forth in Point I above, then TWA is still entitled to the compensation for delay which is customary in cases where the determination of damages is referred to a master and the master's award is subsequently confirmed by the district court—*i.e.*, TWA should receive interest from the filing of the Brownell Report to the entry of judgment confirming that Report. By denying TWA this compensation for delay, the district court (312 F.Supp. at 485, A-2072) and the court of appeals (449 F.2d at 80, A-2795-96) accorded to defendants for that 19-month period the interest-free use of money to which TWA had been judicially determined to be entitled. *Tilghman* v. *Proctor*, 125 U.S. 136 (1888).[11] This de-

[11] In *Tilghman* v. *Proctor*, a patent infringement case, the Court first noted that, under existing prior decisions, the plaintiff's claim was one for "unliquidated damages, which, as a general rule, and in the absence of special circumstances, do not bear interest until after their amount has been *judicially ascertained* • • •" (125 U.S. at 160; emphasis added). It went on to say:

"Nothing is shown to take this case out of the general rule. At the time of the infringement, the fundamental questions of the validity and extent of Tilghman's patent were in earnest controversy and of uncertain issue. *Interest should therefore be allowed, as in Illinois Central Railroad* v. *Turrell, just cited, only from the day when the master's report was submitted to the court* • • • upon the amount shown to be due by that report and the accompanying evidence." (125 U.S. at 161; emphasis added.)

nial placed upon TWA the entire cost of the delay from referring the question of damages to a special master.

Some delay is virtually inevitable whenever the question of damages is referred to a special master, particularly in a complex private antitrust action, since—whatever the gain in judicial efficiency—an additional layer of judicial review is involved, and that takes time. In this case it took one year and seven months. The policy underlying Section 4 of the Clayton Act can be completely effectuated only by minimizing the adverse impact of such a delay upon the plaintiff. However necessary the reference may be in such a case, this necessity arises not from anything done by the plaintiff, but from defendants' wrongdoing for which Section 4 is intended to provide a remedy.

This Court has previously expressed its concern that parties not be unnecessarily penalized by references to masters. *LaBuy* v. *Howes Leather Co.*, 352 U.S. 249, 256 (1957); *Los Angeles Brush Mfg. Corp.* v. *James*, 272 U.S. 701, 707 (1927). There is no logical reason why such a delay should operate to the monetary prejudice of the plaintiff when there is available the simple solution of allowing interest on any sum found properly awarded from the date of filing of the master's report. This is exactly what federal courts have done for very many years in judgments entered on special masters' awards, where interest has not been awarded from an earlier date as an element of damages. *See, e.g., Illinois Central R.R.* v. *Turrill*, 110 U.S. 301, 303 (1884); *Tilghman* v. *Proctor, supra; Crosby Steam Gage & Valve Co.* v. *Consolidated Safety Valve Co.*, 141 U.S. 441, 458 (1891); *L. P. Larson, Jr., Co.* v. *William Wrigley, Jr., Co.*, 20 F.2d 830, 836 (7th Cir. 1927), *rev'd in part on other grounds*, 277 U.S. 97 (1928); *Carter Products, Inc.*

v. *Colgate-Palmolive Co.*, 214 F.Supp. 383, 417-18 (D.Md. 1963). The fact that most of these were patent cases is reflective only of the long-standing utilization of references to special masters in patent cases. There is nothing peculiar to patent infringement suits nor any basis in the historical development of the applicable statutes that would justify confining the rule to patent cases.[12] It was originally announced as a rule of general applicability, and it should apply whenever the assessment of damages is referred to a special master and the master's award is subsequently confirmed by the district court. This Court said as much in discussing the rationale for the rule in the *Crosby Steam Gage & Valve Co.* case, *supra*:

> "Delay caused by the court, or not attributable to the plaintiff, in coming to a conclusion on the master's report, where the amount found by that report is confirmed, ought not to deprive the plaintiff of interest on the amount found by the master. Under such circumstances, the account ought to be considered as liquidated on the day when the master's report is filed." (141 U.S. at 458).

We know of no reason for refusing to apply a similar rule to the master's award in a private treble damage case.

---

[12] At the time of this Court's decisions in the *Illinois Central R.R.*, *Tilghman* and *Crosby* cases, the pertinent statutory provisions spoke only of "actual damages sustained" and "the damages the complainant has sustained." Revised Statutes of 1874, Section 4919 and Section 4921. No mention was made therein of interest from the filing of the master's report. The first reference to interest of any kind was inserted in Section 4921 by Act of August 1, 1946, ch. 726, § 1, 60 STAT. 778, which provided for "general damages * * *, not less than a reasonable royalty therefor, together with such costs, and interest, as may be fixed by the court." The House Committee Report indicates that the reference to interest in the 1946 amendment was intended to require the award of interest "from the time infringement occurred." H.R. REP. No. 1587, 79th Cong., 2d Sess., 1946 U.S. CODE CONG. & ADMIN. NEWS, p. 1387.

A similar practice is established in New York, where N.Y. CPLR § 5002 (McKinney 1963) mandates the recovery of interest "in any action, from the date * * * the report * * * was made to the date of entry of final judgment." In *In re Kavares (Motor Vehicle Accident Indemnification Corp.)*, 29 App.Div.2d 68, 70-71, 285 N.Y.S.2d 983, 987 (1st Dep't 1967), "report" in § 5002 was held to include the final award of an arbitrator determining the amount of compensation under the Motor Vehicle Accident Indemnification Corporation Law, N.Y. INS. LAW §§ 600-26 (McKinney 1966). *See also* ILL. ANN. STAT. ch. 74, § 3 (Smith-Hurd Supp. 1972); IOWA CODE ANN. § 625.21 (1950); *Aronson* v. *Orlov*, 228 Mass. 1, 116 N.E. 951, 955, *cert. denied*, 245 U.S. 662 (1917) (applying predecessor of MASS. GEN. LAWS ANN. ch. 235, § 8 (1956)); MINN. STAT. ANN. § 549.09 (1947); S. C. CODE ANN. § 10-1605 (1962); WIS. STAT. ANN. §271.04 (4) (Supp. 1972-73).

The court of appeals did not find it necessary to give any reason for departing from this established practice because it considered the question to be one of interest on a federal money judgment (449 F.2d at 80, A-2795), which under 28 U.S.C. § 1961 *must* run from the date of entry of the judgment at the rate prescribed by state law.[13]

---

[13] The court of appeals distinguished the cases cited by TWA on the ground that they were concerned with the award of interest *as damages*, which it held unavailable as a matter of law in antitrust cases (449 F.2d at 80n.5, A-2796); *see* discussion in Point I *supra*, especially pp. 19-21. This distinction, however, is unavailable in light of the discussion in *Crosby Steam Gage & Valve Co.*, *supra*, which rests the practice of awarding interest on a master's report, subsequently confirmed, squarely on the policy of avoiding prejudice to a plaintiff from the delay involved in a reference.

The suggestion that 28 U.S.C. § 1961 affirmatively *precludes* interest prior to the entry of judgment by the court is of course untenable in light not only of *Tilghman* v. *Proctor* and *Crosby*

The court of appeals appears again to be following the Seventh Circuit's decision in *Locklin* v. *Day-Glo Color Corp.*, discussed in Point I, p. 19 *supra*. On the basis of an erroneous ruling that interest "not enumerated as a recoverable item in the statute * * * is therefore precluded" (429 F.2d at 877), the Seventh Circuit held that interest cannot be recovered from the date of the master's award since Section 4 of the Clayton Act makes no provision for interest and 28 U.S.C. § 1961 applies only to interest from the entry of a final judgment. This Court's decision in *Rodgers* v. *United States*, 332 U.S. 371, 373 (1947), directly refutes this proposition:

> "* * * the failure to mention interest in statutes which create obligations has *not* been interpreted by this Court as manifesting an unequivocal congressional purpose that the obligation shall not bear interest." (Emphasis added.)

Both the Second Circuit below and the Seventh Circuit in *Locklin* fail to deal with the equitable principle embodied in *Tilghman* v. *Proctor, supra,* and the cases following it, that a successful plaintiff should, as a matter of course, be compensated for the delay between the determination of the amount of his damages by the special master whom the court has appointed and the entry by the court of judgment thereupon.

A private antitrust plaintiff is as entitled to the benefit of this equitable principle as are patent, trademark and

---

Steam Gage & Valve Co. but also of *Miller* v. *Robertson, supra*, *Lincoln* v. *Claflin, supra,* and innumerable other cases which have allowed such interest in a broad variety of situations ever since the substance of 28 U.S.C. § 1961 was enacted in the Act of August 23, 1842, ch. 118, § 8, 5 STAT. 518, subsequently codified in Revised Statutes of 1874, Section 966.

copyright plaintiffs, who are accorded it as a matter of course. The congressional policy expressed in the Clayton Act requires, indeed, that defendants found to have violated the antitrust laws should not be permitted to retain the fruits of their wrongdoing. *International Boxing Club* v. *United States,* 358 U.S. 242, 253 (1959); *Schine Chain Theatres, Inc.* v. *United States,* 334 U.S. 110 (1948). To leave a plaintiff uncompensated for such additional delay in his recovery would appear inconsistent with that policy.

The amount of interest to which TWA is entitled may be calculated, in the absence of a federal statute, with reference to the law of the state in which the district court sits. *See Royal Indemnity Co.* v. *United States,* 313 U.S. 289, 297 (1941); *Collier* v. *Granger,* 258 F.Supp. 717, 719 (S.D.N.Y. 1966). Under N.Y. CPLR §§ 5002, 5004 (McKinney 1963), interest from master's report to judgment would be calculated at the legal rate, which during the 19-month period in question rose from 7¼ per cent to 7½ per cent.[14] Therefore, the interest may be determined according to the following computation:

---

[14] Under N.Y. GEN. OBLIG. LAW § 5-501(1) (McKinney Supp. 1971), as amended in 1968, the legal rate of interest in New York is that set by the State Banking Board. *Rachlin & Co.* v. *Tra-Mar, Inc.,* 33 App.Div.2d 370, 308 N.Y.S.2d 153 (1st Dep't 1970). Effective July 1, 1968, the Board set the rate at 7¼%, Regulation No. 37, 3 N.Y.C.R.R. § 34.1 (1968). Subsequently the rate was increased to 7½% effective February 16, 1969, General Regulation, Part 4, 3 N.Y.C.R.R. § 4.1 (1969). During its 1972 session the New York State Legislature enacted Assembly Bill No. A10477 (1972 NEW YORK LEGISLATIVE RECORD & INDEX, vol. I, p. A669) which amends N.Y. CPLR § 5004 to change the rate of interest on verdicts, reports and decisions (as provided for in N.Y. CPLR § 5002) from "the legal rate" to "six per centum per annum." The amendment was signed into law by the Governor as Chapter 358 of the Laws of 1972, and will go into effect on September 1, 1972. N.Y.L.J., May 26, 1972, p. 1, col. 6.

Total award of Special Master:	$137,611,435.95
Number of years at rate of 7¼% (9/21/68 to 2/15/69):	.40
Number of years at rate of 7½% (2/16/69 to 4/14/70):	1.16
$137,611,435.95 × .0725 × .40 =	$ 3,990,731.64
$137,611,435.95 × .075 × 1.16 =	$ 11,972,194.93
	$ 15,962,926.57

III.

The decisions below should have determined TWA's net damages on the basis of a "cost of capital" established by the allegations of the complaint that defendants wrongfully precluded borrowings at lower interest rates.

The Special Master found that, when TWA received too few jets too late (47 instead of 63, with delays of up to 11 months) (Brownell Report, pp. 51-57, 151-53; A-1966) and was compelled to lease jets from Toolco in 1959-1960 instead of purchasing them directly (Brownell Report, p. 182; A-1966), TWA suffered losses in operating profits totalling $74.3 million (Brownell Report, p. 322; A-1966). The complaint establishes that defendants' actions in limiting and delaying TWA's jet fleet and in leasing jets to TWA on unlawful conditions were in furtherance of their conspiracy to restrain and monopolize and their attempt to monopolize the supply of aircraft to commercial air carriers in violation of the antitrust laws (Complaint, pars. 7, 9, 10, 14-20, 22, 24, 49-51, 52(a), A-3-4, A-8-10, A-15, A-23-25).

In computing TWA's damages for its injuries from these antitrust violations, the Special Master deducted from this $74.3 million of proven losses in operating profits a total of $29 million to reflect the cost which TWA would have incurred in raising sufficient capital funds to purchase the additional 16 jets, to acquire the full 63-plane fleet earlier, and to purchase rather than lease from Toolco the planes received in 1959-1960 (Brownell Report, pp. 147-67, 183-85, 319-20; A-1966). Since the deduction was made from the earnings which the Special Master had determined TWA lost (*i.e.*, before trebling), the effect of this deduction was to reduce TWA's overall recovery by $87 million.

TWA accepts the logic and propriety of making a "cost of capital" deduction from the gross damage award pursuant to the principle approved by this Court in *Hanover Shoe, Inc.* v. *United Shoe Machinery Corp.*, 392 U.S. 481, 504 (1968), but believes the principle was misapplied in this case. In *Hanover Shoe,* where the damages stemmed from the plaintiff's having been unlawfully required to lease machinery which would have been cheaper to buy, an interest charge of 2.5 per cent on the assumed purchase price of the machinery was deducted from the amount of the award. In this case, where the damages stemmed from being denied capital equipment as well as being required to lease rather than own such equipment, the same principle was applied by the Special Master and approved by the courts below (308 F.Supp. at 694, A-2054-55; 449 F.2d at 79-80, A-2793-94).

The specific cost of capital which the Special Master fixed, however, was based on assumed interest rates of 6 per cent and 6.3 per cent. He derived these rates from the interest rates incurred by airlines generally for borrow-

ings negotiated in the 1958-1960 period, with particular reference to the rates available to TWA in 1959-1960 (Brownell Report, pp. 158-59; A-1966). Yet the complaint specifically alleges that, in furtherance of and as a part of their conspiracy to restrain and monopolize and their attempt to monopolize aircraft supply, defendants prevented TWA from arranging financing in 1955 and 1956 when interest rates were very substantially lower, ranging from 4 per cent to 4¾ per cent (Complaint, pars. 7, 9, 10(g), 23, 26, 27, 28, 52(c), A-3-4, A-8-10, A-15-16, A-25). The Special Master expressly found these allegations to be well-pleaded, and summarized what he considered to be their essential elements in his own language:

> "It may be helpful once again to restate below in summary form the essence of these allegations as follows:
>
> "1. For the purpose of creating and maintaining control of the business of financing the purchase of aircraft for use by TWA and strengthening control over the acquisition of aircraft by TWA, the defendants rendered TWA dependent upon them for such assistance in financing as defendants might choose to provide, refusing to allow equity financing by TWA except on condition that as a result Toolco would increase its equity position in TWA and causing TWA instead to obtain funds chiefly by means of debt financing, thus rendering TWA unable to seek financing needed for the acquisition of aircraft except upon the approval of defendants. The actions complained of commenced subsequent to the acquisition by Toolco of a stock interest in TWA and the action continued throughout the period covered by the complaint. (Par. 23).*

"* Toolco first acquired stock of TWA in 1939 (6 CAB 153, 154) and continued its actions until December 31, 1960.

"2. From 1955 until December 1960 defendants dictated the type and manner of acquiring aircraft and the manner of financing the acquisition of aircraft. (Par. 24).

"3. At least as early as 1955 United States air carriers recognized the needs for the extensive financing required for the acquisition of jet powered aircraft. (Par. 25).

"4. In 1955 and continuously thereafter until December 1960 defendants directed TWA to make no efforts itself to obtain financing necessary for the acquisition of jets required for TWA needs. (Par. 26).

"5. Commencing in 1955 and continuing thereafter various other air carriers, including TWA competitors, made appropriate arrangements for the financing of jet aircraft, and in 1955 and in 1956 obtained commitments for funds at interest rates ranging from 4% in 1955 to 4¼%-4¾% in 1956. (Par. 27).

"6. In 1955, and for several years thereafter defendants discussed various proposals for financing TWA jet aircraft, but made no arrangements for such financing, nor was TWA allowed to make any such arrangements until December 1960, when interest rates for long-term debt were approximately 6-6½% (Par. 28); and

"7. TWA was foreclosed from obtaining financing on more advantageous terms than those available to it in December 1960 and thereby suffered a loss because of the greater cost of borrowing and TWA's ability to obtain financing for its needs was substantially impaired. (Par. 52(c) and (d)).

"The well pleaded allegations restated above * * * are accepted as facts * * * ." (Brownell Report, pp. 254-55; A-1966)

The Special Master held, however, that TWA had not met its burden of showing that it had suffered losses in any specific amount in connection with the financing of its jet fleet (Brownell Report, pp. 258 *et seq.*, 322; A-1966).

TWA does not contest the fact that—as the Special Master determined—in 1958-1960 TWA would have had to pay 6 to 6.3 per cent interest. This is approximately what it did pay at about that time.

In 1955 and 1956, however, TWA would have paid 4 to 4¾ per cent. Those figures are established by the complaint and fairly reflect the rates paid by other airlines which, unlike TWA, arranged financing in those years (AX-1776-77). TWA believes that the Special Master (who accepted these figures) should have given recognition to them in his selection of a "cost of capital" factor to apply in determining the net amount of the losses in operating profits which resulted from defendants' misconduct.

Charging TWA with 6 per cent and 6.3 per cent interest in a "cost of capital" deduction produces an inequitable result as can be seen in the extraordinary difference between TWA's historical interest costs and the interest costs which other airlines, which had arranged for their borrowings earlier, were in fact paying during the 1960-1963 period for their overall debt. TWA Ex. 314 (AX-1060 *et seq.*) sets out the weighted average interest rates on all outstanding external debt, as of December 31 of each of the years 1960-1963, for TWA and each of its three principal competitors—Pan American World Airways, Inc. ("PAA"), American Airlines, Inc. ("AAL"), and United Air Lines, Inc. ("UAL"):

Weighted Average Interest Rates on Debt Outstanding at December 31, 1960-1963

	TWA	*PAA*	*AAL*	*UAL*
1960	6.27%	4.67%	4.32%	4.27%
1961	6.27	4.88	4.67	4.38
1962	6.21	4.87	4.65	4.25
1963	6.27	4.74	4.68	4.41

Of the four largest American-flag airlines, *only* TWA found itself, at the close of the Hughes-Toolco regime, with an operative interest rate in excess of 6 per cent. The amounts to which the low interest rates of its competitors were applicable were in all respects comparable to the amounts on which TWA was compelled to pay interest rates so strikingly higher (*see, e.g.*, TWA Ex. 313, AX-1051 *et seq.*). This is the very "loss by virtue of the greater cost of borrowing" pleaded in paragraph 52(c) of the complaint (A-25). For that to become the basis for a deduction from the damage award to TWA is to allow defendants to profit by their own wrongdoing. *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251, 265 (1946).

If the Special Master had used 4¾ per cent (no higher rate is justifiable in light of the express allegations of the complaint admitted by the default and the demonstrated interest costs of TWA's competitors during the same period of time) instead of 6 per cent and 6.3 per cent, the cost of capital which he computed would have been $22.5 million instead of $29.0 million, and the damages found would have been increased by $6.5 million. Since the Special Master set out his actual computations in his Report, where they appear at pp. 161-62, 164-66 and 185 (A-1966), the results of such a change in the assumed interest rate are simple to determine: in Annex B to this brief we have set out the required changes

in the Special Master's computations, showing the $6.5 million difference. After trebling the result would be to increase TWA's judgment by $19.5 million.

IV.

The decisions below improperly interpreted the provision for recovery of "cost of suit" in Section 4 of the Clayton Act to exclude the expense necessarily incurred by TWA when it retained expert witnesses to assist in proving the amount of its damages.

Section 4 of the Clayton Act provides that a successful private antitrust plaintiff

> "* * * shall recover threefold the damages by him sustained, *and the cost of suit, including a reasonable attorney's fee.*" (Emphasis added.)

Like the permissible composition of the damage award discussed in Point I above, the meaning of the phrase "cost of suit" presents a question of statutory interpretation—one upon which this Court has not had occasion to pass. In the absence of a definitive construction by this Court, the lower federal courts have interpreted "cost of suit" as meaning only "taxable costs."

As the instant case strikingly demonstrates, proving damages in a major private antitrust case has become not just time-consuming, but complex, sophisticated and correspondingly very costly. When the damages suffered by a plaintiff are required to be measured in terms of profits lost over a period of many years (the Special Master and the district court rejected any simpler approach to fixing TWA's damages[15]), the measurement of those profits as a practical matter can only be made with

[15] Brownell Report, pp. 302-08 (A-1966); 308 F.Supp. at 694 (A-2053-54). The district court did, however, state that TWA's Comparative Profit Study (AX-80 *et seq.*) had a "reasonable basis" (312 F.Supp. at 483, A-2068).

the participation of experts. *See* N. Leonard, *The Measurement of Damages: An Economist's View*, 31 OHIO ST. L.J. 687, 698-99 (1970). Even in a less complex case, a plaintiff who did not present accounting testimony, for example, would run an obvious risk of having failed to establish the amount of his loss.

TWA's total claim for its cost of this suit, exclusive of attorney's fee, was $2,230,602.83. The district court limited its recovery to an award of "taxable costs" in the amount of $336,705.12 (312 F.Supp. at 485, A-2071-72, A-2073). Again, as it did in the court of appeals in order to simplify presentation of the issue, TWA here confines its claim in excess of the amount recovered as taxable costs to the fees and disbursements which it had to pay for the services of firms and individuals retained as experts in connection with the damage hearing—a total of $1,642,677.71.[16] The

[16] The breakdown of the fees as to each firm of experts is as follows:

Coverdale & Colpitts consulting engineers		
Fees	$569,810.23	
Disbursements	41,023.13	610,833.36
Drexel Harriman Ripley, Inc. investment bankers		
Fees	$257,250.00	
Disbursements	784.33	258,034.33
Price Waterhouse & Co. independent public accountants		
Fees	$464,600.00	
Disbursements	32,267.76	$ 496,867.76
R. Dixon Speas Associates aviation consultants		
Fees	$234,206.00	
Disbursements	42,736.26	276,942.26
		$1,642,677.71

The disbursements of R. Dixon Speas Associates included fees paid to expert consultants on statistics (including Professor Van Court M. Hare, Jr.) totalling $17,793.08.

affidavits submitted by TWA to demonstrate that it had actually made these expenditures and that they were reasonably necessary to the prosecution of TWA's claims (Docs. 520, 524) were not contested by the defendants in the district court.[17]

The sole reason for the denial by the courts below of reimbursement to TWA for these expenditures was that,

---

[17] The role played by each expert may be briefly described. *Edward L. Wemple,* a partner in the consulting engineering firm, Coverdale & Colpitts, presented reports by his firm to demonstrate the amount by which TWA's operating revenues and profits had been decreased through failure to receive all of its 63-plane jet fleet in the manner and on the time schedule it would have followed had it not been for defendants' unlawful intervention (AX-80 *et seq.*, AX-91 *et seq.*, AX-167 *et seq.*). *Edward J. Morehouse,* Senior Vice President of the investment banking firm, Drexel Harriman Ripley, Inc., presented a report stating his opinion and that of his firm that a non-captive TWA could have financed the purchase of its full 63-plane jet fleet at very much lower costs than those in fact incurred in the later financial arrangements eventually dictated by defendants for the cut-back fleet, and describing in detail a particular program which he and his firm would have recommended as "do-able" at the time (AX-336 *et seq.*, AX-430 *et seq.*). *R. Dixon Speas,* President of R. Dixon Speas Associates, submitted a report estimating the financial loss suffered by TWA as a result of delays in the sale of its piston engine aircraft (TWA Ex. 6(b)). *John C. Biegler,* a partner in Price Waterhouse & Co., independent public accountants, presented a report which restated and compared TWA's historical financial statements during the damage period with those which it would have reported except for the various matters complained of, adjusting and combining all of the other expert studies on the basis of a consistent set of assumptions and following in all material respects the accounting methods which were historically employed by TWA and its independent accountants during the years in question (AX-452 *et seq.*, AX-480 *et seq.*). Price Waterhouse also prepared supplementary accounting studies that were admitted into evidence and relied upon by the parties and the Special Master as accurately reflecting the financial effects of the conflicting assumptions of the experts for each side (Brownell Report, pp. 58-59, 81-83, 142-43; A-1966). Statistical experts, including *Van Court M. Hare, Jr.,* assisted in the analysis of defendants' expert testimony, and Professor Hare testified in rebuttal on certain statistical matters (A-1773 *et seq.*).

under a line of circuit and district court cases stemming from the Second Circuit's decision in *Straus* v. *Victor Talking Machine Co.*, 297 F. 791, 806-07 (1924), such reimbursement has been denied. The district court felt bound by these precedents (312 F.Supp. at 485, A-2071), and the court of appeals declined to overrule the *Straus* case (449 F.2d at 81, A-2798). Therefore, it remains for this Court, which has never passed upon the question, to give a definitive interpretation of the phrase "cost of suit" in Section 4 of the Clayton Act in order to effectuate fully the congressional policy embodied in it in light of the realities of today's private antitrust suit.

Although federal courts do not tax as court costs even a part of the actual out-of-pocket expenses for necessary expert witnesses, a number of state statutes recognize their importance by including all or part of the expenses of hiring experts within taxable costs.[18] However, in a private antitrust case it is not necessary to expand the type of litigation expenses now comprehended by ordinary taxable costs. Congress has expressly provided for the recovery of the "cost of suit," and all that is necessary is to give that provision its natural meaning.

---

[18] *See, e.g.*, Title 16, ME. REV. STAT. ANN. § 251 (Supp. 1972) (amended in 1971, eliminated $50 per diem limit to permit "a reasonable sum for each day's attendance of any expert witness"); N.H. REV. STAT. ANN. § 525:14-a (Supp. 1971) (amended in 1971 to allow "actual costs" for expert witness fees); FLA. STAT. ANN. § 90.231 (West 1960) (expert witness fee, "including the cost of any exhibits used by such witness in the amount of ten dollars per hour or *such amount as the trial judge may deem reasonable* • • • shall be taxed as costs.") (emphasis added); Title 10, DEL. CODE ANN. § 8906 (1953) ("[F]ees for witnesses testifying as experts • • • shall be fixed by the court in its discretion, and • • • taxed as part of the costs"). *See also* LA. REV. STAT. ANN. § 13:3666 (West 1968); N.C. GEN. STAT. § 7A-314 (Supp. 1971); N.D. CENT. CODE § 28-26-06(5) (Supp. 1971); WYO. STAT. ANN. § 1-195 (Supp. 1971).

By doing so in the present case, this Court will not only give recognition to the present-day importance of such expert witnesses in private antitrust suits,[19] but will also effectuate the congressional purpose underlying Section 4 of the Clayton Act in a most practical way. Where Congress has intended that a policy of national importance is to be enforced by those who have been directly injured by the proscribed conduct, this Court has recognized that it should liberally construe provisions allowing recovery of the expense of suit in order that such persons will be encouraged to seek judicial relief. *Newman* v. *Piggie Park Enterprises, Inc.*, 390 U.S. 400, 402 (1968). Such an approach is equally applicable to a private antitrust action, for as this Court has very recently made clear, the purpose of allowing the recovery of cost of suit in Section 4 is not only to encourage but to make economically feasible the bringing of private antitrust actions. In *Hawaii* v. *Standard Oil Co. of California*, 405 U.S. 251, 266 (1972), this Court responded as follows to the State of Hawaii's argument that it should be permitted to bring an antitrust suit *parens patriae* on behalf of all of its citizens because individual citizens were not financially able to bring such a suit on their own behalf:

"Congress has given private citizens rights of action for injunctive relief and damages for antitrust viola-

[19] Recognition of the importance of expert witnesses generally is already expressed by this Court in the adoption of the 1970 amendments to the Federal Rules of Civil Procedure. Thus Rule 26(b)(4)(C), as amended, not only provides that a party seeking discovery from another party's expert witness must pay a reasonable fee for the expert's time in responding to discovery, but also that if such discovery extends to the facts known or opinions reached by the expert, the party seeking discovery must pay a fair portion of the other party's reasonable fees and expenses in obtaining such facts or opinions from the expert.

> tions without regard to the amount in controversy. 28 U.S.C. § 1337; 15 U.S.C. § 15. Rule 23 of the Federal Rules of Civil Procedure provides for class actions which may enhance the efficacy of private actions by permitting citizens to combine their limited resources to achieve a more powerful litigation posture. • • • The fact that a successful antitrust suit for damages recovers not only the costs of the litigation, but also attorney's fees, should provide no scarcity of members of the Bar to aid prospective plaintiffs in bringing these suits."

The fees paid to experts for which the lower courts have refused TWA recovery were plainly part of the "costs of the litigation" to TWA.

That TWA should recover its cost of expert witnesses is, we believe, firmly within the equity and policy of the statute. Furthermore, we believe the language of the statute is entirely consistent with the equity and policy we urge, while the contrary analysis of Section 4 in *Straus* v. *Victor Talking Machine Co., supra,* is strained and unpersuasive.

The language of Section 4 of the Clayton Act derives from Section 7 of the Sherman Act (now repealed)[20] from which it differs solely in the substitution of the singular "cost of suit" for the plural "costs of suit". In *Straus* the court commented that this difference was probably accidental (297 F. at 806-07). Yet in a different context, but roughly contemporary with passage of the Clayton Act, legal significance was ascribed to the use of "cost" instead of "costs." In *Hygienic Chemical Co.* v. *Provident Chem-*

---

[20] Act of July 2, 1890, ch. 647, Sec. 7, 26 STAT. 210. *repealed,* Act of July 7, 1955, ch. 283, 69 STAT. 283, eff. January 7, 1956.

ical Works, 176 F. 525, 527-28 (2d Cir. 1910), the court in construing an agreement to share the cost and expense of defending a patent suit, stated:

> "The words 'cost' and 'costs' do not always mean the same thing. The word 'cost' and the phrase 'taxable costs' generally have quite different meanings. 'Cost' may be considered as synonymous with 'expense'. 'Taxable costs' are allowances made to the successful party to reimburse him for his disbursements made in prosecuting or defending a suit." [21]

The court in *Straus* placed its principal reliance on the argument that, because the language of both statutes was followed by the phrase "including a reasonable attorney's fee", Congress could not have intended to mean the *expenses* of suit, since such expenses would automatically include the attorney's fee (297 F. at 807). This, however, is a misreading of the words that Congress used.

The important word in this analysis is "including." It evidences the fact that Congress regarded the phrase "cost

---

[21] *Accord: Munro* v. *Maryland Casualty Co.*, 48 Misc. 183, 187, 96 N.Y.S. 705, 707 (Sup. Ct. N.Y. Co. 1905) ("To defend at its cost means to bear the burden of the litigation, to defray the expense of carrying it on. 'Cost' and 'costs' are not synonymous."). *See also Hutchinson* v. *Hutchinson,* 223 Cal.App.2d 494, 36 Cal. Rptr. 63 (1st Dist. 1963), where the court construed CAL. CIV. CODE § 4370(a) (West Supp. 1971), which provides that in a matrimonial proceeding a party may be ordered to pay "such amount as may be reasonably necessary for the cost of maintaining or defending the proceeding * * * ." The court, affirming an award of a reasonable fee for the services of a private investigator whom the wife had employed, analyzed the pertinent statutory language as follows:

> "Quite obviously, the reference to 'the cost of maintaining or defending the action' means something other than and in addition to attorney's fees. Also, such a cost means something other than and in addition to what are referred to as 'costs and necessary disbursements in the action.'" (36 Cal. Rptr. at 71)

of suit" as *including* within its meaning "a reasonable attorney's fee." The rule that ordinary taxable costs *never* include an attorney's fee was well-settled long before the enactment of either the Sherman Act or the Clayton Act. *Flanders* v. *Tweed,* 15 Wall. 450, 452-53 (1872); *Day* v. *Woodworth,* 13 How. 362, 372-73 (1851). *See* 28 U.S.C. § 1920 (1970); 6 J. MOORE, FEDERAL PRACTICE ¶ 54.70[1], at 1301 (2d ed. 1971). Since Congress may be presumed to have been aware that "taxable costs" do not include an attorney's fee, it must have intended the phrase "cost of suit" chosen in Section 4 to mean something more than the ordinary "taxable costs" recoverable by the successful party in any lawsuit. Otherwise the phrase used would have been "costs *and* a reasonable attorney's fee."

The practical effect of the construction in *Straus* is to treat the entire reference to "cost of suit" in Section 4 as mere surplusage. The principle that taxable costs follow the result as of course in actions at law in federal courts was well settled at the time the Sherman Act was enacted. *Ex parte Peterson,* 253 U.S. 300, 317-18 (1920) (reviewing the early practice); *United States* v. *Schurz,* 102 U.S. 378, 408 (1880) (Supplemental Opinion); *Trinidad Asphalt Paving Co.* v. *Robinson,* 52 F. 347, 349-50 (E.D. Mich. 1892). There was no need for Congress to provide that a successful treble damage plaintiff should recover taxable costs. He would get those under the prevailing practice in any event.

Therefore, grammatically and logically the language chosen points to a conclusion opposite to the one reached in *Straus*—that Congress intended the entire expense of suit, including specifically an attorney's fee, to be recoverable.

Conclusion

It is respectfully submitted that the judgment below should be modified to increase the amount to be recovered by cross-petitioner TWA as follows:

A. Interest as damages from December 31, 1963 to entry of judgment (Point I) [see also Annex A]	$38,888,991.78
(or, alternatively)	
Interest from filing of Brownell Report to entry of judgment (Point II)	15,962,926.57
B. Increase to reflect lower "cost of capital" (Point III)	19,500,000.00
C. Including TWA's expenses for experts in "cost of suit" (Point IV)	1,642,677.71

and as modified should be affirmed.

Respectfully submitted,

DUDLEY B. TENNEY

ANNEX A

If this Court finds that TWA is entitled to have its damages increased by $6.5 million before trebling to give effect, in deducting its "cost of capital", to the lower interest rates, as alleged in the complaint, at which TWA would have financed its full 63-plane jet fleet but for defendants' wrongdoing (Point III *supra*), then TWA's total damages before trebling will be increased to $52,370,478.65. This will result in an increase in the total amount of prejudgment interest to which TWA would be entitled under the computation set forth on p. 22 of Point I *supra*, which can be shown as follows:

TWA's proven losses:	$52,370,478.65
rate of interest:	.045
number of years (12/31/63 to 4/14/70):	6.28
$52,370,478.65 × .045 × 6.28 =	$14,799,897.26
	× 3 (trebling)
	$44,399,691.78

ANNEX B

COST OF CAPITAL

In his Report the Special Master describes in detail the procedures which he followed in determining the "cost of capital," commencing at p. 148 and continuing through the detailed calculations in the tables appearing at pp. 161-62 and 164-66 that are labeled as Calculations A through E (A-1966). With respect to the jets which TWA was required to lease through 1960, instead of being able to buy them for itself, a brief additional computation is contained in the Brownell Report at p. 185 (A-1966). This Annex will describe the principal elements of those computations, and how the Special Master made them.

His method is simple and appropriate. TWA's objection is that "cost of capital" should not employ an interest rate in excess of 4¾ per cent. The effect on the award of a change in the interest rates is shown in the revised computations appearing hereafter.

The 63-plane jet fleet, which TWA would have had but for defendants' wrongdoing, can be divided for this purpose, as it was for the purpose of the basic operating studies on which the award of damages was based, into four classifications, which for this purpose the Special Master labeled (A), (B), (C) and (D).

(A) Six B-331 aircraft were diverted to Pan American by defendants so that TWA never did receive them.

(B) Ten CV-880 aircraft were diverted by defendants, who assigned six to Northeast and, initially, retained the other four. (These four were later leased to Northeast for a number of years but then reverted to Toolco's possession.)

(C) Of the 33 Boeing aircraft involved, 28 (11 B-131s and 17 B-331s) were delayed in delivery for an aver-

age of 1.63 months, or .1354 of a year, as the result of defendants delaying the placement of jet orders in 1955. (This includes the six diverted B-331s covered by (A) above, since under (A) there is considered only the period of operation following delivery to Pan American, and not the pre-delivery delays.)

(D) Of the 20 CV-880 aircraft received by TWA, 19 were delayed in delivery for an average of 7.74 months or .6450 of a year as a result of defendants' conduct.

The Special Master's computations are perhaps most easily understood if (C) and (D) are considered first.

The extent of the delays in delivery for the Boeing and Convair fleets in fact received by TWA had been determined by the Special Master at an earlier point in his Report, based on the testimony of Robert W. Rummel, TWA's Vice President, Planning and Research, and the principal expert on equipment matters for both TWA and Toolco throughout the relevant period, and John B. Connelly, Vice President and Assistant General Manager of the Boeng Company —Aircraft Division and a member of Boeing's "headquarters group" during the negotiations with airlines for the sale of early jet aircraft, and a review of the other evidence (Brownell Report, pp. 52, 87, 141, 151-53; A-1966). For "cost of capital" purposes any assumed interest rate was therefore applicable only for these specific periods of delay (Brownell Report, pp. 154-55; A-1966). The amount on which interest should be computed was considered to be the *total* cost of the planes in question, together with all related spare parts and equipment. This cost had been computed and furnished to the Special Master by Price Waterhouse & Co. and had been accepted by defendants' expert (Brownell Report, pp. 149-50, 154-55; A-1966). The calculations with respect to sections (C) and (D) were thus simple.

With respect to those aircraft that TWA did not in fact receive, covered under (A) and (B), interest was imposed for a much longer period—the entire portion of the 1959-1963 damage period during which TWA was deprived of the aircraft. The *amounts* to which the interest rate was applied were available to the Special Master through the computations of Price Waterhouse & Co., which had computed the depreciation charge for each year in order to deduct it from the claims for lost operating profit. Price Waterhouse & Co. thus developed and presented as part of its reports the necessary information on "adjusted capital investment" for each segment of the fleet as of the end of each calendar year throughout the period. The Special Master determined that funds would be needed in advance of the actual delivery dates, and consequently he charged TWA with interest on one-third of the total investment in each fleet commencing a little over one month prior to the first delivery of an airplane in that fleet, with interest on the second third commencing to accrue three months later, and interest on the final third commencing to accrue after an additional three months. Thus assumed interest was charged to TWA on the entire assumed investment for "cost of capital" purposes well in advance of the time when TWA was assumed to have received its final deliveries (Brownell Report, pp. 149-50; A-1966).

The computations required to implement this direct and straightforward approach are quite easy to follow. Reproduced below are the tables that appear at pp. 161 through 166 of the Brownell Report (A-1966), exactly as such tables appear in the Report except that each figure which would be different if the calculation had been made using a 4¾ per cent interest rate has been *italicized,* and next to it is printed **[in bold-face type and in brackets]** the different figure that would result from using the 4¾ per cent rate to make the same calculation.

CALCULATION A

Interest Cost 1959-1963

Adding Six B-331 Aircraft
($ millions)

	(1) Adjusted Capital Investment Beginning of Period	(2) Less Depreciation and Amortization for the Period[2]	(3) Adjusted Capital Investment End of Period	(4) Average Investment for the Period (1) + (3) ÷ 2	(5) Interest at 6.3 per cent [4¾]	(6) Interest Cost for the Period (4) × (5)
Fourth qtr. 1959	14.1[1]	—	14.4	14.4	*1½%*[3] [1 3/16%[3]]	*.216* [.171]
First qtr. 1960	28.8[1]	0.4*	28.4	28.6	*1½%*[3] [1 3/16%[3]]	*.429* [.340]
Second qtr. 1960	42.7[1]	1.1*	41.6	42.1	*1½%*[3] [1 3/16%[3]]	*.632* [.501]
Second half 1960	41.6	2.3*	39.3	40.5	*3%*[4] [2⅜%[4]]	*1.215* [.962]
1961	39.3	5.1	34.2	36.7	*6%* [4¾%]	*2.202* [1.743]
1962	34.2	4.3	29.9	32.0	*6%* [4¾%]	*1.920* [1.520]
1963	29.9	3.6	26.3	28.1	*6%* [4¾%]	*1.686* [1.335]
				Total increase in interest cost for period 1959-1963		*$8.300* [6.572]

* Proration of annual depreciation of $3.8 million.

CALCULATION D

Interest Cost 1960-1961

Earlier Purchase of Nineteen CV-880 Aircraft
($ millions)

Cost of 19 Aircraft delayed[1]	$ 82.9	
Less increase in depreciation as a result of the earlier purchase[2]	$ 6.8	
Net value of earlier investment	$ 76.1	
Average earlier investment (a + b ÷ 2)	$ 79.5	
X Average annual interest rate[3]	*$ .063*	[.0475]
Increased interest cost for one year	*$5.0085*	[$3.7763]
X Average delay	.6450	
	$3.2305	[$2.4357]

[1] See determination page 155 of this report.
Source: TWA Ex. 7(b)2, VI, p. 46.

CALCULATION E

Summary of Adjustments to Interest Cost
1958-1963
($ millions)

I. *Additional Purchase*		
Six B-331 Aircraft	*$ 8.300*	[$ 6.572]
Ten CV-880 Aircraft	*8.663*	[6.532]
	$16.963	[$13.104]
II. *Earlier Purchase*		
Eleven B-131 Aircraft and Seventeen B-331 Aircraft	*$ 1.439*	[$ 1.139]
Nineteen CV-880 Aircraft	*3.231*	[2.436]
	4.670	[3.575]
Total	*$21.633*	[$16.679]

The total effect of the foregoing changes would be to decrease the sum subtracted from the award—*i.e.*, to increase the award—by $4.9 million (before trebling).

Leasing

The Special Master's application of the "cost of capital" approach to the jets which were required to be leased by TWA in 1959 and 1960, instead of owned, is described in the Brownell Report at pp. 184-85 (A-1966). Since the same method is employed it requires no additional explanation. The calculation below is reproduced from p. 185 of the Report, with those figures *italicized* which are affected by a change to 4¾ per cent in assumed interest rates; next to each italicized figure is printed **[in bold-face type and in brackets]** the different figure that would result from using the 4¾ per cent rate in the calculation.

Determination of Separate Net Damage Resulting From Leasing Rather Than Owning Jet Aircraft

Year	(1) Average Additional Investment in Jets (Net Book Value)	(2) Assumed Interest Rate on Borrowed Funds	(3) Cost of Capital to Own Jets (1) × (2)	
1959	$51.3 million[1]	6% [4¾%]	*$3.1* million	[$ 2.4]
1960	$72.1 million[1]	6% [4¾%]	*4.3* million	[3.4]
	Total		*7.4* million	[5.8]

	($ millions)	
TOTAL RENTALS JET AIRCRAFT 1959-1960	24.2	
Add		
HISTORICAL INCREASE IN DEPRECIATION AND AMORTIZATION COSTS IN 1961-1963 OVER RECONSTRUCTED COSTS[2]	1.4	
	25.6	
Less		
DEPRECIATION AND AMORTIZATION 1959-1960	(12.9)	
COST OF CAPITAL—(3) above	(*7.4*)	[(5.8)]
	(*20.3*)	[(18.7)]
TOTAL NET LOSS BY REASON OF LEASING RATHER THAN OWNING	*$5.3*	[$6.9]

[1] Simat Report, Dx 271A IX-B-3-4.

[2] Price Waterhouse Report, TWA Ex. 7(d).

The effect of this change would be to decrease the sum subtracted from the award—*i.e.*, to increase the award—by $1.6 million (before trebling).

Effect on award

The "cost of capital" deductions from TWA's damage award made by the Special Master totalled $29.0 million ($21.6 million as shown in Calculation E at p. 8b *supra*, plus $7.4 million as shown in the calculation at p. 10b *supra*). If the interest rate used in making the calculations had been 4¾ per cent, the "cost of capital" deductions from TWA's damage award would have totalled $22.5 million ($16.7 million as shown in Calculation E at p. 8b *supra*, and $5.8 million as shown in the calculation at p. 10b *supra*).

The result of using a 4¾ per cent rate to calculate "cost of capital" would thus be to increase the damage award to TWA by $6 5 million (before trebling), and by $19.5 million after trebling.

IN THE

Supreme Court of the United States

October Term, 1971

No. 71-827

HUGHES TOOL COMPANY and
RAYMOND M. HOLLIDAY,

Petitioners,

v.

TRANS WORLD AIRLINES, INC.

Respondent.

ON WRIT OF CERTIORARI TO THE UNITED STATES
COURT OF APPEALS FOR THE SECOND CIRCUIT

BRIEF FOR PETITIONERS

Petitioners Hughes Tool Company ("Toolco") and Raymond M. Holliday ("Holliday") submit this brief on writ of certiorari to review the opinion and judgment of the Court of Appeals for the Second Circuit that affirmed a judgment in favor of respondent Trans World Airlines, Inc. ("TWA") of $145,448,141.07 and increased the rate of interest on that judgment from 6% to 7½%. TWA's cross-petition to review the judgment (No. 71-830) on the ground that it is inadequate was also granted by the Court. Separate briefs are being submitted in No. 71-830.

Opinions Below

The opinion of the Court of Appeals is reported at 449 F.2d 51 (App. A-2739).[1] Earlier opinions in this litigation are reported as follows:

(1) The opinion and order of the District Court for the Southern District of New York, dated February 7, 1963, denying petitioners' motion to dismiss the complaint, is reported at 214 F.Supp. 106 (App. A-255).

(2) The opinion and order of the District Court, dated May 3, 1963, ordering the entry of a judgment by default against petitioners and certifying the presence of a controlling question of law, is reported at 32 F.R.D. 604 (App. A-317).

(3) The opinion of the Court of Appeals for the Second Circuit, dated June 2, 1964, affirming the District Court on the question on which interlocutory appeal was allowed, is reported at 332 F.2d 602 (App. A-328).

(4) The orders of this Court granting and then dismissing writs of certiorari as improvidently granted, dated November 16, 1964, and March 8, 1965, are reported at 379 U.S. 912, 380 U.S. 248, and 380 U.S. 249 (App. A-2738, A-2739).

(5) The opinion and order of the District Court, dated November 16, 1965 affirming the Special Master's refusal to adopt respondent's proposed interim finding, is reported at 38 F.R.D. 499 (App. A-396).

---

[1] Citations to the Appendix filed in this Court in Docket Nos. 71-827, 71-830 are in the form "App. A " or "App. AX ." References to portions of the record that were not printed in the Appendix are in the form "Doc. , p. ."

(6) The opinion and order of the District Court, dated December 23, 1969, confirming the Special Master's damage award in the sum of $137,611,435.95, is reported at 308 F.Supp. 679 (App. A-2027).

(7) The opinion, order, and judgment of the District Court, dated April 13 and 14, 1970, including counsel fees of $7,500,000 and costs, is reported at 312 F.Supp. 478 (App. A-2060).

(8) The opinion and order of the District Court, dated June 10, 1970, granting stay of execution and establishing security pending appeal, is reported at 314 F.Supp. 94.

Jurisdiction

The judgment of the Court of Appeals for the Second Circuit was entered on September 1, 1971. A timely petition for rehearing was filed on September 15, 1971, and denied on September 28, 1971. The petition for a writ of certiorari was filed on December 23, 1971, and was granted on February 22, 1972. The jurisdiction of the Court rests upon 28 U.S.C. § 1254(1).

Questions Presented

1. Does a defendant have a right under the Due Process Clause of the Fifth Amendment and as a part of notice pleading under the Civil Rules to require plaintiff to identify with reasonable specificity the conduct that it claims is illegal before defendant is required to participate in lengthy and expensive deposition proceedings in which plaintiff seeks evidence from the defendant to support the charges of illegality?

2. Is a defendant deprived of property without due process of law in violation of the Fifth Amendment if a court enters a default judgment, as a sanction for refusal to make further discovery, under circumstances that do not permit a presumption that the defendant has no defense to the action, and then treats the default as a conclusive admission of liability and that damage proximately resulted therefrom?

3. After a defendant is in default may a federal court, despite the clear prohibition of Civil Rule 54(c), permit a plaintiff to amend its complaint so that it may be awarded damages substantially greater than those prayed for in the complaint at the time of the default?

4. When the Civil Aeronautics Board has approved an acquisition of control over an air carrier by a person engaged in a phase of aeronautics and has further approved all relevant transactions between them, is the exercise of that control to determine how the air carrier acquires aircraft and the necessary financing therefor immunized from the operation of the antitrust laws under Section 414 of the Federal Aviation Act?

5. May a subsidiary recover against its parent for violation of the Sherman Act because the parent determines the manner and method by which the subsidiary acquires capital equipment, when the parent is not a competitor of those who manufacture and supply such equipment?

6. Is a corporation that has in no way restrained or monopolized a particular area of commerce subject to damages under the Sherman Act because it has "independent economic significance" and is a "potential competitor" of those engaged in that area of commerce?

7. May a plaintiff recover antitrust damages without introducing any evidence that relates the injuries claimed to the restraint or monopolization of trade alleged and without showing that the plaintiff had the financial ability to do what it claims defendants prevented it from doing?

Constitutional and Statutory Provisions Involved

The constitutional and statutory provisions involved are set forth in the Annex hereto. They include the following:

1. United States Constitution, Amendment V.

2. United States Code, Title 15, Sections 1 and 2 (Sherman Act §§ 1, 2) and Sections 14, 15 and 18 (Clayton Act §§ 3, 4, and 7).

3. United States Code, Title 49, Sections 1302, 1378, 1379, 1381, 1384, 1482(b) and (c) and 1485(d) (Federal Aviation Act §§ 102, 408, 409, 411, 414, 1002(b) and (c) and 1005(d)).

4. United States Code, Title 28, Section 1292.

5. Federal Rules of Civil Procedure, Rules 15, 16, 37, 54, and 55.

Statement of the Case

The judgment below for $145,448,141.07, with interest at 7½%, was entered as a sanction under Civil Rule 37 against Toolco, formerly the controlling stockholder of TWA, and Holliday, a Toolco executive and for a time a director of TWA. The District Court ordered that a default judgment be entered after Toolco had elected to rest on the merits of its legal positions in order to obtain appellate review of interlocutory orders of the District Court that

(1) had denied Toolco the right to a reasonable specification of TWA's factual contentions prior to being subjected to burdensome deposition discovery estimated to cost Toolco over $5,000,000, and (2) had held that TWA could maintain an antitrust action notwithstanding that the Civil Aeronautics Board (the "CAB") had authorized and approved Toolco's acquisition of control of TWA and all significant transactions between Toolco and TWA.

Following the default order, a hearing was held before a Special Master. It was limited to the amount of damages to be awarded TWA, without regard to whether the conduct that TWA claimed injured it was illegal under the antitrust laws or to whether that conduct was the proximate cause of the injuries for which TWA claimed damage.

The judgment awards $137,611,435.95 as treble damages under the antitrust laws, plus $7,500,000 in attorneys' fees and $336,705.12 as costs.

The Toolco-TWA Control Relationship

The antitrust damages purportedly relate to the acquisition of TWA's initial jet fleet while under Toolco control. Toolco first acquired a stock interest in TWA in 1938 at the suggestion of TWA's then president to Howard R. Hughes ("Hughes"), the sole stockholder of Toolco and one of the country's leading aviators. By 1944 Toolco had acquired approximately 44% of the stock of TWA. It applied to the CAB for approval, if necessary, of this acquisition. The CAB approved after public hearings the acquisition by Toolco of control over TWA. *Transcontinental & Western Air., Inc., Control by Hughes Tool Co.*, 6 C.A.B. 153 (1944) (App. A-3297).

The CAB found in 1944 that it had jurisdiction over Toolco's acquisition of 44% of the stock of TWA because Toolco had ordered aircraft for TWA, some of which might be sold to airlines other than TWA, and thus was engaged in a phase of aeronautics within the meaning of § 408. The CAB retained jurisdiction over the Toolco-TWA relationship by approving the acquisition of control only on the condition that individual transactions between Toolco and TWA be limited to less than $200 and total annual transactions to less than $10,000.

The CAB reexamined the Toolco-TWA control relationship when Toolco, shortly after the Second World War, supplied desperately needed financing to TWA pursuant to a letter agreement that permitted Toolco to acquire over 70% of the stock of TWA. The CAB ordered an investigation to determine whether the increase in control required further approval under § 408. The CAB concluded that its approval was required because, under the agreement, "a control relationship has been established where the controlled company, which formerly responded to orders from one person with assistance from others by proxies, or otherwise, now responds or may respond to one person at its sole instance." *Transcontinental & Western Air., Inc., Further Control by Hughes Tool Co.*, 9 C.A.B. 381, 391 (1948) (App. A-3311, A-3330). The CAB further held that a requirement that TWA obtain the consent of Toolco before purchasing additional equipment "represents an element of new and increased control arising out of the letter agreement" (9 C.A.B. at 391 n. 18, App. A-3330).

At the public hearing to determine whether this increased control was in the public interest, the Examiner conducted a broad inquiry into "the activities of Toolco with respect to TWA for the period during which the prior

approved control existed." *Trans World Airlines, Inc., Further Control by Hughes Tool Co.*, 12 C.A.B. 192, 194 (1950) (App. A-3333, 3343). He held this inquiry proper "to test what this same controller may do with complete, unqualified control with what it did under a 45-percent ownership of the carrier" (12 C.A.B. at 197, App. A-3342). The purpose of such an examination was solely

> to indicate the kind and character of control which for the past years has been, and which may in the future continue to be, exercised by the same controller exercising the additional degree of control arising from the transactions evidenced by the letter agreement of January 8, 1947. [12 C.A.B. at 197, App. A-3343.]

The inquiry centered on TWA's acquisition of equipment and financing under Toolco control. The Examiner stressed "the contributions of Toolco and Mr. Hughes in the way of financial support to the carrier, [and] in the selection and purchase of its equipment" (12 C.A.B. at 216, App. A-3382). He found that the acquisition of "practically every Constellation aircraft in the TWA fleet now and those on order has been accomplished directly or indirectly with the financial and technical assistance of Mr. Hughes and his company" (12 C.A.B. at 217, App. A-3382-3383). Although critical of the extent to which TWA under Hughes control had relied on debt financing, he concluded:

> The continued interest of Toolco in TWA appears essential to the best interests of the carrier and the public. [12 C.A.B. at 224, App. A-3396.]

The Board adopted the findings, conclusions and recommended opinion of the Examiner. It held:

> The record in this proceeding does not permit us to reach any other conclusion than that reached by the

> Examiner, viz, that the further acquisition of control should be approved as being consistent with the public interest and the requirements of the Act. [12 C.A.B. at 193, App. A-3334.]

The 1950 order approving the acquisition of further control continued in force the provisions of the 1944 control order under which the Board retained jurisdiction over all significant transactions between Toolco and TWA. As a result, every material transaction between Toolco and TWA was submitted to the CAB and approved by it under § 408 through modification of the original orders approving acquisition of control. The CAB issued nineteen modification orders, including orders approving the specific transactions that are the subject of this litigation (pp. 75-81, *infra*).

The Pleadings

In 1960, several large banks and insurance companies demanded, as a condition to their supplying senior financing for TWA's initial jet fleet, that Toolco place its TWA stock in a voting trust controlled by them. Toolco yielded to this demand on December 31, 1960. Six months later, under a new management installed by the lenders, TWA filed an antitrust complaint against Toolco, Holliday and Hughes. The primary object of the new management in bringing an antitrust action was to obtain divestiture of Toolco's stock interest in TWA and thus to solve what it viewed as a problem created by Hughes' interest in TWA (App. A-1886).[2] Hughes was never served.

[2] On April 18, 1962, TWA filed an action against Toolco and Hughes in the Delaware Court of Chancery alleging mismanagement and violations of fiduciary duties. This action has not yet been dismissed.

The complaint (App. A-1) charged in conclusory terms violations of §§ 1 and 2 of the Sherman Act and §§ 3 and 7 of the Clayton Act. Toolco was alleged to be a manufacturer and supplier of aircraft to air carriers and the offenses charged all related to the alleged exclusion of Toolco's competitors from the TWA market for aircraft. The alleged use of Toolco's control of TWA to exclude competitors of Toolco from the TWA market was variously denominated an acquisition of stock in violation of § 7 of the Clayton Act, a boycott, a tie-in, monopolization or an attempt to monopolize, and sales and leases on the condition that TWA not acquire aircraft from any competitor of Toolco.

The complaint alleged a number of acts by Toolco, some during the period of Toolco control and some after the voting trust, in furtherance of the offenses charged. At the damage hearing, however, TWA limited its claims to the manner in which, under Toolco control, TWA acquired its initial jet fleet from Boeing and Convair.[3]

The complaint prayed for treble damages of $105 million, divestiture, and other injunctive relief.[4] Since both TWA and Toolco are Delaware corporations, federal jurisdiction was solely dependent on alleged antitrust violations.

The answers of Toolco and Holliday (App. A-41, A-99) denied the alleged violations of law and asserted as affirmative defenses that the District Court had no jurisdiction

---

[3] In the damage hearing, TWA did not seek any damages for conduct of the defendants after the voting trust took control in December, 1960 or because of an alleged conspiracy between the defendants and Atlas Corporation to bring about a merger of Northeast Airlines and TWA or for alleged malicious and wilful interference with TWA's business after December, 1960.

[4] Toolco sold its interest in TWA in a public offering in 1966.

over the subject matter and that the complaint failed to state a claim on which relief could be granted because: (1) the CAB had authorized and approved Toolco's control over TWA and specifically approved every transaction between Toolco and TWA involving the acquisition of flight equipment or financing, thereby exempting the conduct complained of from the antitrust laws; and (2) the CAB had exclusive primary jurisdiction over the subject matter of the action.

Toolco also filed counterclaims against TWA, the lending institutions, and individuals representing the interests of the lending institutions. The counterclaims alleged violations of the Federal Aviation Act, the antitrust laws and common law.[5]

The Discovery Orders of the District Court

Prior to filing the complaint, the new management of TWA discussed the tactical advantages of seeking the deposition of Hughes at the outset of the litigation. Directors of TWA who knew Hughes stated that he would settle the lawsuit rather than submit to a deposition (App. A-1930-1931). When TWA filed its complaint, it obtained an order sealing the complaint and an order to show cause why the deposition of Hughes should not be taken at once (App. A-x).

---

[5] One counterclaim was asserted derivatively on behalf of TWA. It alleged that the additional defendants had conspired to restrain and monopolize the supplying of senior financing to airlines, had seized control of TWA pursuant to that conspiracy, and, by reason of that conspiracy and acts in furtherance thereof, both before and after the wrongful seizure of control, had injured TWA. Among the acts of which Toolco complained was the ordering of an excessive number of aircraft for TWA and the financing of those aircraft on terms designed to perpetuate the voting trust and to prevent its termination in accordance with its terms.

Toolco urged that it was entitled to a reasonable identification of TWA's factual claims before TWA commenced deposition discovery and that the charges of antitrust violations in the complaint were unintelligible because: (1) Toolco had never manufactured airplanes for airlines and was a supplier only to the extent that it had helped its subsidiary acquire aircraft; and (2) such acts as were alleged in the complaint appeared to be immunized from the antitrust laws, under § 414 of the Federal Aviation Act, by the orders of the CAB approving Toolco's control of TWA and all transactions in which TWA acquired equipment or financial assistance from Toolco. The District Court awarded Toolco priority of discovery (App. A-2077).

The deposition of TWA failed to provide any definition of the ultimate facts on which TWA relied to support its antitrust claims.[6] TWA's President, Charles C. Tillinghast, Jr., who made the decision to file the complaint, was uninformed as to the factual basis for the antitrust charges. He revealed that an antitrust action had been brought on the advice of special counsel for TWA after an incomplete investigation of the facts in order to obtain permanent insulation of TWA from Hughes (App. A-1898, A-1911-1912). He gave as a reason for bringing an antitrust action that it "didn't have the social approbriums [*sic*] attached to it that some other types of action did"—"the best people were defendants in antitrust actions"—and that for this reason settlement might be facilitated (App. A-1912).

Mr. Tillinghast indicated that Mr. Rummel, TWA's Vice President-Planning and Research, and Mr. Leslie, TWA's chief financial officer for seventeen years, might be in pos-

[6] See the statement in this regard of Special Master Rankin, quoted pp. 36-37, *infra*.

session of relevant facts. But to Mr. Leslie's knowledge Toolco never attempted to force TWA to boycott any supplier of aircraft or to force TWA to acquire aircraft from one aircraft supplier rather than another (Doc. 223, pp. 12338-12339). And Mr. Rummel testified that far from restraining competition among manufacturers of aircraft, Toolco and TWA created competition among manufacturers where none previously existed (Doc. 234, pp. 64-65).

While the TWA deposition was in progress, TWA continued to attempt to obtain an order for the deposition of Hughes. TWA procured a subpoena from the District Court in California for the deposition of Hughes as a witness, and counsel for Toolco accepted service of this subpoena on behalf of Hughes. On September 15, 1962, Special Master J. Lee Rankin, who had been appointed to preside over discovery, adjourned indefinitely the return day for the deposition of Hughes. He recommended that a pretrial conference be held at which TWA would be required to delineate the facts on which it based its complaint and at which the issues could be defined (App. A-2383-2389).

Special Master Rankin stressed the inequity of requiring the testimony of Hughes while TWA's factual claims remained undefined. He announced that he considered the holding of a pretrial conference to be so important to the progress of the litigation that in the event counsel did not apply to the court for such a conference, as he had suggested, he would "approach Judge Metzner [to whom the case had been assigned for all purposes] and request that he take such proposed action in order that this case be properly expedited" (App. A-2388).

Toolco applied for a pretrial conference. TWA opposed the application. While awaiting a decision on the application, Toolco served interrogatories designed to elicit TWA's factual contentions. The Special Master ruled that the interrogatories were proper and that TWA could be of great assistance to the progress of the litigation by answering them promptly (App. A-2436). TWA appealed this ruling.

While TWA resisted revealing its factual contentions, it continued to press for the deposition of Hughes. TWA claimed that it would prove 75% of its case through Hughes but refused to reveal what that case might be. On October 25, 1962, the Special Master set February 11, 1963, as the date for the deposition of Hughes in California pursuant to the witness subpoena. He fixed this date in order to give Toolco an opportunity to bring on a dispositive motion addressed to the complaint after Toolco had obtained a definition of the issues, either through answers to interrogatories and further discovery of TWA, or a Rule 16 proceeding (App. A-2431-2437).

The District Court deprived Toolco of this opportunity. On January 10, 1963, it denied Toolco's application for a Rule 16 proceeding, ordered that TWA need not answer interrogatories until 60 days after completion of the Hughes deposition, and confirmed the February 11th date for that deposition (App. A-122-126).

The Order for the Entry of A Default Judgment

Shortly after the action was commenced, Toolco had moved to dismiss the complaint or for summary judgment. Since the District Court advised Toolco that it considered the motion premature, the motion was held in abeyance

pending a delineation of TWA's factual contentions. Toolco told the District Court that once TWA defined its factual claims, Toolco would be in a position to admit the facts (in contrast to legal conclusions) and obtain a determination whether they gave rise to liability and, if so, to what extent (App. A-2129-2130).

Deprived by the District Court's rulings of a definition of TWA's factual claims and faced with the prospect of a deposition expected to take at least "a good two or three months" (App. A-1908) and to cost Toolco $5 million (App. A-280), Toolco abandoned its motion for summary judgment and brought on for hearing the motion to dismiss, based upon the control orders of the CAB and the Commission's jurisdiction over the Toolco-TWA relationship. The District Court denied the motion from the bench (App. A-2653-2654). It refused to certify its denial so as to permit an interlocutory appeal under 28 U.S.C. § 1292(b).[7]

In order to secure appellate review, Toolco on February 8, 1963, filed a Notice of Position, stating that subject only to whatever judicial relief it might thereafter obtain, it elected to rest on the merits of its positions so that it might avoid the burden and enormous expenses of further pretrial and trial proceedings prior to the time that an appellate court had the opportunity to rule upon the decisions and orders of the trial court (App. A-268).

In a hearing the same day, Toolco advised the District Court that by reason of the election it had made, Hughes would not appear for deposition on February 11, 1963 (App.

[7] The District Court gave no reason at the time for this refusal, although later the Court suggested that Toolco could have had review by writ of mandamus (App. A-277). Toolco had sought review by writ of mandamus of the discovery orders of the District Court but the Court of Appeals denied it review.

A-281) and that Toolco's position would be the same, and it would not further defend on the merits, even if Hughes should appear (App. A-298-299). Consistent with this position, Toolco declined to produce documents in addition to some 125,000 that it had already furnished to TWA (App. A-305). The District Court then indicated that it would entertain a motion by TWA for a default judgment (App. A-307).

On February 15, 1963, TWA moved for the entry of a default judgment and also to increase the *ad damnum* from $105 million to $135 million. On May 3, 1963, the District Court granted these motions and referred the matter to the Special Master to determine "the amount of damages to be paid * * *" (App. A-321). Having done so, it also granted the certification under 28 U.S.C. § 1292(b) that it had declined to grant at the time it denied the motion to dismiss the complaint (App. A-322).

The Interlocutory Appeal

Toolco petitioned the Court of Appeals for leave to appeal under 28 U.S.C. § 1292(b). The Court of Appeals limited its review to whether the District Court had jurisdiction of the action and whether the CAB orders were a complete defense to the action (App. A-2736). It affirmed the District Court on those issues. This Court granted certiorari but, at this interlocutory stage of the case, dismissed the writ after argument as improvidently granted (380 U.S. 248, 249, App. A-2738).[8]

---

[8] In its order of May 3, 1963, the District Court dismissed with prejudice Toolco's counterclaims, save one as to which it granted TWA summary judgment. The Court of Appeals affirmed the District Court, with the exception of one counterclaim that it held was within the exclusive jurisdiction of the CAB. This Court also granted certiorari as to the dismissal of the counterclaims but dismissed the writ as improvidently granted.

The Damage Award

At the damage hearing before newly-appointed Special Master Herbert Brownell,[9] TWA predicated its entire case on the fact that Toolco had controlled the acquisition and financing of TWA's initial jet fleet. According to TWA, Toolco did not do as good a job of it as, in hindsight, should have been done and presumably would have been done by TWA, absent that control. On a complaint that alleged the outlines of a boycott, tie-in and attempt to monopolize based upon the exclusion of manufacturers and suppliers of aircraft other than Toolco from the TWA market, TWA sought damages because Toolco, not TWA, ordered aircraft from Boeing and Convair for the TWA market.

According to TWA, TWA should have ordered for its initial jet fleet 33 planes from Boeing and 30 planes from Convair—exactly the planes that Toolco ordered for its subsidiary (App. AX-10-11, AX-15). TWA contended that if it, not Toolco, had ordered the planes, it would have ordered the planes from Boeing sooner, received all the planes instead of cutting back on the size of the fleet, and purchased all the planes instead of leasing some of the Boeing jets for a time and purchasing them later (App. AX-13-14, AX-23). Moreover, since Toolco as purchaser of the Convair aircraft assumed responsibility for all matters pertaining to deliveries of the aircraft, Toolco, so TWA's damage case ran, was responsible for any delay in the delivery of the Convair aircraft beyond the original contract dates even though TWA recognized that there would have been some delay beyond the contract dates whoever had ordered the planes (App. AX-23, Doc. 556-14, 16).

[9] Brownell was appointed to succeed Special Master Rankin after the latter was named Corporation Counsel of the City of New York (App. A-424).

Based on these assumptions, TWA constructed a hypothetical delivery schedule for the 33 Boeing planes and the 30 Convairs (App. AX-43-55). This delivery schedule in turn became the basis for the opinion of an expert witness as to how much more money TWA would have made with the hypothetical fleet than with the fleet it in fact operated during the period for which damages were claimed. This testimony in principal part was based upon the assumption that additional jet capacity would be filled in any given year at the same rate as the capacity actually operated (App. AX-121, AX-136-137, AX-147, AX-160), even though during much of the damage period the airline industry was plagued by too much jet capacity, not too little (App. AX-1604, AX-1703).

TWA also claimed damages based upon testimony of a financial expert as to how TWA, if not under the control of Toolco, could have and, had his firm been retained to advise TWA, would have financed the 63-plane fleet (App. AX-353).

Petitioners introduced no evidence at the damage hearing other than certain industry statistics and expert testimony, including testimony showing that TWA was losing money on many of the jets it in fact operated during the damage period, thereby indicating that TWA was operating too much rather than too little jet capacity (App. AX-2503-2516). Toolco relied on the testimony of TWA's witnesses on direct and cross-examination, and documents introduced during the course thereof, to establish the essential facts as to the procurement of TWA's initial jet fleet. These facts, which were never in dispute, included the following:

(a) Toolco did not manufacture airplanes for air carriers and did not compete with manufacturers and suppliers of aircraft for air carriers. See pp. 100-103, *infra*.

(b) In order to obtain the best jet plane for TWA, Toolco and TWA entered into timely negotiations with Convair for the manufacture of a long-range jet to meet the unique requirements of TWA. Promptly after Convair decided not to manufacture a long-range jet, Toolco ordered Boeing aircraft for TWA (App. A-511-513, A-889-890). At the time Toolco ordered jet planes for TWA, TWA lacked the financial resources to make the requisite down payments and progress payments (App. AX-1378).

(c) To the manufacturers, whether TWA or Toolco ordered the aircraft made no difference. As a Boeing vice president testified: "We considered that they were and are the same" (App. A-1101). Toolco's contracts with the manufacturers prohibited the assignment of the right to receive the aircraft to anybody other than TWA without the consent of the manufacturer (App. AX-1461-1462, AX-1496-1497, AX-1517).

(d) In March, 1959, after the announcement of improved fanjets (App. AX-870), Toolco determined that eight of the Boeing jets and ten of the Convair jets were not needed by TWA for its initial jet fleet and so advised TWA (App. A-560-564). Pursuant to this decision, in the summer of 1959 Toolco assigned to Pan American, with the consent of Boeing, Toolco's contractual rights to six long-range Boeing jets then under construction and Boeing released Toolco from its obligations as to these aircraft (App. AX-1498). Boeing then sold these planes to Pan American (App. AX-1498).

(e) Late in 1960 Toolco released its contractual rights to six of the ten Convair planes that had been determined to be surplus to TWA's needs. Convair then leased these planes to Northeast (App. A-949-950, AX-1525). The remaining four Convairs ultimately were delivered to Toolco, after Toolco in 1961 had offered the planes to TWA and TWA had turned

down the offer (App. AX-1538, AX-1539, AX-1540). The four Convairs sat on the ground until 1963 (App. A-861-863).

(f) Toolco's financial resources and credit made possible payment for and the delivery of 19 of the Boeing jets. Pending the arrangement of permanent financing, Toolco leased these planes on a day-to-day basis. The CAB approved the leases under Section 408 of the Federal Aviation Act (App. AX-2202, AX-2226, AX-2237, AX-2245, AX-2260).

(g) Of the 20 Convair planes TWA received, 19 were delivered after permanent financing was arranged in December 1960.

Special Master Brownell held that the order for the entry of default judgment established both liability and proximate cause. For this reason he found it unnecessary to consider whether the conduct that TWA claimed injured it was conduct that violated the antitrust laws, or how, in light of CAB approval of Toolco control, antitrust damages could properly be awarded based on what TWA contended should or would have happened, absent that control. For this reason, he nowhere in his Report explained how a parent, by ordering planes for its subsidiary instead of having the subsidiary order the same planes from the same supplier, violates the antitrust laws. Nor did he explain what decisions made by the parent as to how many planes the subsidiary needs or whether they should be bought or leased have to do with a boycott, tie-in, or attempt to monopolize.

Special Master Brownell held that "in considering and determining damages," he was required to ignore historical facts. To take into account what actually took place "would be in derogation of the allegations [of the Complaint] and not permissible", because of the order for a default judg-

ment (App. A-1966 Brownell Report 255-256). Special Master Brownell found sufficient basis in the allegations of the complaint to award TWA antitrust damages because it did not purchase 33 Boeing jets and 30 Convair jets on the delivery dates hypothesized by TWA, modified, as to the Convairs, to those set forth in a contract amendment. He did so even though he rejected the testimony of TWA's financial expert as to how a TWA independent of Toolco could have raised the vast amounts of financing required for the 63-plane fleet. He assumed, without explanation, that TWA could have financed the fleet and he awarded damages based on this assumption.

Accepting the approach of TWA's expert that in a given year additional jet capacity would be filled at the same rate as existing capacity, the Special Master awarded TWA $27,600,000 for late delivery of jets and delivery of a smaller number of jets than originally ordered. He awarded TWA $5,300,000 because some of the jets were temporarily leased by TWA pending permanent financing. He awarded TWA $570,748.65 for disruption of TWA's business because the Convair jets were delivered late. The remaining $12,400,000 of the damage award represents the effect of retroactive application of changes in accounting practices made by TWA two-and-a-half years after this action was instituted. The total damage award after trebling came to $137,611,435.95.

The District Court confirmed the Report of the Special Master in all respects (App. A-2027). Judgment was entered for $145,448,141.07, including attorneys' fees and costs, with interest from the date of judgment at the rate of 6%.

The Decision of the Court of Appeals

TWA, Toolco, and Holliday filed cross-appeals from the District Court's judgment. TWA claimed that the judgment was inadequate because the Special Master had used the wrong cost of capital, because TWA should have received moratory interest and interest at a higher rate and because TWA should have recovered as costs the amount it paid for expert testimony. Toolco and Holliday maintained that the judgment entered was without foundation in fact or law, and that the order for the entry of the default judgment under the circumstances of this case and the effect given to that order by the District Court deprived them of their property without due process of law. The Court of Appeals affirmed the judgment in all respects but one. It increased the interest rate from 6% to 7½% (App. A-2796-2798). The total amount of the judgment with interest now stands at over $169 million. Interest alone is running at almost $11 million a year.

Summary of Argument

This case has occupied the attention of the federal courts, at every level, on repeated occasions since 1961 when it was commenced. It involves a huge amount of money. The issues it presents are extremely important—but not, in truth, either complicated or difficult. Once the procedural underbrush is cleared away, as we undertake to do in the first three sections of the Argument, the substantive issue, discussed in the final three sections, appears in stark simplicity: is it a violation of the federal antitrust laws for a parent corporation, whose control of an air carrier subsidiary has been approved by the Civil Aeronautics Board, to

make normal business decisions about the acquisition and financing of capital equipment for the subsidiary? TWA claims that hindsight shows that some of Toolco's decisions as its parent were erroneous, that it was damaged by them, and that it is entitled to recover that damage three times over in a federal antitrust suit. Toolco maintains that even if the decisions were unwise (which it denies), this attempt by TWA to insulate itself from Hughes (App. A-1898, A-1911-1912) amounts to at most a mismanagement claim, cognizable only in state court, rather than a violation of the federal antitrust laws.

I. Toolco has supposed from the outset that the only possible issue in the case is the simple one just described. That issue could have been resolved one way or the other, expeditiously and inexpensively, many years ago. But TWA's complaint was so commodious and so conclusory that it was difficult to be sure that no more than this was involved. Both Toolco and Special Master Rankin pressed from the beginning to find out from TWA just what it really was claiming and what the issues in the case were. These efforts were resisted by TWA and rebuffed by the District Court. Although the Judicial Conference of the United States has insisted over and over again, for many years, that it is imperative in the "big" case that the issues be adequately specified before discovery on the merits is permitted, the District Court ordered that TWA must be allowed extremely expensive and time-consuming discovery on the merits before identifying the issues. The District Court also refused to allow interlocutory review in which Toolco could test its legal position. Because the District Court strayed so far from the permissible course of pre-trial proceedings in cases of this kind, and abused the discretion it must ordinarily have on those rulings, Toolco was left

with no viable option save to refuse to proceed further on the merits of the case and to stand on its legal position. It was only at the damage hearing, after Toolco had been held to be in default, that TWA revealed what it should have been required to disclose at the outset, that despite all the antitrust jargon adeptly used in the complaint, TWA's whole case was that its parent should have provided it with more jets, should have ordered them earlier, and should have financed them differently. See pp. 28-42, *infra*.

II. All agree that the controlling case on the effect of a default is *Thomson* v. *Wooster*, 114 U.S. 104 (1885), but there is great divergence on what that case means. The District Court and Court of Appeals read *Thomson* as saying that a default admits all "well-pleaded allegations of the complaint" and thus reasoned that Toolco had admitted that "the acts pleaded in the complaint violated the antitrust laws." In fact *Thomson* held that a default admits "facts properly pleaded." It is settled that a default does not admit conclusions of law nor does it admit that on the facts pleaded the plaintiff is entitled to relief. Even if the general rule on this were otherwise—and it is not—it would be a constitutionally impermissible denial of due process under the *Hovey-Hammond* rule to hold that, as a sanction for a refusal to permit further discovery, a defendant can be foreclosed from litigating purely legal issues when it is clear that defendant took the act that led to the default so that it could stand or fall on those legal issues. See pp. 42-51, *infra*.

III. When Toolco gave notice to the court and to TWA that it would not proceed further on the merits, the complaint sought a judgment against it for $105 million. Subsequently TWA was allowed to amend its complaint to increase its demand to $135 million and ultimately was

awarded $137.6 million, plus attorneys' fees and costs. No amount of rationalization can escape the fact that in permitting recovery in excess of the amount demanded at the time of default, the courts below have ignored the explicit command of Civil Rule 54 (c) : "A judgment by default shall not be different in kind from or exceed in amount that prayed for in the demand for judgment." See pp. 52-65, *infra*.

IV. TWA says that the "crux" of its case is Toolco's acts "to control and dictate" the acquisition and financing of aircraft by TWA; the Second Circuit regarded the judgment as based on "the illegality of Toolco's arrogation of all authority for buying aircraft * * *." But the CAB had twice approved, under § 408 of the Federal Aviation Act, Toolco's acquisition of control of TWA and, under § 414 of the FAA, all acts necessary to the exercise of that control are made immune from the antitrust laws. The CAB approved Toolco control even though it was fully aware that Toolco would make exactly the kinds of decisions for TWA of which complaint is now made. The CAB imposed conditions on its approval to prevent abuse by Toolco of its control and scrutinized all subsequent transactions between TWA and Toolco, including those involving the jet aircraft here in issue, for that same purpose. The congressional scheme adopted in the Federal Aviation Act leaves the Board free to balance the anticompetitive effects of an acquisition of control against other factors relevant to the public interest and gives antitrust immunity to control relationships that the Board has approved on the conditions that the Board has required. The court below thought that the Board is not "any more qualified to consider such charges than the federal courts, which daily encounter and resolve antitrust problems," but this fails to recognize that Con-

gress has directed the Board to consider a broader spectrum of considerations than merely the antitrust laws and that the Board "has its special standard of the 'public interest' as defined by Congress. * * * If the courts were to intrude independently with their construction of the antitrust laws, two regimes might collide." *Pan American World Airways, Inc.* v. *United States*, 371 U.S. 296, 308, 310 (1963). See pp. 65-88, *infra*.

V. Even aside from the fact of CAB approval, the acts of Toolco for which TWA was awarded damages were not antitrust violations and were at most state law claims for mismanagement. Toolco was lawfully the parent of TWA. It was not in competition with manufacturers or suppliers of commercial aircraft. For Toolco to make decisions about the acquisition of jets for TWA and to act as a conduit by which the planes went from the manufacturers to TWA is to do what a parent normally and naturally does for its subsidiary and has never been held heretofore to violate the antitrust laws. It was absolutely essential to TWA's antitrust claims that Toolco be a competitor of manufacturers and suppliers of commercial aircraft, though even if this had been the case that would not in itself have been sufficient to establish liability. But Toolco was not a competitor of manufacturers and suppliers. The complaint did not allege that it was; the court below quite properly refused to find that it was. The court sought to cure this defect by finding a "possibility" that Toolco was a "potential commercial manufacturer or dealership in airplanes * * *." Factually this was unsound. Legally it was irrelevant. The "potential competitor" doctrine has considerable significance in cases under § 7 of the Clayton Act. To import a Clayton Act test into a Sherman Act charge overlooks

the fact that the Clayton Act seeks to arrest restraints of trade "in their incipiency" while the Sherman Act is directed to "full-fledged restraints." *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 323 n. 39 (1962). The Second Circuit compounded its error by speculating about mere possibilities when even the Clayton Act cases require a showing of "reasonable probability." *United States* v. *Penn-Olin Chemical Co.*, 378 U.S. 158, 175 (1964). The effect of the decision below in this regard is to encourage litigants with what heretofore have been state law claims to seek treble damages in federal antitrust actions, if they can find a mere "possibility" of "potential competition." See pp. 88-117, *infra*.

VI. Section 4 of the Clayton Act allows recovery of treble damages only to a plaintiff who can show that he has been injured "by reason of" an antitrust violation. This requirement of causation is the same in a default case as in any other. Though there is much confusion in the decisions of Special Master Brownell, the District Court, and the Court of Appeals about the burden, if any, on TWA to show that its damages were by reason of any antitrust violation, the end result is that TWA was awarded damages without establishing causation. TWA did not seek damages because of a restraint on competition among suppliers of aircraft to air carriers. It did not allege, nor did it prove at the damage hearing, that an independent TWA would or could have acquired the number of jets that it now says it should have or that it would have ordered them at the time it now says they should have been ordered. For all that this vast record shows, TWA would have suffered the same losses for which it has now recovered damages even though it had been controlled by an independent board of directors and no so-called "antitrust violation" had ever taken place. See pp. 117-145, *infra*.

ARGUMENT

I. The District Court Erred in Ordering Defendants to Submit to Burdensome and Expensive Discovery Before the Charges against Them Had Been Reasonably Specified.

The plainest principles of fairness and due process, as well as orderly procedure, require that a defendant be apprised of the charges against him before he may be compelled to submit himself to discovery, at an immense expenditure of time and funds. This is particularly true in a treble damage action under the antitrust laws, where the conduct charged is a crime and two-thirds of the relief requested is punitive. Those principles were ignored in the pretrial orders of the District Court and in the affirmance of the judgment by the Court of Appeals.

Two points should be stated at the outset in order that it may be clear that there is no dispute among the parties about them: (1) the effective administration of the Federal Rules of Civil Procedure, and particularly of the discovery rules, requires that wide scope be given to the discretion of the district judge; (2) the rules of procedure and orders of the courts made pursuant to them should be obeyed. Defendants fully accept these two points. But the points are properly understood only when it is remembered that wide discretion is not unlimited discretion and that there are occasions in litigation when the only way for a party to test its position in an appellate court is to respectfully refuse to comply with a court order under the rules.

This case has been colored in the popular mind by the image of a man of great wealth so insistent on maintaining his privacy that he flouts the lawful processes of the United

States courts. The image bears no resemblance to the reality of what in fact happened. It was Toolco that made a responsible decision to decline to proceed further in order to test its legal rights. Toolco specifically advised the court that its decision not to proceed would be the same even if Hughes, who had been subpoenaed as a witness, were to appear on the day set for his deposition (App. A-299, A-303-304).

From the outset of this case Toolco believed its conduct could not, as a matter of law, constitute a violation of the antitrust laws. The defendants and Special Master Rankin pressed for procedures that would require TWA to specify in some meaningful way how it contended that the antitrust laws had been violated, so that defendants might test the legal soundness of these contentions. TWA resisted and the District Court rebuffed all such efforts.

From the outset of this case Toolco believed that the antitrust claims asserted were within the primary jurisdiction of the CAB and had been immunized from the operation of the antitrust laws by orders of the CAB approving Toolco's control of and transactions with TWA. The District Court ruled to the contrary but refused to certify its ruling for an appeal under 28 U.S.C. § 1292(b).

The District Court, instead, ordered that TWA need not disclose its factual contentions until Toolco had been subjected to a deposition that would have taken months and cost it more than $5 million. The Court of Appeals, on application for writ of mandamus, refused to interfere.

It was with the case in this posture, with every other opportunity to secure an orderly determination of its legal position foreclosed, that Toolco made the business decision

not to proceed further in what seemed to it useless litigation on the facts but to stand instead on its legal position. A decision of this kind carries risks for a litigant but is not uncommon when it appears to be the only way to obtain appellate review of interlocutory orders. Thus in *United States* v. *Procter & Gamble Co.*, 356 U.S. 677, 680-681 (1958), the United States solicited dismissal of its complaint as a means of obtaining appellate review of an order requiring it to produce a grand jury transcript. See also *United States* v. *Ryan*, 402 U.S. 530, 533 (1971), holding that a person who believes that a District Court has erred in refusing to quash a grand jury subpoena "is free to refuse compliance and * * * in such event he may obtain full review of his claims before undertaking any burden of compliance with the subpoena."

The case of *Allied Air Freight, Inc.* v. *Pan American World Airways*, 393 F.2d 441 (2d Cir.), *cert. denied*, 393 U.S. 846 (1968), is particularly instructive in this connection because it involved issues so similar to those in the present case. That was an antitrust action by an air freight forwarder against an airline. The airline contended that the CAB had primary jurisdiction. The District Court agreed and ordered the action stayed until the forwarder had exhausted its remedies before the CAB. The court refused to certify its order for appeal under 28 U.S.C. § 1292(b) and the Second Circuit refused to review the order on application for mandamus. The forwarder did not go to the CAB. More than two years later its suit was dismissed without prejudice for want of prosecution. That dismissal, even though without prejudice, was appealable as a final order. On review of it the appellate court held that the primary

jurisdiction doctrine was not applicable, that the stay should not have been ordered, and that the forwarder could now go forward in the District Court.

Thus, in the present case, if the District Court had agreed with the legal defenses the defendants put forward, TWA could have had immediate review if its suit had been dismissed or it could have had review, following the *Allied Air Freight* tactic, if the action had been stayed. In fact the District Court rejected defendants' legal contentions. There still could have been review if the court had allowed a § 1292(b) appeal, as it did three months later on the same issues. Because it refused the § 1292(b) certificate, the decision by defendants not to proceed further was the only way to obtain appellate review without enormous effort, loss of time and expense.

There would have been other devices by which defendants could have tested TWA's antitrust theories if the District Court had required TWA to make clear what its contentions were. In holding that the defendants were entitled to a specification of TWA's factual contentions and a delineation of the issues only *after* they had been subjected to an expensive and burdensome deposition for the purpose of permitting TWA to hunt for evidence to support its ill-defined charges, the District Court overlooked the function of a complaint under modern pleading as well as the nature of discovery under the Federal Rules of Civil Procedure.

At one time the pleadings were expected to inform a defendant of the facts underlying the plaintiff's claim and to define the issues between the parties. They were not a suitable device for this task. Accordingly, under the Federal Rules of Civil Procedure, the complaint is now expected only to give defendant "fair notice of what the plaintiff's claim

is and the grounds upon which it rests." *Conley* v. *Gibson*, 355 U.S. 41, 47 (1957). The defendant's right to know with reasonable specificity the factual nature of that claim is to be vindicated through the various discovery devices provided by the Rules together with pretrial conferences under Rule 16. *Hickman* v. *Taylor*, 329 U.S. 495, 501 (1947). On the 1964 appeal in the present case the Second Circuit upheld the sufficiency of the complaint in the present action (332 F.2d at 610-611, App. A-343-344). With that determination we do not disagree. But that does not mean that the complaint necessarily presented a claim that must be tried. Intelligent use of the rules governing discovery and pretrial conferences may disclose that a complaint, though legally sufficient, is vulnerable to a motion for summary judgment—*e.g.*, *First National Bank of Arizona* v. *Cities Service Co.*, 391 U.S. 253, 290 (1968); *Beckman* v. *Walter Kidde & Co.*, 316 F.Supp. 1321, 1325 (E.D.N.Y. 1970), *affirmed*, 451 F.2d 593 (2d Cir. 1971); *Putnam* v. *Air Transport Ass'n of America*, 112 F.Supp. 885, 886-887 (S.D.N.Y. 1953)—or a motion to strike a particular allegation for which plaintiff has no factual support, *e.g.*, *Alamo Theatre Co.* v. *Loew's Inc.*, 22 F.R.D. 42, 45 (N.D. Ill. 1958).

The same principles of simplified pleading that govern a routine personal injury case are applicable also to the most complex antitrust case. *E.g.*, *Control Data Corp.* v. *International Business Machines Corp.*, 421 F.2d 323 (8th Cir. 1970); *New Home Appliance Center, Inc.* v. *Thompson*, 250 F.2d 881 (10th Cir. 1957); 2A Moore, *Federal Practice* ¶ 8.17[3] (2d ed. 1962). But, as the draftsman of the Civil Rules was at pains to explain in the leading case so holding, simplified pleading is workable for these complicated cases in which fuller disclosure of the basis of

the claim is needed only because disclosure can be had by the other devices in the rules, including Rule 16 and the discovery provisions. *Nagler* v. *Admiral Corp.*, 248 F.2d 319, 322-323 (2d Cir. 1957). See also 4 Wright & Miller, *Federal Practice and Procedure: Civil* 170 (1969).

Simplified pleading works in the "big" case only because of the availability of discovery and similar devices. By the same token the discovery rules are suitable for the "big" case only if their use is controlled much more carefully by the court than in routine litigation, where the parties can be left to use the rules when and how they will. This has been a source of concern throughout the history of the Civil Rules, the problems have been repeatedly studied by knowledgeable and authoritative groups, and widely accepted answers have been found.

The most recent guidelines for the conduct of a large antitrust case are found in *Manual for Complex and Multidistrict Litigation* (1970), developed by a distinguished group of experienced judges under the auspices of the Federal Judicial Center. These guidelines recognize the importance of prompt definition of the issues in the case and the necessity that the defendant be informed in the first instance of the basic facts underlying the complaint. Thus they recommend that the court promptly hold a first pretrial conference in order to "ascertain counsels' current views of the issues involved in the case." *Manual* § 1.2. There is then to be a "first wave of discovery" designed to obtain information concerning the transactions upon which the claims for relief are based. *Manual* § 1.5. The possibility of the disposition of the case by early resolution of some legal question is recognized and procedures

suggested for use if this is the case. *Manual* § 1.8. Only after these preliminary steps have been taken is discovery on the merits to be allowed in a "second wave of discovery." *Manual* § 1.5. Provision is made for earlier carefully-controlled discovery on the merits to provide for emergencies and to permit narrowing of the issues, but the judges are warned that "experience has demonstrated that in a complex case orderly discovery requires that this first wave of discovery be accompanied by plans for full discovery in two successive waves as recommended herein." *Manual* § 1.7.

The teachings of the *Manual* are not a new perception, unavailable for the guidance of the District Court in the years 1961-1963, when this case was in a pretrial stage. Before the present action was commenced a predecessor of the present *Manual*, approved by the Judicial Conference of the United States in March, 1960, had said that in protracted cases discovery must be confined to the genuine issues necessary for decision and that the court must take affirmative steps to define the issues before discovery on the merits begins. *Handbook of Recommended Procedures for the Trial of Protracted Cases*, 25 F.R.D. 351, 386-390 (1960). A still earlier report, approved by the Judicial Conference in September, 1951, was to the same effect in insisting that adequate specification of the issues in complex cases is so important "as to require that it be done no matter what the objection or difficulty" and that the issues as particularized "should serve as the basis for the bounds of permissible discovery." *Report on Procedure in Anti-Trust and Other Protracted Cases*, 13 F.R.D. 62, 66-68 (1951).

In this case the need for a meaningful identification of TWA's factual contentions and of the issues, if any, that they raised was peculiarly great because defendants saw no facts alleged in the complaint that would constitute a violation of the antitrust laws. On the surface, the complaint would appear to be detailed. It is long. It has many paragraphs. It seems to state numerous facts. But on closer examination by defendants, the allegations appeared meaningless for they all seemed to center on acts and judgments normally and naturally engaged in by a parent in relation to its subsidiary. The complaint uses in abundance the special jargon of antitrust—"boycott," "tying arrangement," "attempt to monopolize"—to describe a normal and legal relationship between a parent and a subsidiary.

The complaint was even more puzzling because it simply ignored the orders of the CAB approving Toolco's control of TWA and all transactions between Toolco and TWA. Indeed the complaint made no reference whatever to the CAB. Yet the complaint alleged that the acquisition of Toolco's stock interest in TWA violated § 7 of the Clayton Act, a conclusory allegation that made no sense in light of the CAB's approval of that acquisition.

Defendants' reaction to the complaint was that this case was a classic one for summary judgment because none of the facts known to defendants gave rise to an antitrust claim, and defendants were ready to stipulate to those facts. Moreover, Toolco knew, and the damage hearing confirmed, that the key facts relied upon by TWA had to be among the facts known to defendants—for both TWA and Toolco, after 21 years, were aware of all of the facts concerning their relationship. There were, in

truth, no facts to be discovered, and it was wholly unlikely that there would be any "genuine issue as to any material fact" between them as to what had happened in the past, however much they might differ about the legal consequences of those events.

For these reasons Toolco sought to ascertain on which of the facts, known to both parties, TWA was relying to support the conclusory allegations of antitrust violations. Toolco repeatedly made it clear that once TWA's factual claims were defined Toolco would be in a position to admit the facts (in contrast to legal conclusions) and obtain a determination whether they gave rise to liability and, if so, to what extent.[10]

Special Master Rankin had the same difficulty with the complaint. He tried to elicit from TWA and its executives the facts upon which they were relying to establish antitrust violations, but he was unsuccessful. In a hearing on September 15, 1962, he said:

> I had thought that before we completed the testimony of Mr. Tillinghast [the Chief Executive Officer of TWA], I would be informed about the ultimate facts that the plaintiff was relying upon to support

---

[10] For example, as early as October 2, 1961, counsel for Toolco advised the District Court: "We believe that this case can be decided, in so far as the complaint is concerned, on admitted facts." (App. A-2129). In a memorandum filed on July 12, 1962, counsel for Toolco stated:

> Once the present management of TWA has been compelled to disclose the factual basis for its claims, Toolco will be in a position to admit such facts and seek a determination as to whether they give rise to liability and, if so, as to the extent thereof. It has been the position of Toolco since the commencement of this action that once TWA's management is compelled to disclose what it claims, a determination on the merits as to such claims will be appropriate. [Doc. 100, pp. 24-25].

> the various allegations of its complaint, which are largely conclusions of law, but do conform to the requirements of the federal rules concerning such complaints.
>
> I did not think that with the chief executive officer of the plaintiff being deposed, we would reach a point at the conclusion where I would not know the ultimate facts upon which the plaintiff was relying to establish those various allegations insofar as they had a bearing upon a violation of the antitrust laws.
>
> But I did find that I was in that position. I think that has an important bearing upon what is equitable in asking testimony of principal witnesses of the defendant in this case [*i.e.*, Howard Hughes], and when that should be required [App. A-2385-2386].

Accordingly, Mr. Rankin recommended that a Rule 16 proceeding be held, at which TWA would be required to delineate the facts on which it based its complaint and at which the issues could be defined. He announced that he considered the holding of a pretrial conference to be so important to the progress of the litigation that if the parties did not apply to the District Court for a Rule 16 proceeding, which he offered to conduct, he would do so himself (App. A-2386-2388).

This would have been an appropriate case for summary judgment if the issues and the facts on which TWA was relying could have been identified. It is true that in several cases this Court has quoted the statement first made in *Poller* v. *Columbia Broadcasting System, Inc.*, 368 U.S. 464, 473 (1962), that "summary procedures should be used sparingly in complex antitrust litigation where motive and intent play leading roles, the proof is largely in the hands of the alleged conspirators, and hostile witnesses thicken

the plot." But to say that summary procedures are to be used "sparingly" is to recognize that there are some cases of this kind in which they are proper and useful. The Court emphasized this point in the term following *Poller*, when it said: "Summary judgments have a place in the antitrust field, as elsewhere * * *. Some of the law in this area is so well developed that where, as here, the gist of the case turns on documentary evidence, the rule at times can be divined without a trial." *White Motor Co.* v. *United States*, 372 U.S. 253, 259 (1963). More recently, in *First National Bank of Arizona* v. *Cities Service Co.*, 391 U.S. 253 (1968), the Court affirmed a grant of summary judgment for defendant in a private antitrust case, and said, at 290:

> While we recognize the importance of preserving litigants' rights to a trial on their claims, we are not prepared to extend those rights to the point of requiring that anyone who files an antitrust complaint setting forth a valid cause of action be entitled to a full-dress trial notwithstanding the absence of any significant probative evidence tending to support the complaint.

Courts of appeals, fully sensitive to what was said in *Poller*, have affirmed summary judgments for antitrust defendants in a variety of cases.[11] The matter was well put, in terms

[11] *E.g.*, *California Shipping Co., Inc.* v. *Pacific Far East Line, Inc.*, 453 F.2d 381 (9th Cir. 1971), *cert. denied*, 40 U.S.L.Wk. 3503 (April 17, 1972); *Beckman* v. *Walter Kidde & Co., Inc.* 451 F.2d 593 (2d Cir. 1971); *Dahl, Inc.* v. *Roy Cooper Co.*, 448 F.2d 17 (9th Cir. 1971); *Billy Baxter, Inc.* v. *Coca-Cola Co.*, 431 F.2d 183 (2d Cir. 1970), *cert. denied*, 401 U.S. 923 (1971); *Chapman* v. *Rudd Paint & Varnish Co.*, 409 F.2d 635 (9th Cir. 1969); *McGuire* v. *Columbia Broadcasting System, Inc.*, 399 F.2d 902 (9th Cir. 1968); *Cohen* v. *Newsweek, Inc.*, 374 F.2d 470 (8th Cir.), *cert. denied*, 389 U.S. 878 (1967); *Cowen* v. *New York Stock Exchange*, 371 F.2d 661 (2d Cir. 1967); *Crest Auto Supplies, Inc.* v. *Ero Mfg. Co.*, 360 F.2d 896 (7th Cir. 1966); *Bond Distributing Co.* v. *Carling Brewing Co.*, 325 F.2d 158 (4th Cir. 1963).

that could have been applicable to this case, in *McGuire* v. *Columbia Broadcasting System, Inc.*, 399 F.2d 902, 905 (9th Cir. 1968):

> However, the showing of a "genuine issue for trial" is predicated upon the existence of a legal theory which remains viable under the asserted version of the facts, and which would entitle the party opposing the motion (assuming his version to be true) to a judgment as a matter of law.

As defendants have always viewed this case, it was not one in which it would have been necessary to probe motive or intent. It is their position that there is no viable legal theory on which the dissatisfaction of TWA's new management with decisions that Toolco had made about the acquisition and financing of jet aircraft for TWA could be made into a valid claim under the antitrust laws.

It was this opportunity to test TWA's legal theory and to obtain a prompt disposition of the case that was foreclosed by the pretrial orders of the District Court. The court denied Toolco's motion for a Rule 16 proceeding, despite the specific recommendation of the Special Master, and refused to require answers to defendant Toolco's interrogatories until after the deposition of the witness Hughes, even though both the Special Master and the District Court found these interrogatories to be proper. Thus the court ordered that Hughes first appear for a deposition on the merits that would be both extensive and expensive, and for which he could not properly be prepared. Toolco would have had to bear all of its own expense at that deposition and, as 78% owner of TWA, would have borne 78% of TWA's expense. The estimate that the deposition would cost Toolco

in excess of $5 million (App. A-280) was never challenged.[12] Only after the expenditure of that huge amount was Toolco to be permitted to have any meaningful description of the nature of the claims against it or any opportunity to demonstrate to the court that the case could be disposed of as a matter of law.

Ordinarily the order of discovery is and must be for the discretion of the trial court. The grant of this broad discretion assumes that it will be exercised to illuminate, rather than to conceal, the issues. This is particularly important in large and complex cases such as this one, for it is a commonplace in cases of this kind that "plaintiffs hesitate to commit themselves to a statement of the issues in the case until they have had substantial discovery from defendants." *Handbook of Recommended Procedures for the Trial of Protracted Cases*, 25 F.R.D. 351, 388 (1960). That is why every set of recommendations for handling these "big" cases has insisted on the vital importance of identifying the issues before discovery on the merits is begun. In this case, however, the discovery orders of the District Court, taken together, denied to defendants the fundamental right to know the charges against them before being subjected to examination in search of evidence or leads to evidence.

The possibilities for harassment of defendants, either for the purpose of inducing a settlement or for other ulterior motives unrelated to the merits of the litigation, are enormous under the procedure permitted by the District

[12] It is of interest that the District Court, which was not disturbed at the prospect of a deposition that would cost defendants more than $5 million, later felt it proper to observe that prior to this case the highest *recoveries* on record in cases that had gone to judgment had been $4.4 million and $4.2 million (App. A-2061).

Court. Particularly in the large antitrust case, where vague allegations of a conspiracy in restraint of trade may result in enormous expenditures on discovery, equal in themselves to a sizable judgment, the rights of a defendant under the discovery rules require protection. To put a defendant to an expense of $5 million in trial preparation before it is known if there is anything to be tried is so grave an abuse of judicial process as to amount to a denial of due process.

But it is not only defendants who have a stake in the matter. It is also in the interest of the courts themselves that the procedures experience has shown to be best for litigation of this kind be followed. Prompt identification of the issues and the stipulation of undisputed facts will greatly reduce the burden that the "big" case imposes on the federal courts. Some cases can be disposed of altogether when, through these procedures, it is seen that, despite the conclusory allegations of an artful pleader, the case is not within the jurisdiction of the federal courts at all but belongs in a state court or before an administrative agency. Other cases, when the issues are identified and the undisputed facts stipulated, can be disposed of expeditiously by summary judgment.[13] Even in those cases that must ultimately be tried on the merits, adherence to the recommended procedures for protracted cases

[13] The presentation of an intelligent motion for summary judgment requires that a defendant know with some certainty the plaintiff's factual claims. In this case, for example, though the complaint alleged a boycott (¶9(c), App. A-9), it was not revealed until the damage hearing that the supposed boycott consisted of nothing more than Toolco's ordering planes for TWA from Boeing and Convair instead of TWA's ordering the same planes from Boeing and Convair.

will keep discovery within reasonable bounds and confine the trial to those genuine issues on which there is a real dispute.

This case has occupied an immense amount of time in the federal courts for 11 years. It has done so because of the failure of the District Court to follow sound principles on the proper management of discovery and pretrial proceedings in complex litigation.

II. The Courts Below Erred in Holding That the Default Established the Truth of Conclusions of Law.

At the damage hearing and in subsequent court proceedings, the major issue between the parties has been the effect to be given to the default. The parties, both Special Masters, the District Court, and the Court of Appeals all considered that the controlling decision was what the Second Circuit referred to as "the venerable but still definitive case" (449 F.2d at 63, App. A-2758) of *Thomson* v. *Wooster*, 114 U.S. 104 (1885). *Thomson* is the authoritative precedent, but the courts below misread the decision and gave the default a broader effect than it properly or constitutionally can have.

In an opinion at the outset of the damage hearing, Special Master Rankin recognized that the default "dispenses with any proof of the facts alleged in the complaint, except as to unliquidated damages" (App. A-365). He stated, however, that even a default judgment "must be just" (App. A-371) and that it was "his duty on behalf of the court to be satisfied of the liability of the defendants * * *" (App. A-372). The District Court, in reviewing the opinion by the Special Master, questioned the state-

ment that the Master had to be satisfied about liability, saying that "liability is not an issue for the Special Master except in a very limited sense" and citing *Thomson* for the proposition that by virtue of the default defendants had admitted the truth of "the well-pleaded allegations of the complaint" (38 F.R.D. at 501, App. A-2030). All subsequent actions in the case were colored by this misreading of *Thomson*. The second Special Master in making his report, the District Court in passing on exceptions to the report, and the Court of Appeals in affirming the judgment all erred by giving too broad an effect to the default. The Second Circuit took the position that "the default had the effect of admitting or establishing that the acts pleaded in the complaint violated the antitrust laws and that those acts caused injury to TWA in the respects there alleged" (449 F.2d at 70, App. A-2772). In accord with this view of the effect of a default, the Second Circuit ruled that "there was no burden on TWA to show that any of Toolco's acts pleaded in the complaint violated the antitrust laws nor to show that those acts caused the well-pleaded injuries" (449 F.2d at 70, App. A-2773). The illegality of Toolco's acts, it said, was "conclusively established by the default judgment" (449 F.2d at 71, App. A-2776).

Neither *Thomson*, nor any other authoritative case, supports such a doctrine. What *Thomson* held is that a default admits "facts properly pleaded." 114 U.S. at 110. Similarly, *United States* ex rel. *Harshman* v. *County Court of Knox County*, 122 U.S. 306, 317 (1887), says that a default admits "material and traversable" allegations of "fact." Nothing in *Thomson* or in any other case supports the proposition that a default admits legal conclusions.

To have included conclusions in a complaint would itself have been improper at a time when there was a rigorous rule that pleadings must be limited to the "dry, naked, actual facts." Pomeroy, *Remedies and Remedial Rights* 576 (2d ed. 1883). A default admitted only those things that would then have been admitted by a general demurrer. *McAllister* v. *Kuhn*, 96 U.S. 87, 89 (1877). Thus it was held that a default did not admit "a mere conclusion of law." *Cragin* v. *Lovell*, 109 U.S. 194, 199 (1883).

There is difficulty in distinguishing between allegations of "fact," which are admitted by a default, and "conclusions of law," which are not, but it has always been clear that the illegality of the conduct charged in the complaint is the ultimate conclusion of law. For this reason, a default has never admitted that the conduct charged by the complaint is sufficient as a matter of law to establish a right of recovery. This is open to challenge even by a party in default. This was indicated in *Thomson* itself when the Court insisted that a decree does not follow as of course after a default but is to be made "according to what is proper to be decreed upon the statements of the bill assumed to be true." 114 U.S. at 113. This was spelled out by the Court in more detail a few years later in *Ohio Central R. Co.* v. *Central Trust Co.*, 133 U.S. 83, 91 (1890):

> If the allegations are distinct and positive, they may be taken as true without proof; but if they are indefinite, or the demand of the complainant is in its nature uncertain, the requisite certainty must be afforded by proof. But in either event, although the defendant may not be allowed, on appeal, to question the want of testimony or the insufficiency or amount of the evidence, he is not precluded from

> contesting the sufficiency of the bill, or from insisting that the averments contained in it do not justify the decree.

To the same effect are *Cragin* v. *Lovell*, 109 U.S. 194 (1883); *McAllister* v. *Kuhn*, 96 U.S. 87 (1877); *Tallman* v. *Ladd*, 5 F.2d 582 (4th Cir. 1925); *United States* v. *Fong*, 182 F. Supp. 446, 451 (N.D. Cal.), *aff'd*, 300 F.2d 400 (9th Cir.), *cert. denied*, 370 U.S. 938 (1962); see *Jackson* v. *Heiser*, 111 F.2d 310, 313 (9th Cir. 1940); 3 Freeman, *Law of Judgments* 2664-2665 (5th ed., Tuttle 1925). State decisions are said to be "almost unanimous" in support of a similar view. Anno., 163 A.L.R. 496 (1946). See, *e.g.*, *Central Foundry Co.* v. *Benderson*, 284 Ala. 144, 223 So. 2d 266 (1969); *Lindsey* v. *Drs. Keenan, Andrews & Allred*, 118 Mont. 312, 165 P. 2d 804 (1946); *Johnson* v. *Johnson*, 92 N.J. Super. 457, 224 A. 2d 23 (1966).

Today's more relaxed notions of pleading allow the use of conclusions in a complaint—2A Moore, *Federal Practice* ¶ 8.12 (2d ed. 1962); 5 Wright & Miller, *Federal Practice and Procedure: Civil* § 1218 (1969)—but it is still true that conclusory allegations of an attempt to monopolize do not necessarily constitute a valid antitrust claim. *Central Savings & Loan Assn. of Charlton, Iowa* v. *Federal Home Loan Bank Board*, 422 F.2d 504, 509 (8th Cir. 1970); *SCM Corp.* v. *Radio Corp. of America*, 407 F.2d 166, 170 (2d Cir. 1969), *cert. denied*, 395 U.S. 943 (1969); *Hiland Dairy, Inc.* v. *Kroger Co.*, 402 F.2d 968, 973 (8th Cir. 1968), *cert. denied*, 395 U.S. 961 (1969); *O. Hodgkins Sales Corp.* v. *Chrysler Corp.*, 327 F. Supp. 1020, 1021 (D. Mass. 1971); 2A Moore, *Federal Practice* ¶ 12.08, at 2269 (2d ed. 1968); 5 Wright & Miller, *Federal Practice and Procedure: Civil* § 1357, at 595-596, § 1363, at 658 (1969).

On the first appeal the Second Circuit found that the complaint in this case was not vulnerable to a motion to dismiss (332 F.2d at 610-611, App. A-343-344). As Special Master Rankin had noted, the allegations of the complaint "are largely conclusions of law, but do conform to the requirements of the federal rules concerning such complaints" (App. A-2385).[14] This does not mean that every allegation in it must now stand as admitted. The default admitted only the "facts properly pleaded," as the *Thomson* case said, and did not admit all of the "well-pleaded allegations," as the courts below thought. It is for the court, not for the pleader, to decide whether the facts alleged constitute a violation of law for which the plaintiff can have recovery. Even after a default, it remains for the court to consider whether "the unchallenged facts shown of record establish a legally binding obligation; it adjudicates the plaintiff's right of recovery and the extent of it, both of which are essential elements of the judgment." *Pope* v. *United States*, 323 U.S. 1, 12 (1944).

This view of the effect of a default has not been and will not be a burden on the courts. Most complaints follow well-tested patterns and a first-year law student can tell at a glance that the facts admitted by the default give rise to liability. These usual and routine cases are a far cry from an antitrust case, in which there may be hard questions of liability even on an admitted state of facts. There is an analogy between the effect of a default and the effect of a plea of guilty in a criminal case. A criminal defendant admits his conduct by a guilty plea but may continue to challenge the illegality of that conduct. *Haynes* v. *United*

[14] His statement is quoted in context *supra*, pp. 36-37.

States, 390 U.S. 85, 87 n. 2 (1968); *Kolaski* v. *United States*, 362 F.2d 847 (5th Cir. 1966). Challenges of this kind are rare and not burdensome.

It is because the court performs a judicial function, even on a default judgment, and must be satisfied that the judgment is just, that the court has discretion, if it sees fit, to require proof of some or all of the facts going to liability, even after default. Civil Rule 55(b)(2); *Jackson* v. *Kotzebue Oil Sales*, 17 F.R.D. 204 (D.Alaska 1955); *United States* v. *Knox*, 79 F.Supp. 714 (E.D.Tenn. 1948); *Douglas* v. *Harris*, 35 N.J. 270, 173 A.2d 1 (1961); see *Norman* v. *Young*, 422 F.2d 470, 474 (10th Cir. 1970); *Massa* v. *Jiffy Products Co., Inc.*, 240 F.2d 702, 706 (9th Cir. 1957). Even if the court does not choose to call for proof of liability, it must take into account, in entering judgment, facts that have become a part of the record. Thus, for example, if one of several defendants charged jointly defaults but there is a trial on the merits at which the other defendants are successful, judgment must be given against the plaintiff even as to the defaulting defendant. *Frow* v. *De La Vega*, 15 Wall. (82 U.S.) 552 (1872); *Champlin* v. *Tilley*, 5 Fed. Cas. 436 (No. 2586) (C.C.D.Conn. 1809); 6 Moore, *Federal Practice* ¶ 55.06 (2d ed. 1953). Because the rule about the effect of a default was formulated by analogy to what is admitted by a general demurrer (or, as it is called today, a motion to dismiss), a default, as the courts below acknowledged (38 F.R.D. at 501, App. A-396-397; 449 F.2d at 63, App. A-2758), does not admit even allegations of fact if it may be judicially noticed that they are not true. *E.g.*, *In re Woodmar Realty Corp.*, 294 F.2d 785 (7th Cir. 1961), *cert. denied*, 369 U.S. 803 (1962); *Interstate Natural Gas Co.* v. *Southern California Gas Co.*,

209 F.2d 380 (9th Cir. 1953); *Greeson* v. *Imperial Irrigation District*, 59 F.2d 529 (9th Cir. 1932); 5 Wright & Miller, *Federal Practice and Procedure: Civil* § 1363, at 659 (1969).

The decisions on the effect of a default have been written in the context of a default by want of appearance or by failure to answer, rather than of a default imposed as a sanction for enforcement of the discovery rules. Discovery, as it now exists, was unknown at the time that the governing principles on the effect of a default were formulated. Indeed, in the very month that this Court decided the *Thomson* case, it also held that a federal court lacked jurisdiction to order a defendant to give a deposition even in a diversity action in which the state law, applicable under the Conformity Act, authorized depositions. *Ex parte Fisk*, 113 U.S. 713 (1885). There is no reason, however, to suppose that the effect of a default under Civil Rule 37 is, or constitutionally can be, any broader than under Civil Rule 55. A state court, applying rules based on the Federal Rules, has specifically held that it is not. *Douglas* v. *Harris*, 35 N.J. 270, 173 A.2d 1 (1961). The Due Process Clause stands squarely in the path of any argument that it is.

It is settled here that the Constitution bars a court from denying a party all right to defend an action as a punishment for failure to obey a court order, *Hovey* v. *Elliott*, 167 U.S. 409 (1897), though if a party has failed to produce evidence material to an issue it may be presumed that the party's position on that issue is lacking in merit. *Hammond Packing Co.* v. *Arkansas*, 212 U.S. 322 (1909). These cases, as the Court said in *Societe Internationale Pour Participations Industrielles et Commerciales, S. A.* v. *Rogers*, 357 U.S. 197, 209 (1958), "establish that there are constitutional limitations upon the power of courts,

even in aid of their own valid processes, to dismiss an action without affording a party the opportunity for a hearing on the merits of his cause."

Because of these constitutional limitations, a presumption of lack of merit can go no farther than the production order. Failure to produce evidence going only to one issue justifies resolving that issue against the defaulting party but does not permit the court to deny him a right to defend on other issues. The case of *Feingold* v. *Walworth Bros., Inc.*, 238 N.Y. 446, 144 N.E. 675 (1924), decided by one of the strongest state court benches ever assembled, is instructive. Defendants had refused to disclose information that would show the value of stock about which they were claimed to have made false representations. It was held that entry of a default judgment against them for this refusal to produce went beyond the constitutional limits marked out by the *Hovey* and *Hammond* cases. The refusal, the court held, would permit an order precluding defendants from claiming that the value of the stock was less than the plaintiff alleged but they were still free to contest whether they had made any false representations. In another case it was held that the refusal of defendant to disclose the alleged source of information on which a libelous article was based was enough to justify a presumption that no such person existed but it would not support a default money judgment against the defendant. *Mitchell* v. *Watson*, 58 Wash. 2d 206, 361 P. 2d 744 (1961). See also *People* v. *George Henriques & Co.*, 267 N.Y. 398, 196 N.E. 304 (1935); 4A Moore, *Federal Practice* ¶ 37.03 [2.-1], at 37-56 (2d ed. 1970); 8 Wright & Miller, *Federal Practice and Procedure: Civil* 763-764 (1970); Note, *Sanctions for Enforcement of*

Discovery—Constitutionality of Rule 37, 37 Wash. L. Rev. 175, 181-182 (1962); Note, *The Constitutional Limits of Discovery*, 35 Ind. L. J. 337, 349-350 (1960).

When defendants filed their Notice of Position they took their chances on whether they were right or wrong about the applicable law. They gave up their right to challenge the factual allegations of the complaint. They cannot be held, however, to have admitted the legal conclusions of the complaint that their acts were illegal and that any damage suffered by TWA was the proximate result of the facts alleged. There can be no presumption of want of merit in their legal position when their refusal to proceed further was because they wished to stand on that legal position. The holding below that because of the default even the most conclusory allegations of the complaint are admitted, and that the illegality and its causal relation to the damages are established, is unsupported by precedent and is a constitutionally impermissible punishment of defendants for the position they took. It was and is the view of the defendants that the conduct relied on by TWA had no relationship to a violation of the antitrust laws and that the admissions of TWA at the damage hearing established that fact. The default did not, and constitutionally could not, establish the contrary.

If a default has the novel effect that the courts below, by their misreading of *Thomson* v. *Wooster*, have given it, Rule 37 was violated by the grant of a default judgment. The District Court purported to rely on what were then Rules 37(b)(2)(iii) and 37(d). But Rule 37(b)(2) provided that "the court may make such orders in regard to the refusal as are just, and among others" might render

a judgment by default.[15] If a default judgment establishes the illegality of the conduct with which a defendant is charged, it would not be "just" to enter a default judgment, the severest of all possible sanctions, when it is well understood that defendant's refusal to make further discovery is to test the illegality of the charged conduct. Although the limitation to "just" sanctions is addressed in the first instance to the trial courts, it is vigorously policed by the appellate courts. The appellate courts do this because they are aware of the constitutional issues that lurk so closely in the background if overly drastic sanctions are imposed and because they recognize the general purpose of the Civil Rules to encourage dispositions on the merits. 4 Moore, *Federal Practice* ¶ 37.08 (2d ed. 1970); 8 Wright & Miller, *Federal Practice and Procedure: Civil* § 2284 (1970).

Thus what happened below would be wrong even if a default admits ultimate legal conclusions. But the courts below erred in thinking that legal conclusions, as distinguished from facts, are admitted by a default. Defendants were entitled to an independent judicial determination of whether their acts as alleged in the complaint, supplemented by TWA's admissions at the damage hearing and by facts that may be judicially noticed, were in violation of the antitrust laws. The courts below erred in denying them this determination and in relying instead on the conclusions of the pleader.

---

[15] As a part of the 1970 amendments of the discovery rules, language limiting the court to such sanctions "as are just" was added to Rule 37(d). The courts, however, had always held that the express limitation stated in Rule 37(b)(2) applied also to Rule 37(d). Rosenberg, *Sanctions to Effectuate Pretrial Discovery*, 58 Col.L.Rev. 480, 494 (1958).

III. The Courts Below Erred in Allowing Recovery in Excess of The *Ad Damnum*.

Civil Rule 54(c) is brief and explicit. It provides:

> A judgment by default shall not be different in kind from or exceed in amount that prayed for in the demand for judgment. Except as to a party against whom a judgment is entered by default, every final judgment shall grant the relief to which the party in whose favor it is rendered is entitled, even if the party has not demanded such relief in his pleadings.

Thus the rule draws a sharp distinction between default judgments and all other judgments and lays down separate rules for each. A default judgment cannot go beyond the *ad damnum*. Other judgments are not so limited and, as against a party not in default, the claimant is to be given whatever relief he is entitled to, whether he has demanded it or not. The command of the rule is emphasized by Civil Rule 55(d), which states: "In all cases a judgment by default is subject to the limitations of Rule 54(c)."

In the present case paragraph (3) of the prayer for relief in the complaint prayed for "$105,000,000, threefold the damages sustained by plaintiff, together with costs and attorneys' fees" (App. A-31). After defendants had advised the District Court that they were not going to proceed further, that court granted TWA's motion to increase the *ad damnum* from $105 million to $135 million (32 F.R.D. at 607, App. A-321). The judgment actually entered, exclusive of attorneys' fees and costs, was for $137,611,435.95 (App. A-2073), and here, as in the courts below, TWA is claiming that it is entitled to even more. The process by which the courts below found

that they were not bound by the clear limitation of the first sentence of Rule 54(c) deserves examination.

The discussion of this issue by the District Court is, in its entirety, as follows:

> That branch of the motion seeking to increase the *ad damnum* clause from $105,000,000 to $135,000,000 is granted. This is not a case where a party has defaulted in appearance. Here issue was joined and adversary proceedings continued in the pretrial stages of this litigation. The damages originally asserted were unliquidated and TWA is entitled to recover for whatever damage it can show it suffered. Furthermore, Toolco will be represented at the hearings necessary to assess damages under rule 55(b)(2). Rule 54(c); Peitzman v. City of Illmo, 141 F.2d 956 (8th Cir.), cert. denied, 323 U.S. 718, 65 S. Ct. 47, 89 L. Ed. 577 (1944); cf. Riggs, Ferris & Geer v. Lillibridge, 316 F.2d 60 (2d Cir. 1963). [32 F.R.D. at 607-608, App. A-321.]

The reference by the District Court to Rule 54(c) is mystifying, unless the court noticed only the final language of the rule and failed to note the first sentence or the introductory clause of the second sentence. Nor is the court's position strengthened by its reference—with a "cf." signal—to *Riggs, Ferris & Geer* v. *Lillibridge*, 316 F.2d 60 (2d Cir. 1963). That was not a default case. In holding that after a full contested trial the court can award judgment in excess of the amount demanded, the court in *Riggs* was making a routine application of the second sentence of Rule 54(c). Wright, *Federal Courts* 437 (2d ed. 1970). The case says nothing whatever about the first sentence of the rule.

Thus the only authority cited by the District Court that even arguably supports it on this point is *Peitzman* v. *City of Illmo*, 141 F.2d 956 (8th Cir.), *cert. denied*, 323 U.S. 718 (1944). The shaky quality of that decision as precedent is best indicated by quoting the entire relevant portion of the Eighth Circuit's decision. Defendant in that case was claiming error in allowing an amendment, after his default, raising the prayer for punitive damages from $10,000 to $20,000.

> The other amendment concerns the amount of damages prayed for. In this connection it should be observed that the record is in a confused condition; it in fact presents a paradox. The petition as served in the state court asked for $5,000 compensatory damages. The first amended petition, filed August 2, 1941, while the case was still in the state court, shows that the prayer for compensatory damages was in the sum of $5,000 and for punitive damages in the sum of $20,000. On October 7, 1942, the record indicates, plaintiff gave notice of motion to amend the prayer of the petition by interlineation, by increasing the amount of punitive damages from $1,000 to $10,000, which motion was granted October 12, 1942. In fact, instead of increasing the amount of the claim for punitive damages from $1,000 to $10,000, by this amendment the amount of the claim for punitive damages was decreased from $20,000 to $10,000. At the time of the trial plaintiff moved to amend the complaint "in the actual damages up to $5,000.00 and to amend the amount of punitive damages to $20,000.00." In this state of the record it is doubtful whether the prayer for punitive damages was in fact increased in amount. Rule 54(c) provides in part as follows: "A judgment by default shall not be different in

kind from or exceed in amount that prayed for in the demand for judgment." Rule 55(b) makes provision for a hearing on the question of the amount of damages where defendant has appeared in the action. Rule 54(c) apparently is a general rule applicable in case of a non-appearing defendant in complete default. On a hearing on the question of damages, under Rule 55(b) a defendant, though in default, is in court on a hearing limited to the question of the amount of damages, to the same extent that he is in court in a trial on the merits, and we think amendments at the trial are as appropriate in the one case as in the other. Amendments to a pleading may be allowed at the hearing on damages as to the relief prayed, subject to the right of the defendant, if taken by surprise or put to a disadvantage, to ask for a continuance or for time in which to prepare to meet the enlarged claim. See Rule 5(a); La Barre v. City of Waterbury, 69 Conn. 554, 37 A. 1068. In general, it may be said that a change in the amount prayed for is not of vital importance, as the prayer for relief is in fact no part of the claim or cause of action stated. [141 F.2d at 962.]

A number of things may be said about this confused case. First, since, as the court said, "it is doubtful whether the prayer for punitive damages was in fact increased in amount," the necessity for deciding whether an increase after default is permissible is also doubtful. Second, the default was entered because of defendant's failure to appear for depositions in April and May of 1942, at which time the punitive damages sought were clearly $20,000. The confusing developments all occurred subsequent to that failure. Third, the jury awarded $10,000 as punitive dam-

ages. 141 F.2d at 956. There was no need to rely on either the original demand for $20,000 or the later reinstated demand for that amount in order to affirm the award. Fourth, the only authority cited by the Eighth Circuit for its discussion of the right to amend after default had nothing to do with the limiting effect of the *ad damnum*. Plaintiff in *LaBarre* v. *City of Waterbury*, 69 Conn. 554, 37 Atl. 1068 (1897), had given notice of his claim to the defendant municipality before bringing suit, as he was required to do, but had neglected to allege in his complaint that he had given notice. The court allowed plaintiff to amend to state the fact of notice but also offered to allow defendant to plead anew and to present its witnesses if it wished to do so. The *LaBarre* case, to the extent that it is relevant under very different procedural rules, merely supports a discretionary power in the court to reopen a default for the plaintiff's benefit, so that no injustice will be done because of an inadvertent procedural omission.

We return from the dubious and confused authority of *Peitzman* to the proceedings in the present case. The Second Circuit affirmed the holding of the District Court that an increase in the *ad damnum* is permissible. It said:

> Although the authorities do not appear to be in agreement and this Circuit has not expressed itself on the question, we are of the view that there is no sound basis for restricting TWA to the precise damages originally sought in a case where damages alleged were unliquidated, and where defendant did not default by non-appearance, but rather because of non-compliance with discovery procedures, and indeed was granted a full trial on the question of damages actually caused by the allegations established by its default. See *Riggs, Ferris & Geer* v. *Lillibridge*, 316 F.2d 60, 62-63 (2d Cir. 1963);

Sarlie v. *E. L. Bruce Co.*, 265 F. Supp. 371 (S.D. N.Y. 1967); 6 Moore, Federal Practice ¶¶ 54.61, 55.08 at 1206. Toolco cannot in good conscience complain of any unfairness or surprise, for, as we said in discussing the propriety of the default judgment, at no time has it sought to rectify its refusal to cooperate with the legitimate discovery orders, an act it easily could have performed after Judge Metzner granted the motion to increase the ad damnum. Moreover, at the February 8 hearing, prior to Hughes's non-appearance, TWA clearly announced its intention to apply for an increase in the prayer for damages to the trebled $135 million. [449 F.2d at 78-79, A-2792.]

It is of interest that the Second Circuit did not rely on the *Peitzman* case, though this is not surprising in view of the shakiness of that case as authority, the fact that the Ninth Circuit, as will be seen, had refused to accept the dicta in *Peitzman*, and the obvious embarrassment with which TWA made even passing reference to *Peitzman* in its brief in the Second Circuit.

The authorities on which the Second Circuit did rely are of interest. The *Riggs, Ferris* case, as pointed out in the discussion of the District Court's opinion, was not a default case and goes only to the second sentence of Rule 54(c). Professor Moore does indeed twice repeat a sentence consistent with the ruling of the Second Circuit but he cites no authority except the *Peitzman* case. 6 Moore, *Federal Practice* ¶ 54.61, at 1206, ¶ 55.08, at 1823 (2d ed. 1953).[16] The decision in *Sarlie* v. *E. L. Bruce Co.*, 265

[16] Another treatise, more cautiously, states what was said in *Peitzman* but prefaces the statement with a noncommittal "it has been held that * * *." 3 Barron & Holtzoff, *Federal Practice and Procedure* § 1216, at 87 (Wright ed. 1958).

F. Supp. 371, 377-378 (S.D.N.Y. 1967), is a square holding in support of the ruling below. In *Sarlie* the court said that "it is arguable * * * as a matter of policy" that the limitations of Rule 54(c) should not apply to a default judgment where the defendant has appeared and thought it found "support in case law" for this position in *Peitzman* and in the decision of the District Court in the present case. Thus if *Peitzman* is put to one side, as the Second Circuit recognized sound analysis requires and as the Ninth Circuit has held must be done, there is literally no support for the view of Professor Moore, no support for the decision of the District Court in the present case, no support for the decision in the *Sarlie* case, and thus no support for the ruling of the Second Circuit in the present case except for Judge Cannella's suggestion in *Sarlie* about what might arguably be "sound policy."

The principal theme of the decisions below—as well as of the *Peitzman* and *Sarlie* decisions—is that the limitation of Rule 54(c) applies only to a default for total failure of a defendant to appear and that it does not apply to a defendant who has appeared and later defaulted or later been defaulted because of his failure to make discovery. The simple answer to this is that Rule 54(c) makes no distinction of this kind. The draftsmen of the Civil Rules would not have been at a loss for words if they had wished to make that distinction. Indeed they made just such a distinction in several places in the rules. The notice provisions of Rule 55(b)(2) apply only "if the party against whom judgment by default is sought has appeared in the action" while Rule 5(a) requires service of all papers subsequent to the complaint except on

"parties in default for failure to appear." Their failure to use any words of qualification when they spoke of "judgment by default" in Rule 54(c) shows beyond question that they meant to speak to all judgments by default, whether against a party who "has appeared" or against one "in default for failure to appear."

Nor was this inadvertence on the part of the draftsmen. In an article that had great influence on the drafting of the Civil Rules, Judge Clark and Professor Moore had argued that the prayer for relief should limit the judgment only in cases of default for nonappearance. Clark & Moore, *A New Federal Civil Procedure—II. Pleadings and Parties*, 44 Yale L.J. 1291, 1303 (1935). Both of those distinguished men have recognized that their suggestion on this point was not adopted. Judge Clark later noted that "the federal rule might well have gone further and restricted the judgment to the demand only when the defendant had not appeared * * *." Clark, *Code Pleading* 267 n. 168 (2d ed. 1947). Professor Moore notes policy arguments in favor of not limiting the plaintiff by his demand in a case in which the default is by a party who has appeared, and then says: "But Rule 54(c) does not go that far; it makes no distinction in the type of judgment by default; and hence all judgments by default are subject to its limitations." 6 Moore, *Federal Practice* ¶ 54.61, at 1206 (2d ed. 1953).

The suggestion of the Second Circuit that Rule 54(c) is not limiting because "at the February 8 hearing, prior to Hughes's non-appearance, TWA clearly announced its intention to apply for an increase in the prayer * * *" (449 F.2d at 79, App. A-2792), is also unsound. It is

true that Hughes was scheduled to appear for his deposition on February 11th and that TWA gave notice at the hearing on February 8th that it would seek to amend the prayer (App. A-271). But that hearing was held only because earlier on February 8th Toolco had filed with the court its Notice of Position, announcing that it would not proceed further and would rest on the merits of the positions it had taken (App. A-268). It was by the filing of the Notice of Position that Toolco crossed the Rubicon.[17] At that time it had no notice that TWA was making or would make any claim in excess of $105 million.

The result would hardly be different even if the chronology had been otherwise. If amendment of the *ad damnum* clause was precluded by Rule 54(c), mere notice of the precluded amendment could not cure the preclusion.

A better understanding of Rule 54(c) than that applied by the courts below in this case is evidenced in *Fong* v. *United States*, 300 F.2d 400 (9th Cir.), *cert. denied*, 370 U.S. 938 (1962), a case that was not noted by either the District Court or the Court of Appeals, though it was cited to both of them. The United States had sold a number of surplus ships to Fong for scrapping by him and later brought an action asserting various claims against him arising out of that transaction. The government contended that Fong had not scrapped some of the

[17] The Second Circuit's opinion reflects a consistent misunderstanding of this point. It says, at a number of places and in a variety of ways, that "entry of the default was inevitable after Hughes's nonappearance * * *" (449 F.2d at 58, App. A-2748). The fact, as the District Court correctly noted (32 F.R.D. at 607, App. A-320-321), is that it was Toolco that made a responsible decision not to appear and that it specifically advised the court that its decision to proceed would be the same even if Hughes were to appear for his deposition (App. A-299, A-303-304).

ships within the time permitted under the conditions of sale and that he had resold other ships without scrapping them, contrary to the conditions of the sale. In one count the United States sought double damages under the False Claims Act, in another it sought double damages under the Surplus Property Act of 1944, in another it sought damages for conversion of personal property, and in Count Four it sought damages for breach of contract. A default was ordered because of the failure of Fong to appear for his deposition. Both parties participated in the damage hearing.

The District Court in that case thought there was grave doubt whether the first three counts stated a claim but held that the United States was entitled to contract damages under Count Four. *United States* v. *Fong*, 182 F. Supp. 446, 451 (N.D. Cal. 1959). At the time of the default Count Four alleged facts showing that Fong had breached his contract both by his delay in scrapping some ships and by selling others while they were still unscrapped. The prayer for relief on that count, however, asked only for the liquidated damages provided for in the contract for delay in scrapping.

Initially the court ordered judgment for $516,000 in liquidated damages for the delay in scrapping and an additional $511,000 in actual damages for selling unscrapped ships. 182 F. Supp. at 452-454. On a motion for amendment of the judgment Fong argued that the award of actual damages violated Rule 54(c). The court agreed, holding that Rule 54(c) precluded the recovery by default of anything in excess of liquidated damages. 182 F. Supp. at 454-455. It rejected the government's argument that

Rule 54(c) did not apply because the judgment was entered only after a trial on damages in which Fong participated through counsel. 182 F. Supp. at 455.

On a cross-appeal on this point by the United States, the Ninth Circuit affirmed the holding below that the actual damages for selling unscrapped ships could not be recovered. The appellate court was impressed neither by the *Peitzman* case nor by the sentence from Professor Moore's treatise based on *Peitzman*. It said:

> It must be borne in mind that the mandate of the Rule is very simple, clear and decisive that a judgment "shall not be different in kind from or exceed in amount that prayed for in the demand for judgment" in default cases. Peitzman, supra, was not based upon facts like those in this case, in that, the record was in a "confused condition", and was such that "In this state of the record it is doubtful whether the prayer for punitive damages was in fact increased in amount". Very likely the court in that case in accepting the so-called trial amendment ostensibly increasing the amount of demanded damages, thought that all the court did was to put the statement of the damages demand as to amount back in the very same condition of that statement in the pleading before any changes ever were made, as the parties intended, thus correcting an obvious mistake.
>
> In view of the foregoing, we conclude that for the reasons stated Peitzman, supra, is distinguishable from this case, and should not control or influence our decision here. Moreover, we are unable to escape the explicit and emphatic mandate of Rule 54(c) which unmistakably commands that upon the facts and circumstances of this case the judgment

"shall not be different in kind from or exceed in amount that prayed for in the demand for judgment" at the time of the entry of default. [300 F.2d at 413.]

The *Fong* case is decisively against any right of TWA in this case to recover more than $105 million, exclusive of attorneys' fees and costs. When this case was before the Second Circuit, TWA sought to distinguish *Fong* on two different grounds. It first argued that in *Fong* the government never moved at any time to amend the *ad damnum* clause, while it had made such a motion here after Toolco gave its Notice of Position. This will not do. Either Rule 54(c) states a limitation on default judgments or it does not. If it does, that limitation can hardly be so readily avoided by the formality of offering an amendment. If it does not, an amendment is unnecessary. Rule 15(b), on amendments to conform to the evidence, is no less effective than is Rule 15(a), on formal amendments.

As a second purported distinction offered to the Second Circuit, TWA noted that the complaint in *Fong* asked for liquidated damages while after default the United States also sought actual damages. TWA discerned a difference between an attempt, as in *Fong*, to recover damages "qualitatively different" and an attempt, as it was making, to permit "a purely quantitative difference" in the size of the award. Thus, while its earlier arguments, both in the District Court and in the Court of Appeals, had asked those courts to disregard the first sentence of Rule 54(c) entirely, this second distinction would have had the court rewrite the first sentence to read: "A judgment by default shall not be different in kind but may exceed in amount that prayed for in the demand for judgment." One need

only look at what the first sentence says, as promulgated by this Court, to realize why that purported distinction of *Fong* is untenable.

In opposing certiorari here, TWA abandoned its earlier distinctions and offered still a third reason why *Fong* has no bearing on this case. It described *Fong* as rejecting the government's argument "that the demands made in the insufficient claims could be used to support the higher recovery" and said that the Ninth Circuit had held only that "since each claim seeking actual damages had been found not to state a claim, it would be unjust to import into the single sufficient claim the entirely different theories of damage computation embodied in the insufficient claims." Brief in Opposition at 40. There is discussion in the *Fong* opinion that bears some resemblance to this description by TWA, but the argument is likely to be persuasive only to one who has not read *Fong*. In the opinion at headnote 10, 300 F.2d at 412-413, the Ninth Circuit considered, and rejected for reasons we have quoted, the argument that Rule 54(c) was inapplicable and that the judgment on Count Four was not limited by the demand on that count. After it had concluded that discussion it turned to the alternative argument that the allegations or demands in the first three counts might somehow allow greater relief on Count Four. It considered this, under headnotes 11 and 12, 300 F.2d at 413-414, and rejected this argument also. But the fact that the Ninth Circuit in *Fong* also rejected an alternative argument for greater recovery, not available in this case, does not detract from the force of its rejection of the first argument, the argument that TWA necessarily is making here.

The reason for the limitation imposed by Rule 54(c) is readily apparent. Before a defendant chooses a course that may result in a default judgment against him, he is entitled to know what the consequences to him will be. This is essential as a matter of fairness, if not indeed as a matter of due process. This much is due to every defendant, whether he has appeared or not appeared. A defendant who elects to refuse to continue discovery in order to test the merits of his legal position runs the risk that this may be costly if he is wrong about the law, but he is entitled to know what the maximum cost may be.

Rule 54(c) is, as the Ninth Circuit said, "very simple, clear and decisive." If, as a matter of policy, any change in the rule is indicated, it should be by the usual process of rule amendment, rather than by a vaguely-defined judicial gloss that would make the rule on the books a trap for unwary litigants. This Court should give effect to "the explicit and emphatic mandate" of the rule by holding that the judgment below is a nullity to the extent that it awards TWA, exclusive of attorneys' fees and costs, in excess of $105 million. *Pueblo Trading Co.* v. *El Camino Irrigation Dist.*, 169 F.2d 312, 313 (9th Cir. 1948), *cert. denied*, 335 U.S. 911 (1949); Clark, *Code Pleading* 270 (2d ed. 1947).

IV. CAB Orders Approving Acquisition of Control of a Carrier Create Antitrust Immunity for the Exercise of That Control.

The decision of the Court of Appeals must be reversed because the court below awarded treble damages for conduct immunized from Sherman and Clayton Act penalties.

TWA recognized that the "crux" of its complaint is "Toolco's acts and efforts, through the exercise of its stock control over TWA, to control and dictate the manner and method by which TWA acquired aircraft and the necessary financing therefor" (Doc. 18, p. 5). The Second Circuit agreed that the judgment was based on "the illegality of Toolco's arrogation of all authority for buying aircraft * * *" (449 F.2d at 71, App. A-2776). The "control and dictat[ion]," the "arrogation of all authority," consisted of decisions by Toolco as to when jets should be ordered, whether they should be ordered by Toolco or TWA, how many of the jets ordered were needed by TWA, and whether TWA should lease aircraft for a time until financing could be arranged to purchase them.

As will be demonstrated in Point V, such conduct is completely outside the scope of the antitrust laws. Nevertheless, for present purposes it may be assumed that somehow or other—and the courts below never defined how—the "arrogation of all authority" in some way could have something to do with a violation of the antitrust laws, if only because the complaint so alleges. Whatever antitrust violations may be alleged in the complaint, the fact remains that the damages awarded are solely because Toolco controlled TWA and made decisions that TWA at the damage hearing claimed were wrong.

The CAB twice approved the acquisition of control of TWA, under § 408 of the Federal Aviation Act, and it subsequently approved all transactions between Toolco and TWA, including the temporary leases. Section 414 immunizes any person affected by an order under § 408 from antitrust or other legal restraints to the extent "necessary

to enable such person to do anything authorized, approved or required by such order." It was necessary to Toolco's CAB-approved control of TWA that it make decisions of the kind now complained of for TWA. The CAB, in approving the control, was fully aware that Toolco, if permitted to control, would make these decisions. The power to decide is the power to decide unwisely as well as to make decisions that appear wise in retrospect. If Toolco had not exercised its control over TWA it would have failed to do precisely what the Board by its § 408 order authorized Toolco to do. Yet TWA is now awarded an astronomical sum because Toolco did exercise control. That exercise is now found to be an illegal arrogation of authority.

When this case was first presented to the Court of Appeals in 1964 for interlocutory review of jurisdictional questions, that court ruled that while immunity under § 414 covered the acquisition of control, it could not be said to embrace every conceivable act in the exercise of that control that might possibly constitute a boycott, a tying arrangement, or an attempt to monopolize (332 F.2d at 608, 610, App. A-337-338, A-344). Arguably that was a reasonable decision at that time, when there was nothing before the Court of Appeals but the complaint. But the record of the damage hearing has narrowed the terms of reference from the limitless realm of the possible to a contained set of facts. The damage hearing revealed that the Toolco actions relied upon by TWA were the normal and natural incidents of parental control of a subsidiary. As we shall show later in this section of the argument, it is possible to hypothesize things that Toolco might have done, because

of its relation to TWA, that would not have been within the scope of the approval and the resulting antitrust immunity. The damage hearing has established that these kinds of things are not what this case is about.[18] It is about exactly the kinds of things that the CAB authorized Toolco to do.

Even if the actions of Toolco specified at the damage hearing might, absent CAB approval, have raised questions under the Sherman and Clayton Acts—and we undertake to show in the next section of the brief that they would not —Congress in § 408 specifically reserved for the CAB the task of applying antitrust considerations, along with other public interest factors, in determining whether control relationships like that between Toolco and TWA should be established and maintained, and in § 414 it immunized those relations, when approved by the CAB, from the antitrust laws. This Court has recognized that a meaningful exemption from the antitrust laws is necessary for the Board to effectuate the "regulatory scheme" that Congress intended to create. The key case is *Pan American World Airways, Inc.* v. *United States*, 371 U.S. 296 (1963), the so-called *Panagra* case. Pan American and W. R. Grace

[18] A further reason why the case is in a different posture now than it was in 1964 is that a major portion of the complaint sets out claims for purported violations of the antitrust laws after the voting trust took control of TWA in 1960. Both the Second Circuit on the interlocutory appeal and the CAB in its memorandum filed with this Court when the case was here before relied in part on an argument that the Board no longer had jurisdiction over Hughes and Toolco after Toolco relinquished control in 1960 and that there could be no immunity for post-1960 conduct (332 F.2d at 609, App. A-339); Memorandum of the Civil Aeronautics Board as Amicus Curiae at 18, *Hughes Tool Co.* v. *Trans World Airlines, Inc.*, 380 U.S. 248 (1965)). At the damage hearing TWA abandoned its claims concerning the post-1960 events, as well as its claim of conspiracy with Atlas Corporation to merge TWA with Northeast Airlines, and was awarded damages solely for events that occurred in the exercise of Toolco's control of TWA.

& Co. had jointly established a South American airline, Panagra. A government antitrust action charged that the two owners had unlawfully agreed upon a division of South American routes between Panagra and Pan American and that Pan American had used its 50% control of Panagra to prevent the latter from securing CAB authority to operate from the Canal Zone to the United States. This Court held that the complaint should have been dismissed because the Board had exclusive jurisdiction of the matters alleged in the government's complaint. The Court made particular mention of affiliations approved by the Board under § 408:

> It would also be odd to conclude that an affiliation between a common carrier and an air carrier that passed muster under § 408 should run afoul of the antitrust laws. Whether or not transactions of that character meet the standards of competition and monopoly provided by the Act is peculiarly a question for the Board, subject of course to judicial review as provided in 49 U.S.C. § 1486. [371 U.S. at 309.]

We first discuss the pertinent provisions of the Federal Aviation Act, as well as its legislative history, to show the extensive mandate Congress gave to the Board over antitrust questions. We then examine the various orders of the Board with regard to Toolco's control of TWA. Finally, we examine the facts relied upon for the award of damages to show that they were within the CAB's approval of control and were thus immunized from the effects of laws other than the Federal Aviation Act.

A. The Statutes

When the CAB involved itself in the relationship between Toolco and TWA, it was not performing merely a ministerial function. It was discharging a broad and meaningful responsibility arising from a number of provisions of federal law that were the outgrowth of very serious congressional consideration. The statutes themselves leave little doubt of the mandate Congress gave to the Board.

Most important in the context of this case is § 408(a)(5) of the Federal Aviation Act, which provides that an order of approval by the Board is required where control of an air carrier is to be acquired by another air carrier, by a common carrier, or by a person "engaged in any other phase of aeronautics." Section 408 (b) charges the Board to hold public hearings into proposed acquisitions of this kind and not to approve any that "would result in creating a monopoly or monopolies and thereby restrain competition * * *."

Section 409(a) of the Act sets forth a related requirement for Board approval before persons described above can establish interlocking directorships or interlocking officer relationships. Section 411 of the Act gives the Board power to enjoin after notice and hearing "unfair or deceptive practices or unfair methods of competition in air transportation or the sale thereof." In terms that section is limited to air carriers, but in *Panagra* the Court implied that the Board was free to utilize a broad definition of the term, "air carriers," in order to exercise authority over anticompetitive practices by persons exercising control over an air carrier. 371 U.S. at 311.

In performing its duties under these and other sections of the FAA, the Board is required to measure the public interest in terms of six factors specified in § 102 of the Act, and is charged with "the encouragement and development of an air transportation system * * *," "foster[ing] sound economic conditions" in that transportation, and "the promotion * * * of civil aeronautics."

The responsibility lodged with the Board to prevent anticompetitive abuses of a control relationship continues undiminished after initial approval. Section 408(b) states that Board approval of acquisition of control is to be "upon such terms and conditions as it shall find to be just and reasonable and with such modifications as it may prescribe * * *." It is quite common for the Board to insure continuing supervision by incorporating in approval orders a prohibition against transactions that exceed a specified dollar amount between the controlling party and the carrier and a requirement of special reports detailing dealings between a controlling party and a carrier.[19]

In these cases the Board retains "jurisdiction over the agreement to assure that no anticompetitive practices occur and to impose additional conditions if unforeseen contingencies arise." *National Aviation Trades Assn.* v. *CAB*, 420 F.2d 209, 221 (D.C.Cir. 1969). The Board has statutory authority under § 408(e) to investigate, either on complaint or on its own initiative, to determine whether the restrictions on control are being violated and may require an offender "to take such action, consistent with the provisions

[19] *E.g., Trans World Airlines, Inc., Acquisition of Sun Line Companies*, Order No. 71-1-4, January 4, 1971; *California Eastern Aviation, Inc., Control*, 26 C.A.B. 272, 287 (1958); *Davis-Cutler, Acquisition of Control*, 23 C.A.B. 766, 770 (1956); *Central Airlines, Inc., Control*, 10 C.A.B. 538, 545 (1949); *The Florida Case*, 6 C.A.B. 961, 1001 (1946).

of this chapter, as may be necessary, in the opinion of the Board, to prevent further violation of such provision." Thus the Board can investigate and remedy any change in the activities of either of the parties that it fears may have undue anticompetitive effects. Still another provision, § 1002 (b), (c), gives general authority to the Board to investigate whether any person has failed to comply with any provision of the FAA or any requirements established by the Board thereunder and to compel compliance with the Act if it finds a violation. Finally, § 1005(d) empowers the Board "to suspend or modify" any order "upon such notice and in such manner as [it] shall deem proper." If a control relationship should develop along undesirable lines, or in an unexpected manner, the Board has ample power under the provisions just cited to withdraw its approval or otherwise to remedy the matter.[20]

The foregoing review of the Board's statutory authority demonstrates the seriousness of purpose with which Congress acted in turning over to the Board the responsibility for controlling anticompetitive abuses in the business of air transportation. If there were any doubt that Congress wished the CAB to be the principal moving force in this area, it would be removed by § 414. That section relieves any person affected by an order under §§ 408, 409, or 412 of the Act from antitrust or other legal restraints to the extent "necessary to enable such person to do anything authorized, approved or required by such order."

---

[20] The Board also has power to keep itself informed about the relationships of parties after it has approved control. Under § 408(d) the Board can subject the controlling party to the same requirements relating to accounts, records, and reports as an air carrier. Section 415 allows the Board to require from the controlling party "full and complete reports and other information." The Board has in fact promulgated elaborate reporting regulations. 14 CFR §§ 200 *et seq.*

The broad power vested in the CAB on the face of the statutes is confirmed also by the legislative history of the relevant provisions. Section 7 of the Air Mail Act of 1934, 48 Stat. 936, had prohibited control of an air carrier by a company engaged in any phase of the aviation industry.[21] In 1935 a Federal Aviation Commission, appointed by President Roosevelt to recommend a comprehensive policy for protecting the public interest in light of the rapid growth of the aviation industry, urged that that blanket prohibition should be relaxed and that responsibility for protecting the public interest against anticompetitive practices in the industry should be turned over to a new regulatory agency. The agency would be in a position to preserve competition while balancing this against other public interest considerations, since "the door should be left open as far as possible for a free flow of investment capital into air transportation in the interest of a strengthening of its structure and the improvement of its facilities." *S. Doc. No. 15*, 74th Cong., 1st Sess. 69 (1935). Congress responded to this recommendation in the Civil Aeronautics Act of 1938, 52 Stat. 973, reenacted without substantive change, so far as the presently relevant provisions are concerned, in the Federal Aviation Act of 1958, 72 Stat. 731. As the Court said in *Panagra*, "since 1938, the industry has been regulated under a regime designed to change the prior competitive system." 371 U.S. at 301.

In the Senate debates on the 1938 statute, Senator McKellar questioned the wisdom of giving a commission the

[21] Prior to the 1934 Act, the control of air carriers by airplane manufacturers and holding companies had led to abuses. *Hearings Before the Special Senate Committee on Investigation of Air Mail and Ocean Rail Rates*, 73rd Cong., 2d Sess. (1934).

power to permit combinations in restraint of trade. Senators Truman and McCarran responded by emphasizing the fullness and completeness of antitrust authority intended to be exercised by the new agency under the Act. 83 Cong. Rec. 6728-6729 (1938). The statute delineated the authority of the CAB to enforce antitrust policies more explicitly than in any similar regulatory legislation.[22] Both the statutes and the legislative history teach that the Board was and is intended to control the relation of antitrust policies to other considerations of the public interest in a broad and meaningful way, without any fear of intrusion from any other governmental body.

B. The CAB Orders

As we noted at the outset of this section, TWA says that the "crux" of its complaint involves Toolco's use of its control over TWA "to control and dictate the manner and method by which TWA acquired aircraft and the necessary financing therefor" (Doc. 18, p. 5). The courts below held that these activities were not necessarily within the scope of the various orders entered by the CAB pursuant to § 408. Yet an examination of the orders reveals that their subject matter consists precisely of what TWA calls the "crux" of its complaint. Further, the records pertaining to the orders indicate the Board's active and continuing concern with the very factual "backdrop" that TWA brought forward at the damage hearing. If the result below is sustained, the purported exemption from the antitrust laws expressed in § 414 is a dead letter and the CAB can exercise no meaningful function under § 408.

---

[22] See, *e.g.*, the comparable provisions of the Shipping Act, 46 U.S.C. § 814, the Interstate Commerce Act, 49 U.S.C. §5(2), the Federal Communications Act, 47 U.S.C. §§ 221, 222, and the Federal Power Act, 16 U.S.C. § 824b.

The orders of the Board approving Toolco's control of TWA are described in the Statement of Facts.[23] The basic order, issued in 1944, approved the acquisition by Toolco of approximately 45% of the common stock of TWA (6 C.A.B. 153, App. A-3297). A modifying order in 1950 permitted TWA to increase its stock ownership to more than 70% and to seat a majority of Toolco nominees on the TWA board (12 C.A.B. 912, App. A-3333).

Conditions imposed by the Board in its 1944 order, reaffirmed in 1950, limited transactions between the companies to those "involving complete items of property, the price of which does not exceed $200 each, with the further limitation that the total annual expenditure involved in such commercial transactions by either party shall not exceed $10,000" (6 C.A.B. at 158, App. A-3306). Thus from 1944 to 1960 every acquisition or lease of aircraft by TWA from Toolco and each financing of TWA by Toolco required specific Board approval. The various applications filed by TWA with the Board requesting this approval described in detail the nature of the transactions, the reasons for them, and their benefit to TWA. Extensive exhibits containing the terms and conditions of the transactions accompanied each application. The orders issued by the Board approving the transactions were based on § 408 and were in the form of modifications to the original control order (App. AX-2202, AX-2226, AX-2237, AX-2245, AX-2260). Thus the Board regarded its transactional orders as continuations of the original proceeding approving Toolco's acquisition of control. Each of the modification orders rested on a stated finding by the Board that the transactions were "just and reasonable and in the public interest" (*e.g.*, App. AX-2261).

---

[23] Pp. 6-9, *supra*.

The orders reflect on their face a process of continuous and comprehensive supervision by the Board, in precisely the manner that Congress intended. This is confirmed by the hearings that preceded the basic control orders in 1944 and 1950.

In its opinion accompanying the 1944 order (6 C.A.B. 153, App. A-3297) the Board examined in great detail the specific effects upon competition of the foreseeable actions that Toolco might take with respect to TWA once control was approved. It was precisely because Toolco had the rights to purchase planes, some of which might be held for resale to commercial airlines, that the Board found that Toolco was potentially a dealer and thus was engaged in a phase of aeronautics, so that Board approval of Toolco's control was required (6 C.A.B. at 156, App. A-3302). The Board was aware that it was Toolco that had contracted with Lockheed for the purchase of Constellations, intended for TWA, and that that arrangement had been made "to give TWA the benefit of the credit and financial standing of Hughes Tool in a transaction involving substantial financial responsibility" (6 C.A.B. at 155, App. A-3300-3301). The Board noted the possibility that TWA might be "forced," through Toolco's control, to purchase more planes than TWA's needs required and said that it was imposing conditions to "insure against any temptation which may later come to [Toolco] to take advantage of the relationship to its own profit and to the detriment of the public interest" (6 C.A.B. at 156, App. A-3302-3303). It found that the limit it put on transactions between Toolco and TWA would "protect the public interest from any improper coercion of the air carrier by a controlling company on account of any interest which that controlling company may have in some other phase of aeronautics" (6 C.A.B. at 157, App. A-3304).

When Toolco proposed to increase its stock interest in TWA from 45% to more than 70%, as a part of a financing scheme to rescue TWA from impending bankruptcy shortly after the war, the CAB found that this would be a further acquisition of control, for which its approval was required (9 C.A.B. at 381, App. A-3320). It ordered a hearing to determine if this further acquisition would be consistent with the public interest. That hearing ranged over the entire 14-year history of the Toolco relationship to TWA and the full spectrum of activities involved. Toolco's management policies were subjected to close analysis in the very areas for which TWA has now been awarded damages. Careful scrutiny was given to Toolco's participation in the acquisition of equipment by TWA (12 C.A.B. at 207, 210, 217, App. A-3363-3364, A-3368-3369, A-3383) and to the role of Toolco in obtaining financing for TWA (12 C.A.B. at 208, 216-217, App. A-3365-3366, A-3382-3383). The Board knew that "TWA was required to come to Toolco to obtain consent of the latter before purchasing additional equipment" (9 C.A.B. at 391 n. 18, App. A-3330) and that in practice it was Toolco that contracted with manufacturers for planes intended for TWA (12 C.A.B. at 208, App. A-3365).

The Board, in its 1944 and 1950 orders, did not merely approve the acquisition by Toolco of a financial interest in TWA. It approved, as § 408(a)(5) requires and as its orders show on their face, acquisition of "control." The Board's public counsel was unhappy with the further acquisition in 1950, and noted the possibility that the Board might require that the additional stock to be acquired by Toolco not be voted, but even he thought that such a limitation would be impractical and undesirable (12 C.A.B. at 215, App. A-3380). It was with regard to these particular

parties that the Board defined "control" as used in § 408 as meaning "the existence of a right or power to direct or dominate, whether actually exercised or existing in potential use" (9 C.A.B. at 386, App. A-3321). It was aware that the further acquisition would give Toolco "complete actual and legal control" (12 C.A.B. at 197, App. A-3342), that Toolco would "manage and direct the usual day-to-day business and financial affairs of the airline" (9 C.A.B. at 387, App. A-3323), and that Toolco had not been willing to give further financial assistance to save TWA from bankruptcy "without assurance that the management of the carrier would be replaced and the carrier reorganized and run in agreement with the wishes of the principal stockholder and/or its representatives" (12 C.A.B. at 206, App. A-3360).

With all of this knowledge before it, and with full understanding of exactly what control by Toolco would mean, the Board approved the further acquisition of control. The record showed that benefits to TWA from having Toolco as its principal owner had been "real and substantial" (12 C.A.B. at 216, App. A-3381). Toolco's continued engagement in certain phases of aeronautics was in the public interest and did not conflict with its control of an air carrier (12 C.A.B. at 216, App. A-3381). The record did not permit "any other conclusion than that * * * the further acquisition of control should be approved as being consistent with the public interest and the requirements of the Act" (12 C.A.B. at 193, App. A-3334).

In the light of all that the Board knew and of all that it said, the conclusion is inescapable that the Board, with its eyes wide open, approved giving Toolco the power "to control and dictate the manner and method by which TWA

acquired aircraft and the necessary financing therefor." Far from being an illegal "arrogation of all authority," this was a legitimate exercise of power approved by the Board under § 408 and thus immunized by § 414.

C. The Damage Award

Whatever may have seemed to be the case in 1964 when the Second Circuit considered the immunity issue on the basis of the complaint alone, it is now clear that the damages awarded to TWA are based on decisions that Toolco made for its subsidiary about acquisition and financing of aircraft and are, therefore, for exercising precisely that control that the Board authorized Toolco to have.

(1) The largest item in the award, $27.6 million before trebling, was for late delivery of jet aircraft and because the jet fleet was cut back to 47 planes rather than the 63 planes originally ordered. The initial order for Boeing jets was given promptly after negotiations with Convair about manufacture by that company of a long-range jet suited to the unique requirements of TWA had fallen through. The jet orders were reduced in 1959 when Toolco, in consultation with TWA, determined that the larger fleet of first-generation jets was not needed. Whatever may be said in hindsight about the sagacity of these management determinations, it is difficult to think of decisions that are more traditionally the type of business judgment that a parent would make concerning the policies of its subsidiary. "'* * * [I]nevitably the controlling company, by virtue of its investment in the acquired carrier, will endeavor to make itself accountable—as indeed the acquirer here under scrutiny had—for the managerial efficiency, the operating economy, and the financial integrity of the controlled car-

rier" (12 C.A.B. at 196, App. A-3341). The discussion earlier of the CAB control orders shows that the Board was fully aware, when it approved the acquisition of control, that Toolco would make decisions of this kind for TWA. As late as December, 1960, the Board said that "we have not been unaware of TWA's problems" and pointed to the fact that TWA had not arranged financing for its jet fleet as early as had its major competitors and that it had ordered fewer planes than they had. *Trans World Air., Control by Hughes*, 32 C.A.B. 1363, 1364-1365 (1960) (App. A-3403, A-3408-3409). Yet with that awareness the Board took no action to revoke its approval of control[24] and instead approved, as modifications of the original control orders, each of the transactions by which TWA acquired jets.

(2) The award of $5.3 million before trebling because some of the jet aircraft were temporarily leased by TWA from Toolco is an even more obvious example. The decision that the planes should be leased to the airline until permanent financing could be arranged was well within the general control approved by the CAB in 1944 and 1950 and, in this instance, it was the subject of specific Board approval. In five separate orders the Board approved the lease of planes from Toolco to TWA, finding that these transactions "do not violate the original purpose of the Board in impos-

---

[24] The Board on its own motion did order an investigation in 1956 when thought was briefly given to Toolco's manufacturing jets for TWA. See note 51, p. 109, *infra*.

On June 23, 1960, the Board approved a proposed plan for permanent financing that could have increased Toolco's ownership of TWA stock from 78% to 90%. The Board found that "in view of the overwhelming control" already exercised by Toolco, "any increase of control is insignificant and does not call for a reexamination of the relationship under section 408". *Trans World Air., Control by Hughes*, 31 C.A.B. 982, 983 (1960) (App. AX-2287, 2288).

ing the restrictions contained in Order 3210, and * * * [are] just and reasonable and in the public interest."[25] Even if, as TWA claims, the Board was unaware of, and did not approve, a supposed condition accompanying the leases that TWA would thereafter purchase aircraft only from Toolco, this does not alter the situation. The Board had been fully aware, from at least 1950, that Toolco would decide what planes TWA would acquire and that Toolco would be the nominal purchaser of planes for TWA's use.[26] Furthermore, the acquisition thereafter of any aircraft by TWA from or through Toolco would be subject to CAB approval under § 408.

(3) Somewhat more than half a million dollars, before trebling, was based on added personnel costs to TWA because certain Convairs were not delivered on the schedule that had been agreed to. TWA's case is that these delays would not have occurred had not Toolco controlled TWA, but again the point is that this control was approved by the CAB and thus immunized from the antitrust laws.

(4) The $12.4 million before trebling awarded because of retroactive application of changes made in TWA's accounting practices 2½ years after this suit was instituted are dependent on the validity of the other three awards of damages. They have no independent significance for purposes of the control relationship and its status under § 408.

---

[25] Orders E-13542, Feb. 26, 1959 (App. AX-2202); E-13873, May 15, 1959 (App. AX-2226); E-14169, July 1, 1959 (App. AX-2237); E-14504, Sept. 30, 1959 (App. AX-2245); E-14877, Jan. 29, 1960 (App. AX-2260).

[26] Further, as discussed at pp. 142-145, *infra*, the damages were awarded because leasing is costlier than purchase, not because of the supposed condition.

D. The Decisions Below

The decision by the Court of Appeals that §414 is no bar to the recovery here will result in confusion about the proper role of the courts in relation to the Board and about the extent to which one who acquires control of an air carrier with CAB approval can rely on an order by the CAB approving a transaction as a grant of antitrust immunity in conducting the normal business affairs of a company with such a control relationship. The decision leaves it to the courts to determine when an approved transaction is immunized and when it is not, depending on such subjective criteria as the "backdrop" and the court's perception of the extent to which the CAB was aware of all the facts. But the scope of the Board's power to confer immunity does not turn, as the Court of Appeals mistakenly thought, on whether the courts or the Board are more competent to pass on antitrust matters. Congress has given an express power to confer immunity in § 414. It did so for a purpose —to enable the Board to fashion and apply a competitive standard in the light of public interest factors detailed in § 102 of the Act. "It is not for this Court, or any other, to override a policy, or an exemption from one, so clearly and specifically declared by Congress, whatever may be our views of the wisdom of its action." *McLean Trucking Co.* v. *United States*, 321 U.S. 67, 79 (1944).

Thus it misses the mark to say that the Board is not "any more qualified to consider such charges than the federal courts, which daily encounter and resolve antitrust problems" (332 F.2d at 609, App. A-341). The whole point is that Congress has determined that the extent of permissible competition in the aviation industry is too complex to

be resolved only in antitrust terms. As the Court noted in *Panagra*, the Board "has its special standard of the 'public interest' as defined by Congress. * * * If the courts were to intrude independently with their construction of the antitrust laws, two regimes might collide." 371 U.S. at 308, 310.

Congress has directed the Board to make a broader inquiry than is open in an antitrust action. Under the first proviso of § 408 the Board is prohibited from approving any transaction that "would result in creating a monopoly or monopolies and thereby restrain competition * * *." At the same time, the Board itself "has properly concluded, in light of the immunity from the antitrust laws conferred by § 414, that it must consider anti-competitive effects less extreme than those limned in the proviso in determining whether the transaction will 'be consistent with the public interest,' as defined in § 102 * * *." *Butler Aviation Co.* v. *CAB*, 389 F.2d 517, 519 (2d Cir. 1968). See also *National Aviation Trades Assn.* v. *CAB*, 420 F.2d 209, 213 (D.C.Cir. 1969). But if there is an anticompetitive effect short of a monopoly, the Board may still approve if it finds that, in the light of all the factors listed in § 102, the overall effect is in the public interest. Sections 408 and 414 become meaningless if a court, taking a monocular view of only the effect on competition, can award huge damages for a transaction that the Board, after carefully weighing any injury to competition against the benefits that the transaction will provide, has found to be in the public interest.[27]

---

[27] Thus Professor Davis notes that "* * * the congressional policy expressed in the Federal Aviation Act includes both something more and something less than the antitrust policy." He suggests that a proper accommodation of CAB regulation with the antitrust laws is to limit judicial action applying antitrust policies to proceedings on judicial review of Board orders. Davis, *Administrative Law Treatise* § 19.06, at 634 (1970 Supp.).

Suppose, for example, that when TWA was on the verge of bankruptcy in 1946, the only company with sufficient resources and interest to enable TWA to survive had been Lockheed. Suppose further that the CAB approved acquisition of control by Lockheed, recognizing the obvious restriction on competition from such a vertical integration but finding that that was outweighed by the public interest in having a strong and solvent TWA. On the theory of the court below, Lockheed would have been vulnerable to an antitrust action if, while it exercised control, TWA, with CAB approval, had purchased Lockheed planes.

The Board understands its powers in this regard. See, for example, its recent order authorizing joint action by TWA, American, and United to reduce scheduled capacity in certain markets. *Application of Trans World Airlines, Inc., et al.*, Order 71-8-91 (August 19, 1971). The Board expressly noted that this joint action was inconsistent with the antitrust laws but approved it—and thereby gave antitrust immunity, 41 Op. Atty. Gen. 333 (1957)—because of the financial distress the industry is suffering. The Board said, at 5, that

> in the present unusual circumstances, approval of the three-carrier agreement notwithstanding its inconsistency with the antitrust principles is required to meet serious transportation needs and secure important public benefits.

In the present case antitrust liability was found on the novel theory of what was termed "potential competition." Yet it was precisely because such "potential competition" existed, that is, because Toolco's aeronautics activities made it conceivably a potential supplier to air carriers, that Toolco's acquisition of TWA required CAB approval. Whatever "independent economic significance" Toolco can be said to

have had, or whatever "potential competition" it may have represented, was the basis of the CAB's original interest in the relationship and was examined at great length by the Board prior to each of its approvals (6 C.A.B. at 155-156, App. A-3299-3301; 9 C.A.B. at 382, App. A-3314; 12 C.A.B. at 216, App. 3381).

It is true, as noted in *Panagra*, that the Federal Aviation Act has not completely displaced the antitrust laws, and that "on the civil side violations of antitrust laws other than those enumerated in the act might be imagined." 371 U.S. at 305. This was said in discussing the Board's authority under § 411 and that section is not among the sections specified in § 414 in defining immunity. The Court's remark just quoted was in a context "apart from orders which give immunity from the antitrust laws by reason of § 414 * * *." *Ibid.* Nevertheless it is possible to imagine acts that a controlling company might do, by virtue of its control of an air carrier, that would not be within the immunity conferred by a § 408 order. Suppose, for example, that Toolco refused to sell drill bits except to companies that agreed to patronize TWA whenever possible. Or that Toolco agreed to buy only Boeings for TWA in exchange for Boeing's agreement to buy all its drill bits from Toolco. Arrangements of this kind with third parties might well be outside the scope of the immunity. But that is not our case. We have here only the normal exercise of the controlling party's right to make important decisions for its subsidiary. This is at the heart of the Board-approved control and thus of the § 414 immunity.

In *Panagra*, the Court went on to say:

> Limitation of routes and divisions of territories and *the relation of common carriers to air carriers* are basic in this regulatory scheme. The acts charged in

> this civil suit as antitrust violations are precise ingredients of the Board's authority in granting, qualifying, or denying certificates to air carriers, in modifying, suspending, or revoking them, *and in allowing or disallowing affiliations between common carriers and air carriers.* [371 U.S. at 305; emphasis added.]

Equally the relation between air carriers and persons engaged in aeronautics is "basic in this regulatory scheme" and is a "precise ingredient" in "allowing or disallowing affiliations." Congress has said that what the Board has joined together it is not for the antitrust court to rend asunder.

TWA has suggested that the Board "is without jurisdiction under the Federal Aviation Act over either the acquisition of equipment by air carriers or their financing." Brief in Opposition to Certiorari at 44. It is difficult at this late date to suggest that the restrictions the Board imposed in its original orders on acquisition of equipment and the series of subsequent orders approving particular equipment acquisitions and financing arrangements were all *ultra vires* and that the Board for nearly 30 years has been arrogating an authority it does not have. The unsoundness of this suggestion can be easily illustrated. Suppose that Toolco had obtained and resold to TWA the full 63-jet fleet originally ordered. Suppose that the Board, conscious of the possibility "that TWA might be forced, through the control exercised by Hughes Tool, to purchase more than the economic operations of TWA require * * *" (6 C.A.B. at 156, App. A-3302), had carefully examined the transaction and approved TWA's acquisition of that many jets from Toolco. On TWA's narrow view of the Board's jurisdiction, TWA could now claim substantial antitrust dam-

ages for the money it lost if, with hindsight, 63 jets turned out to be more than it needed, and it could do this despite CAB approval of acquisition of that large a fleet.

The decision below reflects a lack of confidence in the administrative process that Congress saw fit to establish and in the ability of the Board to make knowledgeable decisions. Since 1938 Congress has carefully evolved a system considered by it to be most appropriate for promoting the orderly development and functioning of the commercial aviation industry in this country. Congress intended that the Board should have the responsibility, within a broad regulatory scheme, for adjusting competitive practices within the aviation industry to make possible the provision of assistance to carriers from various segments of the industry and the economy when that is found to be in the best interests of the public.

The case history of the relation between Toolco and TWA reflects that through the use of control of the carrier by Toolco, as approved by the Board, Toolco rescued TWA from financial disaster after World War II, developed TWA's air fleet, aided it in becoming one of the most important air carriers in the country, and assisted it in entering the jet age. Perhaps, as the new management of TWA contends, Toolco made some mistakes in the course of its exercise of control, but in human affairs it would be unusual if this were not the case. The courts below have, in effect, found Toolco's stewardship to have been unlawful by measuring it against the rigid principles of the antitrust laws rather than by the more supple test of the public interest that Congress has provided for this industry.

The decision below is plainly inconsistent with §§ 408 and 414 of the Act and with this Court's holding in *Panagra*. At a time when many air carriers are in difficult finan-

cial circumstances, the decision below, if affirmed, would effectively deter anyone else in any phase of aeronautics from coming to a carrier's assistance, because the antitrust immunity that CAB approval and § 414 seem to confer would have become "only a promise to the ear to be broken to the hope, a teasing illusion like a munificent bequest in a pauper's will." *Edwards* v. *California*, 314 U.S. 160, 186 (1941) (Jackson, J., concurring).

V. The Acts of Defendants Were Not In Violation of the Antitrust Laws.

In the preceding point of the Argument we have discussed the effect on antitrust liability of CAB approval of acquisition of TWA by Toolco and of the transactions between them. For purposes of the present point we assume that the effect of CAB approval is narrower than we have there contended and that the antitrust immunity, granted by § 414 of the Federal Aviation Act and by the last sentence of § 7 of the Clayton Act, extends to the acquisition of control itself but not to the exercise of control. Even on that assumption, the acts of defendants alleged in the complaint are not violations of the antitrust laws.

The complaint alleged that Toolco had restrained and monopolized the trade and commerce of supplying aircraft to air carriers in general and to TWA in particular. Basically it asserted that the defendants foreclosed suppliers of aircraft other than Toolco from supplying the TWA market. So long as TWA could rely on the conclusory allegations of the complaint it could perpetuate the myth that TWA was forced to buy Toolco planes instead of planes of other manufacturers and suppliers. The damage hearing exposed this for the myth it was. TWA was not awarded damages because any other supplier was excluded from the TWA mar-

ket nor because of any restraint on trade of suppliers; the award is based entirely on harm TWA claims to have suffered because Toolco decided for TWA when and how TWA would acquire planes from Boeing and Convair.

Though this case has gone on for many years and produced many decisions from the courts below, at no point has any court specified how defendants' acts violated the statutes plaintiff relies on. The Court of Appeals thought that "the default had the effect of admitting or establishing that the acts pleaded in the complaint violated the antitrust laws * * *" (449 F.2d at 70, App. A-2772). Apparently it lacked full confidence in that position—and wisely so, as we have shown in Point II of the Argument. Accordingly it outlined six different theories on which it thought that an antitrust violation could be found (449 F.2d at 68-69, App. A-2770-71). All six of those theories are fatally undercut by one or both of the following two facts: (1) Toolco was lawfully the parent of TWA; and (2) Toolco was not in competition with manufacturers or suppliers of commercial aircraft.

A. The Parent-Subsidiary Relationship

Because the Court of Appeals ignored the significance of the fact that Toolco and TWA were not independent entities, and that Toolco was lawfully in control of TWA by its 78% stock ownership, approved by the CAB, the court below has awarded $145 million in damages under the antitrust laws for what is at most a mismanagement claim. The court below thought that the judgment was based on "the illegality of Toolco's arrogation of all authority for buying aircraft

* * * " (449 F.2d at 71, App. A-2776), when in substance TWA's claims amounted to nothing more than that normal management decisions made by Toolco for its subsidiary were detrimental to TWA.

A controversy between these two Delaware corporations about mismanagement would have been litigated in a state court and TWA's recovery of *single* damages would have been conditioned on a showing that Toolco had breached its fiduciary duties and had been guilty of "gross and palpable overreaching."[28] The Court of Appeals, by ignoring the critical importance of the parent-subsidiary relationship, has allowed a *three-fold* recovery of damages without even a threshold showing of the elements of a mismanagement claim.[29]

The supposed "arrogation of all authority" consisted of Toolco's deciding that it would order jet aircraft for TWA instead of TWA's ordering precisely the same aircraft from the same manufacturers, the decision as to when these aircraft should be ordered, the later determination that it

---

[28] *E.g., Sinclair Oil Corp.* v. *Levien*, 280 A.2d 717, 722 (Del. 1971); *Getty Oil Co.* v. *Skelly Oil Co.*, 267 A.2d 883, 888 (Del. 1970); *Meyerson* v. *El Paso Natural Gas Co.*, 246 A.2d 789, 794 (Del. Ch. 1967). See generally Note, *The Fiduciary Duty of Parent to Subsidiary Corporation*, 57 Va.L.Rev. 1223 (1971).

[29] TWA can hardly assert that the facts are unrelated to a mismanagement claim. After instituting the instant action in federal court, TWA filed a mismanagement suit in the Delaware Court of Chancery alleging substantially the same facts it had set forth in its antitrust complaint. As a matter of fact, the federal complaint, stripped of its antitrust verbiage and with the added claims of mismanagement and violation of fiduciary duties, is identical for all practical purposes with the state complaint. That state action has not yet been dismissed.

would be unwise to acquire too many first-generation jets and that TWA should take only 47 of the 63 jets initially ordered, and the decision that TWA should lease aircraft for a time until financing could be obtained to purchase them.

If Toolco, by virtue of monoply power or huge resources or predatory tactics, had been able to force decisions of this kind on an independent TWA, the case might arguably fit within antitrust concepts. But for Toolco to make these decisions for a subsidiary it has lawfully acquired was merely to do what a parent normally does. This Court has recognized repeatedly that dealings that would be antitrust violations if engaged in by independent entities can be lawful if the parties are parent and subsidiary. In *United States* v. *Columbia Steel Co.*, 334 U.S. 495 (1948), for example, the Court established that exclusive dealing between parent and subsidiary is a lawful and normal business practice, even though it might well violate the antitrust laws if the companies were unrelated.

> A subsidiary will in all probability deal only with its parent for goods the parent can furnish. That fact, however, does not make the acquisition invalid. [334 U.S. at 523.]

A fortiori the dealings themselves are not illegal. See also *Standard Oil Company of California* v. *United States*, 337 U.S. 293 (1949), where the Court held that an exclusive dealing arrangement imposed on independent dealers violated § 3 of the Clayton Act though recognizing that the same arrangement could have been imposed on company agents, and *United States* v. *Arnold, Schwinn & Co.*, 388 U.S. 365 (1967), explicitly distinguishing between inde-

pendent distributors and those whose function was essentially that of agents or salesmen in determining the propriety of restrictions on resale.

Commentators are agreed that parent-subsidiary relations are not subject to the same standards that govern independent enterprises.[30] The report to Attorney General Brownell by an eminent committee was quite emphatic on this point:

> It seems indeed inconceivable to hold *per se* illegal the mere fixing by a parent of a subsidiary's price or production, or the selection by the parent of those persons with whom its subsidiary may or may not deal. [*Report of the Attorney General's National Committee To Study The Antitrust Laws* 35 (1955).]

The fact of the matter, in view of the parent's responsibilities to its own shareholders, is that "the parent not only has a right to control its subsidiaries, but a duty to do so." Stengel, *Intra-Enterprise Conspiracy Under Section 1 of The Sherman Act*, 35 Miss. L.J. 5, 21 (1963).

At the heart of any antitrust claim is the concept that the offending party has wrongfully exercised, or sought to exercise, control over the economic and competitive decisions of an independent business entity. See *United States* v. *Topco Associates, Inc.*, 92 S.Ct. 1126, 1135-1136 (1972). Virtually every antitrust violation—price-fixing, tying, exclusive

---

[30] See generally Krause, *The Multi-Corporate International Business Under Section 1 of the Sherman Act — Intra-Enterprise Conspiracy Revisited*, 17 Bus. Law. 912 (1962); McQuade, *Conspiracy, Multicorporate Enterprises, and Section 1 of the Sherman Act*, 41 Va.L.Rev. 183 (1955); Willis & Pitofsky, *Antitrust Consequences of Using Corporate Subsidiaries*, 43 N.Y.U.L.Rev. 20 (1968).

dealing, territorial allocations, exclusion of competitors—is based upon a defendant's attempt to control what he has no right to control—the prices of his competitors, his customer's choice of suppliers, a competitor's entry into a market. TWA, however, had no claim to economic independence, since it was lawfully acquired by Toolco as the courts below recognized (214 F. Supp. at 109, App. A-261; 332 F.2d at 608, App. A-336). TWA cannot complain that Toolco controlled what it had no right to control, but only that it did not exercise that control in a manner consistent with what TWA now claims were its best interests. That is a mismanagement claim rather than an antitrust claim.

A subsidiary does have standing under the antitrust laws to challenge the legality of its acquisition by its parent. *E.g., Gottesman* v. *General Motors Corp.*, 414 F.2d 956 (2d Cir. 1969), *cert. denied*, 403 U.S. 911 (1971); *Allis-Chalmers Mfg. Co.* v. *White Consolidated Indus., Inc.*, 414 F.2d 506 (3d Cir. 1969), *cert. denied*, 396 U.S. 1009 (1970). Once that legality has been established, however, as it has here by virtue of CAB approval, the subsidiary should not—and until this case, did not—have capacity to make antitrust claims concerning the mere exercise of parental control. The decision of the Court of Appeals creates a hitherto unimagined[31] potential for actions by subsidiary corporations and minority stockholders. If the arrogation of all authority for management decisions of a subsidiary is a violation of the antitrust laws, then any decision a parent makes for its subsidiary that appears wrong by the wisdom of hindsight will give rise to a claim for treble damages. No

[31] None of the commentators who have studied the question of intra-enterprise conspiracy—see note 30, *supra*—has considered the possibility of a subsidiary suing its parent for restraining the subsidiary's trade. Until now the question has been whether and when a third party or the government could successfully claim that corporate affiliates had conspired with one another.

need will remain to prove breach of duty or "palpable overreaching," and damages caused by a parent's misjudgment will be recoverable thrice over. All the subsidiary need do is invoke the language of antitrust to create exclusive federal jurisdiction over what until now has been a state law claim that in many instances could only be brought in the state courts.[32] With the tantalizing prospect of treble damages as a lure, few plaintiffs are likely to resist the invitation to make a federal case out of it.[33]

In the antitrust laws, as in the securities statutes, Congress "did not seek to regulate transactions which constitute no more than internal corporate mismanagement." *Superintendent of Insurance* v. *Bankers Life & Casualty Co.*, 404 U.S. 6, 12 (1971). The antitrust theories the Court of Appeals thought possibly applicable break down when applied in a parent-subsidiary context.

One theory mentioned by the Court of Appeals was "enforcement of an illegal boycott" (449 F.2d at 69, App. A-2770). The hypothesis fails for the simple reason that there was no "boycott." Each of the cases cited by the Court

---

[32] A different panel of the Second Circuit refused to convert a state claim into a more complex federal action when, one day before the decision in this case came down, it held that conclusory allegations in a complaint are not enough to "bootstrap" a "garden-variety customer's suit against a broker for breach of contract" into a violation of the Securities Exchange Act. *Shemtob* v. *Shearson, Hammill & Co.*, 448 F.2d 442, 445 (2d Cir. 1971).

[33] [T]his is one of those cases, not unfamiliar in treble-damage litigation, where injury resulting from normal business hazards is sought to be made redressable by casting the affair in antitrust terms." *Poller* v. *Columbia Broadcasting System, Inc.*, 368 U.S. 464, 474 (1962) (Harlan, J., dissenting). That this is the wrong moment in history to invite more antitrust suits is evident from the fact that the number of private antitrust actions commenced has increased from 228 in 1960 to 1445 in 1971. *1971 Annual Report of the Director of the Administrative Office* II-108.

of Appeals for this theory[34] involved an agreement by one group of enterprises not to deal with other businesses, with the objective of destroying the other businesses or coercing them into certain desired conduct.

In this case there is no credible suggestion, nor could there be, that Toolco's decision to purchase planes for TWA was designed to coerce or destroy Boeing, Convair, Douglas, or any other aircraft manufacturer. They could hardly have been coerced or destroyed since any loss of sales to TWA was replaced by sales to Toolco. From the viewpoint of these supposedly "boycotted" manufacturers, the "restraint" was no different from what occurs whenever any purchasing decision is made. A decision to buy from one firm is necessarily a decision not to buy from another, but that does not make the decision an unlawful restraint of trade or boycott. See *Chicago Board of Trade* v. *United States*, 246 U.S. 231, 238 (1918). That the decision is made by a parent for its subsidiary does not make unlawful a decision that the subsidiary could lawfully have made for itself. *Hudson Sales Corp.* v. *Waldrip*, 211 F.2d 268 (5th Cir.), *cert. denied*, 348 U.S. 821 (1954); *Alpha Distributing Co. of California* v. *Jack Daniel's Distillery, Inc.*, 207 F. Supp. 136 (N.D.Cal. 1961), *affirmed per curiam*, 304 F.2d 451 (9th Cir. 1962). If Toolco's decision that it, rather than TWA, would purchase aircraft—a decision that did not impinge in any way on the economic freedom of an independent party and that was made "to give TWA the benefit of the credit and financial standing of Hughes Tool * * *" (6 C.A.B. at 155, App. A-3300-3301)—was a boycott, then every parent's selection of suppliers for its

---

[34] *Fashion Originators' Guild* v. *Federal Trade Commission*, 312 U.S. 457 (1941); *Klor's Inc.* v. *Broadway-Hale Stores*, 359 U.S. 207 (1959); and *United States* v. *New York Great Atlantic & Pacific Tea Co.*, 173 F.2d 79 (7th Cir. 1949).

subsidiary can be converted into a boycott by denominating it as such in a complaint. See Willis & Pitofsky, *Antitrust Consequences of Using Corporate Subsidiaries*, 43 N.Y.U.L. Rev. 20, 49 (1968).

TWA acquired Boeing jets and Convair jets, not Toolco jets, and it wanted Boeing jets and Convair jets. To Boeing and Convair, whether TWA or Toolco ordered the jets was immaterial. Boeing viewed TWA and Toolco as one and the same customer, and the right to receive the planes could not be assigned without the consent of the manufacturers. Moreover, Boeing and Convair produced exactly the same number of jets and sold them at the same price, whoever placed the order. The decision to cut back on the orders permitted the sale or lease of certain of these jets to others but the trade of Boeing was in no way restrained or monopolized because with Boeing's consent Toolco assigned its orders for six aircraft and Boeing then sold the aircraft to Pan American. The same is true of the lease of the Convairs to Northeast. The leasing of jets to TWA pending permanent financing affected the manufacturers not at all (and even if it had, of course, the damage would have been to them rather than to TWA).

A second hypothesis on which the Court of Appeals thought an antitrust violation might be found was "tying adequate financing of TWA to its purchase or lease of jets from Toolco, and vice-versa" (449 F.2d at 69, App. A-2770). This hypothesis also fails when it is remembered that Toolco owned TWA. A tie-in between goods and financing can violate the antitrust laws, as *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394 U.S. 495 (1969), cited by the Court of Appeals, shows, but this cannot be the case when the "sale" is from a parent to a subsidiary it lawfully controls. The *Fortner* case and the other tie-in cases all involve sales to independent entities. This is no mere happen-

stance. "[T]he essence of illegality in tying agreements is the wielding of monopolistic leverage; a seller exploits his dominant position in one market to expand his empire into the next." *Times-Picayune Publishing Co.* v. *United States*, 345 U.S. 594, 611 (1953). Here Toolco used no market power in either jets or financing to compel TWA to take the other "tied" product. Instead, Toolco exercised its "power" as a parent corporation to control the decisions of its subsidiary with regard to both jets and financing.[35] As two commentators correctly assert, "the whole theory of antitrust limitations on [tie-in sales] appears to break down when applied to transactions within a multi-corporate enterprise.*** [W]ithin a corporate system, it is of course always open to a parent company to 'force' a wholly-owned subsidiary to accept particular products by the exercise of central corporate control." Willis & Pitofsky, *Antitrust Consequences of Using Corporate Subsidiaries*, 43 N.Y.U.L. Rev. 20, 51 (1968). The only difference with a subsidiary that is less than wholly-owned is the fiduciary duty the parent owes to the minority stockholders of the subsidiary, but that does not alter the antitrust consequences.

The suggestion by the Court of Appeals that antitrust liability might be found on an "exclusive dealing" theory (449 F.2d at 69, App. A-2770), in addition to overlooking that here there was no exclusive dealing, also ignores the fact that TWA was Toolco's lawful subsidiary. The "exclusive dealing" label has no place in parent-subsidiary dealings, because, as the Court recognized in *United States* v.

[35] The weakness of the tying allegation is shown by the statement below that adequate financing was tied to the sale of jets "and vice versa." In a tying arrangement, the purchaser is forced to buy an unwanted product (the "tied" product) in order to obtain the desired "tying" product. An allegation that "A was tied to B and vice versa" makes no antitrust sense, for the same product cannot be both the desired tying product and the unwanted tied product to a single buyer.

Columbia Steel Co., 334 U.S. 495, 523 (1948), a parent may compel its subsidiary to deal only with the parent. In *Standard Oil Company of California* v. *United States*, 337 U.S. 293 (1949), cited by the Court of Appeals,[36] the antitrust illegality consisted of a compulsion upon independent dealers to deal exclusively in defendant's products. All members of the Court agreed that there would be no antitrust violation if the defendant had sold its products through subsidiary stations rather than independent dealers. Indeed Justice Douglas dissented in the *Standard Oil* case because he thought that the effect of the decision would be to encourage oil companies to buy out independent gas stations. 337 U.S. at 315-321.

The vice of an exclusive dealing contract is that it binds an independent businessman to the will of another, thus eliminating competition for the patronage of the former. *Standard Oil Company of California* v. *United States*, *supra*, at 313-314; *Tampa Electric Co.* v. *Nashville Coal Co.*, 365 U.S. 320, 327 (1961). Exclusive dealing between parent and subsidiary is not anticompetitive; it is the normal way of doing business. The Second Circuit's "exclusive dealing" hypothesis, like its theories of "boycott" and "tying," provides no support whatever for characterizing losses allegedly suffered by TWA as the result of Sherman or Clayton Act violations. In each instance, the Court of Appeals failed to perceive the significance of Toolco's lawful ownership of TWA.

United States v. *Yellow Cab Co.*, 332 U.S. 218 (1947), teaches nothing to the contrary. That case upheld the suffi-

[36] The other case cited by the Court of Appeals for this point, *International Salt Co.* v. *United States*, 332 U.S. 392 (1947), was a tying case in which the sale was to independent enterprises.

ciency of a complaint charging that subsidiary cab operating companies were required to buy cabs from their manufacturer parent.[37] The complaint alleged that restraint of interstate trade "was the primary object of the combination" by which the parent acquired the operating companies, 332 U.S. at 227, and this Court ruled that "any affiliation or integration flowing from an illegal conspiracy cannot insulate the conspirators from the sanctions which Congress has imposed." *Ibid.*[38] At the next term the Court read *Yellow Cab* to hold that parent-subsidiary dealings can be unlawful if the acquisition of the subsidiary was unlawful but not if the acquisition was lawful. *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 520-522 (1948). It emphasized that *Yellow Cab* did not mean that all exclusive dealing arrangements are illegal nor does the fact that a subsidiary deals only with its parent for goods make the acquisition of the subsidiary invalid. 334 U.S. at 523. See Willis & Pitofsky, *Antitrust Consequences of Using Corporate Subsidiaries*, 43 N.Y.U.L. Rev. 20, 38-41 (1968). In the present case the acquisition of control over TWA was not unlawful, having been approved by the CAB and immunized from antitrust attack. Thus the essential premise of *Yellow Cab* is not present here.

---

[37] *Yellow Cab* is also not in point here because Toolco was not a manufacturer or supplier of commercial aircraft. See pp. 100-103, *infra*. *Yellow Cab* would have been differently decided if the parent had been supplying its operating subsidiaries with Fords or Chevrolets that the subsidiary wanted rather than with cabs manufactured by the parent.

[38] Subsequently this Court affirmed a judgment for defendants based on findings that the acquisition of the operating companies had not been illegal. *United States* v. *Yellow Cab Co.*, 80 F.Supp. 936 (N.D.Ill. 1948), *affirmed*, 338 U.S. 338 (1949).

The Court of Appeals erred in holding that it is a violation of the antitrust laws for a parent to make decisions for or provide goods and services to its lawfully-acquired subsidiary.

B. Lack of Competition with Manufacturers and Suppliers

In the preceding portion of the Argument we have examined the "boycott," "tie-in," and "exclusive dealing" theories adverted to by the Court of Appeals. That court also suggested that liability might have been found on theories of "unlawful *intent* to monopolize a substantial portion of the commercial aircraft market in restraint of trade," or "unlawful conspiracy to do so," or on "the *Yellow Cab* theory" (449 F.2d at 68, App. A-2770), though how the *Yellow Cab* theory differs from the "exclusive dealing" theory already discussed is not made clear. It is essential to each of these theories that Toolco was in competition with other manufacturers and suppliers for the commercial aircraft market. The record shows conclusively that it was not.[39]

It is true that in the notorious paragraph 3 of the complaint (App. A-2), which is in the section of that document describing the parties, Toolco is described as being engaged, among other things, "in the development, manufacture and acquisition of aircraft and related equipment from the manufacturers thereof in various states and in the sale and lease of such aircraft to air carriers in various other states * * *." This is an allegation of fact, admitted by the default, but it should be noted that it does *not* allege, nor has Toolco admitted, that Toolco has ever been in competition with manufacturers or suppliers of commercial aircraft

[39] The *Yellow Cab* theory also fails because Toolco's acquisition of TWA was lawful. See p. 99, *supra*.

for any portion of that market. To the extent that the allegation is indefinite it must be read in the light of what the record shows (449 F.2d at 63, App. A-2758). The record shows beyond doubt that Toolco was not a manufacturer of commercial aircraft. The record shows beyond doubt that Toolco was not a supplier of aircraft, except in the case of aircraft ordered for its own subsidiary. Paragraph 3 is consistent with both of these facts.

TWA admitted in its brief below that defendants did not manufacture commercial jets during the damage period.[40] This admission was inevitable given the undisputed evidence put forth at the damage hearing.[41] The most that the Court of Appeals could find was "significant movement" toward "actual or potential commercial manufacturer or dealership in airplanes * * *" (449 F.2d at 67, App. A-2767).

Toolco was not a manufacturer of commercial airplanes and it was not an independent supplier. CAB opinions and orders covering Toolco's aeronautical activities prior to

---

[40] Brief for Plaintiff-Appellant Trans World Airlines, Inc. at 94: "[D]efendants did not manufacture and sell a 'Hughes jet' during the damage period * * *." Also see *id.* at 70 (emphasis added): *"If* Toolco had *actually* established itself as an aircraft manufacturer * * *."

[41] In opinions and orders from 1944 through 1950, the impartial Civil Aeronautics Board concluded that Toolco was neither engaged in nor planning the manufacture of airplanes for commercial use (6 C.A.B. at 156, App. A-3302; 9 C.A.B. at 383, App. A-3314; 12 C.A.B. at 198, App. A-3345-3346). Schedules to CAB Form 41 Reports, filed by domestic trunk airlines pursuant to § 407 of the Civil Aeronautics Act of 1938, 52 Stat. 973, now 49 U.S.C. § 1377, show that between 1950 and 1966 none of those airlines purchased or leased a Toolco-made airplane. Finally, Robert W. Rummel, who had been employed by TWA since 1943 in the evaluation of aircraft and in discussions with all major United States and foreign aircraft manufacturers, and who was TWA's chief witness at the damage hearing, did not "recall" Toolco manufacturing airplanes for airlines (App. A-475-476, A-971-972).

1950 reveal not a single sale or lease of an airplane from Toolco to carriers other than TWA.[42] Federally required reports filed by Pan American and all of the domestic trunk airlines show that none of the airlines, other than TWA, acquired a single jet or piston plane from Toolco or Hughes between January 1, 1950, and the filing of the complaint on June 30, 1961.[43] In its post-hearing brief to the Special Master TWA admitted that the 63 jets originally ordered by Toolco in the 1950s "were intended for TWA's use."[44] They were not ordered for resale by Toolco as a supplier to air carriers generally.[45] Subsequent reduction in TWA's anticipated needs forced Toolco to re-

---

[42] See note 41, p. 101, *supra*.

[43] *Ibid.* TWA conceded that the summaries of Form 41 reports "were appropriate for judicial notice" and the Special Master admitted them (App. A-1966 Brownell Report 40-41). There is no reason to doubt the veracity and completeness of these summaries or the reports they reflect.

[44] See Memorandum in Support of TWA's Claims for Damages, May 31, 1968, at 4 (Doc. 556-14).

[45] The planes were to be built to satisfy TWA's special requirements, including its unique cockpit configuration (App. A-508-509). Had Toolco intended to sell those jets to other airlines it would have used the specifications of those airlines. No true independent supplier would intentionally deflate the resale value of his product by making further costs, *e.g.*, for modification and pilot retraining, inevitable.

The purchase agreements between Toolco and the manufacturers specifically barred Toolco from assigning its contract rights to any air carrier other than TWA without the written consent of the particular manufacturer (App. AX-63m; AX-1461). Had Toolco intended to supply the 63 planes to carriers other than TWA, it would not have bargained away its freedom to assign, sell, and lease at will.

Toolco delivered all jets immediately or almost immediately to TWA. Every jet delivered in 1959 was delivered immediately to TWA under interim lease (App. AX-893). Every jet delivered in 1960, save for two 331s on which there was a short delay pending completion of financing, was delivered immediately to TWA either under interim lease or by assignment (TWA Schedule B-7 to CAB Form 41, 6/30/60, TWA Ex. 58, DX 358D). On May 9, 1960, Toolco assigned to TWA all the jets still undelivered (except the 16

lease its rights to some of the jets then on order.[46] The manufacturers, not Toolco, later sold or leased those jets to other airlines.[47]

Since Toolco was not a manufacturer or independent supplier, but only a manager and supply conduit for its subsidiary, the Sherman Act charges must fail. A firm that does not even participate in a market can hardly be said to monopolize that market. This principle follows *a fortiori* from *United States* v. *United States Steel Corp.*, 251 U.S. 417 (1920) (40% of an industry not a monopoly), and *United States* v. *Aluminum Co. of America*, 148 F.2d 416 (2d Cir. 1945) (33% not a monopoly). Neither can a nonparticipant be said to have achieved a "dangerous probability" of successfully monopolizing a market when it has not even entered the market. Yet "dangerous probability" is an essential element of every unlawful "attempt to monopolize." *Swift & Co.* v. *United States*, 196 U.S. 375, 396 (1905); *American Tobacco Co.* v. *United States*, 328 U.S. 781, 785 (1946); *Hiland Dairy, Inc.* v. *Kroger Co.*,

---

by which TWA's proposed fleet had been cut back) and confirmed TWA's exclusive right to acquire the jets remaining under lease, contingent on the consummation of financing by June 30 (App. AX-64).

The above facts reveal what was meant by the allegation that Toolco was engaged "in the sale or lease of such aircraft to air carriers" and how improper it would be to read that allegation as stating that Toolco was functioning as an independent supplier to airlines generally.

[46] With the assent of TWA's president, ratification by TWA's Board of Directors, and agreement by Boeing, Toolco offered its rights to six Boeing 331s to Pan American (App. AX-1408; AX-1661-1663).

[47] Boeing, not Toolco, sold the 331s to Pan American (AX-1661-1663). Toolco *released* its rights to six unneeded Convairs, and *Convair itself* leased the planes to Northeast (A-949). Ultimately four other Convairs were delivered to Toolco and duly offered to TWA, but refused by the new management (App. AX-1538-1540). Those four remained unused by any airline for several years (App. A-861-863; AX-10-11).

402 F.2d 968, 974 (8th Cir. 1968), *cert. denied*, 395 U.S. 961 (1969); *Bushie* v. *Stenocord Corp.*, 1972 Trade Cases ¶ 73,896 at p. 91,720 (9th Cir., March 15, 1972); *Keco Industries, Inc.* v. *Borg Warner Corp.*, 334 F. Supp. 1240, 1245 (M.D. Pa. 1971).

The only "market" in which Toolco was a supplier was the TWA market and Toolco could sell or lease planes to TWA only with the approval of the CAB. Toolco's purchase of planes for TWA had no adverse effect on any manufacturer or independent supplier and was lawful, as we have developed above, because of Toolco's control of TWA. This was not a restraint of trade at all, much less an unreasonable restraint as the Sherman Act requires. *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 522 n. 19 (1948); *Standard Oil Company of New Jersey* v. *United States*, 221 U.S. 1, 63-64 (1911).

The fact that the defendants were not in the market of manufacturing or supplying aircraft also undercuts the theory of a conspiracy to monopolize. "A conspiracy to monopolize is a conspiracy to get control of the industry in which the defendant is engaged * * *." *United States* v. *National Retail Lumber Dealers Assn.*, 40 F. Supp. 448, 456 (D. Colo. 1941). This Court has never sustained such a far-fetched proposition as liability for "conspiracy to monopolize" an unentered business. The purported monopolization conspirators with which this Court has dealt have been present participants in the targeted market.

The conspiracy charge also fails for want of the needed kinds of conspirators. The complaint alleges that Toolco conspired with Hughes, said to be "an officer and the sole stockholder of Toolco," Holliday, said to be "the chief

operating officer of Toolco in charge of TWA affairs," and Atlas. A corporation can act only through its officers and agents and, as a matter of law, cannot be held to have conspired with them. *Chapman* v. *Rudd Paint & Varnish Co.*, 409 F.2d 635, 643 n. 9 (9th Cir. 1969); *Nelson Radio and Supply Co., Inc.* v. *Motorola, Inc.*, 200 F.2d 911, 914 (5th Cir. 1952), *cert. denied*, 345 U.S. 925 (1953); *Johnny Maddox Motor Co.* v. *Ford Motor Co.*, 202 F. Supp. 103, 105 (W.D. Tex. 1960). This is one of those rare propositions in antitrust law of which it can be said that "the law appears clear * * *." Willis & Pitofsky, *Antitrust Consequences of Using Corporate Subsidiaries*, 43 N.Y.U.L. Rev. 20, 24 n. 15 (1968). The rule is not changed by the fact that Hughes was the sole stockholder of Toolco as well as an officer. *Goldlawr, Inc.* v. *Shubert*, 276 F.2d 614, 617 (3d Cir. 1960). This proposition disposes of the claim of a conspiracy with Hughes and Holliday.

The Court of Appeals properly saw fit to ignore the claim in the complaint that Atlas, not named as a defendant, was a coconspirator (449 F.2d at 69, App. A-2771). Atlas was neither a manufacturer nor a supplier of commercial aircraft. Its only alleged act was its decision in 1960, 21 years after Toolco, Hughes, and Holliday are said to have begun their conspiracy, to cause Northeast Airlines, which Atlas controlled, to submit a merger proposal to TWA (App. A-14). The merger was not consummated, nor could it have been without CAB approval, upon which the merger was expressly conditioned and through which antitrust immunity would have resulted. This assertion of a conspiratorial involvement by Atlas has such little relation to TWA's damages that had Atlas been named as a defendant it would have been entitled to dismissal. *First National Bank of Arizona* v. *Cities Service Co.*, 391 U.S. 253 (1968). Nor

did the Court of Appeals rely on TWA's suggestion in its brief below that TWA might itself have been found to be a reluctant conspirator. It is a sufficient answer to that suggestion that no claim of this kind was ever made in the complaint. *Albrecht* v. *Herald Co.*, 390 U.S. 145, 150 n. 6 (1968).

It was absolutely essential to TWA's Sherman Act charges that Toolco be a competitor of manufacturers and suppliers of commercial aircraft. It could have been found to be such only by that "blind" court, against which Chief Justice Taft admonished in a famous passage, that does not see what "all others can see and understand * * *." *Bailey* v. *Drexel Furniture Co.*, 259 U.S. 20, 37 (1922); *cf. United States* v. *Rumely*, 345 U.S. 41, 44 (1953). The Court of Appeals was not blind, and refused to rely upon any actual competition. But the Court of Appeals undertook to cure this fatal flaw in TWA's case by inventing a new concept of *possible* "independent competitive significance" based on a theory of *potential* entry into the market.[48] In doing so the court below read into the Sherman Act a test appro-

[48] This novel concept is discussed at a number of places in the Second Circuit's opinion. The following passage is illustrative:

> Moreover the documents * * * while * * * showing that Toolco was not a major force as a supplier of aircraft other than to TWA, hardly negative the *possibility that Toolco possessed independent economic significance*, apart from its role as supplier to TWA * * *. There is evidence * * * that suggest[s] *significant movement* by Toolco and Hughes *toward* actual or *potential commercial manufacturer or dealership* in airplanes * * *. We cannot say that proof at a trial * * * that Toolco was more than a conduit for TWA but rather possessed *independent competitive significance* with respect to the commercial aircraft market, would be insufficient, if combined with appropriate related proof of the intent, attempt, collusion, tying arrangements, boycotts, and monopolization alleged in the complaint, to support an antitrust judgment for TWA. [449 F.2d at 67, App. A-2767; emphasis added.]

priate under § 7 of the Clayton Act and, in the process, misapplied the test. The decision below well illustrates "the pitfalls which always lurk in so ambiguous a phrase" as "potential competition"[49] and, if affirmed, would cause great confusion in antitrust litigation.

The distinction between the Sherman Act and the Clayton Act in this regard has long been recognized here and by the lower courts. As was said in *United States* v. *E. I. du Pont de Nemours & Co.*, 353 U.S. 586, 597 (1957):

> The Clayton Act was intended to supplement the Sherman Act. Its aim was primarily to arrest apprehended consequences of intercorporate relationships before those relationships could work their evil, which may be at or any time after the acquisition, depending upon the circumstances of the particular case.

See also *Standard Fashion Co.* v. *Magrane-Houston Co.*, 258 U.S. 346, 355 (1922); *Ford Motor Co.* v. *United States*, 92 S.Ct. 1142, 1146 n. 4 (1972). The Court has quoted from the legislative history of the 1950 amendments of the Clayton Act to show that that statute is based on "the concept of reasonable probability" since it "seeks to arrest restraints of trade in their incipiency and before they develop into full-fledged restraints violative of the Sherman Act." *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 323 n. 39 (1962).

"The Sherman Act operates 'after the fact,' that is, once monopolistic proportions have been obtained." *United States* v. *General Dynamics Corp.*, 258 F. Supp. 36, 60 (S.D.N.Y. 1966). It deals, as Senator Kefauver told the Senate in 1950, with "accomplished monopoly." 98 Cong. Rec. 16453

---

[49] Rahl, *Applicability of the Clayton Act to Potential Competition*, 12 Proceedings of ABA Section of Antitrust Law 128, 143 (1958).

(1950). Potential competition is a relevant consideration in § 7 cases. It is not, in the sense that it was used below, in Sherman Act cases.[50]

In *Hiland Dairy, Inc.* v. *Kroger Co.*, 402 F.2d 968 (8th Cir. 1968), *cert. denied*, 395 U.S. 961 (1969), the plaintiff attempted to make an antitrust case out of a food retailer's construction of a dairy facility. The Eighth Circuit approved a dismissal on the pleadings. Allegations of an intent to monopolize plus an initial step supposedly in that direction—building a dairy plant—were insufficient to state a claim. The alleged development toward monopolization was in too infant a stage for a Sherman Act attack.

> [A]bout all anyone could say is that Kroger would have the power potentially to engage in some unfair and predatory practices in this field, but there is no showing of unfair or predatory practices. And any future operations are subject to the proscription of federal and state laws that condemn monopolies and unfair and predatory trade practices that unduly restrict competition. [402 F.2d at 975.]

---

[50] A few Sherman Act decisions have mentioned "potential competition" or similar phrases. *E.g.*, *Standard Oil Company of New Jersey* v. *United States*, 221 U.S. 1, 73-74 (1911); *Associated Press* v. *United States*, 326 U.S. 1, 14 (1945); *American Tobacco Co.* v. *United States*, 328 U.S. 781, 785 (1946); *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 528-529 (1948). But "no [Sherman Act] case seems yet to have turned solely on considerations affecting potential competition * * *." O'Brien, *Potential Competition Under the Sherman Act Cases*, 12 Proceedings of ABA Section of Antitrust Law 105, 107 (1958). The cases that note the concept are inapposite here. They refer to the power of one who has a monopoly to exclude potential entrants, or to the elimination of competition *inter se* among the members of an enterprise. Toolco was not a monopolist since it had not entered the market and it certainly excluded no one. There is no suggestion that Toolco and TWA were potential competitors with each other. If the Sherman Act cases say anything on this point, they state a policy *encouraging* potential entry. The approach of the Court of Appeals is at odds with that policy.

See also *GAF Corp.* v. *Circle Floor Co.*, 329 F. Supp. 823, 828 (S.D.N.Y. 1971), where defendants in a Sherman Act case were granted summary judgment because any steps the defendant had taken toward monopoly "were too remote from achievement to be actionable * * *." These two cases are illustrative of many soundly reasoned Sherman Act cases in which a different result would be required on the approach taken by the Second Circuit in the present case.

In essence, the Court of Appeals thought that Toolco's purchasing decisions for TWA violated the Sherman Act because those decisions were accompanied by a sequence of incipient possibilities: (1) Toolco eventually would become a general manufacturer and supplier of commercial aircraft; (2) despite CAB supervision,[51] Toolco would make TWA into a captive customer bound by exclusive dealing arrangements; (3) despite CAB supervision, risks of Justice Department antitrust suits, and inherent limitations on its ability to shoulder losses, Toolco would use its captive TWA market to subsidize predatory competition aimed at obtaining non-TWA customers; and (4) Toolco would drive others from the non-TWA market and raise permanent barriers to reentry.

If such a pyramid of hypothetical events can form the basis for Sherman Act liability, litigation possibilities for

---

[51] When Toolco in 1956 briefly contemplated manufacturing airplanes itself for TWA, the Board, on its own initiative, ordered an investigation to determine whether the proposed change in Toolco's activities in the field of aeronautics would be a transaction subject to Board approval under § 408 of the Federal Aviation Act and, if so, whether it should approve or disapprove. Order E-10360, June 8, 1956 (App. AX-2149). The investigation was terminated when the Board was advised that Toolco had abandoned the proposed manufacturing project. Order E-12604, June 6, 1958.

imaginative, incipiency-minded plaintiffs would seem enormous. "Theoretically, all manufacturers, distributors, merchants, sellers, and buyers could be considered as potential competitors of each other." *United States* v. *Topco Associates, Inc.*, 92 S. Ct. 1126, 1133 (1972). Persons disappointed in their efforts to sell goods to corporate subsidiaries could readily blame their misfortune on alleged parental schemes to restrain trade. A parent arguably possessing the potential to manufacture goods needed by its subsidiaries would run a grave risk of Sherman Act litigation if it attempted to purchase rather than manufacture the goods. Economically beneficial uses of the parent-subsidiary relationship would be deterred.

It has been said that the antitrust laws were "not passed to outlaw diversification," *Federal Trade Commission* v. *Consolidated Foods Corp.*, 380 U.S. 592, 603 (1965) (Stewart, J., concurring), but on the approach taken below they may well have that result. Section 7 of the Clayton Act has an incipiency standard, but it only applies to the acquisition by one corporation of the stock or assets of another. In contrast, the Sherman Act, as viewed below, has an incipiency standard that applies to *all* transactions, including routine internal expansion or diversification of the sort held not actionable in the *Hiland Dairy* case discussed above.[52]

Arrangements having any potential to lead to illegal tying arrangements would become subject to Sherman Act attack. Until now the *actual* use of *existing* leverage power has been a prerequisite to antitrust condemnation. *E.g.*, *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394

[52] See p. 108, *supra*.

U.S. 495, 502-503 (1969); *Times-Picayune Publishing Co. v. United States*, 345 U.S. 594, 611 (1953). Under the ruling below alleged *intended* use of *potential* leverage power would be sufficient.

Congress should preside over any such drastic changes in antitrust doctrine. For one thing, the Clayton Act already adequately guards against incipient anticompetitive tendencies in acquisitions. Other acts preliminary to the creation of a dangerous probability of monopoly are not proper subjects for immediate antitrust condemnation. If and when the dangerous probability occurs or the restraint is effected, the Sherman Act can intervene to rescue competition before any damage is done. On the doctrine announced below the federal courts will be clogged for years with premature, time-consuming, purely speculative, and totally unnecessary Sherman Act litigation.

The Court of Appeals committed dangerous error when it set out on its own[53] to import a Clayton Act test into a Sherman Act context. It compounded the error when it misapplied the Clayton Act test by speculating about mere possibilities rather than calculating reasonable probabilities.[54]

The concept of reasonable probability is at the heart of the Clayton Act decisions from which the Second Circuit

---

[53] TWA's complaint makes no reference to potential competition nor was the concept ever mentioned by the Special Master or the District Court. Hence, the Court of Appeals' solo excursion was not anticipated by the parties nor discussed in the briefs below.

[54] The court speaks twice of "the possibility" that Toolco possessed independent economic significance (449 F.2d at 67, 68, App. A-2767, A-2770) and once of "movement by Toolco and Hughes toward * * * potential commercial manufacture or dealership" (449 F.2d at 67, App. A-2767).

apparently borrowed its ideas of potential entry and independent competitive significance. Congress made explicit its intent that courts be concerned with probabilities and not possibilities[55] and this Court has repeatedly acknowledged that "proof of a mere *possibility* of a prohibited restraint or tendency to monopoly will not establish the statutory requirement * * *." *United States* v. *E. I. du Pont de Nemours & Co.*, 353 U.S. 586, 598 (1957). See also *Standard Fashion Co.* v. *Magrane-Houston Co.*, 258 U.S. 346, 356-357 (1922). The Court enforces the "statutory requirement of reasonable probability." *United States* v. *Penn-Olin Chemical Co.*, 378 U.S. 158, 175 (1964). See also *Brown Shoe Co.* v. *United States*, 370 U.S. 294, 323 (1962); *Ford Motor Co.* v. *United States*, 92 S.Ct. 1142, 1146 n. 4 (1972).

The Court of Appeals mentions a number of factors to establish the possibility of eventual entry by Toolco into the business of manufacturing airplanes or supplying airplanes for customers other than its subsidiary, TWA. These factors are clearly insufficient to support a finding of reasonable probability.

1. *Potential Manufacturer.* The Court of Appeals noted that Toolco has manufactured helicopters and aircraft parts for military use since World War II (449 F.2d at 67, App. A-2767). This Court can take judicial notice that helicopters and commercial jets are complex and vastly

---

[55] The use of the words ["may be"] means that the bill, if enacted, would not apply to the mere possibility but only to the reasonable probability of the prescribed [*sic*] effect * * * . [S. Rep. No. 1775, 81st Cong., 2d Sess. 6 (1950).]

See also 92 Cong. Rec. 16499-16501 (1950) (remarks of Sen. Donnell).

different products.[56] An enormous array of technological concepts, both theoretical and applied, relate to commercial jetliners but not to helicopters and military aircraft parts.[57] The Court of Appeals did not even mention such obstacles as manpower, basic equipment, and administrative problems inherent in a changeover from defense-related production to commercial operations.[58]

The Court of Appeals also pointed to Toolco's participation with Lockheed in the early 1940's in developing the first Constellations (449 F.2d at 67, App. A-2768). Toolco's role was that of planner, not manufacturer, and its involvement did not indicate a likely entrance into the manufacture of commercial aircraft. As TWA acknowledged in paragraph 13 of the complaint (App. A-11), major airlines frequently joined manufacturers in development of aircraft to fit their special needs. Toolco, as TWA's parent, was doing just that for its subsidiary[59]

---

[56] This is quite unlike cases in which the products were simple in design, closely related in production technique, and nearly identical in end-use. Compare *United States* v. *Continental Can Co.*, 378 U.S. 441, 464-465 (1964) (glass and metal containers); *Federal Trade Commission* v. *Procter & Gamble Co.*, 386 U.S. 568, 580 (1967) (detergents and abrasive cleaners).

[57] The production of some component parts hardly implies an ability to produce the total product. *Cf. Allis-Chalmers Mfg. Co.* v. *White Consolidated Industries, Inc.*, 414 F.2d 506, 534 (3d Cir. 1969) (Aldisert, J., dissenting).

[58] Although Boeing had developed and manufactured jet bombers and tankers for the Air Force and Douglas had manufactured hundreds of commercial air transports, it took them years to develop the specifications for a commercial jet and three or four more years to effect delivery.

[59] In 1955 Toolco engaged in similar cooperation with Convair just as Pan American worked with Boeing to develop the 707 (App. A-1201).

(6 C.A.B. at 155, App. A-3300).[60] Other factors were cited by the Court of Appeals,[61] but these too establish, if anything, only an ephemeral possibility of entry into the manufacturing market. As the late Justice Harlan stated, "assumption is no substitute for reasonable probability * * *" *Federal Trade Commission* v. *Procter & Gamble Co.*, 386 U.S. 568, 584 (1967) (concurring opinion).

2. *Potential Non-TWA Supplier.* The record shows scarcely even a possibility that Toolco would have become an independent supplier of aircraft. The Court of Appeals cited the 1944 CAB decision for the proposition that 25 Lockheed Constellations "were intended by Toolco for sale to airlines other than TWA" (449 F.2d at 67, App. A-

---

[60] The Court of Appeals also cited the "plywood flying boat" to illustrate Toolco's commercial airplane manufacturing proclivities. The HK-1 plane was built under government contract for military purposes and, as the CAB found, the plane "was not intended to be used for anything but military purposes, and Toolco has no plans to build others like it" (12 C.A.B. at 198 n. 13, App. A-3346 n. 13).

[61] The AVRO and Caravelle episodes (449 F.2d at 67, App. A-2768-69) support no finding of reasonably probable entry, for in each case steps *toward* manufacture were briefly explored and then abandoned (App. AX-1297; A-1807-1808). Another in the court's list of "aborted forays" (449 F.2d at 68, App. A-2768)—and the phrase accurately describes their inconsequential nature—was TWA's 1956 CAB motion for permission to purchase up to 25 Toolco-made jets, if such were ever manufactured. See note 51, p. 109, *supra*. As paragraph 15 of the complaint recites (App. A-12), that "project" died aborning the middle of that same year, without ever reaching even the blueprint stage. The court below further assumed that certain Pratt & Whitney jet engines ordered by Toolco "could well have been intended for installation in the planned Toolco jets * * *" (449 F.2d at 67, App. A-2768). This pyramiding of assumptions is clear error under the reasonable probability standard.

2768), but the CAB reached the opposite conclusion: "There is no evidence of an intention * * * to engage in any phase of supply for commercial aviation" (6 C.A.B. at 155, App. A-3301).

The Court of Appeals also relied upon "testimony that Toolco ordered seven Convair 880s manufactured to the specifications of Capital Airlines and thirteen Convair 990s built for American Airlines' requirements" (449 F.2d at 68, App. A-2769). As the record makes clear, however, the 880s conformed to Capital's specifications simply because Capital itself had originally ordered them (App. AX-1319-1320; AX-1556). After studying the merits of using the 880s as designed or converting them, TWA ultimately decided not to purchase the planes and none was ever completed. The 990s had been independently ordered by American and it was not planning to buy more from Toolco (App. A-832).[62]

The Court of Appeals also mentioned a section of the Toolco-Convair contract for thirty 880s (449 F.2d at 68, App. A-2769). That section provided for a retroactive reduction in Toolco's unit base price for each of Convair's commercial sales over the initial 40 being purchased by Toolco and Delta Airlines (App. AX-63q). The cited section

---

[62] Moreover, the Convair-Toolco 990 agreement—a TWA exhibit (App. AX-652)—expressly barred Toolco from assigning the contract to anyone other than TWA without Convair's prior written consent. Nor, for a two-year period following commencement of deliveries, could the 990s be resold or leased. TWA ultimately selected Boeing 131 Bs and 331 Bs over Convair's 990s (App. A-861). The 990 program was discontinued and none of the 990s scheduled for TWA was ever completed (App. A-841).

is evidence of Toolco's hard bargaining for TWA's ultimate benefit. When other airlines climbed on the 880 bandwagon, they would have to pay their share of development costs reflected in the initial prices agreed to by Toolco and Delta. Another section of the contract leaves no doubt but that Convair, not Toolco, would be making those over-forty sales to new customers (App. AX-63p).[63]

* * * * *

The record thus shows clearly that Toolco was not a reasonably probable entrant into the business of manufacturing or supplying planes to non-TWA carriers. Nor, absent probable entry, is it reasonably probable that Toolco possessed competitive significance in the commercial aircraft manufacture and supply markets except to the extent that it was a buyer for its subsidiary. In its opinion, the Court of Appeals never mentioned "reasonable probabilities." The reason is clear—the most that could be shown was "possibilities." And possibilities have never before this case been held sufficient to create liability under the Clayton Act, much less the Sherman Act.

We emphasize, however, that even if the Court of Appeals had found a reasonable probability of entry—and it did not—this would have been a test wholly foreign to the Sherman Act under the circumstances of this case. It is not enough under the Sherman Act that the party charged

---

[63] The memo regarding Lockheed Electras (App. A-198) does not show Toolco to be a reasonably probable *non-TWA* supplier of Electras. It merely reflects that a TWA director advised TWA's president to discourage Mr. Hughes from buying Electras for *TWA*. The memo is no support for an inference that Toolco intended to offer Electras to anyone *other than TWA*.

with monopolizing or attempting to monopolize may someday enter the relevant market, whether that entry is termed possible, probable, or virtually a certainty. We see, therefore, just how far afield the Court of Appeals has gone and what a disruptive, confusing, and dangerous element has been introduced into the law of antitrust.

VI. Damages Have Been Awarded Without Requisite Proof That They Were The Result of Antitrust Violations.

When this case was before this Court in 1965, Justice White asked counsel for TWA: "How can you prove how much you have been damaged without showing what you have been damaged from?" Transcript of Argument at 28, *Hughes Tool Co.* v. *Trans World Airlines, Inc.*, 380 U.S. 248 (1965). Seven years of further litigation have failed to provide an answer to that question.

Damages cannot be awarded in an antitrust case merely because plaintiff establishes that the antitrust laws have been violated and shows that he has been injured. He must also establish the requisite causal relation between the violation and the injury. This is as true after a default as it is in a contested case.[64] The Special Master and the District Court erroneously thought that there was no requirement of establishing causation. The Court of Appeals recognized that this was wrong, and that causation must be shown, but was willing to rely on assumptions to substitute for the proof that TWA was unable to present. Thus

[64] If, for example, liability is established for a conspiracy to fix the price of watches, a dealer in watches would not be entitled to damages because the watches did not work.

the findings as to damages are fatally tainted by application of erroneous legal standards.

A. The General Standard of Causation

For purposes of this portion of the Argument, we assume —contrary to what we believe to be true—that liability for some violation of the antitrust laws properly could have been found in Toolco's control of TWA, either because of the default or on some novel antitrust theory. Even on that assumption, TWA was not entitled to a judgment for damages unless the injuries for which it claimed damages were "proximately caused" by the antitrust violations.

Section 4 of the Clayton Act allows recovery of treble damages by "any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws * * *." For present purposes we assume that TWA has been injured in its business or property. We assume that Toolco and Holliday did something forbidden in the antitrust laws. It is still essential to recovery that the injury be "by reason of" the law violation.

> The statutory requirement that treble damage suits be based on injuries which occur "by reason of" antitrust violations expressly restricts the right to sue under this section. There must be a causal connection between an antitrust violation and an injury sufficient for the trier of fact to establish that the violation was a "material cause" of or a "substantial factor" in the occurrence of damage. [*Billy Baxter, Inc.* v. *Coca-Cola Co.*, 431 F.2d 183, 187 (2d Cir. 1970), *cert. denied*, 401 U.S. 923 (1971).]

Thus in *E. V. Prentice Machinery Co.* v. *Associated Plywood Mills, Inc.*, 252 F.2d 473 (9th Cir.), *cert. denied*, 356

U.S. 951 (1958), defendant admitted that it was liable under the antitrust laws in sending threatening letters to plaintiff's customers. At the trial on the issue of damages plaintiff showed that it had suffered a substantial decline in business immediately after defendant did its wrongful acts. The court found, however, that the decline in business began before the threatening letters were sent out, and that it was caused by customer dissatisfaction with the way plaintiff ran its business. It was held that plaintiff had failed to carry its burden of establishing a causal connection between the wrongful acts and its losses and that plaintiff could not recover any damages.

In *Sunkist Growers, Inc.* v. *Winckler & Smith Citrus Products Co.*, 284 F.2d 1 (9th Cir. 1960), *reversed on other grounds*, 370 U.S. 19 (1962), the court sustained a jury's determination of antitrust liability but held that plaintiff could not recover for its business losses if they resulted from a watered-down product rather than from the antitrust violation. And in *Milwaukee Towne Corp.* v. *Loew's, Inc.*, 190 F.2d 561 (7th Cir. 1951), *cert. denied*, 342 U.S. 909 (1952), the court sustained a finding of conspiracy to exclude the plaintiff from access to first-run movies but reversed an award of damages for a period during which plaintiff's theater, prior to remodeling, was not suitable for playing first-run pictures.

Even a showing of cause-in-fact is not, without more, enough to justify an award of damages. As this Court said very recently in *Hawaii* v. *Standard Oil Co.*, 92 S.Ct. 885, 891 n. 14 (1972):

> The lower courts have been virtually unanimous in concluding that Congress did not intend the antitrust laws to provide a remedy in damages for all

> injuries that might conceivably be traced to an antitrust violation.

Thus a plaintiff must show far more than that its injury was an incidental byproduct of an antitrust violation; it must show that it was a target of the unlawful acts. *E.g.*, *Calderone Enterprises Corp.* v. *United Artists Theatre Circuit, Inc.*, 454 F.2d 1292, 1295-1297 (2d Cir. 1971), *cert. denied*, 40 U.S.L.Wk. 3543 (May 15, 1972); *Billy Baxter, Inc.* v. *Coca-Cola Co.*, 431 F.2d 183, 187 (2d Cir. 1970), *cert. denied*, 401 U.S. 923 (1971); *Nationwide Auto Appraiser Service* v. *Association of Casualty & Surety Companies*, 382 F.2d 925, 928-929 (10th Cir. 1967); *Conference of Studio Unions* v. *Loew's, Inc.*, 193 F.2d 51, 55 (9th Cir. 1951), *cert. denied*, 342 U.S. 919 (1952); *Johnson* v. *Ready Mix Concrete Co.*, 318 F.Supp. 930, 932 (D. Neb. 1970); *Rayco Mfg. Co.* v. *Dunn*, 234 F.Supp. 593, 597 (N.D. Ill. 1964).

On this principle a supplier cannot recover though he has been harmed by a conspiracy directed at his customer. *Volasco Products Co.* v. *Lloyd A. Fry Roofing Co.*, 308 F.2d 383, 395 (6th Cir. 1962), *cert. denied*, 372 U.S. 907 (1963); *Snow Crest Beverages, Inc.* v. *Recipe Foods, Inc.*, 147 F. Supp. 907 (D. Mass. 1956). Consumers cannot recover though a conspiracy raised the price of equipment purchased by utilities with which they deal and led to increased rates. *Commonwealth Edison Co.* v. *Allis-Chalmers Mfg. Co.*, 315 F.2d 564, 566-567 (7th Cir.), *cert. denied*, 375 U.S. 834 (1963). In one interesting case a movie producer had contracted for distribution of his picture and made it a condition of the contract that the distributor would not "block book" the picture. Despite the contract, and in the face of

the antitrust laws, the distributor did block book a group of pictures to television and plaintiff contended that as a result he received $400,000 less than the fair value of the television rights for his picture. The defendant's action was clearly unlawful but plaintiff's antitrust complaint was dismissed on the pleadings. The court held that block booking injures television stations that are compelled to accept motion pictures that they do not want and that it injures other distributors who are deprived of an opportunity to license their pictures to stations that have been forced to take defendant's pictures. The television stations and the other distributors were in the "target area" but any injury to the producer was only incidental and not actionable under the antitrust laws. *Fields Productions, Inc.* v. *United Artists Corp.*, 318 F. Supp. 87 (S.D.N.Y. 1969), *affirmed per curiam*, 432 F.2d 1010 (2d Cir. 1970), *cert. denied*, 401 U.S. 949 (1971).

Thus in the present case the burden was on TWA to establish that any injury it suffered was caused by the antitrust violations it claimed and that the injury was the direct result of the violation rather than merely incidental to the alleged efforts of Toolco to suppress "competition among aircraft manufacturers and others in the furnishing of aircraft by sale, lease or other means" (Complaint, ¶49, App. A-23).

B. The Effect of the Default

The general principles applicable to proof of unliquidated damages are equally applicable after a default.

> The admission arising from a demurrer or a default is not an acknowledgment, or to be considered as evidence, of liability for substantial damages; nor

> that any such damages were suffered, or if so that the defendant was responsible for them. [Sutherland, *Damages* § 429 (4th ed. 1916).]

It is still incumbent on plaintiff, even after default, to show that he has suffered more than nominal damages and that his damage was caused by the legal wrong charged in the complaint.

In a default case in which well-pleaded facts in the complaint are sufficient for liability, defendant, by defaulting, admits that plaintiff is entitled to recover "some" damages. *Thorpe* v. *National City Bank of Tampa*, 274 F. 200, 202 (5th Cir. 1921). But an admission that the plaintiff is entitled to "some" damages does not prevent the defendant from showing that the plaintiff is entitled only to nominal damages. In *Potts* v. *Howser*, 267 N.C. 484, 148 S.E.2d 836 (1966), the court summarized the rule:

> It is true that defendant's answer has been stricken, and that plaintiff's cause of action and right to recover at least nominal damages have been established. However, defendant is entitled to a trial on inquiry before a jury on the issue of damages. * * * In the trial of the question of damages, the defaulting defendant has the right to be heard and participate. He may, if he can, reduce the amount of damages to nominal damages. [267 N.C. at 494, 148 S.E.2d at 844.]

The effect of a default is the same that the common law gave following judgment for plaintiff on demurrer to the defendant's plea. *Thomson* v. *Wooster*, 114 U.S. 104, 107 (1885); *Lamphear* v. *Buckingham*, 33 Conn. 237, 250 (1866). It remains open for defendant, even after default, to show that "no damages were caused to the plaintiff by the

matters alleged" and thus that only nominal damages can be recovered. *E.g., Electrolytic Chlorine Co.* v. *Wallace & Tiernan Co.*, 328 Mo. 782, 790, 41 S.W.2d 1049, 1052 (1931); *Hallett Construction Co.* v. *Iowa State Highway Commission*, 261 Iowa 290, 295, 154 N.W.2d 71, 74 (1967); *Maywald Trailer Co.* v. *Perry*, 238 S.W.2d 826, 827 (Tex. Civ. App. 1951).

Even after a defendant in an antitrust case has admitted liability "the plaintiff is required to establish with reasonable probability the existence of some causal connection between the defendant's wrongful act and some loss of anticipated revenue." *E. V. Prentice Machinery Co.* v. *Associated Plywood Mills, Inc.*, 252 F.2d 473, 477 (9th Cir.), *cert. denied*, 356 U.S. 951 (1958). The same rule applies after default.

Modern provisions for the assessment of damages after default are traceable directly to the writ of inquiry at common law. See *Thomson* v. *Wooster*, 114 U.S. 104, 111 (1885), quoting from *Hawkins* v. *Crook*, 2 P. Wms. 556, 24 Eng. Repts. 860 (1729); 3 Blackstone, *Commentaries* *398. A leading early American case on the scope of the hearing on damages at common law is *Havens* v. *Hartford & New Haven R.R. Co.*, 28 Conn. 69 (1859). That was an action for injuries sustained by a railroad passenger, in which a hearing on damages was had after defendant's demurrer was overruled. On appeal counsel for defendant argued that "the case stands on a demurrer just as it would have stood on a default," and counsel for plaintiff did not dispute that proposition. Instead he argued that at the inquest on damages defendant must be deemed to have admitted that his acts caused the plaintiff's injuries. His

argument, which the court rejected, is strikingly similar to that advanced by TWA in the present case.

> It is laid down by all the authorities that a demurrer admits all the allegations of the declaration that are well pleaded. * * * We do not claim that immaterial allegations are admitted. But when we allege that our injury was caused by the defendant's negligent act, the allegation is a material one, and if he demurs he admits its truth. * * * Now we claim that the whole inquiry must be as to *how much* we were injured, and that it is too late to inquire whether the plaintiff [*sic;* defendant?] has done us any injury at all. [28 Conn. at 83-85.]

The court specifically rejected that argument. It held that although a demurrer or default may admit all material, well-pleaded allegations, "material" in this sense means "material to the question to be tried by the court; and that is, whether the plaintiff can sustain his action." 28 Conn. at 80. A default or demurrer, the court held, admits nothing with respect to what damages plaintiff ought to recover.[65] That is the issue for the inquest on damages. Accordingly, at that inquest plaintiff must show, among other things, that any substantial damages he seeks to recover were caused by the acts of the defendant. The court said that "a demurrer or default proves nothing more than" that the

---

[65] "An allegation of damage is not, however, a traversable allegation. * * * It is not admitted by a defendant's failure to answer." *McClelland* v. *Climax Hosiery Mills*, 252 N.Y. 347, 351, 169 N.E. 605, 606-607 (1930). That rule survives today in Civil Rule 8(d). See *Vevelstad* v. *Flynn*, 230 F.2d 695, 703 (9th Cir.), *cert. denied*, 352 U.S. 827 (1956).

act charged was done "and nothing but nominal damages will be given unless there be further proof." 28 Conn. at 94.

> May not the defendants show, on the hearing in damages, notwithstanding the demurrer, that the plaintiff's knee was not hurt at all? or if so, that it was caused by his attempt to assail the conductor, or in his twisting his limb under the seat in order to keep from being ejected from the car, or in springing over the seat to avoid the conductor? If so, and the injury to the knee may be denied and disproved, the manner and degree in which it is claimed to have been done by the defendants may be disproved; for the greater includes the less, and the proof of the manner may well show, as it did in this case, that the plaintiff himself was the author of this particular injury. [28 Conn. at 96.]

A multitude of cases support the same proposition.[66] Two are worthy of particular comment. *Dehoff* v. *Black*, 206 N.C. 687, 175 S.E. 179 (1934), was a suit to recover the value of plaintiff's truck, which, plaintiff alleged, was demolished in a collision caused by defendant's negligence. A default judgment was entered after defendant failed to answer. At the inquiry on damages substantial damages were awarded to plaintiff. The Supreme Court of North Carolina held that at the inquiry evidence to show that the driver of the defendant's truck was not the defendant's servant was properly excluded because it "goes only to the

---

[66] *E.g. Went* v. *Schmidt*, 117 Conn. 257, 167 A. 721 (1933); *Graves* v. *Cameron*, 161 N.C. 549, 77 S.E. 841 (1913); *Blow* v. *Joyner*, 156 N.C. 140, 72 S.E. 319 (1911); *Batchelder* v. *Bartholomew*, 44 Conn. 494 (1877); *Barclay* v. *Pickles*, 38 Mo. 143 (1866); *cf. Beall* v. *Munson*, 204 Cal.App.2d 396, 22 Cal. Rptr. 333 (1962); *Sagebiel's, Inc.* v. *Sumrall*, 358 S.W.2d 251 (Tex.Civ.App. 1962).

question of liability." 206 N.C. at 690, 175 S.E. at 181. It reversed, however, because it held that it was error to exclude evidence to show that the collision was caused by the driver of plaintiff's truck.

> A simple illustration may serve to make clear its competency: A and B, each driving a truck or automobile, approach from opposite directions upon the highway. B is slightly over the center of the road. A decides to teach him a lesson by taking his front wheel off. This he does with consequent injury to himself. A sues B and obtains a judgment by default and inquiry for want of an answer. Upon the execution of the inquiry, B offers to show how the collision occurred, not to escape his liability of a penny and the costs established by the judgment, but to show that A's damage, over and above the amount fixed by the default judgment, was the result of a self-inflicted injury (not contributory negligence) and the proper measure of damages. * * * In a tort action for unliquidated damages, the amount recoverable is the sum necessary to compensate the plaintiff for the injury sustained as a proximate result of defendant's negligence or wrong. [206 N.C. at 690, 175 S.E. at 181.]

The other case worthy of note is *McClelland* v. *Climax Hosiery Mills*, 252 N.Y. 347, 169 N.E. 605 (1930), which involved a default judgment in a suit for breach of an employment contract. At a proceeding for an assessment of damages under what was then § 490 of the New York Civil Practice Act,[67] defendant introduced testimony to show that

---

[67] Civil Rule 55(b)(2) was modeled in part on § 490 of the New York Civil Practice Act. 6 Moore, *Federal Practice* ¶55.01[4], at 1804 (2d ed. 1953).

plaintiff had been offered a similar position at the same salary by another employer. On the basis of this testimony the trial court refused to award damages for the remaining period of the contract. The Court of Appeals found that the testimony in the case before it was too uncertain to establish that plaintiff could have had similar employment for any definite time at any definite salary, but it held that testimony of this kind is competent, not to defeat plaintiff's cause of action but "for the purpose of assisting the court in fixing the real damages suffered by the plaintiff." 252 N.Y. at 351, 169 N.E. at 607. In a concurring opinion, joined in by all of the members of the court save one, Chief Judge Cardozo explained that if the employee refuses suitable substitute employment, "he has broken the chain of causation, and loss resulting to him thereafter is suffered through his own act. It is not damage that has been caused by the wrongful act of the employer." 252 N.Y. at 359, 169 N.E. at 609-610.

The *McClelland* case supports the others discussed in this section for the proposition that the defaulted defendant is entitled at the hearing on damages to attempt to show that plaintiff's damage was not caused by the acts alleged. No matter how "well-pleaded" plaintiff's allegations, causation is an issue at the hearing on damages and is not established by the default. The Special Master and the courts below strayed from these simple, sensible, and time-honored principles. In so doing, they plunged the damage hearing into a never-never land where outlandish assumptions substituted for proof of actual facts.

C. Application to the Present Case

Special Master Rankin ruled that in a suit for unliquidated damages, "there is no admission as to the damages by reason of the default, and proof thereof is required" (App. A-366). It was his view that he would have to be "satisfied by a preponderance of the evidence that any damages were proximately caused by the violations of law alleged in the complaint" (App. A-372). He was right, as the discussion in the preceding section has shown.

Unfortunately Special Master Brownell took a different view. He ruled that proximate cause is admitted by the default (App. A-1966 Brownell Report 36) and that after default plaintiff did not have any burden of introducing evidence to prove proximate cause (App. A-1966 Brownell Report 47). The District Court took a similar view (308 F. Supp. at 684-685, 689, App. A-2033-34, A-2042). The Court of Appeals recognized that the opinions below and the briefs of the parties "reveal some confusion as to the proper scope of the hearing on damages" (449 F.2d at 69, App. A-2772), but it did very little in its own opinion to dispel that confusion.

On the one hand, the Court of Appeals stated that "the outer bounds of the recovery allowable are of course measured by the principle of proximate cause" and that "in this sense it was TWA's burden to show 'proximate cause'" (449 F.2d at 70, App. A-2773). Again it said that it is "necessary to establish the causal nexus for the recovery of damages * * *" (449 F.2d at 70, App. A-2774). And it noted that TWA's strategy at the damage hearing "was in fact designed to prove causation" (449 F.2d at 71, App. A-2775).

On the other hand, the Court of Appeals ruled that the default had the effect of admitting that the acts pleaded "caused injury to TWA in the respects there alleged" and that "there was no burden on TWA * * * to show that those acts caused the well-pleaded injuries * * *" (449 F.2d at 70, App. A-2772-2773). It praised Special Master Brownell for his understanding of the law on this point and his application of proper principles (449 F.2d at 70, App. A-2774). On critical issues related to causation, it was willing to rely on what it recognized to be "assumption" only (449 F.2d at 73, 74, App. A-2781).

Neither Special Master Brownell nor the Court of Appeals attempted to explain the connection between the restraints of competition alleged and the managerial decisions that TWA claimed injured it. There was no connection. This is not a situation where unwanted goods were foisted on a captive market or where a manufacturer of aircraft was precluded from supplying the TWA market. The target of the antitrust violations alleged was the suppliers of commercial aircraft and not TWA. Toolco owned 78% of TWA and bore 78% of the alleged losses from its exercise of managerial control.

Because the findings below about damages derived from the application of an improper legal standard to the facts, they cannot stand. *United States* v. *Singer Mfg. Co.*, 374 U.S. 174, 194 n. 9 (1963); 9 Wright & Miller, *Federal Practice and Procedure: Civil* 734 n. 7 (1971). In order to demonstrate the seriousness of the errors in this regard, we will examine in some detail how the causation issue was treated in connection with the largest elements of damage—the

loss of profits from an inadequate jet fleet and the use of leases rather than outright sales.

1. *Loss of Profits.* The largest item of damages included in the judgment was $27.6 million ($82.8 when trebled), representing losses in operating profits due to an inadequate jet fleet caused by delays in deliveries of some jets and failure to deliver 16 other jets. These are discussed in Part I of the Special Master's Report (App. A-1966 Brownell Report 44-167) and are referred to as "Part I damages." Our submission here is that if the proper standard had been applied, the amount allowed on this claim would have been zero, since (1) if there had been a loss of profits it would have been wholly unrelated to the alleged suppression of competition among aircraft manufacturers, (2) Toolco did not in fact cause TWA any loss in operating profits, and (3) the finding to the contrary was based on sheer speculation and guesswork.

TWA's financial expert, Edward J. Morehouse of Drexel Harriman Ripley, testified that a May 1955 public offering of TWA common stock was a prerequisite to all of TWA's subsequent debt financings to pay for the earlier deliveries of the larger reconstructed jet fleet that the damage award assumes an independent TWA would have had. Yet the Special Master found that an independent and prudent TWA, operating free of any restraints or controls by Toolco, would not have made this public offering and that none of the subsequent TWA financings, which would have been necessary to pay for the reconstructed jet fleet, would have taken place (App. A-1966 Brownell Report 256-264).

The testimony of TWA's engineering expert, Rummel, who purported to show that TWA's jet fleet was inadequate,

referred only to what "TWA *should* in fact have ordered" (449 F.2d at 73, App. A-2780; emphasis by the Court of Appeals). Rummel expressly disclaimed any knowledge of TWA's financial capabilities. Nor did he say what an independent and prudent TWA board *would* have ordered.

That is all that TWA proved. TWA did not show that Toolco's acts caused TWA's inadequate jet fleet. As the Special Master found, TWA's own independent and prudent Board of Directors—uninfluenced by Toolco—would not have taken the action necessary to finance the larger jet fleet. Thus TWA's failure to have that fleet was not the result of the assumed violations of the antitrust laws by Toolco.

The Special Master unequivocally rejected TWA's proof that it would have obtained the necessary financing. Unfortunately he did not relate his finding on that point to his analysis of Part I damages. The sum total of his explanation why the causation issue had been satisfied is as follows:

> Given the well-pleaded allegations of the complaint, however, the testimony of Rummel, * * * as well as the Connolly testimony, and the evidence that the assumed additional fleets of B-331s, B-131s and CV-880s were in fact ordered in the same type and quantity by a Hughes-dominated TWA, although at later dates, I am of the opinion that the hypothetical jet fleet and reconstructed delivery dates constitute a proper basis for computing damages under this Section I. [App. A-1966 Brownell Report 56.]

The Special Master thus relied in part on "the well-pleaded allegations of the complaint." The allegations to which he referred were set forth in his report as follows:

> "During this period [in or about October 1955] when other United States-flag air carriers were placing orders for jet powered aircraft, and thereafter, the defendants caused and directed TWA to forego making any arrangements for the acquisition, by sale, lease or otherwise of any jet powered aircraft (par. 17) * * * TWA has further been injured in the following manner:
>
> (a) TWA was prevented from obtaining jet powered aircraft and was deprived of opportunity for adequate use of jet powered aircraft during the years 1958, 1959, 1960 and to date with a resultant loss in profits." (par. 52) [App. A-1966 Brownell Report 45; brackets and asterisks in original.]

These "well-pleaded allegations" are barren of any facts showing that the damages are "the certain result of the wrong." *Story Parchment Co.* v. *Paterson Parchment Paper Co.*, 282 U.S. 555, 562 (1931). There is only a five-word conclusory statement that there was "a resultant loss of profits." Nowhere in the complaint is it alleged that an independent TWA wanted or would or could have acquired 33 Boeings and 30 Convairs. Nowhere is it alleged that an independent TWA would or could have financed a 63-jet fleet at earlier dates, rather than the historical 47-jet fleet. Nowhere is it alleged that, but for Toolco's oppression, TWA would have obtained equity financing at a much earlier time than actually happened. No facts were alleged to show that plaintiff's harm necessarily was caused by defendant's assumed unlawful conduct. While we can assume that a conclusory allegation that a defendant's con-

duct "result[ed] [in] loss of profits" was sufficient to sustain the complaint against a motion to dismiss filed shortly after the commencement of the action, it does not follow that the same conclusory allegations can be given controlling weight after a two-year hearing on damages.

The Court of Appeals recognized this when it noted that TWA was required to introduce evidence "to establish a causal nexus for the recovery of damages" (449 F.2d at 70, App. A-2774). Since TWA did not allege that it would have ordered and financed a larger jet fleet in time to take earlier deliveries thereof, TWA should have shown that fact in the damage hearing. The "well-pleaded allegations of the complaint" did not establish causation for the specific grounds of damages for which evidence was offered.[68]

---

[68] The following hypothetical cases illustrate the point:

Hypothetical Case #1: X sues Y for the wrongful death of X's deceased. X alleges in his complaint that (a) deceased fell overboard from Y's boat; (b) Y failed to have lifebuoys on board, and (c) as a result, deceased drowned. The trier of facts finds Y was negligent in failing to have lifebuoys on board. What is the judgment? Before answering, consider:

Hypothetical Case #2: X sues Y for the wrongful death of X's deceased. X alleges in his complaint that (a) deceased fell overboard from Y's boat; (b) Y failed to have lifebuoys on board; (c) deceased floundered alongside the boat for five minutes while the deceased's wife looked on in horror; (d) as a result, deceased drowned. The trier of facts finds Y was negligent in failing to have lifebuoys on board. What is the judgment? Is it the same as in Case #1?

It should be obvious that in Case #2 deceased's death is probably caused by Y's failure to have lifebuoys on board. But for the absence of lifebuoys, the deceased would probably have been saved. Judgment for X in Case #2. But can the same be said in Case #1? It is a matter of "speculation or guesswork," *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251, 265 (1946), whether the deceased's death was caused by Y's negligence in failing to have lifebuoys on board. Suppose, for example, the deceased did not know how to swim and

Indeed, the Special Master appeared to acknowledge this when he explicitly relied upon the testimony of Rummel and Connelly in concluding that damages were shown.

The Special Master cited "the testimony of Rummel" as one of the main reasons why the causation requirement had been satisfied. Estimates for the "reconstructed" delivery dates for all 63 aircraft were prepared by this TWA Vice President, "TWA's most important witness" (449 F.2d at 71, App. A-2775). The Special Master found him qualified as an expert in "negotiations with aircraft manufacturers with respect to technical specifications, performance characteristics, provisioning and spare parts, delivery schedules and acceptance tests" (App. A-1966 Brownell Report 47). Whatever Rummel's qualifications as an engineer, he was totally ignorant of TWA's financial capabilities. Indeed at the hearing he repeatedly disclaimed knowledge of TWA's

---

sank without a trace within seconds after hitting the water? In an earlier Second Circuit case the ruling was for Y:

> [T]here is nothing whatever to show that the decedent was not drowned because he did not know how to swim, nor anything to show that, if there had been a life buoy on board, the decedent's wife would have got it in time, * * * or, if she had, that she would have thrown it so that her husband could have seized it, or * * * that, if he did, it would have prevented him from drowning. [*New York Central R. Co.* v. *Grimstad*, 264 F. 334, 335 (2d Cir. 1920).]

The point of these hypotheticals is that while a complaint may be sufficient to state a cause of action, that fact alone does not necessarily establish cause-in-fact. The leading students of causation accept the result in the *Grimstad* case, just described, and use it to illustrate the proposition that "if the greatest efforts on the part of all concerned would probably not have averted the harm causal connexion is not made out." Hart & Honoré, *Causation in the Law* 371 (1959). It is submitted that TWA's complaint is analogous to Case #1 and, as a consequence, it was necessary for it to prove at the damage hearing that it would not have drowned anyhow.

financial situation during the period when financing would have been needed to support his reconstructed jet fleet. By way of example:

> The Special Master: Do you have an opinion as to whether or not TWA was in a position to finance the acquisition of these planes? Do you have an opinion?
> The Witness [Rummel]: I don't think I have an opinion that's sufficiently valid to present, no. [App. A-503.]

* * * * *

Q. [Toolco counsel]: Did you give financial ability of TWA any weight at all in the preparation of this sentence?
A. [Rummel]: This is an area in which I personally am not especially proficient. It was not my intention to get into that.
Q. Does that mean that you did not give weight to financial ability of TWA?
A. Not particularly. [App. A-547.]

* * * * *

Q. [Toolco counsel]: So does your opinion as expressed in this sentence contain an assumption by you that TWA could have placed the orders for the Convairs in 1956?
A. [Rummel]: Well, I'm simply stating that if TWA had done that what the effect would have been. * * *

> The Special Master: Have you anything to add to it to your knowledge as to whether or not TWA could have placed the order at the same date that Toolco placed it?
> [Toolco counsel]: That's right.
> The Witness: Well, you see that gets over into the area of financing ability and all that sort of thing and I don't feel too competent to testify on it. That was not my area of responsibility. [App. A-626.]

* * * * *

Q. [Toolco counsel]: Is it correct or not, Mr. Rummel, that so far as this particular sentence is concerned, you are indulging the assumption that TWA would have been financially able to place the orders at the time Toolco placed them? * * *

A. [Rummel]: Well, in the reconstruction that's contained in the testimony, it is assumed that TWA would have ordered and then we derived the result that would have been achieved. [App. A-626-627.]

Other examples abound.[69]

The testimony of Rummel makes it very clear that he was not competent to testify on what TWA *could* have done and that he merely assumed what TWA *would* have done. His testimony was an academic answer to an academic question: what *should* TWA have done? The Special Master assumed that TWA could and would have done what Rummel testified it should have done. This assumption follows from the erroneous view that a causal nexus need not be shown, even when it had not been specifically alleged, in the damage hearing.

The erroneous reliance upon the Rummel testimony is analogous to the situation in *Flintkote Co.* v. *Lysfjord*, 246 F.2d 368 (9th Cir.), *cert. denied*, 355 U.S. 835 (1957). Plaintiffs there sought damages for loss of profits that they would have realized if an antitrust violation had not prevented them from acquiring acoustical tile from defendant Flintkote on a direct basis. To prove damages plaintiffs testified that, while they knew nothing of the finances of the business and had never managed such a business

[69] *E.g.*, App. A-492, A-548, A-563, A-664, A-746, A-811, A-813, and A-917.

before, they fully anticipated annual profit increases based on the assumption of " 'just normal expected increase in good will and sales, [and] promotional work.' " 246 F.2d at 390. Neither the plantiffs in *Flintkote* nor Rummel in our case could give even an educated guess as to what *would* have happened absent defendants' unlawful conduct. The Ninth Circuit's answer in *Flintkote*, made with a full appreciation of the relaxed standard of proof of damages in antitrust cases, is equally applicable here:

> What, then, were plaintiffs' estimates and upon what factual basis were they grounded? In essence, the computation of lost profits was based on the *assumption* that the plaintiffs would make as much working for themselves in their first year of operation as they and their employer, R. W. Downer Co., made together from their sales in their best year working for that going concern; that thereafter, profits would increase as much as 50% annually. * * *
>
> The foregoing represents the sum and substance of plaintiffs' evidence on this issue. The omissions are manifold and significant. Nowhere in the record is there any substantial evidence of the state of the industry during this three year period. There is no evidence that plaintiffs would probably have obtained more business if they could have purchased Flintkote tile on a direct basis * * *. [246 F.2d at 391; emphasis added.]

This, the court held, was not enough. Proof of damages, even in an antitrust case, requires "something better * * * than a mere interested guess." 246 F.2d at 394. See also *Wolfe* v. *National Lead Co.*, 225 F.2d 427 (9th Cir.), *cert. denied*, 350 U.S. 915 (1955), in which the evidence in an antitrust case was held insufficient to establish any injury

where it rested on the fact that the plaintiffs "*assume* that they would have received larger quantities of titanium except for the alleged conspiracy; *but there is no evidence that they would have* * * *." 225 F.2d at 432 (emphasis added).

The Court of Appeals in the present case recognized that the award was based on assumption. It accepted "the *assumption* that TWA would have acted approximately as did Toolco * * * " and the "*assumption* that an independent TWA would and could have financed the full 63-jet fleet * * * " (449 F.2d at 73, 74, App. A-2781; emphasis added). But assumption is not proof, as the cases just discussed show.

The Special Master's third reason for finding causation was "the Connelly testimony" (App. A-1966 Brownell Report 56). This point hardly deserves rebuttal—except for its importance to the award—since Mr. J. B. Connelly, who was a *Boeing* Vice President, was obviously in no position to know what the *TWA* Board would have been able to finance. His testimony, like Rummel's, spoke only to what TWA *should* have done and had no probative value on the causation issue.

Finally, the Special Master pointed to the fact that the assumed fleets "were in fact ordered in the same type and quantity by a Hughes-dominated TWA, although at later dates * * *" (App. A-1966 Brownell Report 56). There are three reasons why this adds nothing. (1) A "Hughes-dominated TWA" did not order this fleet at all. The order was placed by Toolco. That Toolco, a wealthy corporation with interests far beyond the airline business, could order a 63-jet fleet is no proof that an independent TWA would

have had the resources to do so. (2) The Toolco order was cut back from 63 jets to 47. No evidence showed, or purported to show, that an independent TWA would have been able to finance more aircraft for itself than a "Hughes-dominated TWA" would have financed. (3) Finally, the Special Master's concession that the same type and quantity were ordered "although at later dates" is precisely the issue here. It is because the assumed 63-jet fleet—as well as the actual 47-jet fleet—would not have been ordered and financed at earlier dates that TWA's "damages" did not result from the alleged illegal conduct of Toolco.

TWA's only evidence of financing capability was the Drexel Harriman Ripley report, designed to provide evidence that financing would have been available for the reconstructed jet fleet. The Ripley firm assumed that an initial jet fleet "would have been ordered by an independent and competent management in the fall of 1955" (App. AX-353), rather than in the period December 1955 to early 1956, as actually happened. From that assumption the firm determined that it was necessary for TWA to have made in May 1955 a public offering of TWA common stock to provide net proceeds of $55.5 million, and thus ensure sufficient equity capitalization to sustain later and more substantial debt financings. The firm found this offering was an absolute prerequisite to all later financings (App. A-1966 Brownell Report 256) and stated that it would have advised the independent TWA board in early 1955 to make such a stock offering.

This evidence was positively and explicitly rejected by the Special Master (App. A-1966 Brownell Report 256-263). He said:

> I conclude that an independent prudent Board of TWA would not have accepted and acted upon the Drexel Harriman Ripley recommendations and that the sale in May 1955 of common stock of TWA for $58.5 million netting TWA $55.5 million would not have occurred.
>
> * * * * *
>
> I conclude that TWA has not proved that either of the 1955 financings could have been reasonably negotiated at the time, in the amount and according to the terms suggested, by an independent and prudent management.
>
> Since the May 1959 equity financing of $60 million and debt financing of $90-100 million assumed and were dependent upon the 1955 common stock and mortgage debt financings and since I have determined that the latter on their face as proposed by TWA's expert could not have taken place under the historical circumstances established in the record, I thus find a failure of proof with regard to these subsequent financings . [App. A-1966 Brownell Report 261, 263.]

Thus the Special Master completely rejected the only evidence presented that an independent TWA could or would have obtained the financing at the earlier times and in the greater amounts required to effect timely delivery of the reconstructed jet fleet.

But these findings of the Special Master in Part III of his report were inexplicably forgotten in Part I. In Part III he heeded and quoted the words of *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251, 265 (1946), that "even where

the defendant by his own wrong has prevented a more precise computation, the [trier of fact] may not render a verdict based on speculation or guesswork" (App. A-1966 Brownell Report 257). But in Part I, in analyzing the acquisition of the reconstructed jet fleet, he said: "I have assumed that funds were available at the time of the delivery of each aircraft" (App. A-1966 Brownell Report 148). This assumed $200 million more than TWA borrowed historically, excluding the massive contributions by Toolco. The only evidence that could have sustained the assumption was actually rejected by the Special Master as too unreal to be accepted.[70]

The only possible explanation for the Special Master's failure to " 'look at the whole picture and not merely at the individual figures in it,' " *Continental Ore Co.* v. *Union Carbide & Carbon Corp.*, 370 U.S. 690, 699 (1962), is his mistaken view that plaintiff did not bear "the burden of introducing evidence to prove proximate cause, regardless of the default" (App. A-1966 Brownell Report 47). Thus his findings in Part I are irremediably tainted. Had he focused on the question whether Toolco caused TWA to have an inadequate fleet or whether an independent and prudent TWA board would have had an inadequate fleet anyway, he would undoubtedly have discussed his Part I findings in light of his Part III findings, and recognized TWA's failure

[70] To find that TWA would have made the stock offering in May 1955 "would in my opinion endow Drexel Harriman Ripley and an independent prudent Board of TWA in 1955 with a prescience, wisdom and perfection of timing that exceeds the natural capacity of the most experienced men acting without the benefit of hindsight" (App. 1966 Brownell Report 258).

to establish the causal nexus between Toolco's act and TWA's inadequate jet fleet.[71]

2. *Use of Leases.* The Special Master awarded TWA $5.3 million as damages ($15.9 when trebled) for Toolco's leasing planes to TWA rather than selling them to TWA outright. TWA made no such claim in its complaint. It never alleged, and the default did not admit, the acts for which the award was made.

Although a great deal was said in the complaint about other financing decisions that Toolco made that TWA claimed to be illegal and injurious (Complaint, ¶¶ 23-28, 52(c), (d), App. A-15-16, A-24-25), TWA never alleged that Toolco's 1959 and 1960 managerial decisions to lease airplanes to TWA pending final arrangements for sale con-

---

[71] The Court of Appeals sought to fill this gap by saying that Toolco should not be heard to assert that TWA would not have financed a 63-jet fleet at the earlier dates because it was Toolco's own supposed "crippling TWA's financial posture and reducing it to a state of vassalage, dependent on Toolco's support," all in violation of the antitrust laws, that rendered TWA incapable of doing any better (449 F.2d at 74, App. A-2782). This argument totally ignores the fact that the Special Master and TWA's own financial experts accepted TWA's financial condition as being free of tainted Toolco impact at the very time at the close of 1954 and early 1955 when an independent and prudent TWA board was supposed to have taken necessary action to finance the 63-jet fleet.

> The damages claimed [under Part I] are confined to those said to stem from actions of the defendants in the period from early 1955 to the end of 1960 * * *. [App. A-1966 Brownell Report 45.]
>
> I must consider the actual Balance Sheet as of December 31, 1954 and the actual operating results for the year 1954 and the first two calendar quarters of 1955, as did TWA and its experts Drexel Harriman Ripley, and as must have an independent Board. [App. A-1966 Brownell Report 256.]

The point is further shown by the ten paragraphs of the complaint that the Court of Appeals cited for its "vassalage" statement. Not one of those paragraphs alleges any wrongful act of Toolco prior to 1955.

stituted antitrust violations. Nor did TWA allege that it was injured by the selection of a temporary rental mechanism rather than immediate sale.

The only paragraph of the complaint that offered any particulars regarding the lease arrangements makes it crystal clear that TWA was not complaining about the use of leases rather than sale but about an exclusive dealing arrangement with Toolco that purportedly ran concurrently with the leases. Paragraph 20 of the complaint alleged:

> During the period 1959 to 1960, defendants arranged for the lease to TWA by Toolco of certain jet-powered aircraft on a day-to-day basis. Such aircraft were the first and only jet-powered aircraft made available to TWA by the defendants during the years 1955 to 1960 and the number of aircraft so leased by Toolco to TWA was inadequate for the needs of TWA. Such leases were given on a continuing condition, agreement and understanding that TWA would not purchase or lease aircraft from any other potential supplier thereof. The effect of such continuing condition, agreement and understanding was to foreclose, to all potential suppliers of jet-powered aircraft to TWA other than defendants, the opportunity for *selling or leasing* jet-powered aircraft to TWA. [App. A-13-14; emphasis added.]

The phrase "selling or leasing" is the giveaway. TWA was concerned with *who* its suppliers were, not with the *manner* in which supplies were furnished. It would have had the same complaint about exclusive dealing even if Toolco had sold each jet to TWA as soon as it was available.

The Special Master recognized this. He said that "the singular thrust of the paragraph goes toward the claim that

the 1959-1960 leases did not provide a sufficient number of aircraft for TWA's needs and that the provisions of the lease agreements prohibited TWA from buying *or leasing* other jet aircraft from another potential supplier" (App. A-1966 Brownell Report 180; emphasis in original). But he was not deterred by what he termed "an omission in a specific allegation" (App. A-1966 Brownell Report 181) and thought that the general allegations of paragraphs 9(f) and 10(h) supported his award of damages for lease-related losses. They do not. Paragraph 10 is an allegation of intent, which says that the acts described in subsequent paragraphs were done in furtherance of the offenses charged in the preceding paragraph.[72] The only subsection of "the preceding paragraph" to mention leasing is 9(f). By its own terms, 9(f) is concerned only with the alleged Clayton § 3 offense of exclusive leasing *and selling*, and not with any offense relating to the relative merits of temporary rental vis-a-vis immediate purchase.[73] Nor is there anything

---

[72] Paragraph 10(h) reads in full as follows:

> Each act of the defendants and Atlas hereinafter alleged was done in furtherance of the offenses charged in the preceding paragraph and was a part thereof and was done with the primary purpose of restraining and monopolizing the trade and commerce described above. It was the intent of the defendants and Atlas, *inter alia*:
>
> * * *
>
> (h) That the defendants and Atlas would obtain substantial profits for themselves, at the expense of TWA and other air carriers, as the result of restrictions upon competition in the trade and commerce hereinbefore alleged. [App. A-9-10.]

[73] Paragraph 9(f) reads in full as follows (emphasis added):

> Beginning in or about the year 1939 and continuing up to and including the date of the filing of this complaint, the defend-

whatever in the "injury" portion of the complaint (¶¶ 49-54, App. A-23-27) suggesting that TWA was injured because of Toolco's preference for leasing rather than selling.

By virtue of the default, TWA has the benefit of having the factual allegations of its complaint assumed to be true. At the same time, however, it is confined by the complaint and cannot recover what it did not claim. As this Court has said, a treble damage plaintiff not only must plead acts constituting a violation but must further plead "that plaintiff was damaged thereby." *Radiant Burners, Inc.* v. *Peoples Gas Light & Coke Co.*, 364 U.S. 656, 660 (1961). Failure to allege "at least in general terms, the mode of injury, the nature and extent of loss" traceable to the leasing decision is fatal to TWA's case, even assuming that TWA properly pleaded that decision as an antitrust offense. *Sam S. Goldstein Industries* v. *Botany Industries, Inc.*, 301 F. Supp. 728, 734 (S.D.N.Y. 1969).

In addition, TWA never either pleaded or proved that the decisions to lease rather than purchase proximately caused any injury to it. As explained earlier, TWA failed to prove an essential element of proximate cause, i.e., that an independent TWA board either would or could have purchased the jets instead of renting them. No amount of *ex post facto* arithmetical calculation or recitations of opinions on the general desirability of purchasing as opposed to leasing can rectify plaintiff's failure of proof.

---

ants, Atlas and other persons acting for each of them have been and are now engaged in

* * *

(f) *Sales and leases* of jet-powered aircraft on the condition, agreement and understanding that the purchaser or lessee shall not *buy or lease* the goods of a competitor or competitors of the vendor or lessor, in violation of Section 3 of the Clayton Act; and

* * *. [App. A-8-9.]

CONCLUSION

Because of the vast stakes involved, petitioners have felt obliged to discuss at length the various issues the Court has agreed to review. The comprehensiveness of our discussion may tend to suggest a complexity that the case does not have and give TWA's position a dignity it does not deserve. Stripped of the overtones of contumacy that the lower courts mistakenly thought were present and of the enthusiastic rhetoric with which plaintiff pleaded legal conclusions, the case is really quite simple. The new management of TWA disagrees with some of the decisions Toolco made for TWA during the last six years of Toolco control. Its resort to federal court to litigate these differences of view has been rewarded beyond its fondest dreams—indeed, beyond its prayer for relief—by a huge judgment in its favor though it has never shown, and the courts below have never decided, how Toolco violated the antitrust laws by making decisions, even erroneous decisions, for its subsidiary, or why any antitrust violations that might be found were not within the immunity conferred by CAB approval of Toolco's control of TWA, or what causal relation existed between the supposed antitrust violations and the damages it has been awarded. Toolco stands to lose a great deal if the decision below is affirmed but the federal courts stand to lose even more. The decision below does violence to sound and well-established principles of antitrust law, of the proper relation between the courts and administrative agencies, and of fair and orderly procedure.

For all of the reasons set out in this brief, the judgment of the Court of Appeals should be reversed.

Respectfully submitted,

ANNEX

Statutory Provisions Involved

UNITED STATES CONSTITUTION AMENDMENT V:

No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

UNITED STATES CODE, Title 15:

§ 1. [Sherman Act § 1] *Trusts, etc., in restraint of trade illegal; exception of resale price agreements; penalty.* Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is declared to be illegal: PROVIDED, That nothing contained in sections 1-7 of this title shall render illegal, contracts or agreements prescribing minimum prices for the resale of a commodity which bears, or the label or container of which bears, the trademark, brand, or name of the producer or distributor of such commodity and which is in free and open competition with commodities of the same general class produced or distributed by others, when contracts or agreements of that description are lawful as applied to intrastate transactions, under any statute, law, or public policy now or hereafter in effect in any State, Territory, or the District

of Columbia in which such resale is to be made, or to which the commodity is to be transported for such resale, and the making of such contracts or agreements shall not be an unfair method of competition under section 45 of this title: PROVIDED FURTHER, That the preceding proviso shall not make lawful any contract or agreement, providing for the establishment or maintenance of minimum resale prices on any commodity herein involved, between manufacturers, or between producers, or between wholesalers, or between brokers, or between factors, or between retailers, or between persons, firms, or corporations in competition with each other. Every person who shall make any contract or engage in any combination or conspiracy declared by sections 1-7 of this title to be illegal shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding fifty thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

§ 2. [Sherman Act § 2] *Monopolizing trade a misdemeanor; penalty.* Every person who shall monopolize, or attempt to monopolize, or combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding fifty thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

§ 14. [Clayton Act § 3] *Sale, etc., on agreement not to use goods of competitor.* It shall be unlawful for any person engaged in commerce, in the course of such commerce, to lease or make a sale or contract for sale of goods, wares, merchandise, machinery, supplies, or other commodities,

whether patented or unpatented, for use, consumption, or resale within the United States or any Territory thereof or the District of Columbia or any insular possession or other place under the jurisdiction of the United States, or fix a price charged therefor, or discount from, or rebate upon, such price, on the condition, agreement, or understanding that the lessee or purchaser thereof shall not use or deal in the goods, wares, merchandise, machinery, supplies, or other commodities of a competitor or competitors of the lessor or seller, where the effect of such lease, sale, or contract for sale or such condition, agreement, or understanding may be to substantially lessen competition or tend to create a monopoly in any line of commerce.

§ 15. [Clayton Act § 4] *Suits by persons injured; amount of recovery.* Any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws may sue therefor in any district court of the United States in the district in which the defendant resides or is found or has an agent, without respect to the amount in controversy, and shall recover threefold the damages by him sustained, and the cost of suit, including a reasonable attorney's fee. Oct. 15, 1914, c. 323, § 4, 38 Stat. 731.

§ 18. [Clayton Act § 7] *Acquisition by one corporation of stock of another.* No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such

acquisition may be substantially to lessen competition competition, or to tend to create a monopoly.

No corporation shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of one or more corporations engaged in commerce, where in any line of commerce in any section of the country, the effect of such acquisition, of such stocks or assets, or of the use of such stock by the voting or granting of proxies or otherwise, may be substantially to lessen competition, or to tend to create a monopoly.

This section shall not apply to corporations purchasing such stock solely for investment and not using the same by voting or otherwise to bring about, or in attempting to bring about, the substantial lessening of competition. Nor shall anything contained in this section prevent a corporation engaged in commerce from causing the formation of subsidiary corporations for the actual carrying on of their immediate lawful business, or the natural and legitimate branches or extensions thereof, or from owning and holding all or a part of the stock of such subsidiary corporations, when the effect of such formation is not to substantially lessen competition.

Nor shall anything herein contained be construed to prohibit any common carrier subject to the laws to regulate commerce from aiding in the construction of branches or short lines so located as to become feeders to the main line of the company so aiding in such construction or from acquiring or owning all or any part of the stock of such branch lines, nor to prevent any such common carirer from acquiring and owning all or any part of the stock of a

branch or short line constructed by an independent company where there is no substantial competition between the company owning the branch line so constructed and the company owning the main line acquiring the property or an interest therein, nor to prevent such common carrier from extending any of its lines through the medium of the acquisition of stock or otherwise of any other common carrier where there is no substantial competition between the company extending its lines and the company whose stock, property, or an interest therein is so acquired.

Nothing contained in this section shall be held to affect or impair any right heretofore legally acquired: PROVIDED, That nothing in this section shall be held or construed to authorize or make lawful anything heretofore prohibited or made illegal by the antitrust laws, nor to exempt any person from the penal provisions thereof or the civil remedies therein provided.

Nothing contained in this section shall apply to transactions duly consummated pursuant to authority given by the Civil Aeronautics Board, Federal Communications Commission, Federal Power Commission, Interstate Commerce Commission, the Securities and Exchange Commission in the exercise of its jurisdiction under section 79j of this title, the United States Maritime Commission, or the Secretary of Agriculture under any statutory provision vesting such power in such Commission, Secretary, or Board.

UNITED STATES CODE, Title 49:

§ 1302. [Section 102, Federal Aviation Act] *Declaration of Policy: The Board.*

In the exercise and performance of its powers and duties under this Act, the Board shall [illegible] the following,

among other things, as being in the public interest, and in accordance with the public convenience and necessity:

(a) The encouragement and development of an air-transportation system properly adapted to the present and future needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense;

(b) The regulation of air transportation in such manner as to recognize and preserve the inherent advantages of, assure the highest degree of safety in, and foster sound economic conditions in, such transportation, and to improve the relations between, and coordinate transportation by, air carriers;

(c) The promotion of adequate, economical, and efficient service by air carriers at reasonable charges, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices;

(d) Competition to the extent necessary to assure the sound development of an air-transportation system properly adapted to the needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense;

(e) The promotion of safety in air commerce; and

(f) The promotion, encouragement, and development of civil areonautics.

§ 1378. [Section 408, Federal Aviation Act] *Consolidation, merger, and acquisition of control.*

(a) *Prohibited acts.* It shall be unlawful unless approved by order of the Board as provided in this section—

* * * * *

(5) For any air carrier or person controlling an air carrier, any other common carrier, or any person engaged in any other phase of aeronautics, to acquire control of any air carrier in any manner whatsoever;

* * * * *

(b) *Application to Board; hearing; approval; disposal without hearing.* Any person seeking approval of a consolidation, merger, purchase, lease, operating contract, or acquisition of control, specified in subsection (a) of this section, shall present an application to the Board, and thereupon the Board shall notify the persons involved in the consolidation, merger, purchase, lease, operating contract, or acquisition of control, and other persons known to have a substantial interest in the proceeding, of the time and place of a public hearing. Unless, after such hearing, the Board finds that the consolidation, merger, purchase, lease, operating contract, or acquisition of control will not be consistent with the public interest or that the conditions of this section will not be fulfilled, it shall by order approve such consolidation, merger, purchase, lease, operating contract, or acquisition of control, upon such terms and conditions as it shall find to be just and reasonable and with such modifications as it may prescribe:

* * * * *

(e) *Investigation of violations.* The Board is empowered, upon complaint or upon its own initiative, to investigate and, after notice and hearing, to determine whether any person is violating any provision of subsection (a) of this section. If the Board finds after such hearing that such

person is violating any provision of such subsection, it shall by order require such person to take such action, consistent with the provisions of this chapter, as may be necessary, in the opinion of the Board, to prevent further violation of such provision.

* * * * *

§ 1379. [Section 409, Federal Aviation Act] *Prohibited Interests: Interlocking Relationships.*

(a) It shall be unlawful, unless such relationship shall have been approved by order of the Board upon due showing, in the form and manner prescribed by the Board, that the public interest will not be adversely affected thereby—

(1) For any air carrier to have and retain an officer or director who is an officer, director, or member, or who as a stockholder holds a controlling interest, in any other person who is a common carrier or is engaged in any phase of aeronautics.

(2) For any air carrier, knowingly and willfully, to have and retain an officer or director who has a representative or nominee who represents such officer or director as an officer, director, or member, or as a stockholder holding a controlling interest, in any other person who is a common carrier or is engaged in any phase of aeronautics.

(3) For any person who is an officer or director of an air carrier to hold the position of officer, director, or member, or to be a stockholder holding a controlling interest, or to have a representative or nominee who represents such person as an officer, director, or member, or as a stockholder holding a controlling interest, in any other person who is a common carrier or is engaged in any phase of aeronautics.

(4) For any air carrier to have and retain an officer or director who is an officer, director, or member, or who as a stockholder holds a controlling interest, in any person whose principal business, in purpose or in

fact, is the holding of stock in, or control of, any other person engaged in any phase of aeronautics.

(5) For any air carrier, knowingly and willfully, to have and retain an officer or director who has a representative or nominee who represents such officer or director as an officer, director, or member, or as a stockholder holding a controlling interest, in any person whose principal business, in purpose or in fact, is the holding of stock in, or control of, any other person engaged in any phase of aeronautics.

(6) For any person who is an officer or director of an air carrier to hold the position of officer, director, or member, or to be a stockholder holding a controlling interest, or to have a representative or nominee who represents such person as an officer, director, or member, or as a stockholder holding a controlling interest, in any person whose principal business, in purpose or in fact, is the holding of stock in, or control of, any other person engaged in any phase of aeronautics.

* * * * *

§ 1381. [Section 411, Federal Aviation Act] *Methods of Competition.*

The Board may, upon its own initiative or upon complaint by any air carrier, foreign air carrier, or ticket agent, if it considers that such action by it would be in the interest of the public, investigate and determine whether any air carrier, foreign air carrier, or ticket agent has been or is engaged in unfair or deceptive practices or unfair methods of competition in air transportation or the sale thereof. If the Board shall find, after notice and hearing, that such air carrier, foreign air carrier, or ticket agent is engaged in such unfair or deceptive practices or unfair methods of competition, it shall order such air carrier, foreign air carrier, or ticket agent to cease and desist from such practices or methods of competition.

§ 1384. [Section 414, Federal Aviation Act] *Legal restraints.* Any person affected by any order made under sections 1378, 1379, or 1382 of this title shall be, and is hereby, relieved from the operations of the "antitrust laws", as designated in section 12 of Title 15, and of all other restraints or prohibitions made by, or imposed under, authority of law, insofar as may be necessary to enable such person to do anything authorized, approved, or required by such order.

§ 1482. [Section 1002(b), Federal Aviation Act] *Investigations on Initiative of Administrator or Board.*

(b) The Administrator or Board, with respect to matters within their respective jurisdictions, is empowered at any time to institute an investigation, on their own initiatve, in any case and as to any matter or thing within their respective jurisdictions, concerning which complaint is authorized to be made to or before the Administrator or Board by any provision of this Act, or concerning which any question may arise under any of the provisions of this Act, or relating to the enforcement of any of the provisions of this Act. The Administrator or the Board shall have the same power to proceed with any investigation instituted on their own motion as though it had been appealed to by complaint.

§ 1482. [Section 1002(c), Federal Aviation Act] *Entry of Orders for Compliance with Act.*

(c) If the Administrator or the Board finds, after notice and hearing, in any investigation instituted upon complaint or upon their own initiative, with respect to matters within their jurisdiction, that any person has failed to comply with

any provision of this Act or any requirement established pursuant thereto, the Administrator or the Board shall issue an appropriate order to compel such person to comply therewith.

§ 1485. [Section 1005(d), Federal Aviation Act] *Suspension or Modification of Order.*

(d) Except as otherwise provided in this Act, the Administrator or the Board is empowered to suspend or modify their orders upon such notice and in such manner as they shall deem proper.

UNITED STATES CODE, Title 28:

§ 1292. *Interlocutory decisions.*

* * * * *

(b) When a district judge, in making in a civil action an order not otherwise appealable under this section, shall be of the opinion that such order involves a controlling question of law as to which there is substantial ground for difference of opinion and that an immediate appeal from the order may materially advance the ultimate termination of the litigation, he shall so state in writing in such order.

* * * * *

RULES OF CIVIL PROCEDURE

Rule 16. *Pre-Trial Procedure: Formulating Issues.* In any action, the court may in its discretion direct the attorneys for the parties to appear before it for a conference to consider

(1) The simplification of the issues;

(2) The necessity or desirability of amendments to the pleadings;

(3) The possibility of obtaining admissions of fact and of documents which will avoid unnecessary proof;

(4) The limitation of the number of expert witnesses;

(5) The advisability of a preliminary reference of issues to a master for findings to be used as evidence when the trial is to be by jury;

(6) Such other matters as may aid in the disposition of the action.

The court shall make an order which recites the action taken at the conference, the amendments allowed to the pleadings, and the agreements made by the parties as to any of the matters considered, and which limits the issues for trial to those not disposed of by admissions or agreements of counsel; and such order when entered controls the subsequent course of the action, unless modified at the trial to prevent manifest injustice. The court in its discretion may establish by rule a pre-trial calendar on which actions may be placed for consideration as above provided and may either confine the calendar to jury actions or to non-jury actions or extend it to all actions.

Rule 37. Refusal To Make Discovery: Consequences.

* * * * *

(b) *Failure to Comply With Order.*

(1) *Contempt.* If a party or other witness refuses to be sworn or refuses to answer any question after being directed to do so by the court in the district in which the deposition is being taken, the refusal may be considered a contempt of that court.

(2) *Other Consequences.* If any party or an officer or managing agent of a party refuses to obey an order

made under subdivision (a) of this rule requiring him to answer designated questions, or an order made under Rule 34 to produce any document or other thing for inspection, copying, or photographing or to permit it to be done, or to permit entry upon land or other property, or an order made under Rule 35 requiring him to submit to a physical or mental examination, the court may make such orders in regard to the refusal as are just, and among others the following:

(i) An order that the matters regarding which the questions were asked, or the character or description of the thing or land, or the contents of the paper, or the physical or mental condition of the party, or any other designated facts shall be taken to be established for the purposes of the action in accordance with the claim of the party obtaining the order;

(ii) An order refusing to allow the disobedient party to support or oppose designated claims or defenses, or prohibiting him from introducing in evidence designated documents or things or items of testimony, or from introducing evidence of physical or mental condition;

(iii) An order striking out pleadings or parts thereof, or staying further proceedings until the order is obeyed, or dismissing the action or proceeding or any part thereof, or rendering a judgment by default against the disobedient party;

(iv) In lieu of any of the foregoing orders or in addition thereto, an order directing the arrest of any party or agent of a party for disobeying any of such orders except an order to submit to a physical or mental examination.

* * * * *

(d) *Failure of Party To Attend or Serve Answers.* If a party or an officer or managing agent of a party wilfully fails to appear before the officer who is to take his deposi-

tion, after being served with a proper notice, or fails to serve answers to interrogatories submitted under Rule 33, after proper service of such interrogatories, the court on motion and notice may strike out all or any part of any pleading of that party, or dismiss the action or proceeding or any part thereof, or enter a judgment by default against that party.[1]

Rule 54. *Judgment; Costs.*

* * * * *

---

[1] Rule 37 was amended March 30, 1970, effective July 1, 1970. The rule now provides, in pertinent part:

(d) *Failure of Party To Attend at Own Deposition or Serve Answers to Interrogatories or Respond to Request for Inspection.* If a party or an officer, director, or managing agent of a party or a person designated under Rule 30(b) (6) or 31(a) to testify on behalf of a party fails (1) to appear before the officer who is to take his deposition, after being served with a proper notice, or (2) to serve answers or objections to interrogatories submitted under Rule 33, after proper service of the interrogatories, or (3) to serve a written response to a request for inspection submitted under Rule 34, after proper service of the request, the court in which the action is pending on motion may make such orders in regard to the failure as are just, and among others it may take any action authorized under paragraphs (A), (B), and (C) of subdivision (b)(2) of this rule. In lieu of any order or in addition thereto, the court shall require the party failing to act or the attorney advising him or both to pay the reasonable expenses, including attorney's fees, caused by the failure, unless the court finds that the failure was substantially justified or that circumstances make an award of expenses unjust.

The failure to act described in this subdivision may not be excused on the ground that the discovery sought is objectionable unless the party failing to act has applied for a protective order as provided by Rule 26(c). [(A), (B), and (C) of subdivision (b)(2), referred to above, are:

(A) An order that the matters regarding which the order was made or any other designated facts shall be taken to be established for the purposes of the action in accordance with the claim of the party obtaining the order;

(B) An order refusing to allow the disobedient party to support or oppose designated claims or defenses, or prohibiting him from introducing designated matters in evidence;

(C) An order striking out pleadings or parts thereof, or staying further proceedings until the order is obeyed, or dismissing the action or proceeding or any part thereof, or rendering a judgment by default against the disobedient party;]

(c) *Demand for judgment.* A judgment by default shall not be different in kind from or exceed in amount that prayed for in the demand for judgment. Except as to a party against whom a judgment is entered by default, every final judgment shall grant the relief to which the party in whose favor it is rendered is entitled, even if the party has not demanded such relief in his pleadings.

Rule 55. *Default.*

(a) *Entry.* When a party against whom a judgment for affirmative relief is sought has failed to plead or otherwise defend as provided by these rules and that fact is made to appear by affidavit or otherwise, the clerk shall enter his default.

(b) *Judgment.* Judgment by default may be entered as follows:

(1) *By the Clerk.*

* * * * *

(2) *By the Court.* In all other cases the party entitled to a judgment by default shall apply to the court therefor; but no judgment by default shall be entered against an infant or incompetent person unless represented in the action by a general guardian, committee, conservator, or other such representative who has appeared therein. If the party against whom judgment by default is sought has appeared in the action, he (or, if appearing by representative, his representative) shall be served with written notice of the application for judgment at least 3 days prior to the hearing on such application. If, in order to enable the court to enter judgment or to carry it into effect, it is necessary to take an account or to determine the amount

of damages or to establish the truth of any averment by evidence or to make an investigation of any other matter, the court may conduct such hearings or order such references as it deems necessary and proper and shall accord a right of trial by jury to the parties when and as required by any statute of the United States.

* * * * *

(d) *Plaintiffs, Counterclaimants, Cross-Claimants.* The provisions of this rule apply whether the party entitled to the judgment by default is a plaintiff, a third-party plaintiff, or a party who has pleaded a cross-claim or counterclaim. In all cases a judgment by default is subject to the limitations of Rule 54(c).

COUNTER-STATEMENT OF QUESTIONS PRESENTED 2

COUNTER-STATEMENT OF THE CASE 4

A. Summary review of proceedings 6

1. *Filing of complaint—rulings thereon* 6

2. *Answers and affirmative defenses—rulings thereon* 7

3. *Pretrial discovery—rulings thereon* 8

4. *The default judgment—rulings thereon* 10

5. *The damage award* 11

B. The complaint 12

C. The discovery proceedings 16

D. Defendants' refusal to proceed and the entry of the default judgment 29

E. Reasons given for the default 33

F. Evidence available to TWA at the time of default 39

1. *The role of Howard R. Hughes* 40

2. *The inferences which can be drawn from what is known about defendants' activities in aircraft manufacture and supply* 42

—The piston era 42

—Prevention of TWA financing 44

—The jet era 47

3. *The curtain of secrecy surrounding Hughes* 56

4. *Co-conspirators other than defendants* 57

SUMMARY OF ARGUMENT 60

ARGUMENT 68

I—The district court's pretrial orders were correct, and defendants' claim that those orders deprived them of due process under the Fifth Amendment is frivolous 68

PAGE

A. Defendants had no right, either constitutional or statutory, to an interlocutory appeal 70

B. Defendants' asserted right to indefinite priority 76

C. The district court properly managed the pre-trial proceedings 83

II—The entry of the default judgment and the effect given to it by the Special Master and the courts below were both proper and necessary; no due process question is presented 89

A. Entry of the default judgment was proper and necessary in light of defendants' refusal to proceed 91

B. The default judgment established that defendants' antitrust violations alleged in the complaint injured TWA 100

III—The courts below were correct in ruling that TWA should be permitted to recover the full amount of the damages to which it is legally entitled 111

A. The amendment of TWA's *ad damnum* clause was properly granted upon adequate notice prior to entry of the interlocutory default judgment 111

B. Whenever a defaulting defendant appears and defends at the damage hearing, the district court has discretion to enter judgment for the full amount of damages proved 117

IV—The orders of the CAB did not exempt the conduct complained of from antitrust attack 122

A. The conduct charged was such that the decisions below were compelled by this Court's rulings on the scope of similar statutory exemptions 123

B. The authority of the CAB to exempt from the antitrust laws is narrowly limited and does not reach this case 129

1. The legislative history 130

2. The Panagra *case* 133

PAGE

C. The orders issued by the CAB were not intended to, and did not, exempt the conduct of which TWA complains 138

1. The original control orders 140

2. Subsequent modification of the control orders 145

V—Damages were properly awarded for violation of the antitrust laws 149

A. Toolco's stock interest in TWA conferred no immunity from the antitrust laws 151

1. The alleged violations did not relate solely to TWA's purchases 151

2. Defendants' foreclosure of the TWA market was not beyond the reach of the antitrust laws 156

B. Defendants' factual defenses to the antitrust claims are inadequate 167

1. Absence of competition is no defense 168

2. The correct legal test was used by the court of appeals 171

VI—The Special Master and the courts below found that TWA, in proving the amount of its damages, demonstrated that each item recovered flowed from the allegations of unlawful conduct and resultant injuries admitted by defendants' default 173

A. TWA proved damages within the rule of "proximate cause" applicable in this defaulted case..... 173

B. Defendants' attack on the Special Master's findings of fact to TWA's damages is refuted by the record in the damage hearing, and those findings have been affirmed by the two lower courts 182

1. Size of TWA's jet fleet 185

PAGE

2. TWA's ability to finance the additional jets 187

3. The 1959-1960 leases 192

C. The Special Master and the courts below applied well-settled legal principles applicable to causation and damages in private antitrust suits 195

Supreme Court of the United States

OCTOBER TERM, 1972

No. 71-827

HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,
Petitioners,

—v.—

TRANS WORLD AIRLINES, INC.,
Respondent.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

BRIEF FOR RESPONDENT TRANS WORLD AIRLINES, INC.

Respondent Trans World Airlines, Inc. ("TWA") cannot agree with the "Questions Presented" and "Statement of the Case" in defendants' brief. Both depend upon the acceptance as fact of defendants' view of controversies which were at issue when defendants chose to default, and thus forestalled a trial. Under these circumstances defendants' version of the facts is unacceptable—particularly when they admit that by the default they "gave up their right to challenge the factual allegations of the complaint" (Def. br. p. 50).

Counter-Statement of Questions Presented

1. When defendants have been allowed extensive discovery, the complaint has been held to state a claim for relief under the antitrust laws, and the pleaded affirmative defenses have been held insufficient to defeat plaintiff's claim, is the district court required by the Fifth Amendment to hold a pretrial conference at that stage for the purpose of defining the issues for trial or to permit defendants to complete further discovery, or both, before it can direct defendants to produce documents held to be relevant and not privileged and permit plaintiff to take an oral deposition?

2. (a) Is it a violation of defendants' Fifth Amendment rights for a court to enter a default judgment in favor of plaintiff as provided in FED.R.CIV.P. 37 when defendants wilfully and deliberately refuse to submit to discovery essential for the proper presentation of plaintiff's case and announce that they will not proceed further? (b) In these circumstances, is it a violation of defendants' constitutional rights for the court to rule that that default judgment conclusively establishes for the purpose of a subsequent damage hearing the truth of the material, traversable and well-pleaded allegations of plaintiff's complaint?

3. (a) May a court, upon actual notice to defendants who have appeared and are before it, grant a plaintiff's motion to amend its complaint by increasing the *ad damnum* prior to entering an interlocutory default judgment? (b) Thereafter, at the close of an evidentiary hearing in which defendants have availed themselves of full opportunity to contest the amount of plaintiff's damages, can the court enter judgment in the full amount to which plaintiff is entitled?

4. Does the immunity from the operations of the antitrust laws and other legal restraints provided in Section

414 of the Federal Aviation Act extend to a treble damage action under Section 4 of the Clayton Act brought by an air carrier against its former controlling stockholder for acts of that stockholder and others which violated the antitrust laws and gravely injured the carrier in its business and property, when none of such acts was approved by the Civil Aeronautics Board, and none was necessary to any acquisition of control which the Board did approve?

5. and 6.[1] (a) Under the antitrust laws are defendants exempt from liability in damages to a controlled corporation having over 13,000 (now 38,000) public stockholders for injuries inflicted upon that corporation by exploiting it as a captive backstop market for aircraft in furtherance of a combination and conspiracy to restrain and monopolize trade in aircraft and an attempt to monopolize a substantial segment of the market for commercial aircraft? (b) Are restraint of trade, monopolization and an attempt to monopolize beyond the reach of the antitrust laws because defendants, who are dealers in and suppliers of aircraft and joint venturers with aircraft manufacturers, contend they do not compete with manufacturers of aircraft? (c) Can either of these questions be determined adversely to plaintiff when its complaint concededly states a legally sufficient claim for relief and it has been deprived of meaningful discovery by defendants' refusal to comply with proper discovery orders?

7. Did the Special Master and the courts below commit clear error in finding that TWA in proving the amount of its damages demonstrated that each item recovered flowed

[1] The propositions covered by these two questions as set out in defendants' brief are so closely related that separate consideration is hardly practicable, as is shown by defendants' decision to cover both in their Point V (Def. br. p. 88 *et seq.*).

D CLOSE IN CENTER

from the well-pleaded allegations of unlawful conduct and resultant injuries admitted by defendants' default?

Counter-Statement of the Case

In 1964 Chief Judge Lumbard, speaking for a unanimous panel of the court of appeals, reviewed the course of this litigation since the filing of the complaint, and concluded that Howard R. Hughes and Hughes Tool Company ("Toolco") "seemed to look upon the entire discovery proceedings as some sort of a game, rather than as a means of securing the just and expeditious settlement of the important matters in dispute." Their tactics, the court believed, could "serve only to frustrate the implementation of the discovery machinery devised by the federal judiciary to expedite the handling of such complex litigation." (332 F.2d at 615, A-352)[2]

In the following year, 1965, this Court had before it on certiorari the basic issues of this case, save and except the quantum of damages. The Court had before it for review the final judgment which had dismissed Toolco's counterclaims against TWA and certain banks and insurance companies for wilful failure to make discovery, and thus the propriety of entering a sanction that deprived Toolco of a

Citations to "Def. br." are to Brief for Petitioners herein.

trial on the merits. At the same time and for the same wilful failure the district court had entered the interlocutory default judgment in favor of TWA on its complaint. On that phase of the case, this Court had also before it for review the decisions on the legal sufficiency of TWA's complaint and the legal sufficiency of Toolco's affirmative defenses of primary jurisdiction and exemption by the CAB. At that time the Court had the benefit of full briefing and argument by the parties, and a brief *amicus* filed on behalf of the CAB which supported the decisions below that Toolco's affirmative defenses were legally insufficient. This Court dismissed the writs of certiorari as improvidently granted. It thus left standing the Second Circuit's 1964 judgment affirming (a) the final judgment of the district court dismissing Toolco's counterclaims, and (b) the interlocutory adjudications which underlay the interlocutory judgment of default in favor of TWA. The case then returned to the district court for the assessment of damages under the interlocutory judgment of default. The resulting award, confirmed by two lower courts, is now here for review.

In this counter-statement we will first review briefly the general course of the proceedings to date. Subsequent sections will be devoted to a more detailed treatment of matters particularly relevant to the questions here raised: the allegations of the complaint; the discovery proceedings during the year and a half following commencement of the action; the entry of the default judgment; an examination of the reasons given by defendants for refusing to proceed; and finally, a survey of the evidentiary material that satisfied the Special Master and the courts below that TWA's claims were well-founded, however urgently defendants might assert that they were sham.

A. Summary review of proceedings

1. Filing of complaint—rulings thereon

At the end of 1960 the stock of TWA[3] then owned by defendant Toolco, amounting to 78 per cent of TWA's outstanding stock, was placed in a voting trust. Two of the three voting trustees were independent of Toolco—Irving S. Olds, former Chairman of the Board of United States Steel Corporation, and Ernest R. Breech, former Chairman of the Board of Ford Motor Company. Defendant Raymond M. Holliday, a Toolco officer, was the third.

Olds and Breech caused enough of the Toolco-controlled directors of TWA to be replaced to obtain an independent majority. In addition to Breech, who became Chairman of the Board, the new directors were Clifford F. Hood, former President of United States Steel Corporation; Barry T. Leithead, President of Cluett, Peabody & Co., Inc.; Houston M. McBain, former Chairman of Marshall Field & Co.; and John A. McCone, former Chairman of the Atomic Energy Commission. The reconstituted Board brought in from outside TWA a new president, Charles C. Tillinghast, Jr., who also became a director. Independent counsel were retained by the Board (DX 39, p. 12), and on their recommendation this action was brought on June 30, 1961 against Toolco, Holliday and Hughes, who was Toolco's sole stockholder and controlling person. Atlas Corporation ("Atlas"), an investment company of which Hughes was the largest stockholder, and which controlled another air carrier, Northeast Airlines, Inc. ("Northeast"), was named as a co-conspirator.

---

[3] TWA is the third largest domestic air carrier and the second largest U.S.-flag international air carrier. It is the only U.S.-flag carrier authorized by the CAB to provide regularly scheduled air transportation both within the United States and across the Atlantic.

Here, as in the courts below, defendants have intimated that this action was brought by the new management in bad faith, with the expectation that an advantageous settlement could be forced by seeking to take the deposition of Hughes (*e.g.*, Def. br. pp. 11, 12). This suggestion was considered and rejected by the court of appeals in 1971: "Nothing in the record would justify any such finding • • •" (449 F.2d at 62, A-2755).

The complaint charged a combination and conspiracy by defendants in restraint of trade and the monopolization and attempted monopolization by them of a substantial segment of the market in commercial aircraft, through conduct involving the exploitation by defendants of TWA as a captive market, all in violation of the antitrust laws. The complaint is detailed; its principal allegations are summarized at pp. 12-15 *infra*. On a motion to dismiss, the district court held it to be sufficient to state a claim against defendants under the antitrust laws (214 F. Supp. at 108, A-257-58), and on the prior interlocutory appeal this decision was affirmed by the court of appeals (332 F.2d at 610-11, A-343-44). That the complaint fails to state a claim was one of the arguments defendants made to this Court in 1965 before certiorari was dismissed as having been improvidently granted (Brief for Petitioners, No. 443, October Term, 1964, p. 89 *et seq.*). In their latest brief to this Court, however, defendants expressly "do not disagree" with the 1964 court of appeals determination that TWA's complaint is legally sufficient (Def. br. p. 32).

2. *Answers and affirmative defenses—rulings thereon*

Defendants' answers denied the principal allegations of the complaint, including the allegations of combination and conspiracy in restraint of trade and monopolization and

attempted monopolization, and the allegations that defendants acted with a specific motive and intent to restrain and monopolize. They asserted as affirmative defenses that all of the conduct charged in the complaint was within the primary jurisdiction of the CAB and had been exempted under Section 414 of the Federal Aviation Act (49 U.S.C. § 1384) from the operation of the antitrust laws, and all other restraints of law, by orders of the CAB. Toolco also filed counterclaims against TWA and a number of other corporations and individuals seeking trebled damages aggregating $366 million, including $135 million in damages, after trebling, for injuries it alleged had been suffered by TWA as a result of violations of the antitrust laws.[4]

The sufficiency of the affirmative defenses was presented to the district court by defendants' motion to dismiss, which was treated for this purpose as a motion for judgment on the pleadings pursuant to FED.R.CIV.P. 12(c). Each was held to be insufficient to defeat TWA's claim (214 F. Supp. at 108-12, A-258-66). This decision was unanimously affirmed by the court of appeals in 1964 (332 F.2d at 606-10, A-333-43). This Court dismissed certiorari as improvidently granted in 1965 (380 U.S. 248, A-2738).

3. Pretrial discovery—rulings thereon

Defendants were allowed "priority" of oral discovery by deposition under the then customary procedure in the Southern District of New York. The tortuous course of discovery during the first year and a half after the complaint was filed is reviewed at pp. 16-29 *infra*. At the end

[4] The additional defendants were The Equitable Life Assurance Society of the United States, Metropolitan Life Insurance Company, Irving Trust Company, Dillon, Read & Co. Inc., Tillinghast, Breech, Ben-Fleming Sessel, James F. Oates, Jr. and Harry C. Hagerty. Sessel, a Senior Vice President of Irving Trust Company, was also a director of TWA. Oates and Hagerty were officers and directors of the respective insurance company defendants.

of that time the district court directed that TWA and the counterclaim defendants should be allowed to take the oral deposition of Hughes beginning February 11, 1963, and again directed defendants to produce documents that they had been refusing to produce in disobedience of a series of orders dating from April 17, 1962.

Defendants objected to producing Hughes (a) before they were allowed to complete all of their proposed depositions, (b) before TWA was required to answer detailed interrogatories as to the evidence available to it, and (c) before a proceeding under FED.R.CIV.P.16 was held to define and limit issues, at which TWA would be required (among other things) to identify each of its proposed witnesses and the substance of the evidence expected to be obtained from each. The district court overruled these objections, (a) directing that the deposition of Hughes begin as scheduled, (b) directing TWA to answer the interrogatories within 60 days after the Hughes deposition, and (c) denying the motion for an immediate Rule 16 proceeding, without prejudice to renewal 30 days after the Hughes deposition (A-122 *et seq.*). Toolco's attempt to secure interlocutory review of these orders by mandamus, or alternatively by appeal, was denied by the court of appeals (A-xxiii-xxiv).

The propriety of the district court's pretrial discovery orders was considered in detail by the court of appeals on the 1963-1964 appeal. The court held not only that these orders were not an abuse of discretion, but that they were entirely correct because the Hughes deposition was "absolutely essential to the proper conduct of the litigation" (332 F.2d at 615, A-352).

The court of appeals in 1971 reviewed the record once more, and concluded unanimously that the pretrial orders were proper and that "the information sought [by TWA] was more than merely 'material.' It was essential" (449 F.2d at 62, A-2756).

4. The default judgment—rulings thereon

The manner in which defendants carried out their decision to default, announced on February 8, 1963, is described in detail in both opinions of the court of appeals. Certain of the special circumstances involved are set out at pp. 29-33 *infra*.

On February 16, 1963 TWA moved for the entry of an interlocutory default judgment, pending a hearing to determine the amount of its damages (A-2692 *et seq.*). In the same motion TWA asked leave to amend its complaint to increase its *ad damnum* claim, as it had announced it would at the outset of the February 8 hearing at which defendants' "business decision" to default was placed on the record. On May 3, 1963 the motion to amend the complaint was granted, and the default judgment was entered (32 F.R.D. at 607-08, A-321). At the same time, Toolco's counterclaims were dismissed for the same refusal to obey discovery orders (*ibid.*; A-323).

Defendants were permitted an interlocutory appeal under 28 U.S.C. § 1292(b) on the questions of jurisdiction and antitrust exemption pursuant to certification by the district court and leave granted by the court of appeals. Toolco also appealed from the final judgment dismissing its counterclaims. In 1964 the court of appeals affirmed Judge Metzner's decision on all matters which were before it, with an exception not now material. Chief Judge Lumbard wrote:

> "The sanction of judgment by default for failure to comply with discovery orders is the most severe sanction which the court may apply, and its use must be tempered by the careful exercise of judicial discretion to assure that its imposition is merited. However, where one party has acted in willful and deliberate disregard of reasonable and necessary court orders and the efficient administration of justice, the application of even so stringent a sanction is fully

justified and should not be disturbed." (332 F.2d at 614, A-351-52)

After reviewing the record once more, the panel that heard defendants' appeal in 1971 agreed that

> "* * * a clearer case for the necessity and propriety of such a [default] judgment could hardly be imagined." (449 F.2d at 60, A-2752)

5. The damage award

The hearing on damages before Special Master Herbert Brownell extended over a period of two and one-half years. The transcript of testimony at the damage hearing totalled almost 11,000 pages, substantially all of it cross-examination since direct testimony was presented in written form. Over 60,000 pages of documents were admitted in the record as exhibits. The Special Master's 323-page Report (A-1966) contains a comprehensive review of the evidence, together with a detailed consideration of the various arguments of the parties. His findings that TWA had proved damages of $137 million, after trebling, for injuries specifically alleged in the complaint to have been caused by defendants' conduct are meticulously spelled out and related to the evidence before him. Defendants' arguments on the merits, including their arguments as to "proximate cause," were considered in detail and rejected.

Defendants filed hundreds of objections with the district court, both to findings made by the Special Master and to his failure to make other findings based on evidence they had presented or arguments they had made (A-1967 *et seq.*). The objections were based largely on factual contentions, in many instances virtually indistinguishable from the version of the "facts" which defendants present to this Court with the claim that they "were never in dispute" (see chart at p. 90 *infra*). While defendants chose then, as now,

to describe these matters as indisputable, TWA disputed them vigorously, and it was TWA's view of the facts which Special Master Brownell accepted.

Defendants' objections were overruled in a detailed opinion by the district court (308 F. Supp. 679, A-2027 *et seq.*), and the Brownell Report was confirmed. On appeal the court of appeals concluded that the findings were amply supported (449 F.2d at 72-78, A-2778-91). The petition for certiorari did not in terms seek review of these findings which had been reviewed and affirmed in all respects by the district court and the court of appeals.

In the following sections of this counter-statement, certain matters of particular relevance to the questions presented here are set forth in greater detail.

B. The complaint

The complaint alleges that since approximately 1939 defendants and other persons acting for them (including Atlas) have engaged in a combination and conspiracy to restrain trade and monopolize and an attempt to monopolize with the intent and purpose that Toolco would take over the supply of aircraft to one or more substantial markets and that control over TWA and its business would be used in advancing this objective. Toolco was to become the sole supplier of aircraft to TWA, which would thereafter be used as a captive backstop market for aircraft ordered by Toolco; suppliers of aircraft other than defendants would be boycotted and foreclosed from furnishing aircraft directly to TWA. (Complaint, pars. 9, 10, A-8-10)

Among the acts alleged to have been committed by defendants pursuant to this conspiracy prior to December 1960 were:

> —an arrangement to develop with the Convair Division of General Dynamics Corporation ("Convair") a "Model 18" jet aircraft to be manufactured by Convair and to be supplied by defendants to air

carriers, including TWA, with the intention that TWA would be a captive market for such aircraft (Complaint, par. 14, A-11-12);

—the development of a plan under which Toolco would itself commence the manufacture of a "Golden Arrow" jet aircraft to be furnished to TWA and other carriers (Complaint, par. 15, A-12);

—taking action to prevent TWA from making any arrangements for the acquisition of jet aircraft from Boeing Company ("Boeing") and Douglas Aircraft Company, Inc. ("Douglas") at a time when other competing carriers were placing orders for such aircraft (Complaint, pars. 16, 17, A-12-13);

—after earlier plans for manufacture were abandoned as no longer in the immediate interest of defendants and Convair, placing orders for the purchase by Toolco of 33 Boeing 707 jet aircraft and 30 Convair Model 880 jet aircraft, but refusing to assign the rights to acquire any of such aircraft to TWA (Complaint, pars. 17, 18, A-13);

—preventing TWA from acquiring any jet aircraft itself until the period 1959 to 1960, when defendants arranged for Toolco to lease a limited and inadequate number of jet aircraft to TWA on a day-to-day basis, subject to the condition and understanding that TWA would not purchase or lease aircraft from any other potential supplier (Complaint, par. 20, A-13-14);

—by these means and for these purposes foreclosing all other potential suppliers of jet aircraft from the TWA market (Complaint, par. 49, A-23-24).

It is further alleged that, pursuant to the combination and conspiracy and attempt to monopolize, Toolco and the other defendants, after acquiring control of TWA, continuously refused to allow equity financing by TWA, except on terms which would increase Toolco's equity position in TWA, and instead caused TWA to obtain funds chiefly

IND CLOSE IN CENTER

by means of debt financing (Complaint, par. 23, A-15) this policy had the purpose and effect of maintaining control by defendants of the financing of aircraft purchases by TWA and strengthening defendants' control over the acquisition of aircraft by TWA (Complaint, pars. 23, 24, A-15). By reason of this policy TWA was prevented from obtaining the financing necessary for its acquisition of jet aircraft until December 1960, when the prevailing interest rate for debt financing was approximately 6-6½ per cent, as compared to the 4-4¾ per cent interest rate at which other air carriers arranged to borrow in 1955 and 1956 (Complaint, pars. 26-28, A-16).

Defendants and Atlas sought to compel TWA to enter into a disadvantageous merger with Northeast for the purpose of enlarging TWA's requirements for new aircraft, and for the additional purpose of enabling Atlas and its stockholders, including Hughes, to obtain stock of TWA on advantageous terms (Complaint, pars. 21, 47, A-14, A-22-23). In November 1960 defendants arranged for the lease by Convair to Northeast of six of the jet aircraft that Toolco had ordered from Convair, including three which had already been assigned to TWA (Complaint, par. 22, A-15).

Defendants' attempts to prevent TWA from acquiring aircraft directly from manufacturers instead of through defendants are alleged to have continued after 1960 and examples are given (Complaint, pars. 36-48, A-19-23). Thus, during May and June 1961 defendants sought to stop TWA from purchasing jet aircraft from Boeing and to compel TWA instead to purchase Convair Model 990 aircraft from Toolco (Complaint, pars. 37-39, A-19-20). Defendants made threats against TWA, its directors, the voting trustees, and the financial institutions lending money to it, including a threat to institute suit; they sought to disrupt the contractual relationship between TWA and Boeing by asserting to Boeing that its contract with TWA

COPY BO

was not binding because Toolco had not consented to it (Complaint, pars. 38, 39, A-19-20). During the same period defendants also sought to impede TWA's financing of the jet aircraft selected by it (Complaint, pars. 40-46, A-20-22).

The injuries caused TWA by this course of conduct are spelled out (Complaint, pars. 50-54, A-24-27). TWA was prevented from obtaining jet aircraft and was deprived of opportunity for adequate use of jet aircraft from 1958 on, with a resultant loss of profits (Complaint, par. 52(a), A-25). It was also foreclosed from obtaining financing at lower rates than it ultimately borrowed at in 1960 (Complaint, par. 52(c), A-25). Further specific examples of injuries alleged include defendants' diversion of six long-range Boeing jets to TWA's principal transatlantic competitor, Pan American World Airways, Inc. ("Pan American") (Complaint, par. 18, A-13), the assignment of Convair 880s to Northeast, and the day-to-day leases of jets in 1959 and 1960 on unlawful conditions. Other injuries alleged include TWA's inability to dispose of its used piston aircraft (because it did not have enough jets) until the market for such aircraft had dropped considerably, impairment of its ability to secure financing, loss of good will, and general disruption of its management and business (Complaint, pars. 52, 53, A-25-26). Damages were estimated as in excess of $35,000,000 (Complaint, par. 54, A-27).

Toolco's answer on February 14, 1962 put in issue substantially all of these averments (A-41 *et seq.*). It also included extensive counterclaims against TWA and nine others. Holliday's answer, filed March 26, 1962, adopted in substance Toolco's answer, and included averments incorporating the principal allegations of Toolco's counterclaims (A-99 *et seq.*).

C. The discovery proceedings

The history of the year and a half of "discovery" whic followed the filing of the complaint is a chronicle of a grad ually developing filibuster by defendants which ultimatel brought the pretrial process to a complete standstill.

After the complaint was filed, both TWA and Toolc sought to obtain oral discovery by filing notices of depos tion. Toolco, however, secured the priority of discover normally available to a defendant under the practice the prevailing in the Southern District of New York (A-2077), a priority it was permitted to exploit without any interrup tion for depositions by other parties until February 1963

On August 31, 1961, two months after the complaint wa filed, the Chief Judge assigned the case "for all purposes" to District Judge Charles M. Metzner, pursuant to Genera Rules 2 of the Southern District (A-33).

Judge Metzner immediately took firm control of the case All matters then pending in the case were reviewed at a lengthy pretrial hearing on September 6, 1961 (A-2078 *et seq.*), the first of 19 formal pretrial hearings before him (not counting those in chambers of which no transcript was kept). Much of the hearing was devoted to discovery matters: there was a progress report about TWA's pro- duction of documents in response to a subpoena that had been served upon it by Toolco; TWA expressed its in- tention to seek documentary discovery from Toolco, and consideration was given to scheduling the depositions which both sides wished to pursue. Toolco on August 8, 1961 had filed a motion to dismiss the complaint and for summary judgment (A-2075-76), and that motion was considered. Judge Metzner pointed out that, since the motion included

[5] This practice has since been completely changed, by Civil Rule 4 of the Southern District of New York effective July 1, 1962 and for district courts generally by this Court's amendments to the Federal Rules of Civil Procedure effective July 1, 1970. *See* especially present Rules 26(d) and 30(a).

COPY BOU

a summary judgment branch, "* * * in view of our decisions here in this circuit, your opponent should have the opportunity of depositions before your motion is passed upon" (A-2103). Toolco's counsel replied: "No objection." (*Ibid.*)

A pretrial order entered the next day directed TWA to complete its response to Toolco's subpoena by October 13, 1961, scheduled another pretrial hearing to consider TWA's motion under FED.R.CIV.P. 34 and various discovery scheduling questions, and directed that Toolco's motion to dismiss and for summary judgment "be held in abeyance" until Toolco notified the court that it wanted the motion heard (A-2113).

TWA's motion seeking documents from Toolco was heard on October 2, 1961 (A-2115 *et seq.*). Toolco argued that it should be allowed to complete all its discovery before TWA could have any (A-2118-19) and objected particularly to being required to produce its tax returns and other financial data (A-2119-25). Judge Metzner granted TWA's motion on December 5, 1961 (A-34-35) and in a pretrial order on December 18 set out a discovery schedule to govern the case: Toolco's previously noticed depositions of TWA and various witnesses would begin January 5, 1962, Toolco's production of documents to TWA would begin March 15, and TWA's previously noticed depositions would begin with Hughes on April 3 (A-2138-39).

Toolco's oral discovery of TWA commenced as scheduled with the deposition of Tillinghast, TWA's new president (Doc. 53). After pretrial conferences on January 10 and January 23 (at which TWA objected that the Tillinghast deposition was being drawn out unduly), Judge Metzner by pretrial order dated February 7 appointed former Solicitor General J. Lee Rankin Special Master "to act in connection with the depositions and other discovery proceedings" (A-36-37). Judge Metzner also directed that the Tillinghast deposition be continued and the depositions of other

D CLOSE IN CENTER

witnesses "be commenced in accordance with the schedule annexed," a schedule that contemplated Toolco's finishing all its depositions prior to April 23 when the Hughes deposition was now to begin (A-36, A-39-40).

The case entered a new phase on February 14, 1962 when Toolco filed its answer and counterclaims against TWA and numerous new parties termed "additional defendants" (Toolco answer, par. 42 *et seq.*, A-51 *et seq.*; A-xv). The effect on the case of adding these new parties was considered at a pretrial conference on February 23, 1962 (A-2141 *et seq.*). TWA asked that the Tillinghast deposition be terminated because Toolco was using it simply to delay proceedings[6] and to discover information about its counterclaims (A-2157-58). The additional defendants asserted that they were entitled to priority of discovery as against Toolco on the counterclaims (A-2142).

In a pretrial order on March 5, 1962 (Doc. 81) Judge Metzner ordered Toolco to limit its depositions "to evidence which bears" on TWA's claims against it, but refused at that time either to terminate the Tillinghast deposition or to alter the order of depositions. He did warn, however, that what he described as the "normal rule of priority" was not

> "• • • rigid in [its] application and must yield in unusual circumstances to the ultimate goal of prompt, orderly and fair disposition of the litigation. Furthermore, the plaintiff who instituted the litigation must not be lost sight of in the maze that has resulted from the pleadings." (Doc. 81, pp. 3-4)

---

[6] A minor but revealing episode occurred at the February 14 deposition session. Special Master Rankin suggested that it might be desirable to suspend the deposition of Tillinghast, who had been TWA's president for only about two months at the time the complaint was filed, to permit an early deposition of Charles Thomas, who had been TWA's president from July 1958 to July 1960 (Doc. 210, p. 1032). The suggestion was immediately and successfully resisted by Toolco, which filed a motion the next day objecting to any intrusion upon its discovery program (A-2140).

On March 15 Toolco began producing documents pursuant to the district court's December 18, 1961 order. The production took place at the same time in Houston and at two locations in Los Angeles; it was far from complete, however. Many documents were produced only after masking tape had been applied to screen out portions of them (*e.g.*, AX-676-77, AX-680-81, AX-708-11). In addition from what was produced it became apparent that other relevant documents had not been produced. The reason given was that they had been destroyed prior to service of TWA's demand (Doc. 215, pp. 3412-13, 3452-56; Doc. 306, pp. 2-5; Doc. 307, pp. 5-8). After examining the masked documents, the Special Master on April 6, 1962 directed defendants to reproduce the greater part with the masking removed (Doc. 217, pp. 4159-60). As it developed, this was the last discovery order that defendants would see fit to obey.

TWA was aware that defendants used attorneys as business agents and negotiators in all important matters. If Toolco were allowed to withhold documents dealing with what was done by attorneys acting in a business, not legal, capacity, some of the most significant documentary evidence of defendants' aircraft and financing activities would be unavailable. When Toolco's documentary production included nothing that touched upon the important areas in which these agents were known to have functioned, TWA and the additional defendants sought to obtain such documents. They asserted that Toolco had waived any possible attorney-client privilege with respect to the documents: Toolco had pleaded advice of counsel as a defense in this action (Toolco answer, par. 40, A-51) and had used affidavits of these attorneys as to matters of fact in an unrelated proceeding before the CAB involving Northeast (A-2177).

After extensive briefing and argument the Special Master on April 17, 1962 ruled that Toolco must produce the documents (A-2176 *et seq.*). Toolco appealed to Judge Metzner. Briefs were submitted and after oral argument on May 17

(A-2206 *et seq.*), Judge Metzner on July 24 affirmed the ruling that Toolco had waived its privilege (A-2268-69).

Toolco ignored this decision.

Meanwhile, since shortly after filing its complaint, TWA had been engaged in an international search in an unsuccessful effort to serve Hughes with process or a subpoena. After all efforts failed, TWA applied to the Special Master for permission to serve limited interrogatories asking Toolco where Hughes could be found (Doc. 283).

Toolco vigorously opposed TWA's right to serve the interrogatories, but on April 17 the Special Master granted TWA's application, directed that any appeal by Toolco be taken within 10 days and specified that the interogatories be served on May 2, 1962.[7] No appeal was taken by Toolco.

On May 2 TWA served its interrogatories, requesting Toolco to answer by May 17 (A-2197-205). Toolco then objected both to the form of the interrogatories and to TWA's right to serve them at all. The Special Master took further briefs and heard additional oral argument but on June 4 ordered Toolco to answer no later than June 20, 1962 (A-2233). Three days later Toolco appealed to Judge

---

[7] "I will sustain the motions to propound and have answered the limited interrogatories about the location of Mr. Howard R. Hughes. In so doing I want to make it very clear that this interference with the right of the Tool Company to proceed with its discovery is not a precedent for any other such interference, but is granted in recognition, in the first place, that much of the documentary evidence that the Special Master has ruled is not privileged and must be produced by the Tool Company with relation to its outside counsel, demonstrates a very active participation by Mr. Hughes on behalf of the Tool Company, and it is not realistic to assume from such materials that there were not common interests between the Tool Company and Mr. Hughes throughout the period involved in this litigation—a common interest which went beyond that of the ordinary stockholder, and involved many important business decisions.

"I am unwilling to preside as Special Master and permit the day to come when the parties would be entitled to take the deposition of Mr. Hughes, and then be unable to do so because they have been unable to locate him." (A-2195-96)

Metzner, but placed no return date on its papers (Doc. 95). On June 11 it attempted to reargue the point before the Special Master (A-2299). On June 14 that attempt was rejected (A-2300).

Although not relieved by either the Special Master or Judge Metzner from meeting the June 20 deadline, Toolco neither answered the interrogatories nor took any other action with respect to them.

On June 25, 1962 TWA again moved to terminate the Tillinghast deposition, still in progress with no end yet in sight (A-2234 *et seq.*). On July 12 another hearing was held before Judge Metzner to determine whether the Tillinghast deposition should be terminated, whether depositions should be alternated so that TWA could commence its discovery without further delay while Toolco exhausted all its discovery possibilities, and whether Toolco had to answer the interrogatories asking the whereabouts of Hughes which it had previously been directed to answer no later than June 20, 1962 (A-2245 *et seq.*). Judge Metzner now ordered that the Tillinghast deposition be terminated no later than July 25. He also modified and affirmed the Special Master's ruling as to the interrogatories seeking the location of Hughes, directing that they be answered by July 26. But he rejected the proposal for alternating depositions, with leave to renew the application in September (A-116-17).

On July 18, 1962 Toolco moved to clarify and limit the order with respect to the interrogatories (Doc. 103). That motion was denied on July 23 (A-2267). On July 26 (the return date) Toolco applied to Judge Metzner for additional time to answer the interrogatories and was given until August 27 (Doc. 105).

Toolco never answered them. Instead, on September 6, pursuant to what Toolco stated was specific and adequate authorization from Hughes, its counsel accepted a subpoena

on Hughes's behalf, providing for his deposition to be taken in Los Angeles beginning September 24, 1962 (A-2309).

TWA promptly moved before the Special Master to confirm that date (Doc. 324). On September 15 the Special Master denied TWA's application to take Hughes's deposition beginning September 24, but said:

> "I feel that there is such a close connection between Mr. Hughes, as evidenced by some of the documents that I have seen, and the fact that he is the sole owner of the Hughes Tool Company, that the Hughes Tool Company is responsible for Mr. Hughes with regard to this subpoena • • •" (A-2384)
>
> • • • • •
>
> "• • • I am piercing the corporate veil as to the Hughes Tool Company, and I am bringing what I hope is clear notice of very substantial sanctions, not against Mr. Hughes, but against the Hughes Tool Company, in case there should be at some later date a claim of lack of authorization or failure to respond to the subpoena • • •." (A-2390)

Counsel for Toolco later stated with respect to this ruling of the Special Master:

> "• • • the Tool Company did not seek a review of those rulings of the Special Master by the Court and accepted in effect the responsibility placed upon it by that ruling." (A-274)

At the same time Toolco sought to reargue its position *vis-a-vis* the assertedly privileged documents (Doc. 323) —none of which had yet been produced despite the district court's July 24, 1962 pretrial order (A-2268-69). The Special Master on September 15 again ordered Toolco to produce them (Doc. 236, pp. 164-67). Toolco again appealed.

After a hearing on September 19 (A-2391 *et seq.*), Judge Metzner entered a pretrial order on September 21:

> "The Special Master stated for reasons set forth in the record that unless Howard R. Hughes communicated with him by today, Friday, September 21st, 1962 he would consider that Mr. Hughes has acquiesced in this interpretation and that if Mr. Hughes subsequently either attacked the validity of the subpoena or failed to appear pursuant to that subpoena on September 24th, 1962, or at any future time that the court might direct for the taking of the deposition of Mr. Hughes pursuant to that subpoena, he, the Special Master, would consider the imposition of sanctions upon the Tool Company, and that he would entertain a motion to strike the answer of the Tool Company and enter judgment against it.
>
> "Without passing upon the power of the Special Master to grant the entry of such judgment, the court adopts the interpretation and conditions expressed by the Special Master. Any determination by the Special Master on an application for a default judgment would, of course, be reviewable upon appeal to the court." (A-120)

In that order Judge Metzner also rescheduled the Hughes deposition to begin on October 29 (A-121).

Toolco's deposition proceedings, meanwhile, went ahead slowly, and two additional TWA officers and one former officer were partially examined. By the time discovery proceedings were halted by Toolco in February 1963, Toolco had spent an entire year in the process and 13,000 pages of deposition transcript had been compiled. The result was one deposition completed, one ordered halted after months of delay and two started but still unfinished.

On September 25, 1962 Toolco moved for a pretrial conference under FED.R.CIV.P. 16 to define and narrow the issues (Doc. 123)—a course which had been suggested by the Special Master in response to Toolco's repeated complaint that its deposition of Tillinghast had not produced

evidence supporting TWA's principal allegations.[8] Toolco's motion demanded that TWA be required to specify all facts which it contended would support the allegations of its complaint, to name each witness which it proposed to call to support each allegation, and to state the substance of the evidence which that witness was expected to give—all this at a time when TWA had yet to take a single deposition and when its documentary discovery was being frustrated by Toolco's non-compliance with court orders. Judge Metzner's refusal to grant this motion at that stage is a principal element of what defendants now claim to have been such an abuse of discretion as to have denied them due process of law. To set this claim in clearer perspective, the papers before Judge Metzner deserve some examination.

—TWA and all of the additional defendants resisted the motion, expressly stating that they had no objection to a "Rule 16 conference" *after* they had an opportunity to conduct their own discovery (A-2403-04, A-2421; Docs. 327, 412-14).

—TWA submitted a marked copy of the complaint, with the allegations admitted by defendants underlined in blue, those denied by defendants underlined in red, and those as to which defendants denied knowledge or information, thus

[8] This was manifestly not true with respect to allegations of the complaint as to defendants' conduct during the only period of which Tillinghast could have been expected to have had knowledge, that is, the events following his employment in April 1961. Tillinghast's testimony with respect to these allegations was comprehensive and detailed. For example, defendants' efforts in 1961 to prevent TWA from buying Boeing jets and their related efforts to interfere with TWA's public financing (Complaint, pars, 37, 39-42, A-19-21) were described by Tillinghast on several occasions, of which pp. A-2957-3000 are illustrative. The May 19, 1961 letter from Toolco's counsel to the SEC, referred to at the outset of this passage, appears at pp. A-3222-41. It is one of a substantial selection of letters and telegrams compiled and introduced into the record early in the Tillinghast deposition as examples of defendants' attempts to prevent the purchase of Boeings. (A-3220-96). *See also* narrative outlines of the Tillinghast deposition (Doc. 167A).

putting TWA to its proof, underlined in yellow. TWA pointed out that on all of the most critical issues the important evidence was in the control of defendants, and TWA could develop its proof only through the discovery process. (Doc. 327)

—A selection of telephone "call sheets," operating memoranda and correspondence obtained from the Los Angeles message center in Toolco's March production was supplied (A-2337-81) demonstrating that Hughes personally handled virtually every important business transaction involving the purchase, sale or financing of aircraft, and that the most critical information could be obtained only from him.

—A selection of papers was supplied which had been submitted by Toolco to the CAB in a proceeding involving Northeast, including memoranda to Hughes from Toolco's counsel reporting on their negotiations with Northeast and Atlas—vividly showing how important it was that Toolco's attempt to withhold similar documents from TWA on the ground of attorney-client privilege should not succeed (A-2327-36).

—Large portions of the transcript of the pretrial hearings to date were submitted; Judge Metzner, of course, had already held numerous pretrial conferences and was fully familiar with the posture of the litigation and the conflicting contentions of the parties.

While this "Rule 16" motion was *sub judice,* other developments occurred which required rulings.

On October 11, 1962 Toolco served on TWA its first massive set of interrogatories, consisting of thousands of interrelated questions. A second equally massive set was served on November 13. TWA objected, both on the ground of excessive burden, and on the ground that most of the important questions were unanswerable until TWA had had deposition discovery from defendants. (Docs. 329, 333, 334, 138)

On October 22 Toolco again moved to adjourn Hughes's deposition, then scheduled for October 29 (Doc. 328); on October 25 the Special Master set February 11, 1963 as the definitive date on which that deposition would begin (Judge Metzner having previously authorized such a postponement if the Special Master considered it warranted). In setting that date, the Special Master expressly noted that he was giving Toolco time to present whatever motions it wished to Judge Metzner (A-2434-35). Although Toolco was cautioned that any appeal from the Special Master's ruling should be taken within 10 days, Toolco did not appeal.

On December 4, 1962 Toolco moved to depose additional defendants Dillon Read, Sessel and Irving Trust Company prior to any deposition of Hughes (A-2461). The Special Master denied the motion on December 28 (A-2519), noting that he considered the February 11, 1963 date for Hughes's deposition a firm one and wished "that there may be no valid basis for misunderstanding it" (A-2517). Toolco appealed.

All of these pending matters were reviewed at a lengthy pretrial hearing on January 9, 1963 (A-2523 *et seq.*). The next day Judge Metzner entered a pretrial order that

> —affirmed the Special Master's decision denying Toolco's motion to depose Dillon Read, Sessel and Irving Trust Company prior to Hughes's deposition (A-122);
>
> —denied Toolco's Rule 16 motion, but with leave to renew 30 days after the deposition of Hughes (A-124);
>
> —directed that TWA answer Toolco's interogatories within 60 days after completion by TWA of the deposition of Hughes (A-126); and
>
> —affirmed (once more) the ruling of the Special Master as to the non-privileged lawyers' documents and ordered Toolco to produce them by noon, January 14, 1963 (A-124-26).

As to the Hughes deposition, Judge Metzner stated:

> "The deposition of Howard R. Hughes by the plaintiff and the additional defendants should now go forward. This deposition was originally scheduled for September 24th, 1962 and then adjourned to October 29th, 1962. It has now been adjourned to February 11th, 1963 and this date will be adhered to in the absence of extraordinary circumstances." (A-123)

None of this checked Toolco's efforts to escape discovery. The documents were *not produced.* When a formal demand for compliance was made at 12 noon on January 14, Toolco's counsel exhibited a package said to contain the documents, but refused to turn them over (A-2571-72).

On January 14, 1963 Toolco moved "in the alternative" to hold Hughes's deposition on written interrogatories or finally to bring on its motion (pending since August 8, 1961) to dismiss the complaint or for summary judgment (A-2574-75). After a pretrial hearing on January 17 (A-2576 *et seq.*) Judge Metzner in his January 19 order denied the motion to depose Hughes on written interrogatories (A-130) but agreed to hear Toolco's 1961 motion (A-131). He fixed a briefing schedule designed to afford Toolco the maximum possible time to prepare its papers without jeopardizing the February 11 date for the commencement of TWA's deposition discovery (*ibid.*). Toolco was also instructed to advise TWA and the additional defendants by January 22, 1963 if it wished them to conduct the Hughes deposition at a location other than the Federal Courthouse in Los Angeles as specified in TWA's notice (A-132). No such advice was given, and extensive preparations were made to conduct the examination in Los Angeles (Doc. 435).

On January 22 Toolco applied to the court of appeals for a writ of mandamus (or, alternatively, for leave to appeal) to review all the orders of the district court and for a stay

of proceedings (A-xxiii). On January 23, after the submission of papers and a hearing, the court denied Toolco's application (A-xxiv).

In preparation for the Hughes deposition TWA and the additional defendants sought discovery of additional documentary material, particularly accountants' work-sheets and similar back-up materials to clarify the bare-bones financial and tax records which Toolco had produced.[9] Although plainly included within the court order of December 18, 1961, such material had never been produced by Toolco. These documents fell into 23 classified categories, and Toolco's counsel later admitted that at least nine boxes of documents in those categories had been collected (A-2642-43).

The Special Master, after argument, ruled on January 22, 1963 that these documents should be produced (A-133-42). They were not produced. After a hearing on January 28 (A-2616 *et seq.*) Judge Metzner on February 1 affirmed the Special Master's ruling and ordered production to start immediately (A-254). Toolco still refused to produce both those documents and the non-privileged lawyers' documents notwithstanding the intervening refusal of the court of appeals to review earlier production orders on an extraordinary writ.

On February 1, 1963 Toolco served its papers on its motion to dismiss, withdrawing its summary judgment motion which had been pending for a year and a half (Doc. 162, p. 3). TWA served its answering papers the next day. On February 6 oral argument was had, and Toolco's motion was denied (A-2654), with a formal opinion issuing on February 7 (214 F. Supp. 106, A-255 *et seq.*). In response to Toolco's request at the close of the oral argument for a further opportunity to seek interim relief

[9] These documents came to be identified by counsel and the court by the shorthand label "tax documents," and they are often so alluded to in the record, although they are much broader in scope.

COPY BOU

by application to the court of appeals (A-2654), Judge Metzner stayed all discovery proceedings until 5 p.m. on February 8, 1963 (A-2655).

Toolco made no such application. It chose instead to default.

D. Defendants' refusal to proceed and the entry of the default judgment

After expiration of the stay of discovery proceedings it appeared that there could be no further excuse to avoid turning over the "tax documents" and non-privileged lawyers' documents which Toolco had been withholding. The Hughes deposition was to commence on Monday morning, February 11. Arrangements had been made with the Chief Judge of the Southern District of California for a courtroom, the Special Master had arranged to be present, court reporters had been hired, and TWA and the additional defendants had leased office space in Los Angeles and moved in the necessary personnel and files.

During the day on Friday, February 8, however, Toolco served on the parties and delivered to the district court a document entitled "Notice of Position." It declared that "Toolco hereby elects • • • to rest on the merits of its positions as heretofore taken so that it may avoid the burdens and expenses involved in further pre-trial and trial proceedings" (A-268-69).

At TWA's request, Judge Metzner, who was at trial on another matter, called a hearing at 5 p.m. that day to consider the resulting situation (A-270 *et seq.*). The function of the hearing was to clarify Toolco's election: if it was, as it appeared to be, a flat refusal to proceed further, the nature, extent and purpose of such a default had to be defined on the record and the legal consequences spelled out. In addition, as counsel for TWA stated at the very outset of the hearing, TWA's investigations had led it to the conclusion that its damages were not less than $45

million, as had been alleged by Toolco in its counterclaims. Before any proposal by Toolco to note a default was considered, TWA wanted to amend its complaint to increase its prayer for damages accordingly. (A-270-71)

Counsel for Toolco made it plain that Toolco's intention was to default, and that this decision had been reached after careful consideration and with full knowledge of the sanctions expected to be imposed. Toolco's responsibility for the appearance of Hughes as a witness was specifically acknowledged. (A-271-74) Production of the "tax documents" and the non-privileged lawyers' documents pursuant to prior discovery orders was explicitly refused (A-304-06). As to the expected consequences, Toolco's counsel said that Toolco realized that if defendants were proved to be wrong on "the legal questions which have been decided to date • • • as a consequence they may be deprived of further defending on the merits, other than on the question of damages" (A-276).

TWA expressed dissatisfaction with the developing situation because of its fear that, without an opportunity to develop the facts fully, its effort to establish and recover for the full extent of its injuries would be handicapped. TWA's counsel said:

> "This is, as TWA sees it, another stall or attempted stall. It is an attempt to bait us away from getting at the merits of the controversy by offering us some phony maneuver for a partial default judgment, unlimited [*sic—and* limited] damages. *The damages I think we will collect in this case are $135 million.* That is the amount that they alleged we were hurt, tripled, and we will prove it." (A-295) (Emphasis added.)

Defendants' counsel responded:

> "I do not understand what remedy it is that the TWA is seeking when *it has the opportunity to*

COPY BOUN

prove these damages that you claim you can establish against the Tool Company, and I don't understand the statement and what the purpose is of TWA saying that it does not want to proceed in that manner.

"My purpose of course is to obtain something which will enable me to get a review on the law as to whether or not you are entitled to be here in the first place. And then I am prepared, if I am wrong in that regard, to pay the consequences *to the extent to which you are able to prove damages.*" (A-297) (Emphasis added.)

The district court summarized this aspect of the discussion as follows:

> "I think the plaintiff, in so far as his complaint is concerned, is amply protected by the record made here this afternoon, and you may then move for your default judgment." (A-299-300)

At the conclusion of this hearing held to record and define the default, defendants' counsel explicitly agreed that on the basis of this record a default judgment could and should be entered. Counsel for TWA had stated repeatedly throughout the hearing that, in the absence of a default judgment agreed to be effective to establish the merits of TWA's claim, TWA should still be allowed to depose Hughes (who had personally expressed no objection to testifying). This led the district court, at defendants' instance, to expressly stay TWA from taking that deposition (A-307). So that TWA would not suffer by this decision, the following formal statement of positions was made by the parties and the court:

> "The Court: • • • In other words, the understanding of the Court is that you have now an anticipatory default for failure to appear which will ripen at 10 o'clock Monday, February 11th, on consent of Hughes Tool Company, the only defendant here with the

UND CLOSE IN CENTER

responsibility, I assume, to answer in [money] damages to your claim. And then you are free to move for a dismissal—I mean for a judgment on your claim.

"Mr. Sonnett: If Mr. Davis accepts what your Honor has just said, I have no problem about Monday [when the Hughes deposition was scheduled to begin in Los Angeles]. I wish he would say yes or no to that.

"The Court: Do you understand what I just said, Mr. Davis?

"Mr. Davis: I understood what you said, your Honor, a long time ago, and I thought I made myself quite clear on the record, and I don't understand how Mr. Sonnett wants to take testimony—

"The Court: Now, Mr. Davis, we have a simple question, yes or no?

"Mr. Davis: I understand everything you said, your Honor.

"The Court: And the answer is yes?

"Mr. Davis: That's correct, your Honor.

"Mr. Sonnett: Thank you.

"The Court: All right." (A-307-08)

With that established, the hearing ended.

On February 21, 1963 Holliday formally elected to associate himself with Toolco's position and abide by its consequences (A-2713).

On May 3, 1963 TWA's motion to amend its complaint was granted and the default judgment was entered (32 F.R.D. at 607-08, A-321). At the same time, Toolco's counterclaims were dismissed on the same grounds (A-323). Judge Metzner recounted the principal events of the litigation to that point, and made a number of express findings of fact, all of which were subsequently affirmed by the court of appeals. Those findings included the following:

> "Toolco owns 78% of the stock of TWA and Howard R. Hughes owns all of the stock of Toolco." (32 F.R.D. at 606, A-317)

COPY BOUND

"It is clear that during all of the times covered by the complaint the management of TWA was controlled by Hughes personally." (*Ibid.*)

"It is clear that the deposition of Hughes is essential for the proper presentation of TWA's case." (32 F.RD. at 607, A-320-21)

"It is also clear that the failure of Hughes to appear on February 11th for his deposition was the result of a clear and studied determination by Toolco after all efforts to postpone the appearance of Hughes had failed. The default was deliberate and willful * * *." (*Ibid.*, A-321)

"Embraced within the refusal to proceed with the deposition of Hughes is the refusal to obey the orders of the court directing Toolco to produce the documents referred to above [*i.e.*, the non-privileged lawyers' documents and the 'tax documents']." (*Ibid.*, A-320)

The district court's opinion and orders of May 3 included the certifications necessary to permit immediate review of both branches of his decision (32 F.R.D. at 608, A-322; A-323). The court of appeals limited the scope of its review of the interlocutory judgment on TWA's complaint to jurisdictional matters (A-2736), but both appeals—from the interlocutory judgment on TWA's complaint and from the final judgment on Toolco's counterclaims—were briefed and argued together, and a single decision resulted (332 F.2d 602, A-328 *et seq.*).

E. Reasons given for the default

The extraordinary nature of defendants' decision "not to proceed any further with respect to discovery proceedings" (A-274) compelled the most careful attention from the courts below. Both the district court and the two panels of the court of appeals were careful to ascertain that there had been neither any misunderstanding by defendans of what was involved in their actions nor any element of per-

sonal oppression or injustice which might have made the decision something other than the free election described in the Notice of Position—or the voluntary "business decision" it was called by defendants' chief counsel at the hearing on February 8, 1963 (A-280).

At that hearing defendants' counsel explained that the decision had been made by Toolco after careful consideration of his advice as to the sanctions which defendants were inviting by their actions (A-274). The election was purportedly based on confidence in "the merits of [Toolco's] positions as heretofore taken" (A-268).

The risk that Toolco's positions would be held to be without any merit at all was obviously great, especially after TWA had stated in open court that it expected to be able to prove actual damages of not less than $45 million. Indeed, the overall amounts put at risk were even greater, since the refusal to proceed applied also to Toolco's own counterclaims asking damages of $366 million. Against the backdrop of these figures, Toolco's claim that, after it had already taken depositions for over a year, the burden and expense of submitting Hughes to a deposition would be too great from a business standpoint is inherently ridiculous. Not only has the $5 million figure that defendants now assert to be the cost of this single deposition quintupled between petitions for certiorari,[10] but the argument

[10] This $5 million figure, repeated no less than six times in defendants' brief (pp. 6, 15, 29, 40 & n. 12, 41), has the most dubious possible provenance. It was mentioned for the first and last time (until the petition for certiorari herein) at the February 8, 1963 hearing, when Toolco's counsel described it as an estimate arrived at by Toolco, which he most pointedly did not himself endorse, of "the amount of expenses that would be incurred, assuming that we continued with the trial on the merits, both in pretrial proceedings as contemplated and at the trial ***" (A-279-80). TWA's counsel said at the time that the argument that defendants' refusal to participate in discovery proceedings was justified because of the expenses of the litigation was made "with tongue in cheek" and was "obviously absurd" (A-293). This particular $5 million figure did not again surface until Decem-

based on that inflated and unexplained estimate also completely ignores the protection against undue expense always available under the Rules. If the deposition had commenced and had become unduly prolonged or otherwise improperly burdensome or oppressive, Toolco could have had relief under FED.R.CIV.P. 30(b) (now FED.R.CIV.P. 26(c) and 30(d)). When Toolco's examination of TWA's president Tillinghast, begun in January 1962, was still in progress in July, TWA sought such relief and obtained it; the Tillinghast deposition was terminated on July 30, 1962 pursuant to court order (Doc. 222, p. 6675A).

A more plausible explanation of defendants' behavior than the one they give is that they knew they could not prevail on the merits if TWA was permitted full discovery. They could not afford therefore to have the truth come out. This is the only hypothesis which can explain the persistent refusal to make *documentary* discovery.

There was, however, an alternative possibility that required consideration—that the default as to the Hughes deposition (although hardly as to the documents) was triggered by some inability of Hughes to testify or by his unwillingness, for some justifiable reason, to testify under the particular circumstances of a public hearing. Defendants' position as to these matters has been strikingly different at different stages of the action, obviously depending on which position appeared at the time most advantageous.

---

ber 23, 1971; it played no part in the various proceedings before the district court or the court of appeals, or in the presentations made to this Court in connection with the prior appeal. On the contrary, the only figure ever mentioned by defendants' counsel at the time as one which he could support was much less—a figure of $1 million was estimated as covering not only Toolco's expenses but also 78% of those of TWA (Doc. 145, p. 10). In their 1964 petition for certiorari in No. 501, October Term, 1964, defendants similarly said the deposition was "estimated as costing over $1,000,000" (p. 44a), a formulation that had also been used in their June 14, 1964 petition for rehearing to the court of appeals (p. 14n).

The election to default, described on February 8, 1963 as the result of a business judgment that Toolco would be better off financially, is similarly described before this Court. Although there is some suggestion that the complaint was brought in bad faith for purposes of oppression (*e.g.*, Def. br. pp. 11, 12), the main thrust is a reiteration that Toolco's decision resulted from careful consideration of the odds—that it was a responsible decision which would not even have been influenced by the actual appearance of Hughes, in response to the subpoena he had accepted, on the day set for his deposition (Def. br. p. 29). The courts below are accused of having misunderstood this position (Def. br. pp. 28-29, 60, 146).

If there is confusion, it is defendants' own, for they argued exactly the contrary to the district court in 1965 and to the court of appeals on their latest appeal. On December 30, 1965 James V. Hayes, then defendants' lead counsel, was arguing a motion for, in effect, summary judgment in Toolco's favor based on affidavits of counsel and CAB records. Judge Metzner, who later denied the motion (A-422-23), asked the following question:

> "• • • Mr. Hayes, I am going to stop you because you have been going for forty-five minutes.
>
> "I have listened very carefully to you, and the only question going through my mind is why was there a default? Why didn't you go into court and get a judgment on the merits?" (A-416)

And received the following response:

> "Mr. Hayes: This is not in the record, but it is well known.
>
> "The default took place because of the failure of Mr. Hughes to appear for a deposition primarily.
>
> "The Court: As a result of a deliberate business judgment.
>
> "Mr. Hayes: Right, correct.

"Mr. Sonnett: With two other instances.

"Mr. Hayes: Yes, I know. I said primarily. Everybody knows Mr. Hughes' passion for privacy, whether we like it or not." (A-417)

A substantially similar argument was made in defendants' principal brief to the court of appeals in 1970.[11]

In 1963, however, when defendants were objecting to discovery and before they defaulted rather than submit to it, this possibility had been very much in Judge Metzner's mind and steps were then taken to make sure that there was no substance to it. A pretrial hearing was held in chambers on January 16, 1963. At defendants' request no transcript was made, and attendance was limited to chief counsel and a single associate for each party. An affidavit was filed by defendants of which the pertinent portions were, at their request, sealed (Doc. 145, pp. 6-8). While those papers have never been unsealed, when the matter arose before the court of appeals at oral argument in 1963 TWA's counsel, John F. Sonnett, who had been present, stated on the record —without denial from counsel for defendants—that at the conference in chambers the question was put to Mr. Davis, defendants' chief counsel:

"'Are you saying that there is any medical reason or any reason of that type why this man can't testify, because if you are the record before me is deficient.'

"Mr. Davis specifically and flatly answered the question by saying, 'No.' He was not making any such

[11] "If a settlement could be blackjacked by forcing Hughes to give a deposition at the cost of defaulting if he did not appear, why bother with Holliday, why bother with interrogatories? The essentiality of Hughes had only one basis that guided TWA's tactics. Exploit his passion for privacy, force him to testify and, at the same time, carefully refrain from identifying a single fact to support its sham complaint." (Defendants' brief to the court of appeals, November 16, 1970, pp. 182-83; *see also* pp. 186, 191.)

OUND CLOSE IN CENTER

contention." (Transcript of oral argument, November 13, 1963, pp. 122-23)

When two years later Mr. Hayes, in the passage quoted at pp. 36-37 *supra*, tried to ascribe the default to Hughes's "passion for privacy," Judge Metzner responded as follows:

> "The Court: Well, beyond that, Mr. Hayes, I offered in an off-the-record discussion to provide for protecting Mr. Hughes' passion for anonymity by having the deposition taken any place he wanted, as secret as he wanted it to be, and then I was asked not to publish it, so I never published it, but that is a fact.
>
> "Mr. Hayes: I am aware of this, your Honor." (A-417)

It was therefore to defendants' "blackjack" argument (see p. 37n. 11 *supra*) that the court of appeals had reference when it ruled:

> "Toolco intimates that throughout the litigation TWA sought in bad faith to win a fabricated case by exploiting Hughes's known craving for solitude. Nothing in the record would justify any such finding, and in any event the district court did offer to permit the deposition to be taken in as much privacy and under any other conditions that might suit Hughes's aversion to public appearance." (449 F.2d at 62, A-2755-56)

After February 8, 1963 there were several occassions on which, if defendants had desired to request an opportunity to remedy their default, to produce the evidence withheld and proceed with discovery and a trial on the merits, it was plainly incumbent upon them to do so. During the February 21, 1963 hearing on TWA's motion for entry of an interlocutory default judgment against Toolco, the court said to Toolco's counsel: "Mr. Davis, you are leading right back to directing Mr. Hughes to appear for examination. Is that where you want to go?"—to which Mr. Davis

responded: "No, your Honor" (A-2722). At the oral argument on November 13, 1963 Circuit Judge Kaufman several times directly asked counsel for defendants whether, if the case were remanded to permit reopening of the default, defendants would be prepared to go ahead with pretrial discovery—including the deposition of Hughes. Each time counsel for defendants responded that he was not. (Transcript of oral argument, November 13, 1963, pp. 41, 50-51, 136)

After the 1964 decision of the court of appeals affirming Judge Metzner's orders, and the dismissal by this Court of certiorari as having been improvidently granted, and following remand to the district court for the damage hearing, no application was made to reopen the default.

F. Evidence available to TWA at the time of default

Defendants' repeated charge that TWA's case—and the decisions of the Special Master, the district court and the court of appeals—were based on "mere assumptions," "possibilities" and "hypothetical events" (*e.g.*, Def. br. pp. 18, 21, 109, 111, 116, 117, 136, 138) ignores the critical fact of this case—that defendants, because of a "business decision" that they would be better off, deprived not only TWA, but the courts below, of access to the truth. Having been deprived of the information within defendants' sole control as to what they in fact did, and why, TWA could not be expected to prove definitively the truth of the allegations of its complaint.

At the damage hearing defendants did not offer a single fact witness.[12] Their attack on the complaint, below as

[12] Even if the Special Master would have been required to hear it, defendants cannot now claim that he, or the district court, erred in not considering testimony that defendants never proffered. *See Smith* v. *Concordia Parish School Bd.*, 445 F. 2d 285, 286 (5th Cir. 1971); *Winston* v. *United States*, 342 F. 2d 715, 724 (9th Cir. 1965). *Cf.* FED.R.CIV.P. 43(c); *Boulter* v. *Chesapeake & Ohio R.R.*, 442 F.2d 335, 336 (6th Cir. 1971).

here, was based alternately on innuendo and on flat assertions as fact of matters which are, at best, questionable inferences from the documentary record. The courts below held that those innuendoes and inferences were completely inadequate to establish the *untruth* of TWA's allegations.

On the contrary, the record, even in its truncated state, amply showed that TWA could have developed evidence to support its allegations, if it had been given the chance.

1. The role of Howard R. Hughes

In evaluating the evidence relating to the allegations of the complaint, it is necessary to keep in mind the effect of the unavailability of Hughes to testify.

Hughes was the central figure in the tapestry. He was never an officer or director of TWA, but he arrogated to himself all power of decision on TWA's aircraft procurement programs (A-699-700). He gave strict instructions to TWA's presidents Burgess and Thomas to stay out of equipment matters altogether (A-704, A-706-07, A-944). In the crucial period of jet exploration and ordering, Damon, then TWA's president, was left by Hughes's orders completely uninformed (A-733-35; *cf.* A-1049). Examples of Hughes's practice of imposing secrecy and keeping TWA's management ignorant of his actions can be found in his negotiations with AVRO (A-1807) and De Havilland (A-1814), in the YB-60 project (A-643), in the plan to manufacture Caravelles under license (A-1818-20) and in every aspect of the procurement of TWA's ultimate jet fleet. These are all matters on which TWA's witness, Robert W. Rummel, the only person in TWA's management that Hughes allowed to participate in procurement matters, had some information. What else went on, that Rummel was not told about, remains *terra incognita*.

One illuminating episode illustrates how difficult it is to ascertain from the outside what Hughes was trying to do.

Late in December 1954, to the dismay of TWA's management, Hughes decided that orders had to be placed at once for 25 Lockheed Constellation 1449A aircraft, which Toolco would buy and which TWA would buy from Toolco when Toolco required it to. At this time and for this particular generation of piston aircraft, TWA's management (including Rummel) preferred the Douglas DC-7C (A-1843-45, A-1848-49). It was, however, apparently one of the times when Hughes's orders were that "we did not work with Douglas" (A-1806).

Despite repeated protests that the proposed airplane was uneconomical, that its specifications were far from complete and indeed "not sufficiently complete to be suitable for use as a contractual instrument * * *," that the price would be excessive, and that TWA management believed the airplane as proposed to be "an unsound project," Hughes "flatly rejected" TWA's views "on the basis that he felt he must wind the deal up right away * * *" (A-213-18). And he did (A-218).

In the preceding month, Boeing had formally announced to the airline industry that it was ready to negotiate the commercial sale of its new jet transport (AX-1584 *et seq.*). The Boeing transport had been flying since July 1954 in a prototype version (*ibid.*), while the Lockheed 1449A (then conceived as a turboprop, and later regressed with the changed designation 1649A to one of the last and probably the least successful large piston aircraft ever built) had never flown. That Hughes and Lockheed had had secret negotiations from which TWA had been entirely excluded seems clear from Rummel's memorandum of the telephone conversation in which Hughes announced his decision (A-213-18).

2. *The inferences which can be drawn from what is known about defendants' activities in aircraft manufacture and supply*

Toolco was and is a substantial manufacturer of helicopter aircraft through its Aircraft Division, and a major supplier of aircraft parts and components. Defendants' brief discounts Toolco's activity on the grounds that helicopters and commercial jets are "vastly different products," and that there are "problems inherent in a changeover from defense-related production to commercial operations" (pp. 112-13). But the products are clearly related, and the changeover had been made by such manufacturers as Boeing and Convair.

In addition to Toolco's Aircraft Division, the Hughes Aircraft Corporation, an affiliated corporation also controlled by Hughes, is recognized as one of the largest aerospace manufacturers in the United States, specializing in sophisticated electronics and space vehicle development and production.

Hughes personally had specialized knowledge and status in the industry, apart from that inherent in his wealth. In the 1930's he set the then world speed record for land-based planes, in an aircraft of his own design (the Hughes Racer), built in his own facilities.

The court of appeals concluded that

> "• • • it is clear that Toolco throughout the relevant period had the technical capability and sophisticated 'know-how,' to enter the commercial market without untoward delay if it had so chosen." (449 F.2d at 67, A-2767-68)

The piston era—At least twice in the piston period Hughes and Toolco took steps toward establishing Toolco as a major supplier of commercial transport aircraft. As a result of Hughes's partnership with Lockheed in the development of the Constellation aircraft, Toolco acquired

COPY BOUND

rights to the first 40 aircraft to be built (6 C.A.B. at 155, A-3300). In the much smaller market which existed before World War II, this constituted a large number of planes. TWA's total fleet as a relatively small domestic carrier in late 1940 consisted of 40 aircraft, only five of them with more than two engines, and it was expected that TWA would absorb 15 Constellations. The other 25 would be available for sale to other airlines. (*Ibid.*, A-3301; 449 F.2d at 67, A-2768). With TWA as a captive market and a technologically advanced product attractive to airlines generally, Hughes and Toolco could logically expect at a single jump to move through Lockheed into a very strong position in the field of commercial aircraft manufacture and supply.

This first, highly promising attempt with aircraft manufactured by Lockheed was frustrated by the outbreak of war when all aircraft output was taken over by the United States Government. By the end of the war, aircraft development had taken great steps forward, and the early Constellation, while still an effective airplane, no longer represented a significant technological advance over its competition.

During and after the war it appears that Hughes's principal interest was in the HK-1, the 700-passenger plywood flying boat which he was developing under Government contract (449 F.2d at 67, A-2768); TWA looked into the plane from a commercial viewpoint (A-1798). This extraordinarily ambitious undertaking, if it had been successful, would have antedated by over 20 years the development in the late 1960's of aircraft capable of carrying comparable numbers of passengers over very long distances. It was a direct manufacturing venture by Toolco, assisted in this instance by public funds under military contracts.

This attempt failed; technology of the period was insufficient for Hughes to produce a workable aircraft to the designed specifications, although work on the aircraft continued off and on for many years. A greater commercial

D CLOSE IN CENTER

opportunity was to come with the introduction of jet aircraft for commercial purposes, and Hughes's planning for this foreseeable development began in the 1940's (AX-5).

In the meantime, as one result of TWA's post-war success in obtaining transatlantic routes, TWA was very greatly enlarged as an aircraft market. Hughes and Toolco tightened and perfected their control over TWA's aircraft procurement. Orders were placed by Toolco or on its instructions, with consultations with TWA consisting primarily of studies made by TWA's technical staff for Hughes's use. Except for the personal association between Hughes and Rummel, in which Rummel worked directly under Hughes's instructions and transmitted Hughes's orders to others in TWA when told to do so, TWA's management had very little part in these activities (A-682-85, A-704, A-706-07, A-733-35, A-737, A-944, A-1807, A-1814, A-1818-20).

Rummel in this period thought that all of these activities were intended for TWA's benefit, and even in 1955, when he became convinced that TWA was being seriously, perhaps irretrievably, injured by Hughes's refusal to allow TWA to negotiate for or order jets, he still thought Hughes's motivation was to benefit TWA. It was not until later that it became obvious this charitable view was mistaken.[13]

Prevention of TWA financing—While other airlines in this period engaged in major public financing to establish the necessary equity base for the much larger scale of airline operations that was coming into being (*e.g.*, AX-889-90, AX-891-92), this formed no part of defendants' plans for TWA. If TWA were to establish itself as financially inde-

[13] Defendants point to Rummel's testimony as evidence of Hughes's and Toolco's benevolent motives (Def. br. p. 13), but it is plain that Rummel's answers were confined to what he then thought, and he expressly stated that he could not know what Hughes's motivations really were, nor did Hughes generally give him any explanations of his actions (*e.g.*, A-470, A-506, A-515, A-1802).

COPY BOU

pendent, able on its own account to deal with and meet its obligations to independent airplane manufacturers, it would have been difficult for defendants when the time came, to use TWA's aircraft needs as a lever to help in establishing a broad commercial position as suppliers of jet aircraft. In the late 1940's defendants took steps to prevent this by reducing TWA to financial impotence.

Until 1947 the president and a majority of the board of directors of TWA were independent. The finance committee established by the independent directors on September 12, 1945 formally recommended a public sale by TWA of common stock to raise $20 million and consideration of a sale of preferred stock to raise an additional $25 million (AX-925-29). In the course of the next nine months the market price of TWA common stock ranged between a low of $47 and a high of $79 per share (AX-930; TWA Ex. 296[14]). Both Pan American and American carried out major public stock financings in this favorable market (AX-889-92).

Hughes and Toolco, however, blocked TWA's every effort to carry out such a program. Finally, in desperation, TWA's board called a special stockholders' meeting in December 1946 to approve an increase in authorized stock which would permit the public sale by TWA of convertible preferred stock, the time for a successful issue of common stock having already passed (AX-931-34). By the device of withholding its proxies Toolco prevented a quo-

[14] TWA Ex. 296, which is reproduced following p. 46, is a chart showing monthly prices of TWA common stock during the period 1939 through 1966 on which are set out Toolco's various transactions in TWA's common stock and related securities. TWA Ex. 296 was admitted into evidence by Special Master Brownell at the damage hearing (Doc. 554, pp. 7379-80). It shows, *inter alia*, that Toolco was able to sell its stock interest in TWA in 1966 at the net price of $83 a share, for total net proceeds of $545,814,771. Toolco's cost basis for that stock was $94 million. Its capital gain was therefore approximately $452 million. (308 F. Supp. at 693, A-2052)

rum at that meeting, and at three successive adjournments of it, the last on January 6, 1947, so that no action could be taken (AX-935 *et seq.*). By thus preventing TWA from selling stock publicly when it could have done so at high prices, Toolco produced a situation in early 1947 in which TWA could meet its financial commitments only by accepting financing on Toolco's terms.

Those terms proved to be the dissolution of the independent finance committee, the appointment of enough Toolco nominees to the board to constitute a majority, and the issuance to Toolco of demand notes in the amount of $10 million, convertible at Toolco's option into common stock at the average of the closing market prices for the ten days preceding the day of Toolco's election to convert (AX-963-64). A year later Toolco required the new board to approve conversion of the notes at $10 per share, at a time when the price computed on the basis of actual market prices, as provided in the notes, would have been $15.80 per share (AX-991; TWA Ex. 296).

By this transaction Toolco acquired an additional 1,034,423 shares of TWA common stock (TWA Ex. 296)—more than the total amount of TWA common stock previously outstanding (986,018 shares)—and increased its stock interest in TWA from 46 per cent to 73.6 per cent (TWA Ex. 292, p. 2; TWA Ex. 296).[15] By this naked application of corporate and economic force defendants succeeded in making TWA completely dependent upon them for financing, and cemented their dominance over the supply of aircraft to TWA, precisely as charged in paragraphs 10, 23, 24 and 51 of the complaint (A-9-10, A-15, A-25). Such was the situation as the jet era approached.

[15] If the original conversion formula had been adhered to, Toolco would have received only 654,699 shares of TWA common stock upon conversion (TWA Ex. 296). Measured by the then market price, the additional 379,724 shares that Toolco acquired at no additional cost had a market value of some $6 million. After a 10% stock dividend in 1952, upon the sale of these shares in 1966 Toolco realized more than $34 million for the shares which it had obtained in excess of the contractual formula (*ibid.*).

The jet era—The development of large military jet aircraft was quickly followed by the introduction of the British-made Comet, the first commercial jet aircraft (A-1809). As the time approached when American manufacturers would be prepared to produce jet transports for airlines, defendants resumed their active efforts to establish Toolco as a source of aircraft.

Hughes and Toolco had two principal approaches to consider. Toolco itself might assume responsibility for the assembly of aircraft (in which case a technological partnership with an established manufacturer would be useful), or it might make arrangements for the assembly to be carried out by an established manufacturer under circumstances in which it would have special rights to the output (in which case defendants' technological participation in the design stage might be of major importance in establishing their partnership position). Under either approach defendants could participate in the manufacture or supply of important components. What was important was the power to control the output.

Hughes moved along both roads.

Manufacture in association with AVRO of Canada was actively considered from 1954 to 1956 (A-471, A-1807, A-1839). Manufacture of Caravelles, as North American licensee for Sud Aviacion of France, was being actively and very secretly considered as late as 1957 (A-1818-22). Even after the failure of its earlier attempts and the rapid progress of Boeing and Douglas had compelled Toolco to place jet orders with Boeing, defendants were most reluctant to give up the hope of Toolco's engaging directly in manufacturing. Project "Greenland" appears to have been the code name given to some highly secret plans for direct manufacture of jet aircraft by Toolco about which Rummel was given very little information (A-475-6, A-1839). Other TWA officers were given none. TWA was caused to file an

application with the CAB in this connection in 1956, which was not abandoned until two years later (AX-2145-46, AX-2425-26). The project was far enough advanced before abandonment so that land acquisition had been commenced in Florida for the necessary facilities (A-476).

As the court of appeals points out (449 F.2d at 67-68, A-2768), the ordering by Toolco of no fewer than 300 Pratt & Whitney jet engines in 1956, at a time when such engines were in short supply, could well have been a preparatory step towards Toolco's manufacturing jet aircraft (A-470-72, A-178-90). By this purchase alone defendants acquired rights to enough jet engines for original installation in 75 commercial jet transports, far beyond any conceivable need of TWA for spare engines, and effectively cornered the jet engine market. Later, when direct manufacturing plans were suspended, Toolco exploited its corner by the sale of most of the engines to Boeing and to Pan American, in direct competition with Pratt & Whitney,[16] and at a substantial profit (A-178-79, A-189; Doc. 494, Exs. 5, 7, 8).

While direct manufacturing was explored, so also was the avenue of establishing a partnership position with an established manufacturer through joint development activities. Hughes's statement to Boeing in 1955 that he was only interested in Boeing jets if he could have the first

---

[16] The President of United Aircraft (Pratt & Whitney's parent corporation) expressed his opinion vigorously in a letter to Toolco dated April 5, 1957:

> "It has, of course, been our practice when a customer has in his possession more Pratt & Whitney Aircraft engines than he requires, to do all possible in assisting such a customer in their sale. However, in your case, you do not now possess more engines than you need, but rather you have on order some 200 more engines than you require for TWA. There is no necessity of your taking delivery of these engines * * *.
>
> * * * * *
>
> "Now you apparently are contemplating going through with this rather large order and marketing these engines in competition to Pratt & Whitney Aircraft." (A-178-79)

50 produced indicates the type of control over output that he was hoping to get (A-1023, A-1051, A-1208). This was essentially the arrangement he had had with Lockheed in the case of the early Constellations. However, the major effort on this front consisted of extended work with Convair[17] which commenced at the very beginning of 1955 and continued (through the collapse of the Model 18 and the subsequent work on Models 19 and 20) until the end of November 1955, a period during which TWA—the captive backstop market on the availability of which much might depend—was forbidden to negotiate with other manufacturers for the jet aircraft which it would need (Complaint, pars. 14, 16, 17, A-11-13; A-1799-1800, A-1802-06).

In the piston period Toolco had dealt in aircraft to a not insignificant extent. Toolco purchased and sold to TWA 33 new and eight used Constellations, not counting a considerable number more as to which it held a security title for a substantial period, and it conceded in the court of appeals below that it purchased and rebuilt at least 14 C-47s, apparently for sale to other airlines (Defendants' brief of November 16, 1970, pp. 32-39). The jets now offered a more important opportunity—the 63-plane jet fleet that Toolco had ordered and that TWA had been allowed to hope and expect would ultimately be made available to it.

TWA soon discovered that defendants would not permit themselves to be bound to turn over any of the aircraft to TWA. As the complaint alleges, Toolco repeatedly refused to assign them (Complaint, par. 18, A-13). For instance, late in 1957 in answer to a letter from Burgess, Toolco explained:

---

[17] It is possible that a similar arrangement was also explored in 1954-1955 with Lockheed, primarily in terms of turboprops in which Hughes was personally very interested, but little is known of the personal contacts which Hughes was making with manufacturers and financiers in that period. The indications in a memorandum of Rummel's telephone conversation with him about the L-1449A deal late in 1954 are suggestive (A-213 *et seq.*).

> "For various reasons Hughes Tool Company can not yet commit itself to TWA with respect to these aircraft, either as to type or number; but, on a basis to be determined later, it is expected that *some* jet aircraft will be made available to TWA." (A-194) (Emphasis added.)

About a year later Toolco representatives "pointed out that Hughes Tool has not yet agreed to furnish jet planes to TWA" (A-193) and that

> "• • • Hughes Tool Co. had NO intention of selling or leasing their stuff (jet planes implied) to TWA • • •." (*Ibid.*) (Emphasis and parenthetical phrase in original.)

TWA's annual reports and prospectuses of the period reflect this attitude on the part of defendants (*e.g.*, AX-887; AX-853, note 5 to financials; AX-840, note 7 to financials).[18]

The inescapable inference is that Toolco wished to become a supplier of jets to other airlines. The application which Toolco had caused TWA to file with the CAB in 1956, to amend the original control order to permit TWA to buy up to 25 jets to be manufactured by Toolco under a program that no one in TWA was allowed any knowledge of, was not withdrawn until 1958 (AX-2145-46, AX-2425-26). Toolco was plainly interested in establishing and maintaining a commercial presence for itself as a corporation to which—as a manufacturer, lessor or supplier—airlines might turn as a source of aircraft.

Selling or leasing jets to other airlines offered sufficient advantages so that opportunities to do so were actively pursued over an extended period—commencing before anyone in TWA was told that its fleet would be cut back.

---

[18] While the jet engine purchases from Pratt & Whitney in 1956 were probably related to the proposed manufacturing programs, the fact that a larger number of spare engines would be useful if the 63-plane fleet were to be split among two or more airlines was also a consideration (A-1841-42).

—As early as March 1958 Hughes was negotiating to lease Viscount turboprops to Northeast through a "buyer" (A-146-47), perhaps the proposed subsidiary of Toolco known as "HACO" or "HALCO."[19]

—As early as January 1959 Toolco was attempting to sell some of its Convair 880s to Capital Airlines (Doc. 494, Ex. 2). This was well before anyone in TWA was told that TWA would not get all 30. Convair regarded these negotiations as being in direct competition with its own sales efforts (A-905-06; A-149).

—Toolco was attempting to sell Convair 880s to Northeast in July 1959—a full year before the 1960 merger proposals. The negotiations went right up to the contract stage. (A-150-57) Hughes was personally an important stockholder of Atlas, which the complaint charges was a co-conspirator. Atlas in turn controlled Northeast. (Complaint, par. 6, A-2-3) It seems probable that, without TWA's knowledge, discussions of one sort or another involving the supply of aircraft by Toolco to Northeast continued throughout 1959 and 1960.

—At one point Toolco was on record as trying to sell seven Convair 880s to National Airlines—and *another* seven to the United States Government (A-169-71).

—The diversion of six of TWA's B-331 long-range aircraft to its principal transatlantic competitor, Pan American, is charged in the complaint and is a major element of TWA's damage claims and award. The record is clear that this was regarded by all of

---

[19] A subsidiary with the former acronym, Hughes Aircraft Company (not to be confused either with Hughes Aircraft Corporation or the Aircraft Division of Hughes Tool Company, both of which are manufacturers rather than operators), now owns and operates the regional carrier Air West, acquired shortly after Toolco sold the controlling interest in Northeast which it had purchased in 1962 from its co-conspirator Atlas.

the parties as a sale by Toolco.[20] Toolco made a substantial profit on the sale.[21]

—During 1960 Hughes discussed with the Bank of America plans to sell to American Airlines all 15 of the B-131s which Toolco was then leasing to TWA (A-203).

Defendants insist that they could not compete with other suppliers of aircraft because of contract clauses preventing assignment of "the right to receive the aircraft" without the consent of Boeing and Convair (Def. br. pp. 19, 96, 102n. 45, 115n. 62). But these clauses were in point of fact com-

[20] As Pan American's Annual Report for 1959 puts it:

"Six long-range Intercontinentals were *purchased from Hughes Tool Company* during the year at a cost of $40,000,000." (AX-868) (Emphasis added.)

Referring to the same transaction, John B. Connelly, Boeing's vice president, testified:

"Well, in particular I recall that when this question was asked—of course, as you know, this involved *the sale of six airplanes by Hughes Tool Company to Pan American.*" (A-1178) (Emphasis added.)

The ratification by TWA's then captive board of directors is found in the minutes under the heading "Consent to *Sale* of Six Boeing Model 707 Aircraft by Hughes Tool Company" (AX-1408) (emphasis added).

[21] Although TWA had no discovery by which it could inquire into Toolco's profits from the Pan American deal, a Toolco financial statement dated July 16, 1959 (Doc. 494, Ex. 5) indicates that its total cost basis for aircraft, engines and spares which went to Pan American was $8,367,325.90, or $1,143,303.38 less than Pan American paid Toolco to get the planes and engines (*id.*, Exs. 6, 7). Toolco's 1959 federal income tax return reflected an otherwise unexplained gain of $955,600.10 from disposition of interests in contracts (Doc. 495).

The arrangement by which Toolco diverted the six Convair 880s to Northeast (Complaint, par. 22, A-15) also resulted in a handsome profit to Toolco. Schedule D of Toolco's 1960 federal income tax return reports a capital gain of $1,208,424, and its 1960 financial statement audited by Haskins & Sells confirms that a gain in the net amount of $1,208,424 was realized in this transaction (Doc. 495).

pletely ineffective. Such aircraft contracts as Toolco chose to assign, it assigned, and Boeing's vice president Connelly testified that Boeing felt it had no choice but to consent (A-1181).[22] As to TWA's consent, its availability was so obvious that it was never a subject of concern. The documents involved in the Boeing sales were signed before the possibility was even communicated to TWA's board of directors, and in the Convair transaction in 1960, the formality of obtaining TWA's consent to the assignments was never even bothered with—in spite of the fact that three of the aircraft in question had already been specifically assigned by identification number to TWA, early in May 1960 (AX-10, AX-64 *et seq.*). Strikingly, the specific B-331s transferred to Pan American by Toolco included four of the first nine delivery positions for which Toolco had contracted (AX-51-52) — although the competitive importance of early delivery of such advanced aircraft was so great that it had led to the most vigorous efforts in the 1955-1956 period for the earliest possible delivery positions.

This does not complete by any means the story of Toolco's equipment ventures. Late in 1959, for example, when TWA's jet fleet (according to defendants' contentions then and now) had been completely provided for, Hughes was negotiating with Lockheed for the purchase of a large number of Electra turboprops. TWA, at least, did not want Electras, although it was very much afraid that they might be put to it if Toolco had no other customers. Thomas, nominal president of the captive market at the time, did not dare follow the advice he was given to tell Hughes personally that TWA would not take Electras (A-198). The Electras would have been replacements—at least until they

[22] There could not legally be any obstacle to the resale of the aircraft after purchase. *United States* v. *Arnold, Schwinn & Co.*, 388 U. S. 365, 379 (1967); *Dr. Miles Medical Co.* v. *John D. Park & Sons Co.*, 220 U. S. 373, 408-09 (1911).

themselves were sold—for the B-131s on lease to TWA that Hughes tried to sell to American (A-203). The usefulness of a captive market for inventory purposes is apparent.

On May 13, 1960 Toolco contracted to purchase seven Convair 880Ms built to the specifications of Capital Airlines.[23] Hughes gave orders to Rummel and his assistants, then supervising the construction by Convair of the 20 CV-880s destined for TWA, to stay away from the CV-880Ms, and that TWA was to have nothing to do with them (A-162-63, A-715-17). As Hughes told Holliday:

> "• • • HTCO is approaching certain bankers immediately as to the possibility of obtaining financing for the purchase of these aircraft *independent of any possible disposition to TWA*." (AX-657) (Emphasis added.)

At about the same time, Toolco ordered Convair 990 aircraft (also designated as CV-600)—a total of 13 of them in 1960 and 1961 (Doc. 495, Toolco 1960 financial statement, note 3). All 13 were to be built in American Airlines' configuration. (AX-644 *et seq.*) American was a customer in which Hughes was very interested. Defendants themselves emphasize the significance of such a choice of configuration (Def. br. p. 102n. 45).

Defendants argue that these aircraft were ordered independently by Capital and American, and suggest that when Toolco acquired the right to purchase them they were intended by Toolco solely for TWA (Def. br. p. 115). While the CV-880Ms had been originally ordered by Capital, none of the 13 CV-990s ordered by Toolco had ever been

---

[23] The CV-880Ms (also designated as CV-22Ms), are not to be confused with the CV-880s Toolco attempted to sell to Capital (p. 51 *supra*). The CV-880Ms contained "leading edge devices" (A-1829), the very change which Rummel wanted on TWA's CV-880s (Doc. 226, pp. 992-97) and which defendants refused to permit (Complaint, par. 19, A-13).

part of any American order, as defendants are well aware. The evidence is convincing that none of these Convair aircraft was originally intended for TWA. In addition to the Hughes statement to Holliday about the Convair 880Ms quoted *supra*, Rummel testified that Hughes personally ordered him to have nothing to do with the Convair 990:

> "The instructions were that I should not participate or allow the participation in either contract or specification development activities, that we should not inspect any 990 parts or components at the Convair facility, and that we should not discuss the 990 with Convair." (A-1802; *see also* A-715-17)

J. William Bew, the TWA employee who was Toolco's Special Representative at Convair, recalls:

> "• • • I received strict instructions not to inspect, discuss or even recognize the fact that they were on the production line." (A-252)

Hughes later tried to force the CV-990s upon TWA to keep it from buying Boeings on its own account, but that was after the captive market had escaped his control (Complaint, pars. 35, 37-39, 41-42, A-18-21).[24]

Sketchy as it necessarily is, the foregoing outline of events does show that defendants' involvement in the activities described in the complaint as the "development, manufacture and acquisition • • • and sale and lease" of aircraft (Complaint, par. 3, A-2) was extensive throughout the

[24] Hughes's point of view during the later period is illuminated by his blunt words to Holliday, to be repeated to Convair:

> "It is not up to Convair to decide whether TWA will accept the so-called 97% of the airplanes. This has never been a matter for discussion. However I obtain TWA's acceptance to this is my own problems; most likely HTCO will control TWA when that matter comes up." (A-199)

Hughes's confidence in February 1961 that he could regain control so quickly is particularly interesting since he had placed his stock in a ten-year voting trust less than two months before.

period covered by the complaint. And what is known is surely not all. It is impossible to guess what other activities might have been discovered if TWA had been able to proceed with the discovery guaranteed it under the Federal Rules of Civil Procedure.

3. The curtain of secrecy surrounding Hughes

There has probably never been an industrial or commercial operation as to which such total and totally effective secrecy has been maintained as is maintained over all of Hughes's affairs. As Rummel observed, it was routine "to deal quietly, so to speak, in dealing in matters in which Mr. Hughes was interested" (A-1815). There is no record known to exist of the great bulk of his personal contacts with financiers and industrialists.[25] Typically, indeed, those with whom he was in contact were instructed to maintain no written record (A-1832, A-1843). Since no such restriction was ever placed on Hughes himself, the existence at the time of the default of critically important documentary material under his personal control was very likely.

The extent of his holdings is equally mysterious. Fascinating indications appear in the public press from time to time—mining lands here, islands there, hundreds of thousands of acres elsewhere, hotels, airports, a television network, banks, factories. Secret agreements with manufacturers that TWA does not presently even suspect are not just possible—they are, given defendants' known methods of operation, a probability.[26]

---

[25] The few "call sheets" preserved in Toolco's secret message center in Los Angeles and produced during pretrial discovery record only messages left with the telephone room; when direct telephone contact was made, the notation "They talked" or "Omit. They talked" is all that survives (AX-665-728 *passim: e.g.*, AX-669, AX-673, AX-691, AX-694).

[26] For example, Hughes at one time offered to Colonel Henry Crown, a major stockholder of General Dynamics Corporation, to purchase all his future aircraft from General Dynamics in return for financial assistance from Crown (A-174).

4. Co-conspirators other than defendants

TWA alleged in its complaint that "defendants, Atlas and other persons acting for each of them" had engaged in the combination and conspiracy to restrain and monopolize charged (Complaint, par. 9, A-8-9). Atlas was alleged to have joined the conspiracy prior to May 1960 (Complaint, par. 21, A-14). Defendants, in support of their contention that the "conspiracy charge also fails for want of the needed kinds of conspirators" (Def. br. p. 104), pretend that Atlas was connected to the combination and conspiracy alleged in the complaint only through the proposed Northeast merger (Def. br. p. 105). Yet the collaboration of Hughes and Atlas went far beyond this merger proposal—or even the provision by Toolco of aircraft to Northeast. (In addition to the six CV-880s referred to in paragraph 22 of the complaint (A-15), examples of the latter include both the Viscounts which were the subject of negotiations in 1958 (A-146-47) and the four CV-880s leased directly from Toolco in 1962.)

Evidence was available to TWA that the chief executive officer of Atlas, Floyd Odlum, was one of the central group of individuals who decided what defendants should do with respect to TWA during the critical period in early 1961 when they were still attempting to control TWA's aircraft acquisitions (Complaint, pars. 36-39, A-19-20) and were attempting to disrupt TWA's efforts to obtain financing in May of that year (Complaint, pars. 40-46, A-20-22). On March 9, 1961 Holliday reported to Hughes in an "operating memorandum" on a secret meeting which he had at Odlum's ranch (A-2370-71). This meeting had been arranged by Hughes, and it is apparent that Holliday had detailed instructions from Hughes as to matters to be discussed (A-2353). One subject was which of two CV-880 aircraft available for early delivery should be assigned to TWA to comply with Toolco's firm commitment made at the end of

1960 to assign a total of 20 such aircraft to TWA. By this date TWA had received only nine (AX-145). Odlum's advice was that both of the aircraft discussed should be assigned, or if not both, the earlier of the two, and he went on to advise Hughes that it would be a serious mistake to seek to use "the last 20 TWA planes as a 'quid pro quo' for • • • an indemnity" against a possible lawsuit (A-2370). The meeting at Odlum's ranch occurred before TWA retained independent counsel, but the directors had already authorized an investigation (DX 39, p. 12), and it is apparent from this and other documents that the defendants and Odlum were seriously concerned that this investigation would result in a major lawsuit.

Holliday's memorandum goes on to report Odlum's suggestion that Toolco make an offer to induce TWA "to have the investigation sufficiently thorough to prevent a derivitive suit [*sic*], but cursory enough so that only a small amount of money would be involved." Holliday recommended that Hughes call Odlum to "discuss the over-all problem." (*Ibid.*)

In May of the same year, when defendants were attempting to block TWA's efforts to issue and sell publicly $100 million of debentures (Complaint, pars. 40-45, A-20-22; AX-877), Holliday appears to have been the recipient of a steady stream of instructions on the subject from Hughes. A few cryptic notes were produced of the instructions given by telephone (A-2357-62). These "call sheets" refer to 19 "memos" during the period (*ibid.*). Hughes's instruction to Holliday at 7 a.m. on Wednesday, May 17, 1961 was "Please follow carefully the recommendations of Mr. Odlum and Mr. Davis" (A-2361). On May 30, 1961 at 10:15 p.m. Holliday was instructed to "Please tell Mr. Davis to be sure that Mr. Odlum, or any body, does not give to the N Y Stock Exchange any decision in this matter until I communicate with Mr. Davis" (A-2362). At 5:35 a.m. on June 5 Hughes

left a message for Holliday concerning a press release about the financing—"I want to put forth for Mr. Davis', Mr. Holliday's and Mr. Odlum's consideration my reasons for feeling as I do" (*ibid.*). Telephone conversations directly between Hughes and Odlum during this period are noted in other call sheets, plainly indicating Odlum's important participation in the activities then going on in an effort to block TWA's financing (A-2338-39). The conclusion is inescapable that the collaboration between Toolco and Atlas, Hughes and Odlum, was as close in this aspect of defendants' dealings concerning TWA as it was in connection with the proposed Northeast merger. In the damage hearing the extent of Atlas's and Odlum's participation was not relevant, but TWA furnished this material to Judge Metzner in September 1962 in connection with Toolco's motion for a Rule 16 conference, to show the need for further discovery before such a conference could be fruitful.

After its own review, the court of appeals summarized the evidence in the record; defendants chose to replace the underlined words with ellipses when quoting this passage as "illustrative" (Def. br. p. 106n. 48):

> "Moreover the documents described above, while (if their contents were accepted as true) showing that Toolco was not a major force as a supplier of aircraft other than to TWA, hardly negative the possibility that Toolco possessed independent economic significance, apart from its role as supplier to TWA sufficient to support proof of any or all the antitrust theories limned by TWA's complaint. There is evidence in the record of activities by Toolco or Hughes that suggest significant movement by Toolco and Hughes toward actual or potential commercial manufacture or dealership in airplanes, especially jets, and their parts. We cannot say that proof at a trial—prevented by Toolco's conduct—

that Toolco was more than a conduit for TWA but rather possessed independent competitive significance with respect to the commercial aircraft market, would be insufficient, if combined with appropriate related proof of the intent, attempt, collusion, tying arrangements, boycotts, and monopolization alleged in the complaint, to support an antitrust judgment for TWA." (449 F.2d at 67, A-2767)

SUMMARY OF ARGUMENT

This case was at issue when defendants chose to bar discovery and foreclose a trial of the facts. They have insisted ever since, however, that the issues should be decided without accepting the truth of the basic charges made by TWA in the complaint. Having successfully frustrated discovery, defendants lay claim to a judgment on the merits of "not proven."

The keystone to that claim is defendants' assertion of the right to refuse to make discovery. The information they withheld, the court of appeals found, "was more than merely 'material.' It was essential" (p. 9 *supra*). It went to every issue, since all inquiry into defendants' conduct was blocked. Whether defendants' actual conduct might be immunized from the antitrust laws because it came within the scope of CAB orders approving Toolco's acquisition of control over TWA; whether, as they insist, defendants were innocent of any intent to restrain trade and did nothing to injure competition; and whether their conduct did or did not directly injure TWA—all these were factual questions which would have been determined at trial except for defendants' refusal to proceed. Evidence available only from defendants was indispensable as to each.

I. **The discovery issue.** Defendants' due process claims are frivolous. They concede that the complaint is legally sufficient, and therefore TWA was entitled to discovery as a matter of law and to the process of the court in aid of discovery. Defendants' explanation for their refusal to comply with the orderly process established by the Federal Rules of Civil Procedure that it was necessary to avoid an expense of $5 million in taking Hughes's deposition is not only inherently ridiculous and five times the estimate made to this Court in 1964, but it ignores the fact that courts can and do issue protective orders under FED.R.CIV.P. 26(c) and 30(d) when abuse of discovery can be shown.

Defendants claim the prerogative to require answers to detailed interrogatories or the holding of a pretrial conference under FED.R.CIV.P. 16, to facilitate a motion for summary judgment, before they could be required to produce critical documents and before TWA was permitted to take the deposition which the court of appeals has since twice held essential. This turns the matter on its head. Both the district court and the court of appeals recognized that discovery was crucial to TWA's case. Judge Metzner held that the discovery which TWA was to be allowed would both facilitate consideration of answers to the interrogatories and the application for a Rule 16 conference, and advance the date when defendants' summary judgment motion could be meaningfully entertained (A-123). Under these circumstances, the order of discovery (always a matter for the discretion of the trial judge) could hardly have been determined differently, and the correctness of the district court's decision is plain. Defendants could not have prevailed on a motion for summary judgment before TWA had essential discovery. *First National City Bank of Arizona* v. *Cities Service Co.*, 391 U.S. 253 (1968); *Poller* v. *Columbia Broadcasting System*, 368 U.S. 464 (1962).

Defendants say they wished to test their legal position. But they did so. Their motion to dismiss, treated as one for judgment on the pleadings, was carefully considered and denied (214 F. Supp. 106, A-255 *et seq.*). They had no right under the Judicial Code, let alone under the Constitution, to an interlocutory appeal, although they ultimately succeeded in getting one by their tactic of default. They cannot complain about the procedure because the decisions went against them on the merits.

II. The default issue. Defendants' "business decision" was not simply to refuse specific information; it was to proceed no further in the case. All discovery was blocked, and not just TWA, but the courts below, were deprived of access to the facts. Under these circumstances, a default judgment was inevitable, and defendants plainly invited it.

The lower courts correctly ruled that TWA was not required to prove the well-pleaded allegations of the complaint, except with respect to damages. Defendants argue that the default does not admit "legal conclusions," and label as "conclusions" such allegations as that their conduct specified in the complaint was pursuant to a combination and conspiracy to restrain trade and monopolize a segment of the market, and that this conduct resulted in specific injuries to TWA. The contention that these are conclusions and not admitted misreads the rule of *Thomson* v. *Wooster*, 114 U.S. 104 (1885). The correct rule is that a default admits all well-pleaded allegations, including allegations of "ultimate facts," which are material and traversable and which would upon denial put the plaintiff to his proof. *McAllister* v. *Kuhn*, 96 U.S. 87 (1877). When the default judgment results from a deliberate and wilful refusal to comply with lawful discovery orders, giving that judgment its full effect of establishing the truth of plaintiff's allegations is particularly appropriate. *Hammond Packing Co.* v. *Arkansas*, 212 U.S. 322 (1909).

Defendants understood the consequences of the default. When they noted their default, they stated on the record that if they were wrong about whether TWA was entitled to be before the court, they were prepared to "pay the consequences to the extent to which you are able to prove damages" (p. 31 *supra*).

III. The amendment issue. In now seeking to confine TWA to less than the full amount of damages it proved, defendants rely on a provision of FED.R.CIV.P. 54(c) meant to apply to a different type of case. Before defendants formalized their business decision to default, they had notice that TWA intended to seek all damages to which it was legally entitled. The district court plainly had discretion to grant TWA's requested amendment before the interlocutory default judgment was entered since FED.R.CIV.P. 15(a) directs that leave to amend shall be freely given "if justice so requires."

Defendants made a business judgment that they risked less by restricting TWA to a trial on damages without meaningful discovery than in a trial on the merits after discovery. They had nearly three months during which they could have withdrawn their election not to proceed before the motion to amend was granted and before the interlocutory default judgment entered against them. They did not then nor thereafter before entry of final judgment seek to cure their default. They participated fully in the damage hearing before the Special Master and were permitted to contest the amount of TWA's damages. The further provision of Rule 54(c), applicable in contested proceedings, that relief shall be granted in accordance with the proof, and the amendment provisions in Rules 15(a) and 15(b), justified the exercise of the court's discretion to allow an amendment of the prayer to demand whatever relief plaintiff could show itself entitled to. None of defendants' substantial rights was prejudiced within the meaning of FED.R.CIV.P. 61 and 28 U.S.C. § 2111.

IV. The immunity issue. Defendants claim an exemption from the antitrust laws flowing from CAB orders and covering all of their conduct complained of in this lawsuit, which they describe as merely the natural and ordinary conduct of a controlling person. This argument has gained no additional force since it was first made to this Court in 1965. An illegal exercise of control is different from a lawful acquisition of control.

Approval of a status or relationship does not immunize from antitrust prosecution everything done in that status or relationship. *Silver* v. *New York Stock Exchange*, 373 U.S. 341 (1963). The legislative history of the Federal Aviation Act makes it evident that the scope of CAB orders under Section 408 (and therefore the scope of any exemption under Section 414) is limited to acquisitions of control. Section 408 contemplates no approval of subsequent conduct, let alone any approval of anticompetitive effects of unlawful conduct in fields not subject to CAB regulation such as the supply of aircraft. The abuse of control charged in TWA's complaint was outside the Board's regulatory powers and the Board has no jurisdiction over aircraft dealers or manufacturers, as such.

Since this case was last before this Court in 1965, TWA's damages have been fixed and related to particular actions of defendants. None of these particular actions was approved by any CAB order. The particular CAB orders on which defendants rely related only to Toolco's acquisition of control over TWA. Under the Federal Aviation Act, the only relief provided from the antitrust laws in respect of such orders is the relief "necessary" to enable accomplishment of action approved by such an order. Even if it had wanted to do so, as it is plain it did not, the CAB had no statutory authority to exempt from the antitrust laws action other than the acquisition of control itself. *Pan American World Airways, Inc.* v. *United States*, 371 U.S. 296 (1963), holds only that the "narrow questions" of divi-

sion of territories and allocations of routes were at the heart of the Board's regulatory function and had been entrusted to the Board, so that all questions of injunctive relief with respect to them were intended to be left to the Board. Here there can be no interference whatever with the regulatory scheme. Toolco no longer controls TWA, and the relief granted is confined to damages for past injuries which the CAB is without power to grant. *Cf. Carnation Co.* v. *Pacific Westbound Conference,* 383 U.S. 213 (1966).

V. The antitrust issue. The court of appeals considered defendants' contentions that their conduct could not in any case violate the antitrust laws. It held that defendants, having refused discovery, could prevail only if they affirmatively demonstrated that no antitrust violation could possibly be proved under TWA's complaint. It found that defendants had not disproved a violation on one or more of six theories. Defendants now essentially repeat their argument below that Toolco's 78 per cent ownership of TWA made it *per se* lawful for them to dictate TWA's aircraft purchases in any way they chose.

Defendants' assertion that their stock control of TWA insulated their conduct from the antitrust laws ignores the complaint's allegations, *inter alia,* that they conspired to monopolize the supply of jet aircraft to other airlines besides TWA. That conspiracy was to be effected by using TWA's requirements to gain access to a supply of aircraft and to provide a captive backstop market. Toolco's control of TWA had no possible relevance to the legality of such conduct. Even with respect to monopolization and restraint of the TWA market, Toolco's stock ownership conferred no immunity. Defendants' suggestion that one who controls a market exceeding $100,000,000 because of stock acquisitions is privileged to exclude competitors from that market is inconsistent with established antitrust principles and contrary to public policy. The further argument that,

even though Toolco's conduct was illegal and injured TWA, a subsidiary having 13,000 public stockholders has no right to sue its parent under the antitrust laws is frivolous.

Defendants' contentions that they were not in fact in competition with other manufacturers or suppliers of aircraft, and for this reason could not have violated the antitrust laws, are not open to defendants in light of the default. Those contentions are also inconsistent with the available evidence of record (pp. 42-59 *supra*), as the lower courts correctly found. In any case, absence of competition does not itself negate antitrust violation; indeed, if brought about by agreement, the agreement itself could constitute such a violation.

The claim that the court of appeals imported Clayton Act concepts into a Sherman Act case rests on a plain misreading of the decision. The court did not decide whether evidence sufficient to make out a violation of the Clayton Act would have also made out a violation of the Sherman Act; it held only that the evidence and argument defendants put forward did not establish that TWA could not have proved, at trial, a violation of the Sherman or Clayton Acts. Because of the default, the court of appeals had no occasion to consider how much evidence TWA would have had to introduce at trial to prevail on any theory.

VI. The damages issue. In their closing attack on the damage award defendants assert that TWA was awarded damages without establishing causation. This assertion confuses the issues of liability and damages. Defendants have continuously argued that TWA was not injured at all by their conduct and the courts below properly held that this contention was not available to them after the default. They also objected that TWA had not proved that the specific items of damages claimed flowed from the injuries that were alleged in the complaint. This objection was cor-

rectly overruled because TWA did in fact prove a causal relationship between each item of damages and the injuries alleged.

The lower courts were extremely conservative in accepting TWA's proof of damages. The district court and court of appeals successively reviewed the record and each held it fully supported the Special Master's findings that, absent defendants' unlawful conduct, TWA would have received 16 additional jets, would not have leased jets from Toolco in 1959 and 1960 but would have purchased jets, and would have received aircraft earlier, and that its crew training would not have been disrupted. Defendants tried throughout the damage hearing to prove either that TWA's losses resulted from other causes or that TWA would not in any case have purchased 63 jets. They failed completely. Defendants' summation that "for all that this vast record shows, TWA would have suffered the same losses for which it has now recovered damages even though it had been controlled by an independent board of directors and no so-called 'antitrust violation' had even taken place" (Def. br. p. 27) is a striking example of the extent to which defendants have ignored the findings. While it is never possible to prove with certainty what would have happened under different circumstances, TWA's proof fully met the standards laid down by this Court. *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946).

ARGUMENT

I

The district court's pretrial orders were correct, and defendants' claim that those orders deprived them of due process under the Fifth Amendment is frivolous

None of defendants' rights was impaired in the slightest by the district court's conduct of pretrial discovery, and defendants' claim that they have been denied their constitutional rights is frivolous. Far from ignoring "[t]he plainest principles of fairness and due process, as well as orderly procedure" (Def. br. p. 28), the courts below have leaned over backward at every stage to give defendants' every argument, no matter how often repeated, a fair and full hearing, as the review of proceedings (pp. 6-9, 16-39 *supra*) has shown.

At the same time that they mount an unjustified attack on the conduct of the lower courts, defendants find themselves compelled by the record and findings below to make certain critical concessions:

Defendants "do not disagree," because they no longer can, with the decision of the court of appeals upholding the sufficiency of the complaint (Def. br. p. 32).

> —Yet, the complaint being sufficient, the rules clearly provide that plaintiff, as well as defendants, is entitled to discovery of evidence, and to the process of the court in aid of such discovery.

Defendants admit, because they must, that the effective administration of the Federal Rules of Civil Procedure requires "wide scope" to be given to the discretion of the district judge (Def. br. p. 28). "Ordinarily the *order* of discovery *is* and *must be* for the discretion of the trial

COPY BOUND

court" (Def. br. p. 40) (emphasis added). And "the rules of procedure and orders of the courts made pursuant to them should be obeyed" (Def. br. p. 28).

—Yet, the pretrial order particularly complained of, that plaintiff should be permitted to proceed with the deposition of an essential witness, was strictly confined to an exercise of the trial court's discretion over the order of discovery, precise in application and limited in scope. The further discovery which defendants were demanding was expressly postponed, and not foreclosed.

Defendants insist that Toolco made "a responsible decision *to decline to proceed further*" (Def. br. p. 29) (emphasis added). It elected to stand on its legal position recognizing that a "decision of this kind carries risks" (Def. br. p. 30). Defendants concede that by their Notice of Position they "took their chances on whether they were right or wrong about the applicable law. They gave up their right to challenge the factual allegations of the complaint" (Def. br. p. 50).

—When defendants made their "responsible decision to decline to proceed further," they explicitly recognized that they were doing so in violation of specific court orders made pursuant to the Rules. The entry of an order of default was the contemplated result, as their counsel stated unequivocally in open court (A-307-08), and as they now admit. Its subsequent implementation has done no more than enforce their renunciation—voluntary and carefully considered—of their right to challenge the factual allegations of the complaint.

Defendants "took their chances," and they lost. At the same time they gained the benefits of shielding their conduct

D CLOSE IN CENTER

from further inquiry. It is not surprising that they would prefer to retain the benefits and avoid the consequences of this "business decision." The fundamental weakness of their position is apparent upon examining just what defendants contend the trial court should have done. Ultimately it is defendants' contention that (a) they should have been accorded as a matter of right an immediate interlocutory review, not provided for in the Judicial Code, of the district court's decision denying their motion to dismiss, and (b) they should have been allowed, again as a matter of right, to withhold from the plaintiff the discovery to which the Rules entitled it, except at their own time and on their own terms.

They contend that the contrary rulings of the district court amounted to a denial of due process, because they put defendants to the expense of the Hughes deposition "before it is known if there is anything to be tried" (Def. br. p. 41).

A. Defendants had no right, either constitutional or statutory, to an interlocutory appeal

Defendants' efforts to avoid full discovery were successful until early 1963. At that time it became clear that the only possibility of further delay was to precipitate decisions on questions of law. Accordingly, 18 months after the complaint was filed, Toolco brought on a motion to test the sufficiency of the complaint and the affirmative defenses. The principal grounds asserted were that the CAB had exempted the conduct alleged in TWA's complaint from the reach of the antitrust laws and that the antitrust violations alleged by TWA were within the CAB's primary jurisdiction.

Judge Metzner's denial of the motion was announced on February 6, 1963 (A-2654) and formalized in a written

COPY BOUND

opinion filed the next day (214 F.Supp. 106, A-255 *et seq.*). That decision was correct (see Point IV, p. 122 *et seq. infra*). The court of appeals so held in its 1964 decision upon the interlocutory appeal which defendants were ultimately allowed (332 F.2d 602, A-328 *et seq.*), and this Court left that decision undisturbed in 1965 when it dismissed certiorari, after briefing and oral argument, as improvidently granted (380 U.S. 248, A-2738).

To defendants the denial of their motion to dismiss meant that they had no further means of avoiding discovery, unless they could appeal the ruling. As Judge Metzner had found no ground for granting the certification required by 28 U.S.C. §1292(b) for an interlocutory appeal, defendants embarked upon a last-ditch plan to obtain an appeal by other means.

There is *no* due process right to an appeal; where such a right has been made available in the federal system by statute, it has with narrow exceptions been limited to appeals from final judgments and orders. 6 J. Moore, Federal Practice ¶ 54.04[1] (2d ed. 1971); 9 *id.* ¶ 110.06 (2d ed. 1970). Defendants' arguments on the sufficiency of their affirmative defenses would of course be preserved for review after final judgment as the statute provides. Such a review would be upon a complete record, and if there were any merit to defendants' arguments they would be strengthened, not weakened, by a full inquiry into the facts (*see* 449 F. 2d at 61-62, A-2755). But deferring an appeal until after final judgment would not have served defendants' purpose of avoiding discovery.

If defendants thought they could show that any substantial rights were jeopardized by the denial of their motion to dismiss, they were free to request discretionary interlocutory relief from the court of appeals. While a district judge's refusal to grant the certification required by 28 U.S.C. § 1292(b) is not reviewable, "mandamus will lie in

CLOSE IN CENTER

an appropriate case, not to review his refusal to certify, but to review the order for which certification was sought." 9 J. MOORE, FEDERAL PRACTICE ¶ 110.22[3], p. 262 (2d ed. 1970); *see Japan Line, Ltd.* v. *Sabre Shipping Corp.*, 407 F. 2d 173, 175 (2d Cir.), *cert. denied*, 395 U. S. 922 (1969); *D'Ippolito* v. *Cities Service Co.*, 374 F. 2d 643, 649 (2d Cir. 1967). The district court granted a further stay of all outstanding discovery orders, *at defendants' request*,[27] to permit them to make such an application, but none was made. Defendants elected instead to force the issue by refusing to proceed. This had the effect, plainly anticipated and indeed counted upon by defendants, of provoking the entry of a default judgment. This time defendants were successful in securing the interlocutory appeal which they sought.

Defendants present Judge Metzner's grant on May 3, 1963 of their request for a certification under Section 1292(b) as if it were virtually a confession of error in having refused such a certification on February 6 (Def. br. pp. 16, 23, 31). The suggestion is completely insupportable.

Events had changed significantly by May 3, 1963. Defendants' business decision not to proceed resulted not

[27] The record contradicts defendants' suggestion (Def. br. p. 15n. 7) that the possibility of their seeking review by writ of mandamus was but an afterthought of the district judge, in justification of his earlier denial of a permissive appeal. At the February 6, 1963 hearing at which Judge Metzner denied Toolco's motion to dismiss, defendants were well aware that they could seek review from the court of appeals:

> "Mr. Davis: May I respectfully request your Honor to stay all further discovery proceedings by the plaintiff until I have had an opportunity to seek a discretionary review by the Court of Appeals?
>
> * * * * *
>
> "The Court: I will tell you what I will do. I will grant your application to the extent of staying all further discovery or deposition proceedings until 5 o'clock Friday. That will give you two days to make whatever application you wish to make to the Court of Appeals for a stay.
>
> "Mr. Davis: All right, your Honor." (A-2654-55)

only in entry of the default judgment on TWA's complaint but also in a final judgment dismissing Toolco's counterclaims against TWA and the additional defendants. That dismissal was plainly ripe for appellate review, and Judge Metzner was concerned, as he said several times, that all then reviewable aspects of this case be considered at one time by a single panel of the court of appeals (A-314-16, A-2728-29). Thus, when TWA urged that review should await final judgment as to its claims, Toolco, pressing for a Section 1292(b) certification, pointed out that the contemplated judgment on the counterclaims "will be appealable, anyway, and we might be able to get both things up together" (A-315-16). Judge Metzner was persuaded:

> "The Court: It doesn't make much sense for one to go up without the other.
>
> • • • • •
>
> "I will think about that overnight." (A-316)

Defendants, then as now, had presented their decision to default as if it were a proper—almost normal—procedure to secure interlocutory review not otherwise available, provided they were willing to accept liability in damages if they lost. As defendants' counsel explained:

> "My purpose of course is to obtain something which will enable me to get a review on the law as to whether or not you [TWA] are entitled to be here in the first place. And then I am prepared, if I am wrong in that regard, to pay the consequences to the extent to which you are able to prove damages." (A-297)

Judge Metzner's decision on May 3 simply gave defendants the opportunity for interlocutory review which they said they wanted.

It is important to note that defendants' wilful refusal to allow discovery to proceed prejudiced consideration of the

issues of antitrust exemption and primary jurisdiction as well as the other issues presented by the pleadings. Both are affirmative defenses under FED. R. CIV. P. 8(c), pleaded as such by defendants (Toolco answer, pars. 30-41, A-48-51; Holliday answer, pars. 30-31, A-106-07). Neither is "jurisdictional" in the sense of going to the power of the district court to hear and determine the questions presented to it. *Cf. Bell* v. *Hood,* 327 U.S. 678, 382-83 (1946). Even if the defenses had been in the full sense "jurisdictional," it is settled that a court has the power to issue orders and to apply sanctions even before its jurisdiction to proceed or to grant particular relief is finally established. *United States* v. *United Mine Workers of America,* 330 U.S. 258, 290 (1947). Thus jurisdiction plainly existed in the district court to enter an interlocutory default judgment for failure to make proper discovery and, after a hearing on damages, to render final judgment in TWA's favor. Discovery is appropriate to facilitate a court's determination whether it has jurisdiction to proceed. *See Surpitski* v. *Hughes-Keenan Corp.,* 362 F.2d 254, 256 (1st Cir. 1966); *Collins* v. *New York Central System,* 327 F.2d 880, 883 (D.C. Cir. 1963); *Urquhart* v. *American-La France Foamite Corp.,* 144 F.2d 542, 544 (D. C. Cir.), *cert. denied,* 323 U.S. 783 (1944).

Questions of antitrust exemption and primary jurisdiction are of a sort particularly likely to be illuminated by discovery, since they may be vitally affected by the evidence adduced in support of the antitrust claims asserted. *Cf. Local Union No. 189* v. *Jewel Tea Co.,* 381 U.S. 676, 686-87 (1965). In this case the discovery which TWA sought and defendants refused would have developed the substance, if any, behind defendants' claim that everything they did which injured TWA and violated the antitrust laws was a necessary concomitant of the acquisition of control which the CAB authorized. It was defendants' deliberate choice,

however, to force the consideration of these questions, in 1965 as in 1972, on an artificially truncated record.

To rationalize what they did, defendants depend upon cases like *United States* v. *Procter & Gamble Co.*, 356 U.S. 677 (1958), and *United States* v. *Ryan*, 402 U.S. 530 (1971), which presented very different circumstances. In both the review had was after final judgment and related to the particular order disobeyed. In *Procter & Gamble* the district court had entered a final order dismissing the Government's complaint upon its refusal to produce grand jury minutes. In *Ryan* the Court stated that the defendant could test the propriety of a grand jury subpoena by refusing to produce the documents called for, subjecting himself to contempt proceedings, and appealing from the resultant final judgment. Neither case suggests that the deliberate violation of a discovery order is a proper procedure to obtain review of a non-final order on unrelated issues. Both cases recognize that one who disobeys a lawful discovery order must bear the usual consequences of whatever proper sanction is imposed for that disobedience.[28]

Whether or not wilful and deliberate disobedience to lawful discovery orders ought to be available as a procedural avenue to interlocutory review of unrelated legal issues, Toolco in fact obtained the very "test [of] its legal rights"

[28] *Allied Air Freight, Inc.* v. *Pan American World Airways, Inc.*, 393 F.2d 441 (2d Cir.), *cert. denied*, 393 U.S. 846 (1968), offers defendants no support at all. The district court there had stayed prosecution of an antitrust case on the mistaken ground that the CAB had primary jurisdiction of the claim. The plaintiff sought but could not obtain interlocutory review by the court of appeals. Thereafter the plaintiff did nothing further in the case, thus literally and fully complying with the stay order complained of, and the district court ultimately dismissed for failure to prosecute. Upon review of the final order of dismissal the court of appeals reversed, holding that there was no primary jurisdiction in the CAB after all, that the stay order was therefore incorrect, that non-prosecution thereafter was excused because in strict obedience to the stay order which—although erroneous—was lawfully entered and binding on the plaintiff, and that the plaintiff should now be permitted to proceed with prosecution of its claim. Only as to the conclusion that the CAB was without

which it sought (Def. br. p. 29). Although the result of the review was adverse to defendants' contentions, they cannot complain that they lost any constitutional rights in the process.

It was decided by this Court more than 60 years ago in *Hammond Packing Co.* v. *Arkansas,* 212 U.S. 322, 347 (1909), that asserted belief in the rightness of one's own cause, however sincere, does not excuse the withholding of evidence which a proper court order requires to be produced:

> "As the [defendant] absolutely declined to obey the order and stood upon what it deemed to be its lawful rights and privileges, even if that course of conduct was taken because of a contrary conception as to the meaning of the statute, it is not within our province to afford relief because of an error of judgment in this respect."

That decision is the source of FED.R.CIV.P. 37 (Original Advisory Committee Note to Rule 37 (March 1938), 28 U.S.C., p. 7799).

B. Defendants' asserted right to indefinite priority

Defendants now openly assert that their election to default was simply a device which they adopted to secure interlocutory review. The nature of the specific orders which they disobeyed was therefore hardly material, and their attack on the conduct of pretrial discovery below is revealed to be spurious. Yet they now also assert as an alternative excuse for their conduct that they could not constitutionally be subjected to deposition discovery until TWA was required—in a Rule 16 proceeding, by answering inter-

---

primary jurisdiction of the antitrust claim were the issues presented in *Allied* "so similar to those in the present case" (Def. br. p. 30), and on that issue *Allied* is in full accord with the decisions below. See Point IV *infra,* esp. p. 135 n. 56.

rogatories, by surviving a summary judgment motion—to prove without discovery that it had claims which "must ultimately be tried" (Def. br. pp. 41 & n. 13, 42).

This argument cannot survive the findings made by the courts below. Judge Metzner said that "the deposition of Hughes is essential for the proper presentation of TWA's case" (32 F.R.D. at 607, A-320-21). Chief Judge Lumbard in 1964 said that it was "necessary" and again "absolutely essential" (332 F.2d at 14-15, A-351-52). Judge Kaufman called this ruling "manifestly correct," described Hughes as the "Prince of the drama," and said that the information sought from him was "more than merely 'material.' It was essential" (449 F.2d at 61-62, A-2754-56). No Rule 16 motion, no answers to interrogatories could have produced a compulsory limitation of the scope of TWA's claims when TWA had been deprived of the right to examine the one essential witness. No summary judgment motion brought when TWA had not had this discovery could have succeeded. These various procedures to which defendants lay a constitutional claim could thus have accomplished no more than further delay, and defendants could not be prejudiced by their postponement. FED.R.CIV.P. 61.

Defendants, however, assert their belief that Toolco's conduct "could not, as a matter of law, constitute a violation of the antitrust laws" (Def. br. p. 29), that they saw "no facts alleged • • • that would constitute a violation of the antitrust laws" (Def. br. p. 35), and that there were "no facts to be discovered" (Def. br. p. 36). Yet the allegations of the complaint were plain enough that defendants could answer it (A-41 *et seq.*, A-99 *et seq.*). The case was at issue when they made their unilateral decision to avoid "useless litigation on the facts" (Def. br. p. 30). They concede that TWA has stated a claim for relief under Section 4 of the Clayton Act. Their objection is not to the complaint, but to their being subjected to discovery with respect to it.

Defendants seem, indeed, to claim that they were entitled to have their summary judgment motion decided on the

basis of such facts as *defendants* would admit, with discovery prevented of any facts they would not admit (*see* Def. br. pp. 35-36). There is no other way to explain their statements that *they* saw "no facts to be discovered" (Def. br. p. 36), and that in *their* view it was not "necessary to probe motive or intent" (Def. br. p. 39). Only if defendants lost such a summary judgment motion, on a record so limited, would TWA be entitled to commence its own discovery.

In fact, defendants' long-pending motion for summary judgment was never brought on for determination.[29] The hopelessness of any such motion prior to the deposition of the witness twice stated by the court of appeals to be "essential" is demonstrated by the procedures followed in the case upon which defendants principally rely, *First National Bank of Arizona* v. *Cities Service Co.*, 391 U.S. 253 (1968) (Def. br. p. 38). In that case this Court upheld the grant of one defendant's motion for summary judgment. There, however, the facts were as follows:

> —Defendant Cities Service moved for summary judgment after extensive depositions of plaintiff on the basis of which the district judge, in considering the motion, concluded that Cities Service had been named on "mere 'suspicion'" and that plaintiff's claim was "insubstantial" (391 U. S. at 265).

---

[29] Toolco withdrew its summary judgment motion from consideration when it brought on its motion to dismiss after it became apparent that the February 11, 1963 date for the Hughes deposition would not be changed (A-255-56). Defendants knew they could not deny that genuine issues as to material facts were present, and that discovery into these facts would be necessary. The evidentiary material outlined at pp. 39-59 *supra* of the counter-statement was largely before Judge Metzner at the time, having been covered by the deposition which defendants had taken of Rummel, or furnished to the court with the affidavits of John F. Sonnett dated September 14, 1962 (A-2316 *et seq.*) and February 1, 1963 (Doc. 165; A-143 *et seq.*, A-226 *et seq.*). TWA was also entitled to identical discovery on Toolco's then pending counterclaims, to which it was a party, seeking total damages of $366 million—of which $135 million were sought, derivatively, on behalf of TWA.

—The district judge nevertheless postponed determination of the motion and later entered an order pursuant to FED. R. CIV. P. 56(f) allowing plaintiff to take the deposition of one Hill, Cities Service's principal negotiator in the transaction complained of (*ibid.*).

—After completion of Hill's deposition, the district judge refused to grant Cities Service's renewed motion for summary judgment and entered a further order under Rule 56(f) permitting plaintiff to depose "all those members of Cities' executive staff then alive" who plaintiff *alleged* had participated in the relevant transactions (391 U. S. at 268).

—Cities Service "conclusively showed" that "the facts upon which [plaintiff] relied to support his allegation were not susceptible of the interpretation he sought to give them" (391 U. S. at 289).

The *Cities Service* case shows the foolishness of any suggestion that the district court here improperly deprived defendants of their rights by directing that Hughes's deposition commence and that Tooleo produce relevant, nonprivileged documents. It would have erred if it had done otherwise.[30]

[30] Not one of the cases cited by defendants as demonstrating the availability of summary judgment in antitrust cases (Def. br. pp. 38 & n. 11, 39) even hints that summary judgment can properly be employed in such cases to deprive a plaintiff of discovery. In *White Motor Co.* v. *United States*, 372 U.S. 253, 259 (1963), this Court *reversed* a summary judgment for *plaintiff* and remanded for further development of a record even though characterizing that case as one "the gist of [which] turns on documentary evidence." In those cases where summary judgment was granted and upheld there had been significant discovery by plaintiff, or none had been sought. *California Shipping Co.* v. *Pacific Far East Line, Inc.*, 453 F.2d 380 (9th Cir. 1971), *cert. denied*, 92 S. Ct. 1501 (1972) ("Discovery procedures, including interrogatories and depositions, were extensively employed * * *"); *Beckman* v. *Walter Kidde & Co.*, 451 F.2d 593

Discovery of the withheld documents and Hughes's oral testimony were inescapable prerequisites to any consideration of defendants' motion for summary judgment. The Federal Rules of Civil Procedure accord to all litigants—plaintiffs as well as defendants—the right to

> "* * * obtain discovery regarding any matter, not privileged, which is relevant to the subject matter involved in the pending action, whether it relates to the claim or defense of the party seeking discovery or to the claim or defense of any other party, including the existence, description, nature, custody, condition and location of any books, documents, or other tangible things and the identity and location of per-

(2d Cir. 1971), *cert. denied*, 40 U.S.L.W. 3610 (June 27, 1972); ("[T]he ruling [granting summary judgment] was deferred until plaintiff had been given an opportunity to obtain additional evidence to support his claims"); *Dahl, Inc.* v. *Roy Cooper Co.*, 448 F.2d 17, 18 (9th Cir. 1971) ("After completion of discovery * * *"); *Billy Baxter, Inc.* v. *Coca-Cola Co.*, 431 F.2d 183, 189 (2d Cir. 1970), *cert. denied*, 401 U.S. 923 (1971) ("* * * the nature of [plaintiff's] injuries and the [defendants'] alleged activities were fully developed during two years of discovery and disclosure"); *Chapman* v. *Rudd Paint & Varnish Co.*, 409 F.2d 635, 643 (9th Cir. 1969) ("[P]laintiff * * * knows of no evidence supporting his allegations"); *McGuire* v. *Columbia Broadcasting System, Inc.*, 399 F.2d 902, 906-07 (9th Cir. 1968) (plaintiff sought no discovery against the moving defendant); *Cohen* v. *Newsweek, Inc.*, 374 F.2d 470 (8th Cir.), *cert. denied*, 389 U.S. 878 (1967) (*pro se* plaintiff had apparently not sought discovery); *Cowen* v. *New York Stock Exchange*, 371 F.2d 661 (2d Cir. 1967) (no claim by plaintiff that he was denied discovery); *Crest Auto Supplies, Inc.* v. *Ero Mfg. COPY BOUND CLO

sons having knowledge of any discoverable matter." (FED.R.CIV.P.26(b)(1))[31]

If the Rules ever left any doubt about the importance of discovery for *all* parties, this Court dispelled it in *Hickman* v. *Taylor*, 329 U.S. 495, 507 (1947):

> "Mutual knowledge of all the relevant facts gathered by both parties is essential to proper litigation. To that end, either party may compel the other to disgorge whatever facts he has in his possession. The deposition-discovery procedure simply advances the stage at which the disclosure can be compelled from the time of trial to the period preceding it, thus reducing the possibility of surprise."

Concurring in that case, Mr. Justice Jackson observed:

> "Discovery is a two-edged sword and we cannot decide this problem on any doctrine of extending help to one class of litigants." (329 U.S. at 515)

More recently in *Schlagenhauf* v. *Holder*, 379 U.S. 104 (1964), the Court expressly refused to differentiate between the discovery rights of plaintiffs and defendants, rejecting the contention that it would be an unconstitutional invasion of privacy to subject a defendant to a physical examination pursuant to FED.R.CIV.P. 35:

> "The chain of events leading to an ultimate determination on the merits begins with the injury of the plaintiff, an involuntary act on his part. Seeking court redress is just one step in this chain. If the plaintiff is prevented or deterred from this redress, the loss is thereby forced on him to the same extent as if the defendant were prevented or deterred from defending against the action." (379 U.S. at 114)

[31] Except as noted, citations to the Federal Rules of Civil Procedure are to the Rules as amended effective July 1, 1970. Although none of the defendants' arguments depends upon the language of the Rules as they existed in 1961-1963 when the various rulings under consideration were made, pertinent provisions of the Rules as they were in 1961-1963 are set out in the Appendix to this brief at p. 17a *et seq.*

LOSE IN CENTER

The 1970 amendments to FED.R.CIV.P. 26-37 make it clear that defendants are not favored over plaintiffs in the sequence and timing of discovery any more than in its scope. FED.R.CIV.P. 26(d) now provides:

> "SEQUENCE AND TIMING OF DISCOVERY. Unless the court upon motion, for the convenience of parties and witnesses and in the interests of justice, orders otherwise, methods of discovery may be used in any sequence and the fact that a party is conducting discovery, whether by deposition or otherwise, shall not operate to delay any other party's discovery."

Explaining the new rule, the Advisory Committee said:

> "This new provision is concerned with the sequence in which parties may proceed with discovery and with related problems of timing. The principal effects of the new provision are first, to eliminate any fixed priority in the sequence of discovery, and second, to make clear and explicit the court's power to establish priority by an order issued in a particular case." (Notes of Advisory Committee on 1970 Amendment to Rules, 28 U.S.C., p. 7781)[32]

Defendants' position is that this is a special kind of case, requiring special treatment. If it were made as an appeal to the trial court's discretion, or in this Court to support a discretionary decision in their favor by the district court,

---

[32] The Advisory Committee also pointed out that amended FED.R. CIV. P. 26(d)

> "* * * follows an approach adapted from Civil Rule 4 of the District Court for the Southern District of New York. That rule provides that starting 40 days after commencement of the action, unless otherwise ordered by the court, the fact that one party is taking a deposition shall not prevent another party from doing so 'concurrently.'" (*Ibid.*)

Civil Rule 4 became effective July 1, 1962 and was one of the grounds urged by TWA when it argued before Judge Metzner that it should be allowed to initiate deposition discovery by examining Hughes even though defendants had not completed all their discovery (A-117, A-121, A-123-24).

that argument would at least be intelligible, although, in TWA's view, such an unprecedented limitation of its discovery rights as defendants were demanding would still be unjustifiable. Here, however, the argument is made the basis for challenging as an *abuse* of discretion orders which, after all, accorded TWA no more than its ordinary rights under the Rules.

C. The district court properly managed the pretrial proceedings

It is surprising that defendants claim support from the suggestions for handling so-called "big cases" set out in the 1970 MANUAL FOR COMPLEX AND MULTI-DISTRICT LITIGATION (the "MANUAL"). Ignoring the direction that "flexibility should be the keynote in applying the suggestions contained in this *Manual*" (p. xix), defendants would read into it a sharp restriction on the power of federal judges to deal with litigation pending before them. The MANUAL was not intended to have any such disabling effect, and it simply does not contain provisions of the kind defendants purport to rely upon.

Defendants' chief rationale for barring TWA from deposing Hughes is a supposed requirement in the "big case" that the issues must be identified before a plaintiff can engage in discovery (Def. br. pp. 40, 41). The MANUAL expressly *disapproves* of that approach:

> "Therefore, the suggested procedures appearing in the *Manual* include some procedures suggested in the *Handbook* [*of Recommended Procedures for the Trial of Protracted Cases, 1960*], and some devised since publication of the *Handbook;* however, other practices developed in use of the *Handbook* are no longer recommended.[3]

[3] E.g., the use of general stay orders unaccompanied by a schedule for the early commencement and completion of discovery; *or the staying of discovery until the issues are formed.*" (p. 6) (Emphasis added.)

The MANUAL's recommendation as to priority of discovery is clear:

> "In the interests of fairness and efficiency, and in the absence of rare and exceptional circumstances, all parties should proceed simultaneously with discovery in the separate stages, namely the first wave, second wave and special issue discovery. Any other course will ordinarily prolong the discovery processes and may prejudice the party first to make discovery or the party whose discovery is deferred." (§ 0.5, p. 14)

It adds:

> *"The essence of the program suggested herein is the exercise of judicial control over complex litigation plus a positive plan for discovery and pretrial preparation.*
>
> • • • • •
>
> "The trial court has the undoubted power and inescapable duty to control the processing of a case from the time it is filed. In the complex case the court must assume an active role in managing all steps of the proceedings. Firm control must be exercised over a complex case from the time of its filing to its disposition." (§ 1.1, p. 16) (Footnote omitted; emphasis in original.)

Beginning on September 6, 1961 with the first of more than 19 pretrial hearings before him (A-2078 *et seq.*) Judge Metzner continuously exercised the firm control that the MANUAL recommends. See the review of the discovery proceedings at pp. 16-29 *supra*.

By February 7, 1962 Judge Metzner had considered and ruled with respect to substantially all of the matters that the MANUAL now suggests be dealt with at the second and third of the principal pretrial conferences which it recommends (*see* § 2.0 *et seq.*, § 3.0 *et seq.*). Documentary production by TWA was complete and a date for production by Toolco had been fixed. Toolco's deposition of TWA's

COPY BOU

president was in progress and a schedule set for the remainder of Toolco's depositions, subject to modification by a special master who was to supervise all discovery. TWA's deposition discovery was to commence on April 23 with the examination of Hughes. The only variation from the MANUAL's recommendations was the sequence and timing of discovery scheduled. In the MANUAL's view:

> "Prolonging time required for the pretrial processes by requiring or permitting one party to conduct or complete discovery before another party begins, should be avoided whenever possible." (§ 2.2, p. 30.1)

Judge Metzner instead followed the practice that then obtained in the Southern District, and permitted Toolco to retain for the time being priority of deposition discovery—an exercise of discretion that defendants would now raise to the level of an immutable right.

It was the plaintiff, TWA, and not defendants, whose case suffered from lack of the simultaneous or concurrent discovery now contemplated in the MANUAL and by FED.R.CIV.P.26(d). Ultimately, in January 1963, the district court was persuaded that it was time for TWA to have an opportunity to pursue its own discovery (A-122-24), a plainly proper exercise of discretion even had the much criticized, and by then discarded, rule of defendants' priority still been in effect. The district court had ruled in its July 12, 1962 pretrial order that it had "the power to vary any order heretofore entered fixing priority of deposition-discovery proceedings" should it appear that "further delay in the taking of the depositions of the defendant would be prejudicial to the plaintiff" (A-117), a ruling confirmed in its September 21, 1962 pretrial order (A-121).

Defendants apparently assert that the district court's ordinary discretion to control the course of discovery could

UND CLOSE IN CENTER

not be exercised in this case because Special Master Rankin had recommended on September 15, 1962 that an elaborate program of issue definition and resolution be instituted, purportedly pursuant to FED.R.CIV.P. 16.[33]

Whether a program of the kind envisioned by the Special Master might ever be appropriate before a plaintiff has had any opportunity for discovery by deposition is at least dubious. As Professors Wright and Miller have pointed out:

> "Rule 16 and Rules 26 through 37 are aimed at a common goal—providing the parties with enough information so that they may fully prepare themselves for trial. Thus, frequently courts view Rule 16 as part of the general discovery process provided for in the rules and speak of the joint purpose to be achieved by the pretrial conference and discovery. Although this is true in a general sense, the pretrial conference should not be thought of as a substitute for discovery. Each of these aspects of the litigation

---

[33] In the Special Master's view, all discovery should have ceased immediately in favor of a program under which he would be authorized "to make the following inquiries of the plaintiff and the defendants regarding the complaint and answer * * *.

> "a. A statement by counsel for plaintiff, either orally or in writing at the option of the Special Master, of each and all ultimate facts and the witness or witnesses who they expect to testify thereto, as to each paragraph of the complaint.
>
> "b. Agreements or disagreements by defendants with each of such claimed ultimate facts.
>
> "c. The same procedure to be followed as to each paragraph of the answer and later, as indicated, as to the counterclaims and the answers thereto.
>
> "d. Any proposed findings of fact that the Special Master may require from the parties, and comments on opposing parties findings." (A-2387)

And so on. Depositions were to cease pending completion of all this and to resume only after a pretrial order had been entered (A-2388). Compare the MANUAL's "Sample Pretrial Order No. 8 (Final pretrial order)" (Part II, § 4.0, pp. 177-78), recommended for entry by the court *after* all pretrial discovery has been completed as the last step in making the case ready for trial.

> cycle is designed to achieve a somewhat different objective and should be pursued with that in mind. Indeed, the success of the pretrial conference often depends upon the parties having completed their discovery proceedings beforehand." (6 WRIGHT & MILLER, FEDERAL PRACTICE & PROCEDURE: CIVIL § 1528, p. 615 (1971)) (Footnotes omitted.)

Other commentators are in accord.[34]

But even if the district court had the power to direct the Special Master to proceed in this fashion, it certainly had discretion to deny Toolco's application that it do so immediately, the denial being "without prejudice to a renewal 30 days after the completion of the deposition of Howard R. Hughes" (A-124), and based on the court's determination that Hughes's deposition would "facilitate an intelligent ruling upon Toolco's application pursuant to Rule 16 of the Federal Rules of Civil Procedure" and "advance

---

[34] The relationship between adequate discovery and issue-limiting pretrial procedures is well recognized. Discussing the New Jersey state practice, Mr. Justice Brennan said in 1956:

> "It is our conviction, justified by experience, that the full benefit of pretrial conference procedure will not be realized unless each litigant is afforded in advance of the conference the fullest possible opportunity to find out all he can as to his own and his adversary's case." W. Brennan, *Pretrial Procedure in New Jersey—A Demonstration*, 28 N.Y.S. BAR BULL. 442, 445 (1956).

In a symposium held in 1951 on "The Practical Operation of Federal Discovery," United States District Judge Bard of the Eastern District of Pennsylvania said:

> "Pre-trials are valueless unless there has been liberal use of discovery, or unless there has been a free voluntary exchange of information which is frequently given now because of the discovery provisions in the federal rules. In other words, the discovery procedure has induced pre-trials and made pre-trials effective." (12 F.R.D. 131, 153)

Professor MOORE'S FEDERAL PRACTICE RULES PAMPHLET (1971) says at p. 641:

> "The deposition and discovery rules are particularly helpful in obtaining factual data as a basis in moving for and opposing

materially the date when the court could meaningfully entertain the various motions which Mr. Davis has indicated he would like to press for a dismissal of the complaint and for summary judgment"(A-123).[35]

As defendants say in concluding their argument on this subject, this case has occupied an immense amount of time in the federal courts for eleven years. They assert that the

---

motions for summary judgment. * * * And in affording the parties and the court with a knowledge of the case *so that pre-trial Rule 16 may function properly*." (Emphasis added.)

See also J. Wright, *Pre-Trial on Trial*, 14 LA. L. REV. 391, 399-400 (1954) ("Much of the benefit from pre-trial is impossible without discovery").

[35] In his January 10 pretrial order Judge Metzner also pointed out that the Hughes deposition would facilitate an intelligent ruling upon "the sufficiency of TWA's compliance with [Toolco's] interrogatories" (A-123) and directed TWA to answer those interrogatories "within 60 days after the completion by TWA of its deposition of Howard R. Hughes" (A-126). Decisions deferring interrogatory answers pending discovery by the answering litigant, or the completion of other proceedings, are a common illustration of the exercise of discretion by a district court in supervising discovery. *Berkley* v. *Newman Realty Co.*, 33 F.R.D. 516, 517 (W. D. Mo. 1963); *United States* v. *Owens-Illinois Glass Co.*, 25 FED. RULES SERV. 33.31, Case 1 (N.D. Ohio 1957); *cf. Babcock & Wilcox Co.* v. *North Carolina Pulp Co.*, 25 F. Supp. 596, 598 (D. Del. 1938). FED.R. CIV.P. 33(b) was amended effective July 1, 1970 to provide expressly for such deferral:

> "An interrogatory otherwise proper is not necessarily objectionable merely because an answer to the interrogatory involves an opinion or contention that relates to fact or the application of law to fact, but the court may order that such an interrogatory need not be answered until after designated discovery has been completed * * *."

The amendments are commented on in 8 WRIGHT & MILLER, FEDERAL PRACTICE & PROCEDURE: CIVIL § 2167, pp. 505-06 (1970). The authors in that passage point out that if an interrogatory were "submitted early in the litigation, before plaintiff had had a chance to find out what the facts were, it would be unfair to eliminate plaintiff's chance of establishing [the acts which the interrogatory required him to specify] until he had had an opportunity to ascertain if there were any such act." (*Id.* at 505)

fault lies in "the failure of the District Court to follow sound principles on the proper management of discovery and pretrial proceedings in complex litigation" (Def. br. p. 42).

Precisely the opposite conclusion as to where the fault lay was reached by the court of appeals. In 1964 it described defendants' conduct as serving "only to frustrate the implementation of the discovery machinery devised by the federal judiciary to expedite the handling of such complex litigation" (332 F.2d at 615, A-352). After a second review of the record, another panel of the court said in 1971 that its prior holding was "manifestly correct" (449 F.2d at 61, A-2754). As to Judge Metzner's conduct of the pretrial hearings, his orders "were not only within [his] discretion but quite obviously correct" (*ibid.*, A-7552).

II

The entry of the default judgment and the effect given to it by the Special Master and the courts below were both proper and necessary; no due process question is presented

The effect given to the default judgment in this case did not turn upon abstract legal theories or hypothetical circumstances. What happened below is a matter of record, and the findings of the Special Master and the two lower courts can only be overturned if they are without record support.

Yet, defendants' attack on the findings of the Special Master depends entirely upon their assertion of matters *dehors* the record which they claim to be undisputed. As the following table shows, defendants' principal list of purported "facts * * * never in dispute" (Def. br. pp. 18-20) is for the most part identical with specific objections they

made to the findings of the Brownell Report—objections that the district court expressly rejected:

"Facts" asserted in defendants' 1972 brief	Defendants' 1968 objections to Brownell Report	District court's rejection of objections in 1969
par. (a) (Def. br. p. 18)	Part I, No. 4 (A-1968)	308 F. Supp. at 686 (A-2037-38)
par. (b) (Def. br. p. 19)	Part I, Nos. 4 (c) (ii), 6 7, (A-1969-70, A-1973-74)	308 F. Supp. at 686-87 (A-2037-38)
	Part II, Nos. 2, 8 (A-1984, A-1985-86)	308 F. Supp. at 688 (A-2040)
par. (c) (*ibid.*)	Part I, No. 4 (c) (iii) (A-1970)	308 F. Supp. at 686 (A-2037-38)
	Part II, No. 2 (A-1984)	308 F. Supp. at 688 (A-2040)
par. (d) (*ibid.*)	Part I, Nos. 4 (c) (v) (vi) (A-1971-72)	308 F. Supp. at 686 (A-2037-38)
	Part II, Nos. 26, 27 (A-1990)	308 F. Supp. at 688-89 (A-2042)
par. (e) (Def. br. pp. 19-20)	Part I, Nos. 4 (c) (v) (vi) (A-1971-72)	308 F. Supp. at 686 (A-2037-38)
	Part II, No. 33 (A-1992)	308 F. Supp. at 689 (A-2042)
par. (f) (Def. br. p. 20)	Part I, Nos. 9, 13 (A-1975-76, A-1977)	308 F. Supp. at 686-87 (A-2037-38)
	Part III, Nos. 1, 2 (A-2004-05)	308 F. Supp. at 689 (A-2043-44)
par. (g) (*ibid.*)	*cf.* Part II, Nos. 60, 64, 73 (A-1998, A-1999, A-2000)	308 F. Supp. at 689 (A-2043)

Defendants also ignore the finding of each of the courts below that Hughes was the essential witness in this case

(32 F.R.D. at 607, A-320-21; 332 F.2d at 615, A-352; 449 F.2d at 61-62, A-2754-55). When the time came for TWA to depose him, Toolco refused to permit that deposition to occur although it had undertaken to produce Hughes for his deposition whenever it was to be held (A-271-74). That refusal was the result of a "business decision" not to participate further in pretrial or trial proceedings (A-268-69, A-280). Pursuant to that business decision, Toolco also refused to obey two other court orders requiring it to produce two separate categories of documents (A-304-06).

The discovery orders that defendants disobeyed were lawful, proper orders and the refusal to obey them was wilful and deliberate (32 F.R.D. at 607, A-320-21; 332 F.2d at 614-15, A-351-54; 449 F.2d at 61-62, A-2754-55). Since their refusal to proceed blocked discovery as to every issue in the case, the entry of a default judgment against defendants was inevitable.

A. Entry of the default judgment was proper and necessary in light of defendants' refusal to proceed

In its 1971 decision the court of appeals held that its prior decision dismissing the counterclaims because of Toolco's refusal to make discovery was not judicially binding as to like issues on the present appeal; it therefore found it necessary to re-examine on the merits those questions and the record of pretrial proceedings. It reached the same conclusions as the previous panel. Whether the principles of judicial finality are applied[36] or the merits re-examined, the end result is the same.

---

[36] We have briefed in this Point and in Point I *supra*, as if they were new questions, the propriety of the discovery orders, defendants' claimed right to make a "business decision" not to obey them, and the correctness of the district court's conclusion that defendants'

Defendants' refusal on February 8, 1963 to make further discovery was total, and the evidence withheld was essential and went to every aspect of the litigation (32 F.R.D. at 607, A-320-21; 332 F.2d at 614, A-351; 308 F. Supp. at 683, A-2031; 449 F.2d at 62, A-2756). Such a refusal compelled the entry of a default judgment against defendants with all that that entails. Otherwise TWA would be deprived not just of its right to full and fair discovery under the Federal Rules of Civil Procedure but of its due process right to have its claims for relief heard and determined in the federal courts in accordance with established principles of law governing like cases. In this case, as in *Norman* v. *Young*, 422 F.2d 470, 474 (10th Cir. 1970), "[t]he entry of default judgment was not vindictive but was compelled by defendants' conduct, in order to protect the statutorily-created right of discovery and the constitutionally-guarded due process rights of plaintiff." *Hammond Packing Co.* v. *Arkansas*, 212 U. S. 322, 350-51 (1909), states the same principle. On the record before him, Judge Metzner had no alternative to entry of a default judgment. *See Norman* v. *Young, supra*; *Jones* v. *Uris Sales Corp.*, 373 F.2d 644, 647-

---

refusal of discovery compelled the entry of the default judgment against them. Those issues, however, were fully adjudicated in the court of appeals' final (not interlocutory) judgment in 1964. That judgment affirmed the dismissal with prejudice of Toolco's counterclaims against TWA and others, and a writ of certiorari with respect to it (No. 501, October Term, 1964) was dismissed by this Court on March 8, 1965 as having been improvidently granted (380 U.S. 249, A-2738). All of the elements calling for application of established doctrines of judicial finality are here met and defendants should consequently be precluded from re-litigating any of them. *Cromwell* v. *County of Sac*, 94 U.S. 351, 353 (1876); *Zdanok* v. *Glidden Co.*, 327 F.2d 944, 955 (2d Cir.), *cert. denied*, 377 U.S. 934 (1964); *Bernhard* v. *Bank of America*, 19 Cal.2d 807, 122 P.2d 892, 894-95 (1942) (Traynor, J.). This Court has consistently applied broad principles of judicial finality. *Blonder-Tongue Laboratories, Inc.* v. *University of Illinois Foundation*, 402 U.S. 313, 328-30 (1971); *Durfee* v. *Duke*, 375 U.S. 106, 113-14 (1963); *Angel* v. *Bullington*, 330 U.S. 183, 192-93 (1947).

48 (2d Cir. 1967); *Pioche Mines Consolidated, Inc.* v. *Dolman,* 333 F.2d 257, 269 (9th Cir. 1964), *cert. denied,* 380 U.S. 956 (1965); *Fong* v. *United States,* 300 F.2d 400, 407-08 (9th Cir.), *cert. denied,* 370 U.S. 938 (1962); *Michigan Window Cleaning Co.* v. *Martino,* 173 F.2d 466, 468 (6th Cir. 1949).

Without provision for sanctions appropriate to the circumstances of the individual case, the entire discovery process, which is the key to the effective functioning of the Federal Rules, would founder. As the court stated in *Diaz* v. *Southern Drilling Corp.,* 427 F.2d 1118, 1126 (5th Cir.), *cert. denied sub nom. Trefina, A.G.* v. *United States,* 400 U.S. 878 (1970):

> "Professor Wright observes that '[w]ithout adequate sanctions, the procedure for discovery would be ineffectual. Under Rule 37 a party who seeks to evade or thwart a full and candid discovery incurs the risk of serious consequences. • • •' C. Wright, Federal Courts § 90 (1963). While it is true that the courts should impose sanctions no more drastic than those actually required to protect the rights of other parties, the language of Rule 37(d) makes clear that the application of sanctions is entrusted to the discretion of the trial judge, and overleniency is to be avoided where it results in inadequate protection of discovery. *See* C. Wright, *supra,* at 346 & n. 14."

The private antitrust plaintiff's dependence upon discovery to develop the evidence he needs to prove his case is well recognized. This Court had reference to that when it warned in *Poller* v. *Columbia Broadcasting System, Inc.,* 368 U.S. 464, 473 (1962), that

> "• • • summary procedures should be used sparingly in complex antitrust litigation where motive and intent play leading roles, the proof is largely in the hands of the alleged conspirators, and hostile witnesses thicken the plot. It is only when the witnesses are present and subject to cross-examination that

> their credibility and the weight to be given their testimony can be appraised."[37]

See also Fortner Enterprises, Inc. v. *United States Steel Corp.*, 394 U.S. 495, 499-500 (1969); *Norfolk Monument Co.* v. *Woodlawn Memorial Gardens, Inc.*, 394 U.S. 700, 704 (1969); *First National Bank of Arizona* v. *Cities Service Co.*, 391 U.S. 253, 290-99 (1968) (discussed at pp. 78-79 *supra*).

In this case TWA's need for discovery was especially acute, as the court of appeals pointed out:

> "Even if we are not bound in a strict legal sense by the previous ruling that Hughes's deposition was essential to TWA's claim, that holding was manifestly correct. As will be seen, many of TWA's asserted charges relied on interpretations of intent and of the significance of ambiguous projects quickly aborted, and of possible explanatory actions taken by Toolco that may or may not have been relevant to TWA's several antitrust theories. The reality behind the charges could hardly be tested without the testimony of the one man who personally directed Toolco's activities throughout the relevant period and whose singular penchant for secrecy was, after two years of frustrating delay in the conduct of the litigation, well known to the Master and the trial court." (449 F.2d at 61, A-2754)

Under FED. R. CIV. P. 37, the ultimate sanction available when a defendant refuses to submit to lawful discovery is entry of a default judgment against him. As the Advisory

---

[37] Defendants assert that, in their "view" of the case, "it was not one in which it would have been necessary to probe motive or intent" (Def. br. p. 39). Their view on this point is relevant at all only if they mean that, for the purpose of testing their "legal position," they were willing to assume that TWA's factual allegations as to the motive and intent with which the acts alleged in the complaint were performed were in all respects true. That assumption defendants could only be willing to make because they either *knew* that they were true, or *hoped* it made no difference—or both.

Committee pointed out when the Federal Rules were first adopted (Original Advisory Committee Note to Rule 37 (March 1938), 28 U.S.C., p. 7799), that sanction is grounded upon the presumption recognized by this Court in *Hammond Packing Co.* v. *Arkansas,* 212 U.S. 322 (1909). The law attaches to a wilful refusal to produce evidence a presumption that the party who has refused to submit to discovery did so knowing that the resulting disclosure of the facts would destroy his case.[38]

The facts in *Hammond* were remarkably like those here. An Arkansas statute barred any corporation, domestic or foreign, from continuing to do business in that state if, *inter alia,* it participated in any scheme to regulate or fix prices or to engage in certain other specified anticompetitive conduct "in this State or elsewhere" (212 U.S. at 332n. 1). Arkansas brought an action against Hammond seeking forfeiture of its permit to do business in that state and money penalties, alleging that Hammond was doing business in Arkansas and at the same time had participated in "a pool or trust, agreement, combination or understanding * * * to regulate the prices of slaughtered livestock and to maintain such prices as so regulated and fixed" (212 U.S. at 334).

After its motion to have the complaint made more specific was denied and its demurrer was overruled, Hammond filed a general denial and asserted various specific defenses under the Constitution. Hammond requested that depositions of its officials outside Arkansas be taken upon written interrogatories; its request was denied. A commissioner was appointed to take testimony of some 16 Hammond officials in Chicago and to oversee the production and examination of books and papers. Hammond interposed various

[38]That presumption is especially compelling here where defendants' refusal is announced as a calculated "business decision" that they risked more by submitting to discovery than by disobeying the district court's orders and suffering a default.

motions.[39] Finally, an order was entered by the Arkansas trial court directing Hammond to have the named witnesses present for examination and to produce the books referred to.

> "The Hammond Company, through its attorneys, declined to comply and stated, in writing, that it could not concede the power of the court to make the order which it had made, and that 'on the contrary it was of the opinion that the request calls upon it [the Hammond Company] to surrender rights in which it is protected by the Constitution of the United States and of the State of Arkansas that are too valuable to be surrendered.'" (212 U.S. at 339)

The state moved to strike Hammond's pleadings and for entry of a default judgment against it. The motion was granted, a judgment for penalties was entered, and the state supreme court affirmed. Upon appeal, this Court first upheld the constitutionality of the statute, and then turned to Hammond's argument that entry of the default judgment was a denial of due process under *Hovey* v. *Elliott*, 167 U.S. 409 (1897). The Court rejected that argument:

> "*Hovey* v. *Elliott* involved a denial of all right to defend as a mere punishment. This case presents a failure by the defendant to produce what we must assume was material evidence in its possession and a resulting striking out of an answer and a default. The proceeding here taken may therefore find its sanction in the undoubted right of the lawmaking power to create a presumption of fact as to the bad faith and untruth of an answer begotten from the suppression or failure to produce the proof ordered, when such proof concerned the rightful decision of

[39] *E.g.*, a motion that Arkansas "set out specifically what she expects to prove by each witness she desires produced, and also to set out specifically a particular description of any books she desires produced by any of said witnesses, together with the name of the witness who is to produce them, and that she be required to specifically state wherein any of said books so named are material to the issues in the case" (212 U.S. at 337-38).

the cause. In a sense, of course, the striking out of the answer and default was a punishment, but it was only remotely so, as the generating source of the power was the right to create a presumption flowing from the failure to produce. The difference between mere punishment, as illustrated in *Hovey* v. *Elliott*, and the power exerted in this, is as follows: In the former due process of law was denied by the refusal to hear. In this the preservation of due process was secured by the presumption that the refusal to produce evidence material to the administration of due process was but an admission of the want of merit in the asserted defense. *The want of power in the one case and its existence in the other are essential to due process, to preserve in the one and to apply and enforce in the other.*" (212 U.S. at 350-51) (Emphasis added.)

In *Societe Internationale* v. *Rogers*, 357 U.S. 197, 209-10 (1958), this Court recognized that *Hammond* provides the constitutional foundation for FED.R.CIV.P. 37. In *Societe* the Court held that a failure to satisfy fully the requirements of an order to produce documents should not be construed to authorize dismissal of a complaint where the failure to comply was "due to inability, and not to wilfullness, bad faith or any fault" of the party who failed to produce the documents (357 U.S. at 212). Implicit in that decision, however, is a determination that it is constitutionally permissible to impose a sanction that deprives a disobedient party of the right to prosecute or defend on the merits when he wilfully and deliberately refuses to obey a lawful discovery order. In No. 501, October Term, 1964, Toolco's appeal from the dismissal with prejudice of its counterclaims presented this precise question on the circumstances of this case, and this Court dismissed certiorari.[40]

[40] TWA as a counterclaim defendant was a party to that proceeding and entitled to its benefits. See discussion at pp. 91-92n. 36 *supra* as to whether principles of collateral estoppel (or perhaps as to this point, "law of the case") should preclude reargument of such issues.

Defendants' "business decision" to default went beyond their refusal to produce Hughes and to obey outstanding orders to produce documents. Their decision was "not to proceed," to "rest on the merits" of positions previously taken, allegedly to "avoid the burdens and expenses involved in further pre-trial and trial proceedings" (A-268-69, A-274-75). TWA was to have no more discovery, whatever further orders the trial court might enter. The Notice of Position, as explained at the February 8, 1963 hearing, was not merely a refusal to make lawful discovery: it was a declaration of default.[41]

[41] On these facts, cases like *Feingold* v. *Walworth Bros., Inc.*, 238 N.Y. 446, 144 N.E. 675 (1924) and *Mitchell* v. *Watson*, 58 Wash.2d 206, 361 P.2d 744 (1961), cited at p. 49 of defendants' brief, are irrelevant. Defendants here did not simply disobey an order to produce evidence going to one of several issues: their election was to bar *all* discovery about every aspect of the case; they "refused to proceed further." In *Feingold* a preclusive order establishing the value of the securities at the maximum value contended for by plaintiff was obviously adequate to protect plaintiff's right to have its claim determined when the evidence withheld related solely to such value; the other pleaded defenses, which included the affirmative defenses of accord and satisfaction and general release under seal, were unaffected and should not have been stricken (see Certified Question Number 3 and answer of the court thereto, 238 N.Y. at 447-48, 456, 144 N.E. at 676, 678), and the order should have been confined to the corporate defendants since only they had violated the production order. In *Mitchell* the existence or identity of the purported informer was not necessarily dispositive of, for example, such a defense as truth of the statements complained of; the court, however, specifically directed that upon remand the trial court would be "free to reject any and all evidence of mitigation of damages or other proffered defenses which are relevant to or have any reasonable connection with the existence of the alleged informer," if the trial court indulged the presumption that the informer did not exist (361 P.2d at 750-51) (emphasis omitted).

People v. *George Henriques & Co.*, 267 N.Y. 398, 196 N.E. 304 (1935), is even further removed from the facts of this case. There the documents at issue had apparently been wilfully destroyed (evidencing a "consciousness of guilt"), but the destruction may well have preceded the order for their production, and the complaint was filed *after* the order had been disobeyed. The court's conclusion was that such disobedience of a production order before the action was commenced could not justify denial of a hearing upon charges subsequently formulated in the complaint (267 N.Y. at 406, 196 N.E. at 307).

COPY BOUN

In this respect, what defendants elected to do cannot be distinguished from what the defendants did in *Bettcher* v. *State,* 140 Colo. 428, 344 P.2d 969 (1959). The defendants in that case, who had appeared and answered, filed a motion to dismiss at the beginning of trial. When their motion was denied, defendants there, like Toolco here, "elected to stand on [their] motion to dismiss" and declined to participate further (344 P.2d at 971). The Colorado Supreme Court affirmed the trial court's entry of a default judgment, stating that "[i]n its broadest modern sense a judgment goes by default whenever between the commencement of a suit and its anticipated decision in court, either of the parties omit or refuse to pursue, in the regular method, the ordinary measures of prosecution or defense" (*ibid.*). As to the effect of that default judgment, the court said:

> "A judgment so rendered 'is a conclusive adjudication as to the matters and allegations properly averred in the complaint,' Massachusetts Bonding & Ins. Co. v. Central Finance Corp., 124 Colo. 379, 237 P.2d 1079, 1081. It determines the plaintiff's right to recover and defendant's liability for the claim alleged, and 'cuts off the defendant from making any further opposition or objection to the relief which plaintiff's complaint shows he is entitled to demand.' Unless set aside, it precludes urging anything contrary to the complaint. Title Ins. & Trust Co. v. King Land, etc., Co., 162 Cal. 44, 120 P. 1066, 1067. See 49 C.J.S. Judgments § 200, p. 356, and 34 C.J. § 385, p. 172.
>
> "[Defendants], by asserting that the complaint failed to state a claim, raised an issue of law. By standing on such issue, they forewent issues of fact. When they advised the trial court that they would stand on such issue of law, and would make no contest of 'anything else,' they, in effect, precluded themselves from setting up any other matters which they might have urged in defense of the suit." (*Ibid.*)

Since defendants here, like those in *Bettcher*, have refused to pursue the "ordinary measures of • • • defense,"

CLOSE IN CENTER

and have deprived TWA of any deposition discovery, thus denying it the ordinary measures of prosecuting its case, no lesser sanction than entry of a default judgment could have protected TWA's right to a determination of its claims. The court of appeals held in 1971 that "[t]he entry of the default judgment was inescapable and virtually invited" (449 F.2d at 63, A-2757), and defendants do not here suggest that the district court should have employed a different sanction. Nor did they—ever—make a timely application that the judgment be set aside (pp. 38-39 *supra*). Instead, they would deprive TWA of a determination of its claims by an alternative device—by obtaining from this Court a limitation upon the effect to be given a default judgment that would rob that sanction of meaning.

B. The default judgment established that defendants' antitrust violations alleged in the complaint injured TWA

The proper effect to be given to a default judgment has been well understood at least since this Court's decision in *Thomson* v. *Wooster*, 114 U.S. 104 (1885), as defendants —albeit grudgingly—concede (Def. br. p. 42).

Plaintiff in *Thomson* v. *Wooster* had sued for infringement of a patent, originally granted in 1858 and reissued in 1872. Defendants appeared but failed to answer, and a decree *pro confesso* was entered declaring, as the bill alleged, that the patent was valid and that defendants were infringing and must account for their profits and damages. The case was referred to a master whose award was confirmed in part by the court below. Defendants appealed, asserting that the reissued patent was invalid because it was for an invention other than that covered by the original patent and because an excessive amount of time had elapsed between the original issue and the reissue. This Court rejected these arguments.

> "The defendants are concluded by that decree, so far at least as it is supported by the allegations of

the bill, taking the same to be true. Being carefully based on these allegations, and not extending beyond them, it cannot now be questioned by the defendants unless it is shown to be erroneous by other statements contained in the bill itself. A confession of facts properly pleaded dispenses with proof of those facts, and is as effective for the purposes of the suit as if the facts were proved; and a decree *pro confesso* regards the statements of the bill as confessed." (114 U.S. at 110)

* * * * *

"* * * The attempt, on the hearing before the master, to show that the reissued patent was for a different invention from that described in the original patent, or to show that there was such unreasonable delay in applying for it as to render it void under the recent decisions of this court, was entirely inadmissible because repugnant to the decree. The defendants could not be allowed to question the validity of the patent which the decree had declared valid. The fact that the reissue was applied for and granted fourteen years after the date of the original patent would, undoubtedly, had the cause been defended and the validity of the reissued patent been controverted, been strongly presumptive of unreasonable delay; but it might possibly have been explained, and the court could not say as matter of law, and certainly, under the decree of the court, the master could not say, that it was insusceptible of explanation." (114 U.S. at 114)

The Court next considered defendants' argument that a showing of either invalidity or inoperativeness of the original patent was a condition precedent to reissuing it and that neither condition could exist since the bill of complaint itself alleged that successful infringement suits had been brought on the original patent.

"The answer to this assignment is obvious. The suits brought on the original patent may have been for infringements committed against particular parts of the invention, or modes of using it and putting

> it into operation, as to which the specification was clear, full and sufficient; whilst, at the same time, there may have been certain other parts of the invention, or modes of using it and putting it into operation, as to which the specification was defective or insufficient, and which were not noticed until the application for reissue was made; or, in the original patent the patentee may have claimed as his own invention more than he had a right to claim as new—a mistake which might be corrected at any time. At all events, the court cannot say, as mere matter of law, that this might not have been the case." (114 U.S. at 115)

The rule laid down in *Thomson* v. *Wooster* that a default judgment admits the well-pleaded allegations of the complaint is applied by the vast majority of state courts.[42]

[42] *See, e.g., Gibson* v. *Elba Exchange Bank*, 266 Ala. 426, 96 So. 2d 756, 759 (1957); *Postal Benefit Ins. Co.* v. *Johnson*, 64 Ariz. 25, 165 P.2d 173, 178 (1946); *Beall* v. *Munson*, 204 Cal. App. 2d 396, 22 Cal. Rptr. 333, 336 (1st Dist. 1962); *Bettcher* v. *State*, 140 Colo. 428, 344 P.2d 969, 971 (1959); *Austin Burke, Inc.* v. *Vigilant Ins. Co.*, 179 So.2d 600, 602 (Fla. App. 1965); *House* v. *Hewett Studios, Inc.*, 125 Ga. App. 127, 186 S.E.2d 584, 585 (1971); *Second National Bank of Robinson* v. *Scudder*, 212 Ind. 283, 6 N.E.2d 955, 958 (1937); *Hallett Construction Co.* v. *Iowa State Highway Comm'n*, 261 Iowa 290, 154 N.W.2d 71, 74 (1967); *Becker* v. *Roothe*, 184 Kan. 830, 339 P.2d 292, 295 (1959); *Boucher* v. *Paradis*, 244 A.2d 69, 70-71 (Me. 1968); *Millison* v. *Ades of Lexington, Inc.*, 262 Md. 319, 277 A.2d 579, 584 (1971); *Cosmopolitan Trust Co.* v. *Golub*, 252 Mass. 574, 147 N.E. 847 (1925); *Haller* v. *Walczak*, 347 Mich. 292, 79 N.W.2d 622, 625-26 (1956); *Rice* v. *Kuckenbecker*, 170 Minn. 110, 212 N.W. 23, 24 (1927); *Putney* v. *Du Bois Co.*, 240 Mo. App. 1075, 226 S.W.2d 737, 740 (1950); *Scheumann* v. *Prudential Ins. Co. of America*, 146 Neb. 173, 19 N.W.2d 48, 50 (1945); *Ealy* v. *McGahen*, 37 N.M. 246, 21 P.2d 84, 89-90 (1933); *Monson* v. *Nelson*, 145 N.W.2d 892, 896 (N.D. 1966); *State ex rel. Nilsen* v. *Cushing*, 253 Ore. 262, 453 P.2d 945, 947 (1969); *Fudim* v. *Kane*, 48 R.I. 155, 136 A. 306, 307 (1927); *Adkisson* v. *Huffman*, 469 S.W.2d 368, 375 (Tenn. 1971); *Sagebiel's Inc.* v. *Sumrall*, 358 S.W.2d 251, 252 (Tex. Civ. Ct. App. 1962), *writ ref., n.r.e.*; *Bonazzi* v. *Fortney*, 94 Vt. 263, 110 A. 439, 441 (1920); *Funkhouser* v. *Million*, 209 Va. 89, 161 S.E.2d 725, 729 (1968); *Johanson* v. *United Truck Lines*, 62 Wash.2d 437, 383 P.2d 512, 516n.6 (1963); *McGinnis* v. *Beatty*, 28 Wyo. 328, 204 P. 340, 343 (1922); *Taylor* v. *Johnson*, 262 A.2d 803, 804 (D.C.Ct. App.

Abandonment of it would constitute a fundamental change in American jurisprudence—a change peculiarly unwarranted where the default judgment has resulted from a wilful and deliberate refusal to submit to lawful discovery.

That the rule is as applicable to a default for refusal to comply with lawful discovery orders as it is to a default entered for failure to appear or answer is clear. *See, e.g., Fong* v. *United States,* 300 F.2d 400, 409 (9th Cir.), *cert. denied,* 370 U.S. 938 (1962); *Sarlie* v. *E. L. Bruce Co.,* 265 F. Supp. 371, 374 (S.D.N.Y. 1967); *Aljassim* v. *S.S. South Star,* 323 F. Supp. 918, 922 (S.D.N.Y. 1971). Indeed, if defendant has appeared and incurred the default judgment of his own choice and with eyes open, questions that might otherwise justify inquiry do not even arise.

If a default judgment is entered for failure to appear, there might be, for example, a disturbing possibility that the defendant's failure was not the result of a meaningful decision by him. Perhaps he was unaware of the consequences of his failure to act, or had failed to secure legal advice, or was badly represented; as a practical matter, he may not even have been adequately informed that suit had been instituted. *See Abuse of Process: Sewer Service,* 3 COLUM. J. L. & SOC. PROB. 17 (1967). Although a default judgment can be set aside upon a proper showing in such

1970). *See generally* 49 C.J.S. *Judgments* § 201 (1947); 47 AM. JUR.2d *Judgments* § 1194 (1969). Four states appear to apply a minority rule that permits the trial court in its discretion to require proof of some or all of plaintiff's allegations. *Metric Investment, Inc.* v. *Patterson,* 98 N.J.Super. 130, 236 A.2d 187, 188-89 (1967), *aff'd,* 101 N.J. Super. 301, 244 A.2d 311 (App. Div. 1968)) *but see Douglas* v. *Harris,* 35 N.J. 270, 173 A.2d 1, 8 (1961)); *State Automobile Mutual Ins. Co.* v. *Leist,* 24 Ohio Op. 2d 7, 192 N.E.2d 512, 515 (1962); *Sibley* v. *Weinberg,* 116 Wis. 1, 92 N.W. 427, 429 (1902); ILL. ANN. STAT. ch. 110, § 50(4) (Smith-Hurd 1968).

Only Louisiana requires proof of liability in all cases after a default is entered for failure to plead. 8 A.L.R.3d 1070 § 6 (1966). The unique Connecticut rule that permits a defaulting defendant in negligence cases to contest liability is discussed at p. 199 ***infra; but*** *see Culetsu* v. *Dix,* 149 Conn. 456, 181 A.2d 116, 117 (1962).

circumstances, the defaulting defendant might be no better equipped to secure relief from an improperly entered default judgment than he was to avoid its original entry. *See United States* v. *Wiseman,* 445 F.2d 792, 797 (2d Cir.), *cert. denied,* 404 U.S. 967 (1971). Special care in enforcing such a default judgment might well be justified.

No such considerations which might suggest giving a default judgment less than its customary effect apply to this default. Toolco was and is an extremely rich and powerful corporation, advised at all times by the ablest of lawyers. Its "business decision" to refuse to obey lawful discovery orders was wilful, deliberate and calculated—made in what Toolco believed was its and Hughes's economic interest. Neither ineptitude nor a lawyer's mistake played the slightest part in the very sophisticated calculation involved. Contrast *Link* v. *Wabash R.R.,* 370 U.S. 626, 648 (1962) (dissenting opinion).

Defendants seek to avoid the effect of their default by a demonstration of scholarly ingenuity—dependent, however, upon misread cases and long-rejected theories of code pleading. Citing *Pope* v. *United States,* 323 U.S. 1, 12 (1944), defendants contend:

> "Even after a default, it remains for the court to consider whether 'the unchallenged facts shown of record establish a legally binding obligation; it adjudicates the plaintiff's right of recovery and the extent of it, both of which are essential elements of the judgment.' " (Def. br. p. 46)

The quotation is drawn out of a most unusual context. That case involved a Special Act of Congress (February 27, 1942, 56 STAT. 1122) that directed the Court of Claims to compute the amount of a petitioner's claim upon the basis of certain data set out in the Act and to give judgment in the amount computed, even though the Court of Claims had rejected the same claim in an earlier suit. The

court declined to do so, asserting that the Act was an unconstitutional encroachment by Congress upon its judicial function. This Court reversed, pointing out, *inter alia*, that numerous judicial acts closely analogous to that required by Congress of the Court of Claims amounted to performance of a judicial function and a proper exercise of judicial power. Among these this Court included rendering judgment on consent, giving judgment on legal obligations established by stipulated facts, and fixing the amount of damages on a default judgment. With specific reference to defaults, the Court said:

> "It is a familiar practice and an exercise of judicial power for a court upon default, by taking evidence when necessary or by computation from facts of record, to fix the amount which the plaintiff is lawfully entitled to recover and to give judgment accordingly." (323 U. S. at 12)

The analogy drawn by this Court in *Pope* is used to support the propriety of rendering judgment without going behind the facts established by the Special Act; implicit in this reasoning is agreement with the rule of *Thomson* v. *Wooster* that a default conclusively establishes the truth of the well-pleaded allegations of the complaint.

As for the argument (Def. br. p. 44) that a default judgment admits only what Pomeroy would have categorized as "dry, naked, actual facts,"[43] it is rubbish.

[43] POMEROY, REMEDIES AND REMEDIAL RIGHTS 576 (2d ed. 1883). The quoted phrase is a favorite illustration of the treatise writers of the essential foolishness of the least successful aspect of the various state experiments in code pleading—the attempt to require a pleader to set forth facts and nothing else. One writer describes Pomeroy's pleading objective as "neither feasible nor desirable." 2A J. MOORE, FEDERAL PRACTICE ¶ 8.12, p. 1684 (2d ed. 1968). Others describe the compartmentalization Pomeroy championed as a "chimera." 5 WRIGHT & MILLER, FEDERAL PRACTICE & PROCEDURE: CIVIL § 1218, p. 133 (1969). Not only is Pomeroy's misguided phrase not a statement of the "rigorous rule" upon which defendants' argument depends (Def. br. p. 44), the truth is that, "as

Under prevailing procedure standards of the 19th century laid down in the controlling federal cases, on a default —as on a demurrer or on a motion to dismiss for failure to state a claim today—a legal theory would not be admitted. Hence, a default would also not admit a conclusion, derived from such a legal theory, that specific allegations resulted in liability. *Cragin* v. *Lovell,* 109 U.S. 194 (1883), stands for that and no more. The question before the Court, as the summarized argument of counsel makes plain, was one of law: whether a principal, having secured the benefit of an agent's actions, is liable on the agent's notes, there being no allegation of any promise by the defendant to the plaintiff. The "conclusion of law" which could not supply the critical missing allegation was solely a terminal allegation of liability, expressly predicated on the other allegations of the petition.

We believe that there is no case—certainly defendants have cited none—that holds allegations of motive and specific intent to restrain trade and monopolize a substantial part of a described market, of conspiracy with others for such purposes, or of actual injury to commerce resulting from such conduct, to be "conclusions of law" which cannot be admitted by a default. Indeed, in *United States* v. *Employing Plasterers Assn.,* 347 U.S. 186, 188 (1954), this Court expressly rejected the utilization of any such distinction between "facts" and "conclusions" in antitrust cases:

> "The complaint plainly charged several times that the effect of all these local restraints was to restrain interstate commerce. Whether these charges be called 'allegations of fact' or 'mere conclusions of the pleader,' we hold that they must be taken into account in deciding whether the Government is entitled to have its case tried."

---

was amply demonstrated by years of frustrating experience [under code pleading] it was difficult, if not impossible, to draw meaningful and consistent distinctions among 'evidence,' 'facts,' and 'conclusions.'" 5 WRIGHT & MILLER, FEDERAL PRACTICE & PROCEDURE: CIVIL § 1218, p. 133 (1969).

FED.R.CIV.P. 9(b) expressly provides:

> "In all averments of fraud or mistake, the circumstances constituting fraud or mistake shall be stated with particularity. *Malice, intent, knowledge, and other condition of mind of a person may be averred generally.*" (Emphasis added.)

In the traditional terminology such allegations were called allegations of "ultimate fact." The cases in which this Court laid down the principles governing the effect of a default establish that this type of allegation is unquestionably admitted by a default. In *McAllister* v. *Kuhn,* 96 U. S. 87, 89 (1877), for example, this Court held that if "the declaration did not state facts sufficient to constitute a cause of action, [the default judgment] may be reversed." Since a cause of action was stated, however, the judgment was affirmed. The defendant's attempt in *McAllister* to challenge the allegation that defendant *converted* stock belonging to plaintiff was rejected:

> "If the statements contained in the petition are true, and McAllister had actually converted the stock to his own use, Kuhn was entitled to his damages. By his default, whatever had been properly pleaded was confessed. Had issue been joined upon the averment of conversion, it would have been necessary to show the existence of facts which in law constituted a conversion; but, for the purposes of pleading, the ultimate fact to be proven need only be stated. The circumstances which tend to prove the ultimate fact can be used for the purposes of evidence, but they have no place in the pleadings. We think the complaint does state all the facts necessary to constitute a cause of action." (96 U. S. at 89)

In *Thomson* v. *Wooster,* 114 U.S. 104, 105-06 (1885), the default established as true allegations of the *validity* of plaintiff's patent, *original invention* by plaintiff's assignor, and *infringement* by the defendant as well. All plainly are

ultimate facts, as the Court used the term in *McAllister*. According to defendants, *Thomson* held that a default admits "facts properly pleaded" (Def. br. p. 43). So it does; defendants are wrong, however, in seeking to infer that *Thomson* limited the admission to facts as opposed to "conclusions of law" (used as defendants use the phrase to cover allegations of ultimate fact). The phrase "facts properly pleaded" appears but once in *Thomson* (114 U.S. at 110), and it is obvious that the Court placed no special weight upon it, since for the most part during the Court's discussion of the principles involved the phrases used are either "the statements of the bill," which are said to be "confessed," or "taken to be true," or the "allegations of the bill," which are also taken "to be true," and which "it is surely irregular to question." Such phrases, which in context clearly include ultimate facts, appear no less than eight times in the course of the opinion (114 U.S. at 110-11, 113-14). When purely verbal distinctions are put aside, the heart of the Court's ruling is apparent from the nature of the principal issue on which the defaulting defendants based their appeal, and which they were flatly forbidden to contest: the *validity* of the plaintiff's patent in light of certain facts of which defendants asked the Court to take notice.

In their petition for a writ of certiorari (p. 21) defendants here conceded that a default to a complaint alleging that "on a particular day at a particular place defendant negligently drove a motor vehicle against plaintiff, as a result of which plaintiff was thrown down and had his leg broken and other injuries," admits facts giving rise to liability (*compare* Official Form 9, FED.R.CIV.P.). They could hardly contend otherwise for there are a host of cases recognizing that *negligence* is an allegation admitted by a default judgment. *E.g., Adkisson* v. *Huffman,* 469 S.W.2d 368, 375 (Tenn. 1971); *Funkhouser* v. *Million,*

209 Va. 89, 161 S.E.2d 725, 729 (1968); *Baltimore Transit Co.* v. *Mezzanotti*, 227 Md. 8, 174 A.2d 768, 775 (1961).

The true rule is most simply stated in *Harshman* v. *Knox County*, 122 U.S. 306, 316-17 (1887), where the Court said that "[t]he averment * * * in the petition in the action, if material and traversable, was confessed by the default." The averment in question, elsewhere referred to as a "fact," was that the bonds sued on had been issued under particular statutory authority. The inquiry which the Court directs is whether the allegation is material—*i.e.*, proper to be pleaded and relevant in establishing the cause of action on which the complaint is based—and whether it is traversable—*i.e.*, an allegation which defendant (whether under 19th century pleading or 20th century pleading) must deny and be prepared to contest at trial if he is not to have it accepted as established against him. The allegation of the amount of unliquidated damages, for example, need not be traversed, and is not admitted by a default. Allegations of specific intent to restrain trade, of an attempt to monopolize a substantial segment of the market in commercial aircraft, that specified actions were done with such intent and in furtherance of such an attempt, are most certainly traversable and were here traversed (pp. 7-8 *supra*). Once denied, the truth of the allegations is at issue and, absent a default, both plaintiff and defendant are put to their proof.

Still, defendants assert that the ordinary rule does not apply in antitrust cases like this where there may be "hard questions of liability even on an admitted state of facts" (Def. br. p. 46).

The argument does not follow. The effect to be given a default judgment is not a function of the relative difficulty of determining a defendant's liability in a lawsuit—whatever that may mean. Although defaults may occur in cases

where liability is plain, they may also occur in cases where liability is not plain. *Thomson* v. *Wooster* was such a case, and even in negligence cases liability may be a "hard question." *See Adkisson* v. *Huffman* and *Funkhouser* v. *Million.*

Moreover, defendants' implication (Def. br. p. 46) that antitrust cases should be treated differently because they present difficult and complex questions is wrong in present law and unsound as a suggestion for future policy. Antitrust cases do not necessarily present difficult or complex questions once the facts are established, and patent cases, like *Thomson* v. *Wooster,* may be much more complex. Nor are antitrust plaintiffs a disfavored class of litigants upon whom specially onerous burdens of pleading and proof are to be placed. *Perma Life Mufflers, Inc.* v. *International Parts Corp.*, 392 U.S. 134, 139 (1968); *Radovich* v. *National Football League,* 352 U.S. 445, 454 (1957) ("• • • this Court should not add requirements to burden the private litigant beyond what is specifically set forth by Congress in [the antitrust] laws").

Defendants argue that the court of appeals erred by treating the default judgment as having established not only that the acts cited in the complaint injured TWA but also that they violated the antitrust laws (Def. br. p. 43). This argument is a red herring. The conclusion that the acts alleged violated the antitrust laws is, of course, not the consequence of the default by itself, but the consequence of a default coupled with, and in this case preceded by, a litigated determination that the complaint stated a claim for relief under Section 4 of the Clayton Act. It does so because it alleges with sufficient specificity and detail that defendants engaged in particular conduct in restraint of trade which injured TWA. The default judgment established all of those allegations as true and precluded defendants from contesting any of them. Only if the conduct alleged *could not* constitute a violation of the anti-

trust laws would defendants be entitled to the belated dismissal they now ask—and that would be because the complaint was legally insufficient, as in *Cragin* v. *Lovell* (p. 106 *supra*).

III

The courts below were correct in ruling that TWA should be permitted to recover the full amount of the damages to which it is legally entitled

Defendants' argument that the first sentence of FED. R.CIV.P. 54(c) precluded the district court from granting an amendment to increase the *ad damnum* clause of the complaint from $105 million to $135 million, or whatever greater amount TWA could prove, fails to apply the rule to the sequence of events which led up to the entry of an interlocutory default judgment against them on May 3, 1963; it also ignores the liberal provisions for amendment in FED.R.CIV.P. 15 and the direction in FED.R.CIV.P. 61 and 28 U.S.C. § 2111 that this Court and others shall be concerned only with "substantial rights."

A. The amendment of TWA's *ad damnum* clause was properly granted upon adequate notice prior to entry of the interlocutory default judgment

TWA cannot know just when defendants reached their decision to refuse to continue with pretrial or trial of the case. Although Toolco had repeatedly disobeyed or ignored various discovery orders of the district court and the Special Master (pp. 19-29 *supra*), it was not until the hearing before Judge Metzner at the end of the day on February 8, 1963 (A-270 *et seq.*), requested by TWA's counsel (A-270-71), that the meaning and legal effect of Toolco's unprecedented procedural device—the so-called "Notice of Position" (A-268-69) served earlier that day—

was defined.[44] At the outset of the February 8 hearing, *before* Toolco formally disclosed its intention to disobey all outstanding discovery orders and otherwise refuse to proceed with the case (A-281, A-298-99, A-304-06), TWA's counsel stated:

> "If [Toolco's Notice of Position] is an application for the withdrawal of the answer and for leave to have a default noted by the Tool Company, TWA would move for the entry of a default judgment for the relief of the complaint.
>
> "I would have an application by way of amendment on the prayer for damages because of their counterclaims, which allege that the damage to TWA was $45 million, our complaint alleged we thought it was in excess of thirty-five. Our investigation to date satisfies us that the $45 million damage figure is correct, so we would move for leave to amend the damage prayer and for a default judgment with the relief sought in the complaint, if in fact what they are proposing to your Honor is that their default in this case be noted." (A-271)

In the discussion that followed these opening remarks, Toolco's counsel made it clear that his client fully understood the risk it faced if it did not prevail on its legal position:

---

[44] Defendants' "Rubicon" theory as a justification for applying Rule 54(c) to forbid amendment of the *ad damnum* after service of their Notice of Position (Def. br. pp. 59-60) clothes their private decision with an authority and finality to which it is not entitled. Since TWA did not and could not know that defendants had decided to refuse to proceed before the Notice of Position was served on it, their argument would allow a defendant, by a unilateral procedural maneuver, to cut off plaintiff's substantial right under FED.R. CIV.P. 15 and 54(c) to obtain all of the relief to which it can prove it is entitled. Such an interpretation of Rule 54(c) is clearly contrary to the express purpose of the rules as set forth in FED.R.CIV. P. 1. Nor was defendants' "business decision" irrevocable. They had repeated opportunities to withdraw from their "position" once they were put on notice that TWA intended to seek the full amount of its damages, but they chose not to do so (pp. 113-14, 116 *infra*).

COPY BOUND

> "• • • we are fully aware—my client is fully aware—that by insisting on a right to obtain a review on the legal questions which have been decided to date • • • they may be deprived of further defending on the merits, other than on the question of damages." (A-276)

The February 8 hearing concluded with an "anticipatory default" noted against Toolco with respect to Hughes's announced non-appearance at the deposition scheduled to begin on February 11, 1963 (A-307), but there was not at that point a "judgment by default" entered against defendants.[45]

On February 16, 1963 TWA filed its formal motion seeking leave to amend the *ad damnum* clause and for an interlocutory default judgment against defendants on the complaint, with the amount of TWA's damages to be subsequently determined (A-2692-95). At a hearing on February 21, 1963 defendants were asserting, as they have so frequently since, that they could still contest TWA's claims on the merits, arguing that TWA must prove its right to any recovery at all (A-2722-25). The result of the default, defendants argued, was to give the plaintiff an opportunity to present its case. Judge Metzner commented that this argument would lead "right back to directing Mr. Hughes to appear for examination." He inquired whether defendants desired that result. The categorical answer was "No, your Honor." (A-2722)

After TWA had filed its motion to increase the amount of its prayer, defendants had a clear opportunity to re-

[45] Defendants urged this very point on *April 29, 1963* in their brief opposing entry of a default judgment against them:

> "While Toolco may be said to have 'defaulted' in producing Mr. Hughes for examination or in producing certain documents, it has not defaulted in the sense which would justify the inference of an admission of the well pleaded facts so as to permit the entry of a judgment against it." (Doc. 190, p. 7n)

CLOSE IN CENTER

consider their "business decision," ask that the pretrial proceedings be reopened and continue with the defense of the action in normal course. They expressly refused the opportunity.

Defendants asserted then, as they do now, that the district court lost all power to grant TWA leave to amend once they had filed their Notice of Position because of FED.R.CIV.P. 54(c) (Doc. 183, pp. 2-3)—an argument which the district court considered seriously before deciding to grant TWA leave to amend (A-2711). Finally, on May 3, 1963, the district court granted both branches of TWA's motion:

> "The default was deliberate and willful and justifies the court in entering a default judgment as provided in rule 37(b)(2)(iii) and 37(d). A judgment by default shall be entered in favor of TWA against Toolco, and the counterclaims asserted by Toolco against TWA shall be dismissed with prejudice.
>
> "That branch of the motion seeking to increase the *ad damnum* clause from $105,000,000 to $135,000,000 is granted. This is not a case where a party has defaulted in appearance. Here issue was joined and adversary proceedings continued in the pretrial stages of this litigation. The damages originally asserted were unliquidated and TWA is entitled to recover for whatever damage it can show it suffered. Furthermore, Toolco will be represented at the hearings necessary to assess damages under rule 55(b)(2)." (32 F.R.D. at 607-08, A-321)

Having correctly found that FED.R.CIV.P. 54(c) presented no bar to an amendment to the original complaint when made on actual notice after issue has been joined, Judge Metzner's decision was justified by the express mandate of FED.R.CIV.P. 15(a) that "leave [to amend a pleading] shall be freely given * * *." A different result would be contrary to this Court's direction that "this mandate is to

be heeded." *Foman* v. *Davis,* 371 U.S. 178, 182 (1962). *See* 3 J. MOORE, FEDERAL PRACTICE ¶15.08 [2] (2d ed. 1968); 6 WRIGHT & MILLER, FEDERAL PRACTICE & PROCEDURE: CIVIL §§ 1471, 1473 (1971).

Therefore, even if FED.R.CIV.P. 54(c) were to be read to preclude amendment after the interlocutory default judgment is entered, the "demand for judgment" which defendants assert limits the total amount of TWA's recovery can only be that recited in TWA's *amended* prayer for relief—*i.e.*, that defendants pay to TWA $135,000,000 in treble damages, together with its cost of suit and a reasonable attorney's fee.

Defendants cite no authority to the contrary.[46] Despite defendants' asserted mystification (Def. br. p. 53) the district court quite correctly referred to Rule 54(c) once it had exercised its discretion under Rule 15(a) to permit amendment of TWA's *ad damnum* clause.[47] *Cf.* 6 WRIGHT & MILLER, FEDERAL PRACTICE & PROCEDURE: CIVIL § 1474, pp. 385-86 (1971).

Defendants have never suggested that their determination to default the case rather than permit TWA discovery would have been altered if TWA's complaint had originally sought $135 million or even an unspecified amount as dam-

[46] *Fong* v. *United States,* 300 F.2d 400 (9th Cir.), *cert. denied,* 370 U.S. 938 (1962), does not support defndants' assertion that FED.R.CIV.P. 54(c) bars an amendment of the complaint *before* judgment by default is entered, since in that case the Government did not claim the right to recover actual damages under the single sufficient count of its complaint (which asked for liquidated damages only) until the damage hearing *after* entry of the interlocutory default judgment against Fong (300 F.2d at 414).

[47] A similar result was reached in *Aljassim* v. *S. S. South Star,* 67 Civ. 1525 (S.D.N.Y. June 28, 1968), where Judge Wyatt, in an unreported decision, granted plaintiffs' motion for leave to amend their complaint to increase the *ad damnum* from $150,000 to $381,660 and entered a default judgment against the defendant for failure to answer interrogatories. After trial on the damage issue, plaintiffs were awarded $255,657.06 (323 F. Supp. 918, 928 (S.D.N.Y. 1971)).

ages—nor do they so represent even now. The rationale advanced for this so-called "business decision" (*i.e.*, that whatever damages TWA might be able to prove would be less than the "$5 million"[48] defendants now claim TWA's deposition of Hughes would have cost Toolco) could not logically be affected by the overall size of TWA's claimed damages, as long as they were greater than $5 million. If TWA could not prove actual damages of $5 million, prayers for $35 million, $45 million, or any larger sum would be of no practical significance. *Cf. Bail* v. *Cunningham Bros., Inc.*, 452 F.2d 182, 189 (7th Cir. 1971); *Varveris* v. *United States Lines Co.*, 141 F. Supp. 874, 875 (S.D.N.Y. 1956).

If, on the other hand, the district court's grant of leave to amend TWA's *ad damnum* clause had affected defendants' calculation of the odds, tipping the balance of risks in their "business decision" toward continuing with the case instead of defaulting, they had a remedy under the orderly procedure set forth in the Federal Rules of Civil Procedure. They could have offered to proceed with discovery at any time between February 8, 1963 and May 3, 1963; and even after the latter date when the interlocutory default judgment was entered, they could have moved within a reasonable time for an order under FED.R.CIV.P. 55(c) setting that judgment aside. 6 J. MOORE, FEDERAL PRACTICE ¶55.10[2], p. 1830 (2d ed. 1971). Defendants' failure to cure their wilful disobedience either when the possibility was raised at the hearing on February 21, at which TWA's motions were formerly argued, or on or after May 3, 1963, when they were granted, has only one possible interpretation: that with the damage prayer increased to $45 million before trebling, defendants still calculated their monetary risk as less in a trial on the sole issue of damages without permitting TWA to have discovery than in a full trial on the merits after TWA had discovery.

---

[48] Nor does TWA accept this absurd figure. *See* discussion at pp. 34-35 & n. 10 *supra*.

B. Whenever a defaulting defendant appears and defends at the damage hearing, the district court has discretion to enter judgment for the full amount of damages proved

Apart from its power under FED.R.CIV.P. 15(a) to allow any amendment to the complaint when justice so requires, there cannot be any real doubt that the district court also had the power, which it properly invoked in the exercise of sound judicial discretion (32 F.R.D. at 607-08, A-321), to permit TWA to recover the full amount of the damages which it was able to prove, where (1) the damage claim was unliquidated, (2) the default followed appearance and answer, (3) defendants were given notice of TWA's intention to seek the full amount of its provable damages prior to their default, (4) TWA was required to prove every dollar of the claimed damages, and (5) defendants were in a position to and did fully contest each element of TWA's damage case. The court of appeals held that on the basis of these five elements the district court had that power, which it properly exercised in this case (449 F.2d at 78-79, A-2791-92).[49]

[49] TWA's damage judgment exceeded the $135 million sought in its amended *ad damnum* clause by $2,611,435.95. Defendants, however, have never argued that under the amended *ad damnum* clause TWA was limited to a recovery of $135 million. Such an argument is not available to them because they did not object to the contrary ruling below. After determining that TWA had proved its right to recover treble damages of $137,611,435.95, the Special Master reviewed the record before him:

> "On April 9, 1968, TWA moved on the record to amend its complaint to ask damages in such amount as the Special Master should find to have been established by the evidence. TWA gave written notice on May 2, 1966 [the first day of the damage hearing], of intent to make such motion at the close of the hearing, and there is no suggestion of surprise." (Brownell Report, p. 323; A-1966)

He found it unnecessary to grant the motion, however, because he interpreted Judge Metzner's earlier order as comprehending the increase requested:

> "I have determined that no amendment of the complaint is required in order to award the plaintiffs the damages hereby

There is no contrary authority to the position taken by the courts below except *Fong* v. *United States*, 300 F.2d 400 (9th Cir.), *cert. denied*, 370 U.S. 938 (1962),[50] discussed at pp. 119-20 *infra*, and then only if the special facts in *Fong* are disregarded. In his opinion granting TWA's motion for leave to amend, Judge Metzner cites *Peitzman* v. *City of Illmo*, 141 F.2d 956, 962 (8th Cir.), *cert. denied*, 323 U.S. 718 (1944), which plainly stands for the proposition that if the defendant is in a position to contest the plaintiff's proof of damage, he is liable for the entire amount found to be proven. Both Judge Metzner and the court of appeals refer to *Riggs, Ferris & Geer* v. *Lillibridge*, 316 F.2d 60, 62-63 (2d Cir. 1963), which supports the basic principle that damages if unliquidated must be proven in their entirety, and that a plaintiff under the modern procedure can obtain all those damages (or other relief) to which he can prove he is entitled. In *Sarlie* v. *E. L. Bruce Co.*, 265 F. Supp. 371, 377-78 (S.D.N.Y. 1967), the district court, distinguishing between defaults for want of appearance and defaults for failure to plead or otherwise defend after appearance where the issue of damages is contested, permitted the defendant to amend its counterclaims at the damage hearing

---

awarded because the previous motion of the plaintiffs to amend their complaint to increase the amount of damages sought to be recovered, as granted by Judge Metzner, was sufficiently broad to authorize the award hereby made." (*Ibid.*)

Defendants made no objection to this ruling, either to the Master or the district court, and they therefore have not preserved any right to have it reviewed in this Court.

TWA's motion to the Special Master, as to which defendants were on notice throughout the damage hearing, covered also such additional damages as are sought by TWA in its cross-petition in No. 71-830.

[50] The United States did not petition for certiorari, so the question was not before this Court when certiorari was denied. The petition which was filed and denied was by the defendant and based on an asserted right to dispute well-pleaded allegations of the complaint despite his default. On that point, *Fong* is in full accord with the decision below.

to increase the amount of damages sought from $400,000 to $500,000.

While FED.R.CIV.P. 54(c) does not in terms distinguish between a default for want of appearance and a default after appearance, if the defendant appears and is represented at the hearing on application for judgment, the court's power to permit amendments to the complaint in a proper case should prevail:

> "Where, however, the defendant appears at the hearing on the application for judgment, the court, in the exercise of sound discretion, may permit the claimant to amend his prayer for relief." 6 J. MOORE, FEDERAL PRACTICE ¶ 54.61, p. 1206 (2d ed. 1953) (Footnotes omitted.)

Fong v. *United States,* 300 F.2d 400 (9th Cir.), *cert. denied,* 370 U.S. 938 (1962), upon which defendants exclusively rely as legal authority for their argument, does not necessarily depend for its result on a contrary view. In *Fong* the Government's complaint contained several counts. Some of these claimed actual damages for such matters as conversion and wrongful sale of the vessels which were the subject matter of the action, but the district court expressed "grave doubt" as to their legal sufficiency. The court did uphold a different count asserting a contract claim for liquidated damages of $100 per day per ship for each day up to 180 days during which the vessels were not scrapped and $25,000 per ship for any period thereafter. The defendant, who had appeared in the action, was defaulted for refusing to appear for the resumption of his deposition. Judgment by default was entered against him after a damage hearing at which the Government for the first time announced that it would seek actual damages beyond the liquidated damages recoverable under the contract count. On defendant's motion, the district court amended its judgment to limit the damages recovered to liquidated damages,

rejecting the Government's argument that the demand for actual damages made in the other counts could be used to support the higher recovery. *United States* v. *Fong*, 182 F. Supp. 446, 454-56 (N.D. Cal. 1959). The Court of Appeals for the Ninth Circuit held that, since damages were awarded only as to the contract count, it would be unjust to import into that count the entirely different theories of damage computation embodied in the other three counts (300 F.2d at 413-14). Despite the language which defendants quote from the Ninth Circuit's opinion in *Fong* to support their contentions, there is no necessary conflict between the result in that case, where no notice of intention to amend was given prior to entry of the default, and the decision below. The Government recovered the full damages it had proven under the contract count.

If defendants' argument is correct, the result would be contrary to the principles embodied in the Federal Rules. FED.R.CIV.P. 54(c) must be read in conjunction not only with the provisions of FED.R.CIV.P. 15(a) that leave to amend a pleading "shall be freely given when justice so requires," but also with FED.R.CIV.P. 15(b) that if issues are actually litigated at trial, "they shall be treated in all respects as if they had been raised in the pleadings. • • • [F]ailure • • • to amend does not affect the result of the trial of these issues."

It was a basic goal of the Rules when adopted to avoid the "tyranny of formalism." *Rosden* v. *Leuthold*, 274 F.2d 747, 750 (D.C. Cir. 1960); *see Riggs, Ferris & Geer* v. *Lillibridge*, 316 F.2d 60, 62 (2d Cir. 1963); 3 J. MOORE, FEDERAL PRACTICE ¶ 15.13[2] (2d ed. 1968).[51] FED.R.CIV.P. 61 was

[51]Defendants' rigid and blinkered view of FED.R.CIV.P.54(c) raises its own serious formal difficulties. In what amount, if any, could plaintiffs in the following situations recover if the defendant defaults: (1) In a suit for violation of the Sherman Act demanding "three times the amount which plaintiff has been damaged by defendant"? (2) In a diversity suit for tortious interference with

specifically intended to prevent reversals when the decision below, whatever technical objections there might be, reached a result that does substantial justice between the parties. The same standard governs review in this Court (28 U.S.C. § 2111).

Substantial rights of defendants have not been prejudiced here because prior to the entry of the default judgment they were put on notice that TWA was claiming the full quantum of damages that it could prove; Toolco itself had alleged in its counterclaims that TWA had been damaged in an amount exceeding TWA's original claim; the amendment of the *ad damnum* clause did not affect in any way defendants' decision to act as they chose to act; and the consequence of permitting the amendment was nothing

---

business, demanding "the amount by which defendant damaged plaintiff," where it is alleged in the body of the complaint that plaintiff's damages are "at least in excess of the jurisdictional amount"?

Were there any "due process" right in a defendant who has appeared in the action "to know what the consequences to him will be" before he chooses to default (Def. br. p. 65), each of those plaintiffs arguably would be barred from recovering his full, provable damages in the event of a default, even when defendant subsequently participates in the damage hearing and fully contests plaintiff's proof of damages. Plaintiff's recovery in no. 1 would be limited to nominal damages and in no. 2 to $10,000. No amount of careful pleading would permit a plaintiff who does not know the exact extent of his losses when he files his complaint to recover the full amount he has been damaged when the defendant pursues a "default strategy." Such a result would appear absurd, as well as unjust, *but see Ludka* v. *Athana Corp.*, 25 Cal. App. 3d 316, 101 Cal. Rptr. 615, 619 (2d Dist. 1972). Plaintiffs would therefore be encouraged either to vastly overestimate the amount of their possible injury (making of the *ad damnum* an absurd formalism and contrary to the spirit of FED. R. CIV. P. 11) or else repeatedly amend this non-traversable allegation of their complaints as better estimates of their losses become available. Both results are directly contrary to the purposes of the Federal Rules. On the other hand, if the plaintiffs in examples no. 1 and no. 2 should be found to have given a defendant who appears in the action sufficient notice to permit full recovery (since defendant plainly had notice that each was claiming whatever amount he could prove), simple justice would be done. And defendants have always had such notice in the case at bar. In paragraph 54 of its complaint, TWA alleged injury "in an amount estimated to be *in excess of* $35,000,000" (A-27) (emphasis added).

more than to require defendants to pay TWA the amount of the damages TWA proved at a hearing in which defendants fully participated.

IV

The orders of the CAB did not exempt the conduct complained of from antitrust attack

Toolco's refusal to make discovery and decision not to proceed with "useless litigation on the facts" (Def. br. p. 30) were as destructive to the building of a proper record with respect to its affirmative defenses as they were to every other issue presented by the pleadings. Had the case gone to trial, there would have been a full factual development of how defendants sought, through abuse of their power over TWA, to establish themselves as a major commercial factor in the field of aircraft manufacture and supply (an industry over which the CAB has no jurisdiction). In this posture of the case, however, the issue is whether the CAB's orders exempted from prosecution every set of facts which might have been proved under TWA's complaint as a basis for the damages awarded.

It is therefore necessary to bear in mind the nature of the conduct alleged in the complaint, which TWA claimed and the courts below held constituted a violation of the antitrust laws. The conduct that caused the injuries for which TWA was awarded damages was not the subject of any CAB order, let alone any order granting the statutory approval which alone can confer a legal immunity (pp. 138-49 *infra*).

It is also important to consider the remedy which the courts have provided to TWA. The long process of reducing TWA's claim to final judgment has made it even clearer than it was in 1965, when this case was last before this Court, that relief for TWA in this action cannot

impinge in any way upon the CAB's regulatory jurisdiction. TWA's final judgment provides no injunctive or other prospective relief, but only money damages for harm previously done, relief which the CAB is powerless to grant.

A. The conduct charged was such that the decisions below were compelled by this Court's rulings on the scope of similar statutory exemptions

The result reached by the courts below takes nothing away from Section 408 (49 U.S.C. § 1378), Section 414 (49 U.S.C. § 1384) or any other provision of the Federal Aviation Act ("the Act"). Indeed, that result is commanded by this Court's decisions in other cases.

Defendants carefully miss the point when they say that:

> "Sections 408 and 414 become meaningless if a court, taking a monocular view of only the effect on competition, can award huge damages for a transaction that the Board, after carefully weighing any injury to competition against the benefits that the transaction will provide, has found to be in the public interest." (Def. br. p. 83)

The point is that not one "transaction" for which the courts below awarded damages is a "transaction" which the Board approved. The courts below ruled that the Board-approved "transaction," *i.e.*, the acquisition itself, was immune from attack. What was *not* immune were the acts done pursuant to defendants' combination and conspiracy in restraint of trade in aircraft and their attempt to monopolize a substantial part of that market. This conduct, in which control over TWA was used as a weapon to secure broader aims outside the field of air transportation, was held to violate the antitrust laws (Point V *infra*). It was not, as defendants would have it, "because Toolco did exercise control" of TWA (Def. br. p. 67) that damages were

awarded, but because defendants performed acts pursuant to their unlawful scheme which injured TWA.

Defendants' hypothetical examples, by illuminating their case, destroy it. Thus, defendants postulate purchase by Lockheed of control of TWA and suggest:

> "On the theory of the court below, Lockheed would have been vulnerable to an antitrust action if, while it exercised control, TWA, with CAB approval, had purchased Lockheed planes." (Def. br. p. 84)

It does not, of course, follow from the decision of the court of appeals that any purchase by TWA of Lockheed planes in the circumstances postulated would constitute an antitrust violation. It does follow from that decision that if Lockheed used its position in TWA as a weapon in a conspiracy to restrain trade and monopolize commerce, and pursuant to that conspiracy injured TWA (or any other person), its conduct would not be immunized by the Board's approval of the acquisition. This, we submit, is an eminently sound result.

The contrary result would be insupportable. The exemption under Section 414 is from "all other restraints or prohibitions made by, or imposed under, authority of law * * *," as well as from the antitrust laws. Thus, if approval of an acquisition of control carries with it approval of every subsequent exercise of such control, the acquiring company has been freed from all legal restraints —as if a pistol permit carried with it permission to use the pistol for criminal purposes.[52]

[52] Congress has recently acted to expand the scope of Section 408 to require CAB approval of any acquisition of control of an air carrier, whether or not effected by one of the categories of persons originally enumerated in Section 408 (83 STAT. 103, August 20, 1969, amending 49 U.S.C. § 1378). Thus, the construction for which defendants argue could in the future extend a most extraordinary immunity from the regular application of antitrust principles to companies in many industries. The discussion in Congress of this amend-

Again, defendants state:

> "* * * it is possible to imagine acts that a controlling company might do, by virtue of its control of an air carrier, that would not be within the immunity conferred by a § 408 order. Suppose, for example, that Toolco refused to sell drill bits except to companies that agreed to patronize TWA whenever possible. Or that Toolco agreed to buy only Boeings for TWA in exchange for Boeing's agreement to buy all its drill bits from Toolco. Arrangements of this kind with third parties might well be outside the scope of the immunity. But that is not our case. We have here only the normal exercise of the controlling party's right to make important decisions for its subsidiary." (Def. br. p. 85)

If Toolco would not be immunized in using its control of TWA as a weapon to enable it to sell drill bits to Boeing, why is it immunized when it uses that control as a weapon in attempting to secure a dominant position as a supplier of aircraft? The CAB has no more right to grant Toolco an indulgence to restrain trade in the one commodity than in the other, and the Board did not purport to grant any such indulgence. Immunity attaches here, on defendants' theory, because what is has done here was merely "the normal exercise of the controlling party's right to make important decisions for its subsidiary." But that was precisely what was put in issue by the complaint and answers (see Point V, pp. 151-66 *infra*).

There is not the slightest inconsistency between the ruling here and the Board's action in *Application of Trans World Airlines Inc., et al.*, Order 71-8-91, [1964-1971 Transfer Binder] CCH Av. L. Rep. ¶22,015 (C.A.B. August 19, 1971), cited at p. 84 of defendants' brief. The multi-carrier agree-

---

ment demonstrates a belief on the part of the supporters of the legislation that the antitrust exemptive effect of a CAB order would not be given so broad a reach. See colloquy among Representatives Staggers, Rogers and Dingell at 115 Cong. Rec. 19924-25 (1969).

ment which the Board approved in that proceeding was an agreement filed pursuant to Section 412 of the Act (49 U.S.C. § 1382). Section 412 requires the filing of various kinds of agreements between or among air carriers and other common carriers, but not agreements with non-carrier parties. Section 414 specifically exempts from the antitrust laws agreements filed and approved under Section 412. There can be no question that, when an agreement is required to be filed under Section 412, the Board may approve it even though it would otherwise violate the antitrust laws. *Cf. Federal Maritime Commission* v. *Aktiebolaget Svenska Amerika Linien,* 390 U. S. 238, 245 (1968); *McLean Trucking Co.* v. *United States,* 321 U. S. 67, 86 (1944). No such agreement, however, was or could be involved here, since Toolco is not a carrier, and has no right to obtain Section 414 immunity under Section 412. It does not, of course, follow from the fact that the CAB is specifically authorized to exempt some kinds of conduct that might otherwise violate the antitrust laws that it may also exempt other kinds of conduct not referred to in Section 414.

This Court has many times held that statutory provisions granting or authorizing exemptions from the antitrust laws are to be kept within the narrowest of limitations. *E.g., United States* v. *Borden Co.,* 308 U.S. 188, 206 (1939); *Georgia* v. *Pennsylvania R.R.,* 324 U.S. 439, 456-57 (1945); *California* v. *Federal Power Commission,* 369 U.S. 482, 485 (1962); *United States* v. *Philadelphia National Bank,* 374 U.S. 321, 350-51 (1963).

Governmental approval of a status or relationship does not immunize from antitrust prosecution everything done in that status or pursuant to that relationship. In *Silver* v. *New York Stock Exchange,* 373 U.S. 341, 356-57 (1963), this Court held that under the Securities Exchange Act the New York Stock Exchange had a general power to adopt rules governing its members' relations with non-members

so that the mere adoption of such rules could not be said to be in violation of the antitrust laws. The Court held, however, that

> "* * * it does not follow that the case can be disposed of * * * by holding that since the Exchange has a general power to adopt rules governing its members' relations with nonmembers, particular applications of such rules are therefore outside the purview of the antitrust laws." (373 U.S. at 357)

The Court went on to hold that, by reason of its anticompetitive consequences, the particular application of the Exchange's rules in that case violated the antitrust laws and was unlawful (*id.* at 361).

In another analogous decision, *Continental Ore Co.* v. *Union Carbide & Carbon Corp.*, 370 U.S. 690 (1962), the defendants had contended, successfully in the lower court, that certain conduct was beyond the reach of the antitrust laws because one of the alleged conspirators was at the time acting as an agent appointed by the Canadian government to allocate ore purchases. In reversing, the Court disposed of this argument as follows:

> "There is nothing to indicate that such [Canadian] law in any way *compelled* discriminatory purchasing, and it is well settled that acts which are in themselves legal lose that character when they become constituent elements of an unlawful scheme. *Swift & Co.* v. *United States*, 196 U.S. 375, 396; *American Tobacco Co.* v. *United States*, 328 U.S. 781, 809; *Steele* v. *Bulova Watch Co.*, 344 U.S. 280, 287. See *Georgia* v. *Pennsylvania R. Co.*, 324 U.S. 439, 457-458; *Slick Airways* v. *American Airlines*, 107 F.Supp. 199, 207 (D.C.N.J.)." (370 U.S. at 707) (Emphasis added.)

Nothing in the CAB's approval of Toolco's acquisition of control compelled Toolco to engage in the conspiratorial

activity charged in the complaint. That activity was not "necessary" to do anything "authorized, approved, or required" by the Board's orders, it was pursuant to an "unlawful scheme" and it was not exempt from the antitrust laws.

The courts below saw the matter clearly and applied these principles unexceptionably. Thus, Judge Metzner defined the scope of the exemption under Sections 408 and 414:

> "The orders of 1944 and 1950 relied on by Toolco merely approved the acquisition of control of TWA by Toolco. The antitrust violations that could possibly be present in such acquisition—that it was a contract in restraint of trade prohibited by section 1 of the Sherman Act, or was an attempt to monopolize prohibited by section 2 of the Sherman Act, or was an acquisition of stock prohibited by section 7 of the Clayton Act—were within the contemplation of the approval orders and protected by the exemption provided by section 414." (214 F. Supp. at 109, A-260-61).

He also set out the limits beyond which such an exemption would not reach:

> "These orders did not give Toolco a license to engage in other acts that normally may be forbidden by the antitrust laws. What has been approved and exempted is the fact of 'acquisition of control', not activities engaged in by the controlling party subsequent to acquisition, which may be illegal." (214 F. Supp. at 110, A-261).

The court of appeals defined the scope of the exemption in similar terms:

> "The Board is explicitly entrusted with the duty of considering for approval any potential acquisition of control over an air carrier by a person engaged in any phase of aeronautics; and to the extent of such approval—but only to that extent—

> the Act grants immunity from the operation of the antitrust laws. Surely Congress did not contemplate that CAB approval of an acquisition would be tantamount to approval of every transaction which might be entered into by the controlling party. The focus of the Board's powers in this sphere is the acquisition itself rather than the broad range of activities into which the controller may enter thereafter." (332 F.2d at 608, A-337)

The Civil Aeronautics Board, in the *amicus* brief filed by the Department of Justice when this case was previously before the Court, concurred in this definition of the scope of its exemptive power:

> "* * * orders authorizing control do not approve prospectively all things that may be done in the exercise of control; and the Board's orders did not permit Toolco to utilize its power as a means of violating the antitrust laws. As the court below summarized TWA's complaint, it charges 'the outlines of a tying arrangement, an economic boycott of the defendants' competitors, and an attempt to monopolize commerce' (332 F.2d at 611). Such conduct plainly did not constitute acts 'necessary to enable' Toolco to do 'anything authorized [or] approved' by the Board's order." (Memorandum for the Civil Aeronautics Board As Amicus Curiae, Nos. 443 and 501, October Term 1964, p. 15)

Nothing in defendants' brief demonstrates that the scope of the exemption was broader than the Board and the courts below conceived it to be.

B. The authority of the CAB to exempt from the antitrust laws is narrowly limited and does not reach this case

Defendants' effort to confer on the Board sweeping authority to oust the federal courts of jurisdiction to enforce the antitrust laws against restraints of trade in the supply-

ing of aircraft cannot be squared with the statute or its legislative history.

1. The legislative history

Defendants draw heavily on their own imaginations when they assert that the Federal Aviation Commission urged "that responsibility for protecting the public interest against anticompetitive practices in the industry should be *turned over* to a new regulatory agency" (Def. br. p. 73) (emphasis added), that Senators Truman and McCarran emphasized "the fullness and completeness of antitrust authority intended to be exercised by the new agency under the Act" (*id.* p. 74), and that "[b]oth the statutes and the legislative history teach that the Board was and is intended to control the relation of antitrust policies to other considerations of the public interest in a broad and meaningful way, without any fear of intrusion from any other governmental body"[53] (*ibid.*). The statutes and legislative history teach no such thing.

The *Report of the Federal Aviation Commission* (S. Doc. No. 15, 74th Cong., 1st Sess. (1935) (the "*Aviation Report*")), on which defendants place so much emphasis (Def. br. p. 73), in no way suggested that the Commission it proposed should have a broad power to regulate competition in the air transportation industry beyond that inherent in its proposed powers to regulate entry into the industry by the issuance of certificates of public convenience and necessity (pp. 54-56), to regulate rates (pp. 52-53), and to supervise financial structures and stock ownership for the purpose of avoiding undue concentration of control (pp. 52, 69-71). It certainly suggests no such power over the industries en-

[53] It is interesting to contrast this statement with the language of this Court in the *Panagra* case:

> "We, therefore, *refuse to hold* that there are no antitrust violations left to the Department of Justice to enforce." (*Pan American World Airways, Inc.* v. *United States*, 371 U.S. 296, 305 (1963) (Emphasis added.)

gaged in aircraft manufacture and supply. Nowhere does it recommend that the responsibility "for protecting the public interest against anticompetitive practices in the industry" should be "turned over" to the new commission.

Recommendation number (102), concerning the establishment of an "Air Commerce Commission," sets out 21 separately defined functions of such a commission including the issuance of certificates of public convenience and necessity and the approval of rates. Only one refers specifically to competition, or its regulation, and it reads as follows:

> "The supervision of the financial structure of air lines and of their *ownership*, insofar as that may be necessary to preserve proper competition." (*Aviation Report*, p. 245) (Emphasis added.)

It is clearly ownership of the air carrier's stock that the *Aviation Report* is concerned with, not the conduct of the owners, let alone the effect of such conduct on competition in other industries. In Section 408, correspondingly, it is acquisition of a controlling interest, not the subsequent exercise of that control, which the CAB is authorized and required to approve. As to supervision of air carriers' financial structures, Congress decided to exclude that from the Board's jurisdiction (83 CONG. REC. 7104, 8869, 8961-63),[54] just as acquisition by carriers of aircraft and equipment was excluded (*see* Section 401(e)(4) of the Act, 49 U.S.C. §1371(e)(4)).

The rest of the legislative history confirms that Congress did not intend to give the CAB a wide-ranging power to

---

[54] See comment of Senator Truman, 83 CONG. REC. 6728. From time to time after the enactment of the Civil Aeronautics Act of 1938, the CAB requested the power to regulate the financial structure and securities issues of air carriers, but it appears to have ceased asking for it. See ANNUAL REPORT OF THE CIVIL AERONAUTICS BOARD—1942, at 14;—1943, at 6;—1944, at 9;—1945, at 16;—1946, at 21;—1947, at 29-30;—1949, at 43;—1950, at 38;—1953, at 40.

forestall antitrust prosecution in the courts. In the congressional debate, contrary to the statement at p. 74 of defendants' brief, neither Senator Truman nor Senator McCarran referred to any "antitrust authority" of the Board, full and complete or not. They, like Senators McKellar and Borah, expressed concern lest the CAB approve any combination of carriers or acquisition that would result in restraining competition, and the proviso in Section 408 was strengthened to forbid the CAB to do so. (83 CONG. REC. 6728-32)

Senator McCarran repeatedly emphasized that the antitrust laws would continue to be enforced as in the past. At one point he commented that

> "* * * every precaution has been written into the bill so that the antitrust laws and all laws for the prevention of combinations and monopolies shall be enforced." (83 CONG. REC. 6729)

One of the ways in which this was done was inclusion in the Act of Section 1106, the saving clause:

> "Nothing contained in this chapter shall in any way abridge or alter the remedies now existing at common law or by statute, but the provisions of this chapter are in addition to such remedies." (49 U.S.C. § 1506)

The effect of this clause is to assure that the remedies provided in the Sherman Act and Clayton Act, as well as other remedial laws, will continue to be available to those entitled to their benefits, unless clearly inconsistent with the Act.[55]

---

[55] A comment by Senator Borah underlines the intent that the Board should not be given a broad power to encroach on antitrust enforcement:

> "We had the same thing come up when we had the N. R. A. We were going to revive and rehabilitate the earth by giving people discretion to do away with the antitrust laws whenever

The entire debate demonstrates that none of the Senators involved intended to give the Board any function beyond approving or vetoing proposed consolidations or acquisitions of control. The proviso about which the debate centered, for example, is addressed solely to consolidations, acquisitions of control and the like, and narrowly limits the Board's power to approve those which might have anticompetitive effects; had it been thought that the Board's power of approval should extend to all further conduct of the parties, surely this limiting proviso would have been similarly extended.

The very paucity of comment specifically addressed to Section 414 makes it inconceivable that Congress contemplated a broad supersession by Board order of the antitrust laws. Supersession of the antitrust laws extending, as defendants urge here, into the field of aircraft manufacture and supply, over which the Board was given no jurisdiction, would have been at the least cause for debate, particularly in the light of the strong views expressed by all those who participated that the protection of the antitrust laws should be preserved. It would be a perversion of their intent to convert the statute which they enacted into a shield for the would-be monopolist.

2. *The* Panagra *case*

This Court's construction of the relevant provisions of the Federal Aviation Act in *Pan American World Airways, Inc.* v. *United States*, 371 U.S. 296 (1963) (*"Panagra"*), far from lending any support to defendants' position, confirms that the area in which the CAB is empowered to intrude

---

they thought in their judgment they should do so. We went through that experience. I myself do not want to be a party to writing into the law that which I think will aid in the destruction of competition." (83 CONG. REC. 6732)

into antitrust enforcement is a very narrow one. Thus, the Court's ultimate conclusion was:

> "We think *the narrow questions presented by this complaint* have been entrusted to the Board and that the complaint should have been dismissed." (371 U.S. at 313) (Emphasis added.)

The Court pointed out that "[t]he Board has no power to award damages or to bring criminal prosecutions" (371 U.S. at 311) and emphasized that it was holding only that *injunctive relief* with respect to the subject matter of that complaint was for the Board alone:

> "• • • the Act leaves to the Board under § 411 all questions of injunctive relief against the division of territories or the allocation of routes or against combinations between common carriers and air carriers." (*Id.* at 310)

The Court "refused" to hold that "there are no antitrust violations left to the Department of Justice to enforce" (371 U.S. at 305), and emphasized that the antitrust matters entrusted to the Board "encompass only a fraction of the total" (*ibid.*).

The particular issues raised by the complaint in *Panagra* were found to be committed to the Board because the acts charged were:

> "• • • precise ingredients of the Board's authority in granting, qualifying, or denying certificates to air carriers, in modifying, suspending, or revoking them, and in allowing or disallowing affiliations between common carriers and air carriers." (371 U.S. at 305)

Moreover, the relief ordered by the district court was that Pan American divest its interest in Panagra, a relationship of the precise kind which it is the duty of the Board to consider and approve or disapprove.

TWA, however, has been awarded no relief which might interfere with some carefully developed scheme of the Board. It has been awarded damages, and damages only. This Court has made clear the propriety of a court's awarding damages for injuries resulting from illegal conduct, even where that conduct is (as defendants' conduct herein was not) subject to administrative regulation. *E.g., Carnation Co.* v. *Pacific Westbound Conference,* 383 U.S. 213 (1966); *Hewitt-Robins Inc.* v. *Eastern Freight-Ways, Inc.,* 371 U.S. 84 (1962). As was emphasized in the *Hewitt-Robins* case, the question is not whether the agency has some relevant duty to perform, but "the effect of the exercise of the remedy [by way of damages] upon the statutory scheme of regulation" (371 U.S. at 89), and whether the damage action "hampers the efficient administration of the Act * * *" (*id.* at 88).[56]

There is no conceivable way in which affirmance of TWA's damage award will "hamper the efficient administration" of the Federal Aviation Act. The conduct attacked

---

[56] The propriety of allowing the recovery of damages in circumstances like these was upheld in *Allied Air Freight, Inc.* v. *Pan American World Airways, Inc.,* 393 F.2d 441 (2d Cir.), *cert. denied,* 393 U.S. 846 (1968), where the court of appeals held that the district court had improperly stayed the antitrust suit pending an application to the Board. The court said:

> "We find that since plaintiffs only seek the remedy of damages, which the administrative agency is not empowered to give, and since determination of the issues in this action by the court will have no effect on the future conduct of the parties and will not impinge upon the agency's ability to promote a uniform scheme of regulation by approving or disapproving of similar agreements in the future, it was inappropriate and not in the interests of efficient administration of justice to compel plaintiffs to make the futile gesture of undertaking administrative proceedings." (393 F.2d at 445)

If a stay was improper in the *Allied Air Freight* case, it is *a fortiori* that a dismissal is inappropriate here. The agreement involved in *Allied Air Freight* affected air transportation and fell clearly within the Board's authority under Section 412 of the Act. Here, the conduct complained of does not even involve "air transportation."

by this suit did not lie at the heart of the Board's regulatory function, as did the conduct challenged in *Panagra*. It did not involve route structures or affiliations between competing or potentially competing carriers. It was not focused, indeed, on competition in air transportation at all, but on competition in the manufacture and supply of aircraft. The thrust of the Federal Aviation Act is toward the regulation and control of *air transportation*. The only provisions which refer to persons engaged in "any other phase of aeronautics," like the defendants here, are Section 408, relating to acquisitions of control, and Section 409, relating to interlocking relationships.[57] Even Section 102 of the Act (49 U.S.C. § 1302), outlining the factors to be considered by the Board in determining the requirements of the public interest, refers to no factor which has any relation to the activities of persons engaging in the manufacture or supply of aircraft.

In its *amicus* brief when this case was previously here, the Board described as being of controlling importance the facts that the abuse of control charged in the present case is outside its comprehensive regulatory powers, and that it has no jurisdiction over aircraft dealers or manufacturers as such:

> "In *Panagra*, the controversy related to routes and services, which only the Board could authorize and regulate (Secs. 401, 412, 49 U.S.C. 1371, 1382), and restraints 'in air transportation or the sale thereof' which were similarly subject to the Board's

[57] Section 407(c) (49 U.S.C. § 1377(c)), relating to certain reporting requirements for air carriers, contains the phrase "person engaged in any phase of aeronautics," but only to require officers and directors of *air carriers* to file reports as to their holdings in such entities. There is no converse provision requiring the filing of such reports by persons engaged in a phase of aeronautics, or by their officers or directors. Similarly, under Section 409 the specified interlocking relationships are unlawful (absent approval) for an air carrier and its officers and directors, but are *not* unlawful for a person engaged in another phase of aeronautics.

control (Section 411, 49 U.S.C. 1381). In contrast, the instant controversy concerns alleged improprieties in the management and control of an air carrier which resulted in injury to the carrier itself —a subject as to which the Board does not have similar comprehensive regulatory powers." (CAB Memorandum, pp. 10-11)

• • • • •

"The Board has no jurisdiction over aircraft dealers or manufacturers as such, and is not generally empowered to regulate the issuance of a carrier's securities or its capital structure, or to specify the aircraft which a carrier can acquire. Indeed, the Board is specifically precluded from interfering with a carrier's choice of equipment (Section 401(e)(4), 49 U.S.C. 1371(e)(4)." (*Id.*, pp. 12-13)[58]

The Board does not even have the power to provide a remedy for the injury inflicted on TWA by Toolco. The Board cannot award damages. Since Toolco no longer controls TWA, the Board can no longer reach Toolco by virtue of any power or proceeding under Section 408. The only remaining source of authority is Section 411 (49 U.S.C.

---

[58] Defendants' citation of Professor Davis's treatise as suggesting that "a proper accommodation of CAB regulation with the antitrust laws is to limit judicial action applying antitrust policies to proceedings on judicial review of Board orders" (Def. br. p. 83n. 27) is based on an inaccurate paraphrase of what Professor Davis actually says. The accurate quotation is as follows:

> "Perhaps the accommodation of CAB regulation with the antitrust laws may best be worked out if collisions between CAB orders and antitrust decrees are avoided by the system of limiting judicial action, *in those areas where such collisions are most probable,* to the application of antitrust policies in proceedings on judicial review of administrative action." DAVIS, ADMINISTRATIVE LAW TREATISE § 19.06, p. 634 (Supp. 1970) (Emphasis added.)

Nothing in the treatise suggests that the CAB's exemptive power should be extended to cover the facts of the instant case; indeed, Professor Davis cites the district court's decision herein without criticism. (*Id.*, pp. 637-38)

§ 1381), which empowers the Board to issue cease and desist orders against "unfair or deceptive practices or unfair methods of competition in air transportation or the sale thereof" by "any air carrier, foreign air carrier, or ticket agent." Toolco is none of these, and the practices of which TWA complains are not "in air transportation." The Board is thus not in a position to reach them.[59]

Congress intended, as Section 1106 of the Act makes explicit, that there should be plural remedies for legal injuries, not a remedial vacuum. The Act could not, without defeating this plain intent, be interpreted as withdrawing from the courts forever the power to give redress to an air carrier against antitrust injuries inflicted upon it by a controlling person, while leaving the Board itself equally powerless.

C. The orders issued by the CAB were not intended to, and did not, exempt the conduct of which TWA complains

Defendants assert that the CAB "issued nineteen modification orders, including orders approving the specific transactions that are the subject of this litigation" (Def. br. p. 9).

---

[59] Defendants claim to find in *Panagra* an implication that the Board is free to utilize a broad definition of "air carrier" to extend its authority under Section 411 to reach anticompetitive practices generally by "persons exercising control over an air carrier" (Def. br. p. 70). The reference is apparently to the Court's statement in a footnote to the effect that it desires to "intimate no view" as to whether a controlliing person might be an "air carrier" (371 U.S. at 310n. 14). This is hardly the clear invitation that defendants suggest, and a cease and desist order against its former controlling person would be of little use to TWA. It would be difficult in any case to read "air carrier" in Section 411 as including a "person controlling an air carrier," in light of distinct meanings given those terms in related sections of the statute. *See, e.g.,* Sections 408(a)(2) and 407(c). The Court of course held in *Panagra* that the Board's authority under Section 411 is not limited to "air carriers," but that was with respect to its power to deal with matters within its special purview, such as division of territories, routes, and carrier affiliations (371 U.S. at 311-12).

No CAB order ever dealt at all with the particular conduct which caused injury to TWA. TWA was awarded damages for the following actions of defendants, each taken pursuant to the conspiracy and attempt to monopolize alleged in the complaint:

(1) Precluding TWA from ordering Boeings in 1955:—no CAB order approved that preclusion;

(2) Diverting six Boeings to Pan American:—no CAB order approved that diversion;

(3) Denying ten Convairs to TWA:—no CAB order approved that denial;

(4) Preventing timely delivery of 20 Convairs to TWA:—no CAB order approved that prevention;

(5) Conditioning the leasing of planes to TWA upon TWA's acquiring planes from no one else:—no CAB order approved that condition; and

(6) Disrupting the training of TWA's flight crews and ground personnel:—no CAB order approved that disruption.

That this course of conduct was part and parcel of a combination and conspiracy to restrain trade in aircraft and an attempt to monopolize a substantial part of the market for aircraft is established by the complaint and defendants' default. That combination and conspiracy and that attempt to monopolize were no more "approved" by the Board's orders than was the specific conduct which caused TWA injury. Nor could they be.

The only authority pursuant to which the Board purported to act in issuing any of the orders on which defendants rely was Section 408. The only relevant conduct which the Board is authorized to approve under Section 408 is an acquisition of control. In defining the kind of order the Board shall issue after its hearing on an application for approval under Section 408(b), the statute specifies that the

Board "shall by order approve such * * * acquisition of control, upon such terms and conditions as it shall find to be just and reasonable and with such modifications as it may prescribe * * *."[60]

Section 414 carefully identifies the orders which can have an exemptive effect and carefully defines the scope of any such exemption. The only relief from the operation of the antitrust laws which Congress permitted was such relief as was "necessary" to enable a person to do "anything authorized, approved, or required" by an order under Section 408, Section 409, or Section 412. Neither Section 409, relating to interlocking relationships, nor Section 412, relating to agreements between air carriers, is pertinent to our present problem. For present purposes, then, Congress's mandated supersession extends only "insofar as may be necessary to enable" a person to do something authorized, approved or required by an order under Section 408. Even if it wanted to do so, the Board was without power to exempt anything other than the acquisition of control itself.

An examination of the action actually taken by the Board discloses that it had no intention at any time of stepping beyond that authority.

1. The original control orders

The question principally considered by the Board in ruling on TWA-Toolco's application for approval of the initial acquisition of control was whether Toolco was, in fact, a person engaged in a phase of aeronautics within the meaning of Section 408(a)(5) of the Civil Aeronautics Act (now the Federal Aviation Act). *Transcontinental &*

[60] Contrary to what defendants say, the CAB's authority to investigate pursuant to Section 408(e) of the Act does not relate to violations of "restrictions on control" (Def. br. pp. 71-72) but solely to violations of "any provision of [Section 408(a) of the Act]"—that is, conduct which may be an unapproved acquisition of control.

Western Air, Inc., Control by Hughes Tool Company, 6 C.A.B. 153 (1944) (A-3297 *et seq.*). The Board noted that among the requisites for its exercise of any jurisdiction in the matter was a finding that there was "an acquisition of control" and that the acquiring person was "engaged in a phase of aeronautics" (*id.* at 155-56, A-3301). The Board concluded that Toolco might, under existing contracts, become a dealer in aircraft, if it had not become one already and referred also to Toolco's "developmental and experimental work in aviation," which, however, was not expected to involve production for commercial use. Since it was conceded that there had been an actual acquisition of control, at least four years earlier, the Board found that it had jurisdiction (*id.* at 155-56, A-3301-02).

Finding that the likelihood of TWA's being forced, through the control exercised by Toolco, to purchase more aircraft than its economic operations required was remote in view of the "paternalistic attitude" which Toolco had exhibited up to that time, the Board concluded on the evidence before it that the continuation of the relationship between Toolco and TWA "would not be inconsistent with the public interest" (*id.* at 156, A-3302).

The Board imposed a condition providing that its approval would "be effective" so long as commercial transactions between TWA and Toolco were limited to transactions involving complete items of property, the price of which did not exceed $200 each, with a further limitation that the total annual expenditure involved in any such transactions should not exceed $10,000 (6 C.A.B. at 158, A-3306).

It is obvious that neither the Board nor its staff had the slightest thought that the order issued in this proceeding might possibly constitute an approval and exemption of Toolco's subsequent activities. Toolco's counsel

in that proceeding, in a letter written to the Hearing Examiner at the time, specifically stated:

> "* * * the approval sought by Hughes Tool Company in this case would not constitute a license to permit Hughes Tool Company or TWA to do whatever they desire in the future * * *." (Doc. 178, Ex. B-7, Letter of January 24, 1944, reproduced in Transcript of Record, Nos. 443 and 501, October Term, 1964, Vol. V, at 610)

At the beginning of 1947 TWA and Toolco entered into a Letter Agreement which resulted in a CAB order instituting an investigation. In an opinion reported as *Transcontinental & Western Air, Inc., Further Control by Hughes Tool Co.*, 9 C.A.B. 381 (1948) (A-3311 *et seq.*), the Board concluded that the Letter Agreement constituted an additional acquisition of control for which its approval under Section 408 would be required and that a hearing was necessary (*id.* at 391, A-3331).

Referring to its 1944 order, the Board noted that the opinion upon which the order was based had been "clearly couched in terms of factors then present" and related solely to the degree of control existing at that time (*id.* at 388, A-3325). The Board thought it clear that "we did not intend to, and did not, grant a blanket, unlimited, *in futuro* approval of the relationship between Toolco and TWA," and that an approval of anything other than the acquisition of the degree of control submitted in the first control proceeding "would have been made in clear, unmistakable language" (*id.* at 389, A-3327).

The further investigation culminated in a Board order issued on October 6, 1950, reported as *Trans World Airlines, Inc., Further Control by Hughes Tool Company*, 12 C.A.B. 192 (A-3333 *et seq.*). That opinion and order, only two pages long, did not discuss in detail the reasons for its approval. The Board did note the position taken by public

counsel that the control of TWA theretofore exercised by Toolco had been "detrimental to the interest of the carrier and the public interest," but that "disapproval of the additional stock acquisition would not adequately remedy or mitigate the existing situation," and that since the Board did not have adequate power to deal with the situation, it was left with "no alternative than to approve such additional stock acquisition" (*id.* at 193, A-3334). After setting out the position of public counsel, the Board concluded merely that:

> "The record in this proceeding does not permit us to reach any other conclusion than that reached by the examiner, viz, that the further acquisition of control should be approved as being consistent with the public interest and the requirements of the Act." (12 C.A.B. at 193, A-3334)

The Board accordingly agreed with and adopted the findings, conclusions, and recommended decision of the Examiner.

The Examiner had not considered what effect the acquisition of control might have on competition, either in the aircraft industry or in air transportation. He directed himself almost exclusively to TWA's financial history. In recounting this history, the Examiner noted that from February 1944 until the close of 1946 the management of TWA had made repeated requests of Toolco for approval of plans to finance the carrier's expansion (12 C.A.B. at 201, A-3351), that the principal officers of the carrier were convinced that the sale of equity securities was preferable to large borrowings (*ibid.*, A-3351-52), that there was no evidence that either Hughes or Toolco's chief financial officer, Noah Dietrich, disagreed with the position that additional financing would be necessary (*id.* at 202, A-3353), that Toolco and Hughes repeatedly refused to agree to equity financing (*id.* at 202-04, A-3353-59), that TWA's

financial condition deteriorated rapidly during 1946 (*id.* at 205, A-3359), and that in the closing months of 1946 TWA could not attract any capital and was facing bankruptcy (*id.* at 206, A-3360). Summing up, the Examiner said:

> "• • • whatever were TWA's problems in promoting equity financing to meet its postwar capital needs, the insistence of Mr. Hughes and Mr. Dietrich on debt as a matter of deliberate policy to meet TWA's capital requirements right after the war ended must be condemned." (12 C.A.B. at 222, A-3393)

The Examiner concluded, however, that the additional acquisition of control should nevertheless be approved, citing principally "the manner in which Mr. Hughes and his company rallied to the support of the carrier during the financial crisis of late 1946 and early 1947" (*id.* at 223, A-3395)—the same crisis which had been created by Hughes's refusal to agree to equity financing in the first place. For further details of this episode, see pp. 45-46 *supra*, and TWA Ex. 296, reproduced following p. 46.

The order issued by the Board in 1950 provided only that

> "• • • the additional acquisition of control of Trans World Airlines, Inc., (TWA) by Hughes Tool Company (Toolco), found to exist by the Board's opinion and order of June 30, 1948, (9 C.A.B. 381) be and it hereby is approved, *provided*, that such additional control shall be exercised in accordance with the terms and conditions of the Board's opinion and order, 6 C.A.B. 153, as amended, approving the original acquisition of control of TWA by Toolco." (12 C.A.B. at 193, A-3335)

The reference back to the earlier order and the similarity in language show that this order, like the 1944 order, did not grant a "blanket, unlimited, *in futuro* approval of the relationship between Toolco and TWA" and was not

intended "as an expression of blanket approval of the relationship under consideration."

2. *Subsequent modifications of the control orders*

Subsequent orders of the Board modifying the control order to permit specific transactions do not strengthen defendants' argument. Not only do they not purport to approve the particular transactions causing injury to TWA, for which TWA has been awarded damages (see p. 139 *supra*), they do not even purport to approve any transaction to which Section 408, 409 or 412 applies. It is only orders approving transactions otherwise prohibited by these sections that can give antitrust immunity under Section 414.

Although in most cases the orders were in form amendments to the original order issued under Section 408, this fact could not of itself confer antitrust immunity on transactions referred to in the amendments. Section 408 is specific that Board approval of a transaction to which Section 408 is applicable can only be granted after notice and hearing. *Trans World Airlines, Inc.* v. *Civil Aeronautics Board (Hughes Tool Co., Intervenor)*, 339 F.2d 56, 62 (2d Cir. 1964), *cert. denied sub nom. Hughes Tool Co.* v. *Trans World Airlines, Inc.*, 382 U.S. 842 (1965). No hearing was held in connection with the orders amending the original order.[61] It is obvious on inspection that these subsequent orders merely relaxed the *conditions* which had been attached to the original order.

[61] The Board does have the power under Section 416 to exempt air carriers from the hearing requirements of Section 408. Although the Board acted under Section 416 with respect to three of TWA's equipment purchases from Toolco, Toolco is in no better position as to these orders. Section 416 is not one of the sections referred to in Section 414 and therefore no antitrust immunity could be conferred by any order under Section 416. In any event, Section 416 only permits the Board to grant an exemption to an air carrier and consistent with this these exemptions were granted only to TWA and not to Toolco.

Nor did the issuance of these orders constitute "a process of continuous and comprehensive supervision by the Board" (Def. br. p. 76). As the Board pointed out in its *amicus* brief on the previous review by this Court:

> "Section 408 requires the Board to approve only an 'acquisition of control'; it does not give the Board continuing responsibility for supervision of a controlling person's management of an air carrier." (CAB Memorandum, p. 12)
>
> • • • • •
>
> "• • • since the Act does not impose any duty on the Board affirmatively to monitor and supervise all aspects of the control relationship, the Board's limited authority over Section 408 relationships should not of itself serve to oust the courts from jurisdiction. Indeed, the availability of antitrust or other judicial remedies may be regarded as additional safeguards for the protection of the public interest." (*Id.*, pp. 13-14) (Footnote omitted.)

Each of the modification orders was issued in response to an application describing a discrete transaction. In only one instance does the record show any action by the Board with respect to the application other than the order granting it. That one exception relates to TWA's application on May 10, 1956 for a modification to permit TWA to purchase certain jet aircraft to be manufactured by Toolco. On June 8, 1956 the Board ordered an investigation to determine whether the entry of Toolco into the business of manufacturing jet aircraft would affect the control relationship so significantly as to require a new proceeding under Section 408 (Order E-10360, AX-2149-50). The investigation was ultimately terminated when TWA withdrew the motion for permission to buy the planes (Order E-12604, AX-2425-26).

In every other instance, Toolco or TWA acting under the control of Toolco submitted a brief application, and the

application was granted. Each of the orders was issued in a non-adversary administrative proceeding, without the hearing required by the statute for an order of approval under Section 408.

With the exception of Orders No. E-11432 (June 11, 1957) (AX-2173-74) and No. E-13334 (December 30, 1958) (AX-2188-90), both of which involved transactions in TWA securities potentially increasing Toolco's control,[62] none of these orders used language of approval.[63] As modifications to an order under Section 408, the only conduct which they could approve was an acquisition of control.

---

[62] E-11432 involved a sale of additional TWA stock to Toolco which is commented on at p. 192n.77 *infra*. E-13334 involved several transactions, including a guaranty of certain TWA obligations on terms involving possible payment by TWA to Toolco of amounts due to third parties. In both orders, it was only the additional control which was accorded the language of "approval."

[63] The language used by the Board in modifying or amending the original 1944 *Control Order* took different forms. In the earlier orders—No. 4437 (A-3307-08), No. E-922 (A-3309-10), No. E-2404 (AX-2031-32), No. E-4160 (AX-2048-49), No. E-5324 (AX-2076-77), No. E-8214 (AX-2094-95) and No. E-10300 (AX-2147-48)—the modification or amendment was achieved by ordering the addition to the 1944 *Control Order* of a paragraph reading substantially:

> "That the terms of this order shall not restrict or affect the right [of Toolco or TWA to carry out the transactions described in the motion requesting modification]."

In subsequent orders—No. E-10871 (AX-2157-58), No. E-11432 (AX-2173-74), No. E-13334 (AX-2188-90), No. E-13542 (AX-2202-03), No. E-13873 (AX-2226-27), No. E-14169 (AX-2237-38), No. E-14504 (AX-2245-46) and No. E-14877 (AX-2260-61)—the Board's language, with slight immaterial variation, was

> "That Order 3210, issued October 17, 1944, as amended by subsequent orders, be and it hereby is further amended to permit [the transactions between TWA and Toolco set forth in the motion for modification]."

In Orders No. E-15430 (AX-2287-89), No. E-15561 (AX-2303-05), and No. E-16195 (32 C.A.B. 1363, A-3403 *et seq.*), the modifying language, with slight immaterial variation, read:

> "That the restrictions imposed on transactions between Toolco and TWA by Order 3210, as modified, are further modified to permit TWA to consummate the transactions described * * *."

Except for Order No. E-922 (October 29, 1947) (A-3309-10), which modified the 1944 control order in respect of TWA's purchase of certain Toolco-manufactured radar units at cost, each order involving any acquisition of aircraft or other flight equipment by TWA from Toolco contains a specific provision, as the court of appeals commented (332 F.2d at 610, A-342), that it "shall not be deemed a determination for rate-making purposes of the reasonableness of any of the transactions specified therein," language which is obviously inconsistent with defendants' contention that the terms and conditions of each transaction received full Board approval. The reasonableness or unreasonableness of the terms, it is clear, was not something the Board was required to consider with respect to any of these transactions.

When dealing with the issue of a possible further acquisition of control of TWA by Toolco, the Board adopted a quite different approach. Thus, in Order No. E-11432 the Board ordered that:

> "Any additional acquisition of control of TWA by Toolco as may result from the agreement presented herein, be and is hereby approved, provided that such additional control, if any, shall be exercised in accordance with the terms and conditions of [the original *Control Order*]." (AX-2174)

The slight variation in Order No. E-13334 ("That any additional control of TWA by Hughes as may result from the transactions * * *") (AX-2189) does not seem to have intended any different effect.

The one remaining significant variation is found in Orders No. E-15430, No. E-15561, and No. E-16195 wherein the Board specifically ordered:

> "That TWA be and it hereby is exempted pursuant to Section 416 from the requirement[s] of section 408 to the extent necessary to enable it ['to purchase the instant aircraft and equipment from Toolco, a person engaged in a phase of aeronautics' (No. E-15430, AX-2289), 'to purchase two additional jet aircraft and five engines from Toolco, a person engaged in a phase of aeronautics' (No. E-15561, AX-2304), and 'to consummate the jet aircraft equipment purchases described and set forth in the motion herein' (No. E-16195, 32 C.A.B. at 1366, A-3412)]."

Such explicit exemptions pursuant to Section 416 (49 U.S.C. § 1386) were given to TWA as an "air carrier," not to Toolco.

The statute is plain, and the record could hardly be clearer. Toolco's acquisition of control over TWA was, indeed, approved by the Board, and "insofar as may be necessary to enable" it to consummate that acquisition, Toolco was relieved from the operation of the antitrust laws, and all other restraints of law.

But no part of the conduct held by the courts below to have been in violation of the antitrust laws, no act by which TWA was injured and for which TWA has been awarded damages, was "necessary" to consummate the acquisition. The manner in which Toolco exercised the control it had acquired has had no approval whatsoever, as the CAB clearly and properly stated to this Court in 1965. Defendants neither have been, nor could they be, immunized by the Board from antitrust prosecution for that conduct.

V

Damages were properly awarded for violation of the antitrust laws

Despite the lower courts' rulings, their own wilful default and their own concession as to the sufficiency of the complaint (Def. br. p. 32), defendants have continued to place their principal reliance on legal and factual contentions undercutting the complaint.

The court of appeals considered the evidence and arguments relied on by defendants, and concluded that they did not foreclose the possibility that if TWA had gone to trial, it would have been able to prove an antitrust violation under one or more of six hypotheses consistent with the complaint:

> 1. *The Yellow Cab theory.* This refers to *United States* v. *Yellow Cab Co.*, 332 U.S. 218 (1947), described by the court of appeals as sustaining a complaint alleging "that a company engaged in the

business of manufacturing taxis had established control of a substantial segment of cab operations in four cities and had exploited its control by extracting exclusive purchasing agreements from its owned cabs and taxi companies" (449 F.2d at 66, A-2765). The court of appeals noted specifically that "Toolco has not established to our satisfaction that TWA could not possibly have proven violations analogous to those alleged in *Yellow Cab*. Even if it had, additional specific allegations of antitrust violations in the complaint other than the one which rests on the holding in *Yellow Cab* are not conclusively disproved by Toolco's evidence" (*ibid.*).

2. *Attempting, with unlawful intent, to monopolize a substantial portion of the commercial aircraft market.*

3. *Conspiring to do so.*

4. *Enforcing an illegal boycott.*

5. *Tying adequate financing of TWA to its purchase or lease of jets from Toolco, and vice-versa.* The court of appeals referred on this point to a sentence at pp. 502 and 503 of this Court's opinion in *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394 U.S. 495 (1969), that the economic power required to impose an illegal tie need exist "only with respect to some of the buyers in the market."

6. *Leasing aircraft to TWA on condition that TWA not purchase or lease aircraft from other suppliers.* The cases cited by the court of appeals with respect to this theory were decided under the Clayton Act; and the cases cited with respect to other theories arose under the Sherman Act or the Federal Trade Commission Act (449 F.2d at 68-69, A-2770-71).

The court of appeals did not state that the listed theories of antitrust violation were the only ones open to TWA under the complaint. The complaint contained other theories as well; there were, for example, allegations of an unlawful combination and conspiracy in restraint of trade,

and allegations of an unlawful combination to monopolize (Complaint, par. 9, A-8-9). However, since defendants have concentrated their fire on the theories set forth by the court of appeals, TWA's response deals primarily with these points.

Defendants' attack on the court of appeals decision is grounded on their assertion that all six theories fail because Toolco had acquired a 78 per cent stock interest in TWA with the approval of the CAB (Def. br. p. 89) and because Toolco, according to defendants, was not in competition with manufacturers or suppliers of commercial aircraft (Def. br. p. 100). The latter contention is a disputed question of fact. The former asserts a legal immunity, and is answered first.[64]

A. Toolco's stock interest in TWA conferred no immunity from the antitrust laws

1. The alleged violations did not relate solely to TWA's purchases

Defendants seek to lead the Court to construe the complaint as alleging simply that they violated the antitrust laws by preventing suppliers of aircraft other than Toolco from supplying TWA. The complaint was not so confined and was not so read by the court of appeals.

Accompanying the allegations of unlawful exclusive dealing, boycotting, and tying with respect to TWA's aircraft purchases were allegations concerning the supply of aircraft to others. The allegations of combination, conspiracy and attempt to monopolize and restrain trade related to a number of alternative markets or submarkets or both. These

[64] The contention that the conduct complained of was or could be exempted by the CAB from application of the antitrust laws is disposed of in Point IV *supra*. In their Point V, however, defendants are contending that the very fact of ownership by Toolco of a controlling stock interest in TWA, not unlawfully acquired, renders ordinary antitrust principles inapplicable to Toolco's conduct.

included, in addition to the submarket represented by TWA's purchases, the all-carrier market for all aircraft, the all-carrier market for jet aircraft and the all-carrier market for aircraft for use on certain routes (Complaint, par. 7, A-3-4). These market allegations find support in the decisions in *United States* v. *Yellow Cab Co.*, 332 U.S. 218, 225-26 (1947), and *United States* v. *National City Lines*, 186 F.2d 562, 567-68 (7th Cir.), *cert. denied*, 341 U.S. 916 (1951), holding as possible subjects of monopolization sales of taxicabs to the principal taxi operating companies in certain cities and sales of buses and related products used in public transportation systems in some 45 cities.

In the normal course TWA would have sought to prove that defendants' dictation of TWA's aircraft purchases —in addition to being illegal by itself—was undertaken in implementation of the alleged conspiracies, attempts and combinations affecting the non-TWA markets as well as the TWA market. The proof would have included Toolco's joint program with Convair for development of a jet to be sold to all carriers, and Toolco's own plans to manufacture a jet for sale to all carriers. It would also have embraced defendants' other dealings with Convair, Boeing and Lockheed, and with AVRO and Sud Aviacion, all of which plainly indicated that defendants' interest was not confined to looking after TWA's needs. It would have included the policies of Convair and Boeing against "speculative" orders, which Hughes and Toolco were permitted to circumvent. There would have been little question that Toolco ordered aircraft ostensibly for TWA but kept open the possibility of marketing them to other airlines, in light of Hughes's position in early 1955 that he would buy Boeing 707s only if he could have the first 50 produced (pp. 48-49 *supra*) and of such evidence as Toolco's letter of November 1, 1957, quoted at pp. 49-50 *supra*, in which Toolco advised TWA that it had "ordered a number of Boeing Model 707-

131, Boeing Model 707-331 and Convair Model 880 jet aircraft," but "can not yet commit itself to TWA with respect to these aircraft" (A-194). The Special Master, like the court of appeals, comments on other evidence supporting this conclusion (Brownell Report, pp. 29-32; A-1966; 449 F.2d at 68, A-2768-69). Other episodes as to which TWA had some information before the default are listed at pp. 53-56 *supra.*

The ability to place orders ostensibly for TWA but not necessarily for use by TWA enabled Toolco to establish a unique position as a source of jet aircraft to other airlines on short notice. Through discovery TWA would have had opportunity to prove whether this unique position was acquired pursuant to an unlawful conspiracy or combination to restrain trade by establishing Toolco as a favored intermediary with exclusive privileges. Taking advantage of their lawfully-acquired exclusive control over TWA's aircraft purchases in order to obtain an advantage over others in the competitive business of supplying aircraft would have been illegal under the rule of *United States* v. *Griffith,* 334 U.S. 100, 107 (1948). Alternatively, Toolco's position as an intermediary might have been established in furtherance of an unlawful conspiracy, combination or attempt to monopolize with the specific intent, as alleged, "[t]hat Toolco would become a dominant source of supply of jet-powered aircraft to air carriers" (Complaint, par. 10, A-9). Such an intent was far from unrealistic. Desire to avoid long term commitments based on necessarily uncertain traffic estimates could cause airlines to prefer Toolco over manufacturers as a source of supply of aircraft. And as Special Master Brownell observed, long lead-times for delivery from manufacturers could easily give Toolco substantial competitive advantages in dealing with airlines temporarily short of aircraft (Brownell Report, p. 31; A-1966). Indeed, Toolco made more than two million dollars

from supplying jets to Pan American and Northeast (p. 52n. 21 *supra*) and might have reaped still larger gains from the Convairs it ordered if demand had not slackened and TWA had not refused to play any further part as a captive backstop market for Toolco's aircraft after it passed out of Toolco's control at the end of 1960.

Defendants have no basis whatever for claiming—if in fact they do claim—that their use of a controlled corporation in a conspiracy or combination to monopolize or restrain trade deprives such an undertaking of its unlawful character.

This Court has often considered cases in which a controlled company was used to implement an illegal conspiracy or combination to monopolize or restrain trade. In *United States* v. *Grinnell Corp.*, 384 U.S. 563, 571 (1966), a parent corporation was held to have obtained monopoly power over a relevant market through its acquired companies. In *Perma Life Mufflers, Inc.* v. *International Parts Corp.*, 392 U.S. 134, 141-42 (1968), the Court rejected a contention that a parent corporation and two subsidiaries, as part of a single business entity, were "entitled to cooperate without creating an illegal conspiracy" under the Sherman Act. The Court stated that since the defendants "availed themselves of the privilege of doing business through separate corporations" the fact of common ownership could not save them from any of the obligations that the law imposes on separate entities (*id.* at 141). In *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394 U.S. 495, 496-97, 498 (1969), a manufacturer was alleged to have used its wholly-owned subsidiary's ability to extend credit as a means to force purchase of its products, and the allegations were sufficient to entitle plaintiff to go to trial. In *United States* v. *Yellow Cab Co.*, 332 U.S. 218 (1947), the complaint upheld alleged in part a combination and conspiracy among related

corporations to restrain and monopolize commerce in the sale of motor vehicles for use as taxicabs to the principal operating companies in certain cities. In all these cases, subsidiaries were used as instruments of carrying out the violations alleged or proven. No exoneration was found by virtue of the use of a subsidiary, rather than an independent corporation, as such an instrument.[65]

Because the complaint alleged in substance that defendants used TWA's purchases to implement an unlawful plan directed at markets embracing more than TWA, and TWA was injured in the course of carrying out this plan, the existence of Toolco's control over TWA was not of legal significance so far as these allegations were concerned. The issues for trial with respect to this part of the complaint were rather the true character of defendants' purposes and goals, the success achieved, probability of future success if TWA had not become emancipated, and the full details of the dealings they kept secret from TWA. Defendants, having elected to default, cannot now be heard to claim that they did not intend to effect, did not do anything to further, and could not have successfully carried out, any unlawful combination, conspiracy and attempt directed at the all-carrier market or some submarket not confined to TWA.

Defendants' references to *Hiland Dairy, Inc.* v. *Kroger Co.*, 402 F.2d 968, 974-75 (8th Cir. 1968), *cert. denied*, 395 U.S. 961 (1969) (Def. br. pp. 45, 103, 108, 110), a case refusing to permit a trial when an insufficient probability of success of monopolization was shown, are inapposite in this

[65] *See also Perkins* v. *Standard Oil Co. of California*, 395 U.S. 642, 647-48, 650-51 (1969); *International Boxing Club of New York, Inc.* v. *United States*, 358 U.S. 242, 247-48 (1959); *United States* v. *Paramount Pictures, Inc.*, 334 U.S. 131, 140 (1948); *United States* v. *National Lead Co.*, 332 U.S. 319, 325-26 (1947); *United States* v. *National City Lines, Inc.*, 186 F.2d 562, 567-68 (7th Cir.), *cert. denied*, 341 U.S. 916 (1951); *United States* v. *General Motors Corp.*, 121 F.2d 376, 397-98 (7th Cir.), *cert. denied*, 314 U.S. 618 (1941).

case where discovery was not completed, and have no pertinence to the allegations of the complaint concerning restraints of trade short of monopolization. Plaintiffs in *Hiland* were seeking to enjoin the defendant grocery chain from entering their market and competing with them by building its own dairy; no actual injury was claimed or damages sought.[66]

2. *Defendants' foreclosure of the TWA market was not beyond the reach of the antitrust laws*

Although TWA's damage award may stand entirely upon the injuries alleged and proved to have occurred as a result of the alleged combination, conspiracy and attempt directed at markets not confined to TWA, the award may also stand on the basis of the narrower allegations which relate to the TWA market.

These allegations include the alleged combination and conspiracy to boycott, that is, to restrain others from access to TWA, as illustrated by Hughes's instructions: "• • • [do] not work with Douglas" (A-1806). The boycott allegations are supplemented by allegations of exclusive dealing, unlawful tying, and other unreasonable restraints of trade. The specific conduct challenged is epitomized by the day-to-day leases described in paragraph 20 of the complaint (A-13-14). Nineteen TWA jets in 1959 and 1960

[66] Defendants contend that they cannot be said to have achieved a "dangerous probability" of successfully monopolizing a market not confined to TWA because they had not even entered such a market (Def. br. p. 103). Paragraph 3 of the complaint alleges that they did enter the market (A-2), and paragraph 10 charges they intended to achieve dominance (A-9-10). The question of probability of success in the absence of TWA's emancipation was for determination at trial after full discovery. It related only to the charge of attempted monopolization under Section 2 of the Sherman Act, and not to the charges of unlawful combination and conspiracy to restrain trade under Section 1. *See United States v. Socony-Vacuum Oil Co.*, 310 U.S. 150, 224n. 59 *et seq.* (1940).

were subject to these leases. The leases are alleged to have been made on the condition that TWA would not deal with other suppliers of aircraft. The leases were a means of implementing the alleged combination and conspiracy to boycott other aircraft suppliers in violation of Section 1 of the Sherman Act (Complaint, pars. 9-10, A-8-10). At the same time they were exclusive dealing agreements in violation of Section 3 of the Clayton Act, because of the amount of commerce involved, and the relative importance of TWA as a market for aircraft suppliers. *Standard Oil Co. of California* v. *United States*, 337 U.S. 293, 295-97 (1949), and *International Salt Co.* v. *United States*, 332 U.S. 392, 394-96 (1947), found violations of Section 3 of the Clayton Act in similar situations affecting a considerably smaller volume of commerce.

If, as alleged (Complaint, par. 8, A-4-8), the TWA market was large or distinct enough to constitute a separate submarket, the same conduct also constituted attempted and actual monopolization as well as a conspiracy to monopolize. On this aspect of the case there can be no question whether the alleged attempt at monopoly had a sufficient probability of success. It was totally successful.

Defendants seek to justify their successful monopolization on the ground that a "parent" is entitled to control the purchases of its "subsidiary." The phraseology in which this argument is cast tends to obscure the true relationship between TWA and Toolco. TWA was not a subsidiary corporation in the sense of being a creature of Toolco established as a separate corporation to conduct one aspect of Toolco's business. Like the controlled corporations involved in *Timken Roller Bearing Co.* v. *United States*, 341 U.S. 593, 595 (1951), TWA was not even wholly-owned by defendants. Like the controlled corporations involved in *Kiefer-Stewart Co.* v. *Seagram & Sons, Inc.*, 340 U.S. 211, 213 (1951), TWA was an independent business entity, sepa-

rately engaged in its own business, and held out to the public as a separate business. Like a number of the controlled companies involved in *United States* v. *Yellow Cab Co.*, 332 U.S. 218, 221-22 (1947), TWA came under Toolco's control as a result of stock acquisition, Toolco having acquired 78 per cent of TWA's common stock between 1939 and 1960; the remaining 22 per cent being held by approximately 13,000 public stockholders. Even if the relationship between a parent corporation and a wholly-owned subsidiary established for reasons of convenience were immune from antitrust inquiry, the presence of other substantial interests would draw such immunity into question. *Cf. Case-Swayne Co.* v. *Sunkist Growers, Inc.*, 389 U.S. 384, 395-96 (1967). Where an effect on third parties is present, transactions between such affiliates are by no means outside the scope of the antitrust laws. *Perkins* v. *Standard Oil Co.*, 395 U.S. 642, 648 (1969). Accordingly, on whatever basis defendants urge treating parent and subsidiary corporations as a single entity for antitrust purposes, despite the rule of *Perma Life Mufflers, Inc.* v. *International Parts Corp.*, 392 U.S. 134, 141-42 (1968), they should be obliged to frame their contention in light of the actual relationship between Toolco and TWA.

It follows that on this aspect of the case the question of law posed by defendants boils down to whether, after acquiring a controlling interest, but not sole ownership, in a regulated airline, the acquiring company is privileged to foreclose from other suppliers substantial markets represented by the acquired company's needs.

Foreclosure of substantial markets from competition is one of the most anticompetitive practices possible. Such foreclosure is described as "unreasonable, *per se*." *International Salt Co.* v. *United States*, 332 U.S. 392, 396 (1947); *Northern Pacific Ry.* v. *United States*, 356 U.S. 1, 6 (1958); *Fortner Enterprises, Inc.* v. *United States Steel Corp.*,

394 U.S. 495, 501 (1969). It is so inconsistent with the purposes of the antitrust laws that the mere probability of foreclosure of a substantial share of a relevant market suffices to ban an acquisition under Section 7 of the Clayton Act. *Ford Motor Co.* v. *United States,* 405 U.S. 562, 567n. 4 (1972); *Brown Shoe Co.* v. *United States,* 370 U.S. 294, 323 & n. 39 (1962). Indeed, when Congress decided in 1914 to supplement the Sherman Act with specific prohibitions, and to define practices which should be arrested in their incipiency, before becoming full-blown violations of the Sherman Act, it outlawed sales or leases of goods on condition that the purchaser or lessee not deal with a competitor of the seller or lessor, where the effect "*may be* to substantially lessen competition or *tend to* create a monopoly," Clayton Act, Section 3 (15 U.S.C. § 14) (emphasis added). In *Standard Oil Co. of California* v. *United States,* 337 U.S. 293, 305, 314 (1949), requirements contracts covering 6.7 per cent of gasoline sales in a seven-state area were held illegal under this standard without proof of actual or probable diminishment of competitive activity.

Where, as here, foreclosure of competitive activity from substantial markets has actually been accomplished, there is little doubt that the antitrust laws have been violated. In *Fortner Enterprises, Inc.* v. *United States Steel Corp.* a subsidiary sold its credit only on the condition that borrowers purchase a certain number of prefabricated houses from its parent. This practice was attacked under Sections 1 and 2 of the Sherman Act. The dollar volume of commerce which the Court noted had been allegedly foreclosed by this practice in three years was about $9.1 million (394 U.S. at 502). The Court held that if the borrower could prove that the subsidiary had a competitive advantage over suppliers of credit, thus indicating that the housing sales were not made on their merits but as a result of an extraneous influence, he was entitled to

judgment on the ground that the foreclosure was *per se* illegal. If he could not do so, he was still entitled to further examination of his more general allegations that parent and subsidiary conspired for the purpose of restraining competition and acquiring a monopoly in the market for prefabricated houses. (*Id.* at 499-500) The only difference between *Fortner* and this case is that in *Fortner* the borrower was initially kept from protesting against its exploitation by financial need while TWA was initially kept in line by Toolco's voting power. Defendants first used Toolco's voting power to block financing of aircraft from sources other than Toolco, and then conditioned such financing on the purchase or leasing of aircraft solely from Toolco.

The voting power made available to Toolco by virtue of CAB approval can be regarded as analogous to the land grants made available by congressional grant to the Northern Pacific Railway. When the railroad later obliged purchasers or lessees of granted land to favor the railroad over other carriers, it was held to have used its lawfully acquired real estate rights to unlawfully foreclose competition for the transportation needs of purchasers and lessees, and to have violated Section 1 of the Sherman Act. *Northern Pacific Ry.* v. *United States*, 356 U.S. 1, 7-8 (1958).

United States v. *Columbia Steel Co.*, 334 U.S. 495 (1948), relied on by defendants though later confined to its special facts by *United States* v. *First National Bank & Trust Co.*, 376 U.S. 665, 672 (1964), confirms, contrary to defendants' argument (*e.g.*, Def. br. pp. 91, 97-98, 99) that acquiring corporations do *not* have a privilege to foreclose markets representing the needs of companies they lawfully acquired. The Court in *Columbia Steel* held the acquisition lawful noting that the degree of foreclosure which would be effected by exclusive dealings between the acquiring and acquired companies—three per cent or less of

the relevant competitive market—was not enough to warrant invalidating the acquisition (334 U.S. at 526-27). But it left open the possibility that exclusive dealings between parent and subsidiary could later become illegal despite the lawfulness of the acquisition. In holding that the use of stock control to force exclusive dealing was lawful in the circumstances, the Court added an important qualification: "at any rate until the effect of such control is to unreasonably restrict the opportunities of competitors to market their product" (*id.* at 524).

Thus *Columbia Steel* recognizes that foreclosure of a controlled company's purchases may be illegal where the effects are serious enough, and this is precisely the position TWA has taken throughout these proceedings.

The outcome of most foreclosure cases (excepting cases of predatory intent and *per se* illegality) turns on the relative and absolute size of the foreclosure. It would be absurd to contend that every exclusive dealing arrangement between parent and subsidiary is illegal, and TWA does not do so. No such contention is necessary to TWA's case in view of the enormous size of the market its aircraft requirements represented. Paragraph 8(f) of the complaint alleges that during the years 1958-1960, when defendants regulated its supply of jets with day-to-day leases, the TWA market for jets exceeded $100,000,000 (A-6). This degree of foreclosure far exceeds in absolute amount that shown in any of the foreclosure cases decided by this Court. In share of relevant market, the foreclosure is well in excess of the ten per cent share represented by a single customer in *Ford Motor Co.* v. *United States,* 405 U.S. 562, 568 (1972), and the 6.7 per cent share represented by numerous customers in *Standard Oil Co. of California* v. *United States,* 337 U.S. 293, 295 (1949). The exact market share foreclosed obviously depends upon which definition of the market and which statistical data would have been

adopted at trial, but on the basis of the data contained in paragraph 8 of the complaint, it is likely that the evidence would have shown TWA's requirements represented no less than 15 per cent of the all-carrier market, and could have been anywhere up to 100 per cent of a more specialized submarket.

Unlawful foreclosure need not be accomplished by abuse of a lawfully acquired competitive advantage, as in *Fortner* and *Northern Pacific*. It may come about from predatory conduct designed to eliminate competition, as in *Lorain Journal Co.* v. *United States*, 342 U.S. 143, 154 (1951), and *Schine Chain Theatres, Inc.* v. *United States*, 334 U.S. 110, 117 (1948); from bargaining to achieve exclusive or preferential rights, as in *United States* v. *Griffith*, 334 U.S. 100, 109 (1948), and *Klor's, Inc.* v. *Broadway-Hale Stores, Inc.*, 359 U.S. 207, 210 (1959), or from consolidating buying power, as in *United States* v. *Paramount Pictures, Inc.*, 334 U.S. 131, 154-55 (1948), and *United States* v. *Crescent Amusement Co.*, 323 U.S. 173, 181 (1944). Regardless of the method employed, and certainly where an intent to suppress or prevent competition by third parties is alleged, foreclosing a substantial market presents an issue for trial under the antitrust laws. The method used for foreclosure affects only the choice among the statutory provisions which may be invoked and the degree of proof required to prevail at trial. The cases cited above indicate that a plaintiff's burden of proof with respect to adverse effect on competition is reduced or removed if he can prove a predatory conspiracy in violation of Section 1 of the Sherman Act, an exclusive dealing agreement within Section 3 of the Clayton Act, a boycott, tying arrangement or other practice subject to the *per se* rules developed under Section 1 of the Sherman Act, or monopolization subject to Section 2 of the Sherman Act. The allegations in the complaint herein were broad enough to embrace all the methods of foreclosure described, and invoked all the statutes cited.

Defendants' position that Toolco acquired the legal right to foreclose a substantial market from competition by making a stock acquisition with CAB approval falls of its own weight in light of these precedents.

Defendants argue, however, that this Court has read *United States* v. *Yellow Cab Co.*, 332 U.S. 218 (1947), to mean that parent-subsidiary dealings cannot be unlawful if the acquisition of the subsidiary by the parent was lawful. Cited for this novel proposition—which may be described as one of *per se* legality, not subject to challenge—is *United States* v. *Columbia Steel Co.*, 334 U.S. 495 (1948), discussed at pp. 160-61 *supra* (Def. br. pp. 98-99). Nowhere in *Columbia Steel* is there any such proposition. Indeed, the Court emphasizes its prior holding that "the fact that the conspirators were integrated did not insulate them from the act" (334 U.S. at 522). It repeats the same thought a few lines later, quoting from *Yellow Cab:* "the common ownership and control of the various corporate appellees are impotent to liberate the alleged combination and conspiracy from the impact of the Act" (*id.* at 523). This principle has been reasserted in subsequent decisions of the Court. *Kiefer-Stewart Co.* v. *Joseph E. Seagram & Sons*, 340 U.S. 211, 215 (1951); *Timken Roller Bearing Co.* v. *United States*, 341 U.S. 593, 598 (1951); *Perma Life Mufflers, Inc.* v. *International Parts Corp.*, 392 U.S. 134, 141-42 (1968). No foundation whatever appears in any of these cases for defendants' proposition that this Court has "recognized repeatedly" that affiliation can immunize otherwise unlawful foreclosure (Def. br. p. 91). Particularly inconsistent with this proposition is the holding in *Timken* permitting affiliation to continue but enjoining unlawful agreements between the affiliates.[67]

[67] *Standard Oil Co. of California* v. *United States*, 337 U.S. 293 (1949), is said by defendants to recognize "that an exclusive dealing arrangement * * * could have been imposed on company agents" (Def. br. p. 91). This case challenged only exclusive supply contracts with independent dealers, and did *not* recognize that such an arrangement

The only other authority cited by defendants to support their contention that post-acquisition foreclosure is privileged is the judgment for defendants after trial in the *Yellow Cab* case. This judgment, according to defendants, is "based on findings that the acquisition of the operating companies had not been illegal" (Def. br. p. 99n. 38). Quite another impression is gained from the decision of the district court. After making the findings referred to, the court proceeds at length to consider the question whether any unreasonable restraint was shown in using operating subsidiaries as captive markets after their acquisition. The court concluded that the evidence showed that the business judgment of the subsidiaries had been that the parent's cabs were built differently and suited their purposes better than other cabs, and the cabs had not been bought under compulsion (80 F.Supp. at 943-44). Accordingly, the findings pertinent here were to the effect that no foreclosure had been proved. The decision cannot in any sense be regarded as holding that foreclosure subsequent to a lawful acquisition actually occurred but was privileged.

It must be noted that if defendants were correct in their novel view that exclusive dealing between parent and subsidiary is *per se* lawful, and privileged against attack on antitrust grounds regardless of the effect on commerce, a number of unfortunate consequences would follow. One would be that conglomerate and other large diversified

---

could have been imposed on company agents. The Court stated instead that insofar as use of company agents or acquisition of dealers might result "in a tendency to monopoly they might encounter the anti-monopoly provisions of the Sherman Act" (337 U.S. at 310). Similarly, *United States* v. *Arnold, Schwinn & Co.*, 388 U.S. 365 (1967), said by defendants to distinguish between independent distributors and agents in determining the propriety of restrictions on resale (Def. br. pp. 91-92), holds territorial and customer restrictions illegal *per se* where independent distributors have purchased the goods concerned, and otherwise subject to attack if unreasonable (388 U.S. at 379-80). Neither case supports the rule of *per se* legality that defendants, by virtue of their decision to forestall inquiry into reasonableness, are compelled to espouse here.

integrated companies would no longer find it necessary to permit outsiders to bid against their affiliates as suppliers to their operating companies. Another would be that enforcement agencies, in order to open up substantial markets foreclosed to outsiders as a result of acquisition, would have to proceed against the acquisition, instead of directly against the foreclosure. It is true that *United States* v. *E. I. du Pont de Nemours & Co.*, 353 U.S. 586, 596-98 (1957), permits invocation of Section 7 of the Clayton Act for this purpose, even though the acquisition has taken place many years previously. However, it is rarely as practicable to proceed against an old acquisition as against a current restraint. Not only are there difficulties in securing witnesses and documentary evidence relating to long-past transactions, but issues and remedies are more complex, and possibilities for delay correspondingly greater. These factors may explain the fact that practically no cases have been brought by the Department of Justice to challenge old acquisitions under the *du Pont* case. The Department has in practice evidently preferred to proceed against current restraints, which it would be severely handicapped in doing under the rule of law proposed by defendants.

Defendants' ultimate position is that a subsidiary, injured by its parent's intentional violations of the antitrust laws may not, when emancipated, sue its parent for those wrongs (Def. br. pp. 93-94 & n. 31). They admit that a subsidiary may challenge its parent as to the legality of its acquisition, but assert that the subsidiary's voice must be thereafter stilled. These assertions, although categorically put, are not based either on authority or on any legitimate public policy.[68]

Contrary to defendants' suggestions, it is generally settled that minority shareholders in a less-than-wholly-

[68] Defendants do suggest (Def. br. p. 94n. 33) that the volume of litigation would be limited if their views prevailed. No proper purpose is served, however, by diminishing the amount of meritorious litigation.

owned subsidiary may bring a derivative antitrust action against a controlling company for anticompetitive practices, engaged in subsequent to an acquisition, which have injured the subsidiary. *Gottesman* v. *General Motors Corp.*, 414 F.2d 956 (2d Cir. 1969); *Rogers* v. *American Can Co.*, 305 F.2d 297, 307-08 (3d Cir. 1962); *Ramsburg* v. *American Investment Co. of Illinois*, 231 F.2d 333, 339 (7th Cir. 1956); *Fanchon & Marco, Inc.* v. *Paramount Pictures, Inc.*, 202 F.2d 731 (2d Cir. 1953); *Kogan* v. *Schenley Industries, Inc.*, 20 F.R.D. 4 (D. Del. 1956); *cf. Ross* v. *Bernhard*, 396 U.S. 531, 539-40 (1970). Any other result would be logically inconsistent with the right of minority stockholders to assert other derivative rights of action, and would deprive them of an important weapon against exploitation. It would also deprive the public of the protection conferred by the private right of action to enforce the antitrust laws. *Zenith Radio Corp.* v. *Hazeltine Research, Inc.*, 395 U.S. 100, 130-31 (1969). The hollowness of defendants' position is illustrated by their primary reliance on a law review article which expressly confines its discussion to wholly-owned subsidiaries and subsidiaries, unlike TWA, in which no more than 5 per cent of the stock is held by outside interests. Willis & Pitofsky, *Antitrust Consequences of Using Corporate Subsidiaries*, 43 N.Y.U.L. Rev. 20, 22 (1968). The authors particularly note that "[a]dditional and considerably different antitrust considerations are brought into play by the existence of more substantial minority interests [citing *United States* v. *E. I. du Pont de Nemours & Co.*, 353 U.S. 586 (1957) (involving an acquisition of stock resulting in preferential treatment of the acquiring company as a supplier)], but these problems are beyond the scope of this article" (*ibid.*).

B. Defendants' factual defenses to the antitrust claims are inadequate

Defendants assert that any of the six antitrust theories which the court of appeals found they had not disproved (449 F.2d at 68-69, A-2770-71), which are not undercut by the CAB's approval of Toolco's acquisition of control of TWA, are destroyed by the "fact" that Toolco was not in competition with manufacturers or suppliers of commercial aircraft (Def. br. p. 89). Defendants first expressly concede for this purpose that Toolco was engaged in the supply of aircraft to air carriers (Def. br. p. 100) but then urge that the complaint can be read as alleging that it was supplying only aircraft ordered for TWA and that it was not engaged "in competition with manufacturers or suppliers" (*ibid.*).

Defendants are attempting to draw too fine a line. No one would read the complaint as alleging that Toolco was engaged in such supply except for profit, or would assume that aircraft manufacturers are not similarly engaged. Convair believed Toolco had gone into competition with it by attempting to sell Convair 880s to Capital Airlines (see p. 51 *supra*) and other aircraft manufacturers would have been justified in drawing similar conclusions. *Cf. United States* v. *Richfield Oil Corp.*, 99 F. Supp. 280, 285, 297 (S.D. Cal. 1951), *aff'd*, 343 U.S. 922 (1952), in which an oil company was in competition with manufacturers of tires and other products purchased by it.

But the short answer to defendants' contention in the present posture is that the complaint, despite defendants' attempt to construe it narrowly, plainly alleges not only that they were engaged in supplying aircraft to "air carriers," in the plural, but also that they sought to restrain and monopolize one or more aircraft markets (Complaint, pars. 7-10, A-3-10); inherent in this allegation is the allegation that they were doing so in competition with other

suppliers. The available evidence of record that Toolco was engaged in supplying aircraft to other airlines besides TWA is fully consistent with these allegations. This evidence is developed more fully at pp. 49-56 *supra* and will not be repeated here.

1. Absence of competition is no defense

It is appropriate to note, however, the legal gap in defendants' argument. If Toolco were entitled to assert that it was a supplier of aircraft only to TWA, and did not compete with other suppliers, it would not follow that "the Sherman Act charges must fail" (Def. br. p. 103). The Sherman Act charges arise under Section 1 and Section 2. Violation of Section 2 would have been plainly made out, if, at trial, the TWA market had been established as a separate submarket or as a sufficiently large proportion of a relevant submarket so that control over the TWA segment constituted monopolization of the entire submarket. Defendants are consequently in no position to state at this point that they could not have violated Section 2. If Toolco had chosen not to compete for other markets or Toolco's domination over its market was so complete that no other supplier dared to compete with it, this could hardly vindicate Toolco of Section 2 charges. The business of a single important customer may be a subject of monopolization, and refusing to permit others to bid for the business has been held unlawful. *United States* v. *Klearflax Linen Looms, Inc.*, 63 F. Supp. 32, 39-40 (D. Minn. 1945). This court has twice found foreclosure of the business of a single substantial customer to be a ground for invalidating stock acquisitions under the Clayton Act. *Ford Motor Co.* v. *United States*, 405 U.S. 562, 568-69 (1972); *United States* v. *E. I. duPont de Nemours & Co.*, 353 U.S. 586, 607 (1957). It has also been held that there is "no reason to differentiate between 'line' of commerce in the context of the Clayton Act and 'part' of commerce for purposes of the Sherman

Act." *United States* v. *Grinnell Corp.*, 384 U.S. 563, 573 (1966). The reasons for holding the business of a carrier such as TWA to be an appropriate subject of monopolization are all the stronger in light of the fact that entry into TWA's business is regulated by the CAB, thus tending to limit the number of alternative outlets for large jet aircraft.

With respect to Section 1 of the Sherman Act, the absence of competition between manufacturer and distributor does not make a violation impossible. An agreement between a manufacturer and a distributor that allocates customers between them may violate the Sherman Act. In *White Motor Company* v. *United States*, 372 U.S. 253, 264 (1963), this Court directed a trial in such a case, and in *United States* v. *Arnold, Schwinn & Co.*, 388 U.S. 365, 379-80 (1967), the Court held that such a practice was *per se* unlawful if distributors took title to the goods involved, and in other situations was to be examined under the "rule of reason."

Therefore, even if defendants' version of the facts were correct, they could hardly argue that by avoiding competition with manufacturers through arrangements by which manufacturers would deal with them, to the exclusion of TWA, for aircraft which in many instances were to be resold to other carriers, defendants necessarily avoided any violation of the Sherman Act. As the arrangement resulted in injuring TWA in its competitive race with other airlines, the situation is more analogous to that presented in *Klor's, Inc.* v. *Broadway-Hale Stores, Inc.*, 359 U.S. 207 (1959), in which the Court upheld the validity of the complaint by a department store that another department store had induced suppliers to refuse to sell directly to it.

Defendants have repeated here their oft-rejected claim that the charge of conspiracy to monopolize fails because of a shortage of alleged conspirators (Def. br. pp. 104-06). The claim is pointless because the allegations include unlaw-

ful monopolization and attempted monopolization, neither of which require more than one party, *Continental Ore Co.* v. *Union Carbide & Carbon Corp.*, 370 U.S. 690, 708-09 (1962), as well as unlawful combination, not necesarily rising to the level of a conspiracy. *See United States* v. *Parke, Davis & Co.*, 362 U.S. 29, 44, 49 (1960). Moreover, the claim that Atlas, charged with being a co-conspirator, had so little to do with the case that it could not have been made a defendant is nonsense in light of the available evidence of broad and close collaboration between Atlas, Toolco, Odlum and Hughes (pp. 57-59 *supra*).

In any event, the claim is plainly untenable in light of *Perma Life Mufflers, Inc.* v. *International Parts Corp.*, 392 U.S. 134, 141-42 (1968), and *Albrecht* v. *Herald Co.*, 390 U.S. 145, 150n. 6 (1968). Hughes, one of the world's richest and most powerful men whose holdings in Toolco were and are only part of a broad empire, could certainly have been found upon a trial to be more than a mere agent of Toolco. *See Nelson Radio & Supply Co.* v. *Motorola, Inc.*, 200 F.2d 911, 914 (5th Cir. 1952), *cert. denied*, 345 U.S. 925 (1953). It appears plain that Hughes had "independent economic significance," the test of capacity to be a conspirator propounded in *Sunkist Growers, Inc.* v. *Winckler & Smith Citrus Products Co.*, 370 U.S. 19, 29 (1962). Moreover, factual issues as to the roles played by antitrust conspirators are not to be resolved merely on the assertions of the accused conspirators alone. *Poller* v. *Columbia Broadcasting System, Inc.*, 368 U.S. 464, 468-73 (1962). As the court of appeals observed in the instant case:

> "Whether TWA might have proven such a conspiracy would have turned on the nature and weight of technical and secretive evidence bearing on the independent economic significance of each of the parties and also on subjective questions of intent and attempt. Toolco's conduct barred even initial exploration of these crucial factual issues." (449 F.2d at 69, A-2771)

2. *The correct legal test was used by the court of appeals*

As a postscript to their contention that Toolco in fact did not compete with aircraft manufacturers and suppliers, defendants assert that the court of appeals used a Clayton Act test rather than a Sherman Act test in upholding TWA's claim (Def. br. pp. 106-12). It is contended that the court erred in attaching relevance, for Sherman Act purposes, to the possibility that Toolco possessed "independent competitive significance" and was "a potential commercial manufacturer" of aircraft.

If standards of proof to be applied upon trial were relevant here, Clayton Act standards would be the only appropriate standards as to those allegations of the complaint arising under Section 3 of the Clayton Act. In fact, the court of appeals cites Clayton Act authorities in conjunction with these allegations in the passage cited at p. 150 *supra*. It cites Sherman Act authorities with respect to the remaining allegations. Some of these happen to be allegations of *per se* violations of the Sherman Act, and as to such violations the requirements of proof are even less onerous than under the Clayton Act. *See United States* v. *Topco Associates, Inc.*, 405 U.S. 596, 606-10 (1972); *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394 U.S. 495, 501-04 (1969). There is accordingly no substance to defendants' argument that the court of appeals misconceived the applicable requirements of proof. Since, however, the question presented was not whether TWA had proved these violations, but whether defendants had sustained the burden of establishing that no such violations could possibly be proved, defendants are attacking a straw man.

For the rest, defendants are merely carping at language which they have chosen to misread. The courts of appeals refers to "independent economic significance" in two contexts, both correct, and both clear to any reader willing to

understand the opinion. The likelihood that Hughes and Toolco each had "independent economic significance," and hence the capacity to conspire with one another, was significant in disposing of defendants' argument that the allegations of conspiracy failed for want of conspirators (449 F.2d at 69, A-2771). See pp. 169-70 *supra*. Toolco's "independent economic significance" from TWA, and its potential for entering manufacturing, was also significant in disposing of defendants' principal argument to the court of appeals (see, *e.g.*, Defendants' brief of November 16, 1970, pp. 66-67, 82, 92, Annex A *passim*) that Toolco could *not* be regarded as of competitive significance in the commercial aircraft market, because it was never more than a conduit for TWA (449 F.2d at 67-68, A-2767-70).

The court rightly concluded that proof at a trial—prevented by Toolco's conduct—might well not have supported defendants' position (449 F.2d at 67, A-2767). It did not hold that Toolco's "independent economic significance"—independent, that is, from TWA—and its capacity to become a manufacturer, in and of themselves, would suffice to enable TWA to establish a Sherman Act violation. Instead, the court held that TWA might have proved these facts, along with others, in support of the complaint, and that if TWA had done so, the court could not conclude that it would have been unable to prevail on at least one of the six theories listed (*ibid.*, A-2767).

When the court of appeals' opinion is read as a whole, therefore, it is plain that it did not import into the law any dangerous doctrine, as defendants suggest. It merely determined on a review of the record that defendants had not affirmatively disproven TWA's allegations in such manner, as the court noted, to require grant of summary judgment for Toolco "when its own default barred even initial exploration of the crucial factual issues" (449 F.2d at 69, A-2772).

VI

The special master and the courts below found that TWA, in proving the amount of its damages, demonstrated that each item recovered flowed from the allegations of unlawful conduct and resultant injuries admitted by defendants' default

Under the heading "proximate cause" defendants are seeking to circumvent the record in this case.

Defendants tried and lost before Special Master Brownell the factual issue whether TWA's losses resulted from causes independent of their admitted wrongful conduct. Both the district court and the court of appeals held that the evidence fully supported the Special Master's findings as to damages (pp. 181-82 *infra*). The court of appeals said:

> " • • • TWA did not rely only on its default judgment but introduced evidence linking each component of the damages claimed to the pleaded illegal acts of Toolco and injuries to TWA." (449 F.2d at 72, A-2778)

Under this Court's two-court rule, factual determinations below do not require review here. "A court of law, such as this Court is, rather than a court for correction of errors in fact finding, cannot undertake to review concurrent findings of fact by two courts below in the absence of a very obvious and exceptional showing of error." *Graver Tank & Mfg. Co.* v. *Linde Air Products Co.*, 336 U.S. 271, 275 (1949).

A. TWA proved damages within the rule of "proximate cause" applicable in this defaulted case

The possibility that Toolco's default might deprive TWA of necessary evidence not only on the issue of whether defendants violated the antitrust laws but also on the issue of

the extent of TWA's injuries drew this Court's attention in 1965. The answer to Mr. Justice White's question—"How can you prove how much you have been damaged without showing what you have been damaged from?" (Def. br. p. 117)—is that sufficient evidence was available to TWA to prove some of its damages—those related to being deprived of timely delivery of an adequate number of jets on direct purchase from the manufacturers—but not all. The evidence of Rummel, vice president of TWA, and Connelly, vice president of Boeing, established to the Special Master's satisfaction the number and kind of aircraft TWA would have obtained and when they would have been received from the manufacturers, absent defendants' unlawful conduct, and hence the extent of TWA's equipment deprivation. On the other hand, while the Special Master agreed that TWA had suffered losses from inadequate and unsound financing, motivated as charged in paragraphs 9 and 10 of the complaint (A-8-10), TWA was not able to establish by evidence satisfactory to him what specific financing program it would have followed, absent Toolco's interference, and it was unable therefore to prove how much it had been damaged by the conduct alleged in the complaint.[69] The actual damages proven to the Special Master's satisfaction were therefore somewhat under $46 million, while TWA had sought to prove over $100 million.

The detailed answer to Mr. Justice White's question, which he asked before the damage hearing had been held, is now to be found in the record of the two-year damage hearing, extracts from which occupy most of Volume A-II and Volumes A-III and A-IV of the Appendix, and Vol-

[69] While accepting Special Master Brownell's findings, TWA has argued on its cross-petition in No. 71-830 that the actual award was incorrectly reduced by an excessive deduction for the additional capital costs TWA would have incurred. The modification for which TWA argues in the companion case would, as a practical matter, provide some relief for TWA's financing injuries as well.

umes AX-I through AX-VII of the Appendix of Exhibits. The care with which the Special Master examined the conflicting evidence is plain throughout the Report that contains his findings and conclusions (A-1966), and the two courts below upheld them in every respect, overruling objections by TWA as well as by defendants.

Defendants' objections to the Brownell Report (A-1967 *et seq.*) rested heavily on the claim that TWA had failed to establish the truth of the allegations of the complaint. The district court, however, held that "TWA did not have to present any evidence to support the well-pleaded allegations of the complaint * * *" (308 F.Supp. at 683, A-2030). The court of appeals also concluded that "TWA had no obligation to introduce any evidence whatever in support of the allegations of its complaint" (449 F.2d at 63, A-2759). These holdings are supported by the finding of Judge Metzner, who supervised the entire course of the discovery proceedings, that defendants' default had "stymied TWA in the acquisition and presentation of evidence in support of its claim" (308 F.Supp. at 683, A-2031). The court of appeals specifically concurred in this finding (449 F.2d at 69, A-2772) ("[Toolco's] own default barred even initial exploration of the crucial factual issues"). These findings were plainly correct.

TWA did prove at the damage hearing, as the Special Master and the courts below held, that the items of damage for which it recovered flowed from the injuries that were alleged in the complaint to have been caused by defendants' violations. To that extent "proximate cause" of the items of damages by the defendants' conduct was part of TWA's burden of proof. But the default relieved TWA of proving that the specific injuries alleged were caused by conduct that violates the antitrust laws—*i.e.*, the allegations of "fact of injury." This is the distinction made by the court of

appeals which defendants pretend to find contradictory (Def. br. pp. 128-29). The full text of what the court of appeals wrote makes this clear:

> "The default had the effect of admitting or establishing that the acts pleaded in the complaint violated the antitrust laws and that those acts caused injury to TWA in the respects there alleged. Because, however, the damages were unliquidated and uncertain, F.R.Civ.P. 55(b), it was necessary for TWA at the hearing to establish the *extent* of the injuries established by the default. The outer bounds of the recovery allowable are of course measured by the principle of proximate cause. The default judgment did not give TWA a blank check to recover from Toolco any losses it had ever suffered from whatever source. It could only recover those damages arising from the acts and injuries pleaded and in this sense it was TWA's burden to show 'proximate cause.' On the other hand, there was no burden on TWA to show that any of Toolco's acts pleaded in the complaint violated the antitrust laws nor to show that those acts caused the well-pleaded injuries, except as we have indicated that it had to for the purpose of establishing the extent of the injury caused TWA, in dollars and cents." (449 F.2d at 70, A-2772-73)

The validity of this distinction is discussed further at pp. 195-203 *infra;* for present purposes it is sufficient to note that the court of appeals held that the Special Master understood this distinction (449 F.2d at 70, A-2774). Mr. Brownell stated quite correctly that

> "• • • the plaintiff (as is customary) has the burden of establishing proximate cause, but that this burden is satisfied *as to liability* if proximate cause is adequately alleged in the complaint, unless the defendants are able to show that such allegations are not well-pleaded. It does not mean that the plaintiff must always prove proximate cause with

evidence, regardless of a default." (Brownell Report, p. 36; A-1966) (Emphasis added.)[70]

Thus, the Special Master correctly applied the legally binding determination that the default admitted the well-pleaded allegations that defendants' unlawful conduct had resulted in the injuries to TWA averred in the complaint. At the same time he required TWA to prove the amount of its damages flowing from and "proximately caused" by the admitted injuries. TWA was damaged, *inter alia,* by the specifically pleaded deprivations it suffered in its jet fleet —inadequate in number, received too late, initially available only through day-to-day leases from Tooleo—and the disruption of certain training operations, as a result of defendants' unlawful scheme, *inter alia,* to establish themselves as suppliers of aircraft to air carriers generally (Complaint, pars. 9-10, 14, 17-20, 22-24, 26, 28, 49-53, A-8-

[70] In this passage Special Master Brownell was applying to the issues before him (which defendants contend included the root question whether they had violated the antitrust laws by their conduct) an opinion by Judge Metzner laying down guidelines as to the burden of proof if defendants sought to contest liability in the damage hearing. Insofar as here relevant, those guidelines were the following:

"Liability is not an issue for the Special Master except in a very limited sense. The sufficiency of the complaint has already been established by the denial of defendant's motion to dismiss. 214 F. Supp. 106 (S.D.N.Y. 1963), *aff'd,* 332 F.2d 602 (2d Cir. 1964), *writ of cert. dismissed,* 380 U.S. 248 (1965). By virtue of the default the defendant has admitted the truth of the well-pleaded allegations of the complaint. *Thomson* v. *Wooster,* 114 U.S. 104 (1885).

* * * * *

"Attempts by defendant to escape the effects of its default should be strictly circumscribed. It should not be afforded an opportunity to litigate what has already been deemed admitted in law. In the absence of an exceedingly strong showing that an allegation is untrue under the rules set forth above, the allegation stands as admitted." (38 F.R.D. at 501, A-397-98).

The rules to which Judge Metzner referred had to do with defective allegations, uncontroverted matters of record in the case, and facts of which judicial notice could be taken (*ibid.*).

26). The amount of the losses which TWA suffered from these fleet deprivations and the training disruption was proven in the course of the bitterly contested two-year damage hearing. The Special Master's findings were expressly related to the allegations of the complaint (Brownell Report, pp. 38, 45, 100-01, 112-13, 168-69, 186-87, 194, 224-26, 265, 296, 302-03; A-1966).

Nor was the district court misled, in ruling upon defendants' objections to the Special Master's Report, by their failure to distinguish between what they admitted by their default as a matter of law and the sufficiency of the evidence to support the factual findings and the damages awarded to TWA by the Special Master:

> "Defendants argue that TWA has failed to establish that it received late or inadequate deliveries of jet aircraft as a proximate result of the conduct of the defendants in violation of the antitrust laws. They assert that the claim 'is defective for the further reason that the plaintiff has failed to establish by a preponderance of the evidence that, but for defendants' conduct, it would and could have accomplished the results now asserted.'
>
> • • • • •
>
> "The question of proximate cause involved in this case arises out of a distinction between the *fact* of damage and the *amount* of damage. The Supreme Court explained this distinction recently in Zenith Radio Corp. v. Hazeltine Research, Inc., 395 U.S. 100, 114 n. 9, 89 S.Ct. 1562, 1571, 23 L.Ed.2d 129 (1969):
>
> > "'Zenith's burden of proving the fact of damage under § 4 of the Clayton Act is satisfied by its proof of *some* damage flowing from the unlawful conspiracy; inquiry beyond this minimum point goes only to the amount and not the fact of damage.'

"Basically defendants seek to deny that they caused *any* injury to TWA, i.e., to deny the *fact* of damages. The fact of damages, however, is an element of liability. The complaint alleges that the defendants committed certain acts which caused injury to TWA. The allegations are admitted by the default and the fact of injury is thereby established. The only question remaining is the amount of damages defendants should pay TWA." (308 F. Supp. at 684-85, A-2033-34) (Emphasis in original.)

Proof that TWA did indeed suffer extensive damages was overwhelming. Following p. 136 of the Brownell Report (A-1966), the Special Master inserted two tables and three graphs comparing TWA's operations during the years 1959-1964 with the results recorded by other domestic trunk carriers in the same period on each of three bases—revenue passenger miles, passenger originations, and passenger enplanements. The comparison in each case is striking.

As the Special Master commented:

"The statistics * * * show that TWA fared far worse during this period than the other trunks. It is clear that during 1960, 1961 and 1962, when plaintiff claims it was short of jets, TWA fell significantly behind the other carriers, and that beginning in 1962 and in 1963 and 1964, when TWA was catching up in terms of jet equipment, it also significantly improved its performance in relation to the other trunk carriers." (Brownell Report, p. 135; A-1966)

* * * * *

"In view of TWA's excellent route structure and its strong performance in 1959, the inference is strong that its failure to maintain its position in 1960 and the subsequent years was due to its shortage of jet equipment, which affected its ability to compete for the available passenger traffic." (*Id.*, p. 140; A-1966)

The Special Master's graphs are reproduced following this page.

References such as this to the relative results of competitors during the damage period, as compared to the relative results of such competitors in a base period, were expressly approved by this Court for use by the trier of fact in measuring the amount of damages in *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251, 266 (1946). TWA therefore presented such a comparison as the basis of an alternate theory of damage computation. This study, designated as "Comparative Profit Study—1959-1963, 1964-1965" (AX-80 *et seq.*), was introduced into evidence through TWA's expert witness Edward L. Wemple. It demonstrated that TWA's operating profits during the damage period had suffered by comparison with its two principal competitors in the aggregate amount of $169.8 million. The charts summarizing those results (AX-88-90) are reproduced following p. 182 *infra*.

That study is a clear indication that the impact on TWA of defendants' having deprived it of aircraft during these crucial years was great indeed. TWA urged that it was sufficient evidence to support an award of damages in the full amount indicated, $169.8 million before trebling. Although, as the Special Master's charts and graphs referred to above show, appropriate comparisons of TWA's results with those of its competitors were accepted as valid confirmation that TWA had been substantially injured, he did not consider the comparison of operating profits developed in the Comparative Profit Study to be "an acceptable measure of damages in this proceeding" (Brownell Report, p. 307; A-1966). He thought that it overlooked additional factors required to make the comparison valid and failed to take into account that improved TWA results might have adversely affected results of its competitors, while

"the methodology used [in TWA's more detailed damage studies] is more precise and realistic than that shown in its comparative profitability study" (Brownell Report, p. 308; A-1966). Similarly, Judge Metzner, to whom TWA urged that the simple and direct approach taken in the Comparative Profit Study was based on the theories approved by this Court in *Bigelow,* upheld the Special Master's ruling, not because the Comparative Profit Study lacked probative value, but because "there was a more precise method of ascertaining damages, which was the method [the Special Master] used" (308 F. Supp. at 694, A-2054). Elsewhere Judge Metzner observed that the Comparative Profit Study had "a reasonable basis" * * * even though the court ultimately ruled against plaintiff on this theory" (312 F. Supp. at 483, A-2068).

The total effort of defendants' witnesses at the damage hearing was directed to an attempt to show that TWA's losses were not "proximately caused" by the matters alleged in the complaint, but were the result of independent factors. The massive nature of that attempt to prove defendants' contentions is only partially indicated by the exhibits contained in Volumes AX-V through AX-VII of the Appendix of Exhibits and the excerpts from the transcript of testimony of defendants' witnesses on cross-examination which are contained in Volume A-IV of the Appendix. This issue was tried to the hilt before the Special Master, and defendants lost on it. They filed hundreds of objections with the district court, charging that the Special Master's findings were in error because not supported by the evidence, and that he should have made different findings accepting their contentions as supported by the evidence of their witnesses (A-1967 *et seq.*). Those objections were in every case overruled (308 F. Supp. 679, A-2027 *et seq.*).

The court of appeals held that the Special Master's "application of the proper principles [was] unexcep-

tionable" (449 F.2d at 70, A-2774). The court did not, as the defendants assert, "rely on what it recognized to be 'assumption' only" (Def. br. p. 129) but considered at length "the evidentiary foundation of TWA's damage award" (449 F.2d at 71, A-2775). It referred specifically to the substance of the testimony of TWA's fact witnesses and experts (449 F.2d at 71-72, A-2775-77) and that of the experts presented by defendants (449 F.2d at 72, A-2777-78) and concluded that "TWA did not rely only on its default judgment but introduced evidence linking each component of the damages claimed to the pleaded illegal acts of Toolco and injuries to TWA" (449 F.2d at 72, A-2778).

The court of appeals also recognized that the heart of defendants' "proximate cause" argument was an attack on the sufficiency of TWA's damage proof. On that issue the court said that "because of the huge sums involved in this litigation [it was not] content to rest on Judge Metzner's appraisal of the Master's findings" (*ibid.*), and went on itself to consider the evidence presented at the damage hearing (449 F.2d at 73-75, A-2780-84). It concluded that "each of the challenged findings is amply supported by evidence introduced during the hearing and * * * none is 'clearly erroneous' " (449 F.2d at 73, A-2780).

B. Defendants' attack on the Special Master's findings of fact as to TWA's damages is refuted by the record in the damage hearing, and those findings have been affirmed by the two lower courts

Findings as to the amount of TWA's damages resulting from defendants' conduct were purportedly not challenged by defendants' petition for certiorari. In defendants' brief, however, the testimony of defendants' experts, rejected below, that TWA's earnings would not have been improved by having more jets in 1959-1963 (Def. br. p. 18; Brownell Report, pp. 112, 124-25, 127, 130; A-1966), the arguments, rejected below, as to TWA's financial in-

capacity to acquire additional jets had it been free from defendants' unlawful interference (Def. br. pp. 131-32, 139-41; Brownell Report, pp. 148-49; A-1966), and the pretense that defendants' bare-faced looting of TWA was "financial assistance" (Def. br. pp. 12, 20, 78, 87-88, 141; Brownell Report, pp. 254-55; A-1966; *cf.* pp. 45-46 *supra*) —all are trotted out again as arguments that TWA is not entitled to any recovery. These factual determinations have been previously reviewed by two other courts, and it is unlikely that this Court has agreed to review them further.[71]

Defendants also ignore the mandate of FED.R.CIV.P. 52 (a) that

> "[f]indings of fact shall not be set aside unless clearly erroneous, and due regard shall be given to the opportunity of the trial court to judge the credibility of the witnesses. The findings of a master, to the extent that the court adopts them, shall be considered as the findings of the court." (*See also* FED. R.CIV.P. 53(e)(2))

This Court re-emphasized the importance of this principle in *Zenith Radio Corp.* v. *Hazeltine Research, Inc.*, 395 U.S. 100, 123 (1969):

> "In applying the clearly erroneous standard to the findings of a district court sitting without a jury, appellate courts must constantly have in mind that their function is not to decide factual issues *de novo*. The authority of an appellate court, when reviewing the findings of a judge as well as those of a jury, is circumscribed by the deference it must give to decisions of the trier of the fact, who is usually in a superior position to appraise and weigh the evidence.

[71] The Court has traditionally viewed such a function as unwarranted and unnecessarily burdensome, even when imposed by law. *See United States* v. *Singer Mfg. Co.*, 374 U.S. 174, 175n. 1 (1963). *See also Berenyi* v. *District Director, Immigration & Naturalization Service*, 385 U.S. 630, 635 (1967); *Graver Tank & Mfg. Co.* v. *Linde Air Products Co.*, 336 U.S. 271, 275 (1949), *adhered to upon rehearing*, 339 U.S. 605, 609-10 (1950).

> The question for the appellate court under Rule 52(a) is not whether it would have made the findings the trial court did, but whether 'on the entire evidence [it] is left with the definite and firm conviction that a mistake has been committed.' *United States* v. *United States Gypsum Co.*, 333 U.S. 364, 395 (1948). See also *United States* v. *National Assn. of Real Estate Boards*, 339 U.S. 485, 495-496 (1950); *Commissioner* v. *Duberstein*, 363 U.S. 278, 289-291 (1960)."

The principle is peculiarly applicable to a case like this where proof was largely the testimony of experts and where the findings of fact defendants challenge were made by a Special Master who presided at the damage hearing for over two years, accepted and confirmed by a district judge who himself lived with this case for nine years, and then again affirmed by the court of appeals. *Badenhausen* v. *Guaranty Trust Co.*, 145 F.2d 40, 53 (4th Cir. 1944), *cert. denied*, 323 U.S. 797 (1945) (The obligation to accept a special master's findings pursuant to FED.R.CIV.P. 52(a) and 53(e)(2) is "[e]specially imperative" when "• • • the master has lived with the case for four years, has patiently studied the complex questions involved and has listened with painstaking care in extended hearings to the arguments and proposals of all the parties • • • "). *See also Graver Tank & Mfg. Co.* v. *Linde Air Products Co.*, 336 U.S. 271, 274 (1949), *adhered to upon rehearing*, 339 U.S. 605 (1950) ("To no type of case is [the 'unless clearly erroneous' rule] more appropriately applicable than • • • where the evidence is largely the testimony of experts• • • "); *Speyer, Inc.* v. *Humble Oil & Refining Co.*, 403 F.2d 766, 770 (3d Cir. 1968), *cert. denied*, 394 U.S. 1015 (1969) ("The matter of weighing the credibility and persuasiveness of expert opinion is the unique function of the trier of fact"); *Evans* v. *United States*, 319 F.2d 751, 755 (1st Cir. 1963) (" • • • the trial court has the right to decide which set of experts—plaintiff's or defendant's—will be credited"); *Sanitary*

Farm Dairies, Inc. v. *Gammel,* 195 F.2d 106, 115, 118 (8th Cir. 1952).

Reached and tested, moreover, defendants' assertions about the evidence in the record of the damage hearing are demonstrably wrong.

1. Size of TWA's jet fleet

By a brief and extremely inaccurate summary of a portion of the testimony of two of TWA's witnesses (Def. br. pp. 130-31) defendants suggest that TWA did not offer any evidence that it would have acquired the 63-plane jet fleet which was found by Special Master Brownell to "constitute a proper basis for computing damages" (Brownell Report, p. 56; A-1966). Following this passage, and without a single reference to the documentary evidence, defendants flatly assert: "That is all that TWA proved" (Def. br. pp. 130-31). This is false.

TWA historically received and paid for 47 jets. TWA presented evidence that, except for defendants' unlawful scheme, it would have received six additional Boeing B-331 jets and ten additional Convair jets (*see, e.g.,* AX-11-14, AX-14-23, AX-43-55, AX-75, AX-78-79; A-1070, A-1075-76). Defendants' facile dismissal of the testimony of Rummel (Def. br. pp. 130-31, 136) and Connelly (*id.* p. 138) on the ground that they could only testify to what TWA "should" have done, rather than what it "would" have done absent defendants' unlawful conduct, raises exactly the type of question as to sufficiency of proof which, having been consecutively reviewed by two courts below, this Court has stated to be inappropriate for review, barring "a very obvious and exceptional showing of error." *Graver Tank & Mfg. Co.* v. *Linde Air Products Co.,* 336 U.S. 271, 275 (1949). Not only does the record demonstrate that the Special Master did not err in relying on the evidence of these witnesses (in addition to the other evidence discussed *infra*), but it shows

that his reliance was entirely proper. Rummel was the only TWA officer qualified to testify on TWA's acquisition of aircraft and related equipment during the Hughes-Toolco regime—and he was plainly better qualified to testify on such matters than any non-TWA officer except Hughes.[72] Connelly specifically confirmed that Rummel's estimate and reallocation of the delivery positions of long-range jets from Boeing (AX-43-55) would have been obtainable had an independent TWA engaged in negotiations with Boeing at about the same time as TWA's principal competitors did (AX-75, AX-78-79; A-1070, A-1075-76). No witness could have been more qualified to testify on these matters than Connelly.[73] Therefore, the Special Master was entirely correct in accepting this evidence as "a proper basis for computing damages * * *" (Brownell Report,

[72] Rummel joined TWA in 1943 as Senior Engineer in charge of new aircraft studies and future fleet planning, becoming Chief Engineer in 1949—a position he occupied until March 1956 when he became Vice President, Engineering. In 1958 he became Chairman of TWA's Jet Planning Committee, which was responsible for planning for the introduction and efficient use of jet aircraft by TWA. In addition, from 1956-1960, he was employed by Toolco as a consultant and special representative in connection with the acquisition of Boeing 707 and Convair 880 aircraft. He reported directly to Hughes and acted as contract administrator for Toolco on these contracts. (AX-4-5) Rummel was Hughes's closest associate in aircraft procurement matters (A-701-03) and was TWA's man in charge of equipment development (AX-4). When Hughes decided that he wanted TWA to know something, he would instruct Rummel to pass the information on (A-702-03). Because of the way Hughes ran TWA's affairs, no one but Hughes had the power and authority to say what TWA would have done during that period (A-699-704), and Rummel reported directly to him.

[73] Connelly, as Director of Contract Administration, was a member of Boeing's "headquarters group" during the period of negotiations on the early jets in 1955. When in 1956 he became Vice President and General Manager in charge of Boeing's Commercial Airplane Division, all responsibility with respect to commercial airplane programs was centralized in that department (AX-74-75; A-977-79). In preparation for his testimony, Connelly held extensive discussions with others at Boeing (A-988, A-992, A-995-96, A-999-1002). Finally, as the Special Master noted, "[t]he Connelly testimony was not seriously controverted" (Brownell Report, p. 55; A-1966).

p. 56; A-1966). The courts below so found (308 F.Supp. at 689-90, A-2042-43; 449 F.2d at 73-74, A-2780-82).

2. *TWA's ability to finance the additional jets*

The largest part of defendants' "proximate cause" argument is devoted to an attempt to demonstrate that TWA failed to prove it could have paid for the additional jets.[74]

As to the amount needed, the Special Master found that (a) "the full purchase price of [the six additional Boeings] and related spare parts and equipment [would have amounted] to a capital expenditure of $43.1 million" (Brownell Report, p. 149; A-1966), and (b) "the full purchase price for [the ten additional Convairs] and related spare parts and equipment would have amounted to $48.1 million" (*id.* p. 150; A-1966). Thus, a total of $91.2 million would have been needed to acquire the 16 jets that defendants' unlawful conduct kept TWA from acquiring. The Special Master, for purposes of his "cost of capital" com-

[74] In light of the allegations of the complaint as to defendants' deliberate impoverishment of TWA, TWA's actual capability in 1959-1960 to pay for the jets of which defendants deprived it was not properly an issue in the damage hearing. If there had been no default and ability to pay had become an issue, defendants would have had the burden of persuading the Special Master that TWA could not do so. *Klinger* v. *Baltimore & Ohio R.R.*, 432 F.2d 506, 516 (2d Cir. 1970). *McClelland* v. *Climax Hosiery Mills*, 252 N.Y. 347, 169 N.E. 605 (1930), in which defendants claim to find support, expressly holds that the burden in such a case rests with the defendant, as well as stating, and enforcing, the rule that "defendant, by failing to answer, admits all traversable allegations contained in the complaint" (252 N.Y. at 351, 169 N.E. at 606). As is shown at pp. 188-90 *infra*, there was ample evidence in the record before the Special Master to permit him to find affirmatively, as he did, that TWA would have been able to finance the additional jets but for defendants' wrongdoing, and TWA would not have "drowned anyhow," despite defendants' felicitous summation of *New York Central R.R.* v. *Grimstad*, 264 F. 334 (2d Cir. 1920) (Def. br. pp. 133-34n. 68) —an outrage to the modern conscience. *Compare Kirincich* v. *Standard Dredging Co.*, 112 F.2d 163, 164 (3d Cir. 1940), and *Zinnel* v. *United States Shipping Board E. F. Corp.*, 10 F. 2d 47, 49 (2d Cir. 1925).

putations, treated all of these funds as borrowed. In light of the default and his rulings on the evidence, he made what he described as the "fair and reasonable" assumption that "funds were available at the time of the delivery of each aircraft" that TWA did not receive because of defendants' unlawful conduct, stating that the record was "sufficiently complete to allow these assumptions to be taken" (Brownell Report, p. 148; A-1966). That is, of course, a finding as to the sufficiency of evidence presented to him on this subject, and a challenge to that finding must fail unless the record is so devoid of supporting evidence that the finding is "clearly erroneous." FED.R.CIV.P. 52(a) and 53(e)(2).

The Special Master had before him not just some, but a whole body of information relevant to TWA's capability to have arranged for the additional funds if it had not been the victim of defendants' unlawful combination and conspiracy to restrain and monopolize and attempt to monopolize in violation of the antitrust laws.[75] Among other things, the record includes:

> (a) The well-pleaded allegations of TWA's complaint—accepted by the Special Master and entitled to controlling weight in any consideration of what TWA could have done if defendants had not violated the law and injured it (see Brownell Report, p. 254; A-1966).
>
> (b) Evidence that each of TWA's principal competitors—United, American, and Pan American—

[75] Therefore, defendants' reliance upon *Flintkote Co.* v. *Lysfjord*, 246 F.2d 368 (9th Cir.), *cert. denied*, 355 U.S. 835 (1957) (evidence of lost profits insufficient to sustain recovery) and *Wolfe* v. *National Lead Co.*, 225 F.2d 427 (9th Cir.), *cert. denied*, 350 U.S. 915 (1955) (evidence insufficient to prove that plaintiffs sustained any damages), is misplaced. As for the specific proof thought necessary in *Flintkote* and *Wolfe*, a full scale trial was had in the damage hearing of whether TWA would have "obtained more business," and the state of the industry was extensively analyzed (Brownell Report, pp. 69-75; A-1966), while the availability from the manufacturers of the specific additional aircraft was fully established by Rummel and Connelly (*id.* pp. 46-51; A-1966).

successfully financed a fleet larger than the 63-plane fleet (TWA Exs. 223, 226, 232, 241 id., 249-52, 260; AX-336 *et seq.*, AX-1712 *et seq.*); during 1955-1960, for example, United made arrangements for additional financing totalling $370 million, American for additional financing totalling $265 million, and Pan American for financing totalling $360 million (AX-1776-80). Substantial amounts were also raised by each of these airlines both earlier and later. The court of appeals considered that the evidence on this subject, alone, would have been enough to support the Special Master's finding (449 F.2d at 74, A-2781).

(c) Traffic and accounting studies which demonstrate that availability of the earlier and larger jet fleet would have produced a large increase in funds internally generated from operations. The increase in 1959 and 1960 alone would have provided $62.9 million, or about 70 per cent of the necessary funds (AX-479). Thus the additional amounts needed would have been on the order of $30 million.

(d) Evidence of TWA's actual financing and the various possibilities available to it to have raised any additional money needed (AX-861, AX-865; TWA Ex. 296, reproduced following p. 46 *supra*); in the year following defendants' surrender of control of TWA, while it was still suffering the immediate adverse effects of defendants' unlawful schemes, TWA was able to arrange borrowing from banks and insurance companies totalling $312 million—$165 million at the end of 1960 (AX-861, note 4 to financials) and $147 million in 1961 (AX-865). In May 1961 it sold to the public more than $19 million Subordinated Income Debentures with warrants, with the balance of the $100 million offering going to Toolco (TWA Ex. 296). A little more than two years later Toolco sold these securities for a profit of more than $13 million (*ibid.*).

(e) Expert testimony by the investment banking firm of Drexel Harriman Ripley, Inc., prepared by

> senior officers of that firm who had personally and throughout the crucial period advised United Airlines on that airline's financing programs (AX-347, AX-349), that an independent TWA could also have financed the acquisition of an adequate jet fleet, including the additional 16 jets (AX-353, AX-429; A-1232).[76]

In light of these matters of record before the Special Master, defendants' assertion that the award to TWA on its claim for losses in operating profits due to an inadequate jet fleet "was based on sheer speculation and guesswork" (Def. br. p. 130) is completely without foundation. The court of appeals so found:

> "We find untenable Toolco's characterization as insufficient to support the Special Master's contrary assumption that an independent TWA would and could have financed the full 63-jet fleet, the evidence that United, American, and Pan American Airlines each were in fact able to finance comparable ventures during the same period. Toolco directs our attention to financial reversals experienced by TWA during the period preceding the time Brownell assumed TWA would have financed the fleet (1958-59). But the well-pleaded allegations of the complaint demon-

[76] Defendants make much of the Special Master's rejection of TWA's claim for damages due to late financing, which was based on the same expert testimony (Def. br. pp. 130, 139-40). The Special Master found TWA's proof of the *specific* financing program proposed by its experts to be insufficient to support the award of additional damages to TWA for its financing injuries because TWA would have needed "the benefit of hindsight" to have adopted the plan in 1955 (Brownell Report, p. 258; A-1966). That, however, does not negative the significance of the testimony that TWA could have obtained such financing as was necessary in other ways. TWA's financing experts explicitly stated in their report that they did not wish it to be interpreted as meaning that the financing program they recommended "is the only program by which TWA might have been successfully financed * * *" (AX-429; *see also* testimony to same effect at A-1214, A-1231-32). Their answer to the "Question Posed" —whether an independent TWA could have financed its 1955-1960 capital requirements—was a categorical yes (AX-353).

> strate conclusively that crippling TWA's financial posture and reducing it to a state of vassalage, dependent on Toolco's support, was part of defendants' overall antitrust violation. See Complaint ¶¶ 17, 18, 19, 22, 23, 24, 26, 50, 51, and 52(a). To the extent of negating Toolco's attempted reliance on TWA's asserted financial weakness, these allegations must be given effect. Any inferences other than that an independent TWA would have fared neither better nor worse than competing airlines in financing its jet fleet would have been unwarranted." (449 F.2d at 74, A-2781-82)

On December 29, 1960 the CAB had pointed out that:

> "TWA has arranged for the acquisition of 47 jet aircraft. Comparable carriers have acquired, or are in process of acquiring, jet fleets in the neighborhood of twice this size." (Order No. E-16195, 32 C.A.B. at 1364n. 16, A-3408n. 16)

The Board said that "we have not been unaware of TWA's problems," and commented that the impact of TWA's not having arranged financing as early as its major competitors might be "indeed far-reaching" (32 C.A.B. at 1364-65, A-3408). It suggested that TWA's equipment deficiencies had played a substantial part in its "recent inability to maintain its traffic position relative to its principal competitors" (32 C.A.B. at 1365, A-3408).

Defendants' manipulation of TWA's financings for their own unlawful purposes is best illustrated by TWA Ex. 296 (following p. 46 *supra*). In the period of Toolco's control, TWA on two occasions (1948 and 1957) sold substantial amounts of newly issued stock. Both sales were dictated by defendants for the purposes and with the precise results alleged in paragraph 23 of the complaint (A-15). Both were disastrous for TWA, and extremely profitable for Toolco, as TWA Ex. 296 plainly shows. Even defendants'

financial expert testified at the damage hearing that he would have preferred not to make the financing in 1957 and characterized the offering as an "unhappy financing" (A-1568-69, A-1571-72).[77] The almost unbelievable story of how Toolco blocked TWA from securing public financing in 1945-1947, which resulted in defendants' complete take-over of TWA as a condition for the 1948 financing, is discussed at pp. 45-46 *supra*.

3. The 1959-1960 leases

Defendants' attack on the award of damages to TWA for being forced to lease jets from Toolco rather than purchase them directly from manufacturers in 1959-1960 is equally without basis. Paragraph 20 of the complaint alleges:

> "20. During the period 1959 to 1960, defendants arranged for the lease to TWA by Toolco of certain jet-powered aircraft on a day-to-day basis. Such aircraft were the first and only jet-powered aircraft made available to TWA by the defendants during the years 1955 to 1960 and the number of aircraft so leased by Toolco to TWA was inadequate for the needs of TWA. Such leases were given on a continuing condition, agreement and understanding that TWA would not purchase or lease aircraft from any other potential supplier thereof. The effect of such continuing condition, agreement and understanding was to foreclose, to all potential suppliers of jet-powered aircraft to TWA other than defendants, the opportunity for selling or leasing jet-powered aircraft to TWA." (A-13-14)

---

[77] It was not unhappy for Toolco. Defendants arranged that Toolco should have unlimited oversubscription rights, while no other stockholder was allowed any oversubscription rights at all (AX-883 *et seq.*). Its activities in the market in attempting to buy up rights of other stockholders were such as to necessitate an application to the Securities and Exchange Commission for exemption from the Commission's anti-manipulation rules (AX-923 *et seq.*). By these methods it was able to buy a total of 2,692,959 shares of TWA stock at the depressed price of $13 a share (AX-919-20). This stock was sold at $83 a share in 1966, for a total profit on these transactions of $188 million (TWA Ex. 296).

Although defendants' claim to find a "failure of proof" (Def. br. p. 145), their objection is that the allegations of TWA's complaint are insufficient to support the award for the leasing damages because they were measured by the amount TWA would have saved if it had been able to buy aircraft directly from the suppliers so foreclosed. The argument is that paragraph 20 of the complaint does not contain an adequate legal statement of the accounting fact, fully proved in the damage hearings, that an additional cost to TWA of millions of dollars (to be exact $5.3 million, net of capital costs and depreciation charges) resulted directly from having to lease jets owned by Toolco, instead of being allowed to buy those jets from their manufacturers.

Defendants fail to recognize that the allegation in paragraph 20 that *all other* potential suppliers of jets were foreclosed from the opportunity for selling to TWA necessarily comprehends an allegation that TWA was by the same conduct foreclosed from buying from those manufacturers. Reading this paragraph together with the other relevant allegations of the complaint, it is plain that this specific unlawful conduct, like the conduct specified in other paragraphs of the complaint, caused TWA hard cash losses.

The Special Master so found (Brownell Report, pp. 168-69, 180-81; A-1966), and both the district court (308 F. Supp. at 689-90, A-2044) and the court of appeals (449 F.2d at 74-75, A-2782-84) held that his ruling was correct: defendants' profits were "at the expense of TWA" (Complaint, par. 10(h), A-10).

The condition that TWA not deal with others was unlawful—and violated Section 1 of the Sherman Act as well as Section 3 of the Clayton Act—because that condition restrained competition among manufacturers and suppliers of jet aircraft for TWA's jet acquisitions. *International Salt Co.* v. *United States*, 332 U.S. 392, 396 (1947);

Standard Oil Co. of California v. *United States,* 337 U.S. 293, 314 (1949); *United States* v. *Richfield Oil Corp.,* 99 F. Supp. 280, 297 (S.D. Cal. 1951), *aff'd per curiam,* 343 U.S. 922 (1952). Although paragraph 20 may not be read outside the context of the whole complaint, *Continental Ore Co.* v. *Union Carbide & Carbon Corp.,* 370 U.S. 690, 699 (1962), even standing alone the specific unlawful conduct alleged in that paragraph plainly violated Section 3 of the Clayton Act and Section 1 of the Sherman Act (see discussion at pp. 156-57 *supra*). When read in context with the other allegations of the complaint, it is also plain that the requirement that TWA lease upon an unlawful condition was part and parcel of the larger combination and conspiracy to restrain and monopolize and the attempt to monopolize. TWA was not required to plead these facts with any greater specificity. FED.R.CIV.P. 8(a); *Perma Life Mufflers, Inc.* v. *International Parts Corp.,* 392 U.S. 134, 142 (1968); *Radovich* v. *National Football League,* 352 U.S. 445, 453 (1957).

Finally, the Special Master's application of the law as to proof of damages to TWA's evidence was correct with respect to this claim. It was undisputed, as the Special Master found, that it cost TWA a total of $24.2 million in 1959-1960 to lease its jet fleet, an arrangement that even defendants' financial expert admitted was unsatisfactory (Brownell Report, p. 181; A-1966). On the basis of the unchallenged evidence, the Special Master found that $12.7 million of this total was extra expense incurred by TWA solely because it was forced to lease this fleet rather than purchase jets directly from manufacturers (Brownell Report, p. 182; A-1966). After adjustments for depreciation and deduction of the interest cost of the funds necessary to purchase rather than lease, the Special Master held that TWA had proven an actual net loss of $5.3 million on its leasing claim, which it would not have suffered except

for defendants' conduct (Brownell Report, p. 185; A-1966). Except for rejected testimony that a greater "cost of capital" should have been deducted, defendants did not challenge these figures (Brownell Report, pp. 182-84; A-1966).[78]

C. The Special Master and the courts below applied well-settled legal principles applicable to causation and damages in private antitrust suits

Causation is of course legally a "fact," like any other fact, proper to be alleged, traversable and, when traversed, subject to evidentiary proof. For reasons which are physical as well as metaphysical, to a greater or lesser extent proof of causation must inevitably depend upon inference. *See* W. PROSSER, HANDBOOK OF THE LAW OF TORTS 237-38, 241-42 (4th ed. 1971). When a defendant defaults rather than produce evidence material to the drawing of such an inference, the alleged fact of causation must be held to be admitted like any other alleged fact under similar circumstances, if the fundamental principle that a civil plaintiff is entitled to compulsory process to obtain discovery is not to be gutted.

Injury to the plaintiff caused by conduct of defendants in violation of the antitrust laws is a necessary element of any private action for treble damages under Section 4 of the Clayton Act. Except for the default, which denied TWA discovery on the merits of its complaint, TWA would have had to prove the *fact* of causal connection just as it would have had to prove any other necessary allegation that defendants chose to put in issue. This Court so held in *Story Parchment Co.* v. *Paterson Co.*, 282 U.S. 555 (1931). In that case, the First Circuit

[78] Defendants' profits were considerably greater than the damages awarded for TWA's injuries from leasing since they realized, in addition to the rentals charged, a very large capital gain through the ultimate sale of the depreciated aircraft to TWA at far above their book value (Doc. 495).

had vacated a private antitrust plaintiff's treble damage judgment on the ground that plaintiff had not met its burden of proving that the depreciation in value of its plant was due to defendants' antitrust violations; the court had done so after deciding that plaintiff's insufficient capital and inefficient management made its business failure inevitable even if there had been no conspiracy of the kind proved. This Court reversed, saying:

> "Whether the unlawful acts of respondents or conditions apart from them constituted the proximate cause of the depreciation in value, was a question, upon the evidence in this record, for the jury 'to be determined as a fact, in view of the circumstances of fact attending it.' *Milwaukee & St. Paul Ry. Co.* v. *Kellogg*, 94 U.S. 469, 474. And the finding of the jury upon that question must be allowed to stand unless all reasonable men, exercising an unprejudiced judgment, would draw an opposite conclusion from the facts." (282 U.S. at 566)

In this case defendants' default had the legal effect of determining the *fact* of proximate cause against them, just as the jury's verdict determined that fact in *Story Parchment*. *See also Package Closure Corp.* v. *Sealright Co.*, 141 F.2d 972, 976-77 (2d Cir. 1944).

Since "proximate cause" is as much a triable issue as any other fact issue, like any other triable issue it can be established by admission or by default. *Thomson* v. *Wooster*, 114 U.S. 104, 109-10, 114 (1885). *See also Adkisson* v. *Huffman*, 469 S.W.2d 368, 375 (Tenn. 1971); *Funkhouser* v. *Million*, 209 Va. 89, 161 S.E.2d 725, 729 (1968); *Baltimore Transit Co.* v. *Mezzanotti*, 227 Md. 8, 174 A.2d 768, 775 (1961); *Osborn* v. *Gibson*, 309 S.W.2d 15, 19 (K.C. Ct. App. 1958); *Johnson* v. *Illini Mutual Ins. Co.*, 18 Ill. App. 2d 211,

151 N.E.2d 634, 637-38 (1958); *Putney* v. *Du Bois Co.*, 240 Mo. App. 1075, 226 S.W.2d 737, 740 (1950).[79]

[79] Many of the cases which defendants cite on this point do not deal with the effect of a default at all. Thus *E.V. Prentice Machinery Co.* v. *Associated Plywood Mills, Inc.*, 252 F.2d 473 (9th Cir.), *cert. denied*, 356 U.S. 951 (1958) (Def. br. pp. 118-19, 123), stands only for the proposition, irrelevant here, that a treble damage plaintiff cannot recover for monetary losses caused by a general downturn in the economy or from customer dissatisfaction with its product for reasons not attributable to defendant's conduct. Defendants here were permitted to attempt to prove such unrelated causes for certain of TWA's losses despite the default, but failed to sustain their burden of proof (*e.g.*, Brownell Report, pp. 131-33; A-1966). *Sunkist Growers, Inc.* v. *Winckler & Smith Citrus Products Co.*, 284 F.2d 1 (9th Cir. 1960), *rev'd on other grounds*, 370 U.S. 19 (1962) (Def. br. p. 119), deals with the nature of a plaintiff's burden of proof on a disputed point as to which conflicting evidence was offered; and *Milwaukee Towne Corp.* v. *Loew's Inc.*, 190 F.2d 561 (7th Cir. 1951), *cert. denied*, 342 U.S. 909 (1952) (Def. br. p. 119), involved a situation where evidence was viewed as demonstrating conclusively that an antitrust plaintiff could not have used the product from which defendants had allegedly foreclosed it—a disputed issue of fact which those defendants were fully entitled to dispute, not having defaulted.

Nor do the cases involving a default which defendants cite support the proposition that TWA had to prove the allegations of its complaint to support the award of actual damages. *See, e.g., Thorpe* v. *National City Bank of Tampa*, 274 F. 200 (5th Cir. 1921) (question of reasonableness of attorney's fee raised issue of fact which had to be tried by jury); *Beall* v. *Munson*, 204 Cal. App. 2d 396, 22 Cal. Rptr. 333, 336, (1st Dist. 1962) ("The defendant by his default has admitted all facts well pleaded in the complaint. * * * The issue of liability is thus foreclosed and defendant is in no position to object to a judgment awarding plaintiff any damages which her evidence will support"); *Hallett Construction Co.* v. *Iowa State Highway Comm'n*, 261 Iowa 290, 154 N.W. 2d 71, 74-75 (1967) (defaulted defendant *cannot* under guise of contesting amount of damages assert a legal defense which could have been raised prior to the default); *Potts* v. *Howser*, 267 N.C. 484, 148 S.E.2d 836 (1966) (defaulted defendant entitled to present evidence in mitigation of plaintiff's damages); *Graves* v. *Cameron*, 161 N.C. 549, 77 S.E. 841 (1913) (defendant should have been permitted to show that in return for good consideration he had been given a release from liability by the plaintiff prior to trial on damages); *Blow* v. *Joyner*, 156 N.C. 140, 72 S.E. 319 (1911) (court erred in instructing jury that default *entitled* plaintiff to "some actual damages" rather than "nominal damages" without further evidence as to amount of his damages); *Electrolytic Chlorine Co.* v. *Wallace & Tiernan Co.*, 328 Mo. 782, 41 S.W.2d 1049 (1931) (plaintiff apparently failed to prove that he was

Thus in *Funkhouser* v. *Million* the Supreme Court of Appeals of Virginia reversed a refusal to enter judgment for plaintiff upon defendant's default for failure to answer. Plaintiff, in addition to presenting evidence on the amount of his damages, offered testimony about how the accident occurred and the trial court held that his testimony had conclusively proved that plaintiff was contributorily negligent. The court, in directing that judgment be entered in such amount as plaintiff's evidence showed he was entitled to, stated:

> "The failure of Million to plead responsively to the plaintiff's motion for judgment was an admission that the plaintiff was entitled to recover some damages from him. Inherent in that admission was the acknowledgment by Million of the negligence charged against him as proximately causing the collision and the concession that the deceased was free of contributory negligence.
>
> "Thus, under the circumstances of this case, the only issue before the trial court when it acted upon the plaintiff's motion for default was the amount of damages to be awarded for the death of the deceased; and it was the court's duty, sitting without a jury, to fix such damages. With Million's failure to plead given its full effect, any evidence as to the manner in which the accident occurred was irrelevant and immaterial to the situation with which the court was ultimately confronted." (161 S.E.2d at 729)

To support their contrary contention that at the damage hearing TWA had the burden of proving that the antitrust violations alleged in the complaint in fact caused the in-

---

entitled to any actual damages); *Barclay* v. *Pickles*, 38 Mo. 143 (1866) (defendant after default is entitled to present evidence that land for which plaintiffs sought to recover rent had been taken by eminent domain prior to time when rent began to accrue and that plaintiffs therefore had sustained no actual damages); *Sagebiel's Inc.* v. *Sumrall*, 358 S.W.2d 251, 252 (Tex. Civ. Ct. App. 1962) ("Appellant's default admitted all the facts alleged except the amount of damages, which was shown by competent evidence").

juries specifically alleged to have resulted therefrom, defendants primarily rely upon three state court cases. The first case, *Havens* v. *Hartford & New Haven R.R.*, 28 Conn. 69 (1859), cited for the proposition that "at that inquest plaintiff must show, among other things, that any substantial damages he seeks to recover were caused by the acts of the defendant" (Def. br. p. 124) represents a historic peculiarity of Connecticut practice. Under the *Havens* rule, a defaulting defendant in a Connecticut negligence action is permitted to prove he was not negligent. *See, e.g., Batchelder* v. *Bartholomew*, 44 Conn. 494 (1877).

This unusual rule (not applicable in contract cases) was characterized by a leading member of the Connecticut bar as "arbitrary and constitut[ing] a system of judicial procedure peculiar to this State • • •." J. Alling, *The Law and Practice of Connecticut Concerning Hearing in Damages on Default, or Demurrer Overruled*, 6 YALE L.J. 121, 128 (1897). The rule provided corporate defendants such as railroads, regularly sued for negligence, a technical device by which to avoid jury trial of the negligence issue (6 YALE L.J. at 130-31). This technique is little used today, probably because the burden of proof is on the defaulting defendant taking advantage of the Connecticut rule. *Crane* v. *Eastern Transportation Line*, 48 Conn. 361 (1880).[80]

The other two cases relied on by defendants are *DeHoff* v. *Black*, 206 N.C. 687, 175 S.E. 179 (1934), and *McClelland* v. *Climax Hosiery Mills*, 252 N.Y. 347, 169 N.E. 605 (1930). Neither supports defendants' contention that TWA had to prove causation in fact at the damage hearing. *DeHoff* per-

[80] Toolco tried—and failed—to persuade Special Master Brownell and the courts below that the evidence it offered was sufficient to prove it had not, as alleged in the complaint, engaged in a combination and conspiracy in restraint of trade in aircraft and the monopolization and attempted monopolization of a substantial segment of the market therein (Brownell Report pp. 25-34; A-1966; 308 F. Supp. at 686, 687-88, A-2037, A-2040; 449 F.2d at 63-69, A-2757-72).

mitted a defaulted defendant to prove the affirmative defense of contributory negligence, and is contrary to the great weight of modern authority (outside of Connecticut) on the effect of a default.[81] In *McClelland* the court ruled that a defaulted defendant could try to prove that plaintiff's loss of income resulted from his refusal to accept other employment, and not from his discharge by defendant; the burden of proof was placed squarely on defendant, however, and the lower court's judgment in defendant's favor was reversed by the New York Court of Appeals because he had failed to meet that burden. The allegations of the complaint, other than as to amount of plaintiff's damages, were expressly held to be established beyond challenge by the default (252 N.Y. at 353, 169 N.E. at 607). In the damage hearing in this case defendants were given every opportunity to try to prove just such matters as were involved in *McClelland,* and the Special Master found that they too had failed to sustain their burden of proof (*e.g.,* Brownell Report, pp. 146-47; A-1966).

Defendants also argue that even if the causal connection between violation and injury is taken as established, the injury to TWA was too remote to be cognizable under the antitrust laws, because TWA was outside the "target area" of the alleged antitrust violation (Def.br.pp.120-21). This argument is of course addressed to sufficiency of the com-

---

[81] *See, e.g., Millison* v. *Ades of Lexington, Inc.,* 262 Md. 319, 277 A.2d 579, 584 (1971); *Adkisson* v. *Huffman,* 469 S.W.2d 368, 375 (Tenn. 1971); *Funkhouser* v. *Million,* 209 Va. 89, 161 S.E.2d 725, 729 (1968); *Baltimore Transit Co.* v. *Mezzanotti,* 227 Md. 8, 174 A.2d 768, 775 (1961); *Haller* v. *Walczak,* 347 Mich. 292, 79 N.W.2d 622, 625-26 (1956); *Anderson* v. *Gallman,* 99 A.2d 560, 561 (D.C.Ct. App. 1953). Thus the court in *Maywald Trailer Co.* v. *Perry,* 238 S.W. 2d 826 (Tex.Civ.Ct.App. 1951), cited in defendants' brief at p. 123, held that the defendant should have been permitted to put in evidence on the extent of plaintiff's injuries after the default, but that he could not put in evidence on issues of negligence. *Hallett Construction Co.* v. *Iowa State Highway Commission,* 261 Iowa 290, 154 N.W.2d 71 (1967), cited on the same page of defendants' brief, is similarly squarely contrary to their basic contentions.

plaint, and is inconsistent with defendants' concession that the court of appeals was correct in 1964 in upholding the sufficiency of the complaint (Def. br. p. 32). Once damages satisfying the test of proximate cause have been proven, the objection that plaintiff's injury is too remote can hardly be well-founded.[82] In fact the objection is specious. Para-

---

[82] In each case which defendants cite on these pages, the complaint was dismissed on the pleadings or on undisputed facts or the claim was otherwise held to be legally insufficient. *See, e.g., Calderone Enterprises Corp.* v. *United Artists Theatre Circuit, Inc.*, 454 F.2d 1292 (2d Cir. 1971), *cert. denied*, 92 S.Ct. 1776 (1972) (dismissed on pleadings); *Billy Baxter, Inc.* v. *Coca-Cola Co.*, 431 F.2d 183 (2d Cir. 1970), *cert. denied*, 401 U.S. 923 (1971) (summary judgment); *Nationwide Auto Appraiser Service, Inc.* v. *Association of Cas. & Sur. Cos.*, 382 F.2d 925 (10th Cir. 1967) (summary judgment on undisputed facts as to nature of plaintiffs' business); *Conference of Studio Unions* v. *Loew's Inc.*, 193 F.2d 51 (9th Cir. 1951), *cert. denied*, 342 U.S. 919 (1952) (dismissed on pleadings); *Rayco Mfg. Co.* v. *Dunn*, 234 F. Supp. 593 (N.D. Ill. 1964) (summary judgment); *Volasco Products Co.* v. *Lloyd A. Fry Roofing Co.*, 308 F.2d 383 (6th Cir. 1962), *cert. denied*, 372 U.S. 907 (1963) (directed verdict, at close of plaintiff's case, against supplier of victim of violations); *Snow Crest Beverages, Inc.* v. *Recipe Foods, Inc.*, 147 F.Supp. 907 (D. Mass. 1956) (summary judgment); *Commonwealth Edison Co.* v. *Allis-Chalmers Mfg. Co.*, 315 F.2d 564 (7th Cir.), *cert. denied*, 375 U.S. 834 (1963) (denying state attorney general's motion to intervene on behalf of consumers); *Fields Productions, Inc.* v. *United Artists Corp.*, 318 F.Supp. 87 (S.D.N.Y. 1969), *aff'd per curiam*, 432 F.2d 1010 (2d Cir. 1970), *cert. denied*, 401 U.S. 949 (1971) (dismissed on pleadings). This Court has expressly refused to accept such an "artificial limitation" of injuries for which damages are recoverable in a case in which "there is sufficient evidence in the record to support an inference of causation * * *." *Perkins* v. *Standard Oil Co. of California*, 395 U.S. 642, 648-49 (1969). Since TWA sufficiently alleged the causal connection between the violations and the injuries alleged, dismissal on that ground was properly denied. *See Johnson* v. *Ready Mix Concrete Co.*, 318 F.Supp. 930, 932 (D. Neb. 1970).

None of the cases applying a "target area" or "standing-to-sue" limitation has held that the *customer* of a supplier subjected to a boycott or other illegal restraint in violation of the antitrust laws is barred from suing under Section 4 of the Clayton Act to recover for the damage caused him by the unlawful boycott. On the contrary, if the injured customer is able to prove it was damaged, it is clearly entitled to recover. *Cf. Hawaii* v. *Standard Oil Co. of California*, 405 U.S. 251, 262-64 (1972); *Mandeville Island Farms, Inc.* v.

graph 10(h) of the complaint alleged that defendants intended to "obtain substantial profits for themselves, at the expense of TWA and other air carriers, as the result of restrictions upon competition in the trade and commerce hereinbefore alleged" (A-10). Thus TWA was plainly an intended victim of the alleged conspiracy. Indeed, TWA was not only in the "target area," it was the beachhead, occupation of which was the first step toward domination of a larger market.

Defendants' assertion that the Special Master applied an "improper legal standard" to TWA's proof of its damage claims (Def. br. p. 129) is unsupportable. The basic guidelines for determining the amount of damages to be awarded a plaintiff injured by violations of the antitrust laws were laid down in *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946), following *Eastman Kodak Co.* v. *Southern Photo Materials Co.*, 273 U.S. 359 (1927), and *Story Parchment Co.* v. *Paterson Co.*, 282 U.S. 555 (1931). These are the principles on which Special Master Brownell relied (Brownell Report, pp. 56-57, 257; A-1966). The Court has never departed from the rules set forth in those three cases, but has reaffirmed them again and again—most recently in *Zenith Radio Corp.* v. *Hazeltine Research, Inc.*, 395 U.S. 100, 123-24 (1969), on which Judge Metzner also relied in his opinion confirming the findings and conclusions of the Brownell Report (308 F.Supp. at 685, A-2034-35).

After reviewing the record, and citing *Bigelow* and *Zenith*, the court of appeals observed:

> "Toolco must bear the responsibility for any lack of preciseness of proof, and there is good reason that this should be so. The default itself by Toolco rendered precise proof of damages even more diffi-

American Crystal Sugar Co., 334 U.S. 219, 236 (1948); *Bales* v. *Kansas City Star Co.*, 336 F.2d 439, 444 (8th Cir. 1964).

> cult than in the usual antitrust case, where the plaintiff may avail itself of the full battery of discovery procedures to prove damages as well as to prove liability. Toolco cannot be permitted to block the discovery of precise, clear and direct evidence and then be heard to complain that the evidence should have been more convincing." (449 F.2d at 73, A-2779-80)

Conclusion

Defendants address this Court as if they have been inexplicably punished by the lower courts, and with the harshest possible penalties, for offenses either purely imaginary, or technical only.

This posture is pretense.

Whether or not anything that defendants have done in the course of this litigation deserved punishment, they have had no punishment from the courts. The default judgment against them, entered as they so insistently state as a "sanction," was as Judge Kaufman for the court of appeals points out "inevitable" and "inescapable." It was not just proper but necessary. The reason for this was neither anger at Hughes nor a desire to punish contumacious conduct by Toolco. It was purely and simply remedial; the necessity was to do justice to TWA by protecting it from having its claim for relief, properly brought before the federal courts, frustrated by tactics which were deliberately calculated to prevent proof of that claim on the merits from ever being discovered.

The courts below have taken throughout only that action necessary to preserve TWA's right to justice, evenly administered. The default judgment was "virtually invited." Since its foundation was defendant's decision to deprive TWA of the opportunity to prove its case on the

merits, it could only be interpreted as it has been interpreted below—as relieving TWA of the necessity for producing such proof.

The amount of TWA's recovery is that amount in which TWA proved itself to have been damaged, in a lengthy evidentiary hearing in which defendants were permitted to produce whatever evidence on damages—including the proximate cause of those damages—they could find. TWA's case was held by the trier of the facts to be overwhelmingly proved, and his decision has been confirmed by the district court and the court of appeals.

Far from being an excessively punished minor offender, Toolco is instead the wealthy debtor that—having profited by more than $450 million on its sale of TWA stock alone—is seeking by intransigence and legal stratagem to avoid financial responsibility to others for its acts.

On all issues raised by the petition in No. 71-827, the decision of the court of appeals should be affirmed.

Respectfully submitted,

APPENDIX OF STATUTES AND RULES

JUDICIAL CODE

§ 2111. Harmless error.

On the hearing of any appeal or writ of certiorari in any case, the court shall give judgment after an examination of the record without regard to errors or defects which do not affect the substantial rights of the parties. (28 U.S.C., p. 7640)

FEDERAL AVIATION ACT OF 1958 (formerly CIVIL AERONAUTICS ACT OF 1938)

§ 1378. [Section 408] Consolidation, merger, and acquisition of control.

(a) Prohibited acts.

It shall be unlawful unless approved by order of the Board as provided in this section—

• • • • •

(5) For any air carrier or person controlling an air carrier, any other common carrier, or any person engaged in any other phase of aeronautics, to acquire control of any air carrier in any manner whatsoever;†

• • • • •

(b) Application to Board; hearing; approval; disposal without hearing.

Any person seeking approval of a consolidation, merger, purchase, lease, operating contract, or acquisition of control, specified in subsection (a) of this section, shall present an application to the Board, and thereupon the Board shall notify the persons involved in the consolidation, merger,

† Section 408 of the Federal Aviation Act is set out in this Appendix as that Section read prior to the amendment that became effective in 1969. 83 STAT. 103.

purchase, lease, operating contract, or acquisition of control, and other persons known to have a substantial interest in the proceeding, of the time and place of a public hearing. Unless, after such hearing, the Board finds that the consolidation, merger, purchase, lease, operating contract, or acquisition of control will not be consistent with the public interest or that the conditions of this section will not be fulfilled, it shall by order approve such consolidation, merger, purchase, lease, operating contract, or acquisition of control, upon such terms and conditions as it shall find to be just and reasonable and with such modifications as it may prescribe: *Provided,* That the Board shall not approve any consolidation, merger, purchase, lease, operating contract, or acquisition of control which would result in creating a monopoly or monopolies and thereby restrain competition or jeopardize another air carrier not a party to the consolidation, merger, purchase, lease, operating contract, or acquisition of control: *Provided further,* That if the applicant is a carrier other than an air carrier, or a person controlled by a carrier other than an air carrier or affiliated therewith within the meaning of section 5(8) of this title, such applicant shall for the purposes of this section be considered an air carrier and the Board shall not enter such an order of approval unless it finds that the transaction proposed will promote the public interest by enabling such carrier other than an air carrier to use aircraft to public advantage in its operation and will not restrain competition: *Provided further,* That, in any case in which the Board determines that the transaction which is the subject of the application does not affect the control of an air carrier directly engaged in the operation of aircraft in air transportation, does not result in creating a monopoly, and does not tend to restrain competition, and determines that no person disclosing a substantial interest then currently is requesting a hearing, the Board, after pub-

lication in the Federal Register of notice of the Board's intention to dispose of such application without a hearing (a copy of which notice shall be furnished by the Board to the Attorney General not later than the day following the date of such publication), may determine that the public interest does not require a hearing and by order approve or disapprove such transaction.

* * * * *

(e) Investigation of violations.

The Board is empowered, upon complaint or upon its own initiative, to investigate and, after notice and hearing, to determine whether any person is violating any provision of subsection (a) of this section. If the Board finds after such hearing that such person is violating any provision of such subsection, it shall by order require such person to take such action, consistent with the provisions of this chapter, as may be necessary, in the opinion of the Board, to prevent further violation of such provision. (72 STAT. 767, *as amended,* 74 STAT. 901)

§ 1381. [Section 411] Methods of competition.

The Board may, upon its own initiative or upon complaint by any air carrier, foreign air carrier, or ticket agent, if it considers that such action by it would be in the interest of the public, investigate and determine whether any air carrier, foreign air carrier, or ticket agent has been or is engaged in unfair or deceptive practices or unfair methods of competition in air transportation or the sale thereof. If the Board shall find, after notice and hearing, that such air carrier, foreign air carrier, or ticket agent is engaged in such unfair or deceptive practices or unfair methods of competition, it shall order such air carrier, foreign air carrier, or ticket agent to cease and desist from such practices or methods of competition. (49 U.S.C., p. 12052)

§ 1382. [Section 412] Pooling and other agreements; filing; approval by Board.

(a) Every air carrier shall file with the Board a true copy, or, if oral, a true and complete memorandum, of every contract or agreement (whether enforceable by provisions for liquidated damages, penalties, bonds, or otherwise) affecting air transportation and in force on the effective date of this section or hereafter entered into, or any modification or cancellation thereof, between such air carrier and any other air carrier, foreign air carrier, or other carrier for pooling or apportioning earnings, losses, traffic, service, or equipment, or relating to the establishment of transportation rates, fares, charges, or classifications, or for preserving and improving safety, economy, and efficiency of operation, or for controlling, regulating, preventing, or otherwise eliminating destructive, oppressive, or wasteful competition, or for regulating stops, schedules, and character of service, or for other cooperative working arrangements.

(b) The Board shall by order disapprove any such contract or agreement, whether or not previously approved by it, that it finds to be adverse to the public interest, or in violation of this chapter, and shall by order approve any such contract or agreement, or any modification or cancellation thereof, that it does not find to be adverse to the public interest, or in violation of this chapter; except that the Board may not approve any contract or agreement between an air carrier not directly engaged in the operation of aircraft in air transportation and a common carrier subject to the Interstate Commerce Act, as amended, governing the compensation to be received by such common carrier for transportation services performed by it. (49 U.S.C., p. 12052)

§ 1384. [Section 414] Legal restraints.

Any person affected by any order made under sections 1378, 1379, or 1382 of this title shall be, and is hereby, relieved from the operations of the "antitrust laws", as designated in section 12 of Title 15, and of all other restraints or prohibitions made by, or imposed under, authority of law, insofar as may be necessary to enable such person to do anything authorized, approved, or required by such order. (49 U.S.C., p. 12053)

§ 1386. [Section 416] Classification and exemption of carriers.

• • • • •

(b)(1) The Board, from time to time and to the extent necessary, may (except as provided in paragraph (2) of this subsection) exempt from the requirements of this subchapter or any provision thereof, or any rule, regulation, term, condition, or limitation prescribed thereunder, any air carrier or class of air carriers, if it finds that the enforcement of this subchapter or such provision, or such rule, regulation, term, condition, or limitation is or would be an undue burden on such air carrier or class of air carriers by reason of the limited extent of, or unusual circumstances affecting, the operations of such air carrier or class of air carriers and is not in the public interest.

• • • • •

(49 U.S.C., p. 12053)

§ 1506. [Section 1106] Remedies not exclusive.

Nothing contained in this chapter shall in any way abridge or alter the remedies now existing at common law or by statute, but the provisions of this chapter are in addition to such remedies. (49 U.S.C., p. 12082)

Federal Rules of Civil Procedure

Rule 1.

Scope of Rules

These rules govern the procedure in the United States district courts in all suits of a civil nature whether cognizable as cases at law or in equity, or in admiralty, with the exceptions stated in Rule 81. They shall be construed to secure the just, speedy, and inexpensive determination of every action. (28 U.S.C., p. 7733)

Rule 8.

General Rules of Pleading

(a) Claims for Relief. A pleading which sets forth a claim for relief, whether an original claim, counterclaim, cross-claim, or third-party claim, shall contain (1) a short and plain statement of the grounds upon which the court's jurisdiction depends, unless the court already has jurisdiction and the claim needs no new grounds of jurisdiction to support it, (2) a short and plain statement of the claim showing that the pleader is entitled to relief, and (3) a demand for judgment for the relief to which he deems himself entitled. Relief in the alternative or of several different types may be demanded.

• • • • •

(c) Affirmative Defenses. In pleading to a preceding pleading, a party shall set forth affirmatively accord and satisfaction, arbitration and award, assumption of risk, contributory negligence, discharge in bankruptcy, duress, estoppel, failure of consideration, fraud, illegality, injury by fellow servant, laches, license, payment, release, res judicata, statute of frauds, statute of limitations, waiver, and any other matter constituting an avoidance or affirmative

defense. When a party has mistakenly designated a defense as a counterclaim or a counterclaim as a defense, the court on terms, if justice so requires, shall treat the pleading as if there had been a proper designation.

* * * * *

(28 U.S.C., p. 7743)

Rule 15.

Amended and Supplemental Pleadings

(a) Amendments. A party may amend his pleading once as a matter of course at any time before a responsive pleading is served or, if the pleading is one to which no responsive pleading is permitted and the action has not been placed upon the trial calendar, he may so amend it at any time within 20 days after it is served. Otherwise a party may amend his pleading only by leave of court or by written consent of the adverse party; and leave shall be freely given when justice so requires. A party shall plead in response to an amended pleading within the time remaining for response to the original pleading or within 10 days after service of the amended pleading, whichever period may be the longer, unless the court otherwise orders.

(b) Amendments to Conform to the Evidence. When issues not raised by the pleadings are tried by express or implied consent of the parties, they shall be treated in all respects as if they had been raised in the pleadings. Such amendment of the pleadings as may be necessary to cause them to conform to the evidence and to raise these issues may be made upon motion of any party at any time, even after judgment; but failure so to amend does not affect the result of the trial of these issues. If evidence is objected to at the trial on the ground that it is not within the issues made by the pleadings, the court may allow the pleadings to be amended and shall do so freely when the presentation of the merits of the action will be subserved thereby and the

objecting party fails to satisfy the court that the admission of such evidence would prejudice him in maintaining his action or defense upon the merits. The court may grant a continuance to enable the objecting party to meet such evidence.

• • • • •

(28 U.S.C., p. 7754)

Rule 16.

PRE-TRIAL PROCEDURE; FORMULATING ISSUES

In any action, the court may in its discretion direct the attorneys for the parties to appear before it for a conference to consider

(1) The simplification of the issues;

(2) The necessity or desirability of amendments to the pleadings;

(3) The possibility of obtaining admissions of fact and of documents which will avoid unnecessary proof;

(4) The limitation of the number of expert witnesses;

(5) The advisability of a preliminary reference of issues to a master for findings to be used as evidence when the trial is to be by jury;

(6) Such other matters as may aid in the disposition of the action.

The court shall make an order which recites the action taken at the conference, the amendments allowed to the pleadings, and the agreements made by the parties as to any of the matters considered, and which limits the issues for trial to those not disposed of by admissions or agreements of counsel; and such order when entered controls the subsequent course of the action, unless modified at the trial to prevent manifest injustice. The court in its dis-

cretion may establish by rule a pre-trial calendar on which actions may be placed for consideration as above provided and may either confine the calendar to jury actions or to non-jury actions or extend it to all actions. (28 U.S.C., p. 7755)

Rule 26.

General Provisions Governing Discovery

(a) Discovery Methods. Parties may obtain discovery by one or more of the following methods: depositions upon oral examination or written questions; written interrogatories; production of documents or things or permission to enter upon land or other property, for inspection and other purposes; physical and mental examinations; and requests for admission. Unless the court orders otherwise under subdivision (c) of this rule, the frequency of use of these methods is not limited.

(b) Scope of Discovery. Unless otherwise limited by order of the court in accordance with these rules, the scope of discovery is as follows:

(1) *In General.* Parties may obtain discovery regarding any matter, not privileged, which is relevant to the subject matter involved in the pending action, whether it relates to the claim or defense of the party seeking discovery or to the claim or defense of any other party, including the existence, description, nature, custody, condition and location of any books, documents, or other tangible things and the identity and location of persons having knowledge of any discoverable matter. It is not ground for objection that the information sought will be inadmissible at the trial if the information sought appears reasonably calculated to lead to the discovery of admissible evidence.

• • • • •

(c) Protective Orders. Upon motion by a party or by the person from whom discovery is sought, and for good case shown, the court in which the action is pending or alternatively, on matters relating to a deposition, the court in the district where the deposition is to be taken may make any order which justice requires to protect a party or person from annoyance, embarrassment, oppression, or undue burden or expense, including one or more of the following: (1) that the discovery not be had; (2) that the discovery may be had only on specified terms and conditions, including a designation of the time or place; (3) that the discovery may be had only by a method of discovery other than that selected by the party seeking discovery; (4) that certain matters not be inquired into, or that the scope of the discovery be limited to certain matters; (5) that discovery be conducted with no one present except persons designated by the court; (6) that a deposition after being sealed be opened only by order of the court; (7) that a trade secret or other confidential research, development, or commercial information not be disclosed or be disclosed only in a designated way; (8) that the parties simultaneously file specified documents or information enclosed in sealed envelopes to be opened as directed by the court.

If the motion for a protective order is denied in whole or in part, the court may, on such terms and conditions as are just, order that any party or person provide or permit discovery. The provisions of Rule 37(a) (4) apply to the award of expenses incurred in relation to the motion.

(d) Sequence and Timing of Discovery. Unless the court upon motion, for the convenience of parties and witnesses and in the interests of justice, orders otherwise, methods of discovery may be used in any sequence and the fact that a party is conducting discovery, whether by deposition or otherwise, shall not operate to delay any other party's discovery.

• • • • •

(28 U.S.C., pp. 7774-75)

Rule 30.

Depositions Upon Oral Examination

(a) When Depositions May be Taken. After commencement of the action, any party may take the testimony of any person, including a party, by deposition upon oral examination. Leave of court, granted with or without notice, must be obtained only if the plaintiff seeks to take a deposition prior to the expiration of 30 days after service of the summons and complaint upon any defendant or service made under Rule 4(e), except that leave is not required (1) if a defendant has served a notice of taking deposition or otherwise sought discovery, or (2) if special notice is given as provided in subdivision (b) (2) of this rule. The attendance of witnesses may be compelled by subpoena as provided in Rule 45. The deposition of a person confined in prison may be taken only by leave of court on such terms as the court prescribes.

• • • • •

(d) Motion to Terminate or Limit Examination. At any time during the taking of the deposition, on motion of a party or of the deponent and upon a showing that the examination is being conducted in bad faith or in such manner as unreasonably to annoy, embarrass, or oppress the deponent or party, the court in which the action is pending or the court in the district where the deposition is being taken may order the officer conducting the examination to cease forthwith from taking the deposition, or may limit the scope and manner of the taking of the deposition as provided in Rule 26(c). If the order made terminates the examination, it shall be resumed thereafter only upon the order of the court in which the action is pending. Upon demand of the objecting party or deponent, the taking of

the deposition shall be suspended for the time necessary to make a motion for an order. The provisions of Rule 37(a) (4) apply to the award of expenses incurred in relation to the motion.

• • • • •

(28 U.S.C., pp. 7785-86)

Rule 37.

FAILURE TO MAKE DISCOVERY: SANCTIONS

• • • • •

(b) Failure to Comply with Order.

• • • • •

(2) *Sanctions by Court in Which Action is Pending.* If a party or an officer, director, or managing agent of a party or a person designated under Rule 30(b) (6) or 31(a) to testify on behalf of a party fails to obey an order to provide or permit discovery, including an order made under subdivision (a) of this rule or Rule 35, the court in which the action is pending may make such orders in regard to the failure as are just, and among others the following:

(A) An order that the matters regarding which the order was made or any other designated facts shall be taken to be established for the purposes of the action in accordance with the claim of the party obtaining the order;

(B) An order refusing to allow the disobedient party to support or oppose designated claims or defenses, or prohibiting him from introducing designated matters in evidence;

(C) An order striking out pleadings or parts thereof, or staying further proceedings until the order is obeyed, or dismissing the action or proceeding or any part thereof, or rendering a judgment by default against the disobedient party;

(D) In lieu of any of the foregoing orders or in addition thereto, an order treating as a contempt of court the failure to obey any orders except an order to submit to a physical or mental examination;

(E) Where a party has failed to comply with an order under Rule 35(a) requiring him to produce another for examination, such orders as are listed in paragraphs (A), (B), and (C) of this subdivision, unless the party failing to comply shows that he is unable to produce such person for examination.

In lieu of any of the foregoing orders or in addition thereto, the court shall require the party failing to obey the order or the attorney advising him or both to pay the reasonable expenses, including attorney's fees caused by the failure, unless the court finds that the failure was substantially justified or that other circumstances make an award of expenses unjust.

• • • • •

(d) Failure of Party to Attend at Own Deposition or Serve Answers to Interrogatories or Respond to Request for Inspection. If a party or an officer, director, or managing agent of a party or a person designated under Rule 30(b) (6) or 31(a) to testify on behalf of a party fails (1) to appear before the officer who is to take his deposition, after being served with a proper notice, or (2) to serve answers or objections to interrogatories submitted under Rule 33, after proper service of the interrogatories, or (3) to serve a written response to a request for inspection submitted under Rule 34, after proper service of the request, the court in which the action is pending on motion may make such orders in regard to the failure as are just, and among others it may take any action authorized under paragraphs (A), (B), and (C) of subdivision (b) (2) of this

rule. In lieu of any order or in addition thereto, the court shall require the party failing to act or the attorney advising him or both to pay the reasonable expenses, including attorney's fees, caused by the failure, unless the court finds that the failure was substantially justified or that other circumstances make an award of expenses unjust.

The failure to act described in this subdivision may not be excused on the ground that the discovery sought is objectionable unless the party failing to act has applied for a protective order as provided by Rule 26(c).

(28 U.S.C., pp. 7798-99)

Rule 52.

FINDINGS BY THE COURT

(a) Effect. In all actions tried upon the facts without a jury or with an advisory jury, the court shall find the facts specially and state separately its conclusions of law thereon, and judgment shall be entered pursuant to Rule 58; and in granting or refusing interlocutory injunctions the court shall similarly set forth the findings of fact and conclusions of law which constitute the grounds of its action. Requests for findings are not necessary for purposes of review. Findings of fact shall not be set aside unless clearly erroneous, and due regard shall be given to the opportunity of the trial court to judge of the credibility of the witnesses. The findings of a master, to the extent that the court adopts them, shall be considered as the findings of the court. If an opinion or memorandum of decision is filed, it will be sufficient if the findings of fact and conclusions of law appear therein. Findings of fact and conclusions of law are unnecessary on decisions of motions under Rules 12 or 56 or any other motion except as provided in Rule 41(b).

• • • • •

(28 U.S.C., pp. 7814-15)

Rule 53.

Masters

• • • • •

(e) Report.

• • • • •

(2) *In Non-Jury Actions.* In an action to be tried without a jury the court shall accept the master's findings of fact unless clearly erroneous. Within 10 days after being served with notice of the filing of the report any party may serve written objections thereto upon the other parties. Application to the court for action upon the report and upon objections thereto shall be by motion and upon notice as prescribed in Rule 6(d). The court after hearing may adopt the report or may modify it or may reject it in whole or in part or may receive further evidence or may recommit it with instructions.

• • • • •

(28 U.S.C., p. 7817)

Rule 54.

Judgments; Costs

(a) Definition; Form. "Judgment" as used in these rules includes a decree and any order from which an appeal lies. A judgment shall not contain a recital of pleadings, the report of a master, or the record of prior proceedings.

• • • • •

(c) Demand for Judgment. A judgment by default shall not be different in kind from or exceed in amount that prayed for in the demand for judgment. Except as to a party against whom a judgment is entered by default, every final judgment shall grant the relief to which the party in whose favor it is rendered is entitled, even if the party has not demanded such relief in his pleadings.

• • • • •

(28 U.S.C., p. 7817)

Rule 55.

DEFAULT

• • • • •

(c) Setting Aside Default. For good cause shown the court may set aside an entry of default and, if a judgment by default has been entered, may likewise set it aside in accordance with Rule 60(b).

• • • • •

(28 U.S.C., p. 7821)

Rule 61.

HARMLESS ERROR

No error in either the admission or the exclusion of evidence and no error or defect in any ruling or order or in anything done or omitted by the court or by any of the parties is ground for granting a new trial or for setting aside a verdict or for vacating, modifying, or otherwise disturbing a judgment or order, unless refusal to take such action appears to the court inconsistent with substantial justice. The court at every stage of the proceeding must disregard any error or defect in the proceeding which does not affect the substantial rights of the parties. (28 U.S.C., p. 7827)

CIVIL RULES FOR THE UNITED STATES DISTRICT COURT, SOUTHERN DISTRICT OF NEW YORK

Rule 4. Order of Taking Depositions.

From and after the fortieth day after commencement of an action, unless otherwise ordered by the court for good cause shown, neither the service of a notice to take the deposition upon oral examination of party or witness, nor the pendency of any such deposition, shall prevent another party, adverse or otherwise, from noticing or taking the deposition upon oral examination of party or witness concurrently with the taking of such deposition noticed or commenced earlier.

It shall be the duty of all attorneys to make every reasonable effort to stipulate as to the exact places, dates and times for the commencement and resumption of the taking of all such concurrent depositions. In the event that attorneys are unable to so stipulate, any party may apply to the court for an order fixing the same and other terms and conditions to govern such depositions, as well as for any other order or relief relating thereto. (FED. RULES SERV., FEDERAL LOCAL COURT RULES, N.Y.—p. 35 (1971))

FEDERAL RULES OF CIVIL PROCEDURE (prior to July 1, 1963)

Rule 1.

SCOPE OF RULES

These rules govern the procedure in the United States district courts in all suits of a civil nature whether cognizable as cases at law or in equity, with the exceptions stated in Rule 81. They shall be construed to secure the just, speedy, and inexpensive determination of every action. (28 U.S.C., p. 6079 (1964))

Rule 26.

Depositions Pending Action

(a) When depositions may be taken.

Any party may take the testimony of any person, including a party, by deposition upon oral examination or written interrogatories for the purpose of discovery or for use as evidence in the action or for both purposes. After commencement of the action the deposition may be taken without leave of court, except that leave, granted with or without notice, must be obtained if notice of the taking is served by the plaintiff within 20 days after commencement of the action. The attendance of witnesses may be compelled by the use of subpoena as provided in Rule 45. Depositions shall be taken only in accordance with these rules. The deposition of a person confined in prison may be taken only by leave of court on such terms as the court prescribes.

(b) Scope of examination.

Unless otherwise ordered by the court as provided by Rule 30 (b) or (d), the deponent may be examined regarding any matter, not privileged, which is relevant to the subject matter involved in the pending action, whether it relates to the claim or defense of the examining party or to the claim or defense of any other party, including the existence, description, nature, custody, condition and location of any books, documents, or other tangible things and the identity and location of persons having knowledge of relevant facts. It is not ground for objection that the testimony will be inadmissible at the trial if the testimony sought appears reasonably calculated to lead to the discovery of admissible evidence.

* * * * *

(28 U.S.C., pp. 6106-07 (1964))

Rule 30.

Depositions Upon Oral Examination

* * * * *

(b) Orders for the protection of parties and deponents.

After notice is served for taking a deposition by oral examination, upon motion seasonably made by any party or by the person to be examined and upon notice and for good cause shown, the court in which the action is pending may make an order that the deposition shall not be taken, or that it may be taken only at some designated place other than that stated in the notice, or that it may be taken only on written interrogatories, or that certain matters shall not be inquired into, or that the scope of the examination shall be limited to certain matters, or that the examination shall be held with no one present except the parties to the action and their officers or counsel, or that after being sealed the deposition shall be opened only by order of the court, or that secret processes, developments, or research need not be disclosed, or that the parties shall simultaneously file specified documents or information enclosed in sealed envelopes to be opened as directed by the court; or the court may make any other order which justice requires to protect the party or witness from annoyance, embarrassment, or oppression.

* * * * *

(d) Motion to terminate or limit examination.

At any time during the taking of the deposition, on motion of any party or of the deponent and upon a showing that the examination is being conducted in bad faith or in such manner as unreasonably to annoy, embarrass, or oppress the deponent or party, the court in which the action is pending or the court in the district where the deposition is being

taken may order the officer conducting the examination to cease forthwith from taking the deposition, or may limit the scope and manner of the taking of the deposition as provided in subdivision (b). If the order made terminates the examination, it shall be resumed thereafter only upon the order of the court in which the action is pending. Upon demand of the objecting party or deponent, the taking of the deposition shall be suspended for the time necessary to make a motion for an order. In granting or refusing such order the court may impose upon either party or upon the witness the requirement to pay such costs or expenses as the court may deem reasonable.

• • • • •

(28 U.S.C., pp. 6111-12 (1964))

Rule 37.

REFUSAL TO MAKE DISCOVERY: CONSEQUENCES

• • • • •

(b) Failure to comply with order.

• • • • •

(2) *Other Consequences.* If any party or an officer or managing agent of a party refuses to obey an order made under subdivision (a) of this rule requiring him to answer designated questions, or an order made under Rule 34 to produce any document or other thing for inspection, copying, or photographing or to permit it to be done, or to permit entry upon land or other property, or an order made under Rule 35 requiring him to submit to a physical or mental examination, the court may make such orders in regard to the refusal as are just, and among others the following:

(i) An order that the matters regarding which the questions were asked, or the character or description of the

thing or land, or the contents of the paper, or the physical or mental condition of the party, or any other designated facts shall be taken to be established for the purposes of the action in accordance with the claim of the party obtaining the order;

(ii) An order refusing to allow the disobedient party to support or oppose designated claims or defenses, or prohibiting him from introducing in evidence designated documents or things or items of testimony, or from introducing evidence of physical or mental condition;

(iii) An order striking out pleadings or parts thereof, or staying further proceedings until the order is obeyed, or dismissing the action or proceeding or any part thereof, or rendering a judgment by default against the disobedient party;

(iv) In lieu of any of the foregoing orders or in addition thereto, an order directing the arrest of any party or agent of a party for disobeying any of such orders except an order to submit to a physical or mental examination.

• • • • •

(d) Failure of party to attend or serve answers.

If a party or an officer or managing agent of a party wilfully fails to appear before the officer who is to take his deposition, after being served with a proper notice, or fails to serve answers to interrogatories submitted under Rule 33, after proper service of such interrogatories, the court on motion and notice may strike out all or any part of any pleading of that party, or dismiss the action or proceeding or any part thereof, or enter a judgment by default against that party.

IN THE

Supreme Court of the United States

October Term, 1972

No. 71-830

TRANS WORLD AIRLINES, INC.,
Cross-Petitioner,

v.

HUGHES TOOL COMPANY and
RAYMOND M. HOLLIDAY,
Cross-Respondents.

ON WRIT OF CERTIORARI TO THE UNITED STATES
COURT OF APPEALS FOR THE SECOND CIRCUIT

BRIEF FOR CROSS-RESPONDENTS HUGHES TOOL COMPANY AND RAYMOND M. HOLLIDAY

Statement of the Case

The Statement of the Case in the Brief for Cross-Petitioner gives an adequate account of the circumstances that raise the issues tendered on the cross-petition, but the cross-respondents, Toolco and Holliday, do not accept conclusory statements set out there that are unnecessary to consideration of the issues thus raised. In particular, Toolco and Holliday do not agree that it is "now undisputed that TWA suffered losses of at least $45,870,478.65 from the specific injuries alleged in the complaint" (Cross-Petitioner's Brief 7-8) or similar statements suggesting

an admission that defendants are liable to TWA or that acts of defendants caused damage in any amount to TWA.[1] The question of liability is discussed throughout defendants' brief in No. 71-827 and the damages claimed are vigorously disputed at pp. 117-145 of that brief.

Summary of Argument

I. The general federal rule is that interest is not allowed upon unliquidated damages but that the court has discretion to "include interest or its equivalent" if this is necessary to arrive at "fair compensation." *Miller* v. *Robertson*, 266 U.S. 243, 258 (1924). At best TWA's claim for prejudgment interest, measured either from the date of the wrong or from the filing of the master's report, would have been addressed to the discretion of the trier of fact, and this case, in which the damages awarded are an arbitrary sum based on imaginative assumptions, would not be an appealing one for the exercise of discretion. But the usual discretion does not apply in a case, like this one, in which the statute provides treble damages as a penalty. An award of double or treble damages gives the plaintiff more than ample recovery for the delay in payment of sums due, *Brooklyn Savings Bank* v. *O'Neil*, 324 U.S. 697 (1945), and, unless a statute expressly provides to the contrary—

[1] The suggestion in note 2 at p. 8 of Cross-Petitioner's Brief that Toolco asserted in its counterclaims that TWA had suffered losses of this magnitude from late deliveries of jets and borrowings at too high interest rates is unfounded. The counterclaim alleged a conspiracy by the lending institutions and others to seize control of TWA for their own purposes and stated that in furtherance of that conspiracy TWA was forced to order more jets than it needed or could afford (Answer ¶ 97(e), App. A-88). A claim that TWA has been injured by ordering too many jets is not an admission that it was injured by having too few jets.

which is not the case here—interest prior to judgment cannot be had on a statutory penalty. *Rodgers* v. *United States*, 332 U.S. 371 (1947).

II. The finding of the Special Master of the interest rate at which TWA could have borrowed capital to acquire jet aircraft has been accepted by the District Court and the Court of Appeals and presents no issue for this Court. TWA claims that it could have acquired the capital at an earlier time and a lower rate, but its evidence offered in support of this contention was specifically rejected by the Special Master, and there is no allegation in the complaint that would have required the Master to make a finding more favorable to TWA.

III. TWA's claim that the authorization in § 4 of the Clayton Act for recovery of "cost of suit" is not limited to taxable costs but allows recovery of expenses incurred for experts has been rejected in a long and uniform line of circuit and district court decisions stemming from *Straus* v. *Victor Talking Machine Co.*, 297 F. 791 (2d Cir. 1924). TWA's construction of the statute would make the further provision for "a reasonable attorney's fee" surplusage, since if "cost of suit" includes a plaintiff's full expenses it necessarily must include his attorney's fee. The main burden of TWA's argument on this point is that the nature of litigation has changed and that this Court should broaden the category of things recoverable as "cost of suit" in order to take account of this. Rewriting statutes is a task entrusted to Congress and not to this Court.

Argument

The issues raised in No. 71-830 are, as TWA admitted in its cross-petition, "peripheral to the basic controversy" (Cross Petition 24). If Toolco and Holliday are successful on the merits in No. 71-827, the issues raised in No. 71-830 pass out of the case. Even if Toolco and Holliday should be unsuccessful on every other issue presented in No. 71-827, there will be no need to consider the issues posed on the cross-petition unless defendants' position on the effect of the *ad damnum*, set out at pp. 52-65 of our brief in 71-827, is rejected in its entirety.

TWA originally prayed for recovery of $105 million together with costs and attorneys' fees (App. A-31). After defendants had refused to proceed further in the case, TWA was permitted to amend to increase the *ad damnum* from $105 million to $135 million (32 F.R.D. at 607, App. A-321). The judgment actually entered, exclusive of attorneys' fees and costs, was for $137,611,435.95 (App. A-2073). Thus TWA, which has already been awarded some $2.6 million more than even its amended *ad damnum* prayed for, now asks on its cross-petition that it be awarded an additional $75,994,596.06. If Rule 54(c) means even remotely what it says, the cross-petition can be disposed of on the basis of that rule without more.

I. The Courts Below Correctly Refused to Allow Interest Prior to Judgment in this Treble Damage Action.

"Interest" is used in two different senses with regard to judgments and these should be clearly differentiated. When a money judgment is entered it is for a stated sum with interest on that sum at a specified rate. See Official Forms 31, 32, Federal Rules of Civil Procedure. In some cases the

judgment itself may include, as a part of the damages, interest for part or all of the time from the occurrence of the wrong until the entry of judgment. The latter is commonly referred to as "moratory interest."

In federal court, there is a statutory right to interest on any money judgment in a civil case. This interest is calculated from the date of the entry of the judgment at the rate allowed by state law. 28 U.S.C. § 1961. There is no issue here about interest of this kind. The judgment of the District Court provided for it, the Court of Appeals increased the rate at which it is payable, and already the interest on this judgment, which is running at a rate of roughly $30,000 a day, has increased the size of the judgment by some $24 million over the principal sum awarded to TWA.

TWA now contends that, as a part of its damages, it should have been given interest from the date of the wrong, or, when trebled, additional damages of $38.9 million. Alternatively it claims that it should have had interest from the date of the master's report, rather than from the entry of judgment, or an additional $15.9 million. Neither claim is tenable.

In an action on a federal statute, such as the present one, whether to include moratory interest as a part of the damages is wholly a question of federal law. *Brooklyn Savings Bank* v. *O'Neil*, 324 U.S. 697, 715 (1945); *Board of Commissioners of Jackson County* v. *United States*, 308 U.S. 343, 349-350 (1939). TWA cites four cases in support of its statement that "[a]t the time the Clayton Act was passed, the general federal rule, permitting the award of interest on a sum found due (even though unliquidated) from the time a plaintiff should have had the sum as an

element of his actual damages, was already well established" (Cross-Petitioner's Brief 17). As the cases it cites show, that statement is misleading if not, indeed, incorrect. The rule that damages included interest applied only if the amount in question was either liquidated or "clearly ascertainable." Thus in *Eddy* v. *Lafayette*, 163 U.S. 456, 467 (1896), this Court held that it was error to charge the jury that interest was to be included in an award of damages, but found the error harmless because the jury had not awarded the plaintiff interest. *New Dunderberg Mining Co.* v. *Old*, 97 F. 150, 153-155 (8th Cir. 1899), held that interest could be awarded on a claim that was unliquidated but was "clear, definite, and exact." *Brent* v. *Thornton*, 106 F. 35, 38 (5th Cir. 1901), held that it was error to charge a jury to add interest to plaintiff's damages, saying that the award of interest was discretionary. *Lincoln* v. *Claflin*, 7 *Wall.* (74 U.S.) 132, 139 (1868), held that a charge requiring the jury to allow interest in a tort case was erroneous but affirmed because defendant had not objected to the charge.

The most that could be said of the federal cases at the time that the Clayton Act was passed was that interest was *not* generally regarded as an element of damages in tort cases for unliquidated damages though in appropriate cases it might be awarded at the discretion of the finder of fact. This is still the law. The statement most often quoted in subseqent cases is that of Justice Butler for the Court in *Miller* v. *Robertson*, 266 U.S. 243, 258 (1924):

> Generally, interest is not allowed upon unliquidated damages. * * * But when necessary in order to arrive at fair compensation, the court in the exercise of a sound discretion may include interest or its equivalent as an element of damages.

TWA rightly turns to a truly distinguished authority, the late Charles T. McCormick, for his statement that there is a tendency toward the allowance of interest in cases for unliquidated damages (Cross-Petitioner's Brief 15), but it neglects to include the next sentence, following the portion that it quotes, in which Dean McCormick said that "the courts have in the main gone only so far as to permit the jury (or the judge where he is sitting without jury) to grant interest in their discretion, in cases of this type." McCormick, *Damages* § 56, at 222 (1935).

Wholly aside from the fact that TWA was awarded a huge penalty by virtue of the treble damage provisions of the statute, this would have been an inappropriate case for the finder of fact to exercise his discretion in favor of allowing interest on TWA's unliquidated claim. This is not a case in which a plaintiff has suffered an identifiable loss from an identified restraint—as it might have been, for example, if a price-fixing conspiracy had required TWA to pay a million dollars per plane more than it should have. As is more fully developed in Point VI of our main brief (Petitioners' Brief 117-145), the damages here assessed were wholly speculative, with regard both to their amount and to their causal relation to any supposed antitrust violation by defendants. At the damage hearing TWA stated how many planes it thought it should have had and compared that with the number of planes it actually had. Damages were then computed on the bold assumption that it could have sold seats in additional planes to the same extent as it did in the planes it actually had. All of this was done without any showing that, absent a restraint of trade, TWA would have or could have acquired 47 jets or 63 jets or any other number of jets. Since the entire damage proof was based on imaginative assumptions about what

might have happened, a trier of fact would hardly be inclined to exercise its discretion in favor of allowing interest on the purely arbitrary sum thus computed.

But whatever discretion the trier of fact might ordinarily have had, this case is different because the statute does provide for treble damages. In *Miller* v. *Robertson*, 266 U.S. 243, 258 (1924), a discretion was recognized to "include interest or its equivalent" when necessary to arrive at "fair compensation." A plaintiff who has received treble damages has already received far more than fair compensation. The trebling of damages gives him far more than the "equivalent" of interest. As the District Court said in the present case, "[t]reble damages compensate a plaintiff handsomely for all his losses, including loss of the use of money rightfully his" (308 F. Supp. at 696, App. A-2059). That ruling was in accord with the general rule that interest cannot be recovered on a penalty nor where double or treble damages are allowed by statute.[2] That principle has specific application to antitrust cases.[3]

To rebut this rule, and to attempt to establish a right to recover interest in a treble damage action, TWA is able to produce only two early and inconclusive decisions (Cross-Petitioner's Brief 18-19). In *Thomsen* v. *Cayser*, 243 U.S. 66 (1917), the jury had added interest to the damages sustained by the plaintiff in an antitrust case. Although this

Vt. 1960); see *United States* v. *United Drill & Tool Corp.*, 183 F.2d 998, 1000 (D.C. Cir. 1950); cf. *Carter Products, Inc.* v. *Colgate-Palmolive Co.*, 214 F.Supp. 383, 418 (D. Md. 1963).

[3] *Locklin* v. *Day-Glo Color Corp.*, 429 F.2d 873, 877 (7th Cir. 1970), *cert. denied*, 400 U.S. 1020 (1971); *Cape Cod Food Products, Inc.* v. *National Cranberry Assn.*, 119 F.Supp. 900, 911 (D. Mass. 1954).

Court mentioned that fact, 243 U.S. at 89, the inclusion of interest was not one of the issues in dispute and this Court did not pass on its propriety.[4] In *United Mine Workers* v. *Coronado Coal Co.*, 258 F. 829, 846-847 (8th Cir. 1919), *reversed on other grounds*, 259 U.S. 344 (1922), it was held to be error for the court to add interest to a jury's award of damages in an antitrust case, on the ground that interest in tort actions is a matter for the discretion of the jury. Whatever authority these decisions might have on this point has been dissipated by intervening decisions from this Court.

In *Brooklyn Savings Bank* v. *O'Neil*, 324 U.S. 697 (1945), one of the issues was whether an employee recovering double damages under § 16(b) of the Fair Labor Standards Act, 29 U.S.C. § 216(b), was also entitled to interest on the sums so recovered. The Court held unanimously that he was not. Since Congress has provided double damages as compensation for delay in payment of sums due, interest would be a second compensation for the same delay and could not be allowed. 324 U.S. at 714-716.

The issue in *Rodgers* v. *United States*, 332 U.S. 371 (1947), was whether interest could be awarded on statutory penalties for exceeding cotton allotments. The Court held that it could not. It said that penalties are intended to have a deterrent effect and are similar to a criminal fine.

---

[4] TWA quite properly does not cite *Hanover Shoe, Inc.* v. *United Shoe Machinery Corp.*, 392 U.S. 481 (1968). Although the Court there said that the judgment "awarded trebled damages, including interest," 392 U.S. at 483, it was misled by an inept choice of language by the District Court. When that court spoke of the "interest to be included in the damage calculations" it was describing a sum that was deducted from the damages because it represented interest costs that the plaintiff would have incurred. 245 F.Supp. at 302. Examination of the briefs and records in that case in this Court confirms that no prejudgment interest was allowed to the plaintiff.

"We are unable to say that it would be consistent with the congressional purpose for the courts to add interest to these very substantial penalties already imposed upon non-cooperating farmers." 332 U.S. at 376. The Court also cited 1 Sutherland, *Damages* § 330 (4th ed. Berryman, 1916), for the proposition that interest cannot be recovered on statutory penalties. 332 U.S. at 376 n. 7.

As the Court of Appeals pointed out, "trebled damages will more than adequately compensate TWA for its injuries" (449 F.2d at 80, App. A-2795). Thus the rationale of the *Brooklyn Savings* case precludes interest. The provision for treble damages in antitrust actions is "in the nature of a penalty for the public wrong * * *." *Rogers* v. *Douglas Tobacco Board of Trade*, 244 F.2d 471, 483 (5th Cir. 1957). Since the remedy is "penal in nature and susceptible therefore to all restrictions surrounding an action of such nature," *Sun Theatre Corp.* v. *RKO Radio Pictures*, 213 F.2d 284, 287 (7th Cir. 1954), prejudgment interest is foreclosed also on the rationale of *Rodgers* v. *United States*.[5]

---

[5] The Court of Appeals made the further point that to allow moratory interest would present "difficult questions of proof—including highly abstruse inquiries as to proper rates and the time from which interest should run. Since the trebled damage device in any event adequately serves the penal and remedial purposes of the antitrust laws, we believe it is sounder, absent contrary express Congressional intent, to consider that these difficult and time-consuming inquiries are intended to be avoided." [449 F.2d at 80, App. A-2795.]

To this TWA offers an interesting plea of confession and avoidance. Without denying that inclusion of interest would lead to the kinds of problems foreseen by the Court of Appeals, TWA says that it is prepared to avoid them by accepting a computation from the latest possible date and at the lowest arguably compensatory figure (Cross-Petitioner's Brief 21-22). It is easy enough for a plaintiff with an already immense judgment generously to forbear from asking more than a minimal $38.9 million extra on this account. But if—contrary to the authorities we have discussed—there is a statutory right to interest from the time of the wrong, the extent of that right cannot be cut back by the forbearance of a particular lavishly-endowed plaintiff and future cases would present precisely the abstruse inquiries that the Second Circuit thought difficult and unnecessary.

If, as we have seen, the fact that this is a treble damage action bars an award of interest from the time of the wrong as damages, it equally bars a claim for interest from the date of the master's report. The cases relied on by TWA in which interest has been allowed from the date of the master's report (Cross-Petitioner's Brief 24-25) have done so on the theory that this interest was a part of the damages.[6] They stem from a time when interest was ordinarily refused on unliquidated claims and they held that the claim became liquidated, and interest ran as part of the damages, from the date of the master's report. Congress has changed the rule in patent cases and has provided by statute for interest from the date of infringement. See Cross-Petitioner's Brief 25 n. 12. Since the cases denying moratory interest in antitrust cases do not deny interest because the damages are unliquidated, but rather because treble damages are in lieu of interest, the patent cases are not in point.[7]

---

[6] This point was clearly recognized by the Second Circuit:

Tilghman v. Proctor, 125 U.S. 136, 8 S.Ct. 894, 31 L. Ed. 664 (1888), and other patent cases relied on by TWA do not involve the question of when interest begins to run on a judgment, but rather from when interest as an element of damages should be measured. The holding of the cases cited is that interest should run from the date that the fact and amount of damages cease to be "in earnest controversy and of uncertain issue . . ." at [illegible] 8 S. Ct. at 907, an event marked by the filing of the Master's report. Since we determine that moratory interest is inappropriate here, these cases are inapposite.

v. Wm. Wrigley, Jr. [illegible] trademark and unfair competition [illegible] also the time from which interest should be computed on an element of damages." *Id.* at 85[illegible] Colgate-Palmolive Co. [illegible] [449 F.2d at 80 n. 5.

[7] Despite the contrary suggestion [illegible] Brief 26 n. 13), no difference [illegible] *Gage & Valve Co.* [illegible] 441 (1891). It too rests on the distinction between liquidated and unliquidated damages [illegible] distinction that is in issue here.

Interest from the date of the master's report cannot be recovered as damages because this is a treble damage action. It cannot be recovered as interest on a judgment because the statute, 28 U.S.C. § 1961, allows interest of that kind only from "the date of the entry of the judgment," and the judgment is not the master's report but rather the document signed by the court on April 14, 1970 (App. A-2073). See Civil Rule 58.

II. The Determination Below of the Cost of Capital Was Proper.

The Special Master deducted $29 million in computing TWA's supposed "damages" to represent the cost TWA would have incurred to borrow the capital necessary to acquire more jets, to acquire them earlier, and to buy them rather than lease them. TWA concedes the logic and propriety of such a deduction (Cross-Petitioner's Brief 30), as it must in view of *Hanover Shoe, Inc.* v. *United Shoe Machinery Corp.*, 392 U.S. 481, 504 (1968). TWA accepts also the Master's determination that the rates he used in this computation, 6% and 6.3%, are the rates that TWA would have had to pay in 1958-1960, the years in which it would have been acquiring the planes (Cross-Petitioner's Brief 33). Nevertheless TWA says that it should receive an additional $19.5 million in damages because it could have acquired the needed funds in 1955 and 1956 at a rate of at most 4¾%.

At the damage hearing TWA undertook to show through its financial expert, Edward J. Morehouse of Drexel Harriman Ripley, that an independent TWA would have arranged financing for a jet fleet earlier and on more advantageous terms. Morehouse's testimony was that an

independent TWA would have sold a substantial amount of common stock in May 1955 and that it would then have been able to borrow money between October 1955 and May 1959 at rates ranging from 4% to 6% (App. AX-353-354). As is discussed more fully in our principal brief (Petitioner's Brief 139-141), this testimony about financing was positively and explicitly rejected by the Special Master (App. A-1966 Brownell Report 256-263).

Since TWA's only evidence of what it might have done failed, the Special Master had no choice but to make his own calculation of the cost of capital. As he said: "Since I have not accepted the Drexel Harriman Ripley financial plan (see pages 257-264) on which the Price Waterhouse computation relied, I have independently calculated the appropriate cost of interest" (App. A-1966 Brownell Report 148). His finding that an independent TWA would have paid 6% and 6.3% to finance jets was expressly accepted by the District Court (308 F.Supp. at 694, App. A-2055) and by the Court of Appeals (449 F.2d at 79-80, App. A-2793-2794). The Court of Appeals said:

> In the absence of a viable alternative offered by TWA (and TWA does not contest the rejection of the Morehouse and Comparative Profits studies) the Master properly based his deduction for interest charges on the price of money at the time when financing would normally have been arranged for the 63-jet fleet. [449 F.2d at 79-80, App. A-2794.][8]

[8] TWA reproduces once more (Cross-Petitioner's Brief 33-34) its Exhibit 314, showing weighted average interest rates it and its competitors had in particular years. As the Court of Appeals pointed out, that exhibit is "without regard to the times that the debts were incurred or the purposes for which they were incurred * * *" (449 F. 2d at 79, App. A-2794), and is not a measure of the interest rate TWA or any other airline would have had to pay in any of the years from 1955 through 1960.

Finally TWA says that the fact that it would have paid 4 to 4¾% is "established by the complaint * * *" (Cross-Petitioner's Brief 33). Even read in a vacuum the complaint "establishes" no such thing. The only relevant allegation is the second sentence of ¶ 27 of the complaint, where it is alleged that: "In 1955 and 1956 various United States air carriers were able to obtain funds at a cost (or interest rate per annum) in 1955 of 4% and in 1956 at costs ranging from 4¼% to 4¾%" (App. A-16). This does not say that TWA would have been able to obtain funds at those rates nor does it speak to the size of the loans that were made at those rates. The Special Master found that "a $150-$170 million loan to TWA on October 1, 1955, [as hypothesized in the rejected testimony of TWA's financial expert] would have been almost three times as large as any long-term commitment that had been made to that date to any airline for any purpose" (App. A-1966 Brownell Report 183). Since the Special Master rejected TWA's evidence that it would have arranged long-term financing beginning in 1955—and this testimony itself would have produced an average rate on borrowing in excess of that alleged in the complaint—he quite properly refused to make a finding even more favorable to TWA on the basis of a single sentence in the complaint that says nothing about how much TWA would have had to pay for sums of this magnitude.

III. TWA Was Properly Denied Recovery for the Expenses It Incurred for Experts.

Section 4 of the Clayton Act provides that a successful plaintiff shall recover treble damages "and the cost of suit, including a reasonable attorney's fee." 15 U.S.C. § 15. TWA now claims that it should have received an

additional $1.6 million, as a part of "the cost of suit," as reimbursement for the expenses it incurred for experts. The leading case on this point is *Straus* v. *Victor Talking Machine Co.*, 297 F. 791 (2d Cir. 1924). The court there rejected a claim for sums spent for stenographer's minutes, saying:

> These expenditures were not taxed, as not being "costs of suit." It will be noted that under section 7 of the Sherman Act the words used are "the *costs* of suit," while under section 4 of the Clayton Act the words used are "the *cost* of suit." No explanation is found in the report of any congressional committee for the use of the singular "cost" in the Clayton Act, instead of the plural "costs" in the Sherman Act. We do not regard this difference as significant, for, in our view, if it had been intended that "cost of suit" should mean anything different from "costs of suit," that intention would, in some manner, have been made clear. Each of these phrases is followed by the words "including a reasonable attorney's fee," and this we think makes clear that the difference between "cost" and "costs" in these statutes is probably merely accidental, because if, under the Clayton Act, it had been intended to include the expenses "of suit," there would hardly seem to be any reason for adding the words "including a reasonable attorney's fee," in view of the fact that an attorney's fee would necessarily be a part of the expense incurred in conducting such a litigation. [297 F. at 806-807; emphasis in original.]

TWA cites no case to the contrary. Indeed when it was seeking review here it conceded that the *Straus* case has been followed in "a long and uniform line of circuit and district court decisions * * *" (Cross-Petition 20). That

concession was well justified. Courts have refused to allow claims for reimbursement for a variety of expenses beyond taxable costs in antitrust suits.[9]

TWA's argument on this point is supported, as it concedes, by no direct authority. It cites *Newman* v. *Piggie Park Enterprises, Inc.*, 390 U.S. 400 (1968), for the proposition that "provisions allowing recovery of the expense of suit" are to be liberally construed. The case will not support the reading TWA gives it. *Newman* involved allowance of attorneys' fees in a class action under the 1964 Civil Rights Act. In holding that attorneys' fees should ordinarily be awarded a successful plaintiff in those actions, the court noted that the statute in question did not provide for damages so that allowance of attorneys' fees was necessary in order to avoid hardship to litigants. The case speaks only of attorneys' fees and says nothing about recovery of "expense of suit" other than attorneys' fees.

TWA makes the following argument, each part contingent upon the other: (1) taxable "costs" never include an attorney's fee; (2) the statute speaks of "cost of suit," including a reasonable attorney's fee; (3) therefore "cost of suit" must refer to something more than taxable "costs" (Cross-Petitioner's Brief 41-42). The argument fails with its major premise. The rule is not that attorneys' fees are *never* recoverable as costs, but only that they are not *ordinarily* recoverable as costs.

---

[9] See, *e.g.*, *Twentieth Century Fox Film Corp.* v. *Goldwyn*, 328 F.2d 190, 224 (9th Cir. 1964) (accounting fees); *Farmington Dowel Products Co.* v. *Forster Mfg. Co.*, 297 F.Supp. 924, 930 (D. Maine 1969) (long distance calls; travel expenses; cost of experts); *Hanover Shoe, Inc.* v. *United Shoe Machinery Corp.*, 245 F.Supp. 258, 305 (M.D.Pa. 1965) (travel expenses); *Brookside Theatre Corp.* v. *Twentieth Century Fox-Film Corp.*, 11 F.R.D. 259, 265 (W.D.Mo. 1951) (long distance calls).

> While the general American rule is that attorneys' fees are not ordinarily recoverable as costs, both the courts and Congress have developed exceptions to this rule for situations in which overriding considerations indicate the need for such a recovery. [*Mills* v. *Electric Auto-Lite Co.*, 396 U.S. 375, 391-392 (1970).]

See, *e.g.*, 42 U.S.C. § 2000a-3(b), providing that in certain civil rights cases the court may allow the prevailing party "a reasonable attorney's fee as part of the costs * * *."

The statute as it stands, and as it has been uniformly construed for nearly half a century, is a coherent provision specifying that antitrust actions are among the exceptional cases in which Congress has determined that an attorney's fee is to be included in the taxable costs. The construction advanced by TWA would make the reference to an attorney's fee surplusage, since the expense of conducting a suit, which TWA would interpret "cost" to mean, would always include attorneys' fees.

The real thrust of TWA's argument is not that Congress in 1914 authorized the recovery of the fees of experts—or the variety of other kinds of expenses that antitrust plaintiffs have claimed—but that this Court should rewrite the statute to conform to changing realities of litigation. Thus TWA says that proving damages in a major antitrust case "has become" complex and costly (Cross-Petitioner's Brief 35). The Court is invited to interpret the statute "in light of the realities of today's private antitrust suit" (Cross-Petitioner's Brief 38), and to "give recognition to the present-day importance of such expert witnesses in private antitrust suits * * *" (Cross-Petitioner's Brief 39). Whether the statute requires revision so that a successful plaintiff, who will already have been awarded three times

the damage he has suffered, should also be reimbursed by defendant for the full expense he has incurred in prosecuting the suit, is a question of policy appropriately addressed to the Congress rather than to this Court.

CONCLUSION

On the issues raised by the cross-petition, the judgment of the courts below should be affirmed if the positions advanced by petitioners in No. 71-827 are rejected. If the positions advanced in that case are accepted, however, the Court need not reach the issues raised by the cross-petition.

Respectfully submitted,

In the Supreme Court of the United States

OCTOBER TERM, 1972

No. 71-827

HUGHES TOOL COMPANY AND RAYMOND M. HOLLIDAY, PETITIONERS

v.

TRANS WORLD AIRLINES, INC.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

MEMORANDUM FOR THE CIVIL AERONAUTICS BOARD AS AMICUS CURIAE

INTERESTS OF THE CIVIL AERONAUTICS BOARD

The Civil Aeronautics Board has an interest in this litigation to the extent that it involves the scope of the antitrust immunity conferred by the Board's orders permitting Hughes Tool Company ("Toolco") to acquire control of Trans World Airlines, Inc. ("TWA") and permitting certain transactions between Toolco and TWA.[1] The Board's position is that those orders did not provide any antitrust or other immunity for the acts alleged as the basis for TWA's complaint.

[1] We are thus addressing ourselves in this submission to the issues raised in Part IV of Toolco's brief (Br. 65-88).

When this case was before the Court during the 1964 Term,[2] the Board, as *amicus curiae,* submitted its views in a memorandum stating that TWA's complaint and Toolco's counterclaims (with one exception) did not raise any issues which lie within the Board's exclusive jurisdiction or which should be referred to the Board for initial consideration under the primary jurisdiction doctrine. The Board also stated that, in its view, the Board orders authorizing Toolco to acquire control of TWA and permitting certain transactions between Toolco and TWA conferred no antitrust or other immunity for the acts upon which TWA's complaint is based. The Board adheres to these views. The purpose of this *amicus* memorandum is to resubmit the Board's prior position on the question of immunity and any remaining question of exclusive jurisdiction. We believe that the proceedings below which followed the Court's dismissal of the writs of certiorari have not affected the validity of that position.[3] We take no position on any other issues in the case.[4]

---

[2] The Court, after argument, dismissed the writs of certiorari as improvidently granted. *Hughes Tool Co.* v. *Trans World Airlines, Inc.* (Nos. 443 and 501), 380 U.S. 248, 249.

[3] For the convenience of the Court we have repeated substantial portions of our prior submission in this memorandum.

[4] We have not commented on the antitrust questions discussed in the Toolco brief because they do not directly pertain to the powers and responsibilities of the Board, or to its interest in this proceeding. Moreover, any substantive antitrust issues in this case appear to be intertwined with the question of the effect of the default judgment entered against Toolco.

STATEMENT

Since the facts have been set forth at some length in the several opinions of the courts below, and since the parties have presented the facts fully in their briefs, we limit this Statement to a brief description of the relevant Board orders, the initial pleadings, and the decisions below.

1. THE BOARD'S ORDERS

In 1944, the Board, acting under Section 408 of the Federal Aviation Act, approved the acquisition of control of TWA by Toolco through ownership of approximately 45 percent of the carrier's stock (*Transcontinental & W. A., Control by Hughes Tool Co.*, 6 C.A.B. 153). The Board ruled that the stock acquisition gave Toolco control over TWA and that Toolco was engaged in a phase of aeronautics because it had the right to purchase a substantial fleet of aircraft, at least a part of which might be held for resale (*id.* at 155–156). The Board also found that Toolco's control of TWA would have no adverse effect upon the public interest. It expressed concern, however, that "TWA might be forced, through the control exercised by Hughes Tool, to purchase more [aircraft] than the economic operations of TWA require" (*id.* at 156). While stating that this possibility was remote (*ibid.*), the Board conditioned its approval of control by limiting transactions between the companies to those "involving complete items of property, the price of which does not exceed $200 each, with the further limitation that the total annual expenditure involved in such commercial transactions by either party shall not ex-

ceed $10,000" (*id.* at 158). In 1950, the Board approved an arrangement under which Toolco increased its holdings of TWA stock to approximately 73 percent (*Transcontinental & W. A., Further Control by Hughes Tool Co.,* 9 C.A.B. 381; 12 C.A.B. 192), subject to the 1944 limitation upon intercompany transactions (12 C.A.B. at 193).

Since 1944 the Board, upon application by TWA and Toolco, has entered various orders modifying the conditions imposed in the basic orders of approval to permit intercompany transactions in excess of the dollar limitations.[5] These orders permitted Toolco to sell or lease aircraft and related equipment to TWA and to participate in the financing of TWA's acquisition of equipment. No hearings were held or adversary pleadings filed when such orders were entered. The Board found that modification of the condition to permit each transaction was in the public interest and, in each order since the end of 1956, that the proposed transaction or transactions did "not violate the original intent of the restriction imposed upon transactions between TWA and Toolco."[6] Nearly all of the orders state further that the allowance of the transaction is not a determination of its reasonable-

[5] A-3307-3308, 3309-3310, AX-2031-2032, 2048-2049, 2076-2077, 2094-2095, 2147-2148, 2157-2158, 2173-2174, 2188-2190, 2202-2203, 2226-2227, 2237-2238, 2245-2246, 2260-2261, 2287-2289, 2303-2305, A-3403-3412.

[6] The quoted language, or variants thereof, is found at AX-2158, 2174, 2189, 2202, 2226-2227, 2238, 2246, 2261, 2288. One order, in June 1960, specifically stated that the Board's finding to that effect was made on "the basis of the application and the representations contained therein" (AX-2288).

ness for rate-making purposes.[7] The last modification order, entered in December 1960 (A–3403–3412), authorized a financing arrangement under which two lending institutions assumed actual control over TWA's management by means of a voting trust imposed on Toolco's stock.[8]

2. THE PLEADINGS

In 1961, TWA filed a complaint against Toolco, Howard Hughes (Toolco's sole stockholder) and Raymond M. Holliday (a Toolco officer) (A–1–32), charging that the defendants had violated Sections 1 and 2 of the Sherman Act and Sections 3 and 7 of the Clayton Act and had maliciously and willfully injured the business of TWA. The antitrust claims are based upon the defendants' alleged misuse of their power to control TWA's acquisition of aircraft, including particularly jet-powered aircraft, with the aim of making Toolco the sole supplier of aircraft to TWA. The complaint alleges that in effectuating this purpose the defendants prevented TWA from acquiring any jet-powered aircraft for a substantial period (A–13–14),

[7] AX–2032, 2049, 2077, 2095, 2148, 2158, 2174, 2189, 2203, 2227, 2238, 2246, 2261, 2289, 2305, A–3412.

[8] In addition to those orders dealing with specific transactions, the Board entered an order in 1956 instituting an investigation to determine whether a "proposed change in Toolco's activities in the field of aeronautics"—entry into the business of manufacturing and selling jet aircraft—required further Board approval under Section 408 (AX–2149–2150). This investigation was terminated in 1958 after Toolco abandoned the proposed manufacturing project and TWA withdrew its request that the Board approve purchase of Toolco aircraft (AX–2425–2426).

and that from 1955 to 1960 they barred TWA from obtaining the financing necessary for acquisition of such aircraft and allowed only debt financing or such equity financing as would increase Toolco's equity position in the carrier (A–15–16). TWA alleged that it was damaged by its failure to acquire necessary aircraft at the appropriate time and was particularly damaged by its failure to acquire jet-powered aircraft in 1958–1960; and that it was also damaged by its failure to obtain financing on more advantageous terms than were available when it finally was permitted to do so (A–16, 25–26).

Defendants Toolco and Holliday filed answers denying the allegations against them, alleging that the complaint did not state a cause of action, and challenging the court's jurisdiction on the ground that the orders of the Civil Aeronautics Board dealing with Toolco's control of TWA immunized the challenged transactions (A–41–51, 99–115).[9] (Defendant Hughes was not served and did not file an answer.)

---

[9] Toolco also asserted six counterclaims against TWA and additional defendants (A–51–94). These counterclaims, no longer pertinent, were dismissed by the district court with prejudice as a result of Hughes' failure to appear for his deposition (A–317–323, 32 F.R.D. 604), with the exception of one counterclaim as to which the district court granted summary judgment for TWA. The court of appeals affirmed the district court's disposition of the counterclaims, except for one which it held the district court should have dismissed for lack of jurisdiction because the Board had exclusive jurisdiction (A–344–356, 332 F.2d 602, 611–616). This Court's grant of a writ of certiorari to review the dismissal with prejudice of Toolco's four counterclaims was subsequently dismissed as improvidently granted (380 U.S. 249).

3. THE DECISIONS BELOW

As a result of the failure of Hughes to appear for the taking of his deposition, the district court (1) entered a default judgment in favor of TWA against Toolco and Holliday on the issue of liability; and (2) referred the question of damages to a special master and retained for further consideration the issues of divestiture of Toolco's stock interest in TWA and injunctive relief [10] (A–317–322, 32 F.R.D. 604, 607–608). The court of appeals authorized Toolco and Holliday to appeal from the interlocutory order granting judgment to TWA on two questions: (1) whether the district court "lacked jurisdiction" of the treble damage action by reason of primary jurisdiction over these matters "residing in the Civil Aeronautics Board"; and (2) whether the Board's orders with respect to Toolco's control of TWA and the various intercompany transactions constituted a defense to TWA's antitrust claim (A–330, 332 F.2d 602, 605).

The court of appeals held that the Federal Aviation Act had not superseded the antitrust laws with respect to TWA's claims, that those claims were not within the Board's primary jurisdiction, and that the Board's orders had not given Toolco and Holliday immunity for their alleged violations of the antitrust laws (A–333–343, 332 F.2d at 606–610).

This Court granted certiorari to review the decision of the court of appeals, but, following argument, dis-

[10] Toolco's sale of its TWA stock in May 1966 mooted TWA's prayers for equitable relief (A–2743, 449 F.2d 51, 56, n. 2).

missed the writ as improvidently granted (380 U.S. 248).

Thereafter, Special Master Brownell conducted a hearing to determine damages. He awarded TWA damages of $45,870,478.65 trebled to $137,611,435.95 (Brownell Report, following A–1966). The damages were awarded to compensate TWA for Toolco actions resulting in late delivery and non-delivery of jets, requiring TWA to lease jets instead of permitting TWA to purchase them, and disrupting TWA's business. More specifically, as the court of appeals summarized the damage award, the damages "consisted primarily of profits [TWA] lost as a result of (1) diversion of the six Convairs to Northeast; (2) temporary retention by Toolco of four additional of the ordered Convairs and the ultimate lease of those jets to Northeast; (3) diversion of the six Boeings to Pan Am; (4) the lease, instead of outright sale, of jets in 1959–60; and (5) late delivery of 47 of the 63 jets ordered in 1956 which would have been avoided if, by the allegations of the complaint, Toolco had not unlawfully constricted TWA's financing and acquisition of its own jet fleet" (A–2763–2764, 449 F.2d 51, 65–66).

Other damage claims were rejected by the Special Master, and TWA did not seek damages for the continuing antitrust violations alleged to have occurred after Toolco put its TWA stock in a voting trust in December 1960 (*ibid.*). The district court adopted and confirmed the Special Master's Report over the objections of both sides (A–2027–2059, 308 F.Supp. 679), and later awarded TWA attorneys fees and costs (A–

2060–2072, 312 F.Supp. 478). The district court entered judgment in April 1970 for a total of $145,448,-141.07, plus interest (A–2073).

On cross appeals, the court of appeals affirmed the judgment in all respects except the rate of interest (A–2739–2798, 449 F.2d 51). The court of appeals did not reconsider its previous ruling rejecting defendants' primary jurisdiction and immunity contentions.

DISCUSSION

A. THE BOARD'S ORDERS AUTHORIZING TOOLCO'S CONTROL OF TWA AND PERMITTING CERTAIN INTERCOMPANY TRANSACTIONS DID NOT IMMUNIZE THE CONDUCT ALLEGED IN THE COMPLAINT AND ADMITTED BY THE DEFAULT

Since immunity from the antitrust laws is not "lightly implied," a statutory immunity for specified transactions does not extend to "other types of agreements or restraints." *California* v. *Federal Power Commission*, 369 U.S. 482, 485; *United States* v. *Philadelphia National Bank*, 374 U.S. 321; *United States* v. *Socony-Vacuum Oil Co.*, 310 U.S. 150, 226–227. The Federal Aviation Act reflects this policy, since the immunity that Section 414 (49 U.S.C. 1384) grants for acts done pursuant to Board orders under Section 408 (49 U.S.C. 1378) is applicable only "insofar as may be necessary to enable such persons to do anything authorized, approved or required by [the Board's] order."

We submit that neither the Board's orders authorizing Toolco's control over TWA nor its subsequent

orders with respect to various intercompany transactions provide any immunity for the antitrust violations that TWA has alleged. The 1944 and 1950 orders approved the acquisition and the enlargement of Toolco's control over TWA. But orders authorizing control do not approve prospectively all things that may be done in the exercise of control, and the Board's orders did not permit Toolco to utilize its power as a means of violating the antitrust laws. The Board's orders did confer antitrust immunity, but that immunity was confined to the acquisition of control itself, and did not extend to the manner in which control was thereafter exercised. As the court below summarized TWA's complaint, it charged "the outlines of a tying arrangement, an economic boycott of the defendants' competitors, and an attempt to monopolize commerce" (A–343, 332 F.2d at 611). Such conduct plainly did not constitute acts "necessary to enable" Toolco to do "anything authorized [or] approved" by the Board's order.

Toolco now contends that the damage award has "narrowed the terms of reference from the limitless realm of the possible to a contained set of facts" (Br. 67) and that this contained set of facts shows that the Toolco acts upon which TWA relied to establish damages were simply normal and natural incidents of the control relationship that the Board approved. We do not believe, however, that the specific acts which served as a basis for the damage award can be examined without reference to the allegations of the complaint alleging that those acts were performed in

furtherance of violations of the antitrust laws. The damage computations were based upon the assumptions that defendants admitted by their default that the underlying antitrust violations did occur and that the specific acts which damaged TWA were caused by those violations. Those assumptions must be deemed correct for purposes of determining the immunity questions. Under those assumptions, the specific acts which damaged TWA were not the normal and natural exercise of the control relationship approved by the Board, and consequently they were not given antitrust immunity.

In any event, we do not believe that an order approving an acquisition immunizes post-acquisition managerial decisions under the antitrust or other laws. The legality of such decisions must be determined on their own merits.

Similiarly, assuming *arguendo* that orders modifying the basic order of approval may confer antitrust immunity in appropriate circumstances,[11] no immunity was conferred by the various modification orders

[11] TWA argues (Br. 145-147) that the Board's subsequent orders could not have conferred Section 414 antitrust immunity on Toolco for several reasons: They were not issued after notice and hearing, which is required for Section 408 approvals; they did not employ language of approval; and, as modifications of a Section 408 order, the only conduct that they could approve with concomitant immunity would be an acquisition of control. The Court need not reach the questions which TWA raises of the Board's power to confer antitrust immunity through modification orders, because none of the modification orders in this case purported to sanction the antitrust violations found to have damaged TWA.

in this case. The orders approving Toolco's control of TWA had prohibited intercompany transactions that involved more than $200 each or that exceeded an annual total of $10,000. These limitations were imposed because of the Board's concern that Toolco might force TWA to purchase more aircraft than its operations required. In waiving this condition for a number of specific purchases and leases of aircraft, the Board considered only such matters as the carrier's need for the particular equipment and the reasonableness of the terms of the various financing arrangements as disclosed by the applications. The Board stressed the limited nature of these modification orders by observing that it was appraising the transactions in light of the original purpose of the restriction. The modification orders were entered solely on the basis of motions, without hearings or adversary pleadings, and did not purport to sanction anything other than the specific transactions involved. The misconduct alleged in the complaint was no more necessary to the consummation of those specific transactions than it was to the original acquisition of control.

Moreover, the TWA charges which Toolco describes as the "crux" of the complaint involve Toolco's use of its control over TWA to prevent TWA from acquiring aircraft from other suppliers and from obtaining the financing necessary to acquire jets (see A–2762–2763, 449 F.2d at 65). The complaint states that these acts were "performed in furtherance of the offenses charged and for the improper purposes alleged" (*ibid.*) and were the cause of the injuries to TWA.

This restraint upon TWA's activities was, of course, neither submitted to nor approved by the Board, and it was certainly not necessary to carry out any of the Board's orders.

Most of the specific items for which damages were awarded to TWA are unrelated to the various modification orders. The bulk of the damages was awarded for Toolco's delay in ordering jets from Boeing, Toolco's diversion of Boeing jets to Pan American, Toolco's diversion to Northeast of 10 out of 30 Convair jets, and Toolco's actions which interfered with and delayed the delivery of the other 20 Convair jets (Brownell Report, Part I). The delay in ordering Boeing jets, the interference with Convair deliveries, and the diversions of aircraft to other airlines are not remotely connected with the subject matter of any of the modification orders.

The Master did award some damages for profits which TWA lost by reason of Toolco's decision to lease jets to TWA during 1959 and 1960 instead of permitting TWA to purchase them (Brownell Report, Part II). That award was, of course, based upon the assumption that this decision was made in furtherance of the underlying antitrust violations, which were never disclosed to or approved by the Board.

Although the Board did enter modification orders permitting TWA and Toolco to enter into short-term leases of the jets and permitting various limited extensions of those leases, the Board's consideration was limited to a determination that the leases did not constitute transactions independently requiring Section

munity under Section 414 of the Federal Aviation Act implies that such immunity must be broadly construed, thereby precluding relief in this case, in order to avoid an intrusion into matters within the Board's jurisdiction. This is not the case. The Board's powers and responsibilities are only incidentally related to the subject matter of this antitrust case.

Section 408 of the Federal Aviation Act does require Board approval before control of an air carrier may be acquired by another air carrier, by a "person engaged in any other phase of aeronautics," by persons having other specified transportation interests, or, since 1969, by "any other person." [12] It was pursuant to this Section that the Board entered its orders approving control of TWA by Toolco, which the Board found to be a "person engaged in any other phase of aeronautics" as a present or potential dealer in aircraft.

But the Board's power under Section 408 to regulate acquisitions of control of air carriers does not oust the courts of jurisdiction under the antitrust laws to adjudicate controversies that grow out of or relate to the exercise of such control. Section 408 requires the Board to approve only an "acquisition of control;" it does not give the Board continuing responsibility for supervision of a controlling person's management of an air carrier. The Board, to be sure, is empowered by Section 408(b) to impose conditions

[12] Section 408(a)(5) was amended in 1969 to require Board approval of an acquisition of control of an air carrier by "any other person." 83 Stat. 103, 49 U.S.C. 1378(a)(5).

upon its approval, and it may bar dealings between the parties or, as it did here, reserve Board supervision over designated future transactions. Such conditions are ordinarily limited, as they were here, to specific classes of transactions, and, indeed, the Board may approve unqualifiedly, without imposing any conditions.

Moreover, the Board has no jurisdiction over aircraft dealers or manufacturers as such, and it is not generally empowered to regulate the issuance of a carrier's securities or its capital structure, or to specify the aircraft which a carrier can acquire, the timing of such acquisitions, or any decisions to defer or refrain from aircraft acquisitions. Indeed, the Board is specifically precluded from interfering with a carrier's choice of equipment (Section 401(e)(4), 49 U.S.C. 1371(e)(4)).

Finally, the Board's remedial powers do not effectively cover the conduct alleged in the complaint. Its authority to enter cease-and-desist orders (Section 411, 49 U.S.C. 1381) is limited to unfair practices committed by an "air carrier * * * in air transportation or the sale thereof," while the complaint sought relief against a person controlling an air carrier, and asserts unlawful action affecting the sale of aircraft, not air transportation. Toolco contends (Br. 71–72) that the Board may reexamine a prior order approving control and cancel it or otherwise remedy undesirable consequences of the relationship if, upon inquiry, it finds abuses of control which require such corrective action in the public interest (cf. Section 1005(d), 49

U.S.C. 1485(d)). We assume for present purposes that the Board has this power and that it may also consider a party's past conduct in the exercise of control when passing upon further requests for Section 408 approval. But since the Act does not impose any duty on the Board affirmatively to monitor and supervise all aspects of the control relationship, the Board's limited authority over Section 408 relationships should not of itself serve to insulate the controlling party from antitrust liability or oust the courts from jurisdiction. Indeed, the availability of antitrust or other judicial remedies may be regarded as additional safeguards for the protection of the public interest.

All of this is not to suggest, as Toolco implies, that Section 414 is to become an empty assurance to those who obtain approval of transactions subject to Sections 408, 409, and 412 of the Federal Aviation Act. It is rather to support the salutary principle that Section 414 is not to be construed by recipients of such approvals as a blanket authorization to conduct their subsequent affairs with reckless disregard of the antitrust laws. Here, indeed, Toolco is not being subjected to penalties because of its acquisition of control of TWA, nor, we believe, could it be. The sanctions relate to subsequent actions, the antitrust aspects of which were never brought to the attention of or considered by the Board.

Under such circumstances, the mere existence of Board jurisdiction with respect to some aspects of aviation neither supersedes the courts' power to award relief in this case nor requires that the scope

of immunity be interpreted in a manner which would have that effect.

Respectfully submitted.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

REPLY BRIEF FOR PETITIONERS

Because the submissions in this case are already voluminous, we endeavor to hold this reply to a minimum and to confine it to the central issues that remain unresolved.* Save for what is set out below we are content to stand on what we have already said to the Court, confident that a rereading of our brief—or even, in view of its length, a rereading of the Summary of Argument previously presented (Petitioners' Brief 22-27)—is an effective antidote to what TWA now says. We consign to the margin a demon-

* We do add a few words, at pp. 25-26, *infra*, on an issue that, in the context of this extraordinary case, must be regarded as comparatively minor.

stration of the care with which statements of "fact" in the TWA brief must be approached.*

* When this case was before the Court in 1965, petitioners devoted 18 pages in their Reply Brief to correcting misstatements of fact by TWA in its brief. Rather than burden the Court to a similar extent again, we set out here only a few illustrations of TWA's ways with a record. See also notes pp. 7 and 13, *infra*. These illustrations have been chosen from many that are available because these go to matters that can be disposed of in a few lines.

1. TWA says that the motion by Toolco for a Rule 16 conference was "a course which had been suggested by the Special Master in response to Toolco's repeated complaint that its deposition of Tillinghast had not produced evidence supporting TWA's principal allegations" (Respondent's Brief 23-24). In fact Toolco's complaint was not that TWA had not produced evidence but that it had not stated what its factual contentions were. It was this failure to make known the ultimate facts on which TWA was relying that had led the Special Master to make his suggestions in this regard. His statement (App. A-2385-2386) is quoted at pages 36-37 of our initial brief.

2. TWA says that the so-called "tax documents" "had never been produced by Toolco" though they were "plainly included within the court order of December 18, 1961" (Respondent's Brief 28). The fact is that the Special Master specifically recognized on March 22, 1962 that this material was not called for by the order of Judge Metzner (Doc. 216, Tillinghast Tr. p. 3710). He ordered that the material be kept in the custody of Andrews, Kurth, Campbell & Jones. He said: "I want to be very clear that I am not indicating in any way that I would order the production of them * * *" (*Id.* at 3714). This was the genesis of the nine boxes, which were shipped to New York for examination by the Master (App. A-2645-2646).

3. TWA is quite unhappy with the fact that the record shows that a deposition of Hughes was expected to cost more than $5 million (App. A-280). It says that Toolco's counsel "pointedly did not himself endorse" that figure and endeavors to suggest that "at the time" counsel himself supported an estimate of $1 million (Respondent's Brief 34 n. 10). The document cited for the $1 million estimate is Document 145. This was filed on January 14, 1963, nearly four weeks before the later, more comprehensive, estimate, and says that the expense "could well exceed

In our initial submission we pointed out that once the procedural underbrush is cleared away, the substantive issue in this case is starkly simple: is it a violation of the federal antitrust laws for a parent corporation, whose control of an air carrier subsidiary has been approved by the Civil Aeronautics Board, to make normal business decisions about the acquisition and financing of capital equipment for the subsidiary? (Petitioners' Brief 22-23). This breaks

---

$1,000,000 apart from counsel fees." When counsel subsequently gave the court the $5 million figure he said that he had resisted the figure "but I have been assured, upon checking and double checking, that that is the minimum that would be involved, and before attempting to address itself as to the probable amount that TWA would be spending" (App. A-280).

4. TWA describes the ordering of Constellations and the building of the plywood flying boat as "steps toward establishing Toolco as a major supplier of commercial transport aircraft" (Respondent's Brief 42). There are specific and explicit findings to the contrary by the CAB. As to the Constellations, see 6 C.A.B. 153, 155 (1944) (App. A-3300-3301). As to the flying boat, see 12 C.A.B. 192, 198 n. 13 (1950) (App. A-3346).

5. TWA says: "Such aircraft contracts as Toolco chose to assign, it assigned, and Boeing's vice president Connelly testified that Boeing felt it had no choice but to consent (A-1181)" (Respondent's Brief 53). Literally this is true—but presented, as it is, in support of the proposition that contractual limitations on assignment were "completely ineffective," it is wholly misleading. In fact Connelly testified that Hughes Tool Co. would have been unable to finance the acquisition of the six Boeings so that Boeing was not really giving up anything by consenting to the assignment to Pan American (App. A-1181).

6. TWA is as free with the facts of other cases discussed in its brief as it is with the facts of the present case. See, for example, its discussion of *Allied Air Freight, Inc.* v. *Pan American World Airways, Inc.*, 393 F.2d 441 (2d Cir.), *cert. denied*, 393 U.S. 846 (1968) (Respondent's Brief 75 n. 28). If, as in that case, prosecution of an action is stayed "until the plaintiff exhausts its available remedies before the Civil Aeronautics Board," 393 F.2d at 443, but plaintiff does nothing and does not resort to the CAB, statements that plaintiff was "literally and fully complying with the stay order" and that its conduct was "in strict obedience to the stay order" are surely Pickwickian.

down into two sub-questions. What relation, if any, do the acts for which TWA was awarded astronomical damages have to do with any putative violations of the antitrust laws? What effect does CAB approval have, under §§ 408 and 414 of the Federal Aviation Act? The court below and our opponents have written hundreds of pages about this case, in opinions and in briefs, but they have not yet seen fit to provide an answer to either of these questions.

1. Supposed antitrust violations

TWA's brief makes it clear that this Court is being asked to uphold a judgment of more than $145 million for a violation of the antitrust laws without anybody, whether a court or the plaintiff, being able to say what antitrust law was violated, how it was violated, or what the connection was between the damages awarded and the conduct that violated the antitrust laws. TWA does not contend that it was awarded damages because any supplier was excluded from the TWA market nor because of any restraint on trade of suppliers. The award is based solely on the fact that Toolco made decisions for TWA about the acquisition of jets and on the claim of TWA that these decisions resulted in it receiving too few jets, receiving them too late, and having to lease them for a time rather than purchase them (Respondent's Brief 139, 177; CAB's Brief 8).

As we have previously developed at length, antitrust claims are based on the concept that the offending party has wrongfully exercised, or sought to exercise, control over the economic and competitive decisions of an independent business entity. Since TWA was lawfully acquired by Toolco, it had no claim to economic independence. It cannot claim that Toolco controlled what it had no right

to control but only that it did not exercise that control as TWA now wishes it had. The fact that the legality of Toolco's acquisition of control cannot now be challenged and that TWA had no right to economic independence disposes of the claim in the complaint of an acquisition in violation of § 7 of the Clayton Act as well as of the boycott, tie-in, and exclusive dealing theories adverted to by the Court of Appeals (Petitioners' Brief 89-100).* The fact that Toolco was not a manufacturer of aircraft nor was it a supplier of aircraft to airlines generally in competition with other manufacturers or suppliers disposes of the three other theories mentioned by the court below (449 F.2d at 68, App. A-2770), those of an unlawful intent to monopolize, an unlawful conspiracy to do so, and the "*Yellow Cab*" theory (Petitioners' Brief 100-117).** TWA, which ad-

---

* In an endeavor to meet our argument that a subsidiary may challenge the legality of its acquisition by its parent but that, if lawfully acquired, it cannot thereafter make an antitrust claim concerning the mere exercise of parental control (Petitioners' Brief 93-94), TWA says: "It is generally settled that minority shareholders in a less-than-wholly-owned subsidiary may bring a derivative antitrust action against a controlling company for anticompetitive practices, engaged in subsequent to an acquisition, which have injured the subsidiary" (Respondent's Brief 165-166). For this statement it cites six cases. The citation of one of these, *Ross* v. *Bernhard*, 396 U.S. 531, 539-540 (1970), is prefaced with a "*cf.*," apparently in recognition that the case involved no antitrust claim. Of the other five cases cited, in four the minority stockholders were clearly challenging the legality of the acquisition of their company by its parent. They are thus consistent with the view we have taken and inconsistent with TWA's view. This is probably also true, though the facts are less clearly stated and in any event the court did not focus on the present issue, in the fifth case, *Fanchon & Marco, Inc.* v. *Paramount Pictures, Inc.*, 202 F.2d 731 (2d Cir. 1953).

** The cases cited by TWA for a contrary position (Respondent's Brief 154) are inapposite. In each of those cases defendants were participants in the market in which they were alleged to have unlawfully restrained trade or created a monopoly, as Tool-

mitted in the Second Circuit that Toolco was not a manufacturer of aircraft (Petitioners' Brief 101 n. 40), makes no claim to the contrary in this Court. It does argue that in its description of Toolco in paragraph 3 of the complaint it used the plural in saying that Toolco was engaged in supplying aircraft to "air carriers," and it finds "inherent in this allegation the allegation that they were doing so in competition with other suppliers" (Respondent's Brief 168-169). But TWA, which has the immense benefit of having all factual allegations of its complaint deemed admitted by virtue of the default, cannot claim an admission of things it might have alleged but did not. And with regard to the use of the plural, "air carriers," in the complaint, the rule, as the court below recognized, is that to the extent allegations of the complaint are indefinite they must be read in the light of what the record shows (449 F.2d at 63, App. A-2758). This is in accord with the long-settled rule that after default distinct and positive allegations of fact may be taken as true, "but if they are indefinite * * * the

---

co was not. There are other important differences. In *United States* v. *Grinnell Corp.*, 384 U.S. 563 (1966), and in *United States* v. *Yellow Cab Co.*, 332 U.S. 218 (1947), the corporate affiliations were the means by which unlawful restraint of trade or monopoly power was achieved. The results were the primary objective of the acquisitions and combination, and were thus unlawful. Here the acquisition was admittedly lawful. *Perma Life Mufflers, Inc.* v. *International Parts Corp.*, 392 U.S. 134 (1968), and *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394 U.S. 495 (1969), involved agreements between parents and subsidiaries that injured independent third parties. Here the independent third parties that could be targeted by the claimed misconduct were aircraft manufacturers who, allegedly, would be foreclosed from supplying TWA. All that happened is that Toolco rather than TWA purchased the aircraft. Sales lost to TWA were replaced by sales to Toolco. No independent third party could have been injured or has claimed to have been injured.

requisite certainty must be afforded by proof." *Ohio Central R. Co.* v. *Central Trust Co.*, 133 U.S. 83, 91 (1890). The record here shows beyond dispute that the only instances in which Toolco supplied commercial aircraft to any carrier other than TWA were when it assigned its contractual rights to some of the Boeings and some of the Convairs that it had ordered for TWA, and Pan American and Northeast then acquired those planes from the manufacturers.* It is in that sense, and only in that sense, that the reference to "air carriers" in the complaint must be understood.

It is apparent that if there were any coherent or logical basis, in fact or in law, for the judgment in this case, TWA would have described it to this Court. If it were possible to support the judgment in terms of conduct that violated the antitrust laws and had an anticompetitive effect that caused injury for which TWA was awarded damages, TWA would specify what that was. Instead, TWA repudiates even the attempts of the Second Circuit to explain the judgment in antitrust terms. The theory of "potential competition," which the Court of Appeals invented without any help from the parties (Petitioners' Brief 111 n. 53) and

---

* The statement that "Toolco made more than two million dollars from supplying jets to Pan American and Northeast" (Respondent's Brief 153-154) is not true. What TWA regards as a "profit" on the transaction with Pan American (Respondent's Brief 52 n. 21) was a payment, as the agreement with Pan American provided, of interest on the installment payments Toolco had already made "at the same rates you would have capitalized under your standard accounting procedures if you had made each of such installment payments at the dates they were made by [Toolco]" (App. AX-729). This was in accord with Toolco's usual practice (App. A-151-152, AX-1549-1550). The supposed "profit" with regard to the Convairs was purely the result of a credit resulting from the reduction from 30 to 24 of the number of 880s to be purchased by Toolco (App. AX-1525).

the inapplicability of which we had felt obliged to discuss at length (Petitioners' Brief 106-117), is now disowned by TWA (Respondent's Brief 172). What is left is the single proposition that the defendants have not "affirmatively disproven" TWA's claim that had it taken the deposition of Hughes it could have discovered some conduct that "on at least one of the six theories" could be found to be a violation of the antitrust laws (Respondent's Brief 172).

This wholly misconceives the effect of the default. At earlier points in their brief TWA had seemed to concede that the effect of a default is as we have urged (Petitioners' Brief 42-51). Thus it quotes with apparent approval our statement that by default we gave up the right "to challenge the factual allegations of the complaint" (Respondent's Brief 69). It agrees that *Thomson* v. *Wooster*, 114 U.S. 104, 110 (1885), held that a default admits "facts properly pleaded" (Respondent's Brief 108). It says that on default "a legal theory would not be admitted" and that it would "not admit a conclusion, derived from such a legal theory, that specific allegations resulted in liability" (Respondent's Brief 106). At other places, however, TWA suggests that the default has admitted "a combination and conspiracy to restrain trade in aircraft" and "an attempt to monopolize" (Respondent's Brief 139). Again it says that the default has admitted an "unlawful combination, conspiracy and attempt" (Respondent's Brief 155).

TWA was right in its earlier concessions, wrong in its later claims of what was admitted and what the scope of inquiry was after default. The default admitted every positive factual allegation of the complaint. It did not admit legal theories, legal conclusions, or liability. The question

open after default is whether, as a matter of law, the admitted facts establish liability (and, if so, what damages flow from that liability). That is a question of law, on which there is no room to talk about a burden on defendant of affirmative disproof. Nor can the factual allegations of the complaint be shored up by resort to speculation about facts that have not been alleged.

An example no longer at issue between the parties illustrates the point. The complaint alleges that Toolco acquired more than 78% of TWA's stock (¶ 11, App. A-10). It charges that the acquisition of the stock was in violation of § 7 of the Clayton Act (¶ 9(g), App. A-9). Finally, it alleges that "TWA has been immediately injured in its business by Toolco's acquisition of TWA's stock * * *" (¶ 50, App. A-24). Despite all of this, TWA now recognizes that, because of CAB approval, Toolco's acquisition of the TWA stock was lawful (Respondent's Brief 149). The default did not admit the conclusion that the stock acquisition was unlawful or that Toolco was liable under § 7 because, as a matter of law, CAB approval, at a minimum, takes the stock acquisition out of the reach of the antitrust laws.

A similar analysis is available for the other claims by TWA that the default has admitted its legal conclusions. If, as a matter of law, a corporation cannot conspire with its own officers, a default does not admit that an alleged conspiracy between Toolco, Hughes, and Holliday is an unlawful conspiracy. If, as a matter of law, an alleged conspiracy in 1960 and 1961 does not permit the award of damages for actions by one of the "conspirators" in 1955 and 1956, a default does not admit that Toolco is liable for these damages because of what it may have done with Atlas in the

latter years. If, as a matter of law, an attempt to monopolize charge under § 2 of the Sherman Act requires a "dangerous probability" of success, a default does not admit an unlawful attempt to monopolize when there is not even a conclusory allegation of dangerous probability and the facts presented by plaintiff show that it could not exist. If, as a matter of law, a parent is free to decide with whom its lawfully acquired subsidiary may deal, a default does not admit violation of § 3 of the Clayton Act.

This is why the court below was in error when it held that "the default had the effect of admitting or establishing that the acts pleaded in the complaint violated the antitrust laws and that those acts caused injury to TWA in the respects there alleged" (449 F.2d at 70, App. A-2772), and when it said that the illegality of Toolco's acts was "conclusively established by the default judgment" (449 F.2d at 71, App. A-2776). This is why TWA is in error when it makes no attempt to establish that the facts alleged in the complaint and the acts for which it was awarded damages had any relation to any identifiable violation of the antitrust laws and claims that the burden is on defendant to prove that other facts, neither alleged by or known to TWA, would not have made out a viable antitrust claim (Respondent's Brief 65, 171, 172).

TWA's brief makes it plain that neither at the time it filed the complaint nor today does TWA know of conduct violating the antitrust laws. For example, TWA recites what it claims is known about defendants' activities in aircraft manufacture and supply (Respondent's Brief 42-56). This lengthy recital is in itself a curious amalgam of plans that came to naught, orders for planes that were never

delivered, and discussions of deals that were never consummated, in no way showing Toolco to have been in competition with those who did manufacture and supply airplanes to airlines. TWA concludes this discussion with the even more curious statement that

> [I]t is impossible to guess what other activities might have been discovered if TWA had been able to proceed with the discovery guaranteed it under the Federal Rules of Civil Procedure. (Respondent's Brief 56.)

It is shocking that a judgment of any amount, let alone one for the astronomical sums involved here, could be based on the possible existence of activities of a defendant about which the plaintiff has so little knowledge that it cannot even guess what they might be. Yet TWA's inability to guess what illegal activities might have occurred is understandable when it is remembered that the airlines report to the CAB from whom they acquire aircraft and these reports show that only TWA bought or leased aircraft from Toolco. Moreover, other than the Convair and Boeing aircraft that the complaint alleges Toolco ordered, and that the manufacturers subsequently sold or leased to other carriers, no jet plane ordered by Toolco has ever been delivered to any air carrier.*

TWA attempts, however, to guess even about the unguessable. Perhaps realizing that manufacturing and supplying jet planes is not an activity that can be carried out without detection in some lonely hollow in the dark of

* The only exception is four Convairs that TWA refused and that Toolco leased to Northeast in 1962 or 1963. See note, p. 13 *infra*.

the moon, TWA suggests that maybe it was not Toolco that was the manufacturer and supplier but somebody else pursuant to an agreement with Hughes. From "fascinating indications * * * in the public press" about Hughes' holdings, TWA divines that "[s]ecret agreements with manufacturers that TWA does not presently even suspect are not just possible—they are, given defendants' known methods of operations, a probability" (Respondent's Brief 56). One difficulty with this excursion into fantasy is that it overlooks the fact that the complaint does not allege any agreements, secret or otherwise, with any manufacturer other than "an arrangement for the joint development of a jet-powered aircraft to be manufactured by Convair," an arrangement that the complaint itself recognizes was abandoned (¶ 14, App. A-11-12). More important, the existence or nonexistence of an agreement with a manufacturer TWA cannot even "suspect" has nothing to do with the damages TWA has been awarded.

TWA ignores the first of these points. The second is of no concern to it. It claims that "the default relieved TWA of proving that the specific injuries alleged were caused by conduct that violates the antitrust laws" (Respondent's Brief 175). This view is unsound, as we have already developed at length (Petitioners' Brief 117-127). This Court has recently noted the virtually unanimous view of the lower courts that "Congress did not intend the antitrust laws to provide a remedy in damages for all injuries that might conceivably be traced to an antitrust violation." *Hawaii* v. *Standard Oil Co.*, 405 U.S. 251, 263 n. 14 (1972). The reach of the damage remedy for antitrust violations is patently a question of law, fully open after a default.

Take, for example, the allegation in the complaint of "a combination and conspiracy to restrain interstate and foreign commerce of the United States in violation of Section 1 of the Sherman Act" (§ 9(a), App. A-8). On its face this is a conclusion of law, not admitted by the default. TWA apparently recognizes, as it must (Petitioners' Brief 104-106), that, as a matter of law, a conspiracy among Toolco, Holliday, and Hughes leaves a great deal to be desired. Thus it seeks to buoy up the claim of conspiracy by relying on Atlas, though the Court of Appeals properly saw fit to ignore the claim that Atlas was a coconspirator (449 F.2d at 69, App. A-271). TWA no longer places any weight on the allegation that in 1960 Northeast Airlines, which Atlas controlled, submitted a merger proposal to TWA (Complaint ¶ 21, App. A-14), a merger that was never consummated and could not have been without CAB approval. It chides defendants for "pretend[ing] that Atlas was connected to the combination and the conspiracy alleged in the complaint only through the proposed Northeast merger," and asserts that defendants should have known that the collaboration of Hughes and Atlas went far beyond the merger and far beyond even the provision by Toolco of aircraft to Northeast, "including both the Viscounts which were the subject of negotiations in 1958 (A-146-147) and the four CV-880s leased directly from Toolco in 1962" (Respondent's Brief 57).* TWA spends

* The statement about furnishing aircraft to Northeast is a striking example of TWA's imaginative approach to a record. See also note p. 11, *supra*. TWA's witness, Rummel, gave the facts about the Viscounts (which are never referred to in the complaint). He stated that Hughes committed to buy 15 Vickers Viscounts for TWA, that TWA decided it did not want the aircraft, that Hughes felt he had a moral commitment to Vickers, that he had one of Toolco's executives help Vickers in their at-

several pages elaborating on its thesis that "the chief executive officer of Atlas, Floyd Odlum, was one of the central group of individuals who decided what defendants should do with respect to TWA during the critical period in early 1961 when they were still attempting to control TWA's aircraft acquisitions" (Respondent's Brief 57-59). Suppose that what TWA says was true. Suppose that Odlum really was "the chief executive officer of Atlas"* and that in their "secret meeting" (Respondent's Brief 57) at Odlum's ranch in March, 1961, he and Holliday had plotted that Toolco would force TWA to buy Convairs ordered by it instead of Boeings ordered by the new management. This has literally nothing to do with damages awarded because back in 1956 Toolco ordered Boeing aircraft less promptly than TWA now thinks that they should have been ordered or because in 1958 Toolco decided to cut back on the size of TWA's initial jet fleet. TWA's speculation about secret agreements with manufacturers and its reliance on 1961 events only emphasize the lack of connection between supposed anticompetitive conduct of the defendants—conduct that is unsuspected and unguess-

---

tempt to sell or lease the planes, and that eventually Northeast bought 10 of these aircraft from Vickers (Rummel Dep. 368-398, 424-428). As for the four CV-880s leased directly from Toolco to Northeast in 1962 or 1963, these of course were four of the 880s that had been ordered by Toolco back in 1956, that were offered to TWA in 1961 (App. AX-1545, AX-1551), turned down by TWA (App. AX-1228), and that were parked on the ground until Northeast leased them (App. A-861-863). They were leased to Northeast after Atlas had sold its interest in Northeast to Toolco, with CAB approval under § 408, and the lease of the planes was approved by the CAB. As a "backstop captive market," TWA was remarkably ineffective.

* It was announced in the press in May, 1960, that Odlum had left Atlas and was considering an association with Hughes.

able but that defendants, so it is said, have not conclusively disproven—and the damages it was awarded. If, as § 4 of the Clayton Act says, damages may be awarded only because of injury sustained "by reason of anything forbidden in the antitrust laws," TWA's entire case collapses.

Events in 1961 were of significance in 1964 when the Court of Appeals upheld the sufficiency of the complaint (332 F.2d 602, App. A-328). At that time much of the complaint dealt with supposed injuries inflicted in 1961 and subsequent years. Thus in applying the relaxed modern rule that a complaint is not to be dismissed on motion "unless it appears beyond doubt that the plaintiff can prove no set of facts in support of his claim which would entitle him to relief," *Conley* v. *Gibson*, 355 U.S. 41, 45-46 (1957), the Court of Appeals could properly take into account all of the allegations of the complaint. But at the damage hearing TWA abandoned any claim for damages based on acts after the voting trust took control in December, 1960. Its case must now be measured by what it established in the damage hearing and it cannot rely on post-1960 acts to retroactively make illegal events that had occurred years before.

Even if it were possible to find antitrust liability in this case, either because a default admits liability—and we have shown that it does not—or because the facts alleged in the complaint and established at the damage hearing are enough to make out liability on some antitrust theory—and we have shown that they are not—the award here cannot be sustained. Here there is no connection between whatever antitrust violation is assumed and the injuries for which TWA

has been awarded damages.* Moreover, even the fact that a defendant has violated the antitrust laws by doing something with a monopolistic intent or pursuant to a conspiracy and in the process has injured a plaintiff does not in itself establish the right of the plaintiff to collect damages under the antitrust laws for that injury. Plaintiff can collect only if the damages result from "the anti-competitive impact" of the defendants' activities.

A recent decision of the Second Circuit, *GAF Corp.* v. *Circle Floor Co., Inc.*, No. 71-1956 (2d Cir., July 5, 1972), is instructive. The Second Circuit there upheld dismissal of a complaint—even without full discovery, 329 F.Supp. 823, 829 (S.D.N.Y. 1971)—that charged violations of §§ 1 and 2 of the Sherman Act and § 7 of the Clayton Act because it found, as a matter of law, that the damages alleged were not "the economic result of the anticompetitive effects of the alleged violations." Slip opinion, at 3912. Circle Floor, the largest installer of floor tile in the New York area, and two individuals sought to acquire working control of GAF, the largest supplier of floor tile in the area, in order to establish a vertically integrated corporation that would have competitive advantages over other manufacturers and contract installers of floor tile. *Id.* at 3904-3905. The complaint alleged that "in furtherance of the combination and conspiracy and attempt to acquire control of GAF" Circle Floor did not make its usual purchases from GAF,

* None of the damage items make any sense in terms of the supposed antitrust violation. Millions of dollars were awarded because Toolco was dilatory in ordering Boeings and because it disrupted production and thus delayed delivery of the Convairs. The last thing that one seeking to monopolize the supplying of aircraft would do would be to take steps so that he has no planes with which to drive out other suppliers from the market.

hoping thus to depress the price of GAF stock and facilitate acquisition of control. GAF claimed that as a consequence of defendants' conduct it had suffered lost profits of $730,000 on the business it would otherwise have had from Circle Floor. The Second Circuit held that the claim for damages was not sufficiently related to the antitrust violations alleged.

> Assuming that GAF could establish that the partial withdrawal of business by Circle Floor resulted in some lost profits, that loss, and the expenses of conducting the proxy contest, would not be the result of diminution in competition produced by the substantive violations of the Sherman and Clayton Acts alleged in the complaint. GAF does not allege facts sufficient to state a claim for relief under the antitrust laws for damage to *its* business by reason of a restraint of trade. GAF is in effect contending that because appellees' alleged activities threatened the competitive position of others, it can maintain a suit under § 4 of the Clayton Act, 15 U.S.C. § 15 (1970), merely by alleging some loss. But this is not the law. Even assuming that GAF has suffered some damage, GAF has not, within the meaning of § 4, been "injured . . . by reason of" the alleged violations of the antitrust laws set forth in the complaint.
>
> * * * GAF has not alleged that its position in the floor tile market has or would be affected by the conspiracy and attempt to control GAF. The complaint merely alleges, under three different theories, a plan for the vertical integration of GAF and Circle Floor that would amount to an unreasonable restraint of trade. The anticompetitive effects of such a restraint would be felt not by GAF but by the competitors of GAF and Circle Floor. The damages alleged by GAF do not represent the diminution of

> GAF's competitive position; the anticompetitive acts alleged in the complaint have not lessened GAF's ability to compete, and GAF has not therefore alleged that it has suffered any *antitrust* damages. [*Id.* at 3909-3910, 3912-3913; emphasis in original.]*

A similar analysis is available here. Even if defendants could be found liable for attempting to monopolize or seeking to restrain the trade of supplying airplanes either to TWA or to all air carriers—and *non constat* that no supplier was foreclosed from the TWA market or from the airline market generally—the losses for which TWA has been allowed recovery, that it received too few jets too late, have no relation to any diminution of competition among the suppliers of jets.

2. CAB approval.

Even if it could be shown to violate the anti-trust laws for a parent to make decisions for its subsidiary, the courts below have failed to give proper weight to the effect of CAB approval of acquisition control. Presumably § 408 of the FAA, requiring CAB approval, and § 414, giving immunity from the antitrust laws for anything necessary to enable a controlling party to do anything authorized,

---

* The *GAF* case cannot be distinguished on the ground that it was decided on a motion challenging the sufficiency of the complaint while here the sufficiency of the complaint was upheld in 1964 and is no longer in issue (*cf.* Respondent's Brief 201 n. 82). When the complaint in this case was upheld TWA was also seeking equitable relief and it was not necessary to pass on the claims of damage. Section 4 of the Clayton Act, allowing for recovery of damages, "is notably different from § 16 of the Clayton Act, 15 U.S.C. § 26, which provides for injunctive relief * * *." *Hawaii* v. *Standard Oil Co.*, 405 U.S. 251, 260 (1972). In addition, at that point the specifics of the damage claims were not before the Court of Appeals.

approved, or required by the order allowing acquisition of control, mean something. Toolco must have acquired some antitrust immunity from the 1944 and 1950 orders of the CAB and the 19 modifying orders. Unfortunately the Second Circuit, TWA, and the CAB have neglected to remove this immunity from the realm of the abstract, to define its terms, or to endow it with substantive content.

TWA now agrees that Toolco's acquisition of a 78% interest in TWA cannot itself be regarded as an antitrust violation (Respondent's Brief 149). Even this is a belated concession on TWA's part. The complaint, which studiously avoided any mention of the CAB or its approval, charged that the acquisition of the stock was in violation of § 7 of the Clayton Act (¶¶ 1, 9(g), App. A-1, A-9).*

The CAB says that "Toolco is not being subjected to penalties because of its acquisition of control of TWA, nor, we believe, could it be" (CAB's Brief 18). This statement does not provide much comfort to a party asked to pay $145 million in damages because of "the illegality of Toolco's arrogation of all authority for buying aircraft * * *" (449 F.2d at 71, App. A-2776).** No amount of rhetoric in the complaint about Toolco's motive and intent can hide the fact that the damages are wholly based on Toolco's making decisions for TWA about the acquisition and financing of

---

* By virtue of the final paragraph of § 7, 15 U.S.C. § 18, CAB approval gave a complete defense to a § 7 charge even if § 414 of F.A.A were not on the books.

** See also TWA's description of the "crux" of the case as Toolco's efforts "to control and dictate the manner and method by which TWA acquired aircraft and the necessary financing therefor" (Doc. 18, p. 5), and Mr. Tillinghast's statement that the case is based on "the fact that Mr. Hughes had pre-empted to himself the procurement of planes and the financing of TWA's operations" (App. A-1885).

jet aircraft. The Board was fully aware when it entered its orders that Toolco would make decisions of this kind for TWA if control were approved. The Board was perfectly conscious of the fact that Toolco would "manage and direct the usual day-to-day business and financial affairs of the airline" (9 C.A.B. at 387, App. A-3323) and that Toolco would contract with manufacturers for planes for TWA (12 C.A.B. at 208, App. A-3365). It was precisely because of the possibility that Toolco might use TWA as a "captive market" (*cf.* Complaint § 10(d), App. A-10) that the Board imposed the conditions it did on Toolco's control (6 C.A.B. at 156-158, App. A-3302-3305).

TWA and the CAB have created a false dilemma with regard to this issue. They view it as if the alternatives are to hold that CAB approval immunizes only the acquisition of an interest in the carrier or that it immunizes "everything done" in the course of the control relationship (Respondent's Brief 126; see also Respondent's Brief 124; CAB's Brief 10, 18).

If these were the only choices, there might be something to be said for the position TWA and the CAB take. We agree that a pistol permit does not carry with it permission to use the pistol for criminal purposes (*cf.* Respondent's Brief 124). At the same time, however, a pistol permit does more than merely allow the holder to acquire a pistol. It furnishes a complete defense to a charge of unlawful possession of a pistol.

We endeavored to suggest what we believe to be the correct rule by the examples put in our initial brief (Petitioners' Brief 85). CAB approval confers immunity on the controlled carrier and on the controlling party, in their

relations with each other and with third parties, to the extent that they would be free from antitrust liability if they were a single entity.* The mere fact that the parent makes decisions for its subsidiary is immunized, because it is exactly this that the Board approves and expects when it allows control. If Toolco and TWA had been a single entity, no one would contend that it would be a violation of the antitrust laws for that entity to decide that it will buy 47 jets rather than 63, or that it will place its order a few weeks later than its competitors, or that it will lease jets temporarily rather than buy them outright. The CAB may be mistaken in its expectation that the public interest will be served by the control relation and it may subsequently conclude that the parent is hurting the carrier by its exercise of control. If this happens, however, the remedy is for the Board to terminate the control relation rather than for a court to make these judgments after the fact and with an eye only to antitrust considerations.

On this analysis, there would be no immunity if the parent, by virtue of its relation to the carrier, engages in acts that would violate the antitrust laws if done by a single entity. As the examples we gave before illustrate, it is conceivable that Toolco, by virtue of its control of TWA, might have made tie-in sales or a reciprocal dealing arrangement that would have been actionable even if Toolco and TWA had been a single entity. Arrangements of this kind with third parties would not be within the scope of immunity under §§ 408 and 414.

---

* The CAB may, as in this case, condition its approval by limiting transactions between the carrier and the controlling party. To the extent that approval is so conditioned, the parties are not free to act as a single entity would be and must have specific CAB approval for a transaction that would be barred by the condition on the original approval.

The distinction we have suggested here would carry out the purpose of Congress in providing for immunity. The acquiring company would not be "freed from all legal restraints" (Respondent's Brief 124). It would be free to make those decisions for the carrier that the carrier, if independent, would have made for itself. If Board approval of control does not mean at least this, it means nothing.

It is, of course, a weighty circumstance that the Board has filed a memorandum with this Court expressing views on this issue contrary to those that we have put forward. The Board perceived a false dilemma and it relied on false assumptions. It says that "the assumptions that defendants admitted by their default that the underlying antitrust violations did occur and that the specific acts which damaged TWA were caused by those violations * * * must be deemed correct for purposes of determining the immunity question" (CAB's Brief 11). Whether those assumptions are sound is in serious dispute among the parties. In any event, this would not be the first time that the Board has taken an unduly timid view of its function. In the *Panagra* case itself, *Pan American World Airways, Inc.*, v. *United States*, 371 U.S. 296 (1963), it was the United States, acting at the request of the Board, that contended that the courts were the proper forum for the antitrust violations claimed to exist there, while this Court held that questions of that kind were "peculiarly" for the Board, 371 U.S. at 309, and that "[i]f the courts were to intrude independently with their construction of the antitrust laws, two regimes might collide." *Id.* at 310.

TWA expressly concedes that under § 412 of the FAA the CAB may approve agreements among carriers, if the

public interest so dictates, even though the agreement would violate the antitrust laws (Respondent's Brief 126). *E.g., Application of Trans World Airlines, Inc., et al.*, Order 71-8-91, at 5 (August 19, 1971) (quoted in Petitioners' Brief 84). The *Panagra* case teaches that the same thing is true of orders under § 408. 371 U.S. at 309. Nor is there any merit in TWA's suggestion that an award limited to damages does not interfere with the Board's exercise of its responsibilities (Respondent's Brief 135).* When this case was here before, TWA conceded that immunity under § 414, to the extent that it exists, bars relief in damages as well as injunctive relief. Memorandum in Response to Reply Brief for Petitioners at 9, *Hughes Tool Co.* v. *Trans World Airlines, Inc.*, 380 U.S. 248 (1965). That concession could hardly be avoided. See *San Diego Building Trades Council* v. *Garmon*, 359 U.S. 236, 246-247 (1959).

We revert to the example we posed in our initial submission (Petitioners' Brief 84). Suppose that when TWA was on the verge of bankruptcy in 1946, the only company with sufficient resources and interest to enable TWA to survive had been Lockheed. Suppose further that the CAB ap-

---

* The statement that "[t]he propriety of allowing the recovery of damages in circumstances like these was upheld in *Allied Air Freight, Inc.* v. *Pan American World Airways, Inc.*, 393 F.2d 441 (2d Cir.) *cert. denied*, 393 U.S. 846 (1968)" (Respondent's Brief 135 n. 56) is quite astonishing. The grievance in the *Allied Air Freight* case was that the defendants had made an agreement for which Board approval was required under § 412 and they had not submitted it to the Board for approval. Whatever the merits may be of the holding on those facts, they are not our facts. The court there recognized that the result would be different and that the action would not lie if the CAB had approved the agreement in question. 393 F.2d at 446. That is the situation that would be analogous to our case.

proved acquisition of control by Lockheed, recognizing the obvious restriction on competition from such a vertical integration but finding that this was outweighed by the public interest in having a strong and solvent TWA. On the theories put forward by TWA and accepted by the Second Circuit, this would violate the antitrust laws in a variety of ways. Lockheed would then monopolize the TWA market and have a substantial share of the overall market for commercial airliners. TWA would be a "captive market." Lockheed's refusal to provide financing to TWA except in connection with acquisition of control and subsequent sale of planes would be a "tie-in." There would be "exclusive dealing" and a "boycott" of other manufacturers. If Lockheed had a principal stockholder with "independent economic significance," a conspiracy could be charged.

If § 408 were not on the books, an acquisition of TWA by Lockheed would raise the most serious kinds of antitrust questions, but § 408 is a mandate to the CAB to weigh the harm to competition from acquisition of a carrier by a major manufacturer against other considerations of the public interest. The CAB does not address itself in its memorandum here to the Lockheed example. TWA does, and says that it follows from the decision below in the present case that "if Lockheed used its position in TWA as a weapon in a conspiracy to restrain trade and monopolize commerce, and pursuant to that conspiracy injured TWA (or any other person), its conduct would not be immunized by the Board's approval of the acquisition" (Respondent's Brief 124). That response shows how the Board's powers would be crippled, and the statutory immunity for § 408 orders in effect written off of the books, if TWA's views were to prevail.

3. The ad damnum

In the whole context of this case the limiting effect of the *ad damnum*, discussed at pages 52-65 of our initial brief and at pages 111-122 of TWA's brief, is a minor issue,* to which we wish to make only two comments.

First, TWA now seems to place its principal reliance on the fact that it did move for leave to amend the *ad damnum* clause, saying that "the court's power to permit amendments to the complaint in a proper case should prevail" (Respondent's Brief 119). The contrary decision in the *Fong* case is distinguished on this ground, and we are told that Rule 54(c) "must be read in conjunction" with Rules 15(a) and 15(b) (Respondent's Brief 120). Indeed in the 12 pages in which TWA discusses this issue there are no fewer than seven references to Rule 15. The short answer is that if Rule 54(c) is not controlling an amendment is unnecessary. Rule 15(b), on amendments to conform to the evidence, would be fully as effective as Rule 15(a), on amendments expressly made.

Second, in a lengthy note TWA purports to find serious difficulties in our position, as applied to a case in which no specific demand is made (Respondent's Brief 120 n. 51). These supposed "difficulties" are apparently thought to be a matter of commonsense obviousness, since the only au-

* If this issue is resolved as we think it clearly must be, by holding that the first sentence of Rule 54(c) means what it says, it would, in itself, reduce TWA's judgment by $32.6 million, plus some $5.5 million in accrued interest. It would also dispose of TWA's cross-petition, in which an additional $76 million plus interest is asked. It is a commentary on this case that an issue dispositive of such amounts must be regarded as a minor issue, and that TWA can suggest that an error of this magnitude can be brushed aside under the "harmless error" rule (Respondent's Brief 63, 111, 120-121).

thority referred to in the note, *Ludka* v. *Athana Corp.*, 25 Cal. App. 2d 316, 101 Cal. Rptr. 615 (2d Dist. 1972), holds squarely that on default nothing can be awarded, in view of a statute similar to Rule 54(c), on a count demanding "damages according to proof." There *is* other authority—but it is contrary to TWA's view. "A complaint that is indefinite as to the relief demanded is insufficient." 2A Moore, Federal Practice ¶ 8.18, at 1801-1802 (2d ed. 1962). "A contrary approach would deprive the statement in the first sentence of Rule 54(c) concerning judgments by default of much of its validity." 5 Wright & Miller, *Federal Practice and Procedure: Civil* § 1259, at 260 (1969).

CONCLUSION

For the reasons set out here and in our initial brief, the judgment of the Court of Appeals should be reversed.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

REPLY BRIEF FOR CROSS-PETITIONER TRANS WORLD AIRLINES, INC.

A. Preliminary—Effect of TWA's *ad damnum* clause

Defendants hopefully assert that, since TWA's cross-petition seeks damages in excess of the $135 million of its amended prayer, the cross-petition fails "[i]f Rule 54(c) means even remotely what it says" (Cross-Respondents' Brief, p. 4). Nothing could be further from the truth.

Judge Metzner's ruling on TWA's motion to amend the *ad damnum* clause of its complaint was not confined to an increase in the prayer to $135 million:

> "The damages originally asserted were unliquidated and TWA is entitled to recover for whatever damage it can show it suffered." (32 F.R.D. at 607, A-321)

The correctness of that ruling is supported at pp. 117-22 of TWA's brief in No. 71-827, and we will not repeat that discussion here.

So that the record would be clear that it was asserting the right under this ruling to recover all its damages, TWA gave written notice on May 2, 1966 that it would move at the close of the damage hearing to amend its prayer to ask damages in such amount as the Special Master should find to have been established (Doc. 556-14, p. 65). At the damage hearing TWA presented evidence in support of a damage claim in excess of $300 million. On April 9, 1968, pursuant to the notice given almost two years earlier, TWA moved on the record for the appropriate change in the prayer of its complaint (Doc. 554, p. 10829).

In response to this motion the Special Master ruled that Judge Metzner's prior decision encompassed the grant of additional damages (Brownell Report, p. 323; A-1966). Defendants did not object to this ruling when they filed objections to the Brownell Report (A-1967-2026). Their argument as to the effect of the *ad damnum* claim on this cross-petition must therefore stand or fall with their argument that on May 3, 1963, when the interlocutory default judgment was entered, Judge Metzner was without the power to allow an amendment to the complaint to increase the damages sought, although TWA had given oral notice of its motion to amend three months earlier on February 8, 1963 in open court, at the outset of the hearing during which defendants announced their intention to default. See TWA's brief in No. 71-827, Point III, p. 111 *et seq.*

In any case, the prayer of the complaint could be relevant only to TWA's argument that the "cost of capital" was erroneously computed below. TWA's claims (1) that its expert fees are recoverable as part of the "cost of suit"

(TWA brief in No. 71-830, pp. 35-42) and (2) that, if interest as damages is not awarded from an earlier date in the discretion of the trier of fact, TWA is entitled to interest from the filing of the Brownell Report to entry of judgment (*id.*, pp. 23-29), are not claims which are comprehended within the *ad damnum* clause of TWA's complaint. The first is a statutory right under Section 4 of the Clayton Act, 15 U.S.C. § 15, and the second is awarded as a matter of law, after the trier of fact has determined the amount of damages (see pp. 4-5, *infra*). Nor is TWA's claim for prejudgment interest the sort of claim that can be expected to be included in the plaintiff's initial estimate of the extent of its injuries. TWA did not and could not know in June 1961 that the amount of its damages would not be initially determined until September 21, 1968 nor reduced to final judgment until April 14, 1970.

B. Interest as damages (Cross-Respondents' Brief, pp. 4-10)

The principal point which defendants make in trying to distinguish the unbroken line of authority by which this Court has held to be proper the award of interest *as damages* on an unliquidated tort claim is that the award of such interest is not mandatory. There is no disagreement whatever between TWA and the defendants on this point. The general federal rule was well established by the time the Sherman and Clayton Acts were passed. It did not require but did permit allowance of interest as damages. *Lincoln* v. *Claflin*, 7 Wall. 132, 139 (1868); *Miller* v. *Robertson*, 266 U.S. 243, 258 (1924).

The applicability of this rule to treble damage cases under the Sherman or Clayton Acts has been before this Court only once. In *Thomsen* v. *Cayser*, 243 U.S. 66 (1917), the defendant was contesting the entire verdict as speculative and unsupported by the proof, and this Court, in upholding

the jury verdict, cited with approval the jury's discretionary inclusion of interest (243 U.S. at 89).

In the instant case the Special Master and the courts below held that there was no discretion to allow interest as damages in this case because it involves a statute providing for multiple damages. Those decisions below relied upon this Court's reading of the very different language of the Fair Labor Standards Act in *Brooklyn Savings Bank* v. *O'Neil*, 324 U.S. 697, 707, 714-15 (1945), and of the Agricultural Adjustment Act in *Rodgers* v. *United States*, 332 U.S. 371, 374 (1947), discussed in TWA's main brief on this cross-petition (pp. 19-21). Both cases confine their analysis to the particular statutes before them; indeed, *Rodgers* specifically cites *Brooklyn Bank* for the proposition that silence as to interest in an Act of Congress does *not* establish a congressional purpose that such interest should not be allowed (332 U.S. at 373).

The Clayton Act provides for recovery by the plaintiff of "the damages by him sustained," which figure is to be trebled. There is no reference to liquidated damages as in the Fair Labor Standards Act, or to penalties imposed by the sovereign, as in the Agricultural Adjustment Act. Since the federal law governing the computation of tort damages was well established when the Clayton Act was enacted, the natural assumption is that Congress intended the same principles to govern the computation of "the damages • • • sustained" under the Sherman and Clayton Acts.

C. Interest on award by Special Master (Cross-Respondents' Brief, pp. 11-12)

Contrary to defendants' statement (Cross-Respondents' Brief, p. 11), the allowance of interest on the award of a special master from the date his report is filed has nothing to do with the federal practice of permitting the discretion-

ary allowance of interest as damages. Interest as damages is awarded by the trier of the fact.

Conversely, the allowance of interest from the date of a special master's award is made by the judge as a matter of law upon entry of judgment. The cases cited in TWA's main brief on this cross-petition show that this had been regarded for very many years as the usual practice. *Tilghman* v. *Proctor,* 125 U.S. 136, 160-61 (1888), refers to "a uniform current of decisions of this court, beginning thirty years ago," establishing a "general rule," which the Court applied by directing that interest should commence on the day of submission of the master's report, not sooner or later. The reason for the rule, most clearly stated in *Crosby Steam Gage & Valve Co.* v. *Consolidated Safety Valve Co.,* 141 U.S. 441, 458 (1891), is that it would be unjust if a plaintiff, solely because of the trial court's reliance on a master to perform the initial part of the judicial function of determining the amount of recovery, were to be deprived of interest upon the amount found by the master for the period until entry of judgment.

D. Cost of capital (Cross-Respondents' Brief, pp. 12-14)

Defendants make only the most perfunctory attempt to justify the charge to TWA of an assumed interest rate of 6.0-6.3 per cent, when the complaint plainly alleges that they had earlier prevented TWA from borrowing money at lower rates. They assert that the complaint does not in fact contain appropriate allegations to this effect, but it is simple enough to examine the complaint, and paragraphs 26, 27, 28 and paragraph 52(c) speak for themselves.* They

* The full text of these critical paragraphs is as follows:

"26. In 1955 and continuously thereafter until December, 1960, the defendants, pursuant to and in furtherance of their plan to control TWA in a manner advantageous to them-

were accepted as proved by the Special Master (Brownell Report, pp. 254-255; A-1966).

To limit TWA's damages by computing its cost of borrowing at high current rates, when the default established that defendants had prevented TWA from borrowing earlier at much lower rates, results in allowing defendants to profit by their own wrongdoing.

E. Cost of suit (Cross-Respondents' Brief, pp. 14-18)

The question presented by TWA's claim with respect to its cost of suit is simply and solely one of statutory interpretation of a phrase that has yet to be construed by this Court.

---

selves, directed TWA to make no efforts itself to obtain financing necessary for the acquisition of jet-powered aircraft required for the needs of TWA.

"27. Commencing in the year 1955 and continuing thereafter, various other air carriers, including competitors of TWA, made appropriate arrangements for the financing of jet-powered aircraft. In 1955 and 1956 various United States air carriers were able to obtain funds at a cost (or interest rate per annum) in 1955 of 4%, and in 1956 at costs ranging from 4¼% to 4¾%.

"28. In 1955 and thereafter for a period of several years, the defendants discussed with others various proposals for the financing of jet-powered aircraft, but the defendants did not make arrangements for such financing nor allow TWA to make such arrangements until December 1960, at which time the prevailing cost of funds (or interest rates) for debt financing was approximately 6-6½%." (A-16)

• • •

"52. TWA has further been injured in the following manner:

• • •

"(c) TWA was foreclosed from obtaining financing on more advantageous terms than those available to it in December 1960 and thereby suffered a loss by virtue of the greater cost of borrowing it ultimately experienced." (A-25)

The only lower court which has addressed itself to the wording of the phrase is the Second Circuit in *Straus* v. *Victor Talking Machine Co.*, 297 F. 791, 806-07 (1924). We believe that the analysis put forward in *Straus* is incorrect, for the reasons given in our main brief on this cross-petition (pp. 40-42). Defendants' reliance upon *Mills* v. *Electric Auto-Lite Co.*, 396 U.S. 375 (1970), to show that attorneys' fees can be included in "costs" is misplaced. That case was an action in which the result obtained by the plaintiffs would also benefit other members of a class of which plaintiffs were members. This fact led the Court to consider "whether the special circumstances exist that would justify an award of attorneys' fees, including reasonable expenses of litigation other than statutory costs" and to conclude that such special circumstances did exist (396 U.S. at 391-92). If the *Mills* case is pertinent at all, its pertinence is in demonstrating that the kind of litigation costs which typically include an award of attorneys' fees are not "statutory costs" of the kind to which TWA was restricted below but a recovery of all "reasonable expenses of litigation." *See also Hawaii* v. *Standard Oil Co. of California*, 405 U.S. 251, 266 (1972).

F. Defendants' allegations of injury to TWA

It is a record fact that Toolco in February 1962 itself alleged that TWA's losses from late deliveries of jets and disadvantageous financing already amounted to $45 million, in addition to threatened future injuries. Plainly recognizing that this allegation now amounts to an admission of the fact of injury suffered by TWA, defendants attempt to explain the allegation away (Cross-Respondents' Brief, p. 2n. 1). Their explanation does not wash.

The realized loss of $45 million is alleged in paragraph 99 of Toolco's third counterclaim (A-90). It is clearly

based on paragraph 98, where that precise adverse financial change is in turn related to five items, of which only (a) and (b) are specific:

> "(a) TWA's jet equipment program was disrupted and the delivery of jet aircraft which had been ordered by Toolco from General Dynamics for the benefit of TWA was delayed;
>
> (b) TWA has been compelled to obtain financing upon unfavorable terms and at higher interest rates than it would have otherwise had to pay." (A-89-90)

Defendants' suggestion that paragraph 96(e) (A-88) is involved (the reference to 97(e) is of course a misprint) is demonstrably incorrect. The allegedly unneeded jets referred to in 96(e) are TWA's B-131B and B-331B fleets, none of which had yet been delivered. Those aircraft were put into service during the period from late April 1962 through March 1963 (AX-95, AX-175). No losses attributable to them could yet have been experienced when paragraph 99 was sworn to. The assertion in paragraph 96(e) that TWA was buying unneeded jets presumably relates to the clause of paragraph 99 about threatened future losses; it could not relate to the $45 million of losses already realized (A-90). Paragraph 96(e), unlike paragraphs 98 and 99, is realleged in Toolco's fourth and fifth counterclaims (A-91), which are not derivative at all but claim damage to Toolco of $77 million (A-91, A-93).

Defendant Holliday, in addition to swearing to Toolco's counterclaims, included similar allegations as to TWA's in-

juries in his own answer (pars. 35, 37, first sentence, and 38, last sentence; A-108, A-110).

IN THE

Supreme Court of the United States

OCTOBER TERM, 1972

No. 71-827

HUGHES TOOL COMPANY and RAYMOND M. HOLLIDAY,

Petitioners,

—v.—

TRANS WORLD AIRLINES, INC.,

Respondent.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

MEMORANDUM FOR RESPONDENT IN RESPONSE TO REPLY BRIEF

TWA submits this short rejoinder with the hope that it will assist this Court in considering the reformulation of issues contained in defendants' Reply Brief.

A. It is central to this case that the only facts which have been judicially established in the usual manner are (a) the procedural facts, as to which there is a complete record supporting the findings of the courts below, and (b) the facts as to TWA's damages, which have been established by findings made on the basis of a full, contested evidentiary hearing.

The remaining facts, those on which liability depends, are those which were alleged in TWA's complaint. With respect to them the customary apparatus of findings based on record evidence tested by cross-examination is missing.

It is missing because (as the lower courts found—a procedural fact) defendants prevented, deliberately and with knowledge of the consequences, trial as well as pretrial of the disputed fact issues. Having so found, the lower courts held that TWA's contentions as to these disputed fact issues, set forth in the complaint, must be taken as true. (TWA's main brief in No. 71-827, p. 75).

Speculation as to the facts which might have been established at a trial is permissible only to the extent that it is consistent with the framework established by the factual allegations of the complaint. As long as the possibility is demonstrably present that TWA could have proved a state of facts under and consistent with the complaint which would have established liability, defendants cannot secure a disguised and belated summary judgment in their favor by requiring TWA without discovery to prove, as a condition of recovery, those details which at a trial would have established defendants' unlawful conduct. A contrary rule would make a mockery of the system of pleading and discovery which this Court has established for civil actions.

Yet defendants' entire posture before this Court depends upon the unsound assumption that the effect of the default is to preserve and protect their factual contentions, while putting TWA to its proof.*

---

* Defendants largely ignore the record except for an extended footnote (Reply Brief, pp. 2n.-3n.) purporting to correct "illustrations" of TWA's "misstatements" of fact. The "illustrations" themselves refute the charges made.

1. It is a fact that the "Rule 16" proceeding suggested by Special Master Rankin would have required TWA to specify all the facts it contended support its allegations in the complaint, to name each witness it proposed to call in support of each allegation and to state the substance of each witness's testimony—all before TWA had taken a single deposition (A-2387-88).

2. It is a fact that defendants never produced the so-called "tax documents" despite repeated orders in January and February of

Thus, when they state the "starkly simple substantive issue," the core of the statement—assumed throughout the remainder of the argument—is that nothing defendants did involved anything more than "normal business decisions" by a parent buying equipment for its subsidiary (Reply Brief, p. 3). That view of defendants' conduct is contrary to the allegations of the complaint, and to the evidence available in the record in this defaulted case (see TWA's main brief, pp. 40-56, *esp.* pp. 49-50).

1963 to do so (A-133-42, A-254, A-304-06). A reservation of ruling the previous spring is strikingly irrelevant.

3. The extent of the personal reservations of counsel for Toolco as to the $5 million estimate of the cost of the Hughes deposition is apparent not only from his comment at the time that "I resisted the figure that they came up with, and I am trying to get a further idea of how they arrived at that figure * * *" (A-280), but also from his reversion two years later in the submissions to this Court on the last appeal to the original lower, but equally unexplained, figure of $1 million (see Petition for Certiorari in No. 501, October Term 1964, p. 44). The $5 million figure was never mentioned again, from February 8, 1963 until defendants' latest petition was filed.

4. The court of appeals below expressly rejected defendants' position after defendants in that court made the same argument they now make that TWA had misstated the evidence with respect to the significance of defendants' interests in the Constellations and the HK-1 plywood flying boat (449 F.2d at 62, A-2768). The CAB "findings" are actually recitals based on information provided by defendants in non-adversary proceedings.

5. The comment on Connelly's testimony fails to mention that Connelly was testifying to what Boeing had been "given to understand" by defendants (A-1181). The important point is that defendants, as a practical matter, were able to control the disposition of the aircraft.

6. As to *Allied Air Freight, Inc.* v. *Pan American World Airways, Inc.*, 393 F.2d 441 (2d Cir. 1968), we find defendants' comments pointless. The case does not support the rather ambiguous reasoning which defendants base on it at pp. 30-31 of their principal brief, for the precise reason given in our statement. Unlike defendants, Allied at no time disobeyed orders of the court. The case in fact directly supports the decision of the court below that the asserted affirmative defenses in the instant case were insufficient to justify either a dismissal or a stay.

At p. 4 they deny that any supplier was excluded from the TWA market, or that there was any restraint on trade of suppliers, an assertion repeated at p. 18 and elucidated in a footnote on p. 6 by the statement: "Sales lost to TWA were replaced by sales to Toolco." But the specific preclusion of TWA from buying aircraft directly from non-Toolco suppliers resulted in TWA actually getting not only later but fewer aircraft than it would have obtained if it had placed its own orders with the manufacturers; the result of this restraint on the trade of suppliers was that they sold fewer aircraft in the aggregate. Pan American, for example, would certainly have purchased other aircraft from Boeing or Douglas if it had not acquired from Toolco six of the Boeings TWA had counted on, and TWA's damage case was expressly based on that premise. (See, *e.g.*, AX-118; Brownell Report, p. 64; A-1966). Toolco is known to have paid several million dollars to Convair in settlement of Convair's claim that Toolco's tactics disrupted Convair's business (DX 145; Doc. 554, p. 2946).

At p. 5 defendants state as a fact that Toolco was neither a manufacturer of aircraft nor a supplier of aircraft to airlines generally. The fact is that it was certainly such a supplier, actively engaged in the business for many years. And it took so many known steps toward manufacture (see TWA's main brief at pp. 42-44, 47-49), that if it was not technically a manufacturer during the years in question, it was plainly holding itself poised and ready to commence manufacture whenever a favorable opportunity developed.

At p. 7, in a footnote, defendants deny having profited from supplying jets to Pan American and Northeast. They do not cite, or refer to, or explain the profits of over $2 million from these transactions set out in their tax returns,

reported as capital gains and presumably taxed as such. Toolco's 1960 audited financial statement and tax return (Doc. 495) are clear, for example, that a *capital gain* (not a "credit" or refund of moneys previously paid) in the amount of $1,208,424 was realized from the Convair transaction (see TWA's main brief, p. 52 n. 21). These papers were sealed, at defendants' request, and defendants thereafter explicitly refused to make further discovery with respect to them (A-304-05).

The body of facts established by the allegations of the complaint and as the legal consequence of their default is what defendants dismiss as "procedural underbrush." They therefore concede nothing as established by the complaint alone; in their view, TWA, to recover, must depend on facts "established at the damage hearing" (Reply Brief, p. 15). These arguments were, of course, rejected below, Judge Metzner observing that "the shoe is on the other foot" (A-423), and Judge Kaufman that "this argument stands the matter on its head" (449 F.2d at 63, A-2759). As the court of appeals has pointed out, defendants never once offered to remedy their default in any respect (449 F.2d at 62, 78-79, A-2756, A-2792).

B. The legal propositions defendants advance as "substantive" defenses are extraordinary, by any standard. For the most part, the "substantive" defense is simply that Toolco owned a controlling interest in TWA's stock (46% in the early years, enhanced to 73% in 1955 and 1956 when TWA was prevented from ordering jets elsewhere and from arranging for their financing, and to 78% when this suit was brought). Defendants assert that the mere existence of this "parent-subsidiary relationship" necessarily means that TWA had "no claim to economic independence" (p. 4) and "no right to economic independence" (p. 5), and that Toolco and TWA must be treated for all

purposes as if the two were a "single entity" (p. 21), so that TWA's 13,000 independent shareholders are, as a matter of law, precluded from derivative actions based on antitrust claims (p. 5n).* But TWA is not only a technically distinct corporation; it is a major enterprise of independent origin, engaged in a public service business. Indeed, as one of the nation's great airlines it constitutes in its own right a separate and distinct market for flight equipment. There is no authority whatever to sustain defendants' proposition that tie-in arrangements, exclusive dealing arrangements and attempts to monopolize of the kind alleged in the complaint and recognized by the courts below could be licensed by the prior purchase of a majority of TWA's stock.

Defendants' assertion that antitrust immunity resulted from various CAB orders is also now reduced to a restatement of their parent-subsidiary immunity claim—that orders approving acquisitions of control of TWA by Toolco necessarily made the two corporations a "single entity" for all purposes under the antitrust laws. Defendants' own hypothetical example of a Lockheed acquisition, now elaborately restated (pp. 23-24), is its own *reductio ad absurdum*. They postulate an investment in TWA by Lockheed that the CAB approves as an acquisition of control, solely to save TWA from bankruptcy. From that defendants argue that the CAB's powers "would be crippled, and the statutory immunity for § 408 orders in effect written off of the books" (p. 24), unless thereafter Lockheed was free to monopolize the TWA market for aircraft, deal with TWA as a captive market and subject TWA to tie-in sales, exclusive dealing and forced boycotting of all

* It may not be without pertinence that, if the defendants' argument had any validity, it would be equally applicable to preclude an action for an injunction brought by the United States.

other aircraft manufacturers. Neither Congress in adopting the Act nor any court has ever suggested that such a result would or ought to follow an acquisition of control. The CAB will have no part of any such argument (see Amicus Brief, pp. 10, 11, 12-13, 18). The suggestion that a license to monopolize aircraft supply is necessary to attract investment in airlines is an economic travesty, disproved by Toolco's own experience in selling its 78% interest in TWA to the public at a profit of $450 million.

C. Defendants put forward as a new argument that any injury suffered by TWA as a result of defendants' activities did not arise from "the anticompetitive impact" of these activities. This argument depends upon an out-of-context use of the language in the recent decision of the Second Circuit in *GAF Corp. v. Circle Floor Co., Inc.*, —— F.2d ——, CCH 1972 Trade Cas. ¶ 74,075 (2d Cir. 1972). The argument is that an antitrust plaintiff cannot recover unless his damages were "the economic result of the anticompetitive effects of the alleged violations," and that TWA's damages were not the result of such anticompetitive effects.

The *GAF* case—the latest of a number of Second Circuit decisions on "standing to sue" (see TWA's main brief, pp. 200-02)—in no way conflicts with that Circuit's decision in the instant case. It would be surprising if it did, since Judge Hays, who wrote the opinion in *GAF*, was a member of each of the two unanimous panels that have decided against defendants' arguments in this case, per Chief Judge Lumbard in 1964, and per Judge Kaufman in 1971. Plaintiff GAF had complained of commercial pressures brought on it in an attempt to acquire control over it, which acquisition would violate the law. The anticompetitive effects of such an acquisition would have been felt, according to the court, not by GAF, whose ability to

compete would not be lessened, but by competitors. Hence the damages sought were not the result of an "anticompetitive impact" of the allegedly unlawful activities.

But there is no way in which defendants can pretend that TWA did not suffer anticompetitive impacts. TWA alleged and proved diminution of its competitive position resulting directly from defendants' antitrust violations (*e.g.*, Complaint, pars. 49(f), 50, 51, 52(a)(e), 53(h), A-23-26).

When, for example, defendants refused to deal at all with Boeing at the beginning of 1955 unless Boeing would sell Toolco the first 50 jets it produced (A-1023, A-1051, A-1208), Boeing was of course affected competitively. Had it acceded, it would have been worse affected, since that would have established Toolco as the exclusive supplier of such jets to the industry for nearly the first two years of the jet era. The impact on TWA, however, was disastrous. The boycott of Boeing was imposed during most of 1955, and it was a direct cause of the delay in TWA's receiving even those jets which it was ultimately allotted by Toolco. The diversion of jets from TWA to its competitors resulted in lost sales by the manufacturers (p. 4 *supra*); it also meant that TWA was directly deprived of the equipment which it needed in order to compete for traffic (see, *e.g.*, Brownell Report, p. 80, A-1966). The damages awarded to TWA consisted of the amount of its net losses of operating revenue resulting from this equipment deprivation, together with the extra cost imposed on it for the Boeings it did receive but was required to lease on a day-to-day basis from Toolco.

Aircraft manufacturers and other suppliers foreclosed from the TWA market were thus injured by defendants' conduct, but TWA, like the plaintiff in *Perkins* v. *Standard*

Oil Co., 395 U.S. 642, 649-50 (1969), was "no mere innocent bystander; [it] was the principal victim * * *." Defendants' argument that recovery for their antitrust violations was available only to the other suppliers of jets which were foreclosed from the TWA market, no matter what injury TWA suffered, is untenable against this background. Were defendants correct, the plaintiff builder in *Fortner Enterprises, Inc.* v. *United States Steel Corp.*, 394 U.S. 495 (1969), would have been automatically out of court since—under defendants' approach—the "anticompetitive impact" of the unlawful tying agreement there would fall only upon competing sellers of pre-fabricated houses. Similarly, the news dealer plaintiffs in *Bales* v. *Kansas City Star Co.*, 336 F.2d 439 (8th Cir. 1964), would have had no damage claim for being foreclosed from selling any publication except defendant's newspapers; only competing publishers of excluded newspapers and magazines would be hurt. *See also Osborn* v. *Sinclair Refining Co.*, 286 F.2d 832 (4th Cir. 1960), *cert. denied*, 366 U.S. 963 (1961).

After the 2-year damage hearing, the courts below were satisfied that but for the anticompetitive conduct alleged TWA would have acquired a 63-plane jet fleet at the times specified, and that it was fully entitled to recover for the ascertainable effects on its revenues, as reflected in the damage award.

SUPREME COURT OF THE UNITED STATES

Syllabus

HUGHES TOOL CO. ET AL. *v.* TRANS WORLD AIRLINES, INC.

CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

No. 71–827. Argued October 10, 1972—Decided January 10, 1973*

Trans World Airlines (TWA) brought this antitrust action against the Hughes Tool Co. (Toolco) and others for treble damages as a result of the manner in which Toolco had exercised its controlling interest in TWA, with particular reference to Toolco's asserted acts to control and dictate the acquisition and financing of aircraft by TWA. As an organization engaged in phases of aeronautics, Toolco could not acquire control of an air carrier such as TWA without consent of the Civil Aeronautics Board (CAB). In 1944 the CAB approved *de facto* control of TWA by Toolco as comporting with the provisions of § 408 of the Federal Aviation Act. That provision permits acquisitions of control that the CAB finds are not inconsistent with the public interest and that will not result in monopoly. Section 414 immunizes from antitrust liability any conduct approved by a CAB order issued under § 408. The approval narrowly limited intercompany sales transactions without specific CAB approval, and required annual reporting. A few years later, Toolco and TWA made an agreement permitting Toolco to obtain full legal control of TWA. The CAB, after full hearings into the Toolco-TWA relationship, found that Toolco's financial and other support was of great importance to TWA and concluded that "the continued interest of Toolco and TWA appears essential to the best interests of the carrier and the public." The CAB's approval was made subject to the conditions of the 1944 order. As a result, from 1944 to 1960, every acquisition and lease of aircraft by TWA from Toolco and each financing by TWA from Toolco received CAB approval pursuant to § 408. In 1960,

*Together with No. 71–830, *Trans World Airlines, Inc.* v. *Hughes Tool Co. et al.*, on certiorari to the same court.

Syllabus

Toolco's stock in TWA was placed in a voting trust in connection with a program for financing TWA's acquisition of jet equipment. Shortly thereafter, TWA brought this suit. As a defense, Toolco relied on *Pan American World Airways, Inc.* v. *United States*, 371 U. S. 296. The District Court entered a default judgment against Toolco. The Court of Appeals affirmed, concluding that *Pan American* was inapplicable because, unlike the situation in that case, the conduct challenged in TWA's complaint was "unrelated to any specific function of the CAB" and not within the CAB's exclusive competence. *Held:* The transactions that TWA challenged as violative of the antitrust laws were under the CAB's control and surveillance, and, by virtue of §§ 408 and 414 of the Federal Aviation Act, had immunity under the antitrust laws. The Court of Appeals, therefore, erred in holding that *Pan American, supra*, is not controlling on the facts involved here. Pp. 2–25.

449 F. 2d 51, reversed.

DOUGLAS, J., delivered the opinion of the Court, in which BRENNAN, STEWART, WHITE, POWELL, and REHNQUIST, JJ., joined. BURGER, C. J., filed a dissenting opinion, in which BLACKMUN, J., joined. MARSHALL, J., took no part in the consideration or decision of the cases.

NOTICE: This opinion is subject to formal revision before publication in the preliminary print of the United States Reports. Readers are requested to notify the Reporter of Decisions, Supreme Court of the United States, Washington, D.C. 20543, of any typographical or other formal errors, in order that corrections may be made before the preliminary print goes to press.

SUPREME COURT OF THE UNITED STATES

Nos. 71–827 AND 71–830

Hughes Tool Company et al., Petitioners,
71–827 *v.*
Trans World Airlines, Inc.

Trans World Airlines, Inc., Petitioner,
71–830 *v.*
Hughes Tool Company et al.

On Writs of Certiorari to the United States Court of Appeals for the Second Circuit.

[January 10, 1973]

MR. JUSTICE DOUGLAS delivered the opinion of the Court.

The complaint in this case alleged antitrust violations and damages suffered by Trans World Airlines (TWA) while under control of Hughes Tool Company (Toolco). A default judgment was entered for over $145 million dollars with interest at the rate of 7½%. The District Court's opinion confirming the damage award is reported at 308 F. Supp. 679, 312 F. Supp. 478. The Court of Appeals affirmed, 449 F. 2d 51. The case is here on a petition for certiorari [1] and on a cross petition. 405 U. S. 915.

[1] The District Court's judgment on entry of a default and certifying a controlling question of law is reported at 32 F. R. D. 604. The Court of Appeals affirmed, 332 F. 2d 602. We granted certiorari, 379 U. S. 912, but after argument dismissed the writ as improvidently granted. 380 U. S. 248. Moreover, our dismissal as improvidently granted was in 1965 and involved the 1964 judgment of the Court of Appeals. In 1971 a different panel of the Court of Appeals ruled that its 1964 decision was not binding. It noted that prior to its 1971 decision there had been no "final judgment" with

The crux of TWA's complaint was the use by Toolco of its control over TWA to control and dictate the manner and method by which TWA acquired aircraft and the necessary financing thereof.[2]

Whether or not that complaint states a cause of action under the antitrust laws is a question we do not reach. Another defense of Toolco was that those transactions

---

respect to the merits of TWA's cause of action against Toolco and therefore *res judicata* did not apply. 449 F. 2d, at 58. It went on to say that collateral estoppel likewise did not apply, since the only relevant issue that was actually litigated and determined in the 1964 appeal was that the District Court "properly entered the default on Toolco's counter claims." *Ibid.* That issue, it said, was "a sharply distinguishable issue from the propriety of a different default judgment in favor of Toolco's adversary." *Id.*, at 58.

No party has suggested that our prior dismissal forecloses us from reaching the issue now presented.

The prior dismissal did not establish the law of the case nor amount to *res judicata* on the points raised. *Indianapolis* v. *Chase National Bank*, 314 U. S. 63 (1941), was a diversity action in which the District Court, after realigning the parties dismissed the action for want of jurisdiction. The Court of Appeals reversed and this Court denied certiorari. Two years later, after the Court of Appeals sustained plaintiff's claims on the merits, certiorari was granted and this Court reversed, holding that proper realignment "precludes assumption of jurisdiction based upon diversity of citizenship." 314 U. S., at 74. Similarly, in *Mercer* v. *Theriot*, 377 U. S. 152 (1964), a diversity action for wrongful death, certiorari was initially denied after the Court of Appeals had set aside a jury verdict on the grounds of various trial errors and insufficiency of the evidence. On remand, the District Court denied a motion for a new trial and the Court of Appeals affirmed. We then granted certiorari and reversed because the trial errors did not affect substantial rights and the evidence at the trial was sufficient to sustain a verdict in petitioner's favor. See also *Hanover Shoe, Inc.* v. *United Shoe Machinery Corp.*, 392 U. S. 481, 488 n. 6 (1968).

For the well-settled view that denial of certiorari imparts no implication or inference concerning the Court's view of the merits, see *Maryland* v. *Baltimore Radio Show, Inc.*, 338 U. S. 912, 919 (Frankfurter, J.).

[2] See 449 F. 2d 51, 71.

were under the control and surveillance of the Civil Aeronautics Board and by virtue of Federal Aviation Act these transactions have immunity from the antitrust laws.

It is our view that the Court of Appeals erroneously rejected that defense. This result, we think, is required by §§ 408 and 414 of the Federal Aviation Act and by our prior decision in *Pan American World Airways, Inc.* v. *United States*, 371 U. S. 296 (1963).

Section 408 of the Act makes illegal certain mergers, consolidations, and other transactions without the approval of the Civil Aeronautics Board.[3] Specifically,

---

[3] Section 408, 49 U. S. C. § 1378, reads in pertinent part as follows:

"(a) Prohibited acts.

"It shall be unlawful unless approved by order of the Board as provided in this section—

. . . . .

"(2) For any air carrier, any person controlling an air carrier, any other common carrier, or any person engaged in any other phase of aeronautics, to purchase, lease, or contract to operate the properties, or any substantial part thereof, of any air carrier;

. . . . .

"(5) For any air carrier or person controlling an air carrier, any other common carrier, any person engaged in any other phase of aeronautics, or any other person to acquire control of any air carrier in any manner whatsoever: *Provided*, That the Board may by order exempt any such acquisition of a noncertificated air carrier from this requirement to the extent and for such periods as may be in the public interest;

. . . . .

"(b) Application to Board; hearing; approval; disposal without hearing.

"Any person seeking approval of a consolidation, merger, purchase, lease, operating contract, or acquisition of control, specified in subsection (a) of this section, shall present an application to the Board, and thereupon the Board shall notify the persons involved in the consolidation, merger, purchase, lease, operating contract, or acquisition of control, and other persons known to have a substantial interest in the proceeding, of the time and place of a public hearing. Unless, after such hearing, the Board finds that the consolidation, merger, purchase, lease, operating contract, or acquisition of control

§ 408 (a)(5) requires the approval of the Board when "any person engaged in any other phase of aeronautics" seeks to acquire control of any air carrier in any manner whatsoever. Section 408 (b) authorizes and directs the Board to approve such transactions, including acquisitions of control, that are in the "public interest" and prohibits approval of any transaction "which would result in creating a monopoly or monopolies and thereby restrain competition or jeopardize another air carrier" not a party to the transaction. Section 2 of the Act requires that in assessing the public interest and the public convenience and necessity, the Board should consider, among other things, "competition to the extent necessary to assure the sound development of an air transportation system properly adapted to the needs of the foreign and domestic commerce of the United States . . . ."[4] Sec-

---

will not be consistent with the public interest or that the conditions of this section will not be fulfilled, it shall by order approve such consolidation, merger, purchase, lease, operating contract, or acquisition of control, upon such terms and conditions as it shall find to be just and reasonable and with such modifications as it may prescribe: *Provided*, That the Board shall not approve any consolidation, merger, purchase, lease, operating contract, or acquisition of control which would result in creating a monopoly or monopolies and thereby restrain competition or jeopardize another air carrier not a party to the consolidation, merger, purchase, lease, operating contract, or acquisition of control. . . ." In 1969, § 408 (a)(5) was amended to include "any other person" acquiring control of an air carrier.

[4] Section 2, 49 U. S. C. § 1302, reads:

"In the exercise and performance of its powers and duties under this chapter, the Board shall consider the following, among other things, as being in the public interest, and in accordance with the public convenience and necessity:

"(a) The encouragement and development of an air-transportation system properly adapted to the present and future needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense;

"(b) The regulation of air transportation in such manner as to recognize and preserve the inherent advantages of, assure the highest

tion 408 (e) empowers the Board, upon complaint or its own initiative, to investigate and determine whether any person is violating any provision of subsection (a) and if such violation is found to "require such person to take such action, consistent with the revisions of this chapter, as may be necessary, in the opinion of the Board, to prevent further violation of such provision." Under § 408 (d), the Board has broad control over the accounts, records, and reports of anyone controlling an air carrier, and their inspection. The Board is further granted power to control the designation of officers or directors of an air carrier who are an officer, director, member or the controlling stockholder of any person who is engaged "in any phase of aeronautics." § 409 (a), 49 U. S. C. § 1379 (a). Section 414 relieves from the operation of the antitrust laws any person affected by any order under § 408 "insofar as may be necessary to enable such person to do anything authorized, approved, or required by such order." [5]

---

degree of safety in, and foster sound economic conditions in, such transportaton, and to improve the relations between, and coordinate transportation by, air carriers;

"(c) The promotion of adequate, economical, and efficient service by air carriers at reasonable charges, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices;

"(d) Competition to the extent necessary to assure the sound development of an air-transportation system properly adapted to the needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense;

"(e) The promotion of safety in air commerce; and

"(f) The promotion, encouragement, and development of civil aeronautics."

[5] Section 414, 49 U. S. C. § 1384, reads:

"Any person affected by any order made under sections 1378, 1379, or 1382 of this title shall be, and is hereby, relieved from the operations of the 'antitrust laws,' as designated in section 12 of Title 15, and of all other restraints or prohibitions made by, or imposed under, authority of law, insofar as may be necessary to enable such

It was against this statutory backdrop that the Civil Aeronautics Board issued a series of decisions and orders with respect to the control of TWA by Toolco, the major decisions being issued in 1944, 1948, 1950, and 1960. The first decision, 6 C. A. B. 153 (1944), authorized control of approximately 45.6% of the outstanding stock of TWA. From the Board's opinion issued at that time, it appears that Howard Hughes first became interested in TWA at the invitation of his friend, Jack Frye, the president of TWA. Hughes began acquiring TWA stock through Hughes Tool Company, which he solely owned. By 1942, Toolco had acquired 42.1% of TWA's outstanding stock and for all practical purposes was in position to control the day-to-day affairs of the carrier. Meanwhile, Hughes and Frye had jointly designed a four-engine transport, later known as the Constellation, which Lookheed agreed to manufacture under contract with Toolco. The contract was assigned by Toolco to TWA in 1942, Toolco reserving the right to purchase a sizeable number of such aircraft through TWA. It was this arrangement by which Toolco might actually acquire for resale a number of commercial aircraft that, together with its experimental work in aviation and its manufacture of aircraft parts for the military, characterized Toolco as an organization engaged in any phase of aeronautics and therefore forbidden to acquire control of an air carrier such as TWA without the consent of the Board. Toolco's control of TWA, by virtue of its stock ownership which had by that time increased to 45.6%, was approved by the Board as being in the public interest and consistent with the provisions of § 408, including the prohibition against monopoly. In order to insure that Toolco would not abuse its power

---

person to do anything authorized, approved, or required by such order."

See also § 1002 (b), (c), of the Act, 49 U. S. C. § 1482 (b), (c).

over TWA, "to its own profit and to the detriment of the public interest," 6 C. A. B., at 156, the approval was to continue only so long as intercompany purchases did not exceed $200 per item and did not amount to more than $10,000 in any one calendar year. Annual reports were required in this respect.[6] 6 C. A. B., at 158.

The 1948 and 1950 decisions of the Board originated in a letter agreement presented by Toolco to TWA on January 8, 1947, and accepted by TWA the following day. By this agreement, Toolco agreed to loan $10 million to TWA in return for the latter's interest-bearing notes which were convertible into common stock of the company. On its own initiative the Board opened an investigation into the matter. At the threshold was the question of Board jurisdiction, which was hotly contested. The Board's June 1948 opinion sustained its jurisdiction, 9 C. A. B. 381 (1948). The opinion took

[6] The Board's public counsel had opposed such a condition on approval as "imposing far too great a burden upon the Board to ask it to pass upon the wisdom and propriety in both a technical and business way, of every bargain made by a carrier for the purchase of equipment from a particular manufacturer." Brief to Examiner, at 25 (Filed Apr. 22, 1944). Public counsel's alternative proposed condition required Toolco to forfeit control in the event Toolco should manufacture or sell certain commercial aircraft or Hughes "should attempt to influence TWA with regard to the purchase, acceptance, or use by it of any aircraft or aircraft parts in the development or design of which he himself may have participated to a substantial degree." 6 C. A. B., at 157. The Board rejected this proposal, reasoning as follows (*Ibid.*):

"The conditions proposed by public counsel are complicated and seem to be somewhat indefinite and difficult of enforcement. The object of any condition . . . should be to protect the public interest from any improper coercion of the air carrier by a controlling company on account of any interest which that controlling company may have in some other phase of aeronautics. This can be accomplished by a reasonable limit upon commercial transactions between the acquirer and the acquired which may be had without further consideration in this proceeding by the Board."

a dual approach to the jurisdictional question. It first inquired whether "any change in the activities of Toolco in the field of aeronautics since October 17, 1944, had affected or altered the character of the control approved in Docket No. 1182. It is clear that a substantial change in the activities of Toolco in the field of aeronautics would result in a transaction subject to the Board's jurisdiction under § 408 by reason of the fact that the character and propriety of control originally approved might be altered or changed as a result thereof." 9 C. A. B., at 382.

After reviewing the aeronautical activities of Toolco, it was concluded that the aircraft division of the company was chiefly a large-scale experimental plant for the military and had not substantially changed its status with respect to its participation in any phase of aeronautics.

The Board's second approach to the jurisdictional question was to inquire whether the letter agreement, which would permit Toolco to increase its shareholdings up to 80% of the outstanding shares of TWA, represented such a change in extent or effectiveness of control as to give the Board jurisdiction and require its consent. Its conclusion was that although Toolco's 45% was obviously enough to dominate the Board and control the day-to-day affairs of the company, the 1947 letter agreement would permit Toolco to translate its *de facto* control into full legal control of the company, which would "obviously imply power to dictate the complete corporate activities of the corporation." 9 C. A. B., at 387. This was sufficient to require a further order of the Board in addition to the 1944 order.

With its jurisdiction established, the Board proceeded with hearings and inquiry into whether the additional control was consistent with the public interest. This matter was also contested. Toolco thought that only

a narrowly focused inquiry was appropriate, but the Board's public counsel not only insisted that the hearings be far-ranging but urged, as a possible solution, that the additional control be disapproved and that the original 1944 proceedings, Docket No. 1182, be reopened to determine whether all control of TWA by Toolco should be terminated. The Board[7] opted for an investigation sufficiently broad to inquire "into the actions and the policies of the controlling company with respect to TWA for the period during which the prior approved control existed . . . [f]or inevitably the controlling company, by virtue of its investment in the acquired carrier, will endeavor to make itself accountable—as indeed the acquirer here under scrutiny had—for the managerial efficiency, the operating economy, and the financial integrity of the controlled carrier." 12 C. A. B. 192, 196 (1950). Before approving the additional acquisition, which would make certain "complete actual and legal control," *id.*, at 197, the Board determined not only to examine the future plans of Toolco but also its past conduct with respect to TWA.

Accordingly, the Toolco-Hughes-TWA relationship from 1939 to the date the decision was examined in detail, including the events transpiring since the letter agreement of January 1947. The major focus of the inquiry were the differences between TWA management and Toolco with respect to the acquisition of new flight equipment—the quantity, the type, the timing and the financing thereof. Unquestionably, TWA had been and was in need of additional financing to make possible the purchase of new equipment, particularly that needed to operate its expanded routes. TWA proposed and pre-

[7] References to the "Board's" 1950 opinion are actually to the opinion of the Trial Examiner. But the Board adopted as its own "the findings, conclusions, and recommended decision of the examiner," without modification. 12 C. A. B., at 193.

ferred equity financing in large measure, but Toolco most often insisted on financing new equipment through credit arrangements. Disagreement caused delay, and this, in combination with other factors, brought TWA to the verge of bankruptcy or reorganization in late 1946. It was at this juncture that the January 1947 letter agreement eventuated. Financial failure was averted; but urgent needs for new equipment continued, and substantial additions were made in the years from 1947 to 1950, most of it with the aid of Toolco and some of it by purchase from Toolco itself.[8] By the time the hearings concluded and the case was under submission, TWA's financial condition had considerably improved, measurably aided by better operating results, better expense control and stock offering to stockholders with the unsubscribed amount being underwritten by investment bankers. 12 C. A. B. 208–209.

In considering whether the additional control by Toolco would be in the public interest, the Board observed that there was no conflict of interest between Toolco's present or contemplated aeronautical activities and its control of an air carrier and that enhanced control presented no problems under the anti-monopoly provisions of § 408 (b). *Id.*, at 216. The Board then noted that Toolco's contributions to the science of aeronautics by way of aircraft design, instrumental aids to aviation for both the armed services and civil aviation have been substantial and found that "of specific importance to TWA, have been the contributions of Toolco and Mr. Hughes in the way of financial support to the carrier, in

[8] The Examiner found that it was "necessary" for Toolco to acquire aircraft initially and then resell them to TWA on a conditional sales basis because TWA "could not have purchased [the aircraft] directly without the specific consent of its principal creditors." 12 C. A. B. 218.

the selection and purchase of its equipment, and their advice and guidance to the engineering and operation departments of the carrier." *Id.*, at 216.[9] Most important, however, in the Board's opinion, were the efforts of Toolco to improve the financial position of TWA during the last few years. Although criticizing Toolco, along with others in the aircraft transportation industry, for relying too heavily on debt financing which, in the case of TWA had resulted in the very difficult, lopsided capital structure, the Board concluded that the record would not support a finding that the additional control would be inconsistent with the public interest. Indeed, the Board concluded that "the continued interest of Toolco and TWA appears essential to the best interests of the carrier and the public." *Id.*, at 224.

The Board's approval in 1950 of the complete control of TWA by Toolco was made "subject to the terms and conditions" imposed by the 1944 order with respect to inter-company purchases and annual reporting. See —, *supra*. As a result, from 1944 to 1960, every acquisition or lease of aircraft by TWA from Toolco and each financing of TWA by Toolco required Board approval. Applications by Toolco were made to the Board in each instance, with the terms and conditions of the transac-

[9] For example, the Examiner found that:

"Even before TWA's financial crisis of late 1946, the financial resources of Toolco were used to provide credit for the carrier. For instance, the credit arrangements provided by Toolco made possible the placing of the original order for the Constellation airplane with the Lockheed Aircraft Corporation. There is little doubt that the Constellation would not have been developed as early as it had without the aid of Mr. Hughes and his company. In addition to the technical assistance from Mr. Hughes and his engineers in Toolco, the financial commitment which was necessary to undertake and continue the project could never have been made and met by TWA." 12 C. A. B., at 216.

tions being described.[10] Each was approved by the Board and each was regarded as a modification or interpretation of its antecedent control orders under § 408. Each of these transactional orders recited a finding of the Board that the transaction was "just and reasonable and in the public interest." Then, in December 1960, the Board issued an order approving a major proposal by TWA for the acquisition of jet equipment, which among other things involved fundamental changes in relationship between TWA and Toolco in that the stock of the latter, at the insistence of the financial institutions involved in the program, was to be placed in a voting trust and the company's Board of Directors reconstituted. 32 C. A. B. 1363. The dominant position of Toolco thus ended for the period of the trusteeship. In

[10] For example: On May 15, 1959, the Board authorized Toolco to lease 11 Boeing Jets to TWA and 30 spare jet engines. The Board required that a separate lease be executed for each aircraft and modified the previous order under § 408 to permit aircraft lease transaction between TWA and Toolco and to authorize an agreement covering $3½ million worth of spare parts.

On July 1, 1959, Toolco asked that 10 leases of Boeing Aircraft to TWA be codified so as to permit the extension of the 10 leases under the same rental until no later than September 30, 1959, and to permit the lease under identical terms of four additional Boeing Jets and to permit the purchase from Toolco at actual cost of additional spare parts necessary for the operation of the leased jet airlines. This order of the Board also constitute a modification of the original order of control granted under § 408.

On September 30, 1959, Toolco asked permission to extend the leases of 10 Boeing Jets. The extension was to be under the identical terms of the original leases, the new leases to be terminated by either party within 24 hours on written notice. Here again the Board modified the original transaction under § 408.

On January 29, 1959, Toolco asked permission to lease to TWA on a day-to-day basis up to eight Boeing Aircraft and up to eight Convairs and to purchase from Toolco at actual cost such spare parts as were necessary and such other provisions as might be required. Here again the Board entered an order that qualified its original "control" order under § 408.

the course of its opinion accompanying the order, the Board stated that although it had not been officially informed of the reasons for the bank's insistence on the voting trust, it "was not unaware of TWA's problems." *Id.*, at 1364. The Board knew, because it was a matter of public record, that TWA had been delayed in financing its jet fleet and the Board's opinion was that TWA had probably suffered because more attractive financing terms were no longer available and because the unavailability of equipment may have contributed to the company's failure to maintain its normal share of the transportation market. "Under these circumstances" the Board said, "we think it clear that Board action to facilitate TWA's acquisition of jet equipment is in the public interest. At the same time, however, it is evident that Toolco's control of TWA, as exercised through Hughes, has presented substantial problems reqiring the Board's attention." *Id.*, at 1365. The Board went on to make clear that its approval would be required before Toolco would be permitted to reassume control over TWA and that any such approval would be forthcoming only after a most "searching inquiry" into the public interest factors involved.[11] *Ibid.*

---

[11] In a footnote, the Board amplified what it meant by public interest factors through reference to the following excerpt from its 1950 decision (12 C. A. B., at 196):

"Aside from any undesirable influence on an air carrier which might arise because of the acquirer's interest in a given phase of aeronautics, an acquirer of an air carrier is not without responsibility in other respects for an air carrier's general capacity to perform its public responsibilities. For inevitably the controlling company, by virtue of its investment in the acquired carrier, will endeavor to make itself accountable [. . .] for the managerial efficiency, the operating economy, and the financial integrity of the controlled carrier. Accordingly, in determining whether or not a particular acquisition should be approved, it is necessary to consider the over-all impact of the acquirer's plans and policies with respect to the controlled carrier."

It was six months later that TWA, now no longer under control of Toolco, filed suit against the latter alleging violations of the antitrust laws to the injury of TWA's business. As analyzed by the Court of Appeals in its opinions filed in this case, the complaint rested principally on Toolco's conduct as controlling stockholder during the years 1955–1960. The assertions were that in 1955 the commercial air industry was converting to jet aircraft, and that TWA's competitors began in that year "to aid in the development of and to purchase jet planes. 332 F. 2d, at 605. Toolco and General Dynamics Corporation (Convair) had entered into an arrangement for the joint development of a suitable aircraft but the plan proved abortive, whereupon Toolco considered but ultimately abandoned a plan for itself to enter aircraft production. Meanwhile, Toolco had arranged for the purchase of jet aircraft from Convair and Boeing, the arrangements providing that Toolco could assign its rights to such aircraft to TWA.

As respects its defense that CAB control and surveillance gave it immunity from the antitrust suit, Toolco relies on *Pan American World Airways, Inc.* v. *United States, supra.* The Court of Appeals distinguished that case, saying that there the unlawful division of territories and allocation of routes were directly "within the ambit of powers explicitly granted the Board by the Congress." 332 F. 2d 602, 608. The Court of Appeals said that the present case was different because, in its view, the continuing supervision of the Board over the Toolco-TWA relationship was general and not related to a specific conduct that gave rise to violations of the antitrust laws.

The transactions on the basis of which damages were awarded were based primarily on profits lost as a result of five transactions relating to orders placed by Toolco

for a fleet of 63 jet aircraft destined for use by TWA. 449 F. 2d 51, 65–66:

(1) The diversion of six Convairs by Toolco to Northeast Airlines.

(2) The temporary retention by Toolco of four other Convairs and their ultimate lease of them to Northeast Airlines.

(3) The diversion of six Boeing jets out of 33 ordered to Pan American Airways.

(4) The lease, instead of outright sales, of jets in 1959–1960.

(5) The late delivery of 47 of the 63 jets.

One difficulty with the conclusion of the Court of Appeals that these transactions, unlike those involved in the *Pan American* case, were transactions on which the Board might take action but did not do so is that it miscontrues the record. As noted from 1944 to 1960 every acquisition or lease of aircraft by TWA from Toolco and each financing of TWA by Toolco required Board approval. Each transaction was approved by the Board and each approval was an order under § 408, for the Board regarded its transactional orders as modifications or interpretations of its antecedent control order. Each of the modification orders recited a finding of the Board that the transactions were "just and reasonable and in the public interest."

It is said, however, that while the Board modified its original "control" order under § 408 so as to permit sale or lease of the aircraft out of which the alleged antitrust violations occurred, the approval of the Board did not sanction or approve the precise way in which Toolco allegedly used the power to the disadvantage of TWA. But that is not an answer to the problem of exemption.

The Federal Aviation Act as construed and applied by this Court and the Civil Aeronautics Board dictates a contrary result.

In *Pan American World Airways, Inc.* v. *United States, supra*, the United States brought a civil antitrust action under §§ 1, 2, and 3 of the Sherman Act challenging the joint control of Panagra, an air carrier, by Pan American Airways and W. R. Grace & Company. The allegations were that Pan American, Grace, and Panagra and divided territories, that Pan American and Grace had conspired to monopolize air transportation on the west coast of South America and that Pan American had used its power to prevent Panagra from extending its routes from the Canal Zone to the United States. The District Court found no division of territories, no conspiracy between Grace and Pan American but concluded that Pan American had violated the Sherman Act in interfering with Panagra's possible route extension. On cross appeals by Pan American and United States, this Court held that the complaint should have been dismissed because of § 411 of the Act gave the CAB broad power to investigate and bring to a halt unfair practices and unfair methods of competition, including those alleged in the complaint, and because if the courts were to intrude independently with their own construction of the antitrust laws the two regimes might collide. Hence, relief against the alleged division of territories, allocation of routes and conspiracy to monopolize was a matter exclusively for the Board. The court also pointed out that under § 414 of the Act Board orders carried antitrust immunity for any conduct authorized, approved or required by the order and that it would be odd to hold that an affilation between an air carrier and others that would pass muster under § 408 could nevertheless run afoul of the antitrust laws—"Whether or not transactions of that character met the standards of competition and monopoly provided by the Act is peculiarly a question for the Board, subject of course to judicial review as provided by 49 U. S. C. 1489." 371 U. S., at 309.

The Court of Appeals did not consider *Pan American* to be relevant or controlling because, different from the situation there, the conduct challenged in TWA's complaint against Toolco was "unrelated to any specific function of the CAB" and hence was not within the exclusive competence of that body. 332 F. 2d, at 608. This view is difficult to square with the statute and the several opinions and orders issued by the Board with respect to the relationship between Toolco and TWA.

The Act expressly forbade Toolco from acquiring control of TWA without approval of the Board. Section 408, however, directed the Board to approve the acquisition if consistent with the public interest and empowered it to remedy any acquisition of control by Toolco obtained otherwise than in accordance with the Act. It is also perfectly clear that in 1944 the Board approved the acquisition of control of TWA by Toolco by virtue of a 45% stock ownership and that in 1948 and 1950 the Board approved a transaction that could have increased Toolco's holdings to 80% and transform its *de facto* control into full legal, as well as practical control.

In reaching this conclusion, the Board inquired broadly into all phases of the exercise of Toolco's control over TWA during the years 1944–1947. It was not only proper but necessary in determining whether further acquisition of control was consistent with the public interest to examine "into the actions and policies of the controlling company . . . for inevitably the controlling company, by virtue of its investment in the acquired corporation, will endeavor to make itself accountable . . . for the managerial efficiency, the operating economy and the financial integrity of the company." 12 C. A. B., at 196. Hence, of major interest to the Board were the decisions of Toolco with respect to the type, quantity, timing, and financing of new equipment acquisition by TWA. It examined and dealt with in great detail the assertions

that Toolco had improperly delayed the arrival of new equipment, had insisted on debt rather than equity financing and had itself sold or leased aircraft to TWA. All of these matters, the Board concluded, were central to proper determination of the issue of the additional control and, indeed, to the additional question before the board as to whether the existing relationship should have been completely terminated.

The point is that the conduct of Toolco with which the Board so extensively dealt in 1950 is the same kind of conduct charged to Toolco in the 1950's and alleged by TWA in its complaint to violate the antitrust laws. It is, therefore, difficult to understand how the Court of Appeals could conclude that the acts of Toolco in controlling, allegedly to the injury of TWA, the timing, the financing and the flow of new equipment to TWA was unrelated to any function of the Board under the Act. Clearly, such considerations were in the mainstream of the Board's § 408 responsibilities to insure that only those acquisitions of control that are in the public interest are approved.

Nor is it tenable to argue that however relevant Toolco's new equipment decisions might have been to the public interest standard mandated for Board approval of the additional control obtained in 1947, the Board's authority nevertheless terminated with that approval and that the Board, having issued its approval, was powerless to control or oversee its exercise in the years to come. Section 408 permits only those acquisitions of control that are not inconsistent with the public interest and that will not result in a monopoly. It also authorizes the Board to approve acquisitions subject to such conditions as it may deem desirable. Section 408 (e) empowers the Board to investigate and remedy violations of § 408 (a)—if a carrier has acquired control "in any manner whatsoever" other than that approved by the

Board, the Board is authorized either on complaint or its own initiative to investigate and if a violation is discovered it is ordered to remedy that situation. Section 204 (a) authorizes the Board to issue and amend such orders as it shall deem necessary to carry out the provisions of and to exercise and perform its powers and duties under this chapter.[12]

It seems sufficiently apparent, therefore, that the Board did not exhaust its powers with respect to Toolco's control of TWA when it issued its order of approval in Docket No. 1182 in 1944. Obviously, the Board remained competent to enforce or to waive the conditions attached to that order. It did so many times. See n. 10, *supra*. It also is clear from the 1948 and 1950 proceedings, where the Board's jurisdiction was challenged, that its jurisdiction was triggered not only by substantial additional acquisitions of stock but by any change in the extent or effectiveness of Toolco's control or in Toolco's position in the aeronautics industry. The Board also implied that had Toolco's exercise of control over TWA from 1942 to 1947 been sufficiently unacceptable to foreclose the additional acquisition of control, reopening Docket No. 1182 and re-examination of the initial approval would have been justified.

We have little doubt that the authority of the Board, either on complaint or its own initiative, extended to forbidding any exercise of control by Toolco which was not authorized or contemplated by the initial or subse-

---

[12] See also § 415 of the Act, 49 U. S. C. § 1386, which provides that:

"For the purpose of exercising and performing its powers and duties under this Act, the Board is empowered to inquire into the management of the business of any air carrier, and, to the extent reasonably necessary for any such inquiry, to obtain from such carrier and *from any person controlling . . . such air carrier*, full and complete reports and other information. [Emphasis added.]"

quent approval. This seems the clear import of the Act and of the Board's 1948–1950 proceedings.

Also instructive is the Board's response when asked in 1956 to modify its original order so as to permit TWA's purchase of up to 25 jet-powered aircraft from Toolco. Reciting that its prior approvals of Toolco's control of TWA had been premised upon the assumption that Toolco was not engaged in the manufacture or sale of aircraft for commercial use, the Board forthwith opened an investigation to determine whether Toolco's position in the aeronautics industry had so changed as to result in a transaction subject to the Board's jurisdiction under § 408. The motion for waiver of the 1944 condition was consolidated with this new proceeding. The proceeding was later cancelled when the motion to waive the 1944 condition was withdrawn, but clearly the Board thought, and rightly so, that it had continuing power to audit the ongoing relationship between TWA and Toolco.

It is also difficult to read in any other manner the recital by the CAB, in the course of approval the 1960 voting trust arrangement, of Toolco's alleged conduct in delaying the delivery of new equipment and dictating the financing of same, all to TWA's alleged injury, followed by its assertion that such conduct "presented substantial problems requiring the Board's attention." 32 C. A. B., at 1365.

It is therefore no answer to say that our *Pan American* decision does not cover the alleged antitrust violations involved in the Toolco-TWA transactions for which treble damages were sought. As noted, § 408 (b) states that the Board shall not approve any "acquisition of control" which would result "in creating a monopoly or monopolies and thereby restrain competition or jeopardize another air carrier." Moreover, the Board in granting permission to "control" an air carrier must consider the

standards of the public interest as defined in § 102 of the Act. Subsection (c) of § 102 provides:

> "The promotion of adequate, economical, and efficient service by air carriers at reasonable charges, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices."

Competition and monopoly [13]—two ingredients of the antitrust laws—are thus standards governing the CAB's exercise of authority in granting, allowing, or expanding or contracting the control which Toolco had over TWA by reason of the various orders issued by the CAB under § 408. In this context, the authority of the Board to grant the power to "control" and to investigate and alter the manner in which that "control" is exercised leads us to conclude that this phase of CAB jurisdiction, like the one in the *Pan American* case, pre-empts the antitrust field.[14] It should be noted in that connection that in

---

[13] The Board in an early decision refused to approve a joint agreement among carriers because of its antitrust aspects:

". . . Agreements of this nature, whereby a carrier operating in a particular territory obtains from a prospective competitor an undertaking, express or implied, not to attempt competitive operations, are likely to tend to impede the development of competition to the extent required by the present and future needs of the nation. Accordingly, we are of the opinion that such agreements thwart the purposes of the Act, and that their formation should in general be discouraged." *Pan American Airways, Inc.*, 3 C. A. B. 540, 546–547.

[14] The *Pan American* case is consistent with the view expressed in *Silver* v. *New York Stock Exchange*, 373 U. S. 341, 360–361, that while a statutory scheme that does not create a total exception from antitrust laws may, nonetheless, in particular and discrete instances by implication grant immunity from an antitrust claim.

To the same effect is *United States* v. *Borden Co.*, 308 U. S. 188, 200, where the Court said:

"That the field covered by the Agricultural Act is not coterminous with that covered by the Sherman Act is manifest from the fact

the *Pan American* case, Pan American, which owned 50% of the stock of the air carrier Panagra, was charged with using its control to prevent Panagra from receiving the authority of the CAB to extend its route from the Canal Zone to the United States. That restraint was held beyond the reach of the antitrust laws even though the CAB had taken no action to investigate, let alone, act on the alleged misfeasance as the Board has done here for over 16 years.

We think the Court of Appeals erred also in construing and applying § 414, which immunizes from antitrust liability any conduct approved, authorized or required by any Board order issued under § 408. As we read this record the Board not only approved Toolco's ownership of TWA stock but it also contemplated actual and legal control of TWA by Toolco. The Board made it as plain as possible that Toolco's stock ownership would inevitably result in Toolco's exercising authority over the day-to-day affairs of TWA, including the acquisition and financing of equipment. It was precisely this kind of control the Board approved. Toolco's power of decision with respect to these matters was central to the public interest issue. What is more, the Board not only concluded that Toolco's stewardship, although faulty in some respects, had been a great benefit to TWA and to the public in years gone by but also determined that the additional control sought by Toolco and continuation of TWA-Toolco relationships were essential to the public interest.

---

that the former is thus delimited by the prescribed action participated in and directed by an officer of government proceeding under the authority specifically conferred by Congress. As to agreements and arrangements not thus agreed upon or directed by the Secretary, the Agricultural Act in no way impinges upon the prohibitions and penalties of the Sherman Act, and its condemnation of private action in entering into combinations and conspiracies which impose the prohibited restraint upon interstate commerce remains untouched."

It is too clear for argument that in entering the 1950 order the Board fully realized that Toolco had determined and would determine when and how much new equipment would be purchased, from whom it would be acquired and how it would be financed. It was precisely this type of association that it contemplated when it approved the additional control obtained by Toolco in 1947. And it was precisely this same conclusion that the Board was implementing each time during the 1950's that it approved a sale or a lease of an airplane from Toolco to TWA which, without its approval, would have violated the Board's ongoing limitation on the size of intercompany transactions.

We repeat, however, what we said in the *Pan American* case that the Federal Aviation Act does not completely displace the antitrust laws.

> "While the Board is empowered to deal with numerous aspects of what are normally thought of as antitrust problems, those expressly entrusted to it encompass only a fraction of the total." 371 U. S., at 305.

One of the most conspicuous exceptions would be the combination or agreement between two air carriers involving trade restraints. See *Timken Co.* v. *United States*, 341 U. S. 593, 598.

There may be other exceptions. But where, as here, the CAB authorizes control of an air carrier to be acquired by another person or corporation and where it specifically authorizes as in the public interest specific transactions between the parent and the subsidiary, the way in which that control is exercised in those precise situations is under the surveillance of CAB, not in the hands of those who can invoke the sanctions of the antitrust laws. As noted, the parent company which controls an air carrier is subject to pervasive control by the CAB. The control which CAB is authorized to grant or to deny under § 408 involves an appraisal of the impact of that

control in terms of monopoly and competition; and the ongoing supervision entrusted to the CAB by § 415 is broad enough to put all transactions between parent and subsidiary—as originally conceived or subsequently exercised—under CAB supervision.

We cannot believe that if the day after the Board's order of 1950, a minority stockholder had instituted a derivative antitrust suit against Toolco, alleging that Toolco had monopolized the TWA market from 1944 to 1950, delayed deliveries of aircraft and insisted on improvident financing arrangements, such a suit could have survived a motion to dismiss based on § 414. Such an action would seek to negate what the Board, after full investigation, had found consistent with the § 408's anti-monopoly provision, consistent with § 2's competition standard and consistent with the public interest.

TWA's suit in 1960 carries no better credentials, for it sought to terminate a relationship the continuation of which the Board had found essential to both TWA and the public interest and to penalize the type of conduct which the Board expressly contemplated and preferred would continue unless and until a different order from the Board was forthcoming.

It adds nothing to the analysis to characterize Toolco's exercise of power over TWA as monopolization of the TWA market, for it was precisely such control that the Board opted for in 1944 and 1950. Moreover, a condition of the order was that Toolco's sales to TWA could not assume more than negligible proportions without in every instance the Board approving the transaction as being consistent with the public interest. Nor does it add to the argument to describe Toolco's conduct as furthering a tying or exclusive dealing arrangement or as a conspiracy to restrain trade in that market represented by TWA.

The short of it is that in our view § 408 and § 414 of the Act, as construed in *Pan American* require reversal of the Court of Appeals and dismissal of this action. What TWA charged in its complaint was no more than the kind of conduct the CAB in 1950 had approved and authorized for the future; and, in any event, such conduct was within the power of the Board to control and was central to the mandate of § 408 to permit control of TWA by Toolco only if consistent with the public interest.

We by no means hold that the Federal Aviation Act completely displaces the antitrust laws. *Pan American*, 371 U. S., at 305. But where, as here, the CAB authorizes control of an air carrier to be acquired by another person or corporation and where the CAB specifically authorizes as in the public interest specific transactions between the parent and the subsidiary, the way in which that control is exercised in those precise situations is under the surveillance of CAB, not in the hands of those who can invoke the sanctions of the antitrust laws. The control which CAB is authorized to grant or to deny under § 408 involves an appraisal of the impact of that control in terms of monopoly and competition; and the ongoing supervision entrusted to the CAB by § 415 is broad enough to put all transactions between parent and subsidiary—as originally conceived or subsequently exercised—under CAB supervision.

This conclusion necessitates a dismissal of the cross-petition and a reversal of the judgment below and a remand with directions to dismiss the complaint, as the numerous other points briefed and argued become irrelevant in that posture of the case.

Reversed.

MR. JUSTICE MARSHALL took no part in the consideration or decision of these cases.

SUPREME COURT OF THE UNITED STATES

Nos. 71–827 AND 71–830

Hughes Tool Company et al., Petitioners, 71–827 *v.* Trans World Airlines, Inc.	On Writs of Certiorari to the United States Court of Appeals for the Second Circuit.
Trans World Airlines, Inc., Petitioner, 71–830 *v.* Hughes Tool Company et al.	

[January 10, 1973]

MR. CHIEF JUSTICE BURGER, with whom MR. JUSTICE BLACKMUN joins, dissenting.

The history of this case is so remarkable—indeed unique in the annals of modern federal jurisprudence, so far as I am aware—that I must preface my dissent on the merits with a recital of the course of this litigation over nearly a dozen years. This protracted litigation, conducted at enormous cost, now comes to an abrupt end on an issue directly presented to this Court nearly eight years ago but not decided. As the strange history will demonstrate, resolution of the issue when it was first before the Court, as now decided, would have terminated this litigation without having the parties invest untold efforts and vast expense in a now wholly irrelevant contest over the proper measure of damages.

On June 30, 1961, TWA filed a complaint against the Hughes Tool Company in the United States District Court for the Southern District of New York, charging violations of the antitrust laws. On February 7, 1962, the District Court filed a pretrial order, appointing a Special Master to act in discovery and

deposition proceedings. After discovery proceeded to an impasse, on February 1, 1963, the District Court ordered Howard Hughes to appear for a deposition and ordered the defendant Toolco to produce certain documents which it had previously refused to produce. Shortly thereafter, on February 7, 1963, the District Court entered a memorandum opinion and order denying a motion to dismiss TWA's complaint.[1] In response to the order to produce Hughes for examination along with the contested documents, Toolco filed a "notice of position," on February 8, 1963, advising the District Court and TWA that it had chosen to rest on the merits of its positions in order to "avoid the burdens and expenses involved in further pretrial and trial proceedings prior to the time that an appellate court has had the opportunity to rule on the decisions and orders heretofore made herein."

This "notice of position" constituted a default and accordingly judgment was entered against Toolco, on May 3, 1963. The District Court then certified to the United States Court of Appeals, Second Circuit the question of the sufficiency of the complaint on which the default judgment was based. The issue of damages was referred to the Special Master. On July 10, 1964 the Second Circuit issued an opinion in which it decided that the District Court had jurisdiction of the action and that the orders of the Civil Aeronautics Board affecting the relationship between the parties did not constitute a good defense to the antitrust claims of TWA.[2] On November 16, 1964, this Court granted certiorari to review the judgment of the Court of Appeals.[3] After full argument and briefing, but without

[1] 32 F. R. D. 604.
[2] 332 F. 2d 602.
[3] 379 U. S. 912.

opinion, the writ was dismissed as improvidently granted on April 5, 1965,[4] and the case returned to the District Court for further proceedings to determine the amount of TWA's damages.

For nearly three years, proceedings were held before the Special Master [5] to determine the appropriate amount of damages. On December 23, 1969, the District Court filed a new opinion confirming a report of the Special Master awarding damages amounting to $137,611,435.95.[6] On April 14, 1970, the District Court filed a superseding order in which he added to the TWA award $7,500,000 as a reasonable attorney's fee (representing some 56,000 hours of work at a "mixed rate" of $128 per hour) and $336,705.12 in costs, for a total of $145,448,141.07 plus interest thereon of 6%. The judgment was stayed pending a renewed appeal to the Court of Appeals, which, on September 1, 1971, affirmed the judgment of the District Court, with only slight modification.[7]

This Court again granted certiorari on February 28, 1972,[8] and today—more than 11 years after it all began and more than seven years after the now determinative issue was brushed aside by this Court—the Court discovers that the actions alleged in TWA's complaint were immunized from the antitrust laws by the Civil Aeronautics Board's role in the Toolco-TWA relationship. This, of course, was the precise issue tendered to this Court for decision in 1964 in order to

[8] 405 U. S. 915.

secure an early decision that might end the contest before enormous additional sums were expended in proving damages resulting from the actions alleged in TWA's complaint.[9]

This capsule chronicle of the present litigation barely suggests its factual complexity. To describe this litigation as a 20th-century sequel to *Bleak House* is only a slight exaggeration. Dickens himself could scarcely have imagined that 56,000 hours of lawyering at a cost of $7,500,000 would represent the visible expenses of only one party to a modern intercorporate conflict, to say nothing of the time of corporate and management personnel diverted from their daily tasks.[10] Indeed, today's "ending" is quite a surprise—as great

---

[9] Toolco's 1964 petition for certiorari posed three questions, the first being as follows:

"1. Where the Civil Aeronautics Board has approved the acquisition of a controlling stock interest in an air carrier by a person engaged in a phase of aeronautics and has further approved or has jurisdiction to approve all relevant transactions between them under an Act which immunizes the approved transactions from the antitrust laws, does the district court have jurisdiction to entertain a complaint by such air carrier alleging that the transactions between the subsidiary air carrier and its parent violated the antitrust laws in that they constituted a conspiracy, an attempt to monopolize and an acquisition in violation of the antitrust laws?"

Toolco's petition in the present case posed seven questions, the fourth of which was as follows:

"4. When the Civil Aeronautics Board has approved an acquisition of control over an air carrier by a person engaged in a phase of aeronautics and has further approved all relevant transactions between them, is the exercise of that control to determine how the air carrier acquires aircraft and the necessary financing thereof immunized from the operation of the antitrust laws under Section 414 of the Federal Aviation Act?"

[10] It is not unreasonable to assume that the battalions of lawyers for these adversaries devoted substantially the same effort and time, thus bringing counsel fees in the aggregate to the sum of $15 million.

a surprise for some of us as it must be for the parties. I suggest it will even surprise the victors, for in the oral argument to this Court only a few fleeting comments were devoted to the point that now becomes the dispositive issue in the case. Of course, this was a sound allocation by counsel of the limited time allowed for argument since the Court had not considered the point worthy of notice in 1964 when the case was first here.

To be sure, all this is secondary to the correctness of today's decision. I am unable to join the Court's disposition because I believe it departs markedly from our prior decisions uniformly holding that repeal of the antitrust laws to accommodate other federal regulatory statutes "is to be regarded as implied only if necessary to make the [regulatory scheme] work, and even then only to the minimum extent possible." *Silver* v. *New York Stock Exchange*, 373 U. S. 341, 357. In particular, the Court today substantially enlarges the scope of *Pan American Airways* v. *United States*, 371 U. S. 296 (1963), a case which the Court says "requires" the result it reaches today—notwithstanding that *Pan American*'s teaching was available in Volume 371 of the United States Reports when the Court dismissed the writ in this case as improvidently granted.

I

Passing to the merits of the Court's holding, I find it necessary at the outset to supplement the Court's description of the statutory framework from which this case arises. Section 408 of the Civil Aeronautics Act, 49 U. S. C. § 1378,[11] requires the approval of the CAB

[11] Section 408, 49 U. S. C. § 1378, reads in pertinent part as follows:
"(a) Prohibited acts.

[*Footnote 11 continued on page 6*]

when any person [12] seeks to acquire a controlling interest in any air carrier. The Board may approve such acquisition only if it finds that the acquisition

---

"It shall be unlawful unless approved by order of the Board as provided in this section—

. . . . . .

"(2) For any air carrier, any person controlling an air carrier, any other common carrier, or any person engaged in any other phase of aeronautics, to purchase, lease, or contract to operate the properties, or any substantial part thereof, of any air carrier;

. . . . . .

"(5) For any air carrier or person controlling an air carrier, any other common carrier, any person engaged in any other phase of aeronautics, or any other person to acquire control of any air carrier in any manner whatsoever: *Provided*, That the Board may by order exempt any such acquisition of a noncertificated air carrier from this requirement to the extent and for such periods as may be in the public interest;

. . . . . .

"(b) Application to Board; hearing; approval; disposal without hearing.

"Any person seeking approval of a consolidation, merger, purchase, lease, operating contract, or acquisition of control, specified in subsection (a) of this section, shall present an application to the Board, and thereupon the Board shall notify the persons involved in the consolidation, merger, purchase, lease, operating contract, or acquisition of control, and other persons known to have a substantial interest in the proceeding, of the time and place of a public hearing. Unless, after such hearing, the Board finds that the consolidation, merger, purchase, lease, operating contract, or acquisition of control will not be consistent with the public interest or that the conditions of this section will not be fulfilled, it shall by order approve such consolidation, merger, purchase, lease, operating contract, or acquisition of control, upon such terms and conditions as it shall find to be just and reasonable and with such modifications as it may prescribe: *Provided*, That the Board shall not approve any consolidation, merger, purchase, lease, operating contract, or acquisition of control which would result in creating a monopoly or monopolies and thereby restrain competition or jeopardize another air carrier not a party to the consolidation, merger, purchase, lease, operating contract, or acquisition of control. . . ."

[12] Section 408 (a)(5) was amended in 1969 to require Board ap-

will be consistent with the public interest. Section 408 (b), 49 U. S. C. § 1378 (b). Specifically, the Board "shall not approve any . . . acquisition of control which would result in creating a monopoly or monopolies and thereby restrain competition or jeopardize another air carrier not a party to the . . . acquisition of control." *Ibid.*

The Act fails to elaborate on the scope of its command to the CAB not to approve any acquisition that would create a monopoly and thereby restrain competition. In other words, the Act fails to specify the relevant market or markets to which the Board must look in determining whether a particular acquisition or exercise of control is forbidden. Section 2 of the Act,[13]

---

proval of an acquisition of control of an air carrier by "any other person." 83 Stat. 103, 49 U. S. C. § 1378 (a)(5). Prior to 1969, the Act required Board approval only for acquisition of control of an air carrier by another air carrier, by persons having other specified transportation interests, or by a "person engaged in any other phase of aeronautics."

[13] Section 2, 49 U. S. C. § 1302, reads:

"In the exercise and performance of its powers and duties under this chapter, the Board shall consider the following, among other things, as being in the public interest, and in accordance with the public convenience and necessity:

"(a) The encouragement and development of an air-transportation system properly adapted to the present and future needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense;

"(b) The regulation of air transportation in such manner as to recognize and preserve the inherent advantages of, assure the highest degree of safety in, and foster sound economic conditions in, such transportation, and to improve the relations between, and coordinate transportation by, air carriers;

"(c) The promotion of adequate, economical, and efficient service by air carriers at reasonable charges, without unjust discriminations, undue preferences, or advantages, or unfair or destructive competitive practices;

"(d) Competition to the extent necessary to assure the sound development of an air-transportation system properly adapted to the

enumerating the general policies which are to guide the Board, is similarly ambiguous. It includes among those factors to be weighed in evaluating the "public interest" factor under the Act "[c]ompetition to the extent necessary to assure the sound development of an air transportation system properly adapted to the needs of the . . . commerce of the United States . . . ." Again, though, the question is: competition by whom? In which market or markets?

There can be no doubt the Board is responsible for promoting competition in some sense; our inquiry is whether the Board is charged with fostering competition both within the air transportation market and without, in other markets essentially unrelated to air transportation and alien to the purposes for which the Board was created. Resolution of this ambiguity is critical to proper interpretation of § 14 of the Act,[14] which confers antitrust immunity upon "any person affected by any order made under [§ 408, *inter alia*] . . . insofar as may be necessary to enable such person to do anything authorized, approved, or required by such order." What is "authorized, approved, or required" by the CAB must surely be determined, at least to a very large extent, by the scope of the Board's mandate to evaluate potentially anticompetitive conduct.

---

needs of the foreign and domestic commerce of the United States, of the Postal Service, and of the national defense;

"(e) The promotion of safety in air commerce; and

"(f) The promotion, encouragement, and development of civil aeronautics."

[14] Section 414, 49 U. S. C. § 1384, reads:

"Any person affected by any order made under sections 1378, 1379, or 1382 of this title shall be, and is hereby, relieved from the operations of the 'antitrust laws,' as designated in section 12 of Title 15, and of all other restraints or prohibitions made by, or imposed under, authority of law, insofar as may be necessary to enable such person to do anything authorized, approved, or required by such order."

II

The Court today neglects to resolve, or indeed even mention, this problem, and well it might, for the legislative history of the Act demonstrates that the competitive concerns which troubled the framers of the Aviation Act related exclusively to competition by and among air carriers. A major impetus to federal regulations of air transportation was the failure of the preceding era of freely competitive price and route warfare to bring stability to the Nation's air transport industry. In his statement accompanying the report of the Committee on Commerce on the Civil Aeronautics Act of 1938, Senator Copeland stated:

> "Competition among air carriers is being carried to an extreme, which tends to jeopardize and render unsafe a transportation service appropriate to the needs of commerce and required in the public interest, in the interests of the Postal Service, and of the national defense. Aviation in America today is unsatisfactory to investors, labor, and the air carriers themselves. . . . The committee feels that this bill will not only promote an orderly development of our Nation's civil aeronautics, but by its immediate enactment prevent the spread of bad practices and of destructive and wasteful tactics resulting from the intense competition now existing within the air-carrier industry." S. Rep. No. 1661, to acc. S. 3845, 75th Cong., 3d Sess., p. 2.

Similar views were voiced by the Chairman of the House Committee on Interstate and Foreign Commerce, Congressman Clarence Lea:

> "Under existing law, there is little economic regulation of air carriers. Routes are awarded not upon the basis of the ability of the particular air carrier to perform the service or the requirements

> of the public convenience and necessity, but upon the letting of air mail contracts to the lowest responsible bidders. This system has completely broken down in recent months, because the air carriers, in their desire to secure the right to carry the mail over a new route, have made absurdly low bids, have virtually evinced a willingness to pay for the privilege of carrying the mail over a particular route. A route once secured, however, under the existing system of air mail-contracts does not protect the air carrier operating that route from possible cutthroat competition, for air carriers are not required to secure a certificate or other authorization from the Government before beginning operations, other than one based upon safety requirements. Nor is there any authority in the Federal Government under existing law to prevent competing carriers from engaging in rate wars which would be disastrous to all concerned.
>
> "The result of this chaotic situation of the air carriers has been to shake the faith of the investing public in their financial stability and to prevent the flow of funds into the industry." H. R. Rep. No. 2254 to acc. H. R. 9738, 75th Cong., 3d Sess., p. 2.

A key aim of the new legislation, then, was to eliminate "cutthroat competition" among air carriers. From the beginning, the air carriers pushed for a scheme of regulation to control entry and regulate price competition in the air transportation market. Yet equally soon after serious consideration of an air regulation bill began, the prospect of regulation gave rise to concern that the new system of regulation might be used to foster the development of an "airline trust" or similar overconcentration in the air transportation market. In 1937, Commissioner Eastman of the ICC, who supported full federal regulation of air transportation re-

minded the members of the Senate Commerce Committee that the proposed legislation would give the Commission unlimited authority to consolidate the Nation's airlines and possibly, to do away with competition altogether. Eastman suggested that language be drafted to preclude undue consolidation among carriers.[15] As one commentator has stated, "Eastman's suggestion appears to have been heeded, for when the [1937] bill was reported, the merger clause contained [the language which became the anti-monopoly restriction of section 408]." Comment, Merger and Monopoly in Domestic Aviation, 62 Col. L. Rev. 851, 856–857. Final consideration of the aviation bill was postponed until the next session of Congress, but when Senator McCarran and Representative Lea introduced legislation at the 1938 session to create an independent air regulatory agency, both bills "contained a monopoly proviso virtually identical to the one that had been added to the 1937 bills, as reported." *Id.*, at 857.

To implement § 408's scheme for balancing stability with competition in the air transportation market, the bill provided explicit antitrust immunity in § 414.[16]

---

[15] Testimony of Joseph B. Eastman, Member, Interstate Commerce Commission, on S. 2 and S. 1760 before a Subcommittee of the Senate Committee on Interstate Commerce, 75th Cong., 1st Sess., 334–335 (1937).

[16] At the House hearings, Colonel Edgar Gorrell, President of the Air Transport Assn. of America, testified that a major element of uncertainty that kept money from flowing into commercial aviation was "cutthroat competition, . . . where one company went out to make warfare against another and would be destroying the capital of both. . . . That is a fact. It has happened and the only agency or agent in America today that can stop it is myself; and the moment I stick my neck out to stop it, if I did, I would face a jail sentence and a fine for violating the antitrust laws. Our companies today cannot lawfully agree on prices." Hearings on H. R. 9738, 75th Cong., 3d Sess., at 309.

See *Silver* v. *New York Stock Exchange*, 373 U. S. 341, 347, where we noted that the relevant "collective action . . . would, had it oc-

The debates over § 414—like the origins of § 408—reflect congressional concern with competition in the air transportation market. Senator McKellar asked Senator Truman, a major supporter of the aviation bill, if it were true that the proposed legislation would repeal the antitrust provisions of the existing airmail laws. When Senator Truman answered in the affirmative, Sen. McKellar complained that

> ". . . such a provision is very inadequate and very bad legislation, and ought never to be agreed to. As everyone knows, at the present time the air companies are complaining that they are not allowed to consolidate. Some years ago we allowed them to consolidate and the result was the greatest ill that ever befell the air companies. The same ill will befall them again if such combinations are permitted.
>
> ". . . I desire to state that I cannot vote for any bill which proposes that a commission shall give air companies the right to combine and confederate into a huge monopoly. I regret very much that I shall have to vote against the bill."

Senator McCarran disagreed. He told Sen. McKellar that the bill "contain[ed] every protection against the very thing which the Senator from Tennessee fears." Senator Truman reminded his colleagues of § 408's proviso requiring that the Board approve no acquisition of control which would "result in creating a monopoly or monopolies and thereby unduly restrain competition or unreasonably jeopardize another air carrier not a party to the consolidation . . . ." Senator McCarran agreed that "every precaution has been written into the bill so that the antitrust laws and all laws for the prevention of combinations and monopolies shall

---

curred in a context free from other federal regulation, constitute a *per se* violation of § 1 of the Sherman Act."

be enforced . . . . Protection has been written into the bill against combinations and monopolies in restraint of commerce, and in restraint of everything which would constitute a monopoly." Senator Copeland recited five different provisions of the bill "where the question of monopoly is dealt with in one way or another with the view to its control and prevention." When the debate turned from the discussion of general principles to application of those principles to a particular fact situation, again the Senators spoke of consolidation and competition by air carriers.[17]

Thus, the debates, as well as the remainder of the legislative history of the 1938 Act, reflect that the Congress which enacted the 1938 legislation was concerned only with problems of competition and monopoly in the air carrier market. Moreover, the debates show that there was considerable concern over even the limited grant of antitrust immunity deemed necessary to provide the proposed authority with sufficient flexibility to administer the air carrier market in the public interest. It is most unlikely that the concerns expressed would have been put to rest by extending the new authority's pre-emptive antitrust responsibilities under § 408 beyond the air transportation market into every market which might happen to be touched by transactions with an air carrier.

III

Our holding in *Pan American v. United States*, *supra*, becomes important in this setting. There, the Government filed an antitrust complaint alleging, *inter alia*, anticompetitive interference by Pan American with the route acquisitions of Panagra, a joint venture of Pan American World Airways and Grace Co. This Court held that the complaint should be dismissed. The Court stood

[17] 83 Cong. Rec. 6730–6731 (1938).

behind the presumption against implied antitrust immunity, 371 U. S., at 304–305, n. 9: however, for two interdependent reasons, the Court held that the conduct alleged in Panagra's complaint was immunized from the antitrust laws. First, the conduct specified in the complaint fell within the Board's basic mission and competency—the regulation of entry into and competition within the air transportation market:

> "Limitations of routes and divisions of territories and the relation of common carriers to air carriers are basic in this regulatory scheme." *Id.*, at 305.

Second, and equally important, we held that § 411 of the Act gave the Board a specific substantive mandate to investigate and regulate unfair practices and unfair methods of competition among air carriers in the air transportation market, 371 U. S., at 302, 308.

In *Pan American* the Board had not only the statutory power to supervise the relevant transactions but also the statutory responsibility to remedy the abusive features of those transactions specified in the Panagra complaint. Consequently, "If the courts were to intrude independently with their construction of the antitrust laws, two regimes might collide." *Id.*, at 310. Even this narrow holding provoked the dissent of MR. JUSTICE BRENNAN, in which Mr. Chief Justice Warren joined.

The present case is different from *Pan American* in a critical respect. Here, we may assume the Board possesses full authority under the Act to supervise § 408 transactions between a controlling person and an air carrier—just as in *Pan American*, the allocation of routes and division of territories comprised the basic stuff of the Board's day-to-day business. Yet, unlike the acts specified by Panagra in *Pan American*, the acts charged in TWA's complaint are components of an antitrust

conspiracy to restrain trade in the aircraft supply and manufacture market. Section 411 does not command Board responsibility for preventing such a conspiracy, since § 411 is in terms restricted to unfair methods of competition "in air transportation or the sale thereof." Thus, to sustain its result in this case, the Court must fall back on one (or both) of two propositions: it must either find some specific authority in the Aeronautics Act other than § 411 for its conclusion that the Board's mandate to police anticompetitive practices extends to the subject matter of TWA's complaint; or it must consider such statutory authority irrelevant to a finding of antitrust immunity. Neither approach is, in my view, sound.

IV

A. Improbable as it seems, there is much in the Court's opinion to suggest that its judgment rests upon the assumption that antitrust immunity is conferred here simply by virtue of a rather extensive grant of procedural authority for the Board to intervene in the control-person-air carrier relationship. The Court recounts, in detail the history of the Board's involvement in the Toolco-TWA relationship—though the Court does not suggest, as it cannot, that the Board specifically considered the actions by Toolco alleged in TWA's complaint to violate the antitrust laws.[18] The Court tells

[18] Between 1956 and 1960, the Board entered various modification orders permitting Toolco and TWA to enter into short-term leases of jets and permitting various limited extensions of those leases. Specifically, the record shows that the Board approved 12 transactions between Toolco and TWA from 1956 to 1960:

—on May 17, 1956, the Board approved sale of some 33 Lockheed aircraft, and spare parts, by Toolco to TWA.

—on Dec. 18, 1956, the Board approved a proposal for TWA to borrow some $10 million in operating capital from Toolco.

—on June 11, 1957, the Board approved a proposal whereby Toolco

us that in 1950, the Board embarked upon a wide-ranging evaluation of the treatment afforded TWA by Toolco as controlling person—though the Court does not sug-

---

would refinance TWA's May 17, 1956, purchase of Lockheed aircraft.

—on Dec. 30, 1958, the Board again approved a transaction relating to the nonjet Lockheed aircraft.

—on Feb. 26, 1959, the Board approved a proposal whereby TWA would lease one Boeing 707–131 aircraft from Toolco, plus spare parts, for the purpose of training its crews to fly jet aircraft.

—on May 15, 1959, the Board approved the lease by Toolco to TWA of 11 Boeing 707–131 jet aircraft, with provision for obtaining spare parts from Toolco and leasing spare jet engines.

—on July 1, 1959, the Board approved the lease of four additional aircraft by Toolco to TWA, and the extension of the leases on the previous jet aircraft. The leases were prolonged pending the working out of "definitive financing arrangements" which, presumably, would enable TWA to acquire ownership of the aircraft.

—on Sept. 30, 1959, the Board again approved extension of the jet leases upon the representation of Toolco and TWA that financing arrangements had not yet been finalized

—on Jan. 29, 1960, the Board approved the lease by Toolco to TWA of eight 707–131's and eight Convair 880's (all jet aircraft), on a day-to-day basis, and again with provision for spare parts. This approval was again premised on completion in the near future of "definitive financing arrangements permitting [TWA] to operate these aircraft on a permanent basis."

—on June 23, 1960, the Board approved acquisition—*i. e.*, purchase—by TWA of 25 Boeing 707 and 20 Convair 880 jet aircraft, with $260 million to be raised by an offering of bonds and junior securities. Toolco was to guarantee the subscription and would lend $50 million to TWA to enable it to make the offering.

—on July 21, 1960, the Board approved acquisition of title to two additional jet aircraft by TWA from Toolco.

—Finally, on December 29, 1960, the Board approved creation of a voting trust for the placement of Toolco's holdings in TWA.

As the Court's opinion observes, damages were awarded for those allegations of the TWA complaint which charged that TWA had been damaged by the diversion of six Convairs by Toolco to Northeast Airlines; by the temporary retention by Toolco of four Convairs and the ultimate lease of these aircraft to Northeast; by the diversion

gest, as again it cannot, that the 1950 proceeding of the Board even remotely considered Toolco's actions as components of an antitrust conspiracy directed toward the aircraft supply and manufacturing market.[19] Finally,

---

of six Boeing jet aircraft, of 33 ordered, to Pan American Airways, TWA's principal trans-Atlantic competitor; by the lease of planes to TWA, in lieu of sales which would have been more to TWA's financial interest; and by the late delivery of 47 of the 63 jets procured for TWA by Toolco.

With the exception of the decision to lease planes to TWA rather than sell them, the actions alleged to have damaged TWA related not to the documented structure of Toolco's transactions with TWA, as presented to and approved in fact by the Board, but rather to the manner in which Toolco executed the paper transactions, without Board approval or knowledge. The leases were never considered in relation to other means of aircraft acquisition, as the complaint required they be viewed. The Court dismisses these discrepancies by observing that the restraint alleged in *Pan American* was held to be immune "even though the CAB had taken no action to investigate, let alone, act on the alleged misfeasance as the Board has done here for over sixteen years." In other words, if the Board were responsible for complete supervision of the Toolco-TWA transactions, immunity would not be undermined by the Board's failure to undertake such supervision in fact.

At best, though, the Court's historical recitation is irrelevant since it in no way explains why it was the Board's statutory responsibility to consider the transactions between Toolco and TWA as components of an antitrust conspiracy allegedly pointed towards the aircraft supply and manufacture market.

[19] The Board's 1950 proceeding undertook "to consider the overall impact of the acquirer's plans and policies with respect to the controlled carrier." 12 C. A. B., at 196. The Board reviewed the past transactions involving the financing of aircraft. In particular, the Board considered whether Toolco had properly resolved, in favor of debt financing, a longstanding dispute between the Toolco and TWA managements over the relative merits of debt or equity financing of new aircraft. The Board concluded that TWA's financial and technical contributions to TWA had been of considerable benefit to the carrier. On the other hand, the Board viewed TWA's capitalization as "neither reasonable nor sound" since "[t]he proportion of

the Court makes much of the powers of investigation and continuing supervision provided by § 415 of the Act—though the Court does not acknowledge that those powers are explicitly limited by Congress to Board actions "[f]or the purpose of performing [the Board's] powers and duties under this Act," and are therefore no indication of the scope of Board substantive responsibility.

The weakness inherent in the Court's recitation of "procedural underbrush" is that it leaps from the premise of the Board's acknowledged procedural power to intervene in § 408 "control" transactions to the conclusion that the Board's substantive statutory duty to consider the anticompetitive impact of such transactions is or, for some reason of policy, ought to be equally unlimited. Yet, inescapably, it is the Board's substantive mandate upon which antitrust immunity properly turns; as our prior decisions teach, the potential of colliding substantive judgments forces the carving out of antitrust immunity, not simply the overlapping of jurisdiction to intervene in a particular type of transaction.

---

debt to total capitalization is far too large." 12 C. A. B., at 218. Yet "the extent to which Toolco and its principal officers can be held directly responsible for TWA's present capital structure poses a most difficult problem," since "numerous factors . . . operate to complicate and often delay agreement on a financial plan." On balance, the Board concluded that Toolco control of TWA had been in the public interest, and it approved the additional acquisition by Toolco of TWA stock.

While it is true that the Board's evaluation of Toolco's "stewardship" over TWA involved decisions regarding the acquisition of aircraft, including the method of financing and the timing of purchase and lease decisions, there is nothing in the Board's decision to indicate that the Board's 1950 proceeding undertook to analyze Toolco's control of TWA from the perspective of Toolco's own market position. Consequently, the 1950 proceeding in no way suggests that the Board has deviated from its consistent position that Congress did not entrust it with the exclusive responsibility for policing anticompetitive effects of § 408 transactions.

We have uniformly insisted upon a substantive mandate to the regulatory agency to consider fully and remedy the relevant anticompetitive conduct. See, in addition to *Pan American, supra, United States* v. *Borden Co., supra,* at 206 (relevant provision of Capper-Volstead Act "does not cover the entire field of the Sherman Act"); *Georgia* v. *Pennsylvania R. Co., supra,* at 456–459 ("no warrant in the Interstate Commerce Act and the Sherman Act for saying that the authority to fix joint through rates clothes with legality a conspiracy to discriminate against a State or a region, to use coercion in the fixing of rates, or to put in the hands of a combination of carriers a veto power over rates proposed by a single carrier"); *Milk Producers Assn.* v. *United States, supra,* at 469–470 (§ 7 of Clayton Act immunized "transactions duly consummated pursuant to authority given by the . . . Secretary of Agriculture" under statutory authority, but this included only marketing agreements and not agreements or restraints of wider scope typically covered by the antitrust laws); *California* v. *Federal Power Comm'n, supra,* at 485 ("Here while 'antitrust considerations' are relevant to the issue of 'public interest, convenience, and necessity' . . . there is no 'pervasive regulatory scheme' . . . including the antitrust laws that has been entrusted to the Commission"); *United States* v. *Philadelphia National Bank, supra,* at 351–352 (though Comptroller of Currency was required to consider effect on competition in passing on bank merger, not required to give the factor any particular weight, to hold a hearing, or to subject his determination to judicial review).

B. The major premise of the Court's decision must, then, be that the Aeronautics Act imposes on the Board full responsibility for evaluating and preventing anticompetitive impact, of whatever variety, flowing from a control transaction touching an air carrier. As the

Court puts it, "Competition and monopoly—two ingredients of the antitrust laws—are standards governing the CAB's exercise of authority in granting, allowing or expanding or contracting the control which Toolco had over TWA by reason of the various orders issued by the CAB under § 408."

I cannot agree with the Court's reading of the provisions of the Act which require the Board to maintain competition. The Court offers no support for its reading of those provisions; and, as I have already indicated, the legislative history surely provides none. Moreover, the Board itself has consistently interpreted the Act not to impose on it the expansive role the Court now perceives for the first time. In a brief *amicus curiae* filed in 1964 and again in 1972, the Board disclaims the mandate or the competency to police the aircraft supply market or any non-air carrier market which may be threatened by anticompetitive acts involving control of an air carrier. We have only recently reaffirmed the well-established doctrine that the consistent administrative construction of federal legislation "is entitled to great weight." *Trafficante* v. *Metropolitan Life Insurance Co.*, *ante*, p. —; *Udall* v. *Tollman*, 380 U. S. 1, 16; *Griggs* v. *Duke Power Co.*, 401 U. S. 424, 433–434. As for the Board's competence to do the job assigned it by the Court, we are not tied to the Board's self-appraisal, but "it is entitled to some weight," particularly when the legal issues surrounding Toolco's alleged behavior in the aircraft supply market "are typical antitrust problems and not at all typical airlines problems . . . . The search for a practical accommodation of court and agency is not advanced by our ignoring the agency's own considered sense of self-limitation." *Pan American*, supra, at 328–330 (dissenting opinion of MR. JUSTICE BRENNAN).

If the Board's basic function, the Act's legislative history, and the Board's view of its own mandate and

competence were not enough to convince me that the Court's reading of the Act is erroneous, these factors are at least enough to raise substantial doubts. Such doubts, as our prior cases teach, are enough to secure the continuing availability of antitrust or other judicial remedies as additional safeguards for protection of the public interest. "Repeals of the antitrust laws by implication from a regulatory statute are strongly disfavored." *United States* v. *Philadelphia National Bank*, 374 U. S. 321, 350 (1963), *United States* v. *Borden Co.*, *supra*, at 198 ("a cardinal principle of construction that repeals by implication are not favored"). See *United States* v. *Socony-Vacuum Oil Co.*, 310 U. S. 150, 226–228; *Georgia* v. *Pennsylvania R. Co.*, 324 U. S. 439, 456–457; *California* v. *Federal Power Comm'n*, 369 U. S. 482, 485, and 15 additional cases cited in MR. JUSTICE BRENNAN's opinion for the Court in *United States* v. *Philadelphia National Bank*, 374 U. S. 321, 350 n. 28. The traditional aversion to implied repeal of the antitrust laws should have particular force in the context of the Aeronautics Act, which explicitly states that "Nothing contained in this chapter shall in any way abridge nor alter the remedies now existing at common law or by statute, but the provisions of this chapter are in addition to such remedies." 49 U. S. C. § 1506; and see *Pan American World Airways* v. *United States*, *supra*, at 321 (dissenting opinion).

Nor does the Court's result seem justifiable for practical reasons of regulatory accommodation. Indeed, I find the Court's expansive reading of the Board's antitrust responsibilities inconsistent with our duty "to make the regulatory scheme work." *Silver* v. *New York Stock Exchange*, *supra*. Section 408 of the Act has now been amended to require Board approval when any person, whether or not engaged in any aspect of aeronautics, acquires a controlling interest in an air car-

rier. In this age of conglomerate mergers, the time may soon arrive when another industrial corporation seeks to acquire control of an air carrier. It may well be that some similar future acquisition may be in the best interests of American air transportation. It may likewise pose serious anticompetitive dangers. The Court's decision today will, I think, provide a serious obstacle to proper consideration of any such transaction that may be proposed in future years, since the Board will be faced with a difficult dilemma. If it approves the control acquisition, under the terms of the Court's decision the Board engages itself to exercise (a) continuing supervision over (b) all aspects of the control relationship, including the anticompetitive impact of the relationship in the computer market, the hotel market, the insurance market, the credit market, or whatever market happens to be affected by the control transaction. Quite understandably, the Board's response may be to play it safe, in keeping with its own advice to this Court that it cannot effectively function as the ombudsman of the American economy whenever that economy touches air transportation in any way. On the other hand, the Board may feel obliged to heed the Court's yawning interpretation of § 408. This course of action poses the threat that the Board will have extended itself so far beyond its competence and manpower that it is diverted from those central tasks of regulation imposed on it by § 408 of the Act. In either event, I cannot imagine that the Court's new reading of § 408 will contribute to the effective enforcement of the congressional scheme for promoting a sound national system of air transportation.

Returning to the 1964 efforts of Toolco to have the Court resolve the issue of the Board's authority with respect to the antitrust issue, it is elementary, of course, that a denial of a petition for certiorari decides nothing. It is also true that dismissal of a petition as improvidently

granted after full oral argument and briefing, is not a judgment on the merits in any sense. But when parties to litigation reach that stage and the Court fails to respond with a decision on the merits, lawyers read that as a signal that the case should proceed. These parties did so—for nine years and more than 15 million dollars in legal expense—only to be told by the Court now that on the facts there is no legal liability—the very issue that could as well have been decided in 1964 as today. All of the litigation since 1964 has been confined to the massive task of determining damages and it will not do to say that the Court could not resolve the legal issues until damages were ascertained. Precisely the contrary is true.

For these reasons, I respectfully dissent from the Court's judgment. I would hold that actions permitted by the Board under § 408 of the Aeronautics Act are "authorized, approved or required" by the Board's action (and thereby immunized by § 414 from antitrust liability) only to the extent that the antitrust claim falls within the core of the Board's statutory responsibility to regulate air transportation while maintaining, in that market, the maximum degree of competition consistent with the public interest. In view of the Court's disposition, it would not be fruitful for me to express at length my views on the other issues presented to the Court, other than to note that, with modifications not relevant to the overriding issue, I would affirm the judgment of the Court of Appeals. At the very least, I would set the case for reargument so the dispositive issue might be fully explored by the Court.

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

PETITION FOR REHEARING

Findings below, concurred in by every judge who has studied the record, untouched by this Court, establish that TWA was injured by defendants' conduct in an amount exceeding $45 million. The immediate money impact of the Court's decision denying TWA a remedy under the Clayton Act for these injuries is equivalent to an average loss of over $4,000 for each of TWA's more than 35,000 shareholders.

Yet the decision now announced reverses the unanimous courts below on an issue not even directly presented by defendants' latest petition for certiorari and not here briefed or argued: an issue originally considered by the Court in 1965 but not then thought worth acting upon. By substituting a broad *pre-emption* for the narrow antitrust *exemption* which the statute provides, a major change in the balance between antitrust policies and other regulatory standards has been effected—almost, it would seem, by inadvertence, and certainly with no opportunity for TWA to present arguments either of general policy or of special application to the facts of this case on the issue now announced to be dispositive.

The disposition of the case chosen by the majority, moreover, is to direct a summary dismissal without permitting any further proceedings. TWA is thus deprived of even the opportunity to prove (if the default is not to be regarded as establishing this surely pertinent fact) that the CAB orders of which judicial notice has been taken are ineffective to support the affirmative defense which this Court now upholds—ineffective because they were entered in proceedings in which critically important information had been knowingly withheld from the Board. *Walker Process Equipment, Inc.* v. *Food Machinery & Chemical Corp.*, 382 U.S. 172 (1965).

We submit that a Court of ultimate review should not reach so startling and unexpected a result without giving TWA opportunity to present the reasons why that result does not do justice in this case. We think a question of due process is presented.

A. Pre-emption of the Antitrust Laws

This case has been decided by applying the doctrine of *pre-emption*—that is, that the grant to the CAB of the

power to authorize an acquisition of control under § 408 of the Federal Aviation Act had the effect of removing the entire subject matter of TWA's complaint from the jurisdiction of the antitrust laws. Mr. Justice Douglas explains the applicable rule of decision as follows:

> "In this context, the authority of the Board to grant the power to 'control' and to investigate and alter the manner in which that 'control' is exercised leads us to conclude that this phase of CAB jurisdiction, like the one in the *Pan American* case, pre-empts the antitrust field." (Slipsheet opinion, p. 21)

The defense which is expressly upheld at p. 3 of the slipsheet opinion is stated by the Court in these words:

> "Another defense of Toolco was that those transactions were under the control and surveillance of the Civil Aeronautics Board and by virtue of the Federal Aviation Act these transactions have immunity from the antitrust laws." (Slipsheet opinion, pp. 2-3)

Section 415, giving broad powers of *inquiry* to the CAB (Slipsheet opinion, p. 19 n. 12), is pointed to as a measure of the extent of the CAB's power to supervise and control and to preclude antitrust enforcement (Slipsheet opinion, p. 25; *infra,* p. 6).

Pre-emption, however, was not a question presented by the petition for certiorari, and it has not been briefed or argued (except incidentally in developing other points) since 1965 when it was the central issue before the Court in No. 443, October 1964 Term. The CAB commented on this fact in its 1972 Amicus Brief:

> "During the first round of appeals in this case, Toolco contended that the court was precluded from

granting any remedy for the conduct described in the TWA complaint because the Board had exclusive jurisdiction over the subject matter. No such contention has been included among the 'questions presented' in Toolco's current petition. Therefore, we assume that Toolco is no longer relying upon a 'supersession' theory and that it is unnecessary to repeat all of the Board's reasons for concluding that this case is not analogous to *Pan American World Airways, Inc.* v. *United States*, 371 U.S. 296. It appears to be conceded that the treble damage award in this case is within the jurisdiction of the courts." (at p. 15)[1]

Application of the doctrine of pre-emption to the facts of this case requires a very great departure from well established principles. When antitrust violations have occurred in areas where regulatory agencies have jurisdiction, the Court until this time has considered pre-emption or supersession a rule to be applied out of necessity, only

[1] The "fleeting comments" at oral argument referred to by Mr. Chief Justice Burger (Slipsheet dissenting opinion, p. 5) were addressed to the question of exemption: whether a specific immunity attached under § 414 because the actions complained of were "necessary" to enable defendants to do something approved by a specific § 408 order.

Defendants claimed that exemption was conferred by supposedly specific Board orders covering particular transactions, but the simple fact is that the only specific orders on particular transactions had nothing at all to do with anything TWA complained of with the single arguable exception of the exclusive day-to-day leases of certain Boeings. While the CAB may have mistaken the law, it knew what specific transactions were brought before it, and its comment as to the relationship of the damage items to the specific "modification orders" which it entered is authoritative:

> "Most of the specific items for which damages were awarded to TWA are unrelated to the various modification orders. • • • The delay in ordering Boeing jets, the interference with Convair deliveries, and the diversions of aircraft to other airlines are not remotely connected with the subject matter of any of the modification orders." (1972 Amicus Brief, p. 13)

when there is no other path to accommodation of the antitrust and regulatory regimes. *Silver* v. *New York Stock Exchange* calls this "the guiding principle to reconciliation of the two statutory schemes." 373 U.S. 341, 357 (1963). But where an express exemption from the antitrust laws has been specifically carved out by the statute, the statute itself has always been accepted as the authoritative definition of the boundary line. So this Court said through Mr. Chief Justice Hughes in *United States* v. *Borden Co.*, 308 U.S. 188, 201 (1939). So it said still, and still unanimously, through Mr. Chief Justice Warren in *Carnation Co.* v. *Pacific Westbound Conf.*, 383 U.S. 213, 217-18 (1966). The Court itself has accurately summarized this substantial line of cases in a sentence: "We could not assume that Congress, having granted only a limited exemption from the antitrust laws, nonetheless granted an overall inclusive one." *California* v. *FPC*, 369 U.S. 482, 485 (1962).

The Court's decision in *Pan American World Airways, Inc.* v. *United States*, 371 U.S. 296 (1963), was not such a case, because it was not concerned with the effect of orders of the CAB which give rise to an exemption defined by statute—that is, orders under §§ 408, 409 and 412. In *Pan American* pre-emption was considered necessary because the subject matter—allocation of routes and territories—was at the heart of the CAB's regulatory role (as aircraft supply plainly is not) and had a kind of coherence which sporadic judicial intervention by injunctive relief would disrupt; no specific exemption was otherwise available to secure the CAB's performance of a role basic in the regulatory scheme. 371 U.S. at 305, 310.

Congress has spoken in favor of a specific and narrow exemption for the acquisition and exercise of control. It is granted in § 414—but only *"insofar as may be necessary"* to carry out the acts authorized by the § 408 order. If not

necessary, no exemption attaches. No more limiting language could have been selected by the legislative draftsmen. If this issue had been explored in argument before the Court, the question of what was "necessary" to carry out the Board's order would have been critical, and would have been reflected in the Court's decision. This point was not argued, and the Court's opinion has defined and applied an immunity plainly not limited to action "necessary" to carry out the order. Indeed, everything relating to a control relationship, "all transactions between parent and subsidiary—as originally conceived or subsequently exercised," has been pre-empted (Slipsheet opinion, p. 25). The transactions complained of, and held sanctioned through pre-emption, were not only between parent and subsidiary but affected others as well.

Thus it is not only the air carrier which is deprived of a remedy. It is all "those who can invoke the sanctions of the antitrust laws" (*ibid.*). The government itself is included in the ban. The baring of the public interest to threats normally protected against by the Sherman and Clayton Acts could not be more complete.

An examination of the factual situations and the actual agency involvement in previous cases before this Court can only reinforce the conclusion that the majority has departed from principles upon which the antitrust laws have previously been accommodated to regulatory schemes. To take one example, in *United States* v. *Radio Corporation of America,* 358 U.S. 334, 350-51 (1959), the Court refused to hold that the FCC's finding, in the exercise of its responsibilities under the statute, that the transaction at issue would serve the "public interest, convenience and necessity" had the effect of pre-empting the antitrust laws. Yet it was *stipulated* in *RCA* that the FCC had before it

and considered all of the facts which were present in the subsequently filed antitrust suit (358 U.S. at 338).[2]

The *Pan American* case (371 U.S. at 340-05 n. 9) left room for the doctrines of the *RCA* case and of *Maryland and Virginia Milk Producers Ass'n* v. *United States,* 362 U.S. 458, 468, 469-70, 472 (1960), but none is left by the present decision, in spite of the repetition in the majority opinion of the words from *Pan American* that "the Federal Aviation Act does not completely displace the antitrust laws" (Slipsheet opinion, p. 23). Indeed, the one "most conspicuous exception" cited by the opinion—a "combination or agreement between two air carriers involving trade restraints"—falls flatly within the provisions of §§ 412 and 414 and is one of the things that the CAB can most clearly exempt from antitrust attack.

We submit that the questions involved are of sufficient importance to justify full consideration, and we would welcome the opportunity to develop the policy considerations more fully. We believe that, upon further analysis of the relationship between pre-emption and statutory exemption, the Court will find the rationale of its decision unsatisfactory.

B. Antitrust Immunity Beyond the Regulated Field

The Court appears to have accepted defendants' characterizations of TWA's complaint—characterizations which

---

[2] That the FCC is without an express statutory power to exempt conduct from the antitrust laws does not serve to reconcile the decisions, since the decision herein does not turn upon the statutory exemption expressly provided in the Federal Aviation Act, but upon the broad pre-emption of antitrust jurisdiction which was rejected in *RCA*.

do not give effect to the default as admitting the truth of the complaint's allegations.

The majority opinion says the "crux" of TWA's complaint was "the use by Toolco of its control over TWA to control and dictate the manner and method by which TWA acquired aircraft and the necessary financing thereof" (Slipsheet opinion, p. 2). That view mistakes the events by which TWA's damages were measured for its charges of violation of law. Those charges establish the existence of a broad conspiracy that ultimately caused the damages.

What defendants did to TWA in the equipment and financing fields caused TWA loss (although no damages were awarded as to financing), but the violation of law charged by TWA involved a conspiracy to restrain and attempt to monopolize larger markets, of which TWA was but a part. Toolco's conduct with respect to TWA was an integral part of this broader course of conduct. This decision therefore now stands for the proposition that persons may admit by default, without fear of antitrust liability, that they have conspired to restrain and monopolize and have attempted to monopolize the sale of aircraft to air carriers, provided only that in furtherance of their scheme they have obtained control of an air carrier with CAB approval, whether or not the CAB was informed of their intentions. We do not believe that such a reach to the present decision could have been intended.

Even though surveillance by the CAB plainly did not extend to defendants' operations in the larger market, nor its inquiry reach the purposes which defendants had with respect to that market, the Court has nonetheless viewed TWA's allegations of antitrust violations as confined to defendants' domination of TWA itself. TWA, however, has no doubt of its ability to support the broader

charge if defendants' default had not deprived it of the opportunity to do so.[3]

It is pertinent in considering the relationship of these charges to the losses which TWA suffered that those losses were not the result of TWA's being compelled to purchase too many aircraft, or even the wrong aircraft, from defendants. That was the risk to the public interest foreseen by the CAB, against which its continuing surveillance was directed. What actually developed was the result of defendants' broader goals: their desire to penetrate the market of other carriers. TWA suffered from getting too few aircraft too late, the result of a conspiracy directed towards a broader market which the CAB did not have either authority or facilities to supervise.

In *Pan American* the anticompetitive actions complained of involved nothing beyond the defendants' alleged actions in controlling the route aspirations of the controlled carrier. Here it is alleged and admitted that the anticompetitive actions extended far beyond TWA. If pre-emption or exemption applies to anti-competitive conduct affecting markets of which the controlled carrier is only a part, the scope of the commerce to which the antitrust laws apply has been further and sharply narrowed. The rule is not one that can be confined to the Federal Aviation Act; other industries are subject to similar regulation.

On reconsideration, the Court could consider whether whatever pre-emption there is should extend to the broad trade restraints actually alleged in the complaint and admitted by the default.

---

[3] Special Master Herbert Brownell reviews the allegations and emphasizes the existence of evidence to support the charges that defendants were engaging in anticompetitive conduct in a market much broader than the TWA market (Brownell Report, pp. 28-34; A-1966; *see also* the Court of Appeals opinion, 449 F.2d at 67-68, A-2767-70).

C. The Immunity Conferred Is Inconsistent with the CAB's Expressed Intent

To ascribe retroactively to past CAB orders an immunizing effect which the CAB did not know those orders would have and did not intend them to have is unnecessary, and we believe both inappropriate and unjust.

The Board's own position on the extent of its powers and the effect of the orders it entered has been explicit and consistent. The Board has said to this Court: we do not have the power to immunize Toolco's conduct here from the operation of the antitrust laws; we do not have the competence to exercise such a power; we did not intend to immunize such conduct when we entered the orders that are now said to have done so; when we entered the orders we were not told nor did we have knowledge of the anti-competitive purposes and restraints on trade that Toolco has conceded by its default in this case.[4]

The Court's decision in this case informs the Board that its powers were far greater than it knew, and its orders might have a far broader effect than it intended. A supervisory role is defined which the Board had not realized was part of its assignment. If these rulings stand, the Board will attempt in the future, because it must, to carry out these greater duties and use its powers with knowledge of the responsibilities that attach to their use.

But to give the same effect to past orders is to defeat the Board's real intent.[5] The consequences attributed to

---

[4] There is annexed in the Appendix a selection of excerpts from and citations to the briefs *amicus* filed on behalf of the CAB on this and on the prior appeal in this case.

[5] In this respect the instant case is very different from *Pan American*. There the Court differed with the Board as to what its powers were, but the case was such that the Board, after that decision, could still exercise its powers to deal with the Grace-Pan

the actions of the Board are irretrievable and disastrous to TWA, yet they are the product of pure inadvertence. Surely the Board's *failure* during the 1950's to take additional action, in the exercise of this power only now revealed to it, does not support an extension of whatever license was granted to specific transactions never formally acted on by the Board at all (Slipsheet opinion, pp. 19-20).

Some passages in the majority's opinion suggest that it believes the Board at the time it acted intended to do more than it now says it did. A full examination of the record of the Board proceedings would clearly demonstrate the contrary. If the Board's present representations are not to be accepted as dispositive, TWA should be entitled—if not here, then before the lower court—to establish the facts. The partial selection of materials by defendants which is all that the Court has had available to it is no substitute for a more detailed review—and judicial notice is not appropriate as to a contested matter of this complexity.

This would appear at the very least an appropriate situation for the application of the principles of primary jurisdiction rather than pre-emption. A referral to the Board would make it possible for the Board to determine the matters the Court says are within its jurisdiction. This course, like that followed by this Court in *Carnation Co.* v. *Pacific Westbound Conf.*, 383 U.S. 213, 224 (1966), would permit a considered judgment by the Board as to whether or not it should approve the actions alleged in the complaint—a determination the Court now says the Board should have made, but which the Board expressly states it did not. Any other course allows a

---

American-Panagra situation. That is not true here. Moreover, in *Pan American* no issue was presented as to what the Board had intended by its prior action.

monopolist to retain the fruits of his monopolistic conduct solely as a result of error on the part of the administrative agency, both as to its statutory authority and as to the factual context of the matters brought before it for decision.

D. TWA Should Have the Opportunity to Show That the CAB Was Misled

In any event, dismissal of the complaint is unwarranted if there are facts TWA could prove which would entitle it to relief despite the Court's holding that defendants' CAB defense is valid.

TWA has contended throughout this proceeding that the Board's orders—from which antitrust immunity is held to be derived—were entered in proceedings in which Toolco had knowingly withheld from the Board information of the utmost materiality. The Board itself has told this Court that it did not know that Toolco was trying to establish itself as a supplier of aircraft to air carriers, or that it intended to prevent TWA from dealing with others for aircraft, as part of this larger scheme.

Surely this Court did not mean to hold that where immunity from the antitrust laws is obtained by fraud an antitrust claimant is not entitled to prove that fraud. In *Walker Process Equipment, Inc.* v. *Food Machinery & Chemical Corp.*, 382 U.S. 172 (1965), the Court held—unanimously—that an antitrust claimant challenging the validity of a patent monopoly was entitled to prove charges of fraud in obtaining the patent, if he could. A patent that had been granted in proceedings in which the patent office had been deceived would not protect the patentee from antitrust charges based on the exercise of the otherwise lawful monopoly. "Fairness requires," the Court said, "that on remand Walker have the opportunity [to prove its claims]." 382 U.S. at 178.

Issuance of a patent is plainly the intentional exercise of statutory power to immunize certain conduct—within the scope of the grant—from the application of the Sherman and Clayton Acts. The *Walker* rule should apply *a fortiori* when reliance is placed on an inferred antitrust immunity which the agency did not realize would occur, and has said it did not intend.[6]

To deprive TWA of all opportunity to prove such fraud as would vitiate that immunity is to deprive it of rights which our judicial system has guaranteed it.

Although it is now clear that this Court's 1965 dismissal of certiorari as improvidently granted did not establish the 1964 Court of Appeals decision on defendants' CAB affirmative defense as the law of this case, the fact of that dismissal coupled with defendants' decision not to tender in their latest petition the issue now held dispositive requires, as a matter of fair and proper judicial administration, that TWA be granted its day in court on that issue.

---

[6] As this Court observed last term in *California Motor Transport Co.* v. *Trucking Unlimited*, 404 U.S. 508, 513 (1972), after citing *Walker*:

> "There are many other forms of illegal and reprehensible practice which may corrupt the administrative or judicial processes and which may result in antitrust violations. Misrepresentations, condoned in the political arena, are not immunized when used in the adjudicatory process."

In *Woods Exploration & Producing Co.* v. *Aluminum Co. of America*, 438 F.2d 1286, 1295 (5th Cir. 1971), *cert. denied*, 404 U.S. 1047 (1972), the Court of Appeals applied the *Walker* rule in refusing to find that rulings of the Texas Railroad Commission pre-empted the antitrust laws (as these rulings otherwise would have under the doctrine of *Parker* v. *Brown*, 317 U.S. 341 (1943)), because the rulings were obtained on the basis of false information filed by the defendant producers pursuant to a conspiracy to restrain trade and to monopolize. *See also Slick Airways, Inc.* v. *American Airlines, Inc.*, 107 F.Supp. 199, 213-14 (D.N.J. 1951), *app. dismissed*, 204 F.2d 230 (3d Cir.), *cert. denied*, 346 U.S. 806 (1953).

Alternatively, this Court should remand to the district court for further proceedings, or as appropriate for reference to the CAB, to determine what effect the CAB intended its orders to have and whether those orders were obtained by misrepresentations of defendants.

Respectfully submitted,

CERTIFICATE

I hereby certify that this Petition for Rehearing is presented in good faith and not for delay.

.....

DUDLEY B. TENNEY
Counsel for
Respondent-Cross-Petitioner
Trans World Airlines, Inc.

APPENDIX

Both when this case was before the Court during its 1964 Term and in the current Term the CAB stated in detail its own understanding of its powers under § 408, what it thought it was doing when it entered orders under that section, and what it did not intend to do, and what the scope of its actual inquiry into the TWA-Toolco relationship was.

As to the CAB's understanding of its powers:

> "Section 408 requires the Board to approve only an 'acquisition of control'; it does not give the Board continuing responsibility for supervision of a controlling person's management of an air carrier.
>
> • • •
>
> "Moreover, the Board has no jurisdiction over aircraft dealers or manufacturers as such, and it is not generally empowered to regulate the issuance of a carrier's securities or its capital structure, or to specify the aircraft which a carrier can acquire, the timing of such acquisitions, or any decisions to defer or refrain from aircraft acquisitions. Indeed, the Board is specifically precluded from interfering with a carrier's choice of equipment • • •.
>
> "Finally, the Board's remedial powers do not effectively cover the conduct alleged in the complaint." (1972 Amicus Brief, pp. 16-17; *cf.* the CAB's 1965 Amicus Brief in No. 443, October 1964 Term, pp. 12-13)

As to what the Board thought it was doing when its orders were entered:

> "The Board's [1944 and 1950] orders did confer antitrust immunity, but that immunity • • • did not ex-

tend to the manner in which control was thereafter exercised." (1972 Amicus Brief, p. 10; *cf.* 1965 Amicus Brief, p. 15)

Thus,

"* * * the Board's orders did not permit Toolco to utilize its power as a means of violating the antitrust laws." (1972 Amicus Brief, p. 10; *cf.* 1965 Amicus Brief, p. 15)

Assuming the truth of the allegations of TWA's complaint,

"* * * the specific acts which damaged TWA were not the normal and natural exercise of the control relationship approved by the Board, and consequently they were not given antitrust immunity." (1972 Amicus Brief, p. 11)

As to the subsequent modification orders,

"[t]he modification orders * * * did not purport to sanction anything other than the specific transactions involved." (1972 Amicus Brief, p. 12; *cf.* 1965 Amicus Brief, p. 16)

* * *

"Most of the specific items for which damages were awarded to TWA are unrelated to the various modification orders. * * * The delay in ordering Boeing jets, the interference with Convair deliveries, and the diversions of aircraft to other airlines are not remotely connected with the subject matter of any of the modification orders." (1972 Amicus Brief, p. 13)

As to the scope of the Board's inquiry,

"* * * the TWA charges * * * involve Toolco's use of its control over TWA to prevent TWA from

acquiring aircraft from other suppliers and from obtaining the financing necessary to acquire jets. * * * This restraint upon TWA's activities was, of course, neither submitted to nor approved by the Board, and it was certainly not necessary to carry out any of the Board's orders." (1972 Amicus Brief, pp. 12-13, *cf.* 1965 Amicus Brief, pp. 16-17)

* * *

"The sanctions [of the damage award] relate to subsequent actions, the antitrust aspects of which were never brought to the attention of or considered by the Board." (1972 Amicus Brief, p. 18)

The modification orders were entered:

"* * * upon application. * * * No hearings were held or adversary pleadings filed when such orders were entered." (1972 Amicus Brief, p. 4; *cf.* 1965 Amicus Brief, p. 4)

With respect to the extent of its surveillance, the Board's view is that:

"* * * the Act does not impose any duty on the Board affirmatively to monitor and supervise all aspects of the control relationship." (1972 Amicus Brief, p. 18; *cf.* 1965 Amicus Brief, pp. 11, 13)

Almost at the outset of the Board's involvement with Toolco's control over TWA, it was represented to the Board by Toolco's counsel, through a letter addressed to the Hearing Examiner in the first control proceeding, that "the approval sought by Hughes Tool Company in this case would not constitute a license to permit Hughes Tool

Company or TWA to do whatever they desire in the future * * *" (Doc. 178, Ex. B-7, Letter of January 24, 1944, reproduced in Transcript of Record, Nos. 443 and 501, October Term, 1964, Vol. V, at 610). The Board's contemporary view of what it was doing is set forth with complete clarity in the second control proceeding, in which it said, referring to its earlier control order, that "we did not intend to, and did not, grant a blanket, unlimited, *in futuro* approval of the relationship between Toolco and TWA" (9 C.A.B. 381, 389 (1948); A-3327).

As its two *amicus* briefs show, the Board has never changed its mind on this proposition.
